PREFACE

WHEN Sir George Grove projected the *Dictionary of Music and Musicians*, the first instalment of which appeared in 1878, he intended it, as he explained in his preface, for the general reader as much as for the musician, and it was in a great measure the fulfilment of this purpose which made the success of the book. Owners of the earlier copies of the old edition will remember that on the title-page of the first volume are the words 'in two volumes,' and the first of what eventually became four volumes includes the greater part of the letter I. It stands to reason, therefore, that the earlier letters of the alphabet were treated far more scantily than the later; as the work went on the scheme enlarged itself, as was indeed inevitable, and finally the more serious omissions under the earlier letters had to be supplied in an appendix, published in 1889. In the present edition an attempt has been made to restore the balance as between the earlier and later letters of the alphabet; but it seemed only fitting to stop short of any rectification of balance which might involve tampering with the three great articles which are Sir George Grove's chief work in musical literature, those on Beethoven, Mendelssohn, and Schubert. These monumental articles have not indeed been left intact, but the alterations in them have been made in strict obedience to the writer's own wishes in the matter of additions and corrections. At his death he left a large quantity of material intended for use in a later edition of the Dictionary, in correction or amplification of these great articles, and the work of incorporating them in the text has been done, in the case of the articles on Beethoven and Mendelssohn, by writers to whom he himself entrusted the materials. In these articles, and some others of the longer biographies, dates have been added at the top of the pages, to assist the reader who may wish to use the book as a work of reference. References to sources of information which have appeared since Sir George Grove's death have been inserted, but in square brackets, such as have been used throughout the Dictionary to indicate additions for which the writer of the original article is not responsible. When these additions are unsigned, it is to be understood that the Editor is responsible for them. Some such additions were necessary in almost every article, but where circumstances allowed the writers have been asked to correct, and add to, their own contributions. This was not always feasible, for the list of contributors will show a large proportion of names of deceased writers, while in other cases it has been impossible to trace the authors of the articles.

One of the most valued contributors to the old edition, the late Mr. A. J. Hipkins, F.S.A., was actively engaged in correcting and expanding his articles when death overtook him in June 1903; his articles on the keyed instruments, and some others, in the present volume, were all corrected by himself, and materials for the correction of those under later letters were left among his papers, and will, it is hoped, be incorporated in the subsequent volumes.

It will be seen that the work of which this is the first volume is not, strictly speaking, a new book: the old arrangement has been kept wherever it was possible, although a great many absolutely new articles appear in the following pages. In the quarter of a century which separates the appearance of the first volume of the old edition from the first volume of the new, not only have many hundreds of names reached an eminence which makes their inclusion necessary, but many new reputations have been made, both among creative and executive musicians. In the department of archæology the standards of research have greatly altered in the years that have passed. At the beginning of the old Dictionary Fétis was considered as altogether trustworthy; later on Mendel's *Lexicon* succeeded to the place formerly occupied by the *Biographie Universelle des Musiciens*, and Fétis's statements were, perhaps undeservedly, discredited. Such authorities as Eitner, Wotquenne, and others, such standards of research as were maintained in the *Dictionary of National Biography*, have put the study of biography and bibliography on a new footing. If the new edition of the Dictionary cannot claim to be based exclusively on original research, it will be found that, in the great majority of cases, the statements made at second-hand are referred to the source from which they were taken.

Upon the first edition a limit of time was imposed, the date 1450 being fixed as the beginning of the music that could be expected to interest modern readers. The study of ancient music, and in particular of that which belongs to ecclesiastical plain-song, has been so widely spread (partly as a result of the scientific articles written by the late W. S. Rockstro in the later part of the Dictionary) that no book on music could now be considered complete which made its starting-point as late as the middle of the 15th century.

The scope of the Dictionary has been greatly enlarged in other ways. There was no article on Acoustics in the first edition, and such composers as Bach, Berlioz, Brahms, and Chopin, were inadequately treated. These five headings, and that of Degrees in Music, may be referred to as indications of the alteration of plan in the new edition. In the case of all composers of real importance, their works have been catalogued systematically under their opus-numbers (where such are used); in like manner, such critical remarks have been admitted, even in the case of living men, as are likely to give the reader a general idea of the special characteristics of the musicians dealt with.

In the new edition, as in the old, no attempt has been made to include the name of every musician who might be held to deserve mention. There is the less need for such an exhaustive treatment (in regard to English musicians, at least) since the publication of *British Musical Biography*, and other works of the kind, which claim to mention every one of any kind of eminence. The average

country organist who, though unknown beyond his own parish, has succeeded in getting an anthem printed, will not find his name in the new edition of the Dictionary any more than in the old. The process of selection may not in all cases meet with universal approval; but it has not been done without careful weighing of the claims of each name, whether among executants or composers. In regard to the younger musicians, particularly executants, only those have been admitted who have attained to real eminence, and whose fame has spread beyond the limits of their own countries.

As the five volumes of the new edition will be published at much closer intervals than the four of the old, it may be confidently expected that the necessity for an appendix at the end will not be as great as it was after the eleven years covered by the publication of the first edition. By more frequent cross-references it is hoped that a final index may also be dispensed with. Since the publication of the first edition, corrections, over and above those which were incorporated in the appendix, have naturally been suggested from many quarters. In many cases the same obvious errors of the press have been corrected by ten or twenty correspondents; the Editor finds it impossible to acknowledge each of these separately, but he takes this opportunity of thanking all those who have taken the trouble to send him corrections that they may have noted. Annotated copies of the whole Dictionary have been placed at his disposal by Messrs. F. G. Edwards, W. Barclay Squire, and Herbert Thompson, to whom his especial thanks are due. To Mr. Nicholas Gatty, for help in the routine of editing, and to all the contributors, who have shown the same interest and enthusiasm in the present work as they or their predecessors showed in the production of the old edition, warm acknowledgments are to be made.

A DICTIONARY

OF

MUSIC AND MUSICIANS

DICTIONARY

OF

MUSIC AND MUSICIANS

A

A. The name of the sixth degree of the natural scale of C. The reason of its being applied to the sixth instead of the first degree will be found explained in the article ALPHABET. It represents the same note in English and German, and in French and Italian is called *La*.

A is the note given (usually by the oboe, or by the organ if there be one) for the orchestra to tune to; in chamber music it is usual for the pianist to play the triad of D minor, so that A is the highest note. A is also the note to which French and German tuning-forks are set, the English being usually tuned to C.

In all stringed instruments one of the strings is tuned to A; in the violin it is the second string, in the viola and violoncello the first, and in the contrabasso generally the third. A is also the key in which one of the clarinets in the orchestra is set. In German the keys of A major and A minor are occasionally expressed by A♯ and A♭. F. T.

AARON, PIETRO, spelt ARON in works published after his death, born at Florence in the latter part of the 15th century. A monk of the order of Jerusalem, and devoted to the study of counterpoint. His various works on the history and science of music (for a list of which see Eitner's *Quellen-Lexikon*) were printed at Venice and Milan. By Pope Leo X. he was admitted into the Roman Chapel, and distinguished in various ways. In or about 1516 Aaron founded a school of music at Rome, which obtained much reputation. He became a canon of Rimini about 1523, and died before 1545. C. F. P.

ABACO, EVARISTO FELICE DALL', born at Verona, July 12, 1675, a famous violinist and composer. After some years' sojourn in Modena, from 1696 to about 1701, he went to Munich, and entered the band of the Elector Max Emanuel as Kammermusiker, in April 1704. After the disaster of Höchstadt he accompanied the Court to Brussels, and on the restoration of the government in 1715 was appointed Concert-meister. His published works are as follows:—op. 1, 12 Sonate da Camera, for violin and violoncello with accompaniment; op. 2, 12 Concerti a quattro da Chiesa; op. 3, 12 Sonate da Chiesa a tre; op. 4, 12 Sonate da Camera a violino e violoncello; op. 5 and 6, Concerti a piu Istrumenti (*sic*). A selection of twenty compositions from opp. 1-4, edited by Adolf Sandberger, forms the first volume of *Denkmäler Deutscher Tonkunst* (zweite Folge, *Denkmäler der Tonkunst in Bayern*) (1900). The memoir prefixed to this volume gives a detailed account of Dall' Abaco's career; he died July 12, 1742. M.

A BATTUTA. See BATTUTA.

ABBATINI, ANTONIO MARIA, was born at Tiferno about 1605, and died there 1677. Was successively maestro di cappella at the Lateran, the Church of the Gesù, and San Lorenzo in Damaso, and three times held the like office at Maria Maggiore; was also, for a time, maestro at the church of Loreto. Was offered by Pope Urban VIII. the task of rewriting the Hymnal; but refused to supersede the music of Palestrina by any of his own. His published works consist of four books of Psalms and three books of Masses; 'Il Pianto di Rodomonte,' consisting of nine songs and a madrigal (Orvieto, 1633); some Antifone for twenty-four voices (Mascardi, Rome, 1630-38, and 1677), and five books of Motetti (Grignani, Rome, 1635). He also wrote two operas, 'Dal male il bene' (Rome, 1654) and 'Ione' (Vienna, 1666). The greater part of his productions remain unprinted. Some academical lectures by him, of much note in their time, mentioned by Padre Martini, do not seem to have been preserved. He assisted KIRCHER in his 'Musurgia.' E. H. P.

ABBÉ, PHILIPPE PIERRE DE ST. SEVIN, and PIERRE DE ST. SEVIN, two brothers, violoncellists, were music-masters of the parish church of Agen early in the 18th century. It seems doubtful whether they were actually ordained priests, or merely in consequence of their office had to wear the ecclesiastical dress. From this circumstance, however, they received the name of Abbé l'ainé—or simply l'Abbé—and l'Abbé cadet, respectively. They gave up their connection with the Church and went to Paris, where they obtained engagements at the Grand Opéra. They were both excellent players, but the younger brother seems to have been the more celebrated of the two, and to have been specially remarkable for his beautiful

above is to write over it the word *bis* (twice), or in some cases *ter* (three times), or to enclose it between the dots of an ordinary repeat.

Passages intended to be played in octaves are often written as single notes with the words *con ottavi* or *con 8vi* placed above or below them, according as the upper or lower octave is to be added (Ex. 11). The word *8va* (or sometimes *8va alta* or *8va bassa*) written above a passage does not add octaves, but merely transposes the passage an octave higher or lower:

so also in clarinet music the word *chalumeau* is used to signify that the passage is to be played an octave lower than written (Ex. 12). All these alterations, which can scarcely be considered abbreviations except that they spare the use of ledger-lines, are counteracted, and the passage restored to its usual position, by the use of the word *loco*, or in clarinet music by *clarinette*.

In orchestral music it often happens that certain of the instruments play in unison; when this is the case the parts are sometimes not all written in the score, but the lines belonging to one or more of the instruments are left blank, and the words *coi violini* or *col basso*, etc., are added, to indicate that the instruments in question have to play in unison with the violins or basses, as the case may be, or when two instruments of the same kind, such as first and second violins, have to play in unison, the word *unisono* or *col primo* is placed instead of the notes in the line belonging to the second.—Where two parts are written on one staff in a score the sign '*a* 2' denotes that both play the same notes; and '*a* 1' that the second of the two is resting.—The indication '*a* 3' '*a* 4' at the head of fugues indicates the number of parts or voices in which the fugue is written.

An abbreviation which is often very troublesome to the conductor occurs in manuscript scores, when a considerable part of the composition is repeated without alteration, and the corresponding number of bars are left vacant, with the remark *come sopra* (as above). This is not met with in printed scores, and as music-printing improves, there is a growing tendency to print out in full such passages as would formerly have been indicated by abbreviations.

There are also abbreviations relating to the theory of music, some of which are of great value. In figured bass, for instance, the various chords are expressed by figures, and the authors of several modern theoretical works have invented or availed themselves of various methods of shortly expressing the different chords and intervals. Thus we find major chords expressed by large Roman numerals, and minor chords by small ones, the particular number employed denoting the degree of the scale upon which the chord is based. Gottfried Weber represents an interval by a number with one or two dots before it to express minor or diminished, and one or two after it for major or augmented, and André makes use of a triangle, ◺, to express a common chord, and a square, □, for a chord of the seventh, the inversions being indicated by one, two, or three small vertical lines across their base, and the classification into major, minor, diminished, or augmented by the numbers 1, 2, 3, or 4, placed in the centre.

F. T.

ABEILLE, Joh. Chr. Ludwig, born at Bayreuth, Feb. 20, 1761, composer, pianist, and organist. Studied at Stuttgart, and in 1782 became a member of the private band of the Duke of Würtemberg. On Zumsteeg's death in 1802 he succeeded him as concertmeister, and was shortly afterwards made organist in the court chapel and director of the official music. In 1832, having completed a period of fifty years' faithful service, he received the royal gold medal and a pension, and died on March 2 of that year, in his seventy-first year. Abeille's concertos and trios for the harpsichord were much esteemed, but his vocal compositions were his best works. Amongst them are several collections of songs (*e.g.* 'Eight Lieder,' Breitkopf and Härtel) which are remarkable for simple natural grace, and a touching vein of melody. Some of these still survive in music-schools. His Ash-Wednesday hymn for four voices, and his operettas of 'Amor und Psyche,' 'Peter und Aennchen,' were well known in their day, and were published, in pianoforte score, by Breitkopf and Härtel. C. F. P.

ABEL, Clamor Heinrich, born in Westphalia about the middle of the 17th century, chamber-musician to the court of Hanover. His work *Erstlinge Musikalischer Blumen* appeared first in three vols. (Frankfort, 1674, 1676,

and 1677), afterwards united under the title *Drei Opera musica* (Brunswick, 1687). M. C. C.

ABEL, Karl Friedrich, one of the most famous viol da gamba players, born at Cöthen in 1725. He was brought up at the Thomasschule at Leipzig under Sebastian Bach. In 1748 he obtained a post under Hasse in the court band at Dresden, where he remained ten years. In 1759 he visited London, and gave his first concert on April 5 at the 'great room in Dean Street, Soho,' when, besides playing the viol da gamba, he performed 'a concerto upon the harpsichord, and a piece composed on purpose for an instrument newly-invented in London, and called the pentachord,' the whole of the pieces in the programme being of his own composition. His facility was remarkable: he is reported to have performed more than once on the horn, as well as on 'new instruments never heard in public before.' From the year 1765, however, he confined himself to the viol da gamba. He was appointed chamber-musician to Queen Charlotte, with a salary of £200 a year. On the arrival of John Christian Bach, in the autumn of 1762, Abel joined him; they lived together, and jointly conducted Mrs. Cornelys' subscription concerts. The first of their series took place in Carlisle House, Soho Square, on Jan. 23, 1765, and they were maintained for many years. The Hanover Square Rooms were opened on Feb. 1, 1775, by one of these concerts. Haydn's Symphonies were first performed in England at them, and Wilhelm Cramer the violinist, father of J. B. Cramer, made his first appearance there. After Bach's death on Jan. 1, 1782, the concerts were continued by Abel, but with indifferent success. In 1783 he returned to Germany, taking Paris on the way back, where he appears to have begun that indulgence in drink which eventually caused his death. In 1785 we find him again in London, engaged in the newly established 'Professional Concerts,' and in the 'Subscription Concerts' of Mr. Salomon and Mme. Mara at the Pantheon. At this time his compositions were much performed, and he himself still played often in public. His last appearance was at Mrs. Billington's concert on May 21, 1787, shortly after which, on June 20, he died, after a lethargy or sleep of three days' duration. His death was much spoken of in the papers. Abel's symphonies, overtures, quartets, concertos, and sonatas were greatly esteemed, and many of them were published by Bremner of London and Hummel of Berlin. A complete catalogue is given in Eitner's *Quellen-Lexikon.* The most favourite were 'A fifth set of six overtures, op. 14' (Bremner), and 'Six sonatas, op. 18.' Abel's playing was most remarkable in slow movements. 'On the viol da gamba,' says the *European Magazine*, 1784, p. 366, 'he is truly excellent, and no modern has been heard to play an Adagio with greater taste and feeling.' Burney's testimony is to the same effect, and he adds that 'his musical science and taste were so complete that he became the umpire in all musical controversy, and was consulted like an oracle.' He was accustomed to call his instrument 'the king of instruments,' and to say of himself that there was 'one God and one Abel.' Among his pupils both in singing and composition were J. B. Cramer, Graeff, and Brigida Giorgi (Signora Banti). His friend Gainsborough painted a three-quarter-length portrait of Abel playing on the viol da gamba, distinguished by its careful execution, beauty of colouring, and deep expression. It was bequeathed by Miss Gainsborough to Mr. Briggs, and was sold in London in 1866. Gainsborough also exhibited a whole-length of Abel at the Royal Academy in 1777. A very powerful portrait of him by Robineau is to be found at Hampton Court, and another by a nameless artist is in the Music School at Oxford. C. F. P.

Probably the most interesting among Abel's compositions are those written for the viol da gamba. None of them seem ever to have been published, but specimens exist in the British Museum and other public libraries, and in private collections. They include studies and other pieces marked 'Viola da Gamba senza Basso,' sonatas, 'A Viola da Gamba Solo e Basso,' and 'Duettos' marked 'Per la Viola da Gamba e Violoncello.' They evince a high degree of taste, little musical imagination, and unlimited command over the peculiar resources of the instrument. Some adagios from his quartets were published in score, with pianoforte adaptations, 'as a tribute of respect to his memory by his surviving and grateful pupil, J. B. Cramer' (1820). A good idea of Abel's personal appearance is afforded by a caricature representing 'A Solo on the Viola di Gamba, Mr. Abel,' drawn by J. N., 1787, etched by W. V. Gardiner.

Following English traditions, Abel played on a six-stringed viol da gamba, instead of the seven-stringed one commonly in use on the Continent. The instrument shown in his portraits is evidently by an old German maker, and has a brass 'rose' inserted in the belly under the finger-board. E. J. P.

ABEL, Leopold August, born at Cöthen 1717, died at Ludwigslust, August 25, 1794 (*Quellen-Lexikon*); elder brother of the preceding, violinist, and pupil of Benda. He played in the orchestra of the theatre at Brunswick, and was successively conductor of the court band to the Prince of Schwarzburg-Sondershausen (1758), the Margrave of Schwedt (1766), and the Duke of Schwerin (1770). He composed a 'sinfonia a 8 voci' in 1766, and some violin studies, etc., are in the

possession of the Gesellschaft der Musikfreunde at Vienna; he never rose to the reputation of his brother. M. C. C.

ABELL, JOHN, a celebrated alto singer and performer on the lute, was born about 1660, and probably educated in the choir of the Chapel Royal, of which establishment he was sworn a 'gentleman extraordinary' in 1679. He was greatly patronised by royalty, and between the years 1679 and 1688 received 'bounty money' amounting to no less than £740. (See 'Moneys received and paid for secret services of Charles II. and James II.'—*Camd. Soc.*). Charles II. sent him to Italy to study, and after his return Evelyn thus describes meeting him: 'Jan. 27, 1681-82. After supper came in the famous treble, Mr. Abel, newly returned from Italy. I never heard a more excellent voice, and would have sworn it had been a woman's, it was so high and so well and skilfully managed, being accompanied by Signor Francisco on the harpsichord.' He remained in the service of the chapel until the Revolution of 1688, when he was dismissed for his supposed leaning to the Romish religion. After this he travelled abroad, visiting France, Germany, Holland, and Poland, leading a vagrant sort of life, and depending for his support upon his voice and lute. It is said that when Abell was at Warsaw he refused to sing before the court, but his objections were overcome by the somewhat summary method of suspending him in a chair in the middle of a large hall, while some bears were admitted below him. He was asked whether he preferred singing to the king and the court, who were in a gallery opposite to him, or being lowered to the bears; he not unnaturally chose the former alternative. He was Intendant at Cassel in 1698 and 1699 (*Dict. of Nat. Biog.*). About the end of the century, Abell returned to England, and occupied a prominent position on the stage. Congreve, in a letter dated 'Lond. Decem. 10, 1700,' says 'Abell is here: has a cold at present, and is always whimsical, so that when he will sing or not upon the stage are things very disputable, but he certainly sings beyond all creatures upon earth, and I have heard him very often both abroad and since he came over' (*Literary Relics*, 1792, p. 322).

In 1701 Abell published two works, 'A Collection of Songs in Several Languages,' which he dedicated to William III., and 'A Collection of Songs in English.' In 1702 he set a poem by Nahum Tate on Queen Anne's coronation. His death is not recorded, but it was after 1716, when he gave a concert at Stationers' Hall (Hawkins, *Hist.*, *Cheque-Book Chap. Roy.*, etc.). E. F. R.

ABERT, JOHANN JOSEPH, born Sept. 21, 1832, at Kochowitz in Bohemia, began his musical education as a chorister in the church of Gastdorf. In his eighth year he was transferred to the Augustine convent at Leipa, and remained there till his fifteenth year, when he ran away to Prague, and through the assistance of an uncle entered the Conservatorium there. Several of his compositions were performed at the concerts of the school, and in 1852, having attracted the attention of Lindpaintner, then capellmeister at Stuttgart, he received the post of contrabassist in the theatre orchestra of that town. Shortly after this, two symphonies were written. These were followed by a symphonic poem 'Columbus' (Crystal Palace, March 4, 1865), and by four operas, 'Anna von Landskron' (1859), 'König Enzio' (1862), 'Astorga' (1866), 'Ekkehard' (1878), and 'Die Almohaden' (1890), besides many works of smaller calibre. On the retirement of Eckert in 1867, Abert succeeded him as capellmeister, retiring in 1888. His 'Frühlingssymphonie' is dated 1894. M.

ABOS, GERONIMO, born at Malta about 1708, died at Naples about 1786, a composer of the Neapolitan school, and pupil of Leo and Durante. He was a teacher in the Conservatorio of 'La Pietà' at Naples, and trained many eminent singers, of whom Aprile was the most famous. He visited Rome, Venice, Turin, and, in 1756, London, where he held the post of maestro al cembalo at the opera. His operas are 'La Pupilla e 'l Tutore,' 'La Serva Padrona,' and 'L'Ifigenia in Aulide' (Naples), 'L'Artaserse' (Venice, 1746), 'L'Adriano' (Rome, 1750), 'Tito Manlio,' and 'Creso' (London, 1756 and 1758). His church music (see catalogue in *Quellen-Lexikon*) is preserved in manuscript in Naples, Milan, Bologna, Rome, Vienna, Carlsruhe, and the Conservatoire in Paris. The style of his composition somewhat resembles that of Jommelli. M. C. C.

ABRAMS, The Misses HARRIET, THEODOSIA, and ELIZA, were three sisters, vocalists. Harriet, the eldest, was a pupil of Dr. Arne, and first appeared in public at Drury Lane theatre, in her master's musical piece, 'May Day,' on Oct. 28, 1775. She and her sister Theodosia sang at the opening of the Concert of Ancient Music in 1776. Harriet (b. 1760) possessed a soprano, and Theodosia a contralto voice of excellent quality. The youngest sister, Eliza, was accustomed to join with her sisters in the pieces which were sung at the Ladies' Catch and Glee Concerts. The elder two sang at the Commemoration of Handel, in Westminster Abbey, in 1784, and at the principal London concerts for several years afterwards, when they retired into private life. They both attained to an advanced age; Theodosia (then Mrs. Garrow) was living in 1834. Harriet Abrams composed several pleasing songs, two of which, 'The Orphan's Prayer' and 'Crazy Jane,' aided by the expressive singing of her

sister, Theodosia, became very popular. She published, in 1787, 'A Collection of Songs,' and 'A Collection of Scotch Songs harmonised for three voices,' besides other pieces at later dates. W. H. H.

ABSOLUTE and ABSTRACT are terms applied to music that derives none of its interest from external things, and is thus in the strongest contrast to Programme-music.

A reference to the article PROGRAMME-MUSIC will show at how very early a period musicians made the discovery that music could serve an illustrative function, and could be employed in a subordinate capacity to the idea, pictorial, poetic, historical, or what not, that might happen to suggest itself. In more recent times, the vogue of programme-music has so greatly increased that it has been maintained by some writers that music which has no illustrative idea, whether revealed to the public or not, has no right to be considered as artistic music at all. However much the fashion may grow in this direction, it is probable that there will be always, as there always have been in the past, men whose interest in music itself is strong enough to make it worth their while to create works in which the musical idea is sufficient inspiration, in which the adventures, so to speak, of the musical themes, in the process of purely musical development, are of primary importance.

In the great line of the classic composers programme-music holds the very slightest place; an occasional *jeu d'esprit*, like Bach's 'Capriccio on the Departure of a Brother,' or Haydn's 'Farewell' symphony, may occur in their works, but we cannot imagine these men, or the others of the great line, seriously undertaking, as the business of their lives, the composition of works intended to illustrate a definite 'programme.' Beethoven is sometimes quoted as the great introducer of illustrative music, in virtue of the 'Pastoral' symphony, and of a few other specimens of what, by a stretch of terms, may be called programme-music. But the value he set upon it as compared with 'absolute' music may be fairly gauged by seeing what relation his 'illustrative' works bear to the others. Of the nine symphonies, only one has anything like a programme; and the master is careful to guard against misconceptions even here, since he superscribes the whole symphony, 'More the expression of feeling than painting.' Of the pianoforte sonatas, op. 90 alone has a definite programme; and in the 'Muss es sein?' of the string quartet, op. 135, the natural inflections of the speaking voice, in question and reply, have obviously given purely musical suggestions which are carried out on purely musical lines. It is only natural that programme-music should for the time being be more popular with the masses than absolute music, since the majority of people like having something else to think of while they are listening to music. Tchaikovsky's 'Pathetic' symphony is a good instance of a work that is evidently written to a programme the exact import of which is not revealed; but this, like some of the tone-poems of Richard Strauss, or Elgar's 'Cockaigne,' can be listened to as absolute music with quite as much pleasure as if the poetical idea were always obtruded upon the hearer's attention. At the present moment, the symphonies of Brahms seem to be the last great monument of absolute music; but there is no reason to suppose that the art of writing music independently of external suggestions has expired with him. M.

ABT, FRANZ, born at Eilenburg in Prussian Saxony, Dec. 22, 1819. His father was a clergyman, and Franz, though destined to the same profession, received a sound musical education, and was allowed to pursue both objects at the Thomasschule and University of Leipzig. On his father's death he relinquished the Church as a profession and adopted music entirely. He was successively capellmeister at Bernburg and Zürich (1841), where he occupied himself more especially with men's voices, both as composer and conductor of several societies. In 1852 he entered the staff of the Hof-theater at Brunswick, where until his retirement in 1882 he filled the post of leading capellmeister. He died at Wiesbaden, March 31, 1885.

Abt is well known by his numerous songs for one or more voices, which betray an easy fluency of invention, couched in pleasing popular forms, but without pretence to depth or individuality. Many of his songs, as for instance 'When the swallows,' were at one time universally sung, and have obtained a more or less permanent place in the popular repertory. His greatest successes in Germany and Switzerland have been obtained in part-songs for men's voices, an overgrown branch of composition unfortunately devoted to the pursuit of the mere superficial enjoyment of sweet sounds, and to a great extent identified with his name.

The list of Abt's compositions is enormous, and contains more than 400 works, consisting chiefly of 'Lieder' of the most various kinds for one, two, or three solo voices, as well as for chorus, both female and mixed, and, as already mentioned, especially for men's voices. Of the solo 'Lieder,' a collection of the less-known ones has been published by Peters under the title of 'Abt-Album.' In the early part of his life Abt composed much for the pianoforte, chiefly pieces of light *salon* character. These have never had the same popularity as his vocal works, and are now virtually forgotten. A. M.

ABU HASSAN, a comic singspiel or operetta in one act, the words by Hiemer, the music by Weber, composed between August 11, 1810,

and Jan. 12, 1811. It seems to have been produced on the 4th of the following June at Munich, under Winter. In London it was produced in English at Drury Lane in 1835, and in Italian at Drury Lane on May 12, 1870 (at the same time with Mozart's 'Oca del Cairo'), the translation being made by Marchesi, and the dialogue set to recitative by Arditi. There appear to have been only two performances (see WEBER). G.

ABYNGDON, HENRY. An English ecclesiastic and musician. He succeeded John Bernard as succentor of Wells on Nov. 24, 1447, and held that post till his death on Sept. 1, 1497, when he was succeeded by Robert Wydewe (Beckynton's and Oliver King's Registers at Wells). He was admitted a bachelor of music at Cambridge on Feb. 22, 1463, this being the first musical degree recorded at any university. In addition to the succentorship at Wells, Abyngdon held the office of 'Master of the Song' of the Chapel Royal in London, to which he was appointed in May 1465 at an annual salary of forty marks, confirmed to him by a subsequent Act of Parliament in 1473-74 (Rimbault, *Cheque-book of Chapel Royal*, p. 4). He was also made Master of St. Catherine's Hospital, Bristol, in 1478 (Collinson, ii. 283). Two Latin epitaphs on Abyngdon by Sir Thomas More have been preserved (Cayley's *Life of More*, i. 317), of which the English epitaph quoted by Rimbault from Stonyhurst is an adaptation. In these he himself is styled 'nobilis,' and his office in London 'cantor,' and he is said to have been pre-eminent both as a singer and an organist:—

Millibus in mille cantor fuit optimus ille,
Praeter et haec ista fuit optimus orgaquenista.

More's friendship is evidence of Abyngdon's ability and goodness, but the acquaintance can only have been slight, as More was but seventeen when Abyngdon died. None of his works are known. G.

ACADÉMIE DE MUSIQUE. This institution, which, following the frequently changed political conditions of France since 1791, has been called in turn *Royale*, *Nationale*, and *Impériale*, has already entered its fourth century. In 1669 royal letters patent were granted by Louis XIV. to the Abbé Perrin, Robert Cambert, and the Marquis de Sourdéac, for the establishment of an Académie wherein to present in public 'operas and dramas with music, and in French verse,' after the manner of those of Italy, for the space of twelve years. Nearly a century prior to this, in 1570, similar privileges had been accorded by Charles IX. to a Venetian, C. A. de Baif, in respect to an academy 'de poésie et de musique,' but its scheme does not appear to have included dramatic representation. In any case it failed utterly. The establishment of the existing institution was, however, also preceded, and therefore facilitated, by a series of performances in Italian by Italian artists, beginning in 1584 and continued with little interruption till 1652, and by rarer though not less important ones by French artists, beginning from 1625, when 'Akébar, roi du Mogol,' was produced in the palace of the Bishop of Carpentras. This has frequently been spoken of as the earliest veritable French opera; but that title is more justly due to the 'Pastorale en musique' of CAMBERT—the subject of which was given to the Abbé Perrin by the Cardinal Legate of Innocent X.—first performed at Issy in 1659. Two years after, Cambert followed this opera by 'Ariane,' and in the following year by 'Adonis.' The Académie was opened in 1671 with an opera by the same master, 'Pomone,' which attained an enormous success; having been repeated, apparently to the exclusion of every other work, for eight months successively. The 'strength' of the company engaged in its performance presents an interesting contrast with that of the existing grand opera, and even of similar establishments of far less pretension. The troupe consisted of five male and four female principal performers, fifteen chorus-singers, and an orchestra numbering thirteen! The career of the Académie under these its first entrepreneurs was brought to an end by the jealousy of an Italian musician then rising in court favour, J. BAPTISTE LULLY, who, through his influence with Mme. de Montespan, succeeded in obtaining for himself the privileges which had been accorded to Perrin and Cambert. The latter, the master spirit of the enterprise thus wrecked, notwithstanding his hospitable reception by our Charles II., died in London shortly afterwards, at the age of forty-nine, of disappointment and home-sickness. By this disreputable proceeding Lully made himself master of the situation, remaining to the time of his death, in 1687, the autocrat of the French lyric drama. During these fourteen years he produced, in concert with the poet QUINAULT, no fewer than twenty grand operas, besides other works. The number, success, and, more than all, the merit, of these entitle Lully to be regarded as the founder of the school of which Meyerbeer may claim to have proved the most distinguished alumnus; though, as we have seen, its foundation had been facilitated for him by the labours of others. In the course of his autocracy, Lully developed considerably musical form in its application to dramatic effect, and added considerably to the resources of the orchestra; though, in comparison with those of more recent times, he left them still very meagre. He is said to have first obtained permission, though in spite of great opposition, for the appearance of women on the stage; but as the troupe of his predecessor Cambert included four, his

claim to their first introduction there needs qualification. Probably he got prohibition, which had ceased to be operative, exchanged for avowed sanction. The status of the theatrical performer at this epoch would seem to have been higher than it has ever been since; seeing that, by a special court order, even nobles were allowed, without prejudice to their rank, to appear as singers and dancers before audiences who paid for admission to their performances. What it was somewhat later may be gathered from the fact that, not to mention innumerable less distinguished instances, Christian burial was refused (1673) to Molière ann (1730) to Adrienne Lecouvreur. Lully's scale of payment to authors, having regard to the value of money in his time, was liberal. The composer of a new opera received for each of the first ten representations 100 livres (about £4 sterling), and for each of the following twenty representations, 50 livres. After this the work became the property of the Académie. The theatre was opened for operatic performance three times a week throughout the year. On great festivals concerts of sacred music were given. The composers contemporary with Lully (many of them his pupils) could only obtain access to the Académie by conforming to his style and working on his principles. Some few of these, however, whose impatience of the Lullian despotism deprived them of all chance of a hearing within its walls, turned their talents to account in the service of the vagrant troupes of the Foire Saint-Germain; and with such success as to alarm Lully both for his authority and his receipts. He obtained an order (*more suo*) for the suppression of this already dangerous rivalry, which, however, proved itself far too supple for legislative manipulation. The 'vagrants' met each new ordonnance with a new evasion, and that of which they were the first practitioners, and the frequenters of the Foire the first patrons, subsequently grew into the most delightful, because the most truly natural, of all French art products, the Opéra Comique. The school of composition established by Lully did not die with its founder; nor for many years was any serious violation of his canons permitted by his adopted countrymen. Charpentier (1634-1702), a composer formed in the school of Carissimi, was unsuccessful in finding favour for the style of his master; Campra (1660-1744) was somewhat less so; while Marais, Desmarets, Lacoste, and Montéclair were gradually enabled to give more force, variety, and character to orchestration. The last of these (1666-1737) first introduced the three-stringed double-bass, on which he himself was a performer, into the orchestra. But a condition of an art on the whole so stagnant as this was sure eventually to become insupportable, if not to the public, to the few who at all times, consciously or unconsciously, direct or confirm its inclinations. Their impatience found expression in the Abbé Raguenet's *Parallèle des Italiens et des Français, en ce qui regarde la musique et les opéras* (1704), one of a considerable number of essays which assisted in preparing the way for a new style, should a composer present himself of sufficient genius, culture, and courage, to introduce it. Such an one at length did present himself in JEAN PHILIPPE RAMEAU, whose arrival in Paris in 1721, at the somewhat mature age of forty-two, forms an epoch in the history not merely of French opera but of European music. In the face of much opposition this sturdy Burgundian succeeded first in obtaining a hearing from and eventually in winning the favour—though never to the same extent as Lully the affections—of the French people. Between 1737 and 1760, irrespective of other work, he set to music no less than twenty-four dramas, the majority of them grand operas. The production of these at the Académie he personally superintended; and some idea of his activity and influence as a director may be gathered from the fact that in 1750, fourteen years before the close of his career, the number of performers engaged at the Académie had risen to 149; a number, doubtless, to some extent rendered necessary by the increased craving of the public ear for intensity, but more by the varieties of musical effect of which he himself had been the inventor. In 1763 the theatre of the Palais Royal, built by Lemercier, so long resonant with the strains of Lully and Rameau, was destroyed by fire. The ten years which connected the death of Rameau with the arrival in Paris of GLUCK were marked by the production of no work of more than secondary rank. On April 19, 1774, the 'Iphigénie en Aulide' of this master was heard for the first time. The production of this work was followed by that of a series of others from the same hand, one and all characterised by a direct application of musical form and colour to dramatic expression before unknown to the French or any other theatre. The arrival in Paris, shortly after, of the admirable PICCINNI brought Gluck into relation with a master who, while not unworthy to cope with him as a musician, was undoubtedly his inferior as a diplomatist. Between these two great composers the parts of the typical '*rusé* Italian' and the 'simple-minded German' were interchanged. The latter left no means untried to mar the success of the former, for whose genius he openly professed, and probably felt, high admiration; and in the famous war of the Gluckists and Piccinnists—whose musical knowledge for the most part was in inverse ratio to their literary skill—the victory which fell eventually to the former was the result no less of every species of chicanery on the part of Gluck than of genius especially adapted to

captivate a people always more competent to appreciate dramatic than musical genius. In 1781 the second Palais Royal theatre, like its predecessor, was burnt to the ground. The Académie, for many weeks without a home, at length took temporary refuge in the Salles des Menus-Plaisirs. Meanwhile the architect Lenoir completed the Salle de la Porte Saint-Martin in the short space of three months. The result of this extravagant speed was that, after the first performance, said to have been attended (*gratis*) by 10,000 persons, the walls were found to have 'settled' two inches to the right and fifteen lignes to the left. In 1784 an École Royale de Chant et de Déclamation, afterwards developed into the Conservatoire, was grafted on to the Académie. In 1787 the Académie troupe is said to have consisted of 250 persons—an increase of 100 on that of Rameau. The unfortunate Louis XVI. took great interest in the Académie, and even gave much personal attention to its regulation. He reduced the working expenses by nearly one-half; not at the cost of the working members, but by the abolition of sinecures and other incumbrances on its income. In 1784 he established prizes for libretti, and in 1787 issued several well-considered ordonnances for the regulation of the establishment. But from 1789 the thoughts of the ill-starred king were exclusively occupied by more weighty and more difficult subjects. On April 20, 1791, the royal family attended the Académie for the last time. The opera was the 'Castor et Pollux' of Rameau. Shortly after this the 'protection,' or exclusive right of performance of grand opera, was withdrawn from the Académie and the *liberté des théâtres* proclaimed. Hitherto the names of the artists concerned in the Académie performances had never been published. This rule was violated for the first time in the *affiche* announcing 'L'Offrande à la Liberté,' an opera-ballet by Gardel and Gossec. The history of the Académie during the next few years is a part of the history of the French Revolution, and could only be made intelligible by details out of all proportion with our space. The sociétaires, as public officers, were largely occupied in lending the charms of their voices and instruments—the only charms of which they were receptive—to 'Fêtes de la Raison,' 'Sans-Culottides,' and eventually to 'Hymnes à l'Etre Suprème,' alike unmeaning, indecent, or blasphemous. In many of these the talents of the illustrious Cherubini, who had taken up his residence in Paris in 1788, were employed. The chronological 'Notice' of his compositions, which he himself drew up (Paris, 1843), contains the titles of a large number of productions of this class—'Hymne à la Fraternité,' 'Chant pour le Dix Août,' 'Le Salpêtre Républicain,' and the like. In 1794 the Académie was transferred to the Rue de Richelieu, a locality (the site of the Hôtel Louvois) chosen, it was said, by Henriot, convinced of 'the inutility of books,' in the hope that an establishment so liable to conflagration as a theatre might lead to the destruction of the Bibliothèque Nationale contiguous to it! In its new abode the Académie took a new name—Théâtre des Arts. Here for the first time the pit was provided with seats. In the four or five years following this removal, the habitués of the Académie became weary of a repertoire having constant ultimate reference to *liberté*, *fraternité*, or *egalité*. The old operas, subjected always to democratic purification, were again heard. In 1799 Gluck's 'Armide' was revived. During the consulate no new works of importance were brought forward at the Théâtre des Arts, eventually the scene of two conspiracies against the First Consul, which, had they been successful, would have altered seriously the subsequent history of Europe. On the occasion of the first of these the 'Horaces' of Porta, and on that of the second the 'Creation' of Haydn were performed, the latter for the first time in Paris. During the ten years which follow 1804 French opera was much developed through the labours both of foreign and of native composers; among the former, Spontini, Rodolphe Kreutzer, and Cherubini; among the latter Lesueur and Catel. Among the most important of their works were 'Les Bardes' of Lesueur and 'La Vestale' of Spontini—the latter an enormous success won despite bitter and long-continued opposition. To Spontini, on account of it, was awarded the prize of 10,000 francs, decreed at Aix-la-Chapelle by Napoleon for the best opera produced at the Académie (now) Imperiale. In 1814 the allies occupied Paris, and the Emperor of Russia and the King of Prussia assisted at a performance of 'La Vestale' on April 1. On May 17 following 'Œdipe à Colone' and a Ballet de Circonstance were played before Louis XVIII. On April 18, 1815, Napoleon witnessed another performance of 'La Vestale,' and on July 9 of the same year the same opera was again performed before Louis XVIII., the Emperor of Austria, and the King of Prussia. The assassination of the Duc de Berri on the evening of Feb. 13, 1820, interrupted for several months the performances of the Académie. The act and its consequences were attended by every conceivable circumstance that could add to their ghastliness. The dying victim, who could not be removed from the theatre, lay, surrounded by his weeping family, separated only by a thin partition from an audience, unconscious, of course, of the tragedy in progress behind the scenes, convulsed with laughter at the antics of Polichinelle! The last sacraments of the church were administered to the duke on condition—exacted, it may be presumed, by

the clergy in attendance—that the building in which these horrors were being enacted should be forthwith demolished. On May 3, 1821, the Académie troupe resumed its performances in the Salle Favart, with an Opéra de Circonstance, the combined work of Berton, Boieldieu, Kreutzer, Cherubini, and Paer, in honour of the infant Duc de Bordeaux. In the next year the Académie was again transferred—this time to the Rue Le Peletier, the salle of which was destined to be for many succeeding years its home, and the scene of even greater glories than any it had yet known. About this time a change of taste in music, mainly attributable to a well-known critic, Castil-Blaze, showed itself among the opera habitués of Paris. French adaptations of the German and Italian operas of Mozart, Rossini, Meyerbeer, and even Weber, were produced in rapid succession and received with great favour. The 'Freischütz' of the last great master was performed at the Odéon 387 times in succession. The inevitable result soon followed. The foreign composers who had so effectually served the Académie indirectly, were called upon to serve it directly. The career of Mozart, alas! had, many years before, come to an untimely end, and that of Weber was about to prove scarcely more extended. But Rossini and Meyerbeer, though already renowned and experienced, had not yet reached the age when it is impossible or even very difficult to enter on a new career. They became and remained French composers. Meanwhile HÉROLD, AUBER, and other native musicians, had made themselves known by works of more than promise; and the services of a body of operatic composers, foreign and French, unprecedented in number and ability, were made to contribute at the same time to the pleasure of a single city and the prosperity of a single institution. By a fortunate coincidence, too, there flourished during this period a playwright, Augustin Eugène Scribe, who, despite his *style impossible*, must be regarded as the greatest master the theatre has known of that most difficult and thankless of literary products, the libretto. The two years immediately preceding, and the eighteen following the revolution of July form the period during which the Académie attained its highest excellence and success. Not to speak of a large number of works which in other times might have deserved special mention, this period includes the composition and production of the 'Comte Ory' and the 'Guillaume Tell' of Rossini, the 'Muette' of Auber, the 'Robert le Diable' and 'Huguenots' of Meyerbeer, the 'Juive' and 'Charles VI.' of Halévy, the 'Favorite' of Donizetti, and the 'Benvenuto Cellini' of Berlioz. These works were performed almost exclusively by native artists, whose excellence has especial claims on our admiration from the fact that, fifty years before, singing as an art can scarcely be said to have existed in France. Writing from Paris in 1778, Mozart says: 'And then the singers!—but they do not deserve the name; for they do not sing, but scream and bawl with all their might through their noses and their throats.' With the times, like many other things, French singing had certainly changed in 1830. Transitory as is the reputation of the average vocalist, the names of Cinti-Damoureau, Falcon, Nourrit, Levasseur, and the later Duprez, are as little likely to be forgotten as those of the admirable masters of whose works they were the first interpreters. Since 1848 the lyric dramas produced at the Académie hold no place beside those of earlier date. Few of them—this is the best of tests—have been performed with any success, or even at all, out of France. The 'Prophète' of Meyerbeer and the 'Vêpres Siciliennes' of Verdi present all but the only exceptions; and the composition of the former of these belongs to an earlier epoch. In 1861, when the second empire was, or seemed to be, at its zenith, the foundations were laid in Paris of a new Académie, designed on a scale, as respects magnitude and luxury, unprecedented in any age or country. Its progress, from the first slow, was altogether stopped by the Franco-German war and the political changes accompanying it. The theatre in the Rue Le Peletier having meanwhile, after the manner of theatres, been burnt to the ground, and the works of the new one resumed, the Académie, installed in its latest home, once more opened its doors to the public on Jan. 5, 1875. In some respects the new theatre is probably the most commodious yet erected.

Since the foundation of the Académie in 1669, its relations with the Government, though frequently changed, have never been altogether interrupted. The interference of the state with the entrepreneur has been less frequent or authoritative at one time than at another; but he has always been responsible to a 'department.' Before and up to the Revolution the ultimate operatic authority was the King's Chamberlain; under the Empire the Steward of the Imperial Household; under the Restoration the King's Chamberlain again; under Louis Philippe the Minister of Fine Art; and under Napoleon III. (after the manner of his uncle) the Steward of the Imperial Household again. The arbitrary rule of one of these officers, Marshal Vaillant, brought the working of the Académie to a complete standstill, and the Emperor was compelled to restore its supervision to the Minister of Fine Art. From the foundation of the Académie to the present time its actual management has changed hands, in the course of two centuries, nearly fifty times, though many managers have held office more

than once; giving an average of only four years to each term of management. In 1875 the entrepreneur, subject to the Minister of Fine Art, was M. Halanzier, who received from the State a yearly allowance (*subvention*) of £32,000, the principal conditions of the enjoyment of which were that he should maintain an efficient staff, open his theatre four times a week, and give favourable consideration to new works by native composers.

[The present director is M. Gailhard, who is in office till 1908. The succession of conductors since 1887 has been as follows: Vianesi (1887), Lamoureux (1891), Colonne (1892), Madier de Montjau (1893), Taffanel (1893), Maugin (1894), P. Vidal (1896).]

The facts in this article are drawn from the following works, amongst others:—*Histoire de la Musique dramatique en France*, Gustave Chouquet, 1873; *Histoire de la Musique en France*, Ch. Poisot, 1860; *Notice des Manuscrits autographes de la Musique composée par Cherubini*, 1845; Koch's *Musikalisches Lexicon*, edited by von Dommer; *Critique et littérature musicales*, Scudo, 1859; *Mémoires pour servir à l'histoire de la Revolution opérée dans la Musique par M. le Chevalier Gluck*, 1781. ACADEMY OF ANCIENT MUSIC. This association was formed about the year 1710 at the Crown and Anchor Tavern in the Strand, by a body of distinguished instrumentalists, professional and amateur, including the Earl of Abercorn, Mr. Henry Needler, Mr. Mulso, and other gentlemen, for the study and practice of vocal and instrumental works; and an important feature in the scheme was the formation of a library of printed and MS. music. The Academy met with the utmost success under the direction of Dr. Pepusch, the gentlemen and boys of St. Paul's Cathedral and the Chapel Royal taking part in the performances. In 1728 Dr. Maurice Greene left the Academy and established a rival institution at the Devil Tavern, Temple Bar, but this only existed for a few years, and the old Academy continued its work, with Mr. Needler as leader of the orchestra. In 1734 there was a second secession from the Academy, Mr. Gates retiring and taking with him the children of the Chapel Royal. After passing through one season without any treble voices the Academy issued invitations to parents to place their children under the instruction of Dr. Pepusch, one of the conditions being that they should sing at the concerts. A subscription list was also opened to provide the necessary funds, and among those who supported the Academy were Handel and Geminiani, the latter of whom frequently played at its concerts. The death of Dr. Pepusch in 1752 was a serious loss to the institution, but the doctor bequeathed to it the most valuable portion of his library. The Academy closed its career in 1792 under the conduct of Dr. Arnold, who had been appointed its director in the year 1789. C. M.

ACADEMY OF MUSIC, NEW YORK. This is not an academy in the English sense of the word, but is the name of a large building employed for the performance of operas and concerts, opened in 1854, burnt down in 1866, reopened in Feb. 1867. The chief public institution in New York for teaching music is the NEW YORK CONSERVATORY OF MUSIC.

ACADEMY OF VOCAL MUSIC, THE. This society was started on 'Fryday, Jan. 7, $172\frac{5}{6}$, at the Crown Tavern, against St. Clement's Church, in y^{e} Strand,' according to the original minute-book presented to the British Museum by Vincent Novello (Add. MS. 11,732). The meetings were held fortnightly from 7 to 9 P.M. At the first, the thirteen persons who paid a subscription of half-a-crown each included King, Gates, Wesley, Pepusch, Green, and Gaillard. The expenses of that evening included—

	s.	d.
A coach for ye children [the choristers of St. Paul's Cathedral] .	2	0
Wine and bread	10	6
For the use of ye room, fire, and candles .	5	0
The Drawer . . .	1	0

A fortnight later the names of Flintoft and Dr. Crofts appear,—they each paid half-a-guinea; and among subsequent names of subscribers those of Bononcini, Haym, Geminiani, Senesino, and Dieupart. In 1729 the sixty-nine subscribers included Hogarth, Festing, Robinson, and Randall. On June 1, 1727, Steffani was elected President. The last entry in the minute-book (from which these particulars are derived) contains various resolutions drawn up on May 26, 1731, one of them being 'By ye composition of the Ancients is meant of such as lived before ye end of the 16th century'; another, 'That Dr. Pepusch be desired to demand of Dr. Green the Six Mottetts ye Bishop of Spiga [Steffani] sent the Academy.' The name of Handel is absent from the roll of members. Vincent Novello has endorsed the MS. to the effect that the Academy of Vocal Music afterwards became the King's Concerts of Ancient Music, but this needs confirmation. F. G. E.

ACADEMY, ROYAL, OF MUSIC. See ROYAL ACADEMY.

A CAPPELLA, or ALLA CAPPELLA (Ital., 'in the church style'), is used in three senses, (1) as showing that the piece is for voices without accompaniment; (2) where instruments are employed, that these accompany the voices only in unisons or octaves and have no independent parts; or (3) as a time indication, in which case it is equivalent to ALLA BREVE.

A CAPRICCIO (Ital.). 'At the caprice' or pleasure of the performer, both as regards time and expression.

ACCADEMIA, an institution which flourished all over Italy in the 16th and 17th centuries,

and, speaking generally, was founded for promoting the progress of science, literature, and art. Il Quadrio (*Storia e Ragione*, i. 48-112) gives an account of all the Italian academies from the earliest times, and the mere alphabetical list would fill several pages. Even from his voluminous work but little beyond the names and mottoes of these institutions, the dates of their foundation, and their general objects can be ascertained. A detailed history of their endowments and separate objects would require an examination into the archives of each particular city, and it is doubtful whether such an examination would supply full information or repay it when supplied. Nor is it an easy task to separate those institutions which had music for their especial object.

The 'Accademie,' even those especially devoted to music, do not come under the same category as the CONSERVATORIOS. The latter were schools founded and endowed for the sole purpose of giving instruction in music. The Academies were either public institutions maintained by the state, or private societies founded by individuals to further the general movement in favour of science, literature, and the fine arts. This they did in various ways, either by public instructions and criticisms, facilitating the printing of standard works on music, illustrating them with fresh notes, or by composing new ones; and every week the Academicians would assemble to compare their studies and show proofs of their industry. The study of one science or art would often help to illustrate the other. By the end of the 16th century poetry had become so closely allied to music in the drama that an academy could hardly have one of these arts for its object without including the others also, while many, like the 'Alterati' at Florence, the 'Intrepidi' at Ferrara, the 'Intronati' and the 'Rozzi' at Siena, devoted their energies to promoting the successful combination of the two arts in theatrical representation.

As far as regards science, the study of mathematical proportions was found to throw light upon the theory and the practice of music, when the Greek writers upon music came to be translated and studied in Italy in the 16th and 17th centuries. Take, for example, the mathematical demonstrations of Galileo in his *Trattàto del Suon*, the writings of the great Florentine theorist, Giambattista Doni (a member of the literary academy 'Della Crusca'), and Tartini's *Trattato di Musica*. From the 15th to the 18th century the passion for academical institutions was so vehement in Italy that there was scarcely a town which could not boast at least one, while the larger cities contained several. At first they went by the name of their founder, as that of 'Pomponio Leto' at Rome, or 'Del Pontano' at Naples. But as they increased and multiplied this did not suffice, and each chose a special name either with reference to its particular object or from mere caprice. Hence arose a number of elaborate designations indicative either of praise or blame, 'Degli Infiammati,' 'Dei Solleciti,' 'Degl' Intrepidi,' etc. Each of these societies had, moreover, a device bearing a metaphorical relation to its name and object. These were looked upon as important, and were as highly esteemed as the crests and coats-of-arms of the old nobility.

Selecting, as far as possible, the academies which had the cultivation of music for their special object, we find that the earliest in Italy were those of Bologna and Milan, founded, the former in 1482, the latter in 1484. In the 16th and 17th centuries Bologna had four societies for public instruction in music, Cesena and Ferrara one each, Florence five, Padua and Salerno one each, Siena four, entirely for musical dramatic representations, Verona one, founded by Alberto Lavezzola—a combination of two rival institutions which in 1543 became united —Vicenza two, also founded entirely for musical representation.

At this period there appears to have been no particular academy for music either at Milan, Rome, Naples, or Venice, though the science was probably included in the general studies of the various academies which flourished in those cities, while it could be specially and closely studied in the famous Neapolitan and Venetian Conservatorios (see CONSERVATORIO) or under the great masters of the Pontifical and other Chapels at Rome.

The 'Accademie' were all more or less short-lived, and that of the 'Filarmonici' (at Bologna) is the only one which Burney (*Musical Tour*, 1773) mentions as still extant. It is difficult to determine how far the musical life of Italy was affected by these Accademie and Conservatorios; certainly the genius of Palestrina, Stradella, or Cherubini, can no more be attributed to them than that of Dante to the Schools; while the Accademia della Crusca might lacerate the heart of Tasso by picking to pieces a poem which not one of her Academicians could have produced. Yet, on the other hand, it may be urged that lovers of music owe much to such institutions when their members are capable of discerning the bright light of genius and cheering it during its existence, besides being ready to impart the information which is required for the general purposes of musical science (see BOLOGNA, CONSERVATORIO, FERRARA, FLORENCE, MILAN, NAPLES, PADUA, ROME, VENICE).

The name 'Accademia' is, or was, also given in Italy to a private concert. Burney says in his *Musical Tour*: 'The first I went to was composed entirely of dilettanti. Il Padrone, or the master of the house, played the first violin, and had a very powerful band; there were twelve or fourteen performers, among whom

were several good violins; there were likewise two German flutes, a violoncello, and small double bass; they executed, reasonably well, several of our [J. C.] Bach's symphonies, different from those printed in England: all the music here is in MS. . . . Upon the whole, this concert was much upon a level with our own private concerts among gentlemen in England' (*Tour*, ii. 94, 95). From Italy the use of the word spread to Germany. 'Besuche er mich nicht mehr,' said Beethoven on a memorable occasion, 'keine Akademie!' C. M. P.

ACCELERANDO (Ital.). Gradually quickening the speed. In the finale to his quartet in A minor (op. 132) Beethoven is not satisfied with the Italian term, but has added above it 'immer geschwinder.' E. P.

ACCENT. As in spoken language certain words and syllables receive more emphasis than others, so in music there are always some notes which are to be rendered comparatively prominent; and this prominence is termed 'accent.' In order that music may produce a satisfactory effect upon the mind, it is necessary that this accent (as in poetry) should, for the most part, recur at regular intervals. Again, as in poetry we find different varieties of metre, so in music we meet with various kinds of time; *i.e.* the accent may occur either on every second beat, or isochronous period, or on every third beat. The former is called common time, and corresponds to the iambic or trochaic metres; *e.g.*

Away! nor let me loiter in my song,

or

Fare thee well! and if for ever.

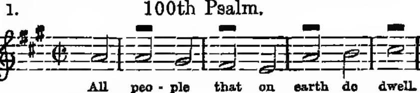
When the accent recurs on every third beat, the time is called triple, and is analogous to the anapæstic metre; *e.g.*

The Assyrian came down like the wolf on the fold.

[In music of the madrigalian era, the strong marking of the accent seems to have been only usual in dance music, and in vocal Ballets or Fa-las; in anthems, motets, and madrigals the strong stress on the first beat of the bar was not contemplated. What should be aimed at in music where the imitation of one voice by another is close and at irregular intervals, is not a common accent in all the parts, but separate accents in each part. (Preface to vol. xxi. of G. E. P. Arkwright's Old English Edition.)]

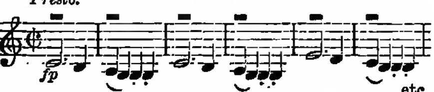
In modern music the position of the accent is indicated by bars drawn across the stave. Since the accents recur at regular intervals it follows of course that each bar contains either the same number of notes or the same total value, and occupies exactly the same time in performance, unless some express direction is given to the contrary. In every bar the first note is that on which (unless otherwise indicated) the strongest accent is to be placed. By the older theorists the accented part of the bar was called by the Greek word *thesis*, *i.e.* the *putting down*, or 'down beat,' and the unaccented part was similarly named *arsis*, *i.e.* the *lifting*, or 'up beat.' In quick common and triple time there is but one accent in a bar; but in slower time, whether common or triple, there are two—a stronger accent on the first beat of the bar, and a weaker one on the third. This will be seen from the following examples, in which the strong accents are marked by a thick stroke (▬) over the notes, and the weak ones by a thinner (—).

1. 100th Psalm.



2. Beethoven, Eroica Symphony (Scherzo).

3. Beethoven, Symphony in C minor (Finale).



4. Haydn, Quartet, Op. 76, No. 1 (1st movement).

5. Beethoven, Trio, Op. 70, No. 2 (3rd movement).

The above five examples show the position of the accents in the varieties of time most commonly in use. The first, having only two notes in each bar, can contain but one accent. In the second and third the time is too rapid to allow of the subsidiary accent; but in the other two both strong and weak accents will be plainly distinguishable when the music is performed.

It will be observed that in all these examples the strong accent is on the first note of the bar. In music of regular form this is its invariable position. [What are called 'cross-accents' should properly be explained as cases where the emphasis and the natural accent contradict one another; in all cases of syncopation, such as in the following examples, the natural accent of the bar is felt, and the displaced emphasis gains in effect by the fact that the accent is felt.] Just as in poetry the stress is sometimes thrown

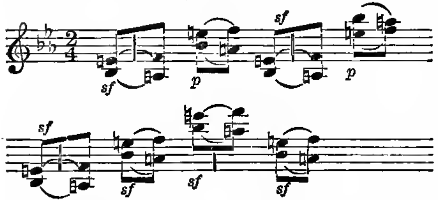
backward or forward a syllable, as for instance in the line

Stop! for thy tread is on an Empire's dust,

where the first syllable instead of the second receives the stress, so in music, though with much more frequency, we find the emphasis transferred from the first to some other beat in the bar. Whenever this is done it is always clearly indicated. This may be done in various ways. Sometimes two notes are united by a slur, showing that the former of the two bears the emphasis, in addition to which a *sf* is not infrequently added; *e.g.*

6. HAYDN, Quartet, Op. 54, No. 2 (1st movement).

7. BEETHOVEN, Sonata, Op. 27, No. 1 (Finale).



In the former of these examples the phrasing marked for the second and third bars shows that the emphasis in these is to fall on the second and fourth crotchets instead of on the first and third. In Ex. 7 the alteration is even more strongly marked by the *sf* on what would naturally be the unaccented quavers. Another very frequent method of changing the position of the stress is by means of SYNCOPATION. This was a favourite device with Beethoven, and the two following examples will illustrate the point:

8. Symphony in B♭ (1st movement).

9. Sonata, Op. 28 (1st movement).

In the following example,

10. SCHUMANN, Phantasiestücke, Op. 12, No. 4,

will be noticed not merely a reversal of the emphasis as in the extracts from Beethoven previously given, but also in the last three bars an effect requiring further explanation. This is the displacing of the stresses in such a way as to convey to the mind an impression of an alteration of the time. In the above passage the last three bars sound as if they were written in 2-4 instead of in 3-4 time. This effect, frequently used in modern music, is nevertheless at least as old as the time of Handel. A remarkable example of extension of rhythm, so that two bars of 3-4 time are made to sound like one bar of 3-2, is to be found in a duet by Steffani, beginning as follows:

11.

As instances of this device in the works of later composers may be quoted the following:

12. BEETHOVEN, Eroica Symphony (1st movement).

13. WEBER, Sonata in C (Menuetto).

The device of making a passage in common time sound as if it were in triple is much less frequently employed. An example which is too long for quotation may be seen in the first movement of Clementi's Sonata in C, op. 36, No. 3. Beethoven also does the same thing in the first movement of his symphony in B flat.

14.

Though no marks of phrasing are given here, as in some of the examples previously quoted, it is obvious from the form of the passage, which consists of a sequence of phrases of three minims each, that the feeling of triple time is conveyed to the hearer. In this contradiction of the natural accent lies the main charm of the passage.

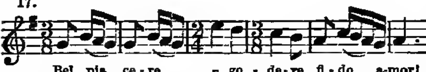
Of the modern employment of this artifice the following examples will suffice:

15. SCHUMANN, P. F. Concerto (Finale).

16. BRAHMS, 'Schicksalslied.'

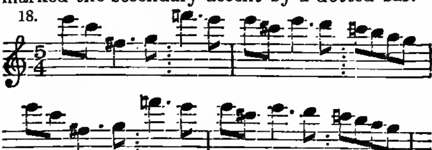
It will be seen from the above extracts what almost boundless resources are placed at the disposal of the composer by this power of varying the position of the accent. It would be easy to quote at least twice as many passages illustrating this point; but it must suffice to have given a few representative extracts showing some of the effects most commonly employed. Before leaving this part of the subject a few examples should be given of what may be termed the curiosities of accent. These consist chiefly of unusual alternations of triple and common-time accents. In all probability this peculiar alternation was first used by Handel in the following passage from his opera of 'Agrippina':

17.



In the continuation of the song, of which the opening bars are given here, the alternations of common and triple time become more frequent. In the rare cases in which bars of 3-4 and 2-4 time alternate, they are sometimes written in 5-4 time, the accent coming on the first and fourth beats. An example of this time is found in the third act of Wagner's 'Tristan und Isolde,' in which the composer has marked the secondary accent by a dotted bar.

18.



A similar example, developed at greater length, may be seen in the tenor air in the second act of Boieldieu's 'La Dame Blanche.'

[The second movement of Tchaikovsky's 'Pathetic' Symphony contains the best-known modern example of a genuine quintuple rhythm, so happily treated that no feeling of eccentricity is created.]

One of the most interesting experiments in mixed accents that has yet been tried is to be found in Liszt's oratorio 'Christus.' In the pastorale for orchestra entitled 'Hirtengesang an der Krippe' the following subject plays an important part:

19.

It is impossible to reduce this passage to any known rhythm; but when the first feeling of strangeness is past there is a peculiar and quaint charm about the music which no other combination would have produced. Such examples as those last quoted are however given merely as curiosities, and are in no way to be recommended as models for imitation.

Besides the alternation of various accents, it is also possible to combine them simultaneously. The following extract from the first finale of 'Don Giovanni' is not only one of the best-known but one of the most successful experiments in this direction:

20.

In the above quotation the first line gives a quick waltz in 3-8 time with only one accent in the bar, this accent falling with each beat of the second and third lines. The contredanse in 2-4 time and the minuet in 3-4 have each two accents in the bar, a strong and a weak one, as explained above. The crotchet being of the same length in both, it will be seen that the strong accents only occur at the same time in both parts on every sixth beat, at every second bar of the minuet, and at each third bar of the contredanse. A somewhat similar combination of different accents will be found in the slow movement of Spohr's symphony 'Die Weihe der Töne.'

All the accents hitherto noticed belong to

the class called by some writers on music *grammatical* or *metrical;* and are more or less inherent in the very nature of music. There is however another point of view from which accent may be regarded—that which is sometimes called the *oratorical* accent. By this is meant the adaptation in vocal music of the notes to the words, of the sound to the sense. We are not speaking here of the giving a suitable expression to the text; because though this must in some measure depend upon the accent, it is only in a secondary degree connected with it. What is intended is rather the making the accents of the music correspond with those of the words. A single example will make this clear. The following phrase is the commencement of a

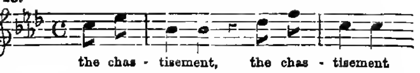
21.

well-known song from the 'Schwanengesang' by Schubert. The line contains seven syllables, but it is evident that it is not every line of the same length to which the music could be adapted. For instance, if we try to sing to the same phrase the words 'Swiftly from the mountain's brow,' which contain exactly the same number of syllables, it will be found impossible, because the accented syllables of the text will come on the unaccented notes of the music, and *vice versâ.* Such mistakes as these are of course never to be found in good music, yet even the greatest composers are sometimes not sufficiently attentive to the accentuation of the words which they set to music. For instance, in the following passage from 'Freischütz,' Weber has, by means of syncopation and a sforzando, thrown a strong stress on the second syllable of the words 'Augen,' 'taugen,' and 'holden,' all of which (as those who know German will be aware) are accented on the first syllable.

22.

The charm of the music makes the hearer overlook the absurdity of the mispronunciation; but it none the less exists, and is referred to not in depreciation of Weber, but as by no means a solitary instance of the want of attention which even the greatest masters have sometimes given to this point. Two short examples of a somewhat similar character are here given from Handel's 'Messiah' and 'Deborah.' In the former the accent on the second syllable of the word 'chastisement' may not improbably have been caused by Handel's imperfect acquaintance with our

23.



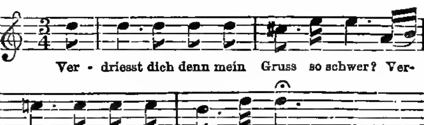
24.

And thy right hand vic - to - - - - rious.

language; but in the chorus from 'Deborah,' in which the pronunciation of the last word according to the musical accents will be vīctŏrīous, it is simply the result of indifference or inattention, as is shown by the fact that in other parts of the same piece the word is set correctly.

Closely connected with the present subject, and therefore appropriately to be treated here, is that of Inflexion. Just as in speaking we not only accent certain words, but raise the voice in uttering them, so in vocal music, especially in that depicting emotion, the rising and falling of the melody should correspond as far as possible to the rising and falling of the voice in the correct and intelligent reading of the text. It is particularly in the setting of recitative that opportunity is afforded for this, and such well-known examples as Handel's 'Thy rebuke hath broken his heart' in the 'Messiah,' or 'Deeper and deeper still' in 'Jephtha,' or the great recitative of Donna Anna in the first act of 'Don Giovanni' may be studied with advantage by those who would learn how inflexion may be combined with accent as a means of musical expression. But, though peculiarly adapted to recitative, it is also frequently met with in songs. Two extracts from Schubert are here given. In asking a question we naturally raise the voice at the end of the sentence; and the following quotation will furnish an example of what may be called the interrogatory accent.

25. SCHUBERT, 'Schöne Müllerin,' No. 8.



The passage next to be quoted illustrates what may rather be termed the declamatory accent.

26. 'Winterreise,' No. 21.

The word 'matt' is here the emphatic word of the line; but the truthful expression of the music is the result less of its being set on the accented part of the bar than of the rising inflexion upon the word, which gives it the

character of a cry of anguish. That this is the case will be seen at once if C is substituted for F. The accent is unchanged, but all the force of the passage is gone.

What has just been said leads naturally to the last point on which it is needful to touch—the great importance of attention to the accents and inflexions in translating the words of vocal music from one language to another. It is generally difficult, often quite impossible, to preserve them entirely; and this is the reason why no good music can ever produce its full effect when sung in a language other than that to which it was composed. Perhaps few better translations exist than that of the German text to which Mendelssohn composed his 'Elijah'; yet even here passages may be quoted in which the composer's meaning is unavoidably sacrificed, as for example the following:

27.

Here the different construction of the English and German languages made it impossible to preserve in the translation the emphasis on the word 'mich' at the beginning of the second bar. The adapter was forced to substitute another accented word, and he has done so with much tact; but the exact force of Mendelssohn's idea is lost.[1] In this and many similar cases all that is possible is an approximation to the composer's idea; the more nearly this can be attained, the less the music will suffer.

The word 'rhythm' is sometimes inaccurately used as synonymous with accent. The former properly refers not to the beats within a bar but to the recurrence of regular periods containing the same number of bars and therefore of accents. E. P.

[The famous instrumentalists of the classical school, such as Joachim, Mme. Schumann, Sir Charles and Lady Hallé, Piatti, and many others, were accustomed to mark the natural accent, as distinguished from emphasis, not by enforcing the sound, but by a hardly perceptible prolongation of the first note of the bar. This rhythmic convention gives a remarkable degree of articulation to the phrasing, and adds greatly to the beauty and meaning of the music. It is also to be heard in the performances of the Ducal Orchestra of Saxe-Meiningen. It, or something like it, seems to be indicated in Dr. Riemann's elaborate system of phrase-notation, by the conclusion of a slur placed over the first, or accented note of each bar.]

ACCENT IN PLAIN-SONG. The natural accent, which belongs to all sentences whether of prose or of verse, has a very important influence on the music which is to be wedded to them. This is especially the case with Plain-Song, which differs from measured music in having a free and not a strict rhythm; in either case the rhythm is determined by the accents, but the irregularly recurring accents of Plain-Song are more potent than the regularly recurring accents of measured music. In fact, the whole of the distinctive rhythm of Plain-Song is determined by the accents (see RHYTHM).

The simplest form of Plain-Song is a monotone with inflexions at intervals, which are determined by the accents; the tones for the Lessons, the Versicles, and even those of the Psalms, are of this character (see INFLEXION). And even in much of the most elaborate chant the same characteristics are preserved, though the cadences are so multiplied and the recitation is so restricted that the preservation of these features in the melody is not at first sight obvious (see RESPONSORIAL PSALMODY).

Again, it is to accent that Plain-Song owes, not only its rhythm and much of its melody, but also its notation, since the whole of the modern system of musical notation has grown by an extraordinary evolution out of the simple accents originally used for elocutionary purposes (see NOTATION). W. H. F.

ACCIACCATURA (Ital. from *acciaccare*, to crush, to pound; Ger. *Zusammenschlag;* Fr. *Pincé etouffé*). A now nearly obsolete description of ornament, available only on keyed instruments, in which an essential note of a melody is struck at the same moment with the note immediately below it, the latter being instantly released, and the principal note sustained alone (Ex. 1). It is generally indicated by a small note with an oblique stroke across the stem (Ex. 2), or when used in chords by a line across the chord itself (Ex. 3).

Its use was latterly confined exclusively to the organ, where it is of some service in giving the effect of an accent, or sforzando, to either single notes or chords; but the practice is generally discredited in the present day.

The term Acciaccatura is now very generally applied to another closely allied form of ornament, the short appoggiatura (see that word). F. T.

[1] In a letter of Mendelssohn's to Bartholomew, now in the possession of Mr. F. G. Edwards, the composer specially asked the translator to use these words. M.

ACCIDENTALS. The signs of chromatic alteration, employed in music to show that the notes to which they are applied have to be raised or lowered a semitone or a tone. They are five in number, the sharp (♯) (Fr. *dièse*, Ger. *Kreuz*) and double sharp (×) (Fr. *double-dièse*, Ger. *Doppelkreuz*), which being placed before a note raise it respectively a semitone or a tone; the flat (♭) (Fr. *bémol*, Ger. *Be*) and double-flat (♭♭) (Fr. *double-bémol*, Ger. *Doppelbe*), which cause the note to be lowered to the same extent; and the natural (♮) (Fr. *bécarre*, Ger. *Quadrat*), which is applied to an already chromatically altered note in order to restore it to its original position.

In modern music the signs are placed at the beginning of the composition, immediately after the clef, when they affect every note of the same name throughout the piece; and they are also employed singly in the course of the piece, in which case they only affect the note to which they are applied and any succeeding note on the same line or space within the same bar. Strictly speaking, only those which occur in the course of a composition are accidentals, the sharps or flats placed after the clef being known as the SIGNATURE, but as their action is the same wherever placed it will not be necessary to make any distinction here.

The invention of accidentals dates from the division of the scale into hexachords, an arrangement usually attributed to Guido d'Arezzo (A.D. 1025) but probably in reality of later date.[1] These hexachords, of which there were seven, were short scales of six notes each, formed out of a complete scale extending from G, the first line of the bass stave, to *e″*, the fourth space of the treble, and commencing on each successive G, C, and F, excepting of course the highest, *c″*, which being the last note but two, could not begin a hexachord. The chief characteristic of the hexachord was that the semitone fell between the third and fourth notes; with the hexachords of G and C this was the case naturally, but in singing the hexachord of F it was found necessary to introduce a new B, half a tone lower than the original, in order that the semitone might fall in the right place. This new note, the invention of which laid the foundation of all modern chromatic alterations, was called *B molle* (Fr. *Bémol*, Ital. *Bemolle*, still in use), and the hexachord to which it belonged and the plain-song in which it occurred were termed respectively *hexachordum molle*, and *cantus mollis*, while the hexachord of G, which retained the original B, was known as *hexachordum durum*, and the melody employing it as *cantus durus*.

For the sake of distinction in writing (for modern notation was not yet invented, and musical sounds were generally expressed by letters), the unaltered higher B was written of a square form, after the fashion of a black letter 𝔟, from which circumstance it received the name *B quadratum* (Fr. *Bé quarre, Bé carré;* Ital. *Be quadro;* Ger. *Quadrat*, still in use), while the new lower B was written as a Roman b and called *B rotundum* (Fr. *B rond*, Ital. *B rotondo*). [The two forms of B were at first applied only to the note immediately below middle C, that being the only B which lay within the compass of the ecclesiastical chant. When a similar distinction was needed in the octave above, a doubled form of the letter, both round and square, [illegible], was often employed. It was not till the 15th century that the *B molle* was admitted in the lowest octave of the gamut, or allowed to appear in that place in the signature.] The square B, slightly altered in shape, has become the ♮ and the round B the ♭ of modern music, and they have in course of time come to be applied to all the other notes. The inconvenience, as it at that time appeared, of having two different kinds of B's led the German musicians to introduce a new letter, H, which however, probably on account of its similarity of shape, was given to the square B, while the original designation of B was made over to the newly-invented round B. This distinction, anomalous as it is, remains in force in Germany at the present day.

The sign for chromatically raising a note, the sharp, is of later date, and is said to have been invented by Josquin de Près (1450-1521). It was originally written as a square B crossed out or cancelled, to show that the note to which it was applied was to be raised instead of lowered,[2] and was called *B cancellatum* (latticed or cancelled B).

Modern music requires double transposition signs, which raise or lower the note a whole tone. These are the double flat, written ♭♭, (or sometimes in old music a large ♭ or a Greek *β*), and the double sharp, written [illegible], or, more commonly ×. The double sharp and double flat are never employed in the signature, and the only case in which the natural is so placed occurs when in the course of the composition it becomes necessary to change the signature to one with fewer flats or sharps, in order to avoid the use of too many accidentals. In this case the omitted sharps or flats are indicated in the new signature by naturals. The proper use of the natural is to annul the effect of an already used sharp or flat, and it has thus a double nature, since it can either raise or lower a note according as it is used to cancel a flat or a sharp. Some of the earlier composers appear to have objected to this ambiguity, and to obviate it they employed the natural to counteract a flat only, using the flat

[1] Guido himself never speaks of hexachords in his writings, but on the contrary says that there are seven sounds in the scale (see Fétis, *Biographie Universelle des Musiciens*, art. 'Guido').

[2] Some writers contend that the four cross lines of the sharp were intended to represent the four commas of the chromatic semitone, but this appears to be a fanciful derivation, unsupported by proof.

to express in all cases the lowering of a note, even when it had previously been sharpened. Thus

would be written

This method of writing merely substitutes a greater ambiguity for a less, and is only mentioned here as a fact, the knowledge of which is necessary for the correct interpretation of some of the older compositions.

After a double sharp or flat the cancelling signs are ♮♯ and ♮♭, which reduce the note to a single sharp or flat (for it very rarely happens that a double sharp or double flat is followed at once by a natural); for example—

When a note which is sharpened in the signature becomes altered in the course of the composition to a flat, or *vice versâ*, the alteration is sometimes expressed by the sign ♮♭ or ♮♯, the object of the natural being to cancel the signature, while the following flat or sharp indicates the further alteration, as in Schubert's 'Impromptu,' op. 90, No. 2, bars 4 and 164; this is, however, not usual, nor is it necessary, as a single sharp or flat fully answers the purpose (see Beethoven, Trio, op. 97, bar 35).

Until about the beginning of the 17th century the accidentals occurring during a composition were often not marked, the singers or players being supposed to be sufficiently educated to supply them for themselves. In the signature only the first flat, B♭, was ever marked, and indeed we find numerous examples of a similar irregularity as late as Bach and Handel, who sometimes wrote in G minor with one flat, in C minor with two, and so on. Thus Handel's Suite in E containing the 'Harmonious Blacksmith' was originally written with three sharps, and is so published in Arnold's edition of Handel's works, No. 128; and the trio in 'Acis and Galatea,' 'The flocks shall leave the mountains,' though in C minor, is written with two flats in the signature and the third marked throughout as an accidental. In the same way the sharp seventh in minor compositions, although an essential note of the scale, is not placed in the signature, but is written as an accidental. [In a barcarolle by E. J. Loder, called 'Moonlight on the Lake,' the key of G minor has an F♯ in the signature in addition to the usual flats for B and E.]

In French the chromatic alterations are expressed by the words *dièse* (sharp) and *bémol* (flat) affixed to the syllables by which the notes are usually called; for example, E♭ is called *mi-bémol*, G♯ *sol-dièse*, etc., and in Italian the equivalents *diesis* and *bemolle* are similarly employed, but in German the raising of a note is expressed by the syllable *is* and the lowering by *es* joined to the letter which represents the note, thus G♯ is called *Gis*, G♭ *Ges*, and so on with all except B♭ and B♮, which have their own distinctive names of B and H. Some writers have lately used the syllable *Hes* for *B*♭ for the sake of uniformity, an amendment which appears to possess some advantages, though it would be more reasonable to restore to the present H its original name of B, and to employ the syllables *Bis* and *Bes* for B sharp and B flat. Reference should be made to a paper by Professor Niecks, read before the Musical Association (*Proceedings*, 1889-90, p. 79). F. T.

ACCIDENTALS. See also CIS, DIS, HEXACHORDS, and NOTATION.

ACCOMPANIMENT. This term is applied to any subsidiary part or parts, whether vocal or instrumental, that are added to a melody, or to a musical composition in a greater number of parts, with a view to the enrichment of its general effect; and also, in the case of vocal compositions, to support and sustain the voices.

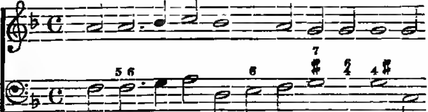
An accompaniment may be either 'Ad libitum' or 'Obbligato.' It is said to be Ad libitum when, although capable of increasing the relief and variety, it is yet not essential to the complete rendering of the music. It is said to be Obbligato when, on the contrary, it forms an integral part of the composition.

Among the earliest specimens of instrumental accompaniment that have descended to us, may be mentioned the organ parts to some of the services and anthems by English composers of the middle of the 16th century. These consist for the most part of a condensation of the voice parts into two staves; forming what would now be termed a 'short score.' These therefore are Ad libitum accompaniments. The following are the opening bars of 'Rejoyce in the Lorde allwayes,' by John Redford (about 1543):

Before speaking of Obbligato accompaniment it is necessary to notice the remarkable instrumental versions of some of the early church services and anthems, as those by Tallis, Gibbons, Amner, etc. which are still to be met with in some of the old organ and other MS. music books. These versions are so full of runs, trills, beats, and matters of that kind, and are so opposed in feeling to the quiet solidity and sober dignity of the vocal parts, that even if written by the same hand, which is scarcely credible, it is impossible that the former can ever have been designed to be used as an accompaniment to the latter. For example, the instrumental passage corresponding with the vocal setting of the words 'Thine honourable, true, and only Son,' in the Te Deum of Tallis (died 1585) stands thus in the old copies in question :—

while that of the phrase to the words 'The noble army of martyrs praise Thee,' in the well-known Te Deum in F of Gibbons (1583-1625), appears in this shape :—

The headings or 'Indexing' of these versions stand as follows, and are very suggestive :—'Tallis in D, organ part varied'; 'Te Deum, Mr. Tallis, with Variations for the Organ'; 'Gibbons in F, Morning, with Variations'; 'Te Deum, Mr. Orlando Gibbons, in F fa ut, varied for the Organ'; and so forth. There is little doubt therefore that the versions under notice were not intended as accompaniments at all, but were variations or adaptations like the popular 'Transcriptions' of the present day, and made for separate use, that use being doubtless as voluntaries. This explanation of the matter receives confirmation from the fact that a second old and more legitimate organ part of those services is also extant, for which no ostensible use would have existed, if not to accompany the voices. Compare the following extract from Gibbons's Te Deum ('The noble army of Martyrs') with the preceding.



An early specimen of a short piece of 'obbligato' organ accompaniment is presented by the opening phrase of Orlando Gibbons's Te Deum in D minor, which appears as follows :—

Verse Dec.

The early organ parts contained very few if any directions as to the *amount* of organ tone to be used by way of accompaniment. Indeed the organs were not capable of affording much variety. Even the most complete instruments of Tallis's time, and for nearly a century afterwards, seem to have consisted only of a very limited 'choir' and 'great' organs, sometimes also called 'little' and 'great'

from the comparative size of the external separate cases that enclosed them; and occasionally 'soft,' as in the preceding extract, and 'loud' organs in reference to the comparative strength of their tone.

Other instruments were used besides the organ in the accompaniment of church music. Dr. Rimbault, in the introduction to 'A Collection of Anthems by Composers of the Madrigalian Era,' edited by him for the Musical Antiquarian Society in 1845, distinctly states that 'all verse or solo anthems anterior to the Restoration were accompanied with viols, the organ being only used in the full parts'; and the contents of the volume consist entirely of anthems that illustrate how this was done. From the first anthem in that collection, 'Blow out the trumpet,' by M. Este (about 1600), the following example is taken—the five lower staves being instruments:—

[A very early instance of the use of cornets (*i.e.* Zinken) or trombones with the organ is in the account of the performance at the Field of the Cloth of Gold. In the *Calendar of State Papers*, Venetian, 1520-26, No. 93, it is noted that 'The Choristers of the two chapels of France and England sang this Mass, the music by Perino, accompanied by an organ with trombones and cornets.' G. E. P. A.

On the general question of the instrumental accompaniment of church music in the 16th and early 17th centuries, see pref. to No. xxii. of G. E. P. Arkwright's Old English Edition. An interesting paper on the accompaniments of the early operas in Italy is in the *Rivista Musicale Italiana*, i. 1.]

The resources for varied organ accompaniment were somewhat extended in the 17th century through the introduction, by Father Smith and Renatus Harris, of a few stops, until then unknown in this country; and also by the insertion of an additional short manual organ called the Echo; but no details have descended to us as to whether these new acquisitions were turned to much account. The organ accompaniments had in fact ceased to be written with the former fulness, and had gradually assumed simply an outline form. That result was the consequence of the discovery and gradual introduction of a system by which the harmonies were indicated by means of *figures*, a short-hand method of writing which afterwards became well known by the name of *Thorough Bass.* The 'short-score' accompaniments—which had previously been generally written, and the counterparts of which are now invariably inserted beneath the vocal scores of the modern reprints of the old full services and anthems—were discontinued; and the scores of all choral movements published during the 18th and the commencement of the 19th century, were for the most part furnished with a figured bass only by way of written accompaniment. The custom of indicating the harmonies of the accompaniment in outline, and leaving the performer to interpret them in any of the many various ways of which they were susceptible, was followed in secular music as well as in sacred; and was observed at least from the date of the publication of Purcell's *Orpheus Britannicus*, in 1698, down to the time of the production of the English ballad operas towards the latter part of the 18th century.

In committing to paper the accompaniments to the 'solos' and 'verses' of the anthems written during the period just indicated, a figured bass was generally all that was associated with the voice part; but in the symphonies or 'ritornels' a treble part was not unfrequently supplied, usually in single notes only, for the right hand, and a figured bass for the left. Occasionally also a direction was given for the use of a particular organ register, or a combination of them; as 'cornet stop,' 'bassoon stop,' 'trumpet or hautboy stop,' 'two diapasons, left hand,' 'stop diapason and flute'; and in a few instances the particular manual to be used was named, as 'eccho,' 'swelling organ,' etc.

Although the English organs had been so much improved in the volume and variety of their tone that the employment of other instruments gradually fell into disuse, yet even the best of them were far from being in a state of convenient completeness. Until nearly the

end of the 18th century English organs were without pedals of any kind, and when these were added they were for fifty years made to the wrong compass. There was no independent pedal organ worthy of the name; no sixteen-feet stops on the manuals, although Father Smith's organ at St. Paul's went down to CCC on the manuals; the swell was of incomplete range; and mechanical means, in the shape of composition-pedals for changing the combination of stops were almost entirely unknown; so that the means for giving a good instrumental rendering of the *suggested* accompaniments to the English anthems really only dates back about fifty years.

The best mode of accompanying a single voice in compositions of the kind under consideration was fully illustrated by Handel in the slightly instrumented songs of his oratorios, combined with his own way of reducing his thorough-bass figuring of the same into musical sounds. Most musical readers will readily recall many songs so scored. The tradition as to Handel's method of supplying the intermediate harmonies has been handed down to our own time in the following way. The late Sir George Smart, at the time of the Handel festival in Westminster Abbey in 1784, was a youthful chorister of the Chapel Royal of eight years of age; and it fell to his lot to turn over the leaves of the scores of the music for Joah Bates, who, besides officiating as conductor, presided at the organ. In the songs Bates frequently supplied chords of two or three notes from the figures on a soft-toned unison-stop. The boy looked first at the book, then at the conductor's fingers, and seemed somewhat puzzled, which being perceived by Bates, he said, 'My little fellow, you seem rather curious to discover my authority for the chords I have just been playing'; to which observation young Smart cautiously replied, 'Well, I don't see the notes in the score'; whereupon Mr. Bates added, 'Very true, but Handel himself used constantly to supply the harmonies in precisely the same way I have just been doing, as I have myself frequently witnessed.'

Acting on this tradition, received from the lips of the late Sir George Smart, the writer of the present article, when presiding occasionally, for many years, at the organ at the concerts given by Hullah's Upper Singing Schools in St. Martin's Hall, frequently supplied a few simple inner parts; and as in after conversations with Hullah as well as with some of the leading instrumentalists of the orchestra, he learnt that the effect was good, he was led to conclude that such insertions were in accordance with Handel's intention. Acting on this conviction he frequently applied Handel's perfect manner of accompanying a sacred song, to anthem solos; for its exact representation was quite practicable on most new or modernised English organs. Of this fact one short illustration must suffice. The introductory symphony to the alto solo by Dr. Boyce (1710-79) to the words beginning 'One thing have I desired of the Lord' is, in the original, written in two parts only, namely, a solo for the right hand, and a moving bass in single notes for the left; no harmony being given, nor even figures denoting any. By taking the melody on a solo stop, the bass on the pedals (sixteen feet) with the manual (eight feet) coupled, giving the bass in octaves, to represent the orchestral violoncellos and double basses, the left hand is left at liberty to supply inner harmony parts. These latter are printed in small notes in the next and all following examples. In this manner a well-balanced and complete effect is secured, such as was not possible on any organ in England in Dr. Boyce's own day.

Notice may here be taken of a custom that has prevailed for many years in the manner of supplying the indicated harmonies to many of Handel's recitatives. Handel recognised two wholly distinct methods of sustaining the voice in such pieces. Sometimes he supported it by means of an accompaniment chiefly for bow instruments; while at other times he provided only a skeleton score, as already described. In the four connected recitatives in the 'Messiah,' beginning with 'There were shepherds,' Handel alternated the two manners, employing each twice; and Bach, in his 'Matthew Passion Music,' makes the same distinction between the ordinary recitatives and those of our Lord. It became the custom in England in the early part of the 19th century to play the harmonies of the *figured* recitatives not on a keyed instrument, but on a violoncello. When or under what circumstances the substitution was made, it is not easy now to ascertain; but if it was part of Handel's design to treat the tone-quality of the smaller bow instruments as one of his sources of relief and musical contrast, as seems to have been the case, the use of a deeper-toned instrument of the same kind in

lieu of the organ would seem rather to have interfered with that design. It is not improbable that the custom may have taken its rise at some provincial music meeting, where either there was no organ, or where the organist was not acquainted with the traditional manner of accompanying; and that some expert violoncellist in the orchestra at the time supplied the harmonies in the way that afterwards became the customary manner in England.

But to continue our notice of the accompaniments to the old anthem music. A prevalent custom with the 18th-century composers was to write, by way of introductory symphony, a bass part of marked character, with a direction to the effect that it was to be played on the 'loud organ, two diapasons, left hand'; and to indicate by figures a right-hand part, to be played on the 'soft-organ,' of course in close harmony. By playing such a bass on the pedals (sixteen feet) with the great manual coupled thereto, not only is the bass part enriched by being played in octaves, but the two hands are left free for the interpretation of the figures in fuller and more extended harmony. The following example of this form of accompaniment occurs as the commencement of the bass solo to the words 'Thou art about my path and about my bed,' by Dr. Croft (1678-1727).

Sometimes the symphony to a solo, if of an arioso character, can be very agreeably given out on a combination of stops, sounding the unison, octave, and sub-octave, of the notes played, as the stopped diapason, flute, and bourdon on the great organ; the pedal bass, as before, consisting of a light-toned sixteen-feet stop with the manual coupled. Dr. Greene's alto solo to the words 'Among the gods there is none like Thee, O Lord,' is in a style that affords a favourable opportunity for this kind of organ treatment.

The foregoing examples illustrate the manner in which English anthem solos and their symphonies, presenting as they do such varied *outline*, may be accompanied and filled up. But in the choral parts of anthems equally appropriate instrumental effects can also frequently be introduced, by reason of the improvements that have been made in English organs in recent years. The introduction of the *tuba* on a fourth manual has been an accession of great

importance in this respect. Take for illustration the chorus by Kent (1700-76), 'Thou, O Lord, art our Father,' the climax of which, in the original, is rather awkwardly interrupted by rests ; the fragmentary sections can now be appropriately and advantageously united by a few intermediate jubilant notes in some such manner as the following :

Again, in Dr. Greene's anthem, 'God is our hope and strength,' occurs a short chorus, 'O behold the works of the Lord,' which, after a short trio, is repeated, in precisely the same form as that in which it previously appears. According to the modern rules of musical construction and development it would be considered desirable to add some fresh feature on the repetition, to enhance the effect. This can now be supplied in this way, or in some other analogous to it :

The organ part to Dr. Arnold's collection of Cathedral Music, published in 1790, consists chiefly of treble and bass, with figures ; so does that to the Cathedral Music of Dr. Dupuis, printed a few years later. Vincent Novello's organ part to Dr. Boyce's Cathedral Music, issued in 1849, on the contrary, was arranged almost as exclusively in 'short score.' Thus after a period of three centuries, and after experiment and much experience, organ accompaniments, in the case of full choral pieces, came to be written down on precisely the same principle on which they were prepared at the commencement of that period.

Illustrations showing the way of interpreting figured basses could be continued to almost any extent, but those already given will probably be sufficient to indicate what may be done in the way of accompaniment, when the organ will permit, and when the effects of the modern orchestra are allowed to exercise some influence.

In accompanying English psalm tunes it is usual to make use of somewhat fuller harmony than that which is represented by the four written voice-parts. The rules of musical composition, as well as one's own musical instinct, frequently require that certain notes, when combined with others in a particular manner, should be followed by others in certain fixed progressions ; and these progressions, so natural and good in themselves, occasionally lead to a succeeding chord or chords being presented in 'incomplete harmony' in the four vocal parts. In such cases it is the custom for the accompanist to supply the omitted elements of the harmony ; a process known by the term 'filling in.' Mendelssohn's Organ Sonatas, Nos. 5 and 6, each of which opens with a chorale, afford good examples of how the usual parts may be supplemented with advantage. The incomplete harmonies are to be met with most frequently in the last one or two chords of the clauses of a tune ; the omitted note being generally the interval of a fifth above the bass note of the last chord ; which harmony note, as essential to its correct introduction, sometimes requires the octave to the preceding bass note to be introduced, as at the end of the third clause of the example below ; or to be retained if already present, as at the end of the fourth clause. An accompaniment which is to direct and sustain the voices of a congregation should be marked and decided in character, without being disjointed or broken. This combination of distinctness with continuity is greatly influenced by the manner in which the *repetition* notes are treated. Repetition notes appear with greater or less frequency in one or other of the vocal parts of nearly all psalm tunes, as exhibited in the example below. Those that occur in the melody should not be combined, but on the contrary should, generally speaking, be repeated with great distinctness. As such notes present no melodic movement, but only rhythmic progress, congregations have on that account a tendency to *wait* to hear the step from a note to its iteration announced before they proceed ; so that if the repetition

note be not clearly defined, hesitation among the voices is apt to arise, and the strict time is lost. The following example will sound very tame and undecided if all the repetition notes at the commencement of the first and second clauses be held on.

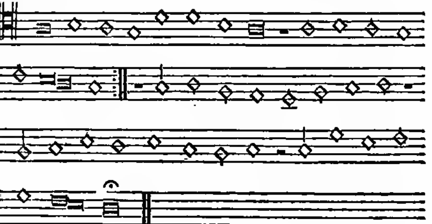
A very little will suffice to steady and connect the organ tone; a single note frequently being sufficient for the purpose, and that even in an inner part, as indicated by the binds in the following example. A repetition note in the bass part may freely be iterated on the pedal, particularly if there should be a tendency among the voices to drag or proceed with indecision.

Old Hundredth tune.

The important subject of additional accompaniments to works already possessing orchestral parts, with the view of supplying the want of an organ, or obtaining the increased effects of the modern orchestra, is treated under the head of ADDITIONAL ACCOMPANIMENTS. E. J. H.

ACCORDION (Ger. *Handharmonika*, also *Ziehharmonika*). A portable instrument of the free-reed species, invented at Vienna by Damian, in the year 1829. It consists of a small pair of hand-bellows, to one side of which is affixed a key-board, containing, according to the size of the instrument, from five to fifty keys. These keys open valves admitting the wind to metal reeds, the latter being so arranged that each key sounds two notes, the one in expanding, the other in compressing the bellows. The right hand is placed over the keyboard, while the left works the bellows, on the lower side of which are usually to be found two keys which admit wind to other reeds furnishing a simple harmony—mostly the chords of the tonic and dominant. It will be seen that the capabilities of the instrument are extremely limited, as it can only be played in one key, and even in that one imperfectly; it is, in fact, but little more than a toy. It was originally an extension of the 'mouth-harmonica'—a toy constructed on a similar principle, in which the reeds were set in vibration by blowing through holes with the mouth, instead of by a keyboard. This latter instrument is also known as the ÆOLINA. E. P.

'ACH GOTT VOM HIMMEL.' This hymn, the words of which are a paraphrase by Martin Luther on Psalm xi. (Vulgate version), made its first appearance in 1524, when it was printed in at least four different collections: (*a*) 'Etlich cristlich lider Lobgesang, vnd Psalm, etc.' printed at Wittenberg (Wackernagel, No. cxxix.); (*b*) the Erfurdt Enchiridion (Wackernagel, No. clvii.); (*c*) the 'Teütsch Kirchen Ampt mit lobegesengen,' printed by Wolf Köppel at Strasburg (Wackernagel, No. clxii.); and (*d*) Walther's Wittenberg 'Geystliche gesangk Buchleyn' (Wackernagel, No. clxiii.). In (*a*) it is directed to be sung to the melody of 'Es ist das Heil'; in (*b*) it appears with the tune in the Hypophrygian mode to which it is usually sung—especially in North Germany; in (*c*) it is set to a tune in the Hypoæolian mode, to which it is sometimes still sung in South Germany; and in (*d*) it appears with a tune in the Dorian mode. In Joseph Klug's Hymnbook (1535), besides the well-known Hypophrygian tune it is set to another tune in the Phrygian mode, which was afterwards adapted to Andreas Knöpken's Psalm 'Hilf Gott, wie geht das immer zu.' The melody in the Erfurdt Enchiridion is as follows:



The use which Mozart has made of this Chorale in the Finale to Act II. of the 'Zauberflöte' is very interesting. It is now well known that this opera refers under a slight disguise to the suppression of Freemasonry by Maria Theresa. To masons both book and music are said to be full of allusions to the mysteries of the craft, and it seems probable that one of these is the introduction of the two men in armour who sing at the moment of Tamino's most solemn trial the motto inscribed on a pyramid set to the well-known chorale 'Ach Gott vom Himmel.' Jahn (*W. A. Mozart*, iv. 617) surmises that Mozart's attention was drawn to the chorale by Kirnberger's 'Kunst des reinen Satzes,' in which it is twice used as a Canto Fermo for contra-

puntal treatment. A sketch is preserved in the Imperial Library at Vienna of another four-part arrangement of the chorale, which still more closely resembles the passages in Kirnberger's work. The autograph score of the 'Zauberflöte' shows that the beginning of the scene between Tamino and the two men in armour has been carefully sketched. The chorale itself is sung in octaves by the two voices, accompanied by flutes, oboes, bassoons and trombones, whilst the strings have an independent contrapuntal figure. W. B. S.

ACHTEL (Ger.). A quaver.

ACIS AND GALATEA. A 'masque,' or 'serenata,' or 'pastoral opera,' composed by Handel at Cannons, probably in 1720 (date is wanting on autograph); and performed there probably in 1721. Words by Gay, with additions by Pope, Hughes, and Dryden. Rescored by Mozart for Van Swieten, Nov. 1788. Put on the stage at Drury Lane by Macready, Feb. 5, 1842. 'Aci, Galatea, e Polifemo,' an entirely different work, was composed in Italy in 1708-9.

ACOUSTICS. Almost all the sounds with which we are concerned in music have a definite and steady pitch. The side-drum, the castanets, and one or two other instruments, produce mere noises without pitch, as is seen by the fact that no attempt is made to tune them to the rest of the orchestra; but such instruments are of less importance than those which are capable of giving something more than mere rhythm.

Very little observation is necessary to show that sound is always caused by the vibration of something or other. If a tuning-fork is made to give out a sound it can often be seen to be in a state of vibration by the hazy appearance of the prongs; and even though the vibrations are too small to be visible they may be felt by touching the fork with the finger. If the pressure of the finger is so great as to stop the vibrations the sound also stops. Similar evidence that there is never sound without vibration can be obtained from many musical instruments,—some part of the instruments will be seen or felt to be in vibration so long as sound is being emitted.

Moreover, it will be noticed that the loudness of the sound is connected with the amplitude of the vibrations,—the greater the amplitude the louder the resulting sound for a given pitch.

That the medium by which the sound is carried from the vibrating body to the ear is, in most cases, the air, is seen by the old experiment of placing an alarum clock or electric bell under the receiver of an air-pump and pumping out the air. The sound grows fainter as the air is removed. It cannot be made to die away altogether, for air is not the only medium that will convey sound. The bell must be supported on something, and the support will carry some of the sound to the air-pump or bell-jar and so to the external air. The result of the experiment is more striking if the bell is supported by some material that conducts vibration badly, such as indiarubber cords or a pad of soft felt.

The pitch of a note is easily proved to be dependent on the rate at which the body vibrates. Hold a card against the teeth of a rotating cogwheel, and if the wheel is rotating fast enough, the taps of the card on the cogs will blend into a note of recognisable pitch. Turn the wheel faster,—that is, produce more taps per second,—and the pitch rises.

A still simpler experiment is to run the thumb nail along a piece of ribbed silk ribbon. A note is produced by the taps of the nail on the ribs, and the faster the thumb is drawn over the silk the higher will be the pitch of the note.

In the case of every musical instrument the vibrations that give rise to the sound are due to the elasticity of some part of the instrument or of the air contained in it. Take the simple case of a harp string. Pull the string aside and it is felt to resist the displacement with a force that is greater, the greater the displacement, and whatever the direction of the displacement the force is such as to tend to restore the string to the position in which it is in equilibrium. If the string is drawn aside and let go it will oscillate about its equilibrium position until the energy that was given to it by the finger is dissipated in the form of sound or wasted by friction.

In the case of every elastic body the force that resists a displacement is proportional to the amount of displacement, provided the displacement does not exceed a certain limit that depends on the shape, size, and material of the body. Thus to stretch an elastic cord two-tenths of an inch requires just double the force required to stretch it one-tenth.

This law, when applied to solid bodies, is known as Hooke's Law, and is the fundamental fact in the theory of elasticity.

Hooke's Law leads, by a line of argument that cannot be given here, to the result that if an elastic body vibrates in consequence of its elasticity, the vibrations will be isochronous; that is to say, the time occupied by a single vibration will be the same, whatever the amplitude of the vibration, or the number of vibrations per second will be the same whatever the extent of the vibrations.

The oscillations of a pendulum afford a familiar instance of isochronism. A pendulum of the proper length will beat seconds independently of the extent of the oscillation, provided that extent be not very great. The vibrations are, in this case, not due to elasticity, but the law connecting the restoring force and the displacement is the same.

The application of this law of isochronism

of elastic vibrations to music leads to the important result that the pitch of the note given by a musical instrument does not depend on the loudness of the note. Had the laws of elasticity been different, music in its present form would have been impossible, for every variation in the loudness of a note would have been accompanied by a variation in its pitch.

The pendulum vibration is typical of the simplest, but not the only possible form of vibration of an elastic body, and is called a Simple Harmonic Vibration.

In order to obtain an idea of the nature of the motion, imagine a point P moving with uniform velocity in a circle. Drop a perpendicular from P on any diameter AB, and N the foot of the perpendicular will describe Harmonic vibrations along the line AB.

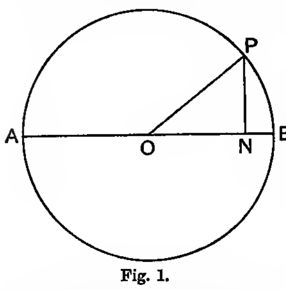


Fig. 1.

It is obvious that if P moves uniformly, N will be momentarily at rest when it is at A or B, that it will have its greatest velocity as it passes through O, and that, at intermediate points, it will have intermediate velocities.

A graphic representation of harmonic motion is given by the curve (Fig. 2) called the Sine Curve.

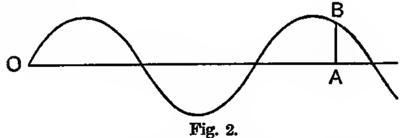

Fig. 2.

By means of this curve the displacement of a vibrating point at any moment is shown. Let distances measured to the right from O represent time—say 1 unit represents 1 second. Then to find the displacement, say 3 seconds after the vibrations commenced, measure a distance 3 units to the right from O, and at the point A thus reached draw a perpendicular. The distance AB along this perpendicular from the base line to the point where it cuts the curve is the displacement, which is to one side or the other of the equilibrium position according as B is above or below A.

The limits of this article preclude any lengthy account of the mode of propagation of sound through the air, and a brief description must suffice. When the prong of a tuning-fork is moving outwards it condenses the air on its face, and this condensation proceeds to travel outwards from the fork. Before the condensation has travelled far the prong of the fork has passed the outward end of its swing, and is moving inwards. This rarefies the air near it, and the rarefaction travels outwards in the rear of the condensation. This process is continued, and we have a series of waves of condensation and rarefaction travelling away from the fork. The air does not travel along bodily with the waves; but any given particle of air over which the train of waves is passing, oscillates backwards and forwards in the direction in which the waves are travelling. The oscillations are due to the elasticity of the air, and are isochronous. A complete wave includes one region of condensation and one region of rarefaction, and during the time taken by the particle to make one complete oscillation one complete wave will pass over it. When the particle is moving in the same direction as the train of waves it is in a region of condensation, and when it is moving in the opposite direction it is in a region of rarefaction. When it is at an end of its swing, and so is momentarily at rest, it is at a place where condensation changes to rarefaction, and so the air has its normal density.

As the vibrations are isochronous, and one complete wave passes in the time of one complete oscillation, it follows that waves of the same length will travel with the same velocity whatever their intensity; and as, moreover, the period of oscillation depends only on the elasticity and density of the air, and not on the length of the waves, waves of every length will travel with the same velocity. Since waves of all lengths travel with the same velocity, though different vibrating bodies may be giving them out in very different numbers per second, it follows that the distance travelled by a wave in one second will contain as many waves as the body performs vibrations per second. If n is the number and l is the length of one wave, then nl will be the distance travelled by the waves in one second, which is the measure of the velocity, so that $v=nl$.

Further, it follows that the greater the vibration number, or, in other words, the higher the pitch of the note the shorter will be the waves in air. The notes in common use in music have wave-lengths varying from about 40 feet to 3 inches.

The mathematical investigation of the relation between the velocity of sound in a gas, and the density and elasticity of the gas, shows that if the ratio of the pressure to the density remains the same the velocity will be constant. Hence a rise of the barometer will not affect the velocity of sound, because the increase of pressure increases the density in the same ratio; but a rise of temperature will increase the velocity, for it will rarefy the gas without altering the pressure.

The earlier measurements of the velocity of

sound in air were made by firing a cannon, and noticing the time the sound took to travel over a measured distance, making any necessary corrections for wind or for variations of temperature.

The velocity is found to be about 1090 feet per second, at a temperature of 32° Fahrenheit, and to increase by about one foot per second per degree rise of temperature at ordinary temperatures.

The velocity in different gases at the same temperature is roughly inversely proportional to the square root of the density. Thus in hydrogen, which has a density rather more than one-sixteenth that of air, the velocity of sound is about four times greater. (This law, however, is by no means accurately followed. For reasons that cannot be given here the ratio of the specific heats of a gas affects its adiabatic elasticity, which is the elasticity concerned in the propagation of sound, and this ratio varies considerably for different gases.)

The velocity of waves of condensation and rarefaction in solids and liquids is greater than in gases. The greater density of such bodies tends to lower the velocity, but this is more than compensated by the very great forces developed by their compression. The velocity of sound in water is 1435 feet per second, in iron it is 5030, and in glass 5438.

Sound-waves are capable of reflection in the same way as light-waves, and according to the same laws. Most echoes are due to waves striking a surface normally, and suffering reflection along the line of incidence; though an echo is sometimes produced by several oblique reflections.

Sound-waves diverging from a point may, in certain circumstances, be reflected from a curved surface in such a way as to come together again at a focus. If a watch is placed at the principal focus A of a large concave spherical mirror—that is, at a point half-way between the centre of the sphere of which the mirror forms a part,

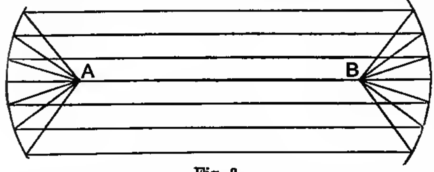

Fig. 3.

and the centre of the surface of the mirror—the sound rays diverging from the watch and striking the mirror will be reflected off in a beam of parallel rays. If this beam is received on a second similar mirror it will be collected together at the principal focus B, so that an ear placed at the focus would hear the ticking of the watch, whilst a little way from the focus the ticking would be quite inaudible. Reflection of this kind sometimes takes place in large buildings. Curved parts of the walls take the place of the spherical mirrors, and a whisper at one focus may be heard distinctly at the other.

Solid obstacles cast sound shadows in the same way as they cast light shadows; but there is a practical difference, resulting from the great difference between the length of sound-waves and of light-waves. An obstacle gives a well-defined shadow only when it is a considerable number of wave-lengths in diameter. Light-waves are about a fifty-thousandth of an inch long, so that very small objects give clear shadows. The waves of sound may be of any length up to about 40 feet, so that except for very high notes a large object is needed to give a well-defined shadow. A house or a haystack is capable of giving a shadow of the scream of birds.

We have seen that the loudness of a musical note depends on the amplitude of the vibrations that give rise to it, and that the pitch of the note is fixed by the number of vibrations that reach the ear per second. A third characteristic of a note, its quality, has not yet been mentioned.

By Quality is meant that feature by which the note of one instrument can be distinguished from that of another, though of the same pitch. Fig. 2 is a graphic representation of one form of wave motion in air, the ordinates of the curve showing the displacement of the particles of air at a given instant. The waves may be varied in three ways only. They may be altered in length which will correspond to an alteration in the pitch of the note. They may be altered in the height of the crests and the depth of the troughs, which will give an alteration in the loudness of the note.

Lastly, they may be altered in shape. It is essential that if a musical note is to continue unchanged each wave must be like its fellows in every respect, but with this limitation, the waves may be of any shape. They need not be smooth and symmetrical as in Fig. 2, but may have one side steeper than the other, or may have sharp bends, or may vary in many other ways. It has long been assumed that it is the shape of the wave that determines the quality of the note, but Helmholtz was the first to give a definite theory of the nature of the relation between shape and quality. Before stating his theory some preliminary explanation is needed. Suppose a note and its octave are sounded at the same time, and that each is of the special quality corresponding to a simple harmonic vibration. The higher note will have half the wave-length of the lower, and the displacements due to the two separately are represented by the two sine curves in Fig. 4. Now an air particle cannot have two different displacements at the same moment, and both theory and experiment show that the actual displacements can be shown by a curve passing through the ends of

ordinates, obtained by taking at any point along the base line, the algebraic sum of the ordinates of the two sine curves; that is, adding them

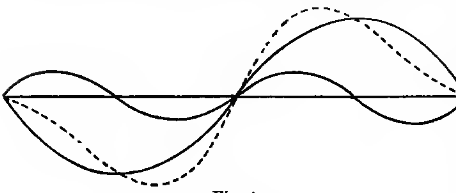

Fig. 4.

if they are on the same side of the base line, subtracting the smaller from the greater if they are on opposite sides, and drawing the resulting ordinate on the same side of the base, as the greater of the two components.

The curve thus obtained (the dotted line in the figure) is not symmetrical, and it is evident that a great variety of curves can be obtained by an extension of the method. The octave curve could be changed in amplitude or it could be moved to the right or left by any amount, thus changing what is called the relative phase of the two curves. Further, we might compound with the lower note some other note than the octave, or we might superpose in a similar way more than two notes. Fourier's Theorem states that any curve whatever can be built up in this way from sine curves, provided it is periodic, or consists of waves all of the same shape and size, and provided it has not anywhere an ordinate of infinite length—a limitation that does not concern us in acoustics. If the length of one complete wave of the curve to be built up or analysed is represented by 1, the components required will have wave-lengths, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, and so on. It may be necessary to take a large number of such components—even an infinite number if there are sharp corners in the curve—and some members of the series may be missing, but it will never be necessary to go outside the series, and if the amplitudes and relative phases of the components are properly chosen any periodic curve can be so built up.

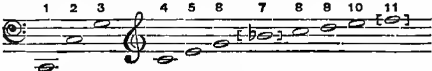
Now most of the notes used in music can be recognised by a trained ear as not being simple, but made up of a number of constituents of different pitches and intensities. What then is the particular kind of vibration that results in a pure tone unmixed with any others? Ohm's Law states that a simple harmonic vibration is the only form of vibration that gives the sensation of a pure tone without any admixture of overtones, and thus we are able to draw a very important conclusion from Fourier's Law. The ear analyses a complex note in exactly the same way as Fourier analyses a complex curve.

Any musical note can, with suitable training and suitable appliances, be shown to be made up of one or more of a series of pure tones, whose vibration numbers are in the ratio of the numbers 1, 2, 3, 4, etc. Tones bearing this relation to each other are called Harmonics.

Helmholtz went a step farther, and stated that the relative phase of the constituent harmonics does not affect the quality of the resultant sound, and that all we are concerned with is the number, amplitude, and position in the series of the constituents. If, for instance, the two constituent curves in Fig. 4 are placed in several different positions with reference to each other, keeping always the same base line for both, it will be found that the resultant curves vary much in shape; but according to Helmholtz the corresponding notes will sound alike. The quality of the note will be completely defined by the amplitude of the two constituents, without reference to their phases.

Doubt has been cast on Helmholtz's theory by some distinguished physicists, but it appears to be in the main correct. If difference of phase has any effect it is probably small.

Pure tones are little used in music. They are colourless and uninteresting, and for reasons that will be stated later are unsatisfying in harmonic combinations. Wide stopped organ pipes give nearly pure tones, but reed pipes and all orchestral instruments have strong harmonics. In the case of the smoother toned instruments such as flutes and horns, the lower harmonics are the more prominent, whilst with instruments that give more incisive tones such as violins and hautboys, the prominent harmonics extend higher in the series.



As we shall frequently have occasion to refer to the harmonic series of overtones it will be convenient to give them here expressed in musical notation, taking C as the fundamental. The numbers above the notes are in the ratios of the vibration numbers of the notes. The seventh and the eleventh of the series are enclosed in brackets, as they cannot be correctly represented by any notes in the scale. The seventh is flatter than B♭, and the eleventh is about half-way between F and F♯ on the tempered scale. The series extends upwards indefinitely, but the higher members are generally faint.

The construction of scales is treated of elsewhere, and it is sufficient to note here that the vibration ratio of any interval in the true diatonic scale can be obtained from this table. Thus the major second, C to D, is 8 : 9; the minor second, D to E, is 9 : 10; the major third, 4 : 5; and so on. These intervals are of course modified in the system of tuning by equal temperament where the octave is divided into twelve equal semitones the vibration ratio of each of which is $\sqrt[12]{2} : 1$, or about 89 : 84. Here there is no distinction between major and minor

seconds, and all the intervals with the exception of the octave differ more or less from the ratios given in the diagram.

When two notes of the same pitch are sounded together it may happen at some point that the crests of one train of waves coincide with the hollows of the other train. From what has been said above about the composition of vibrations it is clear that at this point the two trains will neutralise each other if they are of equal amplitude, and there will be silence. Strike a tuning-fork, hold it to the ear, and turn it round slowly. It will be found that in one revolution there will be four points of maximum intensity, separated by four points of silence. Each of the prongs is giving off its own train of waves. At the points of maximum loudness the crests of the two trains fall together, and the sound from one prong is reinforced by that from the other. At the points of silence the two trains neutralise each other. That this is really so is easily proved by slipping a paper tube over one prong without touching it, when it will be found there are no points of silence.

Suppose, next, that the two notes have nearly but not quite the same pitch. Let one have, for instance, the vibration number 100, and the other 102. Then in the space that sound travels in one second are comprised 100 waves of one train, and 102 of the other. If the crest of the first wave in one train coincides with the first crest of the other, the waves will reinforce each other at that point. Similarly, the 50th crest of one train will coincide with the 51st of the other, and the 100th of one with the 102nd of the other, so that, at these points each sound will intensify the other. At the 25th crest of the one train we shall, however, have a hollow of the other train, and, similarly, at the 75th crest, so that at these two points the sounds will neutralise one another to an extent depending on the relative amplitudes of the two sets of waves. As the two trains of waves are travelling with the same velocity these maxima and minima of sound will pass a stationary listener, who will consequently hear the sound rise and fall in intensity twice in each second. These alternations of intensity are called beats, and it is clear that the number of beats per second is the difference between the vibration numbers of the two notes. As the two notes approach each other in pitch the beats become slower, until, with perfect unison, they disappear, which fact affords a ready means of judging of the accuracy of the tuning of two notes to each other.

Next, consider the case of a train of waves striking a flat surface at right angles. They will be reflected, and the incident and reflected trains will interfere. Let the full curve in Fig. 5 represent the position of the incident train at a given moment; then the dotted curve will represent the reflected curve at that moment; for remembering that the actual displacements of the air-particles are along the line CO, it is clear there can never be any displacement

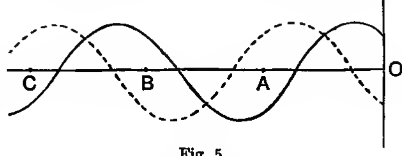


Fig. 5.

at O, and hence the reflected curve must be in such a position that at O it always compounds with the incident curve so as to give no displacement. It will now be found that there is a series of other points A, B, C, etc., half a wave-length apart, where there is also no displacement at any time; and we have what is known as a stationary wave (Fig. 6).

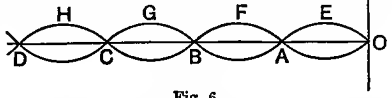

Fig. 6.

At the points O, A, B, etc., there are changes in the pressure of the air but no motion; whilst at the points half-way between there is motion but no change of pressure. If one end of an indiarubber tube is placed in the ear, and the other end moved along the line OD which passes through the source of the sound, and is at right angles to the reflecting surface, sound will be heard at the points O, A, B, etc. because at these points the changes of pressure cause waves to run down the tube to the ear; whilst at the points half-way between there will be silence, as at these points the air merely flows backwards and forwards across the end of the tube. This gives us a means of measuring the wave-length of any given note, as the points of silence are exactly half a wave-length apart, and since we have seen that $v=nl$ where v is the known velocity of sound, we can calculate n the vibration number of the note. The method works well for high notes, but it is better then to use a sensitive flame as a detector instead of a tube leading to the ear. With low notes reflections from walls and surrounding objects cause complications, and it is necessary to confine the sound in a tube.

A special case of stationary vibration is that of a resonator, which consists of a hollow body of any shape communicating with the outer air by a small aperture. It is possible by blowing across the mouth of a resonator to cause the enclosed air to vibrate and give out a definite note. The pitch of the note depends only on the volume of the contained air and the area of the opening, and not on the shape of the body or of the opening, provided neither is very elongated; nor on the position of the opening. The pitch can be raised by increasing the size

of the opening or by diminishing the volume of the contained air. A narrow-necked bottle will serve as a resonator. Blow across the neck and a note is given out. Pour in some water so as to diminish the volume and the pitch rises. Cover part of the opening with a card and the pitch falls. Tilt the partly filled bottle in various directions so as to change the shape of the cavity without changing its volume, and the pitch remains unaltered. Instead of raising the pitch by enlarging a single opening we may obtain the same result by making additional openings. The instrument called the ocarina is an instance of a simple resonator. The shape of the instrument has no effect on the pitch of the note, neither has the position of the holes. If the holes be uncovered one at a time it will be found that holes of the same size give the same rise of pitch wherever they are situated, and the scale is obtained merely by increasing the connection between the internal and external air. The resonator has the property of taking up and intensifying its own proper tone when sounded by some other instrument, and thus serves as a sensitive detector of the existence of that tone in the surrounding air. Helmholtz made use of this property in his investigations on the quality of complex tones. A series of resonators was used, tuned to the harmonics of the note to be investigated, and each had a short narrow neck that could be inserted into the ear. If a given harmonic was present in the complex note the corresponding resonator intensified it whilst excluding all others, thus enabling Helmholtz to carry out experimentally Fourier's analysis of complex vibrations, and to determine what harmonics were present in a given note. The addition of a resonance box to a tuning-fork has the effect of making the note emitted nearly a pure tone. The note of the fork alone is not generally a pure tone, the octave in particular being sometimes so strong as to overshadow the fundamental if the handle of the vibrating fork is merely pressed against the table and the amplitude is great. A resonance box of the proper pitch augments only the fundamental, leaving the higher tones of the fork so weak that the note emitted is practically pure.

Organ pipes bear some resemblance to resonators, but the points of difference make it necessary to treat them separately. Consider first the stationary vibrations in a pipe stopped at one end. The stopped end must of necessity be a node or point of no motion of the air. The open end must be a point of minimum change of pressure and therefore of maximum motion. Hence, since a point of maximum motion in a stationary wave is a quarter of a wave-length from the nearest node a closed pipe is one quarter the length of the waves it emits when giving its fundamental notes. This is not quite correct, for the point of maximum motion is not strictly at the end of the pipe, but a little beyond it. In all that follows the pipe must be regarded as lengthened at an open end by an amount that depends on the size and shape of the opening. For a circular pipe with thin walls the correction is about three-fifths of the radius. The conditions regarding the ends would be equally well satisfied if we were to take the closed end as a node and the open end as being, not the centre of the next vibrating segment, but the centre of the next but one, say O and F, see Fig. 6. In order to secure this, the wave-length must be shortened to one-third of what it was in the former case, and the pipe will then contain $\frac{3}{4}$ of a wave. The vibration number will be three times what it was before, and hence the pitch will be a twelfth higher. The pipe will now contain two nodes, one at the closed end and the other one-third of the way down from the open end. Similarly, it may have 3, 4, or more nodes and corresponding vibration numbers 5, 7, etc. times that of the fundamental. Thus the series of notes that a closed pipe is capable of giving have vibration numbers in the ratios of the numbers 1, 3, 5, 7, etc.

An open pipe must have the centre of a segment at each end. The longest wave that fulfils this condition is that which is double the length of the pipe, so that E and F of Fig. 6 fall at the ends and the node, A, at the middle. Since then a stopped pipe, when sounding its fundamental, emits a note of wave-length 4 times its own length, and an open pipe one of only twice its own length, it follows that if the pipes are of the same length the open one will sound an octave higher than the closed one. For the first overtone of an open pipe we must reduce the length of the stationary waves until the length EG is equal to the pipe length. The pipe now contains two nodes, and the wave-length is half what it was for the fundamental, so that the vibration number is doubled and the note is an octave higher. Similarly, we can show that the pipe can give notes whose vibration numbers are 3, 4, 5, etc. times that of the fundamental. The fact that a correction is needed for the open end of a pipe does not affect the harmonic relations of the overtones to each other, provided the correction is the same for all the notes. This is the case only if the pipe is narrow. An open pipe of wide bore may depart widely from the harmonic series of overtones. The series of overtones that can be produced from a pipe or other musical instrument must not be confounded with the harmonic series spoken of above in connection with the theories of Fourier and Helmholtz. The overtones of an instrument are not necessarily the *harmonic* overtones of the fundamental. Most wind instruments are designed with a view to securing overtones that fall approximately in the harmonic series ;

but, as has just been said, the wider organ pipes diverge from the series, whilst drums, bells, etc. do not even approximate to it in the relations of their overtones to each other.

The complex note given by such an instrument as a bell will be made up of these inharmonic constituents. Since Fourier's Law is of universal application it must be possible to express the note as the sum of terms selected from the harmonic series, but they will generally be terms very high in the series, and not harmonic overtones of the lowest tone the bell is capable of producing, but of some other tone which may either be altogether absent or too low to be within the range of hearing. It should also be noted that the several overtones of such an instrument as a bell are not separately simple harmonic vibrations.

The flute is an open pipe, and hence has the complete series of overtones with vibration numbers in the ratios of the numbers 1, 2, 3, 4, etc. By means of the holes the tube can be shortened, and the pitch altered so as to give the notes intermediate between the natural overtones. If the holes were as great in diameter as the bore of the tube they would reduce the effective length of tube to the length between the mouthpiece and the highest hole left open, and their distances from the mouthpiece would be inversely proportional to the vibration numbers of the notes given out. It is, for several reasons, not practicable nor desirable to make the holes so large, and the flute must be regarded as of the nature of a resonator with several openings. Uncovering a particular hole has in part the effect of shortening the tube, and in part the effect of enlarging the opening of the flute regarded as a resonator. The nearer a hole is to the mouthpiece the higher is the pitch of the corresponding note; and the larger the hole the higher the note, so that if it is desired for any mechanical reason to alter the position of a hole the pitch can be corrected by making a suitable change in its size. An open hole prevents the formation of a node in its neighbourhood, but favours the formation of a vibrating segment. Cross-fingering is an application of this fact to the production of certain high harmonics. The holes near the points where nodes are situated in the particular form of vibration required are closed, whilst the holes near the vibrating segments are left open.

The clarinet, like many flutes, has a cylindrical bore, but differs from the flute in giving only the odd overtones, so that the first overtone is a twelfth above the fundamental. The mouthpiece is to be regarded as a closed end, but in other respects what has been said of the flute applies equally to the clarinet.

A conical tube closed at the narrow end has the same fundamental as an open cylindrical pipe of the same length, and gives the complete series of harmonic overtones. The hautboy and bassoon have conical tubes, and as the reed end is to be regarded as closed they, like the flute, rise an octave when the pressure of the wind is increased.

All the brass instruments used in the orchestra give the full series of harmonic overtones. The shape of the tube is in most cases neither cylindrical nor conical, but of a shape that has been found by experience to give overtones that are correctly in tune with each other. The shape of the mouthpiece and of the bell have an effect on the quality of the note emitted. A shallow cup-shaped mouthpiece and a small bell tend to make the tone 'brassy,' as in the trombone and trumpet, whilst a deep conical mouthpiece and a wide-spreading bell give a smooth tone, as in the case of the horn.

A narrow bore favours the production of the higher overtones, and conversely. The instruments of the Saxhorn class have a relatively wide bore, and consequently the fundamental is easily produced and of good quality. The bore of the horn is very narrow, and hence, though it is almost impossible to produce the fundamental, a competent performer can produce the overtones up to the sixteenth or even higher.

If a tube has a constriction at some point the pitch of the note emitted will be lowered when the constriction is near the centre of a vibrating segment, and raised when it is near a node. Consequently, dents in the side of a brass instrument will put the notes more or less out of tune with each other, some notes being sharpened, and others flattened, according to the position of the nodes relatively to the dent. The effect is very slight unless the indentation is deep.

Hitherto we have considered only waves and vibrations in air, where the vibrations of a particle of air are longitudinal, that is, in the direction of the line along which the sound is travelling. In solid bodies, of which stretched strings are the most important for our present purpose, longitudinal vibrations are possible, though little used in music. If a resined finger is rubbed lengthways along the string of a pianoforte, a high screaming note will be emitted, which is due to stationary longitudinal vibrations of the string. In the more usual form of the vibration of strings each piece of the string moves transversely to its length, and there is no longitudinal motion. Progressive waves can travel along strings, as is easily shown by hanging a long india-rubber tube or cord from the ceiling, and giving the lower end a sharp jerk sideways. A wave will be seen to travel up the string, and be reflected from the fixed point at the top. If a tube is used, it may be filled with sand or water which, by increasing the inertia of the tube, will reduce the velocity of the wave, just as we saw that in the case of

a gas the greater the density of a gas, and consequently the greater its inertia, the less will be the velocity of waves in that gas. If the cord is stretched more tightly the force required to draw it aside at any point is increased. Consequently the part displaced flies back more rapidly, and the wave travels with greater velocity. Progressive waves travelling along a string and reflected from the end give rise to stationary waves with nodes and segments exactly as described above for air-waves reflected from a wall; and the period of a stationary vibration is the time taken by one complete wave to travel over a given point of the string, or the time a wave takes to travel over twice the length of one of the segments. A string as used for producing musical notes is stretched between two fixed pegs, or over two bridges, and vibrates transversely. The laws connecting the period of vibration with the length, tension, and mass of the string can be determined experimentally by means of the monochord. This consists of a string stretched over a sounding box. One end of the string is fixed, and the other passes over a pulley and supports a weight that can be varied so as to give any required tension. A movable bridge is placed under the string, so that the length of the vibrating section can be altered. It will be found that if the length is reduced to one-half, the note rises an octave, if to one-third it rises a twelfth, and so on; whence it follows that the vibration number is inversely proportional to the length, or the period of vibration directly proportional to the length. In order to raise the pitch an octave by altering the tension it will be found that the weight must be made four times greater, and to raise the pitch a twelfth it must be made nine times greater, and hence the vibration number is proportional to the square root of the tension. Similarly, by using strings of the same length and tension but of different weights it will be found that the vibration number varies inversely as the square root of the density.

All three methods of altering the pitch of a note are illustrated by the violin. It is desirable, both for mechanical and musical reasons, that the tensions of the strings should not be greatly different from each other; and hence the lower strings are thicker than the higher ones, in order to lower the pitch whilst retaining a sufficient tension. The G string is wrapped with wire so as to get sufficient density without impairing the flexibility. If all three strings were of the same density the ratio of the tensions of the G and E would be 64 to 729, as the vibration numbers are in the ratio 8 to 27, and the lower strings would then be so loosely stretched as to give a very feeble tone of a very poor quality. The tuning of a string is effected by adjusting its tension, and the production of the notes other than the open note by pressing the string down on the finger-board and so altering its length.

When a string gives out its fundamental alone it vibrates as a whole without nodes between the fixed ends, but it is possible for it to vibrate with one, two, or more nodes, and so to produce a series of overtones. If there is only one node it will be situated at the middle of the string, and the note will be an octave higher than the fundamental. This follows from the statement made above, that the vibration number is inversely proportional to the length; for a node is a point of no motion, and might be fixed without altering the circumstances, so that a string with a node in the middle is practically equivalent to two strings of half the length and hence an octave higher in pitch. The sections of string on the opposite sides of a node are always displaced in opposite directions. If, for instance, that on the right is arched upwards that on the left will be bent downwards, and *vice versâ*. If the two sections have the same period, this state of affairs once established will persist, and the node will remain at rest; but a moment's consideration will show that a single node cannot be elsewhere than at the middle, for if it were, the two sections of the string would have different periods, and though at one moment they might be in opposite phases of vibration they could not remain so. A time would come when they would be moving in the same direction, and the point separating them would be compelled to move with them and so could not be a node. Hence it follows that whatever the number of nodes they must be so situated as to divide the string into sections of equal length.

Hence, since any number of nodes is possible, it is easily seen that the notes that can be produced from a string of given length will have vibration numbers in the ratio of the numbers 1, 2, 3, etc., or the harmonic series.

Overtones are sometimes produced on the violin by touching the string gently at an aliquot part of its length from one end, so as to induce the formation of a node at the point touched, instead of pressing the string down on the finger-board. The note produced by a string is made up of the fundamental together with harmonics which vary according to the method and position of the plucking, bowing, etc. The harder the hammer and the nearer the point struck to an end of the string the more prominent will be the higher harmonics and the more tinkling will be the tone.

It has been stated above that within certain limits the force required to produce a given displacement in an elastic body is proportional to the displacement. In such circumstances if the force acting on the body varies according to the harmonic law—that is, is proportional to the sine of a uniformly increasing angle—the displacement will also follow the harmonic law.

A vibrating body A communicates vibrations to an elastic body B in contact with it, by acting on it with a force that varies periodically. If A vibrates harmonically the forces will be harmonic, and if B obeys Hooke's Law, its vibrations will also be harmonic. If B does not obey Hooke's Law its vibrations will not be harmonic though they will be periodic, and will have the same period as the vibrations of A. Now small changes of volume of air are approximately proportional to the changes of pressure that cause them, and hence a harmonically vibrating body will set up approximately harmonic vibrations in the air if the vibrations are small. When, however, the periodic forces acting on air are large this is no longer the case. The condensation is no longer proportional to the increase of pressure above the normal, and therefore a body that is itself vibrating harmonically may cause vibrations in the air that are not harmonic. The vibrations will be periodic, and therefore can be expressed as the sum of a series of harmonic constituents, the overtones being more conspicuous the greater the amplitude of the vibrations. Thus we have the result that when a body that executes nearly simple harmonic vibrations communicates its vibrations to the air, the sound produced may be a complex note when it is very loud, and will gradually alter in quality as it dies away, becoming more and more nearly a pure tone. Harmonics formed in this way are very faint unless the vibrations are amplified by confining the vibrating air in a small cavity. If a strongly vibrating fork is held over the mouth of a bottle, the octave may sometimes be heard.

When two trains of simple harmonic waves of different periods reach such a restricted cavity simultaneously the amplitude of vibration of the two, when combined, may be sufficient to exceed the limits within which force is proportional to displacement. Helmholtz has shown that in such circumstances there are formed Combination Tones, the most important of which is one whose frequency is the difference of the frequencies of the two original tones, and is called the First Difference Tone. There is formed also a Summation tone whose frequency is the sum of the frequencies of the original tones. The difference and summation tones being real tones can form further difference and summation tones with each other and with the original notes, and hence a large number of such combination tones are theoretically possible. The drum of the ear does not obey Hooke's Law. In the normal state it is stretched inwards a little, and an increase of pressure in the air near it gives a smaller displacement than an equal diminution of pressure gives in the opposite direction. Consequently two trains of harmonic waves that are not of sufficient amplitude to give combination tones in the air may do so when they reach the ear, and it is probable that most of the combination tones heard are thus formed in the ear. If they exist outside the ear they will be strengthened by a resonator ; if they are produced by the ear a resonator will have no effect on their loudness. The first difference tone is heard very plainly when two notes are sounded together on a harmonium. Here the tone has a real existence outside the ear, as is proved by its being markedly strengthened by a resonator tuned to it. The tone is probably produced in the wind chest where the air is confined to a limited space, and so vibrates with great amplitude. Two whistles blown together give a very unpleasantly loud difference tone. It is easy to find the pitch of the difference tone produced by two given notes as follows: Write down the series of harmonic overtones on any note, say C, and number them 1, 2, 3, etc., from below upwards. These numbers will be proportional to the frequencies of the various notes. Now pick out two notes of the series that give the interval under consideration; subtract the number opposite the lower from that opposite the higher, and the difference will be found opposite the first difference tone of the two notes. Suppose, for instance, we want the difference tone of a major sixth. The third and fifth tones of the series, viz. G and E, make this interval with each other. Their difference tone is found opposite 5—3 or 2, and hence is a fifth below the lower of the two notes forming a sixth. It must be remembered that on all musical instruments at the present day the method of tuning by equal temperament is employed, so that the vibration ratio for a sixth is not exactly 5 : 3, and therefore the difference tone is not exactly a fifth below the lower.

The harmonic series can be used in a similar way for finding summation tones or difference tones of higher order than the first. Thus, for instance, the summation tone of notes 2 and 3, a fifth apart, is 5, which is a major sixth above the higher. It will be seen that the first difference tone has a frequency equal to that of the beats produced by the two tones that give rise to it, and it was long thought that it arose simply from the beats being so rapid as to give the sensation of a definite note. This view is inconsistent with Ohm's Law, for two harmonic vibrations when compounded cannot, on analysis by Fourier's Method, yield anything more than was put into the compound vibration, and in particular cannot yield a harmonic vibration of the period of the beats. Consequently, as every constituent of a complex tone corresponds to a harmonic vibration, there cannot be in the resultant note any tone with the frequency of the beats, unless the circumstances are altered by some such defect of elasticity as has been mentioned above.

If two pure tones sounded together have nearly the same pitch, their beats will be slow,

and will produce a not unpleasing effect. As the beats increase in rapidity by an increase in the interval between the two tones the effect becomes less pleasant, and when they reach about 30 a second they are very harsh. Beyond this point they are too rapid to be recognised as beats, and the unpleasantness diminishes. A difference of frequency of 30 between the two notes corresponds to a different interval at different parts of the scale. Near the middle of the range used in music it is about a semitone. The experimental fact that two tones, differing in frequency by about 30, give the maximum roughness, was taken by Helmholtz as the basis of his physical theory of consonance. It must be remembered in what follows that we are speaking only of the harshness of a chord standing alone, and are not concerned with the art of the musician who can make the roughest of discords beautiful by giving it suitable neighbours. Nor are we considering the mere æsthetic beauty of a chord. According to Helmholtz's theory the octave is a much better concord than the major third. Every one would agree that the octave is the smoother of the two, though most would regard the major third as more satisfying to the musical ear.

As regards the consonance of two pure tones, it need only be said here that it is least when the difference of frequencies is about 30, and there is no great difference between the smoothness of the different concords (though, as we shall see later, the intervals are more or less defined by the existence of combination tones). Consequently chords of pure tones alone soon become monotonous from the uniformity of their smoothness. The wide-stopped pipes of an organ give an illustration of this. If used alone they very soon become wearisome.

With complex tones the case is different, for even though the fundamentals are too far apart to beat, it may be that some of the harmonics are near enough to cause roughness. In general the overtones of lower order, that is nearer the fundamental, are the stronger, and Helmholtz estimates the roughness of a chord by the number and order of the pairs of harmonics that are within beating distance. Let us take as illustrations the octave, fifth, and major third.

The open notes are the fundamentals, the black notes are the first few harmonics.

In the case of the octave the second C adds nothing that did not already exist in the harmonics of the first; it makes no difference whatever to any roughness that may have existed already in the first C by the clashing of its own harmonics with each other, as the consonance is perfect. The only result of adding the second C is to alter the quality of the first, and not to give the sensation of a chord.

Take next the perfect fifth. Here the second harmonic of G clashes slightly with the third and fourth of C; but the effect of this is not great as the interval is rather too wide for great harshness. Proceeding higher we find B♭ clashing with B♮ but these are so high in the series as to be in most cases very faint, so that there is some roughness in the fifth, but it is not great.

The major third is decidedly worse, for the second harmonic of E is a semitone from the third of C, and, a little higher, G clashes with G♯.

These chords afford sufficient illustrations of Helmholtz's method. In the same way chords of three or more notes can be investigated, or particular chords relating to instruments whose overtones are known.

For instance the clarinet has only the odd overtones, whilst the hautboy has the whole series. It is easily shown that if a major third is to be played by these two instruments, it is better to give the upper note to the hautboy. The stopped and open pipes of an organ afford illustrations of a similar kind.

The existence of harmonics explains also the reason why the slight mistuning of certain intervals has a less unpleasant effect than is the case with others. In the system of equal temperament no intervals are strictly true except the octaves. If the octaves and fifths were as far from true intonation as are the thirds, the effect would be intolerable. The octave is very sharply limited by the fact that the higher of the two notes coincides with the first harmonic of the lower. If the higher is mistuned it will beat with the first harmonic of the lower, and as this harmonic is generally very strong the beats will be quite too loud to be ignored, and consequently octaves must be tuned accurately. Similarly the fifth is limited by the coincidence of the first harmonic of one fundamental coinciding with the second of the other. The beats caused by mistuning are not in this case so conspicuous as in the case of the octave, as the harmonics concerned are of higher order and therefore weaker, but they are quite perceptible enough to serve as a guide in the accurate tuning of fifths. Referring next to the third of the intervals tabulated above—the major third—it will be seen that the only limitation arises from the coincidence of the third harmonic of one note, with the fourth of the other. These harmonics are generally so faint that their beating is almost inaudible, and hence the mistuning of thirds does not seriously affect the consonance of the interval.

Even when the notes forming the interval are perfectly pure tones, the presence of combination tones may require that the tuning should be exact. Take the case of the octave, and suppose the vibration numbers of the two notes are 100 and 200. The first difference tone will have a frequency, 100. Now sharpen the higher note by two vibrations per second, and the difference tone will become 102, which will beat twice a second with the lower note. Two pure tones, a fifth apart, are limited in a similar way, but here the beats are caused by a combination tone of the second order and so are faint. Let the interval be so mistuned that the frequencies are 200 and 301, then the first difference tone will be 101, and this with the lower note gives a second difference tone 99, so that the two difference tones will beat twice a second. J. W. C.

ACT. A section of a drama having a completeness and often a climax of its own. Though the word Act has no representative in Greek, the division indicated by it was not unknown to the ancient theatre, where the intervention of the chorus stopped the action as completely as the fall of the curtain in the modern. The 'Plutus' of Aristophanes, the earliest Greek play from which the chorus was extruded, has come down to us without breaks or divisions of any kind; practically, therefore, it is 'in one act.' Whether the earlier essays of Roman dramatists were divided into acts by themselves is uncertain. The canon of Horace, that a drama should consist of neither more nor less than five acts ('Epist. ad Pisones,' 189), was doubtless drawn from previous experience and practice.

The number of acts into which the modern drama is divided, though of course largely dependent on the subject, is governed by many considerations unknown to the ancient, in which 'the unities' of place as well as of time and action were strictly observed. With us the locality generally changes with each act, frequently with each scene. For this change the convenience of the mechanist and even of the scene-shifter has to be consulted. In the musical drama other considerations beside these add to the difficulties of laying out the action; such as variety and contrast of musical effect, and the physical capabilities of the performers, whose vocal exertions must not be continued too long without interruption. It is not surprising therefore that operas, even of the same class, present examples of every kind of division. French *grand opéra* consists still generally, as in the days when Quinault and Lully worked together, of five acts; French *opéra comique* of three, and often one only. The Italians and Germans have adopted every number of acts, perhaps most often three.

[Wagner laid it down as a principle that three was the best number of acts for opera, and all his own dramas obey this rule; many modern operas, of all schools, contain four.]

Handel applies the word to oratorios, and it is used by J. S. Bach in a manner probably unique. He heads his cantata 'Gottes Zeit ist die allerbeste Zeit' with the words 'Actus Tragicus.' It is what would be called among ourselves a funeral anthem. The word 'Act' was also used in connection with miscellaneous concerts, instead of our modern 'Part I.' and 'Part II.' J. H.

ACT-TUNE Fr. (*Entr'acte*, Germ. *Zwischenspiel*), sometimes also called CURTAIN TUNE. A piece of instrumental music performed while the curtain or act-drop is down between the acts of a play. In the latter half of the 17th century and first quarter of the 18th century act-tunes were composed specially for every play. The compositions so called comprised, besides the act-tunes proper, the 'first and second music,' tunes played at intervals to beguile the tedium of waiting for the commencement of the play,—for it must be remembered that the doors of the theatre were then opened an hour and a half, or two hours before the play began—and the overture. The act-tunes and previous music were principally in dance measures. Examples may be seen in Matthew Lock's 'Instrumental Musick used in The Tempest,' appended to his 'Psyche,' 1675; in Henry Purcell's 'Dioclesian,' 1691; and his 'Collection of Ayres composed for the Theatre,' 1697; and in two collections of 'Theatre Music,' published early in the 18th century; as well as in several MS. collections. During the greater part of the 18th century movements from the sonatas of Corelli, Handel, Boyce, and others were used as act-tunes, and at present the popular dance music of the day is so employed. For the elaborate compositions and plays, in which entr'actes form but one part, see INCIDENTAL MUSIC. W. H. H.

ACTION (Fr. *Le Mécanique*; Ital. *Mecanica*; Ger. *Mechanismus*, *Mechanik*), the mechanical contrivance by means of which the impulse of the player's finger is transmitted to the strings of a pianoforte, to the metal tongue (free reed) of a harmonium, or by the finger or foot to the column of air in an organ-pipe. In the harp the action, governed by the player's foot upon the pedals, effects a change of key of a semitone or whole tone at will. In the pianoforte the action assumes special importance from the capability this instrument has to express gradations of tone; and as the player's performance can never be quite consciously controlled—more or less of it being automatic—we are, through the faithful correspondence of the action with the touch, placed in direct relation with the very individuality of the player. It is this blending of conscious and unconscious expression of which the pianoforte action is the medium that produces upon us the artistic impression. There have

been important variations in the construction of pianoforte actions that have had even geographical definition, as the English, the German action, or have been named from structural difference, as the grasshopper, the check, the repetition action. In the organ and harmonium, as in the old harpsichord and spinet, the action bears a less important part, since the degree of loudness or softness of tone in those instruments is not affected by the touch. For history and description of the different actions see CLAVICHORD, HARMONIUM, HARP, HARPSICHORD, ORGAN, and PIANOFORTE. A. J. H.

ACUTENESS. A musical sound is said to be more *acute* as the vibrations which produce it are more rapid. It is said to be more *grave* as the vibrations are slower. Thus of the two

and

notes the former of which is produced by 512 vibrations per second, and the latter by 256, the former is called the more acute, the latter the more grave. The application of these terms is as difficult to account for as the words 'high' and 'low,' to denote greater and less rapidity of vibration. The ancients appear to have imagined that the acute sounds of the voice were produced from the higher parts of the throat, and the grave ones from lower parts.[1] And this has been supposed by some writers to have been the origin of the terms; but the idea is incorrect and far-fetched, and can hardly be considered a justification

As soon as anything approaching the form of musical notation by the *position* of marks or points came into use, the terms high and low were naturally seized upon to guide such positions. Thus our musical notation has come into being, and thus the connection between high notes and quick vibrations has become so firmly implanted in our minds, that it is exceedingly difficult to bring ourselves to the appreciation of the truth that the connection is only imaginary, and has no foundation in the natural fitness of things. W. P.

ADAGIETTO (Ital., diminutive of ADAGIO). (1) a short adagio (*e.g.* Raff's Suite in C). (2) As a time indication, somewhat less slow than adagio.

ADAGIO (Ital. *ad agio*, 'at ease,' 'leisurely'). (1) A time-indication. It is unfortunate that great differences of opinion prevail among musicians as to the comparative speed of the terms used to denote slow time. According to the older authorities adagio was the slowest of all time, then came grave, and then largo. This is the order given by Clementi. In some more modern works, however, largo is the slowest, grave being second and adagio third; while others again give the order thus—grave, adagio, largo. It is therefore impossible to give any absolute rule on the subject; it will be sufficient to define adagio in general terms as 'very slow.' The exact pace at which any particular piece of music thus designated is to be taken will either be indicated by the metronome, or, if this has not been done, can be for the most part determined with sufficient accuracy from the character of the music itself, for, like most of the other indications of pace, the character, rather than the actual rate of speed, is implied.

(2) The word is used as the name of a piece of music, either an independent piece (as in the case of Mozart's Adagio in B minor for piano, or Schubert's posthumous Adagio in E), or as one of the movements of a symphony, quartet, sonata, etc. When thus employed, the word not only shows that the music is in very slow time, but also indicates its general character. This is mostly of a soft, tender, elegiac tone, as distinguished from the largo, in which (as the name implies) there is more breadth and dignity. The adagio also is generally of a more florid character, and contains more embellishments and figurated passages than the largo. The distinction between the two will be clearly seen by comparing the adagios in Beethoven's sonatas, op. 2, Nos. 1, 3, and op. 13, with the largos in the sonatas op. 2, No. 2 and op. 7. On Chopin's use of the word, see Niecks's Biography, vol. i. p. 203.

(3) It was formerly used as a general term for a slow movement—'No modern has been heard to play an Adagio with greater taste and feeling than Abel.' Thus in the autograph of Haydn's Symphony in D (Salomon, No. 6), at the end of the first movement, we find 'Segue Adagio,' though the next movement is an Andante. E. P.

ADAM, ADOLPHE CHARLES, born in Paris, July 24, 1803, was the son of Louis (Johann Ludwig) Adam, a well-known musician and pianoforte-player at the Conservatoire. Although thus intimately connected with the art of music he strenuously resisted the early and strong desire of his son to follow the same calling. Adolphe was sent to an ordinary day-school and was refused all musical instruction, which he himself tried to supply by private studies, carried on in secret and without guidance or encouragement. At last the quiet persistence of the young man overcame the prejudices of paternal obstinacy. In 1817 he was allowed to enter the Conservatoire, but only as an amateur, and on condition of his promising solemnly never to write for the stage, an engagement naturally disregarded by him at a later period. His first master was Benoist, and his instrument the organ, on which he began to thrum little tunes of his own, soon abandoning it for the harmonium. Adam's first success indeed was due to his clever improvisations on that instrument in fashionable drawing-rooms. It was perhaps owing to his

[1] See passage from Aristides Quintilianus, quoted in Smith's *Harmonics*, p. 2.

want of early training that even at a more advanced period he was unable to read music at sight. The way in which he at last acquired the sense of intuitive hearing, so indispensable for the musical composer, is pleasantly described by Adam himself in the autobiographical sketch of his life. 'Soon after my admission to the Conservatoire,' he says, 'I was asked by a schoolfellow older than myself[1] to give a lesson at his solfeggio class, he being otherwise engaged. I went to take his place with sublime self-assertion, and although totally unable to read a ballad I somehow managed to acquit myself creditably, so creditably indeed that another solfeggio class was assigned to me. Thus I learnt reading music by teaching others how to do it.' We are also told of his studying counterpoint under Eler and Reicha, which, however, to judge by the results, cannot have amounted to much. The only master to whom Adam owed not only an advance of his musical knowledge but to some extent the insight into his own talent, was that most sweet and most brilliant star of modern French opera, Boieldieu. He had been appointed professor of composition at the Conservatoire in 1821, and Adam was amongst his first and most favourite pupils. The intimacy which soon sprang up between the teacher and the taught has been pleasantly described by Adam in his posthumous little volume *Derniers souvenirs d'un musicien.* It was owing to this friendship that Adam was able to connect his name with a work vastly superior to his own powers, Boieldieu's 'Dame Blanche,' of which he composed or rather combined the overture. By Boieldieu's advice and example also our composer's talent was led to its most congenial sphere of action, the comic opera. Adam's first connections with the stage were of the humblest kind. In order to acquire theatrical experience he is said to have accepted the appointment of supernumerary triangle at the Gymnase, from which post he soon advanced to that of accompanist at the same theatre. His first independent attempt at dramatic composition was the one-act operetta of 'Pierre et Cátherine,' brought out at the Opéra Comique in 1829. It was followed the next year by the three-act opera 'Danilowa.' Both were favourably received, and, encouraged by his success, Adam began to compose a number of operatic works with a rapidity and ease of productiveness frequently fatal to his higher aspirations. Subjoined is a list of the more important of these works, with the dates of their first performances: 'Le Chalet,' 1834; 'Le Postillon de Longjumeau,' 1836 (Adam's best and most successful work); 'Le Brasseur de Preston,' 1838; 'Le Roi d'Yvetot,' 1842; 'Cagliostro,' 1844; 'Richard en Palestine,' same year: also the ballets of 'Faust,' 1832 (written for London); 'La jolie fille de Gand,' 1839; and 'Giselle,' 1841. Our remarks on the remaining facts of Adam's biography can be condensed into few words. In 1847 he started, at his own expense and responsibility, a new operatic theatre called Théâtre National, and destined to bring the works of young aspiring composers before the public. These laudable efforts were interrupted by the outbreak of the Revolution in the February of the ensuing year. The theatre had to close, Adam having sunk in the enterprise all his earnings, and having moreover incurred a considerable debt, to discharge which he henceforth, like Sir Walter Scott, considered the chief task of his life. This task he accomplished in the course of five years, during which time, besides producing several operas, he occupied himself in writing criticisms and *feuilletons* for the newspapers. His contributions to the 'Constitutionel,' 'Assemblée Nationale,' and 'Gazette Musicale,' were much appreciated by the public. Although a critic he succeeded in making no enemies. Some of his sketches, since collected, are amusing and well though not brilliantly written. In 1844 he was elected Member of the Institute; in 1849 Professor of Composition at the Conservatoire. He died suddenly May 3, 1856. His reputation during his lifetime was not limited to his own country. He wrote operas and ballads for London, Berlin, and St. Petersburg, which capitals he also visited personally. His deservedly most popular opera, as we said before, is the 'Postillon de Longjumeau,' still frequently performed in France and Germany. In the latter country it owed its lasting success chiefly to the astonishing vocal feats of Wachtel, whose own life seemed strangely foreshadowed by the skilful and amusing libretto.

[1] Halévy, the composer of 'La Juive.'

Adam attempted three kinds of dramatic composition, viz. the grand opera, in which he utterly failed, the ballet, in which he produced some of the most charming melodies choregraphic music has to show, and the comic opera, the one and only real domain of his talent. As the most successful of his works in these respective branches of art we mention 'Richard en Palestine,' 'Giselle,' and the 'Postillon de Longjumeau.' Adam's position in the history of music, and more especially of comic opera, may be briefly described as that of the successor and imitator of Boieldieu. His early style is essentially founded on the works of that master. With him he shares, although in a lesser degree, the flowing melodiousness and rhythmical piquancy of his style, the precision of declamatory phrasing, and the charming effects of a graceful though sketchy instrumentation. When inspired by the sweet simplicity of the French popular song, Adam has occasionally effects of tenderest pathos; in other places, as for instance in the duet between the terrified accomplices in the last act of the 'Postillon,' his rollicking humour shows to great

advantage. At the same time it cannot be denied that his melodies are frequently trivial to absolute vulgarity; the structure of his concerted pieces is of the flimsiest kind; dance-rhythms prevail to an immoderate extent: all this no less than the choice of *hasardé* subjects seems to indicate a gradual decline from the serene heights of Boieldieu's humour. A memoir by Arthur Pougin was published in 1876. F. H.

ADAM, LOUIS (Johann Ludwig), born at Müttersholz in Alsace, Dec. 3, 1758, died in Paris, April 11, 1848; a pianist of the first rank; appeared in Paris when only seventeen as the composer of two symphonies-concertantes for the harp, piano, and violin, the first of their kind, which were performed at the Concerts Spirituels. Having acquired a reputation for teaching, in 1797 he was appointed professor at the Conservatoire, a post he retained till 1843, training many eminent pupils, of whom the most celebrated were Kalkbrenner, Hérold, father and son, Chaulieu, Henri le Moine, and Mme. Renaud d'Allen, and last, though not least, his own more famous son, Adolphe Charles.

Adam was a remarkable example of what may be done by self-culture, as he had scarcely any professional training, and not only taught himself the harp, and violin, and the art of composition, but formed his excellent style as a pianist by careful study of the works of the Bachs, Handel, Scarlatti, Schobert, and later of Clementi and Mozart. His *Méthode de doigté* (Paris, 1798), and *Méthode Nouvelle pour le Piano* (1802), passed through many editions. M. C. C.

ADAM DE LA HALE. See HALE, ADAM DE LA.

ADAM DE FULDA. See FULDA, ADAM DE.

ADAMBERGER, VALENTIN, born at Munich, July 6, 1743. Remarkable for his splendid tenor voice and admirable method. He was taught singing by Valesi, and at his instance went to Italy, where he met with great success under the Italianised name of Adamonti. He was recalled to Vienna by the Emperor Joseph and made his first appearance at the German opera at the Hof-und-National-Theater there on August 21, 1780. In the interim, however, he had visited London, where he sang in Sacchini's 'Creso' at the King's Theatre in 1777. In 1789 he entered the Imperial Chapel. Later in life he became renowned as a teacher of singing. It was for him that Mozart composed the part of Belmonte in the 'Seraglio,' as well as the fine airs 'Per pietà,' 'Aura che intorno,' and 'A te, fra tanti affanni' (Davidde Penitente). He also appeared in the 'Schauspiel-Director' of the same master. In 1782 he married Maria Anna, daughter of Jacquet the actor, herself a noted actress. She died 1804. His daughter Antonie, also a player, a woman of much talent and amiability, was betrothed to Körner the poet, but their union was prevented by his death in action August 26, 1813, after which, 1817, she married Jos. Arneth, trustee to the imperial cabinet of antiquities. Fétis and others give Adamberger's name as Joseph, and his death as on June 7, 1803—both incorrect. He died in Vienna, August 24, 1804, aged sixty-one. Mozart's letters contain frequent references to him, and always of an affectionate and intimate character. Through all the difficulties and vicissitudes of theatrical life, nothing occurred to interrupt their intercourse, though evidence is not wanting that Adamberger's temper was none of the best. Mozart took his advice on musical matters, and on one occasion names him as a man 'of whom Germany may well be proud.' C. F. P.

ADAMI DA BOLSENA, ANDREA. Born at Bolsena in Oct. 1663. On the recommendation of Cardinal Ottoboni (Corelli's patron) he was appointed master of the Pope's chapel, and acting professor of music. While in this post Adami wrote 'Osservazioni per ben regolare il Coro dei Cantori della Cappella Pontificia,' etc. (Rome, 1711), which is in reality a history of the Papal chapel, with twelve portraits and memoirs of the principal singers. He died, July 22, 1742, much esteemed both as a man and a musician. C. F. P.

ADAMS, THOMAS, was born Sept. 5, 1785. He commenced the study of music, under Dr. Busby, at eleven years of age. In 1802 he obtained the appointment of organist of Carlisle Chapel, Lambeth, which he held until 1814, in which year (on March 22) he was elected, after a competition in playing with twenty-eight other candidates, organist, of the church of St. Paul's, Deptford. On the erection of the church of St. George, Camberwell, in 1824, Adams was chosen as its organist, and on the opening of the church (March 26, 1824), an anthem for five voices, 'O how amiable are Thy dwellings,' composed by him for the occasion, was performed. In 1833 he was appointed organist of the then newly rebuilt church of St. Dunstan-in-the West, Fleet Street, which post he held, conjointly with that of Camberwell, until his death. From their commencement Adams for many years superintended the annual evening performances on the Apollonicon, a large chamber-organ of peculiar construction (see APOLLONICON). For a period of upwards of a quarter of a century Adams occupied a very prominent position as a performer, and was commonly called 'the Thalberg of the organ.' Excelling in both the strict and free styles, he possessed a remarkable faculty for extemporising. His services were in constant requisition by the organ-builders to exhibit the qualities of their newly built organs, prior

to their removal from the factories to their places of destination. On such occasions the factories were crowded by professors and amateurs, anxious of witnessing the performances, and Adams played from ten to twelve pieces of the most varied kind, including two or three extemporaneous effusions, not only with great effect, but often with remarkable exhibition of contrapuntal skill, and in a manner which enraptured his hearers. Even in so small a field as the interludes then customary between the verses of a psalm tune, he would exhibit this talent to an extraordinary degree. Adams was a composer for, as well as a performer on, his instrument. He published many organ pieces, fugues, and voluntaries, besides ninety interludes, and several variations on popular themes. He also published numerous variations for the pianoforte, and many vocal pieces, consisting of short anthems, hymns, and sacred songs. Besides his published works, Adams composed several other pieces of various descriptions, which yet remain in manuscript. [The *Musical Times* of Sept. 1899 contains an account of his organ-recitals, and a set of harmonies to the 'Old Hundredth,' an amusing burlesque of the tortuous style of treatment then coming into fashion.] He died Sept. 15, 1858. His youngest son, Edgar Adams, followed the profession of his father, and held for many years the appointment of organist of the church of St. Lawrence, Jewry, near Guildhall. He died May 2, 1890. W. H. H.

ADCOCK, James, a native of Eton, Bucks, was born July 29, 1778. In 1786 he became a chorister in St. George's Chapel, Windsor, under William Webb (and afterwards under Dr. Aylward), and in Eton College Chapel under William Sexton. In 1797 he was appointed lay clerk in St. George's Chapel, and in 1799 obtained a similar appointment at Eton. He soon afterwards resigned those places and went to Cambridge, where he was admitted a member of the choirs of Trinity, St. John's, and King's Colleges. He afterwards became master of the choristers of King's College. He died April 30, 1860. Adcock published several glees of his own composition, and 'The Rudiments of Singing,' with about thirty solfeggi to assist persons wishing to sing at sight. W. H. H.

ADDISON, John, born about 1766, the son of a village mechanic, at an early age displayed a taste for music, and learned to play upon several instruments. Having, about 1793, married Miss Willems, a niece of Reinhold, the bass singer, a lady possessed of a fine voice and considerable taste, he conceived the idea of pursuing music as a profession. Soon after her marriage Mrs. Addison made a successful appearance at Vauxhall Gardens. Addison then went with his wife to Liverpool, where he entered on his professional career as a performer on the violoncello and subsequently on the double bass, an instrument to which, as an orchestral player, he afterwards confined himself. From Liverpool they went to Dublin, where Addison soon became director of the amateur orchestra of the private theatre, and, from having to arrange the music, improved himself in composition. After fulfilling other engagements in Liverpool and Dublin, Mr. and Mrs. Addison came to London, where, on Sept. 17, 1796, the latter appeared at Covent Garden Theatre as Rosetta in 'Love in a Village,' and afterwards performed other characters. In 1797 they went to Bath, where Mrs. Addison studied under Rauzzini. After a three years' engagement in Dublin, they proceeded to Manchester, where Addison was induced to abandon the musical profession and embark in the cotton manufacture. In this, however, he was unsuccessful, and soon resumed his profession. After a brief sojourn in the provinces he returned to London, and engaged with Michael Kelly as manager of his music business. He was also engaged at the Italian Opera and the Ancient and Vocal Concerts as a double bass player. In 1805 he made himself known as a composer, by the music to Skeffington's 'Sleeping Beauty.' He afterwards composed several pieces for the Lyceum, and composed and adapted others for Covent Garden Theatre. On March 3, 1815, a short sacred musical drama entitled 'Elijah raising the Widow's Son,' adapted by Addison to music by Winter, was produced at Drury Lane Theatre in the series of Lenten oratorios, under the direction of Sir George Smart. Addison next employed himself as a teacher of singing, and in that capacity instructed many singers who maintained very creditable positions in their profession. He died at an advanced age, on Jan. 30, 1844. His principal dramatic compositions are 'The Sleeping Beauty,' 1805; 'The Russian Impostor,' 1809; 'My Aunt,' 1813; 'Two Words,' 1816; 'Free and Easy,' 1816; 'My Uncle,' 1817; 'Robinet the Bandit,' 'Rose d'Amour,' an adaptation of Boieldieu's opera of that name, 1818. He was one of the six composers who contributed the music to Charles Dibdin the younger's opera, 'The Farmer's Wife,' in 1814. W. H. H.

ADDITIONAL ACCOMPANIMENTS. 1. In the published scores of the older masters, especially Bach and Handel, much is to be met with which if performed exactly as printed will fail altogether to realise the intentions of the composer. This arises partly from the difference in the composition of our modern orchestras as compared with those employed a century and a half ago; partly also from the fact that it was formerly the custom to write out in many cases little more than a skeleton of the music, leaving the details to be

filled in at performance from the 'figured bass.' The parts for the organ or harpsichord were never written out in full except when these instruments had an important solo part; and even then it was frequently the custom only to write the upper part and the bass, leaving the harmonies to be supplied from the figures by the player. Thus, for instance, the first solo for the organ in Handel's Organ Concerto in G minor No. 1, is thus written in the score:—

It is evident from the figures here given that the passage is intended to be played in the following, or some similar way,

and that a performer who confined himself to the printed notes would not give the effect which Handel designed. Similar instances may be found in nearly all the works of Bach and Handel, in many of which nothing whatever but a figured bass is given as a clue to the form of accompaniment. At the time at which these works were written the art of playing from a figured bass was so generally studied that any good musician would be able to reproduce, at least approximately, the intentions of the composer from such indications as the score supplied. But when, owing to the growth of the modern orchestra, the increased importance given to the instrumental portion of the music, and the resultant custom which has prevailed from the time of Haydn down to our own day of writing out in full all parts which were *obbligato*—*i.e.* necessary to the completeness of the music—the art of playing from a figured bass ceased to be commonly practised, it was no longer possible for the person who presided at the organ or piano at a performance to complete the score in a satisfactory manner. Hence arose the necessity for additional accompaniments, in which the parts which the composer has merely indicated are given in full, instead of their being left to the discretion of the performer.

2. There are two methods of writing additional accompaniments. The first is to write merely a part for the organ, as Mendelssohn did with so much taste and reserve in his edition of 'Israel in Egypt,' published for the London Handel Society. There is more than one reason, however, for doubting whether even his accompaniment would succeed in bringing out the true intentions of the composer. In the first place, our modern orchestras and choruses are so much larger than those mostly to be heard in the time of Bach and Handel, that the effect of the combination with the organ must necessarily be different. An organ part filling up the harmony played by some twenty or twenty-four violins in unison (as in many of Handel's songs) and supported by perhaps twelve to sixteen bass instruments will sound very different if there is only half that number of strings. Besides, our modern organs often differ hardly less from those of the 18th century than our modern orchestras. But there is another and more weighty reason for doubting the advisability of supplementing the score by such an organ part. In the collection of Handel's conducting-scores, purchased by M. Schoelcher, and now at Hamburg, is a copy of 'Saul' which contains full directions in Handel's own writing for the employment of the organ, reprinted in the edition of the German Handel Society;[1] from which it clearly appears that it was nowhere used to fill up the harmony in the accompaniment of the songs, which must therefore have been given to the harpsichord. It is therefore evident that such an organ part as Mendelssohn has written for the songs in 'Israel,' appropriate as it is in itself, is not what the composer intended.

3. The method more frequently and also more successfully adopted is to fill up the harmonies with other instruments—in fact to rewrite the score. Among the earliest examples of this mode of treatment are Mozart's additional accompaniments to Handel's 'Messiah,' 'Alexander's Feast,' 'Acis and Galatea,' and 'Ode for St. Cecilia's Day.' These works were arranged for Baron van Swieten, for the purpose of performances where no organ was available. What was the nature of Mozart's additions will be seen presently; meanwhile it may be remarked in passing, that they have always been considered models of the way in which such a task should be performed. [See the preface to Professor Prout's edition of 'The Messiah' (full score), 1902.] Many other musicians have followed Mozart's example with more or less success, among the chief being Ignaz Franz Mosel, who published editions of 'Samson,' 'Jephtha,' 'Belshazzar,' etc., in which not only additional instrumentation was introduced, but utterly unjustifiable alterations were made in the works themselves, a movement from one oratorio being sometimes transferred to another; Mendelssohn, who (in early life) rescored the 'Dettingen Te Deum,' and 'Acis and Galatea'; Dr. Ferdinand Hiller, Sir G. A. Macfarren, Sir Michael Costa, Sir Arthur Sullivan, and last (and probably best of all) Robert Franz. This

[1] See also Chrysander's *Jahrbücher für Musikalische Wissenschaft*, Band I, which contains a long article on this subject.

eminent musician has devoted special attention to this branch of his art; and for a complete exposition of the system on which he works we refer our readers to his *Offener Brief an Eduard Hanslick,* etc. (Leipzig, Leuckart, 1871). Franz has written additional accompaniments to Bach's 'Passion according to St. Matthew,' 'Magnificat,' and several 'Kirchencantaten,' and to Handel's 'L'Allegro' and 'Jubilate.'

4. The first, and perhaps the most important case in which additions are needed to the older scores is that which so frequently occurs when no instrumental accompaniment is given excepting a figured bass. This is in Handel's songs continually to be met with, especially in cadences, and a few examples follow of the various ways in which the harmonies can be filled up.

At the end of the air 'Rejoice greatly' in the 'Messiah,' Handel's notes (in large type) are accompanied by Mozart on the string quartet, as follows (in smaller type):—

Sometimes in similar passages the accompaniments are given to a few wind instruments with charming effect, as in the following examples by Mozart. For the sake of comparison we shall in each instance give the original in large type and the additional parts in small. Our first example is from the close of the song 'What passion,' in the 'Ode for St. Cecilia's Day.'

In the foregoing quotation (No. 2) it will be seen that Mozart has simply added in the flute and bassoon the harmony which Handel no doubt played on the harpsichord. In the next (No. 3), from 'He was despised,' the harmony is a little fuller.

In all the above examples the treatment of the harmony is as simple as possible. When similar passages occur in Bach's works, however, they require a more polyphonic method of treatment, as is proved by Franz in his pamphlet above referred to. A short extract from the 'Passion according to Matthew' will show in what way his music can be advantageously treated. The figures here give the clue to the harmony, but if simple chords were used to fill it up, as in the preceding extracts, they would, in Franz's words, 'fall as heavy as lead among Bach's parts, and find no support among the constantly moving basses.' Franz therefore adopts the polyphonic method, and completes the score as follows:—

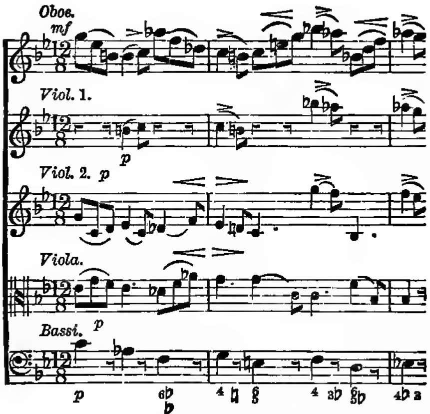
Somewhat resembling the exercises given above is the case so often to be found both in Bach and Handel in which only the melody and the bass are given in the score. There is hardly one of Handel's oratorios which does not contain several songs accompanied only by

 ADDITIONAL ACCOMPANIMENTS

violins in unison and basses; while Bach very frequently accompanies his airs with one solo instrument, either wind or stringed, and the basses. In such cases it is sometimes sufficient merely to add an inner part; at other times a somewhat fuller score is more effective. The following quotations will furnish examples of both methods.

HANDEL, 'Sharp violins proclaim.'
('Ode for St. Cecilia's Day.')

BACH, 'Ich hatte viel Bekümmerniss.'



In the first of these extracts nothing is added but a viola part; in the second Franz has added the string quartet to the solo oboe, and again treated the parts in that polyphonic style which experience has taught him is alone suitable for the fitting interpretation of Bach's ideas.

5. In all the cases hitherto treated, the melody being given as well as the bass, the task of the editor is comparatively easy. It is otherwise however when (as is sometimes found with Handel, and still more frequently with Bach) nothing whatever is given excepting a bass, especially if, as often happens, this bass is not even figured. In the following quotation, for example, taken from Bach's 'Magnificat' ('Quia fecit mihi magna'),

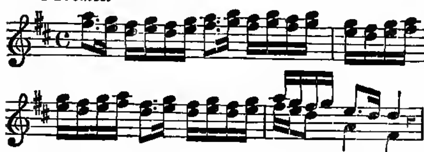
it is obvious that if nothing but the bass part be played, a mere caricature of the composer's intentions will be the result. Here there are no figures in the score to indicate even the outline of the harmony. The difficulties presented by such passages as these have been overcome in the most masterly manner by Robert Franz, who fills up the score thus—

By comparing the added parts (which, to save space, are given only in compressed score) with the original bass, it will be seen that they are all founded on suggestions thrown out, so to speak, by Bach himself, on ideas indicated in the bass, and it is in obtaining unity of design by the scientific employment of Bach's own material that Franz shows himself so well fitted for his self-imposed labour. It has been already said that Bach requires more polyphonic treatment of the parts than Handel. The following extract from Franz's score of 'L'Allegro' ('Come, but keep thy wonted state') will show the different method in which he fills up a figured bass in Handel's music. Here it will be seen there is no attempt at imitative writing. Nothing is done beyond harmonising Handel's bass in four parts. The harmonies are given to clarinets and bassoons in order that the first entry of the strings, which takes place in the third bar, may produce the contrast of tone-colour designed by the composer. The result is as follows:—

6. It is quite impossible within the limits of such an article as the present to deal exhaustively with the subject in hand; enough has, it is hoped, been said to indicate in a general manner some of the various ways of filling up the orchestration from a figured bass. This, however, though perhaps the most important, is by no means the only case in which additional accompaniments are required or introduced. It was mentioned above that the composition of the orchestra in the days of Bach and Handel was very different from that of our own time. This is more especially the case with Bach, who employs in his scores many instruments now altogether fallen into disuse. Such are the viola d'amore, the viola da gamba, the oboe d'amore, the oboe da caccia (which he sometimes calls the 'taille'), and several others. In adapting these works for performance, it is necessary to substitute for these obsolete instruments as far as possible their modern equivalents. Besides this, both Handel and Bach wrote for the trumpets passages which on the instruments at present employed in our orchestras are simply impossible. Bach frequently, and Handel occasionally, writes the trumpet parts up to c''', and both require from the players rapid passages in high notes, the execution of which, even where possible, is extremely uncertain. Thus, in probably the best-known piece of sacred music in the world, the Hallelujah chorus in the 'Messiah,' Handel has written d''' for the first trumpet, while Bach in the 'Cum Sancto Spiritu' of his great Mass in B minor has even taken the instrument one note higher, the whole first trumpet part as it stands being absolutely unplayable except on the so-called 'Bach' trumpet rediscovered by Herr Kosleck, and now occasionally introduced into performances of Bach's and Handel's works. In such cases as these it becomes necessary to rewrite the trumpet parts, giving the higher notes to some other instrument. This is what Franz has done in his editions of Bach's 'Magnificat' and 'Pfingsten-Cantate,' in which he has used two clarinets in C to reinforce and assist the trumpet parts. The key of both pieces being D, the clarinets in A would be those usually employed; the C clarinets are here used instead, because their tone, though less rich, is more piercing, and therefore approximates more closely to that of the high notes of the trumpet. One example from the opening chorus of the 'Magnificat' will show how the arrangement is effected. Bach's trumpet parts and their equivalents in Franz's score will alone be quoted.

It is to be regretted that the same amount of reverence for the author's intentions shown in the above arrangement has not always been evinced even by great musicians in dealing with the scores of others. Mozart, in his arrangement of the 'Messiah,' thought fit to rewrite the song 'The trumpet shall sound,' though whatever obstacle it may have presented to his trumpeter it has been often proved by Mr. Thomas Harper and others that Handel's trumpet part, though difficult, is certainly not impossible. Mendelssohn, in his score of the 'Dettingen Te Deum,' has altered (and we venture to think entirely spoilt) several of the very characteristic trumpet parts which form

so prominent a feature of the work. As one example out of several that might be quoted, we give the opening symphony of the chorus 'To thee, Cherubin.' Handel writes:



These trumpet parts are assuredly not easy; still they are practicable. Mendelssohn however alters the whole passage thus:—

and, still worse, when the symphony is repeated in the original by oboes and bassoons, the arranger gives it to the full wind band with trumpets and drums, entirely disregarding the ideas of the composer. The chief objection to be urged against such a method of procedure as the above—so unlike Mendelssohn's usual reverence and modesty[1]—is not that the instrumentation is changed or added to, but that the form and character of the passage itself are altered. Every arrangement must stand or fall upon its own merits; but it will be generally admitted that however allowable it may be, nay more, however necessary it frequently is, to change the dress in which ideas are presented to us, the ideas themselves should be left without modification.

7. Besides the cases already referred to, passages are frequently to be found, especially in the works of Bach, in which, though no obsolete instruments are employed, and though everything is perfectly practicable, the effect, if played as written, will in our modern orchestras altogether differ from that designed by the composer. From a letter written by Bach in 1730[2] we know exactly the strength of the band for which he wrote. Besides the wind instruments, it contained only two or at most three first and as many second violins, two first and two second violas, two violoncellos and one double-bass, thirteen strings in all. Against so small a force the solo passages for the wind instruments would stand out with a prominence which in our modern orchestras, often containing from fifty to sixty strings, would no longer exist; and as all the parts in Bach's music are almost invariably of equal importance, it follows that the wind parts must be strengthened if the balance of tone is to be preserved. This is especially the case in the choruses. It would be impossible, without quoting an entire page of one of Bach's scores, to give an extract clearly showing this point. Those who are familiar with his works will recall many passages of the kind. One of the best known, as well as one of the most striking examples, is in the short chorus 'Lass ihn kreuzigen' in the 'Passion according to Matthew.' Here an important counterpoint is given to the flutes above the voices and stringed instruments. With a very small band and chorus this counterpoint would doubtless be heard, but with our large vocal and instrumental forces it must inevitably be lost altogether. Franz, in his edition of the 'Passion,' has reinforced the flutes by the upper notes of the clarinets, which possess a great similarity of tone, and at the same time by their more incisive quality make themselves distinctly heard above the other instruments.

8. In Handel's orchestra the organ was almost invariably used in the choruses to support the voices, and give fulness and richness to the general body of tone. Hence in Mozart's arrangements, which were written for performance without an organ, he has supplied the place of that instrument by additional wind parts. In many of the choruses of the 'Messiah' (*e.g.* 'And the glory of the Lord,' 'Behold the Lamb of God,' 'But thanks be to God,' etc.) the wind instruments simply fill in the harmony as it may fairly be conjectured the organ would do. Moreover, our ears are so accustomed to a rich and sonorous instrumentation, that this

[1] The Te Deum and Acis were instrumented by Mendelssohn as an exercise for Zelter. The date on the MS. of Acis is January 1829. He mentions them in a letter to Devrient in 1833, speaking of his additions to the Te Deum as 'interpolations of a very arbitrary kind, mistakes as I now consider them, which I am anxious to correct.' It is a thousand pities that the work should have been published.

[2] See Bitter, *Johann Sebastian Bach*, ii. 15-22.

music if played only with strings and oboes, or sometimes with strings alone, would sound so thin as to be distasteful. Hence no reasonable objection can be made to the filling up of the harmony, if it be done with taste and contain nothing inconsistent with the spirit of the original.

9. There yet remains to notice one of the most interesting points connected with our present subject. It not seldom happens that in additional accompaniments new matter is introduced for which no warrant can be found in the original. Sometimes the composer's idea is modified, sometimes it is added to. Mozart's scores of Handel are full of examples of this kind; on the other hand Franz, the most conscientious of arrangers, seldom allows himself the least liberty in this respect. It is impossible to lay down any absolute rule in this matter: the only test is success. Few people, for instance, would object to the wonderfully beautiful wind parts which Mozart has added to 'The people that walked in darkness,' though it must be admitted that they are by no means Handelian in character. It is, so to speak, Mozart's gloss or commentary on Handel's music; and one can almost fancy that could Handel himself have heard it he would have pardoned the liberty taken with his music for the sake of the charming effect of the additions. So again with the trumpets and drums which Mozart has introduced in the song 'Why do the nations.' No doubt Handel could have used them had he been so disposed; but it was not the custom of his age to employ them in the accompaniments to songs, and here again the excellence of the effect is its justification. On the same ground may be defended the giving of Handel's violin part to a flute in the air 'How beautiful are the feet,' though it is equally impossible to approve of the change Mozart has made in the air and chorus 'The trumpet's loud clangour' in the 'Ode to St. Cecilia's Day,' in which he has given a great portion of the important trumpet part (which is imperatively called for by the words) to the flute and oboe in unison! The passages above referred to from the 'Messiah' are so well known as to render quotation superfluous; but two less familiar examples of happily introduced additional matter from the 'Ode to St. Cecilia's Day' will be interesting. In the first of these,

from the song 'Sharp violins proclaim,' it will be seen that Handel has written merely violins and basses. The dissonances which Mozart has added in the viola part, are of the most excellent effect, well suited, moreover, to the character of the song which treats of 'jealous pangs and desperation.' Our last extract will be from the song 'What passion cannot music raise and quell?' in which Mozart has added pizzicato chords for the strings above the obbligato part for the violoncello.

10. It has been said already that additional accompaniments must in all cases be judged upon their own merits. The question is not whether but how they should be written. Their necessity in many cases has been shown above; and they will probably continue to be written to the end of time. While, however, it is impossible to lay down any absolute law as to what may and what may not be done in this respect, there are two general principles which may be given as the conclusion of the whole matter. First, that all additions to a score merely for the sake of increasing the noise are absolutely indefensible. At many operatic performances, Mozart's 'Don Giovanni' and 'Figaro' were formerly given with copious additional accompaniments for trombones; and a conductor has even been known to reinforce the score of Weber's overture to 'Euryanthe,' which already contains the full complement of brass, with two cornets and an ophicleide. All such procedures are utterly inartistic, and cannot be too strongly condemned. And lastly, no one who writes additional accompaniments has any right whatever to tamper with the original text, either by adding, cutting out, or largely modifying passages. By all means let such additions be made as are needed to adapt the music to our modern requirements, but let the changes be such as to bring out more clearly, not to obscure or alter the thought of the composer. These additions, moreover, should be in unison with the spirit, as well as the letter of the original. To hear, as is sometimes to be heard, Handel's music scored after the fashion of Verdi's grand operas shows an equal want of artistic feeling and of common sense on the

part of the arranger. Those additional accompaniments will always best fulfil their object in which most reverence is shown for the author's original intentions. [See articles by Professor Prout in the *Monthly Musical Record* for 1891, on Franz's edition of the 'Messiah.' Also *Musical Times*, May and June 1891.] E.P.

A DEUX MAINS (Fr.). 'For two hands.' A term applied to music for one performer on the piano, as contradistinguished from A QUATRE MAINS, etc.

ADLER, GUIDO, a distinguished writer on music, born Nov. 1, 1855, at Eibenschütz in Moravia, was educated at the academical Gymnasium at Vienna, and at the Conservatorium, where he was pupil of Bruckner and Dessoff. In 1874 he went to the university, and took part with Mottl and K. Wolf in the foundation of an 'Academische Wagnerverein'; he was appointed as a university teacher of musical science in 1881, and in 1882 was a representative of Austria at the international liturgical congress held at Arezzo. In 1884 he founded, in association with Chrysander and Spitta, the useful publication called *Vierteljahrschrift für Musikwissenschaft*, in 1885 was appointed professor of musical science at Prague, and in 1898 succeeded Hanslick in a similar professorship at Vienna. He has edited the compositions of Ferdinand III., Leopold I., and Joseph I., and since 1894 has been editor-in-chief of the series of *Denkmäler der Tonkunst in Oesterreich;* his capital edition of Froberger, in two vols., appeared in 1903, and various musical treatises are enumerated by Riemann, from whose lexicon the above particulars are taken.

ADLGASSER, ANTON CAJETAN, born April 3, 1728, at Inzell in Bavaria. After being a pupil of Eberlin's, he was sent to Italy by the Archbishop of Salzburg, and recalled thence to the post of organist to the cathedral and cembalist to the court at Salzburg, where he died Dec. 21, 1777, from an apoplectic stroke while at the organ. Adlgasser was noted both as organ player and contrapuntist. His works remain mostly in MS. [A list is given in Eitner's *Quellen-Lexikon.*] C. F. P.

AD LIBITUM (Lat.). At the pleasure of the performer, as regards time and expression. In the case of arrangements—'with violin or flute ad libitum'—it signifies that the solo instrument may be left out or exchanged at pleasure.

ADLUNG, JACOB, born at Bindersleben, Erfurt, Jan. 14, 1699; a theologian, scholar, and musician. His taste for music came late; the clavier, organ, and theory, he learned from Christian Reichardt the organist, who though not a musician of the first rank was truly devoted to his art. After the death of Buttstedt in 1727 Adlung received his post as organist of the Evangelical church, were he was soon known for his masterly playing, and in 1741 became professor at the Rathsgymnasium of Erfurt. In 1736 his house and all his possessions were burnt, but the undaunted man was not discouraged. He taught both music and language, wrote largely and well on music, and even constructed instruments with his own hands; and thus made a successful resistance to adverse fortune till his death, July 5, 1762. Three of his works are of lasting value in musical literature: (1) *Anleitung zur musik. Gelahrtheit*, with a preface by Joh. Ernst Bach (Erfurt, 1758); a 2nd edition, issued after his death, by J. A. HILLER (Leipzig, 1783). (2) *Musica mechanica Organœdi*, etc. (Berlin, 1768), a treatise in two volumes on the structure, use, and maintenance of the organ and clavicymbalum. This contains additions by J. F. AGRICOLA and J. L. Albrecht, a translation by the former of a treatise on the organ by BEDOS DE CELLES, and an autobiography of Adlung. (3) *Musikalisches Siebengestirn* (Berlin, 1768). (See Hiller's *Lebensb. ber. Musikgelehrten.*) C. F. P.

ADOLFATI, ANDREA, born in Venice 1711, date and place of death unknown; was a pupil of Galuppi, conductor of the music in the church of Santa Maria della Salute in Venice, and in that of the Annunziata at Genoa, the latter from about 1750 till his death. His principal operas are 'L'Artaserse,' 'L'Arianna,' 'Adriano in Siria,' and 'La Gloria ed il Piacere,' the first produced in Rome in 1742, the three last in Genoa in 1750-52. Another 'La Clemenza di Tito,' dated 1753, is preserved in the Hofbibliothek, Vienna. After that date Adolfati was appointed maestro di cappella to the Princess of Modena. He left also sacred compositions, chiefly Psalms. 'Arianna' is said to contain an air in quintuple time. M. C. C.

ADRIEN, or ANDRIEN, MARTIN JOSEPH, called ADRIEN L'AINÉ, born at Liége, May 26, 1767; a bass singer, taking alternate parts with Chéron at the opera in Paris from 1785 to 1804; afterwards choirmaster at the opera. In March 1822 he succeeded Laîné as professor of declamation at the École Royale de Musique, and died Nov. 19, 1824 (?) a victim to the exaggerated system of declamation then in vogue. His voice was harsh, and his method of singing bad, but he had merit as an actor. He composed the 'Hymne à la Victoire' on the evacuation of the French territory in 1795, the hymn to the martyrs for liberty, and an 'Invocation à l'Etre suprême,' 1793. His brother J. ADRIEN was born at Liége about 1768, and died about 1824; he published five collections of songs (Paris, 1790-1802), and was for a short time choirmaster at the Théâtre Feydeau. Another brother, FERDINAND, born 1770, died about 1830, was a teacher of singing in Paris, choirmaster of the opera (1798-1800) and composer of songs. M. C. C.

A DUE (Ital., 'In two parts'), or A 2. This expression is used in two exactly opposite

ways in orchestral scores. For the wind instruments, for which two parts are usually written on the same stave, it indicates that the two play in unison; for the strings, on the other hand, it shows that the whole mass, which usually plays in unison, is to be divided into two equal parts, the one taking the upper and the other the lower notes. In practice there is never any difficulty in seeing which meaning is intended. E. P.

AELSTERS, GEORGES JACQUES, born of a musical family at Ghent, 1770, died there April 11, 1849; carillonneur of that town from 1788 to 1839; for fifty years director of the music at the church of St. Martin, and composer of much church music still performed in Flanders, especially a 'Miserere.'

AENGSTLICH (Germ. 'fearfully'). A word which calls for notice here only on account of its use by Beethoven at the head of the recitative in his Missa Solennis, 'Agnus Dei, qui tollis peccata mundi, miserere nobis.' In this most dramatic and emotional part of his great work Beethoven seems to realise the 'prayer for internal and external peace' which he gives as a motto to the entire 'Dona': the fierce blasts of the trumpets alternating with the supplications of the voices bring before us the enemy at the very gates. As in the case of ACCELERANDO Beethoven has accompanied the German word with its Italian equivalent *timidamente*, misspelt *tramidamente*.

ÆOLIAN HARP (Fr. *Harpe Eolienne;* Ital. *Arpa d'Eolo;* Ger. *Aeolsharfe, Windharfe*). The name is from Aeolust, he god of the wind. The instrument, of which the inventor is unknown, would appear to owe its origin to the monochord, a string stretched upon two bridges over a soundboard. The string happening to be at a low tension and exposed to a current of air would divide into various aliquot parts according to the varying strength of the current, and thus give the harmonics or overtones we hear in the music of this instrument. Had the principle of the Æolian harp never been discovered, we should in these days of telegraphy have found it out, as it is of frequent occurrence to hear musical sounds from telegraph wires which become audible through the posts, which elevate the wires and assume the function of soundboards. Once recognised on a monochord, it would be a simple process to increase the number of strings, which, tuned in unison, would be differently affected in relation to the current of air by position, and thus give different vibrating segments, forming consonant or dissonant chords as the pressure of wind might determine. That musical sounds could be produced by unaided wind has been long known in the East. According to tradition King David's harp (*kinnor*) sounded at midnight when suspended over his couch in the north wind; and in an old Hindu poem, quoted by Sir William Jones, the *vina*, or lute of the country, is said to have produced tones, proceeding by musical intervals, by the impulse of the breeze. In the present day the Chinese bave kites with vibrating strings, and the Malays have a curious Æolian instrument, a rough bamboo cane of considerable height, perforated with holes and stuck in the ground. This is entirely a wind contrivance, but they have another of split bamboo for strings. (C. Engel, *Musical Instruments*, 1874, p. 200.) St. Dunstan of Canterbury is said to have hung bis harp so that the wind might pass through the strings, causing them to sound, and to have been accused of sorcery in consequence. This was in the 10th century. It was not until the 17th we meet with the Æolian harp itself. Kircher (1602-80) first wrote about it. He speaks of it in his *Musurgia Universalis* as being a new instrument and easy to construct, and as being the admiration of every one. He describes the sounds as not resembling those of a stringed or of a wind instrument, but partaking of the qualities of both. This is quite true, and applies to any stretched string the sound of which is made continuous by any other agency than that of a bow, and not dying away as we usually hear the tones of pianofortes, harps, and guitars. Matthew Young, bishop of Clonfert, in his *Enquiry into the Principal Phenomena of Sounds and Musical Strings* (1784), gives full particulars of the Æolian harp, and offers a theory of its generation of sound. It also gained attention in Germany about the same time, through a description of it in the *Göttingen Pocket Calendar* for 1792. H. C. Koch, a German, appears to have bestowed the most attention upon the effects obtainable by varying the construction and stringing of the Æolian harp; but it is of little importance whether the tone be a little louder or a little softer, the impression to be derived from the instrument is as attainable from one of simple build as from double harps, or from one with weighted (spun) strings added.

An Æolian harp is usually about three feet long, five inches broad, and three inches deep; of pine wood, with beech ends for insertion of the tuning- and hitch-pins, and with two narrow bridges of hard wood over which a dozen catgut strings are stretched. These are tuned in the most exact unison possible, or the beats caused by their difference would be disagreeable. The direction sometimes attached to tune by intervals of fourths and fifths is only misleading. The tension should be low; in other words, the strings be rather slack, the fundamental note not being noticeable when the instrument sounds. There are usually two soundholes in the soundboard. The ends are raised above the strings about an inch, and support another pine board, between which

and the soundboard the draught of air is directed. To hear the Æolian harp it should be placed across a window sufficiently opened to admit of its introduction, and situated obliquely to the direction of the wind. The sounds are so pure and perfectly in tune, that no tuning we might accomplish could rival it. For we have here not tempered intervals but the natural tones of the strings, the half or octave, the third or interval of the twelfth, and so on, in an arithmetical progression, up to the sixth division, the whole vibrating length being taken as the first—we are listening to full and perfect harmony. But the next, the seventh, still in consonance with the lowest note, in effect not unlike the dull sad minor sixth, but still more mournful, is to our ears transcendental, as our musical system does not know it: and it would be too much out of tune with other intervals consonant to the key-note for admission to our scales. We are impressed with it as by a wail—in the words of Coleridge a 'sweet upbraiding' ('The Æolian Harp,' *Poems*, i. 190)—to be followed as the wind-pressure increases by more and more angry notes as we mount to those dissonances in the next higher octave, especially the eleventh and thirteenth overtones that alternate and seem to shriek and howl until the abating gust of wind suffers the lower beautiful harmonies to predominate again. A. J. H.

ÆOLIAN MODE. This title occurs in the works of some of the earliest Greek writers, who mention the Greek modes or scales; but it disappears again, and the Æolian mode is apparently not in question in the time of Plato, Aristotle, and those who immediately followed them. It reappears again, however, at a later date, and figures, together with a Hypo-æolian mode, in the set of thirteen modes attributed to Aristoxenus; while at a later date still a Hyper-æolian mode was added. It was however not one of those that were generally current or of permanent importance in the history of music; nor did it find a place in the mediæval system of modes. When, however, Glareanus (*q.v.*) tried in his *Dodecachordon* to establish the relation between the mediæval western and the Greek systems of modes, he gave the name of Æolian mode to the scale ranging from A to *a*, which was the first of the four additional modes added by him to the current eight, in order to make up the number to twelve. This had been until then universally regarded by mediæval theorists as a mere transposition of the first mode. The theory of Glareanus was unfortunate, and his innovation only threw into further confusion the question, already highly confused, of the relation of Eastern and Western music-theory (see MODES). W. H. F.

ÆOLINA. A small and simple 'free reed' instrument, invented about 1829 by Messrs. Wheatstone. It consisted of a few free reeds, which were fixed into a metal plate and blown by the mouth. As each reed was furnished with a separate aperture for supplying the wind, a simple melody could of course be played by moving the instrument backwards and forwards before the mouth. Its value for artistic purposes was *nil*; its only interest is a historical one, as being one of the earliest attempts to make practical use of the discovery of the free reed. The æolina may be regarded as the first germ of the ACCORDION and CONCERTINA. E. P.

ÆOLODION, or ÆOLODICON (also called in Germany *Windharmonika*), a keyed wind-instrument resembling the harmonium, the tone of which was produced from steel springs. It had a compass of six octaves, and its tone was similar to that of the harmonium. There is some controversy as to its original inventor; most authorities attribute it to J. T. Eschenbach of Hamburg, who is said to have first made it in 1800. Various improvements were subsequently made by other mechanicians, among whom may be named Schmidt of Presburg, Voit of Schweinfurt, Sebastian Müller (1826), and F. Sturm of Suhl (1833). The instrument is now entirely superseded by the harmonium. A modification of the æolodion was the ÆOLSKLAVIER, invented about 1825 by Schortmann of Buttelstädt, in which the reeds or springs which produced the sound were made of wood instead of metal, by which the quality of tone was made softer and sweeter. The instrument appears to have been soon forgotten. A further modification was the ÆOLOMELODICON or CHORALEON, constructed by Brunner at Warsaw, about the year 1825, from the design of Professor Hoffmann in that city. It differed from the æolodion in the fact that brass tubes were affixed to the reeds, much as in the reed-stops of an organ. The instrument was of great power, and was probably intended as a substitute for the organ in small churches, especially in the accompaniment of chorals, whence its second name choraleon. It has taken no permanent place in musical history. In the ÆOLOPANTALON, invented about the year 1830, by Dlugosz of Warsaw, the æolomelodicon was combined with a pianoforte, so arranged that the player could make use of either instrument separately or both together. A somewhat similar plan has been occasionally tried with the piano and harmonium, but without great success. E. P.

AERTS, EGIDIUS, born at Boom near Antwerp, March 1, 1822, died at Brussels, June 9, 1853; an eminent flautist and composer, studied under Lahon in the Conservatoire at Brussels. From 1837 to 1840 he travelled professionally through France and Italy, and on his return to Brussels studied composition under Fétis. In 1847 was appointed professor of the flute at the Conservatoire, and first flute at the Theatre. He composed

symphonies and overtures, as well as concertos and other music for the flute. M. C. C.

AEVIA (ÆUIA or ÆVIA). A technical word formed from the vowels of *Alle*l*uia*; and used, in Mediæval Office Books, as an abbreviation, in the same manner as EVOVÆ—which see.

In Venetian and other Italian Office-Books of the 16th century, we sometimes find Hal'a, or Hal'ah, substituted for Aevia. W. S. R.

AFFETTUOSO (Ital.), or CON AFFETTO, 'with feeling.' This word is most commonly found in such combinations as 'andante affettuoso' or 'allegro affettuoso,' though it is occasionally placed alone at the beginning of a movement, in which case a somewhat slow time is intended. It is frequently placed (like 'espressivo,' 'cantabile,' etc.) over a single passage, when it refers merely to that particular phrase and not to the entire movement. The German expressions 'Innig,' 'Mit innigem Ausdruck,' to be met with in Schumann and other modern German composers are equivalent to 'Affettuoso.' E. P.

AFFILARD, MICHEL L', a tenor singer in the choir of Louis XIV. from 1683 to 1708, with a salary of 900 livres. His work on singing at sight, 'Principes très faciles,' etc., in which the time of the airs is regulated by a pendulum,—precursor of the metronome—passed through seven editions (Paris, 1691; Amsterdam, 1717).

AFFRETTANDO (Ital.): hastening the time. A direction implying a certain degree of excitement, which is not necessarily conveyed in *accelerando*.

AFRANIO, lived in the beginning of the 16th century, a canon of Ferrara, and reputed inventor of the bassoon, on the ground of a wind instrument of his called Phagotum, which is mentioned, and figured in two woodcuts, at p. 179 of the *Introductio in Chaldaicam linguam* of Albanesi (Pavia, 1539), a work dedicated by the author to his uncle Afranio. The instrument sufficiently resembles the modern bassoon or fagotto to make good Afranio's right; but see Ambros's *History*, vol. iii. p. 422, and BASSOON.

AFRICAINE, L'. Grand opera in five acts; words by Scribe, music by Meyerbeer. The composer received the book in 1838, but did not bring the work into its final shape until shortly before his death. Produced at the Académie, Paris, April 28, 1865; in Italian, under the French title, at Covent Garden on July 22 of the same year, with Pauline Lucca in the part of Selika, and in English (translation by Kenney with same title) at Royal English Opera, Covent Garden, Oct. 21.

AFZELIUS, ARVID AUGUST, born at Enköping, Sweden, May 6, 1785, died Sept. 25, 1871, a pastor and archæologist; edited conjointly with Geijer a collection of Swedish national melodies 'Svenska Folkvisor,' 3 vols. (Stockholm, 1814-16, continued by Arwidsson), and wrote the historical notes to another collection, 'Afsked af Svenska Folksharpan' (Stockholm, 1848).

AGAZZARI, AGOSTINO, was a cadet of a noble family of Siena, and born on Dec. 2, 1578. He is said, but on rather slight authority (see Eitner's *Quellen-Lexikon*) to have passed the first years of his professional life in the service of the Emperor Matthias. About 1600 he came to Rome, where he was chosen Maestro di Cappella at the German College (after Anerio's retirement in 1609), at the church of S. Apollinaris,[1] and subsequently at the Seminario Romano. An intimacy grew up between him and the well-known Viadana, of Mantua, and he was one of the earliest adopters of the figured bass. In the preface to the fourth book of his 'Sacræ Cantiones' (Zanetti, Rome, 1606), he gives some instructions for its employment. In 1630 he returned to Siena, and became Maestro of its cathedral, a post which he retained till his death, probably April 10, 1640. Agazzari was a member of the Academy of the *Armonici Intronati*. His publications are numerous, and consist of Masses, Madrigals (1596, 1600, 1602, 1607, 1608), Motets, Psalms, Magnificats, Litanies, etc., republished in numerous editions at Rome, Milan, Venice, Antwerp, Frankfort, and elsewhere. See list in *Quellen-Lexikon*. His one substantive contribution to the scientific literature of music is a little work of only sixteen quarto pages, entitled 'La Musica Ecclesiastica, dove si contiene la vera diffinizione della Musica come Scienza non più veduta e sua nobiltà' (Siena, 1638); the object of which is to determine how church music should best conform itself to the Resolution of the Council of Trent. On the authority of Pitoni, a pastoral drama, entitled 'Eumelio,' has been ascribed to Agazzari. It was undoubtedly performed at Rome in 1606 and printed by Amadino at Venice in that year; but no author's name is affixed either to music or libretto.

A short motet by Agazzari is given by Proske in the 'Musica Divina' (Ann. I. Lib. Motettorum, No. lxv.). E. H. P.

AGITATO (Ital.), also CON AGITAZIONE, 'agitated,' 'restless.' This adjective is mostly combined with 'allegro' or 'presto' to describe the character of a movement. In the somewhat rare cases in which it occurs without any other time-indication a rather rapid time is indicated.

AGNESI, LOUIS FERDINAND LEOPOLD, the

1 Baini alone mentions this appointment; but he is probably right.

famous bass, whose real name was Agniez, was born July 17, 1833, at Erpent, Namur. He studied at the Brussels Conservatoire, under Bosselet and Fétis, and in 1853-55 gained the concours de Rome. He brought out an opera, 'Harold le Normand' (1858) with indifferent success, and subsequently abandoned composition for singing. For the latter purpose in 1861 he received instruction from Duprez, and became a member of Merelli's Italian Opera Company, under the name Luigi Agnesi, during a tour through Germany, Holland, and Belgium. On Feb. 10, 1864, he first appeared at the Italiens, Paris, as Assur in 'Semiramide,' with the sisters Marchisio, and was engaged there for several seasons. In 1865 he was engaged at Her Majesty's Theatre, where he first appeared with Murska, May 22, as the Prefect in 'Linda di Chamouni,' and during the season he played Assur and Figaro (Le Nozze), and also sang at the Philharmonic, on each occasion with fair success.

In 1871, on his return to England, where he remained until his death, Feb. 2, 1875, he enjoyed a greater reputation, not only in opera at Drury Lane (1871-74), but as an oratorio and concert singer at the Handel and provincial Festivals, at the Sacred Harmonic, at the Philharmonic, etc. In addition to the parts above named, he played with success Pizarro ('Fidelio'), Mikheli in the solitary Italian performance of 'Les deux Journées,' June 20, 1872, the Duke in 'Lucrezia,' etc., and showed himself in all an accomplished actor and musician, devoted to his art. Special mention may be made of his Assur, which he sang in true Italian style, with Titiens and Trebelli as Semiramide and Arsace, a cast of which opera has never since been equalled; also of his delivery of the bass part of Crotch's 'Palestine,' in a style of music wholly unfamiliar to him. A. C.

AGNESI, Maria Teresa, born at Milan, 1724, died about 1780; sister of the renowned scholar, Maria Gaetana Agnesi; a celebrated pianist of her time, composed five operas, 'Sofonisbe,' 'Ciro in Armenia,' 'Nitocri,' 'Il Re Pastore' and 'Insubria consolata' (1771), several cantatas, two pianoforte concertos, and sonatas, well known in Germany. M. C. C.

AGOSTINI, Ludovico, born 1534 at Ferrara. In holy orders, and both poet and composer. Became chapel-master to Alfonso II., Duke of Este, and died Sept. 20, 1590. Collections of madrigals, and other vocal works were published at Milan, Venice, and Ferrara between 1567 and 1586.

AGOSTINI, Paolo, an Italian composer, who stands out in relief from too many of his contemporary countrymen. He was born at Valerano in 1593, and was a pupil, at Rome, of Bernardino Nanini, whose daughter he married. After being organist of S. Trinità de' Pellegrini, S. Maria in Trastevere, and S. Lorenzo in Damaso, he succeeded Ugolini as Maestro at the Vatican Chapel, in 1627. He died in Sept. 1629.

The extant published works of Agostini consist of two volumes of Psalms for four and eight voices (printed by Soldi, Rome, 1619); two volumes of Magnificats for one, two, and three voices (*ib.* 1620); and five volumes of Masses for four, five, eight, and twelve voices, published (Robletti, Rome) in 1624, 1625, 1626, 1627, and 1628, respectively. He was one of the first to employ large numbers of voices in several choirs. Ingenuity and elegance are his prevailing characteristics; but that he could and did rise beyond these, is proved by an 'Agnus Dei' for eight voices in canon, which was published by P. Martini in his 'Saggio di Contrappunto Fugato,' and which is allowed to be a masterpiece. He contributed a dialogue to G. Giamberti's 'Poesie diverse' (1623). The fame, however, of Agostini rests upon his unpublished pieces, which form the great bulk of his productions. They are preserved partly in the Corsini Library, and partly in the Collection of the Vatican. A motet by Agostini is given in Proske's 'Musica Divina' (Ann. I. Liber Motettorum, No. lxx.). E. H. P.

AGOSTINI, Pietro Simone, born at Rome about 1650, was maestro di cappella to the Duke of Parma. Two oratorios, several motets, and cantatas, as well as two operas (one—'Il Ratto delle Sabine,' performed at Venice 1680) are mentioned in Eitner's *Quellen-Lexikon*.

AGRELL, Johann Joachim, born at Löth in Sweden, Feb. 1, 1701; studied at Linköping and Upsala. Appointed court musician at Cassel in 1723, and in 1746 conductor at Nuremberg, where he died, Jan. 19, 1765. He left nine published works (Nuremberg), concertos, sonatas, etc., and many more in manuscript.

AGRÉMENS (Fr., properly *Agrémens du Chant* or *de Musique;* Ger. *Manieren;* Eng. *Graces*). Certain ornaments introduced into vocal or instrumental melody, indicated either by signs, or by small notes, and performed according to certain rules.

Various forms of agrémens have been from time to time invented by different composers, and many of them have again fallen into disuse, but the earliest seem to have been the invention of Chambonnières, a celebrated French organist of the time of Louis XIV. (1670), and they were probably introduced into Germany by Georg Muffat, organist at Passau in 1695, who in his youth had studied in Paris. The proper employment of the agrémens in French music—which, according to Rousseau (*Dictionnaire de Musique*, 1767) were necessary 'pour couvrir un peu la fadeur du chant français'—was at first taught in Paris by special professors of

the 'gout du chant,' but no definite rules for their application were laid down until Emanuel Bach treated them very fully in his *Versuch über die wahre Art das Clavier zu spielen*, in 1753. In this he speaks of the great value of the agrémens :—'They serve to connect the notes, they enliven them, and when necessary give them a special emphasis, . . . they help to elucidate the character of the music ; whether it be sad, cheerful, or otherwise, they always contribute their share to the effect, . . . an indifferent composition may be improved by their aid, while without them even the best melody may appear empty and meaningless.' At the same time he warns against their too frequent use, and says they should be as the ornament with which the finest building may be overladen, or the spices with which the best dish may be spoilt.

The agrémens according to Emanuel Bach are the Bebung,[1] Vorschlag, Triller, Doppelschlag, Mordent, Anschlag, Schleifer, Schneller, and Brechung (Ex. 1).

In addition to these, Marpurg treats of the Nachschlag or 'Aspiration' (Ex. 2), which Emanuel Bach does not recognise, or at least calls 'ugly, although extraordinarily in fashion,' but which is largely employed by modern composers.

The principal agrémens of French music were the Appoggiature, Trille, and Accent, which resembled respectively the Vorschlag, Triller, and Nachschlag described above, and in addition the Mordant—which appears to have differed from the Mordent of German music, and to have been a kind of interrupted trill,—the Coulé, Port de voix,[2] Port de voix jetté, and the Cadence pleine ou brisée [3] (Ex. 3).

The agrémens or graces peculiar to old English music differed considerably from the above, and have now become obsolete. They are described in an instruction-book for the violin, called the *Division Violist*, by Christopher Sympson, published in 1659, and are divided into two classes, the 'smooth and shaked graces.' The smooth graces are only adapted to stringed instruments, as they are to be executed by sliding the finger along the string ; they include the Plain-beat or Rise, the Backfall, the Double Backfall, the Elevation, the Cadent, and the Springer which 'concludes the Sound of a Note more acute, by clapping down another Finger just at the expiring of it.' The effect of this other finger upon the violin would be to raise the pitch of the last note but one (the upper of the two written notes) so that the Springer would resemble the French *Accent*. The 'shaked graces' are the Shaked Beat, Backfall, Elevation, and Cadent, which are similar to the plain graces with the addition of a shake, and lastly the Double Relish, of

1 The Bebung (Fr. *balancement*, Ital. *tremolo*) cannot be executed on the modern pianoforte. It consisted in giving to the key of the clavichord a certain trembling pressure, which produced a kind of pulsation of the sound, without any intervals of silence. On stringed instruments a similar effect is obtained by a rocking movement of the finger without raising it from the string.

2 The term 'Port de voix,' which ought properly to signify the carrying of the voice with extreme smoothness from one note to another (Ital. *portamento di voce*), has been very generally applied to the appoggiatura.

3 The Doppelschlag (Eng. 'Turn') was often called Cadence by the French writers of the time of Couperin (1700): and indeed Sebastian Bach uses the word in this sense in his *Clavier-Büchlein* (1720).

which no explanation in words is attempted, but an example in notes given as above (Ex. 4).

The agrémens used in modern music or in the performance of the works of the great masters are acciaccatura, appoggiatura, arpeggio, mordent, nachschlag, shake or trill, slide, and turn, each of which will be fully described in its own place. [See also the masterly treatise on 'Musical Ornamentation' by E. Dannreuther, in two volumes of Novello's *Music Primers.*] F. T.

AGRICOLA, Alexander, a composer of great celebrity living at the end of the 15th century and beginning of the 16th. Crespel's lament on the death of Ockeghem mentions Agricola as a fellow-pupil in the school of that master; and the dates of his published works, together with an interesting epitaph printed in a collection of motets published at Wittenberg in 1538, furnish us with materials for briefly sketching his life. The words of the epitaph, which bears the title 'Epitaphium Alex. Agricolæ Symphoniastæ regis Castiliæ Philippi,' are as follows:—

Musica quid defles? Periit mea cura decusque.
Estne Alexander? Is meus Agricola.
Dic age qualis erat? Clarus vocum manuumque.
Quis locus hunc rapuit? Valdoletanus ager.
Quis Belgam huc traxit? Magnus rex ipse Philippus.
Quo morbo interiit? Febre furente obiit.
Ætas quæ fuerat? Jam sexagesimus annus.
Sol ubi tunc stabat? Virginio in capite.

The question 'Who brought the Belgian hither?' is decisive as to his nationality. He was certainly educated in the Netherlands, and passed great part of his life there. At an early age he was distinguished both as a singer and performer. A letter of Charles VIII. of France, in Mr. Julian Marshall's collection, proves that he was in that king's service, and left it, without leave, for that of Lorenzo de' Medici; he was at Milan till June 1474, and after some years in the service of the Duke of Mantua, entered (about 1491) that of Philip, Duke of Austria and sovereign of the Netherlands, and followed him to Castile in 1505. There Agricola remained until his death, at the age of 60 (about the year 1506), of acute fever, in the territory of Valladolid. Amongst Agricola's known works the most important are a motet for three voices in the collection called 'Harmonice Musices' (1501), two motets for three voices in that entitled 'Motetti XXXIII' (Venice, Petrucci, 1502); eight four-part songs from the collection 'Canti cento cinquanta' (Venice, Petrucci, 1503); and a volume of five masses 'Misse Alex. Agricolæ' (Venice, Petrucci, 1504). Other MS. masses are mentioned in Eitner's *Quellen-Lexikon.* It is not improbable that a large number of his compositions may still be contained in the libraries of Spain. [For recent investigations concerning Agricola, see Van der Straeten's *Musique aux Pays-Bas*, vols. vi. and vii.] J. R. S.-B.

AGRICOLA, Georg Ludwig, born Oct. 25, 1643, at Grossen-Furra in Thuringia, where his father was clergyman; brought up at Eisenach and Gotha and the universities of Wittenberg and Leipzig; capellmeister at Gotha in 1670. He composed 'Musikalische Nebenstunden' for two violins, two violas, and bass; religious hymns and madrigals; sonatas and preludes, 'auf französische Art,' etc. etc. He died at Gotha, Feb. 20, 1676, at the age of thirty-three, full of promise, but without accomplishing a style for himself. F. G.

AGRICOLA, Johann, born at Nuremberg about 1570, professor of music in the Gymnasium at Erfurt in 1611, and composer of three collections of motets (Nuremberg, 1601-1611).

AGRICOLA, Johann Friedrich, born Jan. 4, 1720, at Dobitz, near Altenburg, Saxony. His father was a judge, and his mother, Maria Magdalen Manke, a friend of Handel. He began to learn music in his fifth year under a certain Martini. In 1738 he entered the University of Leipzig when Gottsched was Professor of Rhetoric. But though he went through the regular course of 'humanities' he also studied music under Sebastian Bach, with whom he worked hard for three years. After this he resided at Dresden and Berlin, at the latter from 1741 onwards, and studied the dramatic style under Graun and Hasse. In 1749 he published two pamphlets on French

and Italian taste in music under the pseudonym of Flavio Anicio Olibrio. In the following year a cantata of his, 'Il Filosofo convinto in amore,' was performed before Frederick the Great, and made such an impression on the king as to induce him to confer on Agricola the post of Hof-componist (1751). He had an equal success with a second cantata, 'La Ricamatrice.' Agricola then married Signora Molteni, prima donna of the Berlin opera, and composed various operas for Dresden and Berlin, as well as much music for the Church and many arrangements of the king's melodies. After the death of Graun (August 8, 1759) he was made director of the royal chapel; but without the title of 'capellmeister.' There he remained till his death Dec. 1, 1774 (obituary in *Vossische Zeitung*). Agricola's compositions had no permanent success, nor were any printed excepting two psalms and some chorales. He had the reputation of being the best organ-player in Berlin, and a good teacher of singing. He translated with much skill Tosi's *Opinioni de' Cantori*, and made some additions of value to Adlung's *Musica mechanica organœdi*. F. G.

AGRICOLA, MARTIN, whose German name, as he himself tells us, was Sohr, or Sore, was born about 1500 at Sorau in lower Silesia. In 1524 we find him teacher and cantor in the first Protestant school at Magdeburg, and he remained there till his death, June 10, 1556. The assertion of his biographer Caspar that Agricola reached the age of seventy has misled all following writers as to the date of his birth. In his *Musica instrumentalis deudsch*, which, notwithstanding its polyglot title is written in German, he states that he had no 'activum præceptorem' for music, but learned the art by himself while constantly occupied as a schoolmaster. That work is remarkable not only for its musical ability but for its German style, which has all the force and flavour of the writings of his contemporary Luther himself. [It was reprinted at Leipzig, 1896.] Agricola's chief protector and friend was RHAU, the senator of Wittenberg, renowned in his own day as a printer of music. This excellent man printed many of Agricola's works, of which the following may be named amongst others:—*Duo libri musices*, 1561; *Ein kurtz deudsche Musica*, 1528; *Musica instrumentalis deudsch*, 1529, '30, '32, '42, '45; *Musica figuralis deudsch*, 1532; *Von den Proportionibus*, c. 1532; *Rudimenta Musices*, 1539. The list of the rest will be found in Draudius' *Bibliotheca Classica*, p. 1650; Walther's *Lexikon;* Marpurg's *Beiträge*, vol. v.; Forkel's *Literature*, Gerber's *Dictionary*, and Eitner's *Quellen-Lexikon*. Mattheson in his *Ephorus* (p. 124) praises him for having been the first to abolish the 'ancient tablature,' and adopt the system of notation which we still employ. But this is inaccurate. All that Agricola proposed was a new 'tablature' for the lute, better than the old one. On the conflict between the old and new notation, Agricola's writings are full of interest, and they must be studied by every one who wishes to have an accurate view of that revolution. But unfortunately they are both rare and costly. F. G.

AGRICOLA, WOLFGANG CHRISTOPH, lived about the middle of the 17th century, composed a 'Fasciculus Musicalis' for two voices (Würzburg, 1637), a book of masses (*ib.* 1647), and 'Fasciculus variarum cantionum,' of motets (*ib.* 1648).

AGTHE, CARL CHRISTIAN, born at Hettsstädt, 1762; died at Ballenstedt, Nov. 27, 1797; organist, composer of six operas, three pianoforte sonatas (Leipzig, 1790), and a collection of Lieder (Dessau, 1782). His son, W. J. ALBRECHT, born at Ballenstedt, April 14, 1790, in 1810 settled at Leipzig, and 1823 at Dresden as teacher of Logier's system, under the approval of C. M. von Weber, and in 1826 founded a similar establishment at Posen. From 1832 to 1845 he directed a musical institution of his own at Berlin, where he died, Oct. 8, 1873. Kullak was his best-known pupil. M. C. C.

AGUADO, DIONISIO, born in Madrid, April 8, 1784, a remarkable performer on the guitar; received his chief instruction from Garcia, the great singer. In 1825 he went to Paris, where he associated with the most eminent artists of the day, till 1838, when he returned to Madrid, and died there, Dec. 20, 1849. His method for the guitar, an excellent work of its kind, passed through three editions in Spain (Madrid, 1825–1843) and one in Paris (1827). He also published 'Colleccion de los Etudios para la guitarra' (Madrid, 1820), 'Colleccion de Andantes,' etc., and other works for his instrument. M. C. C.

AGUILERA DE HEREDIA, SEBASTIAN, a monk and Spanish composer at the beginning of the 17th century. His chief work was a collection of Magnificats for four, five, six, seven, and eight voices (1618), many of which are still sung in the cathedral of Saragossa, where he directed the music, and at other churches in Spain.

AGUJARI, LUCREZIA, a very celebrated singer, who supplies an extraordinary example of the fashion of nicknaming musicians; for, being a natural child of a noble, she was always announced in the playbills and newspapers as *La Bastardina* or *Bastardella*. She was born at Ferrara in 1743, instructed in a convent by the Abbé Lambertini, and made her début at Florence in 1764. Her triumph was brilliant, and she was eagerly engaged for all the principal towns, where she was enthusiastically received. She did not excel in expression, but in execution she surpassed all rivals. The extent of her register was beyond all comparison. Sacchini said he had heard her sing as high as B♭ in

altissimo, and she had two good octaves below: but Mozart himself heard her at Parma in 1770, and says of her[1] that she had 'a lovely voice, a flexible throat, and an incredibly high range. She sang the following notes and passages in my presence':—

Ten years later, in speaking of Mara, he says, 'She has not the good fortune to please me. She does too little to be compared to a Bastardella—though that is her peculiar style—and too much to touch the heart like an Aloysia Weber.'[2] Leopold Mozart says of her, 'She is not handsome nor yet ugly, but has at times a wild look in the eyes, like people who are subject to convulsions, and she is lame in one foot. Her conduct formerly was good; she has, consequently, a good name and reputation.'

Agujari made a great sensation in the carnival of 1774 at Milan in the serious opera of 'Il Tolomeo,' by Colla, and still more in a cantata by the same composer. In 1780 she married Colla, who composed for her most of the music she sang. She sang at the Pantheon Concerts for some years, from 1775, receiving a salary at one time of £100 a night for singing two songs, a price which was then simply enormous. There is an amusing account of her in Mme. D'Arblay's *Memoirs of Dr. Burney*. She died at Parma, May 18, 1783. J. M.

AGUS, HENRI, born in 1749, died 1798; composer and professor of solfeggio in the Conservatoire of Paris (1795). The only works attributed with certainty to him, are educational. Another AGUS, named JOSEPH, is the author of a number of works, which display more learning than genius, and consist of trios for strings, duets, glees, catches, etc., published in London, where he lived for some time, and six duos concertants for two violins, published by Barbieri (Paris) as the op. 37 of Boccherini.

[1] Letter of March 24, 1770. [2] Letter of Nov. 13, 1780.

AHLE, JOHANN RODOLPH, church composer, born at Mühlhausen in Thuringia, Dec. 24, 1625; educated at Göttingen and Erfurt. In 1646 he became organist at Erfurt, and in 1654 held the same post in the Blasiuskirche at his native place, where in 1656 he was appointed member of the senate and in 1661 burgomaster. He died in full possession of his powers July 8, 1673. His published compositions include *Compendium pro tonellis* (1648), a treatise on singing which went through three editions; 'Geistlichen Dialogen' (1648), 'Sinphonien, Paduanen, Balletten'; 'Thuringische Lustgarten,' a series of church compositions, which appeared in 1657, 1658, 1663, 1665; 400 'geistliche Arien,' 'geistliche Concerte,' and 'Andachten' on all the Sundays and Festivals, etc. etc. He cultivated the simple style of the choral, avoiding polyphonic counterpoint. His tunes were for long very popular, and are still sung in the Protestant churches of Thuringia—amongst others that known as 'Liebster Jesu, wir sind hier.' A selection of his vocal works, edited by Herr J. Wolf, is in vol. 5 of *Denkmäler Deutscher Tonkunst*, in the preface to which is a complete list of Ahle's compositions. See also *Sammelbände* of the Inter. Mus. Gesellschaft, ii. 393. Ahle left a son, Johann Georg, born 1650, who succeeded to his father's musical honours, and was made poet laureate by the Emperor Leopold I. He died Dec. 2, 1706. His hymn tunes were once popular, but are not now in use. F. G.

AHLSTROEM, OLOF, born August 14, 1756; a Swedish composer, organist at the church of St. Jakob, Stockholm, and court accompanist; composed sonatas for pianoforte (Stockholm, 1783 and 1786), cantatas, and songs, and edited with Boman *Walda svenska Folkdansar och Folkledar*, a collection of Swedish popular airs. He was also editor for two years of a Swedish musical periodical *Musikalisk Tidsfördrift*. He died August 11, 1835. M. C. C.

AHNA, HEINRICH KARL HERMANN DE, was born, June 22, 1835, at Vienna, where he was trained as a violinist by Mayseder. He also received instruction from Mildner in Prague, and was already at the age of twelve making public appearances in Vienna, London, etc. Two years later he received the appointment of Chamber Virtuoso to the Duke of Coburg Gotha, but in 1851 an entire change came over his manner of life. He forsook the musical for a military career, joined the Austrian army as a cadet, and remained a

soldier until the close of the disastrous Italian campaign in 1859, when he returned to his musical studies. Art was certainly the gainer by his return. In due time he became a soloist of repute, and violinist in the much-frequented Trio Concerts given by him in conjunction with Barth the pianist and Hausmann the violoncellist; but he is chiefly known to fame as second violin in the Joachim Quartet, a position for which he was not only fitted by refinement of style, and musical knowledge, but also by his quite remarkable faculty of playing up to the leader. It is said that, in parallel passages, it was at times difficult to discern which of the two was playing. Amongst the posts held by him at Berlin were that of leader of the Royal orchestra and professor at the Hochschule under Joachim. He died in Berlin, Nov. 1, 1892. His sister, ELEANORA DE AHNA, was a dramatic singer of great promise, fulfilling mezzo-soprano rôles at the court opera. Born Jan. 8, 1838, she died at the early age of twenty-seven, on May 10, 1865. W. W. C.

AIBLINGER, JOHANN CASPAR, born at Wasserburg in Bavaria, Feb. 23, 1779. His compositions are much esteemed, and performed in the Catholic churches of South Germany. In 1803 he went to Italy, and studied eight years at Vicenza, after which he settled at Venice, where in conjunction with the Abate Gregorio Trentino he founded the 'Odeon' Institution for the practice of classical works. In 1819 he was recalled to his native country by the king, wrote two ballets, and was appointed capellmeister of the Italian Opera at Munich, until 1823, when he conducted the court music. In 1833, however, he returned to Italy, and resided at Bergamo, occupying himself in the collection of ancient classical music, which is now in the Staatsbibliothek at Munich. His whole efforts to the end of his life were directed to the performance of classical vocal music in the Allerheiligenkapelle at Munich, erected in 1826. His single attempt at dramatic composition was an opera, 'Rodrigo e Chimene,' 1821, which was not successful. The bravura airs for Mme. Schechner and for Pellegrini were much liked, but the piece showed no depth of invention. In church music, however, he was remarkably happy; his compositions in this department are in the free style of his time, written with great skill, and full of religious feeling, tuneful, agreeable, and easy melody, and exactly suited to small church choirs. They consist of masses, some requiems, graduals, litanies, and psalms, with accompaniments for orchestra and organ, published at Munich, Augsburg, and Paris (Schott). Aiblinger died May 6, 1867. C. F. P.

AICHINGER, GREGOR. Born about 1565; took holy orders, and in 1584 entered the service of Freiherr Jacob Fugger at Augsburg as organist. In 1599 he paid a visit of two years to Rome to perfect himself in music. He died Jan. 21, 1628. In the preface to his 'Sacræ Cantiones' (Venice, 1590), he praises the music of Gabrieli; and his works, both in this collection and in that of 1603, also betray the influence of the Venetian school. They are among the best German music of that time, bearing marks of real genius; and are superior to those of his contemporary, the learned Gallus, or Handl. Amongst the most remarkable are a 'Ubi est frater,' and 'Assumpta est Maria,' both for three voices; an 'Adoramus' for four; and an 'Intonuit de cœlo' for six voices, the last printed in the *Florilegium Portense*. A Litany, a Stabat Mater, and various motets of his are printed in Proske's 'Musica Divina,' and a motet for six voices in Commer's 'Musica Sacra.' A complete list is in the *Quellen-Lexikon*. F. G.

AÏDA. Grand opera in four acts; libretto by Antonio Ghislanzoni, music by Verdi. Commissioned by the Viceroy of Egypt for the opera-house at Cairo, and produced there Dec. 24, 1871. The first European performance took place at Milan, Feb. 8, 1872; and on June 22, 1876, it was given at Covent Garden. M.

AIMON, PAMPHILE LEOPOLD FRANÇOIS, violoncellist and composer, born at L'Isle, near Avignon, Oct. 4, 1779; conducted the orchestra of the theatre in Marseilles when only seventeen, that of the Gymnase Dramatique in Paris 1821, and of the Théâtre Français, on the retirement of Baudron, 1822. Of his seven operas only two were performed, the 'Jeux Floraux' (1818), and 'Michel et Christine' (1821), the last with great success. A third, 'Les Sybarites,' was published in 1831. He also composed numerous string quartets, trios, and duos (Paris and Lyons), and was the author of *Connaissances préliminaires de L'Harmonie*, and other treatises. He died in Paris, Feb. 2, 1866. M. C. C.

AIR (Ital. *aria*; Fr. *air*; Germ. *Arie*, from the Latin *aer*, the lower atmosphere; or *æra*, a given number, an epoch, or period of time). In a general sense air, from the element whose vibration is the cause of music, has come to mean that particular kind of music which is independent of harmony. In common parlance air is rhythmical melody—any melody or kind of melody of which the *feet* are of the same duration, and the *phrases* bear some recognisable proportion one to another. In the 16th and 17th centuries air represented popularly a cheerful strain. The English word *glee*, now exclusively applied to a particular kind of musical composition, is derived from the A.S. ȝliȝȝe, in its primitive sense simply *music*. Technically an air is a composition for a single voice or any monophonous instrument, accompanied by other voices or by instruments. About the beginning of the 17th century many part-songs were written, differing from those of the preceding century in many important particulars, but chiefly in the fact of their

interest being thrown into one, generally the upper, part; the other parts being subordinate. These other parts were generally so contrived as to admit of being either sung or played. The first book of Ford's *Musike of sundrie kinds* (1607) is of this class. Subsequently to its invention, arias were for a considerable time commonly published with the accompaniment only of a 'figured bass.' The aria grande, great or more extended air, has taken a vast variety of forms. These, however, may be classed under two heads, the aria with 'da capo' and the aria without. The invention of the former and older form is now generally attributed to Francesco Cavalli, in whose opera 'Giasone' (1649) the line which divides air from recitative seems to have been marked more distinctly than in any preceding music. The so-called 'aria' of Monteverde and his contemporaries (*c.* 1600) is hardly distinguishable from their 'musica parlante,' a very slight advance on the 'plain-song' of the Middle Ages. The aria without 'da capo' is but a more extended and interesting form than that of its predecessor. In the earlier the first section or division is also the last; a section, always in another key and generally shorter, being interposed between the first and its repetition. In the later form the first section is repeated, often several times, the sections interposed being in different keys from one another as well as from the first, which, on its last repetition, is generally more or less developed into a 'coda.' The aria grande has assumed, under the hands of the great masters of the modern school, a scope and a splendour which raise it to all but symphonic dignity. As specimens of these qualities we may cite Beethoven's 'Ah, perfido,' and Mendelssohn's 'Infelice.' The limits of the human voice forbid, however, save in rare instances, to the aria, however extended, that repetition of the same strains in different though related keys, by which the symphonic 'form' is distinguished from every other. But compositions of this class, especially those interspersed with recitative, though nominally sometimes arie belong rather to the class 'scena.' [See also ARIA.] J. H.

A'KEMPIS, NICHOLAS, organist of Ste. Gudule, at Brussels, about 1628; composed three books of symphonies (Antwerp, 1644, 1647, and 1649). A certain Jean Florent A'Kempis was organist of another church in Brussels from about 1657; he was certainly the author of a book of 'Cantiones' published at Antwerp in 1657, and possibly wrote the 'Missæ et Motetta' and a requiem, the former of which, published at Antwerp in 1650, has been also ascribed to the other A'Kempis.

AKEROYDE, SAMUEL, a native of Yorkshire, was a very popular and prolific composer of songs in the latter part of the 17th century. Many of his compositions are contained in the following collections of the period: 'D'Urfey's Third Collection of Songs' 1685; 'The Theatre of Musick,' 1685-87; 'Vinculum Societatis,' 1687; 'Comes Amoris,' 1687-94; 'The Banquet of Musick,' 1688; 'Thesaurus Musicus,' 1693-96; and in *The Gentleman's Journal*, 1692-94. He was also a contributor to the Third Part of D'Urfey's 'Don Quixote,' 1696. W. H. H.

ALA, GIOVANNI BATTISTA, born at Monza about the end of the 16th century, died at the age of thirty-two; organist of the Church dei Servitori, in Milan, and composer of canzonets, madrigals, and operas (Milan, 1617, 1625), 'Concerti ecclesiastici' (Milan, 1618, 1621, 1628), and several motets in the 'Pratum musicum' (Antwerp, 1634), and in the 'Luscinia Sacra' (Antwerp, 1633).

ALABIEV, ALEXANDER NICHOLAEVICH, a talented amateur of the pseudo-national school which preceded Glinka, born at Moscow, August 30, 1802. He entered the army, but being led by his fiery temper into some breach of discipline, was exiled to Tobolsk. On his return, he settled in Moscow, where he died in 1852. In collaboration with Verstovsky and others, he produced several vaudevilles which were popular in their day. Encouraged by the success of Catterino Cavos, he attempted a Russian fairy-opera: 'A Moonlight Night, or the Domovoi' (House Spirit). Probably the task was beyond his amateur resources, for the work proved a failure. Alabiev composed about a hundred songs, pleasing melodies in the popular style, but exceedingly elementary as regards form and accompaniment. One of these 'The Nightingale' became widely known from having been introduced into the 'Singing-lesson' in 'Il Barbiere' by Viardot, Patti, and Sembrich. R. N.

ALARD, DELPHIN, eminent violinist. Born at Bayonne, March 8, 1815; showed at an early age remarkable musical talent, and in 1827 was sent to Paris for his education. At first he was not received as a regular pupil at the Conservatoire, but was merely allowed to attend Habeneck's classes as a listener. He soon, however, won the second, and a year later the first prize for violin-playing, and from 1831 began to make a great reputation as a performer. In 1843, on Baillot's death, he succeeded that great master as professor at the Conservatoire, which post he held until his death, Feb. 22, 1888. Alard was the foremost representative of the modern French school of violin-playing at Paris, with its characteristic merits and drawbacks. His style was eminently lively, pointed, full of *élan*. He published a number of concertos and operatic fantasias which, owing to their brilliancy, attained in France considerable popularity, without having much claim to artistic worth. On the other hand, his 'Violin School,' which has been translated into several languages, is a very comprehensive and meritorious work. He also edited a selec-

EMMA ALBANI

tion of violin-compositions of the most eminent masters of the 18th century, 'Les maîtres classiques du Violon,' etc. (Schott), in 40 parts. P. D.

ALBANI, MATHIAS, a renowned violin-maker, born 1621, at Botzen, was one of Stainer's best pupils. The tone of his violins, which are generally very high in the belly, and have a dark red, almost brown, varnish, is more remarkable for power than for quality. He died at Botzen in 1673. His son, also named Mathias, was at first a pupil of his father, afterwards of the Amatis at Cremona, and finally settled at Rome. His best violins, which by some connoisseurs are considered hardly inferior to those of the Amatis, are dated at the end of the 17th and beginning of the 18th century. A third Albani, whose Christian name is not known, and who lived during the 17th century at Palermo, also made good violins, which resemble those of the old German makers. P. D.

ALBANI, the stage-name of Mlle. Marie Louise Cécile Emma Lajeunesse, who was born Nov. 1, 1850, of French Canadian parents, at Chambly, near Montreal, and is therefore an English subject. Her father was a professor of the harp, and she began life in a musical atmosphere. When she was five years of age the family removed to Montreal, and Mlle. Lajeunesse entered the school of the Convent of the Sacré Cœur. Here she remained several years, with such instruction in singing as the convent could afford, and she is said to have abandoned the idea of adopting a religious life on the representation of the Superior of the convent, who discovered the great qualities of her pupil.

In the year 1864 the family again removed, this time to Albany, the capital of the State of New York; and while pursuing her studies there Mlle. Lajeunesse sang in the choir of the Catholic cathedral, and thus attracted the notice not only of the public but of the Catholic bishop, who strongly urged M. Lajeunesse to take his daughter to Europe and place her under proper masters for the development of so remarkable a talent. A concert was given in Albany to raise the necessary funds, after which Mlle. Lajeunesse proceeded to Paris with her father. From Paris, after studying with Duprez for eight months, she went to Lamperti at Milan, with whom she remained for a considerable time. The relation between the master and his gifted pupil may be gathered by the fact that his treatise on the Shake is dedicated to her. In 1870 she made her début at Messina in the Sonnambula, under the name of ALBANI, a name suggested by Lamperti. She then sang for a time at the Pergola, Florence. Her first appearance in London was in the same opera at the Royal Italian Opera, Covent Garden, on April 2, 1872. The beautiful qualities of her voice and the charm of her appearance were at once appreciated, and she grew in favour during the whole of the season. Later in the year she made a very successful appearance at the Italian Opera of Paris. She then returned to Milan, and passed several months in hard study under her former master. 1873 saw her again at Covent Garden. Between that and her next London season, she visited Russia and America, and on August 6, 1878, she married Mr. Ernest Gye, who became lessee of Covent Garden on his father's death in Dec. 1878.

From 1880 she sang at Covent Garden each season (except that of 1885) until 1896, when she appeared as Isolde and Donna Anna. Her large repertory includes the chief parts in such 'stock' operas as 'Lucia,' 'Faust,' 'Huguenots,' 'Traviata,' 'Rigoletto' and 'Mefistofele'; she was the first to sing Elizabeth, Elsa, and Eva in the Italian versions of the operas in which they appear; [and the last and greatest triumph of her operatic career was as Isolde, which she sang for the first time to the Tristan of Jean de Reszke, in German, June 26, 1896]. Other new parts have been—Isabella ('Pré aux Clercs'), Tamara (Rubinstein's 'Demonio'); Brunhild (Reyer's 'Sigurd'); Antonida ('Vie pour le Czar'); Desdemona (Verdi's 'Otello'); and Edith (Cowen's 'Harold'), the only operatic part she has created in the English language.

Since 1872 she has sung every autumn at one or more of our provincial festivals, where she has created, in important new works, parts mostly written for her, viz., at Birmingham, 1882, in the 'Redemption'; 1885, 'Mors et Vita' and 'Spectre's Bride'; 1881, at Norwich in 'St. Ursula' (Cowen): and at Leeds, 1880, Margarita in 'The Martyr of Antioch'; 1886, Elsie in 'The Golden Legend,' St. Ludmila (Dvořák), and Ilmas ('Story of Sayid'), Mackenzie. At Worcester, also, in 1881, she sang in Cherubini's Mass in D minor, in 1882 (at Birmingham) in the same composer's Mass in C; and in 1884 in Bach's cantata, 'God so loved the world.' In London and at Sydenham she has sung in the greater part of these works, also in 'The Rose of Sharon,' Dvořák's Stabat Mater, and in 1886 in Liszt's 'St. Elizabeth' on the occasion of the composer's farewell visit. Mme. Albani has sung in opera abroad with her usual success; also in Gounod's oratorios at the Trocadéro, Paris. During a three weeks' visit to Berlin in 1887 she sang both in German and Italian in 'Lucia,' 'Traviata,' 'Faust,' 'Fliegende Holländer' and 'Lohengrin,' and was appointed by the Emperor a court chamber singer. At the request of Sir Arthur Sullivan she returned to Berlin on April 2, 1887, and sang her original part of Elsie on the second performance there of 'The Golden Legend,' under his direction, having travelled from Brussels for that express purpose.

Her voice is a rich soprano of remarkably sympathetic quality, and of great power. The

higher registers are of exceptional beauty, and she possesses in perfection the art of singing *mezza voce*. She is also a good pianist. A. C.

ALBENIZ, ISAAC, born May 29, 1861, at Comprodon, Spain, pupil of Marmontel, Jadassohn, Brassin and Liszt, for piano and of Dupont and Gevaert for composition. Appeared with great success in London and elsewhere as a pianist, and wrote a comic opera, 'The Magic Opal,' produced in 1893. 'Enrico Clifford' and 'Pepita Jimenez,' two more ambitious works, were given at Barcelona in 1894 and 1895 respectively.

ALBENIZ, PEDRO, born in Biscay about 1755, died about 1821; a Spanish monk, conductor of the music at the Cathedral of St. Sebastian, and (1795) at that of Logrono; composed masses, vespers, motets, and other church music, never published, and a book of solfeggi (St. Sebastian, 1800).

ALBENIZ, PEDRO, born at Logrono, April 14, 1795, died at Madrid, April 12, 1855; son of a musician, Mattéo Albeniz, and pupil of Henri Herz and Kalkbrenner; organist from the age of ten at various towns in Spain, and professor of the pianoforte in the Conservatoire at Madrid. He introduced the modern style of pianoforte playing into Spain, and all the eminent pianists of Spain and South America may be said to have been his pupils. He held various high posts at the court, and in 1847 was appointed secretary to the Queen. His works comprise a method for the pianoforte (Madrid, 1840), adopted by the Conservatoire of Madrid, seventy compositions for the pianoforte, and songs. M. C. C.

ALBERGATI, COUNT PIRRO CAPACELLI, of an ancient family in Bologna, lived from about 1663 to 1735, an amateur, and distinguished composer. From 1687 he was in the service of the Emperor Leopold I. His works include the operas 'Gli Amici' (1699), 'Il Principe selvaggio' (1712), the oratorios 'Giobbe' (Bologna, 1688), 'L'Innocenza di Santa Eufemia' (1700), and 'Il Convito di Baldassare' (1702), sacred cantatas, masses, motets, etc., and compositions for various instruments.

ALBERT, HEINRICH, born at Lobenstein, Voigtland, Saxony, June 28, 1604: nephew and pupil of the famous composer Heinrich Schütz. He studied music in Dresden, but was compelled by his parents to give it up for a legal education at Leipzig. In 1626 he started for Königsberg, where Stobäus was at that time capellmeister, but was taken prisoner by the Swedes and did not reach his destination till 1628. In 1631 he became organist to the old church in that city, and in 1638 married Elizabeth Starke. He died Oct. 6, 1651.

Albert was at once poet, organist, and composer. As poet he is one of the representatives of the Königsberg school, with the heads of which he was closely associated.

His church music is confined, according to Winterfeld, to a Te Deum for three voices, published Sept. 12, 1647. He, however, composed both words and music to many hymns, which are still in private use, *e.g.* 'Gott des Himmels und der Erden.' These, as well as his secular songs, are found in the eight collections printed for him by Paschen, Mense, and Reusner, under the patronage of the Emperor of Germany, the King of Poland, and the Elector of Brandenburg. These collections sold so rapidly that of some of them several editions were published by the author. Others were surreptitiously issued at Königsberg and Dantzig under the title of 'Poetisch-musikalisches Lustwäldlein,' which Albert energetically resisted. These latter editions, though very numerous, are now exceedingly rare. Their original title is 'Erster (Zweiter, etc.) Theil der Arien oder Melodeyen etlicher theils geistlicher theils weltlicher, zu gutten Sitten und Lust dienender Lieder.' Then followed the dedication, a different one to each part. The second is dedicated to his 'most revered uncle, Heinrich Schütz,' the only existing reference to the relationship between them. Albert's original editions were in folio, but after his death an octavo edition was published in 1657 by A. Profe of Leipzig. In his prefaces Albert lays down the chief principles of the musical art, a circumstance which gives these documents great value, as they belong to a time in which by means of the 'basso continuo' a reform in music was effected, of which we are still feeling the influence. Mattheson, in his 'Ehrenpforte,' rightly assumes that Albert was the author of the 'Tractatus de modo conficiendi Contrapunctam,' which was then in manuscript in the possession of Valentin Hausmann. In the preface to the sixth section of his 'Arien' Albert speaks of the centenary of the Königsberg University, August 28, 1644, and mentions that he had written a 'Comödien-Musik' for that occasion, which was afterwards repeated in the palace of the Kurfürst. Albert was thus, next after H. Schütz, the founder of German opera. Both Schütz's 'Daphne' and Albert's 'Comödien-Musik' appear to be lost, doubtless because they were not published.

Albert's 'Arien' give a lively picture of the time, and of the then influence of music. While the object of the opera as established in Italy was to provide music as a support to the spoken dialogue, so the sacred 'concert' came into existence at the same time in Italy and Germany as a rival to the old motets, in which the words were thrown too much into the background. But the sacred 'concert' again, being sung only by a small number of voices, necessitated some support for the music, and this was the origin of the 'basso continuo.' Albert, who, on his arrival at Königsberg, had undergone a second course of instruction under

Stobäus, attained in his music a peculiar character which may be described as the quintessence of all that was in the best taste in Italy and Germany. Owing to the special circumstance that Albert was both a musician and a poet—and no small poet either—he has been rightly called the father of the German 'Lied.' His place in German music may be described as a pendant to the contemporary commencement of Italian opera. A five-part madrigal is in vol. iii. of *Arion*. F. G.

ALBERT, PRINCE. FRANCIS CHARLES AUGUSTUS ALBERT EMMANUEL, Prince Consort of Queen Victoria, second son of Ernest Duke of Saxe-Coburg-Saalfeld, was born at Rosenau, Coburg, August 26, 1819, married Feb. 10, 1840, and died Dec. 14, 1861. Music formed a systematic part of the Prince's education (see his own 'Programme of Studies' at thirteen years of age in *The Early Years*, etc., p. 107). At eighteen he was 'passionately fond' of it, 'had already shown considerable talent as a composer,' and was looked up to by his companions for his practical knowledge of the art (*ib.* pp. 143, 173); and there is evidence (*ib.* p. 70) that when quite a child he took more than ordinary interest in it. When at Florence in 1839 he continued his systematic pursuit of it (*ib.* p. 194), and had an intimate acquaintance with pieces at that date not generally known (*ib.* pp. 209-211).[1] His organ-playing and singing he kept up after his arrival in England (Martin's *Life*, pp. 85, 86; Mendelssohn's letter of July 19, 1842), but his true interest in music was shown by his public action in reference to it, and the influence which from the time of his marriage to his death he steadily exerted in favour of the recognition and adoption of the best compositions.

This was shown in many ways. First, by his immediate transformation of the Queen's private band from a mere wind-band (see *Musical Times*, 1902, p. 463, for its constitution) into a full orchestra (dating from Dec. 24, 1840), and by an immense increase and improvement in its *répertoire*. There is now a peculiar significance in the fact that—to name only a few amongst a host of great works—Schubert's great symphony in C (probably after its rejection by the Philharmonic band, when offered them by Mendelssohn in 1844), Bach's 'Matthew-Passion,' Mendelssohn's 'Athalie' and 'Œdipus,' and Wagner's 'Lohengrin,' were first performed in this country at Windsor Castle and Buckingham Palace. Secondly, by acting in his turn as director of the Ancient Concerts, and choosing, as far as the rules of the society permitted, new music in the programmes; by his choice of pieces for the annual 'command nights' at the Philharmonic, where his programmes were always of the highest class, and included first performances of Mendelssohn's 'Athalie,' Schubert's overture to 'Fierabras,' and Schumann's 'Paradise and the Peri.' Thirdly, by the support which he gave to good music when not officially connected with it: witness his keen interest in Mendelssohn's oratorios, and his presence at Exeter Hall when 'St. Paul' and 'Elijah' were performed by the Sacred Harmonic Society. Fourthly, by the interest he took in the Royal Library at Buckingham Palace. There can be no doubt that, in the words of a well-known musical amateur, his example and influence had much effect on the performance of choral music in England, and on the production here of much that was of the highest class of musical art.

The Prince's delight in music was no secret to those about him. In the performances at Windsor, says Sir Theodore Martin, from whose *Life* (i. App. A) many of the above facts are taken, 'he found a never-failing source of delight. As every year brought a heavier strain upon his thought and energies, his pleasure in them appeared to increase. They seemed to take him into a dream-world, in which the anxieties of life were for the moment forgotten.' Prince Albert's printed works include 'L'invocazione all' Armonia,' for solos and chorus; a morning service in C and A; anthem, 'Out of the deep'; five collections of 'Lieder und Romanzen,' 29 in all; three canzonets, etc. G.

ALBERT, CHARLES LOUIS NAPOLEON D', son of François Benoit d'Albert, was born at Menstetten, near Altona, Hamburg, Feb. 25, 1809. His father was a captain of cavalry in the French army. On his death in 1816 the mother and son emigrated to England. She was a good musician, and her son's first musical education—in Mozart and Beethoven—was due to her. He then had lessons in the piano from Kalkbrenner, and in composition from Dr. Wesley, and afterwards learnt dancing at the King's Theatre, London, and the Conservatoire, Paris. On his return to England he became ballet-master at the King's Theatre, and at Covent Garden. He soon relinquished these posts, and devoted himself to teaching dancing and composing dance-music, in which he was very successful, and achieved a wide reputation. He ultimately settled at Newcastle-on-Tyne, married there in 1863, and for many years was a resident in the North of England and in Scotland. He published 'Ball-Room Etiquette,' Newcastle, 1835; and a large number of dances, beginning with the 'Bridal Polka,' 1845; all of these were very great favourites, especially the 'Sweetheart's Waltz,' 'Sultan's Polka,' and 'Edinburgh Quadrille.' In the latter years of his life he removed to London, where he died May 26, 1886.

His son, EUGÈNE FRANCIS CHARLES, was born at Glasgow, April 10, 1864. His genius for music showed itself from a very early age,

[1] P. 211, *for* 'Nencini' *read* 'Nanini.'

and he was carefully taught by his father. In 1876 he was elected Newcastle scholar in the National Training School, London, where he learnt the piano from Pauer, and harmony and composition from Stainer, Prout, and Sullivan. Here his progress in piano playing, counterpoint, and composition, was rapid and brilliant, and he also occupied himself much in the study of languages. An overture of his was performed at a students' concert at St. James's Hall on June 23, 1879. His piano playing was at that early age so remarkable that he was engaged and appeared three times at the Popular Concerts, Nov. 22, 1880, and Jan. 3 and 8, 1881. On Feb. 5 of the latter year he played Schumann's Concerto at the Crystal Palace, and appeared at the Philharmonic on March 10. He played a concerto of his own in A at the Richter Concert of Oct. 24, 1881, and in the following November, having in the meantime won the Mendelssohn Scholarship, entitling him to a year abroad, he went to Vienna at the instance of Richter, who had been very much impressed by his great promise in London. Very shortly after his arrival in Vienna he played the first movement of his own concerto at the Philharmonic Concert there. He then became a pupil of Liszt, who called him the 'young Tausig,' in allusion to his extraordinary technical ability. As a mature artist he maintains the highest and noblest traditions of music, and in breadth of style he yields to very few pianists. An overture 'Hyperion,' was played at a Richter Concert, June 8, 1885, and his symphony in F, op. 4, at the same on May 24, 1886. Both these are full of nobility and beauty. Among his most important works are the pf. concertos in B minor, op. 2, and in E flat, op. 12; an overture, 'Esther,' op. 8; a pf. suite, op. 1, that has been often played; two string quartets, A minor op. 7, and E flat op. 11, a pf. sonata op. 10, in F; and a work for six-part chorus 'Der Mensch und das Leben,' op. 14. His first opera, 'Der Rubin,' was given at Carlsruhe in 1893, his second, 'Ghismonda,' in Dresden, 1895, 'Gernot' at Mannheim, 1897, 'Die Abreise' at Frankfort, 1898. His operatic writing is uniformly musicianly and appropriate, without any very strongly marked individuality. 'Kain,' a one-act tragedy, is not yet performed. From 1892 to 1895 D'Albert was the husband of Madame Teresa Carreño, and he is at present married to the successful singer, Hermine Fink. He held the post of capellmeister at Weimar for a time in 1895. A. J. H.

ALBERTAZZI, Emma, the daughter of a music-master named Howson, was born May 1, 1814. Beginning at first with the piano, she soon quitted that instrument, to devote herself to the cultivation of her voice, which gave early promise of excellence. Her first instruction was received from Costa, and scarcely had she mastered the rudiments, when she was brought forward at a concert at the Argyll Rooms. In the next year, 1830, she was engaged at the King's Theatre in several contralto parts, such as Pippo in the 'Gazza Ladra,' and others. Soon afterwards she went to Italy with her father, and got an engagement at Piacenza. It was here that Signor Albertazzi, a lawyer, fell in love with her, and married her before she was seventeen. Celli, the composer, now taught her for about a year; after which she sang, 1832, in Generali's 'Adelina,' at the Canobbiana, and subsequently was engaged for contralto parts at La Scala. There she sang in several operas with Pasta, who gave her valuable advice. She sang next at Madrid, 1833, for two years; and in 1835 at the Italian Opera in Paris. This was the most brilliant part of her career. In 1837 she appeared in London. Madame Albertazzi had an agreeable presence, and a musical voice, not ill-trained; but these advantages were quite destroyed by her lifelessness on the stage—a resigned and automatic indifference, which first wearied and then irritated her audiences. To the end of her career—for she afterwards sang in English Opera at Drury Lane—she remained the same, unintelligent and inanimate. Her voice now began to fail, and she went abroad again, hoping to recover it in the climate of Italy, but without success. She sang at Padua, Milan, and Trieste, and returned in 1846 to London, where she sang for the last time. She died of consumption, Sept. 25, 1847. J. M.

ALBERTI BASS. A familiar formula of accompaniment which first came prominently into fashion early in the 18th century, and has since been the frequent resource of hundreds of composers from the greatest to the meanest. It derives its distinctive name from Domenico Alberti, a musician who is supposed to have been born during the second decade of the 18th century at Venice, where he became a pupil of Lotti. He won fame both as a singer and as a player on the harpsichord, and wrote some operas and a considerable number of sonatas, some of which were very popular with musical amateurs. It is not very probable that he actually invented the formula, but he certainly brought it into undue prominence in his sonatas, and therefore did his best to deserve a notoriety which is not altogether enviable. A set of eight sonatas of his, which was published by Walsh in London, affords good illustrations of his love of it. He uses it plentifully in every sonata of the set, sometimes in both movements, and occasionally almost throughout a whole movement. For instance, in the first movement of the second sonata it persists through thirty-seven bars out of a total of forty-six; and in the first movement of the sixth sonata it continues through thirty-six whole bars and four half bars out of a total of forty-

MARIETTA ALBONI

four. The following quotation from the beginning of the sixth sonata illustrates his style, and his manner of using the formula.

Allegro moderato.

The fact of his having been a singer at a time when Italian opera was passing into an empty and meretricious phase, may account for his excessive use of the so-called 'bass' [see also ARPEGGIO, HORN, LOTTI]. He has been injudiciously credited with the invention of the second subject in the binary form, and is said to have been the first to associate contrast of subjects with contrast of keys; a theory which is equally ill-founded. He died comparatively young in 1740. C. H. H. P.

ALBINONI, TOMASSO, dramatic composer and violinist. Born at Venice in the latter half of the 17th century. The particulars of his life are entirely unknown, though Riemann's *Lexikon* gives his dates as 1674-1745. He wrote forty-two operas (the first of which appeared in 1694), which are said to have been successful from the novelty of their style, though a modern French critic describes the ideas as trivial and the music as dry and unsuited to the words. Greater talent is to be seen in his instrumental works, concertos, sonatas, and songs. He was also an excellent performer on the violin. Albinoni's sole interest for modern times resides in the fact that the great Bach selected themes from his works, as he did from those of Corelli and Legrenzi. 'Bach,' says Spitta (Engl. tr., i. 425), 'must have had an especial liking for Albinoni's compositions. Even in his later years he was accustomed to use bass parts of his for practice in thorough-bass,' and Gerber relates that he had heard his father (a pupil of Bach's) vary these same basses in his master's style with astonishing beauty and skill. Two harpsichord fugues of the great master's are known to be founded on themes of Albinoni's—both from his 'Opera prima.' They are in A and B minor, and are to be found in the B-G edition, vol. xxxvi. pp. 173 and 178. For further particulare see Spitta, Engl. tr., i. 425-428. E. H. D.

ALBONI, MARIETTA, the most celebrated contralto of the 19th century, was born at Cesena, Romagna, March 10, 1823. Her first instruction was received in her native place; after which she was taught by Mme. Bertolotti, at Bologna, who taught many other distinguished singers. There she met Rossini, and was so fortunate as to obtain lessons from him: she is said to have been his only pupil. Charmed with her voice and facility, he taught her the principal contralto parts in his operas, with the true traditions. With this great advantage Alboni easily procured an engagement for several years from Merelli, an impresario for several theatres in Italy and Germany. She made her first appearance at La Scala, Milan, 1843, in the part of Maffio Orsini. In spite of her inexperience, her voice and method were brilliant enough to captivate the public. In the same year she sang at Bologna, Brescia, and again at Milan; soon afterwards with equal success at Vienna. In consequence of some misunderstanding about salary she now broke her engagement with Merelli, and suddenly took flight to St. Petersburg. She remained there, however, but a short time; and we find her in 1845 singing at concerts in Hamburg, Leipzig, Dresden, as well as in Bohemia and Hungary. At the carnival of 1847 she sang at Rome in Pacini's 'Saffo,' introducing an air from Rossini's 'Semiramide,' which was enthusiastically applauded, but could not save the opera. In the spring of the same year she came to London, and appeared at Covent Garden, in the height of the 'Jenny Lind fever.' She was indeed a trump card for that establishment against the strong hand of the rival house. The day after her début the manager spontaneously raised her salary for the season from £500 to £2000, and her reputation was established. She sang in 'Semiramide' first on April 6, and afterwards in 'Lucrezia Borgia'; and in the latter had to sing the 'Brindisi' over and over again, as often as the opera was performed. As Pippo in the 'Gazza Ladra' she had to sing the whole first solo of the duet 'Ebben per mia memoria' three times over. Her appearance at that time was really splendid. Her features were regularly beautiful, though better fitted for comedy than tragedy; and her figure, not so unwieldy as it afterwards became, was not unsuited to the parts she played. Her voice, a rich, deep, true contralto of fully two octaves, from g to g'', was as sweet as honey, and perfectly even throughout its range. Her style gave an idea, a recollection, of what the great old school of Italian singing had been, so perfect was her command of her powers. The only reproach to which it was open was a certain shade of indolence and *insouciance*, and a want of fire at times when more energy would have carried her hearers completely away. Some singers have had the talent and knowledge to enable them to vary their *fiorituri*; Alboni never did this. When you had heard a song once from her, perfect as it was, you never heard it again but with the selfsame ornaments and *cadenze*. Her versatility was great,—too great, perhaps, as some critics have said; and it has been asserted that

she did serious harm to her voice by the attempt to extend it upwards. This was, however, not clear to all her admirers, after she returned to her legitimate range. She sang again in London in 1848 at Covent Garden, and in 1849, 1851, 1856, 1857, and 1858 at Her Majesty's Theatre. She appeared at Brussels in 1848, with no less success than in London and Paris. In 1849 she returned to Paris, and sang with equal éclat in 'Cenerentola,' 'L'Italiana in Algieri,' and 'La Gazza Ladra.' In the next year she visited Geneva, and made a tour of France, singing in French at Bordeaux in the operas 'Charles VI.,' 'La Favorite,' 'La Reine de Chypre,' and 'La Fille du Régiment.' On her return to Paris she surpassed the boldness of this experiment by attempting the part of Fidés in the 'Prophète' at the Grand Opera, and with the most brilliant success. She next made a tour in Spain, and in 1853 a triumphal progress through America. After her marriage with Count A. Pepoli, a gentleman of old Bolognese family, she lived in Paris, where she delighted her admirers with most of her old characters as well as some new, and notably in the part of Fidalma in Cimarosa's 'Matrimonio Segreto.' She sang Rossini's 'Quis est homo' with Mme. Patti at that master's funeral in 1868, and she sang in his 'Petite Messe Solennelle,' in London in 1871. J. M.

ALBRECHTSBERGER, JOHANN GEORG. Contrapuntist and teacher of sacred music, composer and organist; born Feb. 3, 1736, at Klosterneuburg, near Vienna; died at Vienna, March 7, 1809. Seyfried has appended his biography to the complete edition of his works (Vienna, 1826, 1837). Albrechtsberger began life as a chorister at his native town and at Melk. At the latter place he was taken notice of by the Emperor Joseph, then Crown Prince; and on a later occasion, the Emperor passing through Melk renewed the acquaintance, and invited him to apply for the post of court organist on the first vacancy. Meantime Albrechtsberger studied hard under the direction of Emmerling. After being organist for twelve years at Melk, he obtained a similar post at Raab in Hungary, and then at Mariataferl. Here he remained instructor in the family of a Silesian count till he left for Vienna as *Regens Chori* to the Carmelites. In 1772 he was appointed court organist, and twenty years later director of music at St. Stephen's, where he at once commenced his career as a teacher. The number of his pupils was very large. Amongst the most celebrated are Beethoven, Hummel, Weigl, Seyfried, Eybler, and Mosel. Nottebohm (*Beethoven's Studien,* 1873) speaks in the highest terms of the instruction which he gave Beethoven. His compositions are computed by Seyfried as 261, of which only twenty-seven are printed. A very great number of them are in the library of the Gesellschaft der Musikfreunde at Vienna (see *Quellen-Lexikon*). The finest is a Te Deum, which was not performed till after his death. His great theoretical work (not without defects) is entitled *Gründliche Anweisung zur Composition* (Leipzig, 1790; second edition, 1818). An English edition, translated by Sabilla Novello, is published by Novello and Co. F. G.

ALBUMBLATT (Germ.; Fr. *Feuillet d'album*). A short piece of music, such as might suitably be written in a musical album. Its form entirely depends upon the taste and fancy of the composer. As good examples of this class of piece may be named Schumann's 'Albumblätter,' op. 124, a collection of twenty short movements in the most varied styles. E. P.

ALCESTE, tragic opera in three acts by Gluck, libretto by Calzabigi; first performed at Vienna Dec. 16, 1767, and in Paris (adapted by du Rollet) April 23, 1776. It was the first in which Gluck attempted his new and revolutionary style, and contains the famous 'Epître dédicatoire' expounding his principles. 'Alceste' was revived at Paris in 1861 for Mme. Pauline Viardot.

ALCHYMIST, DER, Spohr's eighth opera; libretto by Pfeiffer on a Spanish tale of Washington Irving's; composed between Oct. 1829 and April 1830, and first performed at Cassel on July 28, 1830, the birthday of the Elector.

ALCOCK, JOHN, Mus.Doc., born at London, April 11, 1715, became at seven years of age chorister of St. Paul's Cathedral under Charles King. At fourteen he became a pupil of Stanley, the blind organist, who was then, although but sixteen, organist of two London churches, Allhallows, Bread Street, and St. Andrew's, Holborn. In 1737 Alcock became organist of St. Andrew's Church, Plymouth, which place he quitted in 1742, on being chosen organist of St. Lawrence's Church, Reading. In 1749 he was appointed organist, master of the choristers, and lay-vicar of Lichfield Cathedral. On June 6, 1755, he took the degree of bachelor of music at Oxford, and in 1761 proceeded to that of doctor. In 1760 he resigned the appointments of organist and master of the choristers of Lichfield, retaining only that of lay-vicar. He was organist of Sutton Coldfield church (1761-86), and of St. Editha's, Tamworth (1766-90). He died at Lichfield in Feb. 1806, aged ninety-one. During his residence at Plymouth, Alcock published 'Six Suites of Lessons for the Harpsichord' and 'Twelve Songs,' and whilst at Reading he published 'Six Concertos,' and a collection of 'Psalms, Hymns, and Anthems.' In 1753 he published a 'Morning and Evening Service in E minor.' He likewise issued (in 1771) a volume containing 'Twenty-six Anthems,' a 'Burial Service,' etc. He was the composer of a number of glees, a collection of which under the title of 'Harmonia Festi,' he published about 1790. Glees of his composition won the Catch Club prizes in 1770, 1771, and 1772. Alcock edited a collection of Psalm Tunes, by

various authors, arranged for four voices, under the title of 'The Harmony of Sion,' 1752. [His son JOHN, Mus.Bac., born about 1740, was organist of St. Mary Magdalen's, Newark-on-Trent, from 1758-68. He was organist of the parish church of Walsall, from 1773 till his death, March 30, 1791. Between 1770 and 1780 he published songs, anthems, etc.] W. H. H.

ALDAY, a family of musicians in France. The father, born at Perpignan, 1737, was a mandoline player, and the two sons violinists. The elder of the two, born 1763, appeared at the Concerts Spirituels, first as a mandoline player, and afterwards as a violinist. He settled in Lyons and established a music business there about 1795. His works are numerous, and include a 'Méthode de Violon,' which reached several editions. Paul Alday, le jeune, born 1764, a pupil of Viotti, was a finer player than his brother, and achieved a great reputation. He played often at the Concerts Spirituels up to 1791, when he came to England, and in 1806 was conductor and teacher of music in Edinburgh. [He went to Dublin in 1810, purchased a music business in Rhames Street in 1811, opened a musical academy in 1812, and was established as a professor of the violin in 1820. He died in 1835. W. H. G. F.] He published three concertos for violin, three sets of duos, airs variés, and trios, all written in a light, pleasing style, and very popular in their day, though now forgotten. M. C. C.

ALDRICH, HENRY, D.D., was born in 1647, and educated at Westminster School. In 1662 he passed to Christ Church, Oxford, of which foundation he was afterwards so distinguished a member. He took the B.A. degree in 1666, and M.A. in 1669. He then took holy orders, and was elected to the living of Wem, in Shropshire, but continued to reside in his college and became eminent as a tutor. In Feb. 1681 he was installed a Canon of Christ Church, and in May following he took his degrees as Bachelor and Doctor in Divinity. In 1689 he was installed Dean of Christ Church. He was as remarkable for the zeal with which he discharged the duties of his station as for the urbanity of his manners. His college was his first consideration, and he sought by every means to extend its resources and uphold its reputation. He closed his career Jan. 19, 1710.

Dr. Aldrich was a man of considerable attainments, a good scholar, architect, and musician. He wrote a compendium of logic, *Artis Logicæ Compendium*, which is still used at Oxford, and a number of tracts upon theology, the classics, etc., the titles of which may be seen in Kippis (*Biog. Brit.*). He was also one of the editors of Clarendon's History of the Rebellion. Of his skill in architecture Oxford possesses many specimens; amongst others Peckwater quadrangle at Christ Church, the chapel of Trinity College, and All Saints' church. He cultivated music with ardour and success. 'As dean of a college and a cathedral he regarded it as a duty, as it undoubtedly was in his case a pleasure, to advance the study and progress of church music. His choir was well appointed, and every vicar, clerical as well as lay, gave his daily and efficient aid in it. He contributed also largely to its stock of sacred music; and some of his services and anthems, being preserved in the collections of Boyce and Arnold, are known and sung in every cathedral in the kingdom.' He formed a large musical library, in which the works of the Italian composers, particularly of Palestrina and Carissimi, are prominent features. This he bequeathed to his college, and it is to be regretted that a catalogue has not been printed. Catch-singing was much in fashion in the Dean's time; nor did he himself disdain to contribute his quota towards the stock of social harmony. His catch, 'Hark the bonny Christ Church Bells,' in which he has made himself and his college the subject of merriment, is well known. He afterwards wrote and used to sing a Greek version of this catch. He was an inveterate smoker, and another of his catches in praise of smoking is so constructed as to allow every singer time for his puff.

Dr. Aldrich's compositions and adaptations for the church are 'A Morning and Evening Service in G' (printed by Boyce); 'A Morning and Evening Service in A' (printed by Arnold); and about fifty anthems, some original, others adaptations from the Italian. Some of these are to be found in the printed collections of Boyce, Arnold, and Page; others in the Ely, the Tudway, and the Christ Church MSS. (Hawkins, *History; Biog. Dict. U.K.S.;* Hayes, *Remarks on Avison, etc.*). E. F. R.

ALDROVANDINI (wrongly called Aldovrandini), GIUSEPPE ANTONIO VINCENZO, born at Bologna about 1673; member of the Philharmonic Academy at Bologna (1695), and honorary maestro di cappella of the Duke of Mantua's band; studied under Jacopo Perti. He composed eleven operas (1696-1711)—of which 'Amor torna in cinque et cinquanta,' in the Bologna dialect, was perhaps the most famous—also 'Armonia Sacra' (Bologna, 1701), a collection of motets, five oratorios, and other music, sacred and instrumental. M. C. C.

ALEMBERT, JEAN LE ROND D', born in Paris, Nov. 16, 1717, died there Oct. 29, 1783, was an eminent acoustician, and wrote various treatises, such as 'Recherches sur la courbe que forme une corde tendue mise en vibration' (1747); 'Eléments de musique théorique et pratique, suivant les principes de M. Rameau' (1752); 'Recherches sur les cordes sonores' (1761); and 'Recherches sur la vitesse du son.' The second of these was translated into German by Marpurg, and published 1757, the others were also translated into

German (memoirs of the Berlin Academy). D'Alembert also wrote on musical subjects in the *Dictionnaire encyclopédique* (1751-72) (Riemann's and Baker's *Dictionaries*).

ALESSANDRO, ROMANO, surnamed della Viola from his skill on that instrument, lived in the latter half of the 16th century. He composed music for his own and other instruments, as well as motets and songs, among which are a set of Madrigals called 'Le Vergine' (1554), and 'Canzoni alla Napoletana' for five voices (1572). See list in *Quellen-Lexikon*. E. H. D.

ALEXANDER BALUS. The thirteenth of Handel's oratorios; composed next after 'Judas Maccabæus.' Words by Dr. Morell, who ought to have known better than write Balus for Balas. First performance, Covent Garden, March 9, 1748. Dates on autograph:—begun June 1, 1747; end of second part, fully scored, June 24, do.; end of third part, fully scored, July 4, do.

ALEXANDER, JOHANN (or, according to Fétis, JOSEPH), born about 1770, violoncellist at Duisburg at the end of the 18th and beginning of the 19th century. He was distinguished more for the beauty of his tone and the excellence of his style than for any great command over technical difficulties. He wrote a good instruction book for his instrument, *Anweisung für das Violoncell*, Breitkopf and Härtel, 1801; also variations, potpourris, etc. He died in 1822. T. P. H.

ALEXANDER'S FEAST. An 'ode' of Handel's to Dryden's words, as arranged and added to by Newburgh Hamilton. Dates on autograph:—end of first part, Jan. 5, 1736; end of second part, Jan. 12, do.; end of Hamilton's additions, Jan. 17, do. First performance, Covent Garden, Feb. 19, do. Re-scored by Mozart for Van Swieten, July 1790.

ALEXANDRE ORGAN. See AMERICAN ORGAN.

ALFIERI, THE ABBATE PIETRO, born at Rome, June 29, 1801, was admitted in early life to Holy Orders; became a Camaldulian monk; and, for many years, held the appointment of Professor of Gregorian Music at the English College in Rome. He was an earnest student both of Plain-song and Polyphonic Music; and published some useful treatises on these subjects, and some valuable collections of the works of the great Polyphonic Composers. He died, insane, June 12, 1863.

The following is a list of his works:—

1. Numerous articles on subjects connected with Ecclesiastical Music in the *Gazzetta musicale di Milano*, and other periodicals.
2. Excerpta ex celebrioribus de musica viris, J. P. A. Prænestino, T. L. Vittoria, et Gregorio Allegri Romano. (Roma, 1840.)
3. Inno e Ritmo 'Stabat Mater'; e Motetto 'Fratres ego,' di G. P. L. da Palestrina. (Roma, 1840, fol.)
4. An edition of the Sistine Miserere, published under the pseudonym of Alessandro Geminiani. (Lugano, 1840, fol.)
6. Italian translation of Catel's 'Traité d'harmonie.' (Roma, 1840.)
6. Accompagnamento coll' organo, etc. (a treatise on accompanying plain-song), Roma, 1840.
7. Raccolta di Motetti di G. P. L. da Palestrina, di L. da Vittoria, di Avia e di Felice Anerio Romano. (Roma, 1841, fol.)
8. Ristabilmento del Canto e della Musica ecclesiastica. (Roma, 1843, 8vo.)
9. Notizie biografiche di Nicolo Jommelli. (Roma, 1845, 8vo.)
10. Saggio storico teoretico-pratico del Canto Gregoriano. (Roma, 1855.)
11. Prodromo sulla restaurazione de' libri di Canto ecclesiastico detto Gregoriano. (Roma, 1857.)
12. Raccolta di Musica Sacra, etc., of which the contents are here appended.

VOL. I.

Messe scelte di G. P. L. da Palestrina.
Messa di Papa Marcello.
Do. per I Defonti, a cinque voci.
Do. Canonica, a 4.
Do. O regem cœli, a 4.
Do. Æterna Christi munera, a 4.
Do. Dies sanctificatus, a 4.
Do. de Feria, a 4.
Do. Breve, a 4.
Do. Ego enim accepi, a 8.

VOL. II.

Motetti a cinque voci di G. P. L. da Palestrina.
Adjuro vos.
Ave Trinitatis sacrarium.
Beatus Laurentius.
Canite tuba in Sion.
Caput ejus.
Caro mea.
Cœnantibus illis.
Crucem sanctam subiit.
Derelinquat impius.
Descendit in hortum meum.
Dilectus meus mihi.
Dilectus meus descendit.
Domine secundum actum meum.
Duo ubera tua.
Ecce tu pulcher es.
Exi cito in plateas.
Exultate Deo adjutori nostro.
Fasciculus myrrhæ.
Guttur tuum.
Introduxit me Rex.
Lapidabant Stephanum.
Leva ejus.
Manus tuæ Domine.
Nigra sum, sed formosa.
O admirabile commercium.
O sacrum convivium.
Osculetur me osculo.
O beata, et benedicta, et gloriosa Trinitas.
O vera summa sempiterna Trinitas.
Parce mihi Domine.
Paucitas dierum meorum.
Peccavi quid faciam tibi.
Peccavimus cum patribus nostris.
Pater noster.
Peccantem me quotidie.
Pulcra es amica mea.
Pulcræ sunt genuæ tuæ.
Quam pulcra es.
Quam pulcri sunt gressus tui.
Quæ est ista quæ progreditur.
Rorate cœli.
Salve regina.
Si ignoras te.
Sicut lilium inter spinas.
Surge propera.
Surge amica mea.
Surgam, et circuibo civitatem.
Trahe me post te.
Tota pulcra es.
Tribulationes civitatum.
Veni veni dilecte mi.
Vineam meam.
Vox dilecti mei.
Vulnerasti cor meum.

Hymni totius anni Romæ 1589.

VOL. IV.

Lamentazioni di G. P. da Palestrina. Libri tre.

VOL. V.

Offertorii a cinque voci di G. P. da Palestrina. (Offertoria totius anni . . . quinque vocibus concinenda . . . Romæ, 1693.)

VOL. VI.

Motet a 6. Jerusalem cito veniet.
2da pars. Ego enim.
Motet a 6. Veni domine.
2da pars. Excita domine.
Do. a 6. O magnum mysterium.
2da pars. Quem vidistis pastores?
Antiphona a 8 Cum ortus fuerit sol.
Do. a 6. Responsum accepit Simeon.
Do. a 8. Cum inducerent.
Motet a 6. Sancta et immaculata.
2da pars. Benedicta tu.
Do. a 6. Hæc dies.
Do. a 6. Viri Galilæi.
2da pars. Ascendit Deus.
Do. a 8. Dum complerentur.
Do. a 6. Tu es Petrus.
2da pars. Quodcumque ligaveris.
Do. a 6. Solve jubente Deo.
2da pars. Quodcumque ligaveris.
Do. a 6. Deus qui Ecclesiam tuam.
Do. a 6. Vidi turbam magnam.
2da pars. Et omnes Angeli.
Do. a 6. Columna es immobilis.
Do. a 6. Cantabo Domino.
2da pars. Deficiant peccatores.
Antiphona a 8. Regina mater misericordiæ.
Motet a 7. Tu es Petrus.
Do. Virgo prudentissima.
(Do. 2da pars) Maria Virgo.
Motet a 8. Surge illuminare.
2da pars. Et ambulabunt.
Do. Caro mea vere est cibus.
2da pars. Hic est panis.
Do. Laudate dominum.
Do. a 4. 2 Choirs. Alma redemptoris mater.
Antiphona a 8. Ave regina cœlorum.
Psalmi a 8. Jubilate Deo.
Laudate pueri.
2da pars. Quis sicut Dominus.
Sequentiæ a 8. Victimæ paschali.
Do. a 8. Veni spiritus.
Do. a 8. Stabat mater.

VOL. VII.

Hymnus a 12. O gloriosa Virginum.
Sequentia a 12. Stabat mater.
Absolutio in Messa defunct. a 4. Libera me, Kyrie, etc.
Motet in Messa def. a 4. Ne recorderis.
Domine secundum actum meum.
Motet a 4. Innocentes pro Christo.
Do. a 4. Valde honorandus.
Do. a 4. Deus qui animæ famuli Gregorii.
Do. a 4. Ascendens Christus.
Do. a 4. Princeps gloriosissime Michael.
Hymnus a 4. Gaude Barbara.
Psalmus a 5. Venite.
Motet a 5. Cantantibus organis Cæcilia.
2da pars. Biduanis.
Do. a 6. Assumpta est Maria.
2da pars. Quæ est ista.
Do. a 6. Cum autem esset Stephanus.
2da pars. Positis autem.
Do. a 8. Hic est beatissimus Evangelista.
2da pars. Hic est discipulus.
Do. a 8. Fratres ego enim.
Do. a 8. Jesus junxit se.
2da pars. Et increpavit eos.
Do. Spiritus sanctus.
Magnificat a 8. Imi toni.
Do. Imi toni a 5 and 6.
Do. 2di toni a 6 and 8.
Do. 3ti toni a 6.
Do. 8vi toni a 6.
Magnificat octo tonorum a 4.
Pars 1.—1, 2, 3, 4, 6, 6, 7, 8.
Altera pars—1, 2, 3, 4, 5, 6, 7, 8.
Catalogo di tutte le Opere del Palestrina.

Lamentatio a 4.
Claudii Goudimel.
Motet a 4.
Const. Festa. Te Deum a 4.
Christ. Morales. Motet a 5.

W. S. R.

AL FINE (Ital.), 'To the end.' This term

indicates the repetition of the first part of a movement either from the beginning (*da capo*) or from a sign 𝄋 (*dal segno*) to the place where the word *fine* stands. Frequently instead of the word *fine* the end of the piece is shown by a double-bar with a pause above it, thus 𝄐.

ALFONSO UND ESTRELLA. An opera by Schubert, in three acts; libretto by F. von Schober. Dates on autograph (Musikverein, Vienna):—end of first act, Sept. 20, 1821; end of second act, Oct. 20, 1821; end of third act, Feb. 27, 1822; overture (MS. with Spina), Dec. 1823. First performed at Weimar, June 24, 1854. This overture was played as the prelude to 'Rosamunde' in Dec. 1823, and encored. The whole opera was first published in the complete edition of Breitkopf and Härtel, ser. xv. vol. 5.

ALFORD, JOHN, a lutenist in London in the 16th century. He published there in 1568, a translation of Adrien Le Roy's work on the lute (see LE ROY) under the title of *A Briefe and Easye Instruction to learne the tableture, to conduct and dispose the hande unto the Lute. Englished by J. A.* with a woodcut of the lute. W. H. H.

ALGAROTTI, CONTE FRANCESCO, born Dec. 11, 1712, at Venice, a man of varied accomplishments and learning, who studied at the Nazarene College in Rome, and the universities of Bologna and Venice. He travelled to Paris and London, and was for some years in high favour at the court of Berlin; ill-health compelled him to return to Italy about 1749, and he died at Pisa, May 3, 1764. His place in the history of music is due to an important treatise, 'Saggio sopra l'Opera in musica,' first published in 1755, and subsequently translated into French, English, and German; he points out the many serious defects in the contemporary presentation of operas, and foresees an ideal theatre for operatic music, the description of which reads like a prophecy of Bayreuth. M.

ALIANI, FRANCESCO, violoncellist, born at Piacenza. He for a time studied the violin under his father, who was first violin in the orchestra, but afterwards devoted himself to the violoncello under G. ROVELLI, of Bergamo. He was appointed first violoncellist of the theatre at Piacenza, and was celebrated as a teacher of his instrument. He wrote three books of duets for two violoncellos. T. P. H.

ALI BABA, OU LES QUARANTE VOLEURS, an opera of Cherubini's, produced at the Grand Opéra on July 22, 1833. The libretto was adapted and re-written from his 'Koukourgi' (1793), and the music was partly from 'Faniska' and partly from the ballet, 'Achille à Scyros.' The overture was probably quite new. For Mendelssohn's opinion of the opera see his letter of Feb. 7, 1834.

ALIPRANDI, BERNARDO, born in Tuscany at the beginning of the 18th century; entered the Bavarian court band as violoncellist in 1732, was appointed composer in 1737, and afterwards was appointed director of the orchestra at Munich. He there wrote the operas 'Apollo tra le Muse' (1737), 'Mitridate' (1738), 'Iphigenie' (1739), 'Semiramide' (1740). A Stabat Mater a 2 is preserved in the Dresden Museum. BERNARDO, a son of the preceding, was, according to Lipowski, first violoncellist about 1780 in the Munich orchestra. He is said to have composed both for the violoncello and viol da gamba, though Fétis says that he wrote only for the former. T. P. H.

ALKAN, CHARLES HENRI VALENTIN MORHANGE, called Alkan. Born at Paris, Nov. 30, 1813; died there March 29, 1888. Pianist and composer, chiefly of études and caprices for his instrument. His astounding op. 35 (12 études), op. 39 (12 études), and Trois grandes Études, (1) 'Fantaisie pour la main gauche seule,' (2) 'Introduction et Finale pour la main droite seule,' (3) 'Étude à mouvement semblable et perpetuel pour les deux mains,' have not yet met with the attention on the part of pianoforte *virtuosi* which they merit. They belong to the most modern development of the *technique* of the instrument, and represent in fact the extreme point which it has reached. Though they cannot stand comparison in point of beauty and absolute musical value with the études of Chopin and Liszt, yet, like those of Anton Rubinstein, which are in some respects akin to them, they have a valid claim to be studied; for they present technical specialities nowhere else to be found, difficulties of a titanic sort, effects peculiar to the instrument carried to the very verge of impossibility. Alkan was admitted to the Conservatoire of Paris in his sixth year (1819) and remained there until 1830, during which term he was successful in several competitions, and left the institution with the first prize in 1826, and honourable mention at the Concours of the Institut in 1831. After a short visit to London in 1833 he settled as a master of the pianoforte at Paris. His published compositions mount up to opus 72, and include two concertos, several sonatas and duos, a trio, a large number of *pièces caractéristiques*, and transcriptions and songs. Amongst these his works for the pianoforte with pedals, known in France as the 'Pedalier grand,' op. 64, 66, 69 and 72, take rank with his études. E. D.

ALLA BREVE (Ital.). Originally a species of time in which every bar contained a breve, or four minims; hence its name. In this time, chiefly used in the older church music, the minims, being the unit of measurement, were to be taken fast, somewhat like crotchets in ordinary time. This time was also called *Alla Cappella*. Modern alla breve time simply differs from ordinary common time by being always beaten or counted with two minims (and not

with four crotchets) in the bar, and therefore is really quick common time. It is indicated in the time-signature by ₵ *i.e.* the C which is used to show four-crotchet time, with a stroke drawn through it. E. P.

ALLACCI, Leone, born in the island of Chios of Greek parents in 1586, went to Rome at nine years of age, and in 1661 became 'custode' of the Vatican Library. He died Jan. 19, 1669, and his name is only worth preserving for his 'Drammaturgia' (Rome, 1666) a catalogue of Italian musical dramas produced up to that year, indispensable for the history of Italian opera. A new edition, carried down to 1755, appeared at Venice in that year. F. G.

ALL' ANTICO (Ital.), 'In the ancient style.'

ALLARGANDO (Ital.), 'becoming broader,' a term indicating an increased dignity of style, with maintained or increased power, as well as a decided slackening of the pace, which, by itself, would be marked 'rallentando.'

ALLEGRANTI, Maddalena, was a pupil of Holtzbauer of Mannheim, and appeared for the first time at Venice in 1771. After singing at other theatres in Italy, she went in 1774 to Germany, where she continued to perform at Mannheim and Ratisbon till the year 1779, when she returned to Venice. She sang there at the theatre of San Samuele during the Carnival, and eventually came to England in 1781. Here she was enthusiastically admired in her first opera, the 'Viaggiatori felici' of Anfossi. Her voice, though thin, was extremely sweet, of extraordinary compass upwards, and so flexible as to lead her to indulge in a flowery style of singing which had then the merit of considerable novelty. She was also a good actress. But it was soon found that there was a great sameness in her manner and embellishments, and she became gradually so disregarded, by the end of her second season, that she went to Dresden, where the Elector engaged her at a salary of a thousand ducats. She came a second time to London, many years later, and reappeared in Cimarosa's 'Matrimonio Segreto.' Never was a more pitiable attempt; she had scarcely a thread of voice remaining nor the power to sing a note in tune: her figure and acting were equally altered for the worse, and after a few nights she was obliged to retire, and quit the stage for ever. She performed in oratorio in 1799. A pretty portrait of Allegranti is engraved by Bartolozzi, after Cosway. J. M.

ALLEGRETTO (Ital.). A diminutive of 'allegro,' and as a time-indication somewhat slower than the latter, and also faster than 'andante.' Like 'allegro' it is frequently combined with other words, *e.g.* 'allegretto moderato,' 'allegretto vivace,' 'allegretto ma non troppo,' 'allegretto scherzando,' etc., either modifying the pace or describing the character of the music. The word is also used as the name of a movement, and in this sense is especially to be often found in the works of Beethoven, some of whose allegrettos are among his most remarkable compositions. It may be laid down as a rule with regard to Beethoven, that in all cases where the word 'allegretto' stands *alone* at the head of the second or third movement of a work it indicates the character of the music and not merely its pace. A genuine Beethoven allegretto always takes the place either of the andante or scherzo of the work to which it belongs. In the seventh and eighth symphonies, in the quartet in F minor, op. 95, and the piano trio in E flat, op. 70, No. 2, an allegretto is to be found instead of the slow movement; and in the sonatas in F, op. 10, No. 2, and in E, op. 14, No. 1, in the great quartet in F, op. 59, No. 1, and the trio in E flat, op. 70, No. 2, the allegretto takes the place of the scherzo. This use of the word alone as the designation of a particular kind of movement is peculiar to Beethoven down to his date. It is worth mentioning that in the case of the allegretto of the seventh symphony, Beethoven, in order that it should not be played too fast, wished it to be marked 'Andante quasi allegretto.' This indication, however, does not appear in any of the printed scores. In the slow movement of the Pastoral Symphony, Beethoven also at first indicated the time as 'Andante molto moto, *quasi allegretto*,' but subsequently struck out the last two words. E. P.

ALLEGRI, Gregorio, a beneficed priest attached to the cathedral of Fermo, and a member of the same family which produced Correggio the painter, was also a musical composer of much distinction. He was born at Rome about the year 1580, and was a pupil of G. M. Nanini. During his residence at Fermo he acted as chorister and composer to the cathedral. Certain Motetti and Concerti which he published at this time had so great a repute that they attracted the notice of Pope Urban VIII., who appointed him, on Dec. 6, 1629, to a vacancy among the *Cantori* of the Apostolic Chapel. This post he held until his death in 1652.

His name is most commonly associated with a 'Miserere' for nine voices in two choirs, which is, or was till lately, sung annually in the Pontifical Chapel during the Holy Week, and is held to be one of the most beautiful compositions which have ever been dedicated to the service of the Roman Church. There was a time when it was so much treasured that to copy it was a crime visited with excommunication. Not that its possession was even thus confined to the Sistine Chapel. Dr. Burney got a copy of it.[1] Mozart took down the notes while the choir were singing it, and Choron, the Frenchman, managed to insert it in his 'Collection' of pieces used in Rome during

[1] Most probably through Santarelli the singer.

the Holy Week.[1] Leopold I., a great lover of music, sent his ambassador to the Pope with a formal request for a copy of it, which was granted to him. The emperor had the work performed with much ceremony by a highly qualified choir at Vienna. The effect, however, was so disappointing that he conceived himself the victim of a trick upon the part of the copyist, and complained to the Pope that some inferior composition had been palmed off upon him. The fact was that the value of this curious and very delicate work depends almost entirely upon its execution, and upon certain traditional ornaments, called 'abbellimenti,' which give a peculiarly pathetic quality to many passages. Without them it is simple almost to the point of apparent insipidity, and it only assumes its true character when sung by the one choir which received and has retained as traditions the original directions of its author. In the Sistine Chapel it has ever commanded the enthusiasm of musicians for a certain indescribable profundity of sadness, and a rhythmical adaptation to the words about which it is woven but which, in spite of its apparent simplicity, are so difficult to produce that no fraud was necessary to account for the imperial failure at Vienna. The effects of Allegri's 'Miserere' are like the aroma of certain delicate vintages which always perishes in transit: although in Rome, to turn to a metaphor of Baini's, they have never shown a wrinkle of old age.[2] See *Musical Times*, 1885, p. 455.

As the man's music so was the man. Adami of Bolsena says that he was of a singular gentleness and sweetness of soul and habit. His doors were constantly thronged by the poor, who sought him as much for the more impalpable sustenance of his kindness as for the more material fruits of his bounty; and his leisure hours were commonly spent among the prisons and pest-houses of Rome. He died at a ripe old age, on Feb. 18, 1652, and was laid in S. Maria in Vallicella, in the burial-place belonging to the Papal Choir.

His published works consist chiefly of two volumes of 'Concertini' (1618 and 1619) and two of 'Motetti' (1621), all printed by Soldi of Rome. Some stray Motetti of his were, however, inserted by Fabio Constantini in a collection entitled, 'Scelta di Motetti di diversi eccellentissimi autori, a due, tre, quattro, e cinque voci.' But the Archives of S. Maria in Vallicella are rich in his manuscripts, as are also the Library of the Collegio Romano and the Collection of the Papal Choir. Kircher too in his 'Musurgia' has transcribed an extract from his instrumental works; and the library of the Abbé Santini contained the scores of various pieces by him, including 'Magnificats,' 'Improperia,' 'Lamentazioni,' and 'Motetti.'

[1] It will be found in William Ayrton's *Sacred Minstrelsy* (Parker).
[2] 'Senza aver contratto ruga di vecchiezza.'

A 'Veni Sancte Spiritus' by him for four voices is included in the 'Musica Divina' of Proske (Liber Motettorum, No. lx.). E. H. P.

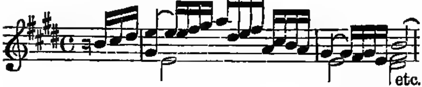
ALLEGRO (Ital.) The literal meaning of this word is 'cheerful,' and it is in this sense that it is employed as the title of Milton's well-known poem. In music, however, it has the signification of 'lively' merely in the sense of quick, and is often combined with other words which would make nonsense with it in its original meaning—*e.g.* 'allegro agitato e con disperazione' (Clementi, 'Didone abbandonato'). When unaccompanied by any qualifying word 'allegro' indicates a rate of speed nearly intermediate between 'andante' and 'presto.' There is however no other time indication which is so frequently modified by the addition of other words. To quote only some of the more common, 'allegro molto,' 'allegro assai,' 'allegro con brio' (or 'con fuoco'), and 'allegro vivace,' will all indicate a quicker time than a simple allegro; an 'allegro assai,' for instance, is often almost equivalent to a 'presto.' On the other hand, 'allegro ma non troppo,' 'allegro moderato,' or 'allegro maestoso,' will all be somewhat slower. The exact pace of any particular allegro is frequently indicated by the metronome, but even this is by no means an infallible guide, as the same movement if played in a large hall and with a great number of performers would require to be taken somewhat slower than in a smaller room or with a smaller band. In this, as with all other time-indications, much must be left to the discretion of the performer or conductor. If he have true musical feeling he cannot go far wrong; if he have not, the most minute directions will hardly keep him right. The word 'allegro' is also used as the name of a piece of music, either a separate piece (*e.g.* Chopin's 'Allegro de Concert,' op. 46), or as the first movement of a large instrumental composition. In these cases it is generally constructed in certain definite forms, for which see SYMPHONY and SONATA. Beethoven also exceptionally uses the word 'allegro' instead of 'scherzo.' Four instances of this are to be found in his works, viz., in the symphony in C minor, the quartets in E minor, op. 59, No. 2, and F minor, op. 95, and the Sonata quasi Fantasia, op. 27, No. 1. E. P.

ALLEMANDE. 1. One of the movements of the SUITE, and, as its name implies, of German origin. It is, with the exception of the PRELUDE and the AIR, the only movement of the Suite which has not originated in a dance form. The allemande is a piece of

J. S. BACH, Suites Anglaises, No. 3.

moderate rapidity—about an allegretto—in common time, and commencing usually with one short note, generally a quaver or semiquaver, at the end of the bar.

Sometimes instead of one there are three short notes at the beginning: as in Handel's Suites, Book i., No. 5.



The homophonic rather than the polyphonic style predominates in the music, which frequently consists of a highly figurate melody, with a comparatively simple accompaniment. Suites are occasionally met with which have no allemande (*e.g.* Bach's Partita in B minor), but where it is introduced it is always, unless preceded by a prelude, the first movement of a suite; and its chief characteristics are the uniform and regular motion of the upper part; the avoidance of strongly marked rhythms or rhythmical figures, such as we meet with in the COURANTE; the absence of all accents on the weak parts of the bar, such as are to be found in the SARABANDE; the general prevalence of homophony, already referred to; and the simple and measured time of the music. The allemande always consists of two parts, each of which is repeated. These two parts are usually of the length of 8, 12, or 16 bars; sometimes, though less frequently, of 10. In the earlier allemandes, such as those of Couperin, the second is frequently longer than the first: Bach, however, mostly makes them of the same length (see TEUTSCH).

2. The word is also used as equivalent to the Deutscher Tanz—a dance in triple time, closely resembling the waltz. Specimens of this species of allemande are to be seen in Beethoven's '12 Deutsche Tänze, für Orchester,' the first of which begins thus:—

It has no relation whatever to the allemande spoken of above, being of Swabian origin.

3. The name is also applied to a German national dance of a lively character in 2-4 time, similar to the CONTREDANSE. E. P.

ALLEN, HENRY ROBINSON, was born in 1809 at Cork, and received his musical education at the Royal Academy of Music. His début took place on Jan. 11, 1831, as Basilio in a performance of 'Figaro' by the students of the Academy at the King's Theatre. He first attracted public attention by his performance on Feb. 5, 1842, of Damon on the production of 'Acis and Galatea' under Macready at Drury Lane. 'He was the only person worth listening to, in spite of the limited powers of his organ.'[1] In 1843, under the same management, he played Acis, and Phaon in Pacini's 'Saffo,' when the heroine on each occasion was Clara Novello, and later in the autumn he played at the Princess's as Edward III. in the English version of 'Les Puits d'Amour.' From that time until the close of the Maddox management in 1850 he was continually engaged at the latter theatre, where, owing to its small size, he was heard to advantage. He played in 'Don Giovanni,' 'Otello,' 'Anna Bolena,' Hérold's 'Marie,' 'La Barcarole,' 'Les Diamants,' Auber's 'La Sirène,' etc.; Halévy's 'Val d'Andorre'; Balfe's 'Castle of Aymon'; Loder's 'Night Dancers.' In the early part of 1846 he was engaged at Drury Lane, where he played, Feb. 3, Basilius on production of Macfarren's 'Don Quixote.' Apropos of this part, Chorley, in the *Athenæum*, considered him, both as singer and actor, as the most complete artist on the English operatic stage.

Allen retired early from public life, and devoted himself to teaching and the composition of ballads, two of which became popular, viz. 'The Maid of Athens' and 'When we two parted.' He died at Shepherd's Bush, Nov. 27, 1876. A. C.

ALLGEMEINE MUSIKALISCHE ZEITUNG. See LEIPZIG and MUSICAL PERIODICALS.

ALLISON, RICHARD, a teacher of music in London in the reign of Elizabeth, the particulars of whose birth and decease are unknown. His name first occurs as a contributor to T. Este's 'Whole Booke of Psalms,' 1592. A few years later he published on his own account 'The Psalmes of David in Meter,' 1599, a collection of old church tunes harmonised by himself in four parts, with an accompaniment for the 'lute, orpharyon, citterne, or base violl,' and important as being one of the earliest to give the melody in the cantus or soprano part—the usual practice being to give it to the tenor. Allison advertises it 'to be solde at his house in the Duke's-place near Alde-gate,' and dedicates it to the Countess of Warwick. It is ushered forth by some complimentary verses by John Dowland, the celebrated performer on the lute, and others. He appears to have been patronised by Sir John Scudamore, to whom he dedicated his collection of part-songs entitled, 'An Houres Recreation in Musicke, apt for Instruments and Voyces,' 1606. This publication contains 'a prayer' set to music 'for the long preservation of the king and his posteritie,' and 'a thanksgiving for the deliverance of the whole estate from the late conspiracie'—the Gunpowder Plot. Some MS. lute-compositions are in the Brit. Mus. (Add. MS. 31,392), in the Cambridge University Library (Dd. iii. 18, and Dd. xiii. 11), and in the Oxford Music School collection.

ALLISON, ROBERT, probably a relative of

[1] Rev. J. E. Cox, *Musical Recollections.*

Richard, was a gentleman of the Chapel Royal. After serving in the royal establishment for twenty years he sold his place, Feb. 8, 1609-10, to Humphry Bache (*Allison's publications; Camd. Soc. Cheque-Bk. of Chap. Royal*). E. F. R.

ALLON, HENRY ERSKINE, son of an eminent Nonconformist preacher, the Rev. Henry Allon, D.D., was born at Canonbury in 1864, and was educated at Reading and Trinity College, Cambridge. He published several books of songs which showed great promise, and a real gift of melody as well as a taste for good poetry, before 1886, in which year his op. 7 saw the light. On devoting himself in earnest to music, he studied composition with Mr. Corder, and produced a good deal of chamber-music, pianoforte solos, etc. His chief work was in the form of cantatas and choral ballads: these were 'May Margaret,' 1889; 'Annie of Lochroyan,' 1890, produced at the Philharmonic 1893; 'The Childe of Elle,' 1891; 'The Maid of Colonsay,' 1894; 'Sir Nicholas,' 1895; and 'The Oak of Geismar,' 1895. This last was given by the Highbury Philharmonic Society only a short time before the young composer's death, which took place on April 3, 1897. M.

ALL' OTTAVA (Ital.). 'In the octave.' (1) In pianoforte music a passage marked *all' 8va.* (or merely *8va.*) is to be played an octave higher than written, if the sign is placed above the notes, an octave lower if placed below them. In the latter case the more accurate indication *8va. bassa* is frequently employed. The duration of the transposition is shown by a dotted line, and when the notes are again to be played as written, the word *loco* (Lat., 'in its place') is put over (or under) the music. (2) In orchestral scores, especially manuscripts, *all' 8va.* signifies that one instrument plays in octaves with another, either above or below. (3) In playing from a figured bass the term shows that no harmonies are to be employed, and that the upper parts merely double the bass in octaves. In this case it is equivalent to TASTO SOLO. E. P.

ALL' UNISONO (Ital., abbreviated *Unis.*). 'In unison.' In orchestral scores this term is used to show that two or more instruments, the parts of which are written upon the same stave, are to play in unison. In modern scores the words *a due, a tre*, etc., are more frequently employed.

ALMAHIDE, an opera by an anonymous author and composer, performed at the Queen's Theatre in the Haymarket in Jan. 1710, the year of Handel's arrival in England. Burney (*Hist.* iv. 211) considers that the style of the music resembles Bononcini, and remarks that it was the first opera performed in England wholly in Italian and by Italian singers, who were Nicolini, Valentini, Cassani, Margarita de l'Epine, and Isabelle Girardeau. There were intermezzi in English between the acts, but the opera itself was entirely in Italian. M.

ALMENRÄDER, KARL, an eminent fagottist, born of humble parents, Oct. 3, 1786, at Ronsdorf near Düsseldorf, taught himself the bassoon, of which he became the professor in the Cologne music school in 1810, and in 1812 was engaged in the theatre orchestra at Frankfort-am-Main. After fulfilling various military appointments in the campaign of 1815-16, he started a manufactory of wind instruments in Cologne, but gave it up after two years and entered the band of the Duke of Nassau at Biebrich. He improved the bassoon in various ways, wrote a pamphlet upon it, and composed concertos, etc., for the instrument with accompaniment of strings, as well as some songs. He died Sept. 14, 1843, at Biebrich (Riemann's *Lexikon*).

ALPENHORN, or ALPHORN, an instrument with a cupped mouthpiece, of wood and bark, used by the mountaineers in Switzerland and many other countries to convey signals and to produce simple melodies. It is nearly straight, and three or more feet in length. Those in the Museum at South Kensington are respectively 7 ft. 5 in. and 7 ft. 11 in. long. There is a Swedish instrument of this kind called *Lure;* another of kindred nature used in the Himalayas; and another by the Indians of South America.

The notes produced are evidently only the open harmonics of the tube, somewhat modified by the material of which it is made, and by the smallness of the bore in relation to its length. The melody associated with it is termed 'Ranz des Vaches.' Its principal musical interest is derived from its introduction into the finale of Beethoven's Pastoral Symphony, and Rossini's opera of 'William Tell.' Beethoven employs the ordinary horn alone; but in the overture the long solo, now usually played by the oboe, sometimes by the cor anglais, was originally intended for, and played by, a tenoroon or alto fagotto standing in F, which much more nearly approaches the real tone of the Alpenhorn than the other instruments.

A similar combination of cupped mouthpiece with wooden tube existed in the serpent, and the result was a peculiar covered and tender quality of tone now lost to music, except in so far as it can be traced in some organ reed-stops, with wooden, not metal bells. W. H. S.

ALPHABET. The musical alphabet, which serves as the designation of all musical sounds, consists of the seven letters A, B, C, D, E, F, and G, and, in German, H in addition. In the natural scale (*i.e.* the scale without sharps or flats) the order of these letters is as follows:— C, D, E, F, G, A, B (or, in German, H), C; the cause of this apparently arbitrary arrangement will be best understood from a brief glance at the history of the musical scale.

According to Isidore, bishop of Seville (*c.* 595), the oldest harps had seven strings, and the

shepherds' pandean pipes seven reeds,[1] from which it appears probable as well as natural that the ancient scale consisted of seven sounds.

These seven sounds, which served for both voices and instruments, were gradually added to, until, in the time of Aristoxenus (340 B.C.), there were fifteen, extending from A the first space of the bass stave to A the second space in the treble. Each of these sounds had its distinctive name, derived from the position and length of the different strings of the phorminx or lyre, and in order to avoid writing them in full the ancient Greek authors expressed them by certain letters of the alphabet.[2] As, however, the properties of the notes varied continually with the different modes and so-called mutations, which by this time had been introduced into the musical system, these letters were written in an immense variety of forms, large and small, inverted, turned to the right or left, lying horizontally, accented in many ways, etc., so that, according to Alypius, the most intelligible of the Greek writers who wrote professedly to explain them, the musical signs in use in his day amounted to no fewer than 1240, and it appears probable that even this number was afterwards exceeded.

The Romans, who borrowed the Greek scale, and gave Latin names to each of its fifteen sounds, did not adopt this complicated system, but employed instead the first fifteen letters of their alphabet, A to P, and later still, Gregory the Great, who was chosen Pope A.D. 590, discovering that the second half of the scale, H to P, was but a repetition of the first, A to H, abolished the last eight letters and used the first seven over again, expressing the lower octave by capitals and the upper by small letters.[3]

So far the original compass of the Greek scale was preserved, and thus A was naturally applied to the first and at that time lowest note, but about the beginning of the 10th century a new note was introduced, situated one degree below the lowest A, and called (it is difficult to say why) after the Greek letter *gamma*,[4] and written Γ. To this others were from time to time added until the lower C was reached, in the early part of the 16th century, by Lazarino. Thus the modern scale was established, and A, originally the first, became the sixth degree. F. T.

ALSAGER, THOMAS MASSA, born 1779, died Nov. 15, 1846, one of the family of Alsager, of Alsager, Cheshire. He was for many years a proprietor and one of the leading men in the management of *The Times*, being especially concerned in all that related to music and the collection of mercantile and foreign news. The professionally trained musical critic, added at his suggestion to the staff of *The Times*, was the first employed on any daily paper. He was the intimate friend of Lamb, the Burneys, Wordsworth, Talfourd, Leigh Hunt, Mendelssohn, Moscheles, and many other celebrities. But what entitles him to mention here was his intense devotion to music, to which he gave all the leisure he could spare from a busy life. His practical ability in music was very great, and it is a fact that he could perform on all the instruments in the orchestra. The frequent private concerts given by the 'Queen Square Select Society' at his residence in London were long remembered by his many musical friends, and were the means of introducing to this country many works and foreign musicians. The great Mass in D of Beethoven was given there, for the first time in England, Dec. 24, 1832, under the direction of Moscheles (see *Musical Times*, 1902, p. 236). There on March 28, 1834, took place the first performance in England of Cherubini's 'Requiem,' principal soprano Mrs. H. R. Bishop; first violin M. Spagnoletti. In 1843 the society held a special musical festival in honour of Spohr, who himself led three pieces. One object of the society was to establish a taste for Beethoven's chamber music, by performing it in the most perfect manner attainable. It was divided into two classes, one called the pianoforte and the other the violin class, and separate evenings were devoted to each kind of composition, special attention being bestowed on those least known to the public. Sivori attempted quartet playing for the first time at these private concerts, which ultimately resulted in the series of chamber concerts given publicly in Harley Street in 1845 and 1846, and called the 'Beethoven Quartet Society,' the whole being due to the enthusiasm, knowledge, and munificence of Mr. Alsager.

ALT. The notes in the octave above the treble stave, beginning with the G, are said to be IN ALT, and those in the next octave IN ALTISSIMO. [See C.]

ALTENBURG, JOHANN ERNST, a famous trumpet-player, born 1736, at Weissenfels, and son of Johann Caspar, also an excellent master of the same instrument. The father served in several campaigns, and was in action at Malplaquet. After leaving the army he travelled much in Europe, and was admired wherever he came, and so successful that he was able to refuse an offer from Frederick Augustus of Poland to enter his service with a salary of 600 thalers. He died in 1761. His son—more celebrated than the father—after completing his education, adopted the military career, and was a field trumpeter in the army during the Seven Years' War. After the peace of Hubertsburg he became organist at Bitterfeld,

[1] Before the time of Terpander (about 670 B.C.) the Greek lyre is supposed to have had but four strings. Boethius attributes its extension to seven strings to Terpander.

[2] For a full description of the Greek scales see GREEK MUSIC.

[3] This system of Pope Gregory forms the so-called basis of the method generally accepted for referring to notes without the use of the stave. See C.

[4] The addition of the Γ is by some attributed to Guido d'Arezzo; but he speaks of it in his *Micrologus* (A.D. 1024) as being already in use.

where he died, May 14, 1801. He was the author of a book entitled *Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauken-Kunst* (Halle, 1795), which, though poor in style, is so complete in its treatment of the subject, as to be of the greatest interest in relation to trumpet music. F. G.

ALTENBURG, MICHAEL, born May 27, 1584, at Alach near Erfurt, the son of a blacksmith, studied theology at Halle in 1601, and was pastor at several places, finally at Erfurt, where he died Feb. 12, 1640. He worked at music from his student years and was one of the most eminent arrangers of church-music of his time. Of his chorale tunes, 'Macht auf die Thor der G'rechtigkeit' and 'Herr Gott nun schleuss den Himmel auf' are still used. But more important are the collections published by him, and his larger sacred works:—'Christliche liebliche und andächtige neue Kirchen und Hausgesänge,' for 6 to 9 voices, Erfurt, 1620-21, in 3 vols.; '16 Intraden' in 6 parts for violins, lutes, organs, etc., Erfurt, 1620; also psalms, motets, cantiones, etc., for 4, 6, 8, or 9 voices. His writings combine simplicity with religious grandeur; and the congregational and choral singing of his various churches was renowned and regarded as a model.

ALTERATIO (Lat.), *i.e.* doubling, is the name given to a curious feature in the notation of the old unbarred mensurable music, by which the second of two similar notes, breves, semibreves, or minims, which were required to occupy the whole of a triple measure, was doubled in value in performance. Thus in the phrase , if it occurred in *prolatio major*, in which three minims were counted to the semibreve, the second minim would be doubled in value, thus and called a *minima alterata*. In the absence of bars some such device was necessary, for if the composer had written , the phrase would have been sung or played . *Alteratio* occurs constantly in measured music, both sacred and secular, down to the middle of the 16th century (see POINT). J. F. R. S.

ALTERNATIVO. A term of frequent occurrence in suites and other compositions of the 17th and 18th centuries, having precisely the same meaning as the more modern word Trio, when that is used of the middle movement of a minuet or scherzo. The name as well as the form evidently had its origin in the common use, for dancing purposes, of two more or less contrasting measures, which were played alternately as long as the dancers desired (see GROSSVATERTANZ, CSARDAS, MAGYAR MUSIC). The word seems generally to carry with it the direction 'Da capo,' since that sign is seldom found in conjunction with it, although the idea of going back to the first strain or measure is never absent from the Alternativo. The latest instance of its use is in Schumann's six 'Intermezzi,' op. 4, in four of which it occurs as the title of the middle section. M.

ALTÈS, ERNEST EUGÈNE, violinist and conductor, younger brother of the flute-player, Joseph Henri Altès (1826-95), was born in Paris, March 28, 1830. Sons of a soldier and brought up in the regiment, the boys were taught by their father to play the violin and fife from their earliest years. In his 12th year Altès wrote an air with variations for violin and piano, which was shown to Habeneck, and procured his entrance into the Conservatoire. In 1843 he entered Habeneck's violin class; two years later he gained a second *accessit* for violin, in 1847 the second prize, and in the following year the first prize. In 1849 he obtained a second prize for harmony under Bazin, after which he spent some time in studying advanced composition with Carafa. From 1845 onwards he played in the Opera band, and in 1846 was admitted to the orchestra of the 'Concerts du Conservatoire.' In 1871 Altès was appointed deputy-conductor at the Opera in place of Deldevez, who had just given up his post after twelve years' work. G. Hainl was at this time conductor of the Opera, but at his death in 1873 Deldevez, who in the preceding year replaced Hainl as conductor at the Conservatoire, was recalled. In 1877 Deldevez was succeeded at the opera by Lamoureux, who being unable to agree with the new director, M. Vaucorbeil, retired at the end of 1879. Altès, who was still deputy-conductor, was now appointed conductor, and almost immediately gave up his post at the Société des Concerts, which he had held since 1877. In 1881 he was decorated with the Legion d'Honneur. His chief compositions are a sonata for piano and violin, a trio for piano and strings, a string quartet, a symphony, and a divertissement on ballet airs by Auber, written for the Auber centenary in 1882, besides operatic fantasias, mélodies caractéristiques, etc. On July 1, 1887, M. Altès, having, against his wish, been placed on the retired list, was rather roughly discharged by the directors of the Opera, and replaced by M. Vianesi. He died in July 1899. A. J.

ALTHORN, a tenor instrument of the SAXHORN family, usually standing in E♭ or F. It is used almost exclusively in military and brass bands, and often replaces the French horn, for which, however, it is a poor substitute as regards tone. [In a slightly modified form, however, as the tenor tuba, it is introduced by Wagner into the orchestral wind band. D. J. B.] It is much easier to learn than the horn, and presents greater facility in rapid melodic passages. The least objectionable way of introducing it into the reed band is to associate a pair of these instruments with two French horns, reserving characteristic holding notes for the latter. In the

brass band, where variety of timbre is less attainable, it answers its purpose well, and can better be played on horseback, from its upright bell. The name is also given to the saxhorn in B♭, but this is best distinguished as the BARITONE. The scale and compass of this and the other SAXHORNS are given under that word. W. H. S.

ALTNIKOL, JOHANN CHRISTOPH, born at Berna in Silesia, was a pupil of Sebastian Bach's in Leipzig from 1745. On Bach's recommendation, he was appointed organist at Niederwiesa near Greifenberg in 1747, and of S. Wenceslaus, Naumburg, in 1748. He married Bach's daughter, Elisabeth Juliane Friderike, on Jan. 20, 1749, and died in July 1759. The royal library at Berlin contains two clavier sonatas in autograph, and a church cantata; the Singakademie at the same place possesses a five-part motet, and in the Fitzwilliam Museum at Cambridge is a four-part Ricercare. None of his works were printed. M.

ALTO (from the Latin *altus*, high, far removed). The male voice of the highest pitch, called also counter-tenor, *i.e. contra*, or against the tenor. In the 16th and early part of the 17th centuries the compass of the alto voice was limited to the notes admissible on the stave which has the C clef on its third line; *i.e.* to the notes a sixth above and a sixth below 'middle C.' Later, however this compass was extended by bringing into use the third register of the voice, or 'falsetto,' a register often strongest with those whose voices are naturally bass. The falsetto counter-tenor, or more properly counter-*alto*, still to be found in cathedral choirs, dates—if musical history is to be read in music—from the restoration of Charles II., who doubtless desired to reproduce at home, approximately at least, a class of voice he had become accustomed to in continental chapels royal and ducal. The so-called counter-tenor parts of Pelham Humphreys, his contemporaries and successors, habitually transcend those of their predecessors, from Tallis to Gibbons, by at least a third [but in this connection it must be remembered that in the interval between them the pitch had changed. See *Zeitschrift* of the Int. Mus. Ges. ii. 331.] The contralto part is properly written on the stave which has C on its second line; it consequently extends from the eighth above middle C to the fourth below. This stave is now obsolete, and the part for which it is fitted is, in England, written either on the alto stave, for which it is too high, or on the treble stave for which it is too low. On the continent the stave which has the C clef on the first line is sometimes used for it. For the female *alto* voice see CONTRALTO. J. H.

ALTO is also the Italian term for the TENOR violin, called alto, or alto di viola, as distinguished from basso di viola, because, before the invention, or at least before the general adoption of the violin, it used to take the highest part in compositions for string-instruments, corresponding to the soprano part in vocal music. For further particulars see VIOLA. P. D.

ALTRA VOLTA (Ital. 'another turn'), a term in use during the early part of the 18th century for ENCORE, a word which has now entirely superseded it.

ALVARY, MAX (properly ACHENBACH) son of the painter Andreas Achenbach, born May 3, 1858, at Düsseldorf, was a pupil of Stockhausen, and made his début as a dramatic tenor at Weimar. He won great success in New York, especially as a Wagner-singer, in the years 1884-89. He sang the part of Tristan at Bayreuth in 1891, and appeared at Covent Garden, June 8, 1892, as Siegfried, his best part. His voice was of fine quality, though a little apt to go out of tune; he had a very handsome stage-presence. He died at his country-seat near Gross-Tabarz in Thuringia, Nov. 7, 1898. M.

ALVSLEBEN. See OTTO-ALVSLEBEN.

ALWOOD, RICHARD, priest and composer, lived about the middle of the 16th century. A six-part mass by him entitled 'Praise Him praiseworthy' is in the Forrest-Heyther part books at Oxford, and there are seven pieces of his for the organ in Add. MSS. 30,485 and 30,513. One of these, a 'Voluntarye,' is printed in the Appendix to Hawkins's *History of Music.* J. F. R. S.

AMATI, a family of celebrated Italian violin-makers, who lived and worked at Cremona, and are generally regarded as the founders of the Cremona school. The family ranked as a patrician one.

1. ANDREA, the eldest, appears to have been born in 1520 and to have died after April 1611. Possibly he was a pupil of one of the great Brescia makers, Gaspar da Salo or Maggini. In spite of some similarity his violins certainly differ materially in shape and workmanship from the works of these older masters. Very few authentic instruments of his make are extant, and those are not in good preservation. They retain the stiff upright Brescian soundhole, but in almost every other respect mark a great advance upon the productions of the older school. Andrea worked mostly after a small pattern; the belly and back very high; the varnish of amber colour; the wood, especially that of the belly, most carefully chosen; the scroll beautifully chiselled; the general outline extremely graceful. A few violoncellos and tenors of this master are also known. The tone of his instruments is clear and silvery, but, probably owing to their small size and high elevation, not very powerful. The fourth string is particularly weak.

2. NICOLO, younger brother of Andrea (not to be confounded with Nicolo son of Geronimo) appears to have made basses in preference to

violins, and is said to have worked between 1568 and 1635.

3. ANTONIO (1550-1638), and 4. GERONIMO (1551-1635), sons of Andrea, improved greatly on their father's style; Geronimo appears to have afterwards made violins of a larger pattern and superior quality, independently of his brother.

5. NICOLO, born Sept. 3, 1596, died Aug. 12, 1684, son of Geronimo, was the most eminent of the family. Although he did not materially alter the Amati model he improved it in many respects. His outline is still more graceful, his varnish of deeper and richer colour, and the proportions, as regards thickness of wood and elevation of back and belly, are better calculated by him than by his predecessors. His instruments have in consequence, besides the clearness and transparency of the older Amatis, greater power and intensity of tone. As a rule he too worked after a small pattern, but he also made some large violins,—the so-called 'Grand Amatis,' which are particularly high-priced—and a great number of beautiful tenors and violoncellos. His instruments enjoyed even during his lifetime a great reputation. Andrea Guarnieri and the still greater Antonio Stradivari were his pupils.

6. GERONIMO, his son (1649-1740), was but an indifferent maker. The violins of the Amati are the link between the Brescia school and those masters who brought the art of violin-making to its greatest perfection, Antonio Stradivari and Giuseppe Guarnieri. The tone of Gaspar da Salo's and Maggini's violins is great and powerful, but has a peculiarly veiled character, reminding one of the viol da gamba. In Nicolo Amati's instruments the tone is clearer and more transparent, but comparatively small. It was left to another generation of makers to combine these qualities and to fix upon a model, which after the lapse of nearly a century and a half has proved itself incapable of even the most trifling improvement. P. D.

The celebrity of Stradivari and other makers of a later generation has somewhat overcast the fame of the Amati family; a result partly due to the fact that the beautiful instruments made by the Amati have not so stubbornly endured the wear and tear of centuries, and for this and other reasons are less in request for playing purposes. It would, however, be scarcely possible to exaggerate their services, especially those of the brothers Antonio and Geronimo, in the artistic development of the violin. Whatever the violin possesses of methodic geometrical design and flowing curvature, both linear and superficial, is mainly due to them. Evidently they were mathematicians as well as craftsmen, and consciously strove to unite freedom and harmony of outline, on the one hand, with tone-producing qualities, and facility of handling, on the other. In so doing they doubtless lost something of the power and depth of tone possessed by the stiffer and more antique-looking fiddles of their predecessors. But it was they—and notably Geronimo, whose work is distinguishable from his brother's—who made the instrument, so far as mere design is concerned, a thing of beauty; and in this respect what they left for their successors to do appears less and less the more it is considered. The Nicolo Amati is only a slightly improved Geronimo, and the Stradivari only a slightly improved Nicolo; and the improvements mainly consisted in restoring the force and gravity of tone which the Brescian makers obtained, but the instrument had lost, while conspicuously bettered in general aspect in the hands of the brothers Antonio and Geronimo. E. J. P.

AMBER WITCH, THE, a romantic opera in four acts, by W. V. Wallace; libretto by H. F. Chorley; first produced at Her Majesty's Theatre, Feb. 28, 1861.

AMBROGETTI, GIUSEPPE, an excellent *buffo*, who appeared in 1807, and at Paris in 1815 in 'Don Giovanni'; and at the opera in London in 1817, where he was very successful. His voice was a bass of no great power, but he was an excellent actor, with a natural vein of humour, though often put into characters unsuited to him as a singer; yet he acted extremely well, and in a manner too horribly true to nature, the part of the mad father in Paer's beautiful opera, 'Agnese,' while that of the daughter was sung by Camporese. He remained until the end of the season of 1821, in which his salary was £400. He married Teresa Strinasacchi the singer. The date of his death is not known. He was said to have become a monk in France; but in 1838 he was in Ireland, since which nothing has been heard of him. J. M.

AMBROS, AUGUST WILHELM. Born Nov. 17, 1816, at Mauth in Bohemia. By virtue of his *Geschichte der Musik* (Breslau, Leuckart), the 4th vol. of which, reaching to MONTEVERDE and FRESCOBALDI, appeared July 1878, he must be considered the greatest German authority on all questions concerning the history of European music from ancient Greece to modern times. In spite of having suffered till past his fiftieth year under that curse of dilettantism, serving two masters—being at the same time a hard-worked *employé* in the Austrian Civil Service and an enthusiastic musician and littérateur, pianist, composer, critic, and historian—his indomitable pluck and perseverance enabled him to put forward a formidable array of writings on the history and æsthetics of music, all of which bear the stamp of a rich, highly cultured and very versatile mind. They are as remarkable for their many-sided learning and accuracy as for their lucid arrangement and brilliant diction. Ambros's father, postmaster and gentleman farmer, was a good linguist and excellent mathematician, and his mother, a

sister of KIESEWETTER, the historian of music, a good pianist of the old school and an accomplished singer. They gave him every chance to acquire the elements of modern culture at the gymnasium and subsequently at the university of Prague; drawing, painting, poetry were not forgotten; music only, which fascinated him above all things, and for instruction in which he passionately longed, was strictly prohibited. It was intended that he should enter the civil service, and music was considered both a dangerous and an undignified pastime. Nevertheless he learnt to play the piano on the sly, and worked hard by himself at books of Counterpoint and Composition. In 1840, after a brilliant career and with the title of *doctor juris*, he left the university and entered the office of the Attorney-General, where he steadily advanced to Referendarius in 1845, Prosecuting Attorney in matters of the press in 1848, etc. Soon after 1850, when he married, his reputation as a writer on musical matters spread beyond the walls of Prague. He answered HANSLICK's pamphlet, 'Vom musikalisch Schönen,' in a little volume, 'Die Grenzen der Poesie und der Musik,' 1856, which brought down upon him, especially in Vienna, a shower of journalistic abuse, but which procured for him on the other hand the friendship and admiration of many of the foremost German musicians. It was followed by a series of elaborate essays: 'Culturhistorische Bilder aus der Musikleben der Gegenwart,' 1860, which were read with avidity, and appeared in a second edition (Leipzig, Mathes) in 1865. Thereupon the firm of Leuckart engaged him to begin his *History of Music*, his life's work. From 1860 to 1864 he was making researches towards it in the Court Library at Vienna, at Venice, Bologna, Florence, and Rome. In 1867 he was ransacking the Royal Library at Munich, one of the richest in Europe, and in 1868, 1869, and 1873 was again in Italy extending his quest as far as Naples. The third volume, reaching to Palestrina, was published in 1868. The fourth volume above mentioned, was edited from his notes by C. F. Becker and G. Nottebohm; a fifth, issued in 1882, was edited by Otto Kade, and a sequel by Langhans brings the work down to the present day. In 1872 and 1874 he published two series of 'Bunte Blätter,' being essays on isolated musical and artistic subjects, and written in a sparkling non-technical manner, but full of matter interesting both to professional artists and *dilettanti*. He was the Professor of the History of Music at the University of Prague from 1869; and, thanks to the liberality of the Academy of Science at Vienna, was in possession of sufficient means and leisure to continue his important task. In 1872 he was appointed to a position in the Ministry of Justice at Vienna, and made a professor in the Conservatorium. He appeared in public repeatedly as a pianist, and his compositions, a Bohemian opera 'Bretislaw a Jitka,' Overtures to 'Othello,' and Calderon's 'Magico Prodigioso'; a number of pianoforte pieces, 'Wanderstücke,' 'Kinderstücke,' 'Landschaftsbilder'; numerous songs; a 'Stabat Mater,' two Masses in B flat and A minor, etc., most of which have a strong smack of Schumann, besides proving him to be a practical musician of far more than common attainments, give an additional weight to his criticisms, showing these to stand upon the firm ground of sound technical attainments. He died at Vienna, June 28, 1876. E. D.

AMBROSIAN CHANT. The ecclesiastical mode of saying and singing Divine Service, set in order by St. Ambrose for the cathedral church of Milan about A.D. 384. We have little historical information as to its peculiarities. That it was highly impressive we learn from the well-known passage in St. Augustine's *Confessions*, Book ix. Chap. 6.

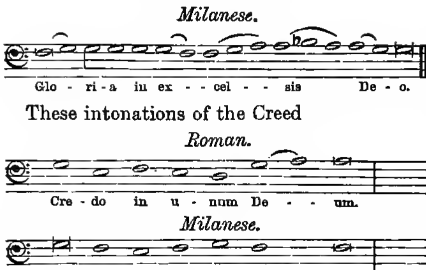
It has been stated without proof, and repeated by writer after writer on the subject, that St. Ambrose took only the four 'authentic' Greek modes, being the first, third, fifth, and seventh of the eight commonly called the Gregorian Tones, from being all used in the revision of the Roman Antiphonarium by St. Gregory the Great at a subsequent date (A.D. 590). But St. Ambrose's own statement in his letter to his sister St. Marcelina is merely that he wished to take upon himself the task of regulating the tonality and the mode of execution of the hymns, psalms, and antiphons that were sung in the church he had built at Milan. It must be confessed that we really know little or nothing of the system and structure of the Ambrosian melodies, and no existing records show anything essentially different from Gregorian plain-song.

The subject of Byrd's anthem 'Bow Thine ear, O Lord,' originally written to the words 'Ne irascaris domine,'

has always been quoted, since Dr. Crotch published his 'Specimens,' as a portion of the plain-song of St. Ambrose. A comparison of the liturgical text and ritual of Milan and Rome shows a different setting of the musical portions of the mass, as well as many variations in rubrics and in the order and appropriation of various portions to the celebrant and assistants, in the two uses. Thus the 'Gloria in excelsis' precedes the Kyrie in the Milan and follows it in the Roman Mass. The setting of the intonation of this, as taken from the missals of the two, may be here given as a specimen of the differences in the plain-song.

Roman.

Glo - - - ri - a in ex - cel - sis De - - - o.



These intonations of the Creed will also serve to show the kind of difference still discernible in the two rites.[1]

But the principal boon bestowed on the Church by St. Ambrose was the beautiful rhythmical hymns with which he enriched the musical service of Milan Cathedral. Many hymns are called Ambrosian because written after his manner; but some ten of the ancient hymns are from his own pen, among which may be mentioned 'Veni Redemptor Gentium' and 'Eterna Christi munera' (Hymnal Noted, Nos. 12, 36).

The entire accent and style of chanting, as regulated by St. Ambrose, was undoubtedly an artistic and cultivated improvement on that of preceding church services, such as would naturally result from the rare combination of piety, zeal, intellect, and poetical and musical power by which he was distinguished. The Ambrosian chant was eventually merged, but certainly not lost, in that vast repertory of plain-song, whether then ancient or modern, which we now call GREGORIAN, from the name of the next great reformer of church music, St. Gregory the Great. The name Ambrosian is frequently applied to the hymn, 'Te Deum laudamus,' but there is no evidence to prove his authorship. T. H.

AMBROSIAN MUSIC. It is beyond all question that St. Ambrose had an important place among those who developed ecclesiastical music. He was apparently responsible for the introduction, at any rate into the West, of two new forms to be employed in public worship, viz., Hymnody and Antiphonal Psalmody (see HYMN, ANTIPHON). But beyond this his personal action can hardly be traced. The term 'Ambrosian' has been applied to the usages liturgical and musical of the great Church of Milan, which, defending itself behind the shelter of his great name, has succeeded in retaining its own customs, and in resisting, at any rate to a certain extent, the tendency to assimilation with Rome. Hence Ambrosian music, like the Ambrosian rite, is of the greatest interest for the purposes of comparison with its Roman correlative (see GREGORIAN). W. H. F.

[1] The Roman examples are from a fine quarto Missale Romanum printed at Antwerp in 1598, corresponding with Guidetti's Directorium and the present use. Those for the use of Milan are from a portion of the 'Missale Ambrosianum Caroli Cajetani Cardinalis, novissime impressum, Mediolani,' A.D. 1831, brought from Milan in 1871 by the writer of this article.

AMEN. This word has been often employed by composers as an opportunity for the display of fugue and counterpoint, just as some of Palestrina's finest music is given to the names of the Hebrew letters, Aleph, Beth, etc., in his 'Lamentationes Jeremiæ.' Witness Handel's final chorus in the 'Messiah,' Dr. Cooke's Amen in double augmentation, engraved on his tomb (see AUGMENTATION), another very spirited chorus in the Italian style by the same composer (Hullah's Part Music, No. 6), fine choruses by Leo, Cafaro, Clari, and Bonno in the Fitzwilliam Music, and many others. [The burlesque 'Amen' in Berlioz's 'Damnation de Faust' is familiar to all amateurs. Mention must be made of the so-called 'Sevenfold Amen' by Stainer, which has come into general use for festal and other occasions, and has been imitated, more or less successfully, by other composers.] G.

AMERICAN GUILD OF ORGANISTS. An organisation formed in New York in April 1896, and incorporated in Dec. 1896, to advance the cause of church music in the United States; to raise the efficiency of organists by a system of examinations and certificates; for the discussion of questions relating to their work; and for hearing model performances of sacred compositions. Examinations are held twice a year in New York and other large cities in the United States for admission to rank either as fellows or associates. Fellows are those who have proved themselves 'organists, directors, and scholarly musicians of high theoretical and practical attainments.' Public church services are held in different churches, with a special order of service authorised by the Bishop of New York. R. A.

AMERICAN ORGAN. A free-reed instrument similar in its general construction to the HARMONIUM, but with some important differences. In the first place the reeds in the American organ are considerably smaller and more curved and twisted than in the harmonium, and there is a wider space left at the side of the reed for it to vibrate, the result being that the tone is more uniform in power, and that the expression stop when used produces much less effect. The curvature of the reeds also makes the tone softer. In the American organ moreover the wind-channel or cavity under which the vibrators are fixed is always the exact length of the reed, whereas in the harmonium it is varied according to the quality of tone required, being shorter for a more reedy tone and longer for a more fluty one. Another point of difference in the two instruments is that in the harmonium the wind is forced outward through the reeds, whereas in the American organ, by reversing the action of the bellows, it is drawn inwards. The advantages of the American organ as compared with the harmonium are that the blowing is easier, the expression stop not being generally used, and

that the tone is of a more organ-like quality, and therefore peculiarly adapted for sacred music; on the other hand, it is inferior in having much less variety of tone, and not nearly so much power of expression. These instruments are sometimes made with two manuals; in the most complete specimens the upper manual is usually furnished with one set of reeds of eight-feet and one of four-feet pitch, and the lower manual with one of eight- and one of sixteen-feet, those on the upper manual being also voiced more softly for the purposes of accompaniment. A mechanical coupling action is also provided by which the whole power of the instrument can be obtained from the lower row of keys. Pedals, similar to organ pedals, are also occasionally added and provided with reeds of sixteen- and eight-feet pitch. The names given to the stops vary with different makers; the plan most usually adopted being to call them by the names of the organ stops which they are intended to imitate, *e.g.* diapason, principal, hautboy, gamba, flute, etc. Two recent improvements in the American organ should be mentioned—the automatic swell, and the vox humana. The former consists of a pneumatic lever which gradually opens shutters placed above the reeds, the lever being set in motion by the pressure of wind from the bellows. The greater the pressure, the wider the shutters open, and when the pressure is decreased they close again by their own weight. In this way an effect is produced somewhat similar, though far inferior, to that of the expression stop on the harmonium. The vox humana is another mechanical contrivance. In this a fan is placed just behind the sound-board of the instrument, and being made to revolve rapidly by means of the pressure of wind, its revolutions meet the waves of sound coming from the reeds, and impart to them a slightly tremulous, or vibrating quality.

The principle of the American organ was first discovered about 1835 by a workman in the factory of M. Alexandre, the most celebrated harmonium-maker of Paris. M. Alexandre constructed a few instruments on this plan, but being dissatisfied with them because of their want of expressive power, he soon ceased to make them. The workman subsequently went to America, carrying his invention with him. The instruments first made in America were known as 'Melodeons,' or 'Melodiums,' and the American organ under its present name, and with various improvements suggested by experience, was first introduced by Messrs. Mason and Hamlin of Boston, about the year 1860. Since that time it has obtained considerable popularity both in America and in this country.

A variety of the American organ was introduced in 1874 by Messrs. Alexandre under the name of the 'Alexandre Organ.' In this instrument, instead of the single channel placed above the reeds there are two, one opening out of the other. The effect of this alteration is to give a quality of tone more nearly resembling that of the flue-stops of an organ. The reeds are also broader and thicker, giving a fuller tone, and being less liable to get out of order. E. P.

AMICIS, ANNA LUCIA DE, a very celebrated singer, born at Naples about 1740. She was at first successful only in opera buffa, in which she sang in London in 1763, appearing in 'La Cascina,' a pasticcio, given by John Christian Bach, and other similar pieces. Bach, however, thought so highly of her that he wrote for her in serious opera, in which she continued afterwards to perform until she left the stage. Burney says she was the first singer who sang rapid ascending scales staccato, mounting with ease as high as E in alt. Her voice and manner of singing were exquisitely polished and sweet; and 'she had not a movement that did not charm the eye, nor a tone but what delighted the ear.' In 1771 she retired, and married a secretary of the King of Naples, named Buonsollazzi. In 1773 she sang in Mozart's early opera, 'Lucio Silla,' at Milan, the principal part of Giunia. On this occasion she exerted herself much in behalf of the young composer, who took great pains to please her, and embellished her principal air with new and peculiar passages of extraordinary difficulty. On the night of the first performance the tenor, who was inexperienced, 'being required, during the first air of the prima donna, to make some demonstration of anger towards her, so exaggerated the demands of the situation, that it seemed as if he were about to give her a box on the ear, or to knock her nose off with his fist, and at this the audience began to laugh. Signora de Amicis, in the heat of her singing, not knowing why the public laughed, was surprised; and being unaware of the ridiculous cause, did not sing well the first evening, and an additional reason for this may be found in a feeling of jealousy that the *primo uomo* (Morgnoni), immediately on his appearance on the scene, should be applauded by the Archduchess. This, however, was only the trick of a *musico;* for he had contrived to have it represented to the Archduchess that he would be unable to sing from fear, in order to secure immediate applause and encouragement from the court. But to console de Amicis, she was sent for the next day to court, and had an audience of both their royal highnesses for an hour.'[1] In 1789 she still sang well, though nearly fifty years old. The date of her death is not known. J. M.

AMICIS, DOMENICO DE. This artist, who is not mentioned by any of the biographical dictionaries, sang with Anna de Amicis in 1763 at London, in 'La Cascina.' It is impossible to say how he was related to that singer; but it is possible that he was her first husband. J. M.

[1] Letter of Leopold Mozart

AMILIE, OR THE LOVE TEST, a romantic opera in three acts, words by J. T. Haines, music by W. M. Rooke. Produced at Covent Garden Theatre, Dec. 2, 1837, and ran for more than twenty nights.

AMMON, Blasius, a Tyrolese musician of the 16th century, was a boy-chorister in the service of the Archduke Ferdinand of Austria, at whose expense he went to Venice to further his musical studies. He ended his days in the Franciscan monastery at Vienna in June 1590. His published works are as follows (the list is taken from Eitner's *Quellen-Lexikon*):—1. 'Liber sacratissimarum (quas vulgo introitus appellant) cantionum,' 5 vocum, Vienna, 1582; 2. 'Missæ,' 4 vocum, Vienna, 1588 (containing five masses); 3. 'Sacræ cantiones quas vulgo moteta vocant,' 4, 5, and 6 vocum, Munich, 1590; 4. 'Breves et selectæ quædam Motetæ,' 4, 5, and 6 vocum, Munich, 1593; 5. 'Introitus dominicales per totum annum,' 4 vocum, Vienna, 1601. Motets, etc., in MS. are preserved in the libraries of Breslau, Munich, Leipzig, etc., and 9 motets are reprinted by Commer, 'Musica Sacra,' vol. xxi. M.

AMNER, John, organist and master of the Choristers of Ely Cathedral. He succeeded George Barcroft in 1610, and held the appointments till his death in 1641. He took his degree as Bachelor in Music at Oxford in May 1613. In 1615 he printed his 'Sacred Hymns of 3, 4, 5, and 6 parts, for Voices and Vyols,' dedicated to his 'singular good lord and maister,' the Earl of Bath. He composed much church music. Three services and fifteen anthems are preserved in the books at Ely; and several other specimens of his skill are to be found in MS. elsewhere (Dickson's *Cat. of Musical MSS. at Ely;* Rimbault, *Bib. Madrigaliana*). E. F. R.

AMNER, Ralph, a relation of John Amner, before mentioned. It appears from the Registers of Ely that he was elected a lay-clerk there in 1604, and was succeeded in 1609 by Michael Este, the well-known composer. Amner was then probably admitted into holy orders, as he is styled 'Vicar,' *i.e.* Minor Canon. Upon the death of John Amery, a gentleman of the Chapel Royal, July 18, 1623, 'Ralphe Amner, a basse from Winsore, was sworn in his place.' He died at Windsor, March 3, 1663-64. In Hilton's 'Catch that Catch Can,' 1667, is 'a Catch in stead of an Epitaph upon Mr. Ralph Amner of Windsor, commonly called the Bull Speaker, who dyed 1664; the music composed by Dr. William Child' (*Reg. of Ely; Cheque-Book of Chap. Roy.*, Camd. Soc.). E. F. R.

AMOREVOLI, Angelo, born at Venice, Sept. 16, 1716. After appearing at the principal opera-houses in Italy with brilliant success, where he was admired for his fine voice and vocalisation, and the perfection of his shake, he was engaged for the Court Theatre at Dresden. He sang for the Earl of Middlesex at the opera in London in 1741; but returned to Dresden, where he died, Nov. 15, 1798. J. M.

AMOROSO, or CON AMORE (Ital.), 'in a loving style,' a direction implying a certain emotional quality, and excusing some degree of sentimentality in the performer.

ANACKER, August Ferdinand, born Oct. 17, 1790, at Freiberg in Saxony, son of a very poor shoemaker. As a scholar at the Gymnasium his musical faculty soon discovered itself, but his poverty kept him down, and it was not till a prize of 1300 thalers in a lottery fell to his share that he was able to procure a piano and music. The first piece he heard performed was Beethoven's Polonaise in C, and Beethoven became his worship through life. In 1813, after the battle of Leipzig, he went to that university, and acquired the friendship of Schicht, F. Schneider, and others of the best musicians. In 1822 he was made cantor of his native place, and principal music-teacher in the normal school. From that time onwards for thirty years his course was one of ceaseless activity. No one ever worked harder or more successfully to make his office a reality. In 1823 he founded the Singakademie of Freiberg, and in 1830 started a permanent series of first-class subscription concerts; in 1827 he formed a musical association among the miners of the Berg district, for whom he wrote numerous part-songs; and in short was the life and soul of the music of the place. At the same time he composed much music, such as the cantatas 'Bergmannsgruss,' and 'Lebens Blume und Lebens Unbestand;' and many part-songs. But his music is nothing remarkable: it is the energy and devotion of the man that will make him remembered. He died at his post on August 21, 1854, full of honour and esteem. The only piece of Anacker's which has probably been printed in England is a 'Miner's Song' (four parts) in the collection called 'Orpheus,' No. 41. G.

ANACREON, OU L'AMOUR FUGITIF, an opera-ballet in two acts, the libretto by Mendouze, and the music by Cherubini, produced at the Opera in Paris on Oct. 4, 1803. It is now only known by its magnificent overture.

ANACREONTIC SOCIETY. The meetings of this aristocratic society, established by several noblemen and other wealthy amateurs, were held at the Crown and Anchor Tavern in the Strand towards the close of the 18th century. The concerts, in which the leading members of the musical profession took part as honorary members, were given fortnightly during the season, and were followed by a supper, after which the president or his deputy sang the constitutional song 'To Anacreon in Heaven.' This was succeeded by songs in every style, and by catches and glees sung by the most eminent vocalists of the day. The privilege of membership was greatly valued, and names were fre-

quently placed on the list for a long period in advance. [Haydn was present at one of the meetings (see *Musical Times*, 1902, p. 642).] The society was dissolved in 1786, when Sir Richard Hankey was president, owing, as Parke states in his *Musical Memoirs*, to the annoyance of the members at a restraint having been placed upon the performance of some comic songs which were considered unfit for the ears of the Duchess of Devonshire, the leader of the *haut-ton* of the day, who was present privately in a box specially fitted up under the orchestra. The members resigned one after another, and shortly afterwards the society was dissolved at a general meeting. C. M.

ANALYSIS. The practice now prevalent in England of accompanying the titles and words of the music performed at concerts by an analysis of the music is one of comparatively recent date. The identity of the pieces in the programmes at the end of the 18th and the beginning of the 19th century is rarely certain. 'New Grand Overture, Haydn,' or 'Grand Overture, MS., Haydn,' is the usual designation of Haydn's symphonies as they were produced at Salomon's concerts in 1791, 1792. The earliest programmes of the Philharmonic Society were almost equally vague—'Symphony, Mozart,' 'Symphony, Beethoven,' 'Symphony, never performed, Beethoven,' was with rare exceptions the style in which the *pièces de resistance* at the Society's concerts were announced. It was not until the fifth season (1817) that the number or the key indicated which works the audience might expect to hear. The next step was to print on the fly-leaf of the programme the words of the vocal pieces, with, in the case of Spohr's 'Weihe der Töne' (Feb. 23, 1835), a translation of Pfeiffer's 'Ode,' or of the 'Pastoral Symphony' (May 11, 1835), some verses from Thomson's 'Seasons,' or at the first performance of the overture to 'Leonora,' No. 1 (May 13, 1844) (due to Mendelssohn), a short account of the origin and dates of the four overtures.

The first suggestion as to the desirability of explaining the structure of compositions to the audience was in a letter written to the *Musical World* of Dec. 2, 1836, by the late C. H. Purday, Esq. The first practical attempt to assist amateurs to follow the construction of classical music during its performance which the writer has met with is that of Mr. Thomson, the first Reid Professor of Music in the University of Edinburgh, who in the year 1841, and even earlier, added analytical and historical notices of the pieces in the programmes of the concerts of the Professional Society of Edinburgh. His analyses entered thoroughly into the construction of the overtures and symphonies performed, but did not contain quotations from the music.—The next step appears to have been made by John Ella when he started the matinées of the Musical Union in 1845. His 'synoptical analysis,' with quotations, set a pattern which has endured to the present time.—The same thing was done, but at greater length, by Dr. Wylde in the programme-books of the New Philharmonic Society, which commenced its concerts in 1852. Some of these analyses were accompanied by extracts, and in many cases are of permanent value, such as those of Beethoven's 'Pastoral Symphony,' Mozart's E flat ditto, and the overture to the 'Zauberflöte' (1858). An analysis of the 'Messiah' was issued by the Sacred Harmonic Society in 1853, and was followed by similar dissections of the 'Creation,' Beethoven's Mass in D, 'Israel in Egypt,' the 'Lobgesang,' Mozart's 'Requiem,' and, some years later, 'Naaman.'

As early as 1847 John Hullah had given biographical notices of composers in the book of words of his historical concerts at Exeter Hall. The books of words of the Handel Festivals (1857, etc.) contain historical accounts of the works performed. In connection with the early Handel Festivals the late H. F. Chorley published two pamphlets called 'Handel Studies,' containing analyses of the 'Messiah,' the Dettingen 'Te Deum,' and 'Israel in Egypt.'

In 1859 the Monday Popular Concerts were established, and the programmes contained notices of the pieces. On the occasion of Hallé's Beethoven-recitals, two years later, full and able analyses by J. W. Davison of the whole of the sonatas were published, accompanied by copious extracts. These have since been incorporated in the Popular Concert books, with similar analyses of other pieces, including the 48 preludes and fugues of Bach, the whole forming a body of criticism and analysis which does honour to its author.—Shortly after the foundation of the Saturday Concerts at the Crystal Palace, short remarks were attached to some of the more prominent pieces. These have gradually become more systematic and more analytical, but they are of a very mixed character when compared with those last mentioned.[1] The remarks which adorned the programmes of Pauer's recitals in 1862, '63, '67, were half biographical and half critical, but made no attempt to analyse each piece.

In 1869 the Philharmonic Society adopted analytical programmes prepared by Macfarren, and the practice has been maintained since, Mr. Joseph Bennett having been responsible for them for many years. Macfarren also prepared similar notices for the British Orchestral Society.

The practice of analysing pieces of classical music with the view to enable the more or less cultivated amateur to seize the ideas and mode of treatment of the composer, is one which, if carried out with skill and judgment, is surely commendable. The fact that a movement is

[1] The above reference to the famous analytical programmes of the Crystal Palace is characteristic of Sir George Grove's modesty; their immense value in the history of music needs no comment in the present day. M.

written on a definite plan or 'form,' and governed by rules more or less rigid, though obvious to the technical musician is news to many an amateur ; and yet without understanding such facts it is impossible fully to appreciate the intention or the power of the composer. In following the scheme of the music the hearer adds to the pleasure of the sounds the pleasure of the intellect. In addition to this there are few great pieces of music in which historical or biographical facts as to the origin and progress of the work, key, etc., connecting the music with the personality of the composer, may not be stated so as to add materially to the pleasure and profit of the hearer.

Analytical programmes do not appear to have been yet introduced into the concert-rooms abroad ; but elaborate analyses of single works published as pamphlets quite independently of any special performance have been made by foreign critics, such as Wagner's of the ninth Symphony (translated and circulated in 1855, when Wagner conducted that Symphony at the Philharmonic), Liszt's of 'Tannhäuser' and 'Lohengrin,' and von Bülow's of Wagner's 'Faust Overture.' G.

ANALYSIS OF COMPOUND MUSICAL SOUNDS. The separation of such sounds into their component elements, or the determination of the elements they contain. The sounds ordinarily met with in music are not simple and single notes as is commonly supposed, but are usually compounds of several sounds, namely one fundamental one (generally the most powerful) accompanied by higher harmonics, varying in number and strength in different cases. These however blend so completely into one sound that the unaided ear, unless specially trained, fails to distinguish the separate elements of which it is made up. Such a compound sound is intentionally produced artificially with the compound stops of a large organ, and if these are well in tune and well proportioned, it is often difficult to distinguish them separately.

In acoustical investigations it is very desirable to ascertain of what simple sounds a compound one is composed, and this is done by a species of analysis similar to that so common in chemistry. In compound chemical substances the elements are usually indistinguishable by the eye, as the elements of a compound sound by the ear, and the plan is adopted of applying to the substance a *test*, which having a peculiar affinity for some particular element, will make known its presence in the compound. Such a test exists for elemental sounds in what the Germans call *Mittönen*, or *sympathetic resonance*.

Certain bodies will vibrate when certain notes, corresponding to their vibratory capacity, and those only, are sounding near them, and they therefore test the presence of such notes, whether perceptible or not to the ear. For example, if we wish to find out whether the note is present in a compound sound, we have only to bring within its range a sonorous body, tuned to that note, as for example the string of a violin, and if that note is present, in sufficient force, the string will be sympathetically set in vibration. We can judge *a priori* by the theoretical laws of harmonics, what notes are or are not likely to be present in a certain compound sound, and by applying tests for each, in this way, the sound may be completely analysed, both (as chemists say) quantitatively and qualitatively, that is, we may not only find what notes are present but also, by proper provision in the test body, what are the relative strengths of each note.

This method of analysis is chiefly due to Helmholtz, the test bodies preferred by him being hollow vessels (resonators) of glass or brass. Each of these has such a capacity that the air it contains will vibrate with a particular note, and by having several of these, tuned to the notes required, the presence of these notes in any compound sound may be ascertained with great facility. W. P.

ANAPÆST. A metrical foot, consisting of two short syllables, followed by a long one.

A remarkable instance of Anapæstic rhythm will be found in Weber's Rondo in E♭, op. 62. W. S. R.

ANCIENT CONCERTS. The Ancient Concerts, or, to give them their formal title, The Concert of Antient Music, were established in 1776 by a committee consisting of the Earls of Sandwich and Exeter, Viscount Dudley and Ward, the Bishop of Durham, Sir Watkin W. Wynn, Bart., Sir R. Jebb, Bart., and Messrs. Morrice and Pelham, who were afterwards joined by Viscount Fitzwilliam and Lord Paget (afterwards Earl of Uxbridge). The performances were also known as 'The King's Concerts.' Mr. Joah Bates, the eminent amateur, was appointed conductor, the band was led by Mr. Hay, and the principal singers were Miss Harrop (afterwards Mrs. Bates), the Misses Abrams, Master Harrison (subsequently a famous tenor), the Rev. Mr. Clarke, Minor Canon of St. Paul's (tenor), Mr. Dyne (counter-tenor), and Mr. Champness (bass). The chief rules of the concerts were that no music composed within the previous twenty years should be performed, and that the directors in rotation should select the programme. Mr. Bates retained the conductorship till 1793, and directed the concert personally, except for two years, when Dr. Arnold and Mr. Knyvett acted for him. He was succeeded by Mr. Greatorex, who remained in office until his death in 1831, when Mr. Knyvett, who had been the principal alto singer for many years, was chosen to succeed him. The resolution of the directors in 1839 to change the conductor at the choice of the director for each night led to the resignation

of Mr. Knyvett, and the post was then offered to Dr. Crotch, who ultimately declined it. Sir George Smart was invited to conduct the first two concerts of 1840, and was succeeded by Mr. (afterwards Sir Henry) Bishop, Mr. Lucas, and Mr. Turle. It was found however that this system did not work well, and in 1843 Sir Henry Bishop was appointed sole conductor. There was also a change in the leadership of the band, Mr. W. Cramer succeeding Mr. Hay in 1780, and being succeeded in his turn by his son François, who filled the post from his father's death in 1805 until 1844, when he retired. Mr. J. F. Loder led the band from 1844 to 1846, in which year Mr. T. Cooke was appointed. Until 1841 it was the custom for the conductor to preside at the organ, but in that year the directors appointed Mr. Charles Lucas as their organist. The band at the time of the establishment of the concerts consisted of sixteen violins, five violas, four cellos, four oboes, four bassoons, two double basses, two trumpets, four horns, one trombone, and drum. At the close of the concerts in 1848, the orchestra numbered seventeen violins, five violas, five cellos, five double basses, three flutes, two oboes, two clarinets, two bassoons, four horns, three trumpets, three trombones, two drums, one harp, two cymbals, and triangle. The canto chorus at first consisted entirely of boys selected chiefly from the boys of the Chapel Royal and Westminster Abbey, but they afterwards gave place to ladies. The earlier programmes included an overture (usually one of Handel's), two or three concertos by Handel, Martini, Corelli, Avison, or Geminiani, several choruses and solos from Handel's oratorios, and an anthem, glee, or madrigal; but occasionally an entire work, such as the Dettingen 'Te Deum,' was given as the first part of the concert. For many years the programmes were almost exclusively Handelian, varied by songs from Gluck, Bach, Purcell, Hasse, and others. After the year 1826 there was greater variety in the schemes, and Mozart's Jupiter Symphony, his Symphonies in D and E flat, the overture to the 'Zauberflöte,' and a selection from his Requiem were included in the programmes for 1826. From that date an orchestral work by Mozart was performed at nearly every concert, although Handel still maintained his supremacy. In 1834 we find Haydn's 'Surprise' symphony, and in 1835 a selection from the 'Creation' and the 'Seasons' in the programmes. In the latter year Beethoven was represented by his 'Prometheus' overture, and during the last ten years of the concerts his symphony in D, overtures to 'Fidelio' and 'Egmont,' a chorus from 'King Stephen,' and other works were given. In 1847, at a concert directed by Prince Albert, Mendelssohn was the solo organist, and played Bach's Prelude and Fugue on the name of 'Bach.' The later programmes were drawn from varied sources, Handel being only represented by one or two items. In 1785 the Royal Family commenced to attend the concerts regularly, and then it was that they were styled 'The King's Concerts.' As a mark of his interest in the performances King George the Third personally wrote out the programmes, and in later years Prince Albert was one of the directors. Among the distinguished artists who appeared at these concerts were Madame Mara and Mrs. Billington (1785), Signora Storace (1787), Miss Parke, Miss Poole (1792), Messrs. Harrison and Bartleman (1795). Up to 1795 the concerts were held in the new rooms, Tottenham Street, afterwards known as the Queen's or West London Theatre, but in that year they were removed to the concert-room in the Opera House, and in 1804 to the Hanover Square Rooms. In 1811 Catalani made her first appearance, and three years later Miss Stephens (afterwards Countess of Essex) made her début at these concerts. In 1816 Mrs. Salmon was heard, and shortly afterwards Messrs. Braham and Phillips were engaged. In addition to the twelve concerts given every year, a thirteenth was added, when the 'Messiah' was performed in aid of the 'Fund for the support of Decayed Musicians and their Families,' a practice still maintained in the annual performances by the Royal Society of Musicians. In accordance with one of the customs connected with the concerts it was the rule for the director of the day to entertain his brother directors and the conductor at dinner. The last concert took place on June 7, 1848, and the library of old masters belonging to the society was afterwards removed to Buckingham Palace, and was subsequently presented to the Royal College of Music. C. M.

ANDACHT, MIT, 'With devotion'; a direction found at the beginning of Beethoven's Mass in D, and in a few other passages. Schumann uses 'Reuig, andächtig,' for the superscription of No. 6 of the 'Bilder aus Osten.' M.

ANDAMENTO (Italian verbal substantive, from *andare*, 'to go,' 'to move'). A form of fugal subject, more highly developed, and of greater length, than the ordinary Soggetto, and generally, though not by any means invariably, consisting of two distinct members, more or less strongly contrasted with each other, and consequently calculated to add materially to the interest of a long and exhaustively-developed fugue.

It is in these respects that the Andamento most strikingly differs from the more usual Soggetto, which, as Cherubini naïvely remarks, 'should neither be too long nor too short, but of a convenient length,' and which is generally, though not always, of a more homogeneous character; while the Attacco, shorter still, and frequently consisting of no more than

three or four notes, culled from the subject, or one of its counter-subjects, is a mere point of imitation, introduced for the purpose of adding interest to the composition, binding it more closely together, or establishing a more intimate correspondence of style between its various sections.

A fugue developed from a well-considered Andamento must, of necessity, be a lengthy one. A fine instance of an Andamento consisting of two distinct sections will be found in the second portion of the chorus, 'When his loud voice,' in Handel's 'Jephthah,' at the words 'They now contract.'

The 'Amen Chorus,' in the 'Messiah,' affords another equally fine example, in which the two sections, though distinctly separated, are not so strongly contrasted with each other.

On the other hand, in the chorus, 'Righteous Heaven,' in 'Susanna,' the subject introduced at the words, 'Tremble guilt,' though phrased in three divisions which admit of distinct breathing-places between them, is very nearly homogeneous in its general character.

Nearly all the fugues in Sebastian Bach's 'Wohltemperirtes Clavier' are formed upon Soggetti; while nearly all his finest organ fugues, with pedal obbligato, are developed from long and well-sustained Andamenti. A curious instance, in two sections, will be found in the fugue in E major from the third toccata (B.-G. vol. xv. p. 278).

In the well-known organ fugue in G minor, the construction of the Andamento is a miracle of melodic skill:—

One of the finest Andamenti to be found among fugues of later date is that which forms the subject of the 'Zauberflöte' overture. Another forms the theme of the first of Mendelssohn's Six Fugues for the pianoforte (op. 35).

Andamenti may be found both in real and tonal fugue; the examples are, however, much more frequent in the former than in the latter. The Andamento is frequently used in combination, both with the Soggetto and the Attacco; and either, or both of them, may occasionally be found in combination with a *Canto fermo*. The 'Hallelujah Chorus' is developed from a Canto fermo adapted to the words, 'For the Lord God Omnipotent reigneth,' a Soggetto, 'And He shall reign for ever and ever,' and a constantly-varying Attacco, 'Hallelujah,' which, under a multitude of changing forms, serves to bind the powerfully-contrasted elements of the composition into a consistent whole.

Sebastian Bach's Choral Vorspiel, 'Wir glauben all' an einen Gott,' is based upon a Canto fermo, an Andamento, and a Soggetto.

In this case, the Canto fermo, were it not for the fact that it is an old ecclesiastical melody, and not an original theme, might be technically described as the true Soggetto, and the Soggetto as a counter-Subject, the office of which it performs throughout the entire composition. It should be mentioned that some German authorities use the term as equivalent to what we call episodes (see ATTACCO, and SOGGETTO). W. S. R.

ANDANTE (Ital., participle of the verb *andare*, 'to go'). Going, moving along at a moderate pace. In modern music this word is chiefly used to designate a rather slow rate of movement; formerly however it was used more generally in its literal sense. Thus in Handel's music we frequently find the indication 'andante allegro,' a contradiction in terms in the modern sense of the words, but meaning nothing more than 'moving briskly.' Andante is a quicker rate of movement than larghetto, but on the other hand is slower than allegretto. As with most other time-indications it is frequently modified in meaning by the addition of other words, *e.g.* 'andante sostenuto' would be a little slower, and 'andante un poco allegretto' or 'andante con moto' a trifle faster, than 'andante' alone. Like adagio, largo, etc., this word is also used as the name of a piece of music (*e.g.* Beethoven's 'Andante in F') or as the name of a slow movement of a symphony, sonata, etc. E. P.

ANDANTINO (Ital.). The diminutive of ANDANTE (*q.v.*). As 'andante' means literally 'going,' its diminutive must mean 'rather going,' *i.e.* not going quite so fast; and properly 'andantino' designates a somewhat slower time than andante. The majority of modern composers however, forgetting the original meaning of the word, and thinking of andante as equivalent with 'slow,' use andantino for 'rather slow,' *i.e.* somewhat quicker. In which sense the word is intended can only be determined by the character of the music itself. No more striking proof of the uncertainty which prevails in the use of these time-indications can be given than is to be found in the fact that three movements in Mendelssohn's 'Elijah,' the first of which, 'If with

all your hearts,' is marked 'andante con moto,' the second, 'The Lord hath exalted thee,' merely 'andante,' and the third, 'O rest in the Lord,' 'andantino,' are all in exactly the same time, the metronome indication being in each case ♩ = 72. See Beethoven's opinion as to the meaning of the term, in Thayer, iii. 241. E. P.

ANDER, ALOYS, one of the most famous German tenor singers of recent times; born Oct. 13, 1817, at Liebititz, in Bohemia. His voice though not powerful was extremely sympathetic in quality. He went to Vienna in the hope that his talents would be recognised there, but it required all the energy and influence of Wild the singer, at that time Ober-Regisseur to the court opera-house, before he was allowed to make the experiment of appearing there for the first time (Oct. 22, 1845) as Stradella in the opera of that name, though with no previous experience of the boards whatever. His success was complete, and decided his course for life, and that single night raised him from a simple clerk to the rank of a 'primo tenore assoluto.' Still more remarkable was his success in the 'Prophète,' which was given in Vienna for the first time on Feb. 28, 1850. Meyerbeer interested himself in the rapid progress of Ander, and from that date he became the established favourite of the Vienna public, to whom he remained faithful, notwithstanding tempting offers of engagements elsewhere. His last great part was that of Lohengrin, in which he combined all his extraordinary powers. As an actor he was greatly gifted, and had the advantage of a very attractive appearance. His voice, not strong and somewhat veiled in tone, was in harmony with all his other qualities; his conceptions were full of artistic earnestness, and animated by a noble vein of poetry. His physical strength, however, was unequal to the excitement of acting, and was impaired by the artificial means which he took to support himself. His last appearance was as Arnold in 'William Tell,' on Sept. 19, 1864; he was then failing, and shortly afterwards totally collapsed. He was taken to the Bath of Wartenberg in Bohemia, where he died on Dec. 11, but was buried in Vienna amid tokens of universal affection. C. F. P.

ANDERSEN, KARL JOACHIM, the most distinguished member of a family of eminent Danish flute-players, born April 29, 1847, at Copenhagen, was a member of the royal band there from 1869 to 1877; in 1881 he went to Berlin, where he was one of the founders of the Philharmonic Orchestra, filling the place of first flute for ten years and occasionally conducting. Since 1893 he has been conductor of the palace orchestra at Copenhagen. He has made important contributions to the literature of the flute, and his set of 48 studies, concertstücke with orchestral accompaniment, etc., are highly esteemed (Riemann's *Lexikon*). The list of his pieces for flute and piano reaches op. 62. M.

ANDERSON, MRS. LUCY, was the daughter of Mr. John Philpot, a professor of music and music-seller at Bath, where she was born in Dec. 1790. Miss Philpot early manifested a love for pianoforte playing, and although she never received any other instruction upon the instrument than some lessons given by her father and a cousin, Mr. Windsor, of Bath, she soon, by perseverance and observation of the eminent players, who occasionally appeared at the Bath concerts, arrived at such a degree of skill as to be able to perform in public at those concerts, which she did with great success, and also to follow music as a profession. Ill-health, however, induced her to quit Bath and to come to London about 1818, where her success was speedily assured, she soon becoming eminent in her profession. In July 1820 Miss Philpot was married to Mr. George Frederick Anderson, a violinist engaged in all the best orchestras, and subsequently, from 1848 to 1870 master of the Queen's Musick. He died Dec. 14, 1876. Mrs. Anderson was distinguished as being the first female pianist who played at the Philharmonic Society's concerts. In 1829 she played at the Birmingham Festival, and retired in 1862. She taught the piano to Queen Victoria and her children. She died Dec. 24, 1878. W. H. H.

ANDRÉ, JOHANN, the head of an extensive musical family, was born at Offenbach a/M., on March 28, 1741. His father was proprietor of a silk factory, and the boy was intended to carry on the business. But the love of music was too strong in him; he began by teaching himself, until about 1760 he happened to encounter an Italian opera company at Frankfort, which added fresh food to his desire. His first comic opera, 'Der Töpfer' (1760), was so successful as to induce Goethe to confide to him his operetta of 'Erwin und Elmire,' (1764) which had equal success, as had also some songs produced at the same time. In 1777 André received a call to act as director of the music at the Döbblin Theatre in Berlin, which he obeyed by settling in Berlin with his family, after handing over the factory (to which since 1774 he had added a music printing office) to his younger brother. Here he enjoyed the instruction of Marpurg, and composed a quantity of songs, dramas, and other pieces for the theatre. Not being able however, owing to the distance, to give the necessary attention to the printing-office, he returned to Offenbach in 1784, and resided there in the pursuit of his business and his music till his death on June 18, 1799. Before that date his establishment had issued the large number of 1200 works, and he himself had composed, in addition to many instrumental pieces, some thirty operas and dramas, and a vast number of melodious songs and vocal pieces, many of which became popular, amongst them the still favourite Volkslied 'Bekränzt mit Laub.' Among his operas was

one by Bretzner in four acts, 'Belmonte und Constanza, oder die Entführung aus dem Serail,' produced in Berlin on May 26, 1781, and often repeated with applause. Shortly afterwards, on July 16, 1782, appeared Mozart's setting of the same opera, with alterations and additions to the text by Stephanie. A paper war followed between the two librettists, during which André took occasion to speak nobly on the side of Stephanie, notwithstanding his having assisted Mozart in the preparation of an opera which had far surpassed his own. After André's death the business was carried on by his third son, JOHANN ANTON, the most remarkable member of the family. He was born at Offenbach, Oct. 6, 1775, and while almost an infant showed great predilection and talent for music. He was an excellent player both on the violin and piano, and a practised composer before entering at the University of Jena, where he went through the complete course of study. He was thus fully competent on the death of his father in 1799 to assume the control of the business, and indeed to impart to it fresh impulse by allying himself with Senefelder the inventor of lithography, a process which he largely applied to the production of music. In the year of his father's death he visited Vienna, and acquired from Mozart's widow the entire musical remains of the great composer, an act which spread a veritable halo round the establishment of which he was the head. André published the thematic catalogue which Mozart himself had kept of his works from Feb. 9, 1784 to Nov. 15, 1791, as well as a further thematic catalogue of the whole of the autographs of the master which had come into his possession. André was equally versed in the theory and the practice of music; he attempted every branch of composition, from songs to operas and symphonies, with success. Amongst other things he was the author of 'Proverbs,' for four voices (op. 32), an elaborate joke which was subsequently the object of much dispute, owing to its having been published in 1869 by Aibl of Munich as a work of Haydn's. As a teacher he could boast of a series of distinguished scholars. His introduction to the violin and his treatise on harmony and counterpoint were both highly esteemed. So also were the first two volumes of his unfinished work on composition (*Lehrbuch der Tonsetzkunst*, 1832-43). André was dignified with the title of Hofrath, and by the accumulation of musical treasures he converted his house into a perfect pantheon of music. He died on April 6, 1842. An idea of the respect in which he was held may be gained from various mentions of him in Mendelssohn's letters, especially that of July 14, 1836, and a very characteristic account of a visit to him in Hiller's *Mendelssohn*, chapter i. Of his sons mention may be made of JOHANN AUGUST, born March 2, 1817, died Oct. 29, 1887, the publisher of the *Universal-Lexikon der Tonkunst* of Schladebach and Bernsdorf; of JOHANN BAPTIST, born March 7, 1823, died Dec. 9, 1882, pupil of Aloys Schmitt and Kessler, and afterwards of Taubert and Dehn, a resident in Berlin, for some years capellmeister to the Duke of Bernburg; of JULIUS, born June 4, 1808, died April 17, 1880, who addicted himself to the organ, and was the author of a *Practical Organ School*, which has gone through several editions, and of various favourite pieces for that instrument, as well as of four hand arrangements of Mozart's works; lastly of KARL AUGUST, born June 15, 1806, died Feb. 15, 1887, who in 1835 undertook the management of the branch establishment opened at Frankfort by his father in 1828, adding to it a manufactory of pianos, and a general musical instrument business. He named his house 'Mozarthaus,' and the pianos manufactured there 'Mozartflügel,' each instrument being ornamented with a portrait of the master from the original painting by Tischbein in his possession. In 1855, on the occasion of the Munich Industrial Exhibition, he published a volume entitled *Pianoforte-making: its history, musical and technical importance* (*Der Klavierbau*, etc.). C. F. P.

ANDREOLI, GIUSEPPE, a celebrated contrabassist, born at Milan, July 7, 1757, died Dec. 20, 1832; member of the orchestra of La Scala and professor of his instrument at the Conservatorio of Milan; also played the harp with success. T. P. H.

ANDREOLI. A musical family, not related to the foregoing. EVANGELISTA, the father—born 1810, died June 16, 1875—was organist and teacher at Mirandola in Modena. His son, GUGLIELMO, was born there April 22, 1835, and was pupil at the Conservatorio of Milan, 1847-53. A pianist of great distinction, remarkable for his soft and delicate touch, pure taste, and power of expression, as well as for great execution. He was well known in London, where he appeared at the Crystal Palace (Dec. 13, 1856), the Musical Union (April 27, 1858), the New Philharmonic (May 9, 1859), and elsewhere. His health was never strong, and he died at Nice, March 13, 1860. His compositions were unimportant. His brother CARLO was also born at Mirandola, Jan. 8, 1840, and brought up at the Conservatorio of Milan, where he became professor of the piano about 1875. He too was favourably known in London, though since 1871 his health has confined him to Italy and the south of France. G.

ANDREVI, FRANCESCO, born near Lerida in Catalonia of Italian parents, Nov. 16, 1786, died at Barcelona Nov. 23, 1853; was successively the director of music in the cathedrals of Valencia, Seville, Bordeaux (1832-42), where he fled during the civil war. He lived in Paris from 1845 to 1849, and finally held the place of director of the music in the church of Our

Lady of Mercy at Barcelona. His sacred compositions were good and numerous; a 'Nunc Dimittis' and a 'Salve Regina,' printed in Eslava's collection of Spanish church music, *Lira Sacro-Hispana*, are his only published works. His treatise on Harmony and Counterpoint was translated into French (Paris, 1848).
M. C. C.

ANDROT, ALBERT AUGUSTE, was born at Paris in 1781, and admitted into the Conservatoire in his fifteenth year. In 1799 he obtained a prize for his exercises in harmony, and four years afterwards, having gained the Prix de Rome for his 'Alcyone,' he was sent to that city to study under Guglielmi. During the first year of his residence in Rome he made such progress that his master commissioned him to write a requiem and another sacred composition. The latter, performed during Passion Week, excited so much admiration, that he was engaged to compose an opera for the autumn. He had scarcely completed the last scene when nature sank under the arduous labour, and the composer died on August 19, 1804. In the following October a De Profundis of his composition was performed in his memory at the church of San Lorenzo in Lucinia.

A short notice of this composer is to be found in the *Dict. of Musicians* (1827). C. H. P.

ANERIO, FELICE, an Italian composer of the Roman school, was born about 1560, and, after being in the Papal choir as a boy soprano from 1575 to 1579, and completing his studies under G. M. Nanini, was made Maestro at the English College. He afterwards took service with Cardinal Aldobrandini, and upon the death of Palestrina was named 'Compositore' to the Papal Chapel, on April 3, 1594, a post which he retained till 1602. The date 1630, given by Riemann for his death, is apparently conjectural. His printed compositions include the following: three books of 'Sacred Madrigals' for five voices (Gardano, Rome 1585); three books of 'Madrigals' for five, six, and three voices respectively (1587, 1590, 1598); two books of Hymns, Canticles, and Motetti (1596 and 1602); 'Responsoria' for the Holy Week (1606); Litanies, Canzonetti for four voices (1586), and Motetti. His unpublished works are preserved in the collections of S. Maria in Vallicella, the Vatican Basilica, and the Pontifical Chapel, as well as in the Hofbibliothek, Vienna, the Royal Library at Berlin, and elsewhere. In the library of the Abbé Santini also, there was a considerable number of Anerio's Masses, with Psalms and other pieces. A Mass and twelve motets (one for eight voices) by him are given in Proske's *Musica Divina*. E. H. P.

ANERIO, GIOVANNI FRANCESCO, a younger brother of the preceding, born at Rome about 1567. His first professional engagement was as Maestro di Cappella to Sigismund III., King of Poland, about 1609. He served in the same capacity in the cathedral of Verona in 1611, but soon after that went to Rome to fill the post of musical instructor at the Seminario Romano, and was, from 1613 to 1620 Maestro di Cappella at the church of the Madonna de' Monti. He was ordained priest in 1616, and seems to have died in or after 1620. He was one of the first Italians who made use of the quaver and its subdivisions. His printed works form a catalogue too long for insertion here. See Eitner's *Quellen-Lexikon*, Vogel's *Bibl. weltl. Vocalmus. Italiens*. Suffice it to say that they consist of all the usual forms of sacred music, and that they were published (as his brother's were) by Soldi, Gardano, Robletti, etc. Giovanni Anerio had a fancy for decking the frontispieces of his volumes with fantastic titles, such as *Ghirlanda di sacre Rose* (1619), *Teatro armonico spirituale* (1619), *Selva armonica*, *Diporti musicali* (1617), and the like. He was one of the adapters of Palestrina's mass 'Papæ Marcelli,' for four voices. (See PALESTRINA.) There were scores of several of his masses in the collection of the Abbé Santini. A Te Deum in Proske's *Musica Divina*, ascribed to the elder brother, is really by Giovanni Francesco Anerio. A requiem of his for four voices was published by Pustet of Regensburg. E. H. P.

ANET, BAPTISTE, a French violinist, pupil of Corelli. After studying for four years under that great master at Rome, he appears to have returned to Paris about 1700, and to have met with the greatest success. There can be little doubt that by his example the principles of the great Italian school of violin-playing were first introduced into France. Probably owing to the jealousy of his French colleagues Anet soon left Paris again, and is said to have spent the rest of his life as conductor of the private band of a nobleman in Poland. He published three sets of sonatas for the violin, the first book of which appeared in Paris in 1724. P. D.

ANFOSSI, PASQUALE, an operatic composer of the 18th century. Born at Naples in or about 1736. He first studied the violin, but deserted that instrument for composition, and took lessons in harmony from Piccinni, who was then in the zenith of his fame. His first opera was 'La donna fedele' (Naples, 1758); his next, 'Caio Mario,' given in Venice in 1769, and 'I Visionari,' Rome, 1771, were failures; but his third, 'L'Incognita perseguitata,' 1773, made his fortune. Its success was partly owing to the ill-feeling of a musical clique in Rome towards Piccinni, whom they hoped to depreciate by the exaltation of a rival. Anfossi lent himself to their intrigues, and treated his old master and benefactor with great ingratitude. In his own turn he experienced the fickleness of the Roman public of that day, and quitting, first the capital, and afterwards Italy, brought out a long string of operas in Paris, London, Prague, and Berlin, with varying success. He returned to Italy in

1784, and to Rome itself in 1787. Tiring of the stage, he sought for and obtained the post of Maestro at the Lateran, and held it from 1792 till his death in Feb. 1797.

The music of Anfossi was essentially ephemeral; he was the fashion in his day, and for a time eclipsed his betters. But, although a musician of undoubted talent, he was destitute of real creative power, and it is not likely that his reputation will ever be rehabilitated. He composed no less than forty-six operas and seven oratorios, besides four masses and certain pieces of church-music, some of which are in the collection of the Lateran and others were in that of the Abbé Santini.

Mozart composed two airs for soprano and one for tenor, for insertion in Anfossi's opera of 'Il Curioso indiscreto' on the occasion of its performance at Vienna in 1783, and an arietta for bass for the opera of 'Le Gelosie fortunate' at the same place in 1788. (See CURIOSO INDISCRETO, Köchel's *Catalogue*, Nos. 418, 419, 420, 541.) E. H. P.

ANGLAISE. The English country-dance (*contredanse*), of lively character, sometimes in 2–4, but sometimes also in 3–4 or 3–8 time. It closely resembles the ECOSSAISE (*q.v.*), and most probably took its origin from the older form of the French *Rigaudon*. E. P.

ANGLEBERT, JEAN HENRY D', chamber-musician to Louis XIV., and author of *Pièces de Clavecin*, etc. (Paris, 1689), a collection of fugues and of airs, some by Lulli, but mostly original, arranged for the harpsichord and organ. One of the pieces, 'Les Folies d'Espagne,' with twenty-two variations, was afterwards similarly treated by Corelli, and has been erroneously supposed to be his composition. The book is also valuable as containing a good account of the *agrémens* used at the time. It is reprinted in vol. xix. of the *Trésor de Pianistes*. M. C. C.

ANGRISANI, CARLO, a distinguished basso, born at Reggio, about 1760. After singing at several theatres in Italy, he appeared at Vienna, where, in 1798 and 1799, he published two collections of 'Notturni' for three voices. In 1817 he sang at the King's Theatre in London with Fodor, Pasta, Camporese, Begrez, Naldi, and Ambrogetti. His voice was full, round, and sonorous. J. M.

ANIMATO or CON ANIMA (Ital.), 'With spirit.' This direction for performance is seldom to be found in the works of the older masters, who usually employed 'Con spirito' or 'Spiritoso.' Haydn and Mozart rarely if ever use it; Beethoven never once employs it. In the whole of Clementi's sonatas, numbering more than sixty, it is only to be found three times. He uses it in the first allegro of the sonata in D minor, Op. 50, No. 2, and in the rondo of the 'Didone abbandonata,' Op. 50, No. 3. In both these cases passages are simply marked 'Con anima.' The third instance is especially interesting as proving that the term does not necessarily imply a quick tempo. The slow movement of his sonata in E flat, Op. 47, No. 1, is inscribed 'Adagio molto e con anima.' Weber frequently uses the term (see his sonatas in A flat and D minor), Chopin employs it in his 1st Scherzo and his E minor Concerto, and it is also to be met with in Mendelssohn—*e.g.* 'Lieder ohne Worte,' Book 5, No. 4, 'Allegro con anima,' symphony of 'Lobgesang' first allegro 'animato' (full score, p. 17). In these and similar cases no quickening of the tempo is necessarily implied; the effect of animation is to be produced by a more decided marking of the rhythmical accents. On the other hand the term is sometimes used as equivalent to 'stretto,' as for instance in the first allegro of Mendelssohn's Scotch Symphony, where the indication 'assai animato' is accompanied by a change in the metronome time from ♩. = 100 to ♩. = 120, or at the close of the great duet in the third act of Auber's 'Haydée,' where the coda is marked only 'animato,' but a quicker time is clearly intended. In this, as in so many similar cases, it is impossible to lay down any absolute rule. A good musician will never be at a loss as to whether the time should be changed or not. See Mendelssohn's letters to Mrs. Voigt, published in *Macmillan's Magazine*, June 1871, p. 129. E. P.

ANIMUCCIA, GIOVANNI, an Italian composer, born at Florence at the end of the 15th or the beginning of the 16th century. He studied music under Claude Goudimel, and in 1555 was made Maestro at the Vatican, retaining that post until his death. He died beyond all question in 1571, for, although Poccianti, in his *Catalogus Scriptorum Florentinorum*, places his death in 1569, Adami, Pitoni, and Sonzonio all give the date 1571. But better than any such authority are two entries in the Vatican Archives, one of his death in March 1571, and the other of the election of Palestrina in his place in April following. There can be no doubt, although his fame and his work were so soon to be eclipsed by the genius of Palestrina, that his music was a great advance upon the productions of the Flemish school. More than one passage in the dedications of his published pieces shows too that he was touched by the same religious spirit of responsibility which filled the soul of Palestrina; and the friendship of Saint Filippo Neri, which they both shared, is alone an indication of that similarity. The saint's admiration of Animuccia may be gauged by his ecstatic declaration that he had seen the soul of his friend fly upwards towards heaven.

Animuccia composed the famous 'Laudi,' which were sung at the Oratorio of S. Filippo after the conclusion of the regular office, and out of the dramatic tone and tendency of which the 'Oratorio' is said to have been developed. Hence he has been called the 'Father of the

Oratorio.' It is strange that a form of music which Protestantism has made so completely its own should have been adopted, even to its very name, from the oratory of a Catholic enthusiast in the later ages of the Church's power.

Some of the 'Laudi' were published in 1563 (Dorico), 1570 (Blado); a first book of masses appeared in 1567, a magnificat in 1568, and madrigals in 1547, 1551, 1554, and 1565. Martini inserted two of his 'Agnus' in his 'Esemplare'—also reprinted by Choron, *Principes*, vol. v. Two movements from the four-part mass, 'Conditor alme siderum,' part of a magnificat, and a madrigal in five parts, are in the first volume of Torchi's *L'Arte musicale in Italia.* But the bulk of his compositions is probably in MS.; many are in the library of the Sistine Chapel.

Of the rapidity with which he wrote some proof is afforded by an extract quoted both by Baini and Fétis from the Vatican Archives. It is an order to the Paymaster of the Chapter to pay Animuccia twenty-five scudi for fourteen hymns, four motetti, and three masses, all of which are shown in the order itself to have been composed in less than five months. E. H. P.

ANIMUCCIA, Paolo, brother of the foregoing, but whether older or younger does not appear. Pitoni takes upon himself to doubt the relationship altogether; but Poccianti, who was their contemporary, distinctly affirms it, speaking of Paolo as 'Animuccia, laudatissmi Joannis frater.' He was made Maestro at the Lateran on the removal of Rubino to the Vatican in 1550, and held the post till 1552, when he was succeeded by Lupacchini. Pitoni insists that he remained at the Lateran from 1550 to 1555; but the 'Libri Censuali' are against him. Baini, however, hints that it is possible that he may have occupied the post a second time temporarily in 1555, just before the election of Palestrina, and that this may have misled Pitoni. He died, according to Poccianti, at Rome in 1563. He left but little printed music behind him. Madrigals of his appear in many of the miscellaneous collections published between 1551 and 1611. See Dr. Emil Vogel's *Bibl. weltl. Vocalmus. Italiens.* There is a motet of his in a Collection of Motetti published at Venice in 1568; and Barrè of Milan published three of his madrigals in a miscellaneous volume in 1558. E. H. P.

ANNA AMALIA, Duchess of Saxe-Weimar, born at Brunswick, Oct. 24, 1739, and learned music from the conductors of the ducal chapel at Weimar. She composed the music in Goethe's melodrama of 'Erwin und Elmire,' a notice of which will be found in the *Teutscher Mercur*, May, 1776. The duchess had fine taste, and to her support is greatly due the excellence of the music in the Weimar theatre about 1770. She died April 10, 1807. F. G.

ANNA AMALIA, Princess of Prussia, sister of Frederick the Great, born Nov. 9, 1723, was a pupil of Kirnberger; she is the composer of a cantata by Ramler, 'Der Tod Jesu,' the same which was set to music by Graun. The princess was an able contrapuntist, and her style is full of vigour and energy, as may be seen from a portion of her cantata which is included in Kirnberger's 'Kunst des reinen Satzes.' She is also said to have played the clavier with great taste and ability. She died at Berlin, March 30, 1787. F. G.

ANNA BOLENA, opera by Donizetti; libretto by Romani; produced at Milan, Dec. 26, 1830, in Paris, July 8, 1831, and in London.

ANNIBALE, called ANNIBALE PADOVANO, a famous contrapuntist of the 16th century, born at Padua about 1527. From 1552 till 1566 he was organist of St. Mark's, Venice, and after the latter year he became capellmeister to the Austrian Archduke Carl at Gratz. He was still in that position in 1573, and seems to have died before 1604. A book of vocal 'ricercari' (four parts) was published in Venice, 1556, a volume of madrigals (five parts) in 1564 by Gardano, a book of motets (five and six parts) in 1567, a volume of masses in five parts in 1573, and 'Toccate e Ricercari' for organ in 1604. Madrigals by him appear in many of the miscellaneous collections (see Vogel, *Bibl. weltl. Vocalmus. Italiens*), and motets by him in MS. collections are mentioned in Eitner's *Quellen-Lexikon.*

ANNIBALI, Domenico, an Italian sopranist at the court of Saxony; was engaged by Handel for his opera at London in the autumn of 1736, and made his début in 'Arminio.' He appeared next in 'Poro,' introducing three songs, not by Handel, which probably he had brought with him from Italy to display his particular powers — an example frequently followed since his day. He performed in the cantata 'Cecilia, volgi,' and sang the additional song, 'Sei del ciel,' interpolated by Handel between the first and second acts of 'Alexander's Feast.' In 1737 he performed the part of Justin in the same master's opera of that name, and that of Demetrio in his 'Berenice.' After that his name does not appear again. J. M.

ANSANI, Giovanni, born at Rome about the middle of the 18th century, was one of the best tenors of Italy. In 1770 he was singing at Copenhagen. About 1780 he came to London, where he at once took the first place; but, being of a most quarrelsome temper, he threw up his engagement on account of squabbles with Roncaglia. He returned the next year with his wife, Maccherini, who did not succeed. He sang at Florence in 1784, at Rome the autumn of the same year, and elsewhere in Italy; and finally retired to Naples at the age of 50, where he devoted himself to teaching singing. He was still alive in

1815. He was a spirited actor, and had a full, finely-toned, and commanding voice. Dr. Burney says it was one of the sweetest yet most powerful tenors he ever heard; to which, according to Gervasoni, he added a very rare truth of intonation, great power of expression, and the most perfect method, both of producing the voice and of vocalisation.

Ansani was known also as a composer of duets and trios for soprano and bass, with a basso-continuo. Gerber reports that an opera of his composition, called 'La Vendetta di Minos,' was performed at Florence in 1791. The date of his death is not known. J. M.

ANSWER. An answer in music is, in strict counterpoint, the repetition by one part or instrument of a theme proposed by another. In the following chorus from Handel's 'Utrecht Jubilate'

a and *c* are the theme, and *b* and *d* the successive answers. In Germany the theme and answer are known as *dux* and *comes*, or as *Führer* and *Gefährte*. (See the articles CANON, COUNTERPOINT, and FUGUE.)

The word is used in looser parlance to denote such replies of one portion of a phrase to another, or one instrument to another, as occur in the second subject of the first movement of Beethoven's 'Sinfonia Eroica':—

throughout the Scherzo of Mendelssohn's 'Scotch Symphony,' and frequently elsewhere. G.

ANTEGNATI of Brescia. This family were amongst the earliest famous organ-builders in Italy in the 15th and 16th centuries. At the latter period they had already built more than 400 instruments. V. DE P.

[One of the family, Costanzo, born 1557, composed two books of masses, psalms, and madrigals; three *ricercari* for organ are contained in vol. iii. of *L'Arte Musicale in Italia*.]

ANTHEM (Gr. *Antiphona;* Ital. and Span. *Antifona;* Fr. *Antienne*). The idea of responsive singing, choir answering to choir, or choir to priest, seems inherent in the term, and was anciently conveyed by it; but this, as a necessary element of its meaning, has disappeared in our modern Anglicised synonym 'anthem.' This word—after changing its form from antefne to antem, and by corruption to anthem—has at length acquired a meaning equally distinctive and widely accepted. It now signifies a musical composition, or sacred motet, usually set to verses of the Psalms, or other portions of Scripture, or the Liturgy, and sung as the culminating point of the daily ritual-music of our English Church. (See also CATHEDRAL MUSIC.)

Anthems are commonly described as either 'full,' 'verse,' 'solo,' or 'for a double choir'; the two former terms correspond to 'tutti' and 'soli' in current technical phraseology. In the verse anthem the solos, duets, and trios have the prominent place; and in some the chorus is a mere introduction or finale.

Nothing can be more various in form, extent, and treatment than the music of 'the anthem' as at present heard in churches and cathedrals. Starting at its birth from a point but little removed from the simplicity of the psalm- or hymn-tune, and advancing through various intermediate gradations of development, it has frequently in its later history attained large dimensions; sometimes combining the most elaborate resources of counterpoint with the symmetry of modern forms, together with separate organ, and occasionally orchestral, accompaniment. In its most developed form the anthem is peculiarly and characteristically an English species of composition.

The recognition of the anthem as a stated part of divine service dates from early in Elizabeth's reign; when were issued the Queen's 'Injunctions,' granting permission for the use of 'a hymn or such like song in churches.' A few years later the word 'anthem' appears in the second edition of Day's choral collection, entitled 'Certain Notes set forth in four and five Parts to be sung at the Morning and Evening Prayer and Communion'; and at the last revision of the Prayer Book in 1662 the word appeared in that rubric which assigns to the anthem the position it now occupies in Matins and Evensong. Only one year later than the publication of the 'Injunctions' Strype gives probably the earliest record of its actual use, at the Chapel Royal on mid-Lent Sunday, 1560: 'And, Service concluded, a good Anthem was sung.' (The prayers at that time ended with the third collect.) Excepting during the Great Rebellion, when music was banished and organs and choir-books destroyed, the anthem has ever since held its place in choral service. At the present day, so far from there being any prospect of its withdrawal, there seems to exist an increasing love for this special form of sacred art, as well as an earnest desire to invest its performance always, and particularly on festivals, with all attainable completeness and dignity.

Ever since the Reformation, anthems have been composed by wellnigh all the eminent masters which this country has produced, from Tye and his contemporaries onwards to Gibbons, Purcell, Boyce, Attwood, Sterndale Bennett, the Wesleys, Goss, and Stainer. The history

of the anthem accordingly can only be completely told in that of music itself. The following attempt at classification, and references to examples, may serve in some measure to illustrate the subject.

Early School, 1520-1625.—Redford, Tye, Tallis, Byrd, Gibbons. Redford's 'Rejoice in the Lord,' Tye's 'I will exalt Thee, O Lord,' Tallis's 'I call and cry,' and 'All people that on earth do dwell,' are good examples. Byrd's 'Bow Thine ear' and 'Sing joyfully,' Gibbons's 'Hosanna,' 'Lift up your heads,' 'O clap your hands together,' and 'Almighty and everlasting God,' are assuredly masterpieces of vocal writing, which can never grow out of date. Most of the anthems of this period are 'full'; 'verse' or 'solo' anthems, however, are at least as old as the time of Gibbons. Sir F. A. Gore Ouseley did good service to the cause of church music and the memory of our 'English Palestrina' by his publication of a *Collection of the Sacred Compositions of Orlando Gibbons*. In this interesting and most valuable work are twelve 'verse' anthems, some of which have solos; none of these are contained in Boyce's *Cathedral Music*, and all may probably be reckoned among the earliest known specimens of this kind of anthem. The employment of instruments in churches as an accompaniment to the singers dates as far back as the 4th century, when St. Ambrose introduced them into the cathedral service at Milan. Later on, some rude form of organ began to be used; but only to play the plain-song in unison or octaves with the voices, as is now often done with a serpent or ophicleide in French choirs. It seems to be beyond doubt that the use of some kind of instrumental accompaniment in churches preceded that of the organ. During our 'first period' it would seem that anthems when performed with any addition to the voices of the choir were always accompanied by such bow instruments as then represented the infant orchestra. 'Apt for viols and voices' is a common expression on the title-pages of musical publications of this age. The stringed instrument parts were always in unison with the voices, and had no separate and independent function, except that of filling up the harmony during vocal 'rests,' or occasionally in a few bars of brief symphony. Before the Restoration, according to Dr. Rimbault, 'verses' in the anthems 'were accompanied with viols, the organ being used only in the full parts.' [See Arkwright's *Old English Edition*, vol. xxii. preface.] The small organs of this period were commonly portable; a fact which seems to indicate that such instrumental aid as was employed to support the singers was placed in close proximity to them: an arrangement so natural, as well as desirable, that it is surprising to find it ever departed from in the present day.

Second Period, 1650-1720.—Pelham Humfrey, Wise, Blow, Henry Purcell, Croft, Weldon, Jeremiah Clarke. Such great changes in the style and manner of anthem-writing are observable in all that is here indicated, that a new era in the art may be said to have begun. Traceable, in the first instance, to the taste and fancy of Humfrey and his training under Lulli, this was still more largely due to the renowned Purcell, whose powerful genius towers aloft, not only among his contemporaries, but in the annals of all famous men. The compositions of this period are mostly distinguished by novelty of plan and detail, careful and expressive treatment of the text, daring harmonies, and flowing ease in the voice parts; while occasionally the very depths of pathos seem to have been sounded. The following may be mentioned as specimens of the above masters. 'Hear, O heavens,' and 'O Lord my God,' Humfrey; 'Prepare ye the way,' and 'Awake, awake, put on thy strength,' Wise; 'I was in the Spirit,' and 'I beheld, and lo!' Blow; 'O give thanks,' 'O God, Thou hast cast us out,' and 'O Lord God of Hosts,' Purcell; 'God is gone up,' 'O Lord, I will praise Thee,' and 'Hear my prayer, O Lord,' Croft; 'In Thee, O Lord,' and 'Hear my crying,' Weldon; and 'I will love Thee' and 'O Lord God of my salvation,' Clarke. While all these pieces are more or less excellent, several of them can only be described in the language of unreserved eulogy. As the 'full' anthem was most in vogue in the former period, so in this the 'verse' and 'solo' anthem grew into favour. It seems to have been reserved for Purcell, himself a 'most distinguished singer,' to bring to perfection the airs and graces of the 'solo' anthem.

During this period instrumental music began to assume new importance, and to exercise vast influence upon the progress of the art.

Some interesting notices of this important change and of the general performance of anthems in the Chapel Royal may be gleaned from the diaries of Pepys and Evelyn. To quote a few: Pepys, speaking of Christmas Day there in 1662, says, 'The sermon done, a good anthem followed with vialls, and the King came down to receive the Sacrament.' Under the date Nov. 22, 1663, recording his attendance at the chapel, the writer says, 'The anthem was good after sermon, being the fifty-first psalme, made for five voices by one of Captain Cooke's boys, a pretty boy, and they say there are four or five of them that can do as much. And here I first perceived that the King is a little musical, and kept good time with his hand all along the anthem.' Evelyn, on Dec. 21, 1662, mentions his visit to the chapel, and records it in the following important passage:—'One of his Majesty's chaplains preached; after which, instead of the

ancient, grave, and solemn wind music accompanying the organ, was introduced a concert of twenty-four violins between every pause, after the French fantastical light way, better suiting a tavern, or playhouse, than a church. This was the *first* time of change, and now we no more heard the cornet which gave light to the organ; that instrument quite left off in which the English were so skilful!'

The development of the simple stringed quartet of Charles the Second's royal band was rapid and important. Purcell himself wrote trumpet parts to his celebrated 'Te Deum,' and in 1755 Boyce added hautboys, bassoons, and drums to the score, besides altering it in many other ways. Handel's Chandos anthems were variously instrumented; amongst them, in addition to the stringed quartet, are parts for flutes, oboes, bassoons, and trumpets; though all these instruments are not combined in any single piece. After this, with Haydn and Mozart shining high in the musical firmament, it was but a short and easy step to the complete grand orchestra of Attwood's coronation anthems.

THIRD PERIOD, 1720-1845.—Greene, Boyce, W. Hayes, Battishill, Attwood, Walmisley. At the beginning of this period the anthem received little accession of absolute novelty; yet, probably owing to the influence of Handel, it found able and worthy cultivators in Greene and several of his successors. 'I will sing of Thy power,' and 'O clap your hands,' Greene; 'O give thanks,' and the first movement of 'Turn Thee unto me,' Boyce; with 'O worship the Lord,' and 'Praise the Lord, O Jerusalem,' Hayes, are admirable examples of these several authors. To Battishill we owe one work of eminent and expressive beauty: his 'Call to remembrance' seems like a conception of yesterday, so nobly does it combine the chief merits of our best modern church composers with the skill and power of the elder masters. 'Withdraw not Thou,' and 'Grant we beseech Thee,' Attwood, with 'Remember, O Lord,' and 'O give thanks,' Walmisley, belong almost to the present day. [The melodious music of Sir John Goss, and the noble series of anthems by Dr. S. S. Wesley, may be held to close the canon of English anthem-music: individual things of beauty and dignity have been written by Stainer, Parry, Stanford, and others, but for the most part modern anthems are not remarkable either for spontaneity or power.]

The number of anthems composed previously to the last hundred years, and scattered among the MS. part-books of cathedral libraries, considerable though it be, represents but imperfectly the productive powers of the old-English school. Of the seventy-one anthems written by Blow, and sixty by Boyce, as composers to the Chapel Royal, how few remain, or at least are accessible! And, to glance farther back, where are the missing outpourings of the genius of Orlando Gibbons, or the numerous 'composures' of all his fertile predecessors? The principal treasures actually preserved to us are contained, for the most part, in Day's *Collection*, already mentioned, Barnard's *Church Music*, the volumes of Tomkins, Purcell, Croft, Greene, and Boyce, the collections of Boyce, Arnold, and Page in print, and of Aldrich, Hawkins, and Tudway in MS., together with that of the twenty-two anthems of the Madrigalian era, edited by Dr. Rimbault for the Musical Antiquarian Society, two of the three volumes of the Motet Society's publications, and Sir F. Ouseley's edition of Gibbons already mentioned.

Foremost among all foreign contributions to our national school of church music must be placed the twelve anthems written by Handel for his princely patron the Duke of Chandos. Standing apart from any similar productions composed on English soil to texts from the English Bible and for the chapel of an English nobleman, these works of England's great adopted son may justly be claimed as part of her rich inheritance of sacred art. Belonging to a class suited for special occasions are the Funeral and Coronation anthems of the same master. These, together with Mendelssohn's stately yet moving psalms and anthems—some of them also composed to English words—may be legitimately adopted as precious additions to our native store of choral music.

Widely different from such genuine compositions are those adaptations, in the first instance from Handel by Bond, and later on from Masses and other works, which have found their way into use in this country. Whether in these we regard the application of strange words to music first inspired by other and widely different sentiments, or the affront to art involved in thus cutting and hacking the handiwork of a deceased master (even in his lightest mood) for the sake of pretty phrases or showy passages—which, however appropriate to their original shape and purpose, are palpably out of keeping in an Anglican service, as well as unsuited to our churches and their simpler executive means—such adaptations are radically bad, and repugnant to all healthy instincts and true principles of feeling and taste.

While many fine examples of eight-part writing exist among the anthems of Gibbons, Purcell, and various later composers, it is much to be desired that the plan of writing for two choirs, treated *antiphonally*, were more cultivated among us than has hitherto been the case. The ample spaces and acoustical properties of our cathedrals and large churches are eminently suited to enhance the effects belonging to such a disposition of voices; while the attendance of trained and self-dependent bodies of singers would ensure all necessary

point and firmness of attack in performance. In this direction, and in the employment of an independent *obbligato* accompaniment for organ, orchestra, or both combined, probably lie the most promising paths for the rising school of musicians who aspire to distinction as composers of the anthem. E. G. M.

ANTICIPATION is when a part of a chord about to follow is introduced beforehand. Thus it has been very customary in a perfect cadence at the end of a strain, to anticipate, before the conclusion of the dominant harmony, one of the notes of the tonic or following chord. This is very common in the old masters, as in the following example from the 'Messiah':—

It is considered a grace of style by modern singers to give the anticipated note with peculiar deliberation and emphasis.

The following passage from Handel's 'Funeral Anthem' contains an anticipation of two notes in the closing chord.

Sir F. A. Gore Ouseley (*Harmony*, p. 204) was of opinion that the third note, G, of the first soprano is also a sort of anticipation of the succeeding chord.

Beethoven has many striking examples of anticipation of a quite different and bolder kind. Thus, in a well-known passage in the last movement of the C minor Symphony, the basses, first with the drums alone and then with the stringed instruments, anticipate the harmony of the great crash of the Allegro four bars before it breaks in (see the original 8vo score, p. 150).

There is a similar anticipation of four bars at the beginning of the last movement of the Pastoral Symphony.

In the first movement of the 'Sinfonia Eroica,' just before the reprise of the principal subject, there is an anticipation of four bars of a melody, still more daring because it is more completely separated from the part anticipated.

This is a musical illustration of the adage, 'Coming events cast their shadows before,' and it is difficult to explain it on any other principle. (See HARMONY.) W. P.

ANTIGONE of Sophocles. Mendelssohn in Sept. 1841 composed music—Introduction and seven numbers (Op. 55)—to Donner's version. First performance at New Palace, Potsdam, Oct. 28, 1841; first public ditto at Berlin Opera, Nov. 6. It was brought out at Covent Garden on Jan. 2, 1845.

ANTINORI, LUIGI, was born at Bologna about 1697. He was one of the best tenor singers of the beginning of the 18th century, being gifted with a voice of pure and penetrating quality, and having acquired an excellent method of using it. He came to London in 1725 and sang in 'Elisa,' an anonymous opera; and in 'Elpidia,' by Vinci and others, a pasticcio given by Handel, in which Antinori took the place of Borosini, who sang in it at first. In the season of 1726 he appeared in Handel's 'Scipio' and 'Alessandro.' After that season his name does not appear again. J. M.

ANTIPHON. The earliest kind of Psalmody was that called 'responsorial,' in which the psalm was sung by a solo voice with a congregational refrain at intervals. (See RESPOND.) But there grew up alongside with it in the East at an early date the rival system of 'antiphonal' psalmody, in which the singing was done by two alternating choirs, and the refrain, instead of being a mere brief tag, was a definite melody. This method is said to have been begun in Antioch in the 2nd century by St. Ignatius after seeing a vision of angels engaged in antiphonal singing (Socrates, *H.E.* vi. 8), but it is more probable that it began in the middle of the 4th century there, and spread very rapidly through both East and West (Theodoret, *H.E.* ii. 19). To the latter it came under the influence of the great St. Ambrose, Bishop of Milan. The word 'antiphon' had already before this come to be used for a refrain in psalmody, and now these two usages coalesced: thus the antiphonal psalmody came to denote the singing of psalms by two choirs alternately, and properly speaking, by male voices alternating with women's or boys' voices, in such a way that an antiphon melody introduced the psalm and was also repeated as a refrain after each verse.

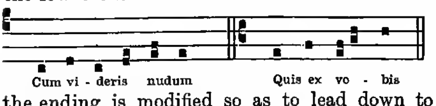
In the course of time changes were made: for the sake of brevity either the repetition of the refrain was cut down, or the psalm itself was shortened. In the Liturgy the psalm of the Introit-antiphon was ultimately reduced to one verse, while at the 'Communion' the psalm dis-

appeared altogether, leaving only the antiphon; in the Divine Service the psalms as a rule remained intact, being of the essence of the Service and not incidental as at Mass, but the antiphon came to be sung only at the beginning and at the end of the psalm, and beyond this too, the singing of it at the opening was in most cases restricted to the first two or three words. Thus in the later medieval and in modern Service-books the antiphonal psalmody is found in use at various stages of decay, and it is only as a rule in processions or where psalms are sung during the performance of a somewhat protracted ceremony, such as the distribution of candles or ashes, that it survives in its full form.

The use of the term antiphon has gone out in connection with the regular music of the Mass, though the Introit and the Communion, and in a sense the Offertory too, are antiphons. It is now specially connected with the psalmody of the Breviary offices, which, as the responsorial psalmody which was formerly there was cut down into mere brief RESPONDS (*q.v.*), became almost entirely antiphonal.

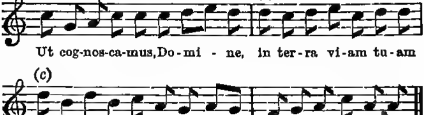
There is an intimate and necessary connection between the antiphon and the psalm-tone; naturally they must belong to the same mode, and therefore the mode of the antiphon-melody determines the tone to which the psalm is to be sung; moreover, since the antiphon is a refrain, it is essential that there should be a correspondence between its opening and the ending of the tone; it was the work of the Tonals, which were first drawn up at the time of the great musical reforms of the 8th and 9th centuries, to lay down methodical rules to secure this correspondence; to group the antiphons by their modes, then to group the antiphons of each mode according to their openings, and then to secure that they should be allied with the right tone and with a suitable ending. One instance may be quoted to show the way in which the tone ending was made to correspond with the opening of the antiphon. In the fourth mode the normal ending of the tone is thus

but in the case of antiphons which begin on the low C such as



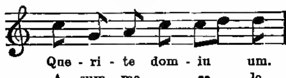
the ending is modified so as to lead down to the low note of the antiphon thus

The antiphons are, as may have been already gathered, not all independent melodies, but in many cases a whole group was formed upon the same melody, which was modified, in the palmy days, with consummate skill, so as to be exactly suited to each text with which it was allied. The following instances will show one of the commonest of these themes, a transposed melody of the fourth mode, and some of the modifications which it undergoes in the course of being adapted to various texts.

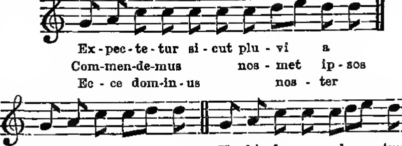


Phrase (*a*) admits both of expansion and compression; the type given above is, however, a very full form, and the phrase is not often expanded much beyond those limits, though it is permissible to repeat the note C in the middle of the phrase oftener if necessary, *e.g.*, for the words 'Crastina die delebitur.'

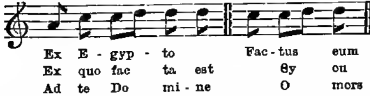
The shortening of the phrase is done in various ways; perhaps the commonest full form of phrase (*a*) is this:—



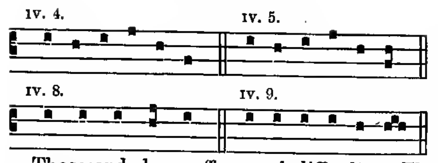
If further compression is needed, the opening notes are left out; and this is also done for the sake of accent, since it is essential that the C in the middle of the phrase should begin with an accented syllable. Consequently a number of forms begin with the G, because the first strong accent is on the third syllable of the words, thus:—



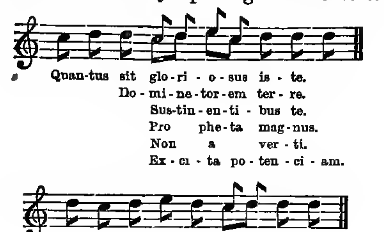
Nor does the possibility of compression end here, for others begin, in rarer cases, on the A, or even on the C itself; in these cases naturally the compression is dictated to a considerable extent by the requirements of the words for the second phrase:—



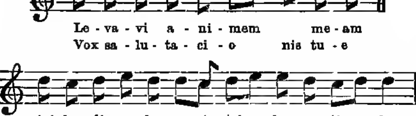
These openings are connected with the endings of the tone. So that the antiphons which begin with the C have the fourth ending; those which begin with G the fifth, those which begin with A the ninth; and those which begin on the second C the eighth.



The second phrase offers much difficulty. The melody is treated with great freedom, the accents are freely altered, and the notes grouped together; if necessary a passing note is inserted.

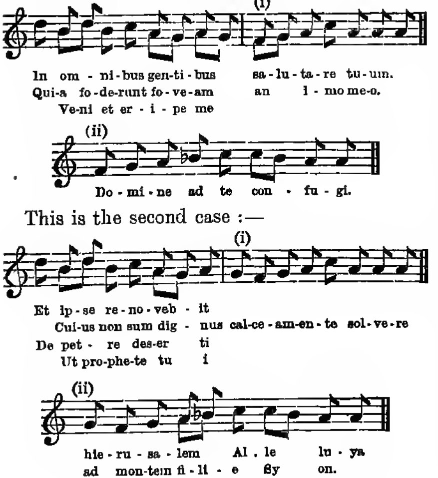


These show the normal modifications; others are rarer, such as the following:—

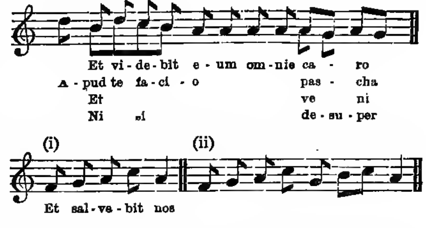


In the third phrase there are two main cases to be considered: (i) when the cæsura comes between G and F; and (ii) when it comes a note earlier, *i.e.*, between A and G. Also in the second half there are two alternative endings.

This is the first case:—



There are a considerable number of cases where the opening notes of this phrase are a descending scale, caused by putting the C before the B, thus:—



The last instance gives an unusual ending, but one which is worth notice. The following also is noticeable as a useful expansion of the ending:—

An analysis such as this throws much light on the nature of antiphons and the principles of those who made them.

To a certain extent antiphons continued to have an existence independent of psalmody: thus the old Roman *cantilena* comprised a number of long processional antiphons, such as the well-known 'Deprecamur te,' which was sung by St. Augustine and his companions at their first coming to England: at a much later date a new set of independent antiphons arose, such as the 'Salve Regina' and the 'Alma redemptoris,' written in honour of the Blessed Virgin. These occasionally came to be inserted into the psalmody of the Hours, but their proper place was an independent one: arising in the 12th century, they soon became treated as an appendage to the Hours, and it became customary to sing one of these antiphons of Our Lady at the close of Compline. In this position they lent themselves readily to harmonisation and were constantly sung 'in pricksong.' Thus the Latin *antiphona* (or, as it was called in English, the 'anthem') passed into the English Prayer-book, not in connection with the psalmody—for all such use of antiphons was ruthlessly cut away—but in the form of an independent musical composition in parts. (For further details as to this interesting transition see ANTHEM.) W. H. F.

ANTIPHONAL (ANTIPHONER). This name has in course of time been applied to two of the Latin Service-books. Antiphons were in use both at Mass and at the Hour services, and therefore it was suitable as a name for the book containing the music for both or either of these two. Originally it oftenest denoted the first, and the 'Antiphonale missarum' was

the regular name in the earlier days at Rome for the book containing the antiphons, and the other music as well, which was sung at Mass. When, however, the two chief antiphons of the collection ceased to be popularly called antiphons, and were known simply as the Introit (or Office) and the Communion, the name became an unsuitable one; it was then transferred to the great collection of antiphons required for the Breviary services, and corresponded to the *Responsoriale*, which contained the responds: the book of Mass music then was commonly called the 'Cantatorium.' The Franks, however, called this *Graduale*, and the whole Music of the Hours *Antiphonale*, and their custom conquered, so that all through the later middle ages 'Antiphonal' is the name for the collection of antiphons, responds, etc., sung at the Hours, and 'Gradual or Grayle' the term for the book of Mass music. W. H. F.

ANTIQUIS, GIOVANNI D', lived in the second half of the 16th century; director of music in the church of St. Nicholas at Bari in the kingdom of Naples, and editor of two collections—*Villanelle alla Napolitana, a tre voci, di diversi musici di Bari* (two books, Venice, 1574). His own contribution consists of seven madrigals in the first book and six in the second. See Vogel, *Bibl. der weltl. Vocalmus. Italiens.* Fétis mentions a similar collection—*Il primo libro di canzonette a due voci, da diversi autori di Bari* (Venice, 1584)—of the works of local composers, 17 in all, few if any of whom are known elsewhere, but no copy is known to exist. The first of the two collections is in the Munich Library. M. C. C.

A PIACERE (Ital.), 'At pleasure.' An indication to the performer to use his discretion as to time. A rallentando is almost always implied.

APOLLONICON. The name given to a large chamber organ of peculiar construction, comprising both keyboards and barrels, erected by Messrs. Flight and Robson, organ-builders, and for many years publicly exhibited by them at their rooms in St. Martin's Lane. Prior to building the Apollonicon, Messrs. Flight and Robson had constructed, under the inspection of Purkis, the organist, a similar but smaller instrument for Viscount Kirkwall. This instrument, being exhibited at the builders' factory and attracting great attention, induced its fabricators to form the idea of constructing a larger instrument upon the same plan for public exhibition. They accordingly in 1812 commenced the building of the Apollonicon. They were engaged nearly five years in its construction, and expended £10,000 in perfecting it.

The instrument contained about 1900 pipes, the lowest (twenty-four feet in length and twenty-three inches in aperture) sounding GGG, and the highest sounding a'''. There were forty-five stops, several of which gave excellent imitations of the tones of the wind instruments of a complete orchestra, viz. flute, oboe, clarinet, bassoon, trumpet, horn, and trombone. A pair of kettle-drums were enclosed within the case, and struck by machinery. The manuals were five in number, a central one comprising a scale of five octaves, and four others, two on either side of the central one, each having a scale of two octaves. To the central manual were attached a swell and some composition pedals, and also a pedal key-board of two octaves. The manuals were detached from the body of the organ, so that the players sat with their faces to the audience and their backs to the instrument. The barrels were three in number, each two feet in diameter and eight feet long, and each acting on a distinct division of the instrument. In their revolution they not only admitted the wind to the pipes, but regulated and worked the stops, forming by instantaneous mechanical action all the necessary combinations for producing the various gradations of power. To secure the means of performing pieces of greater length than were usually executed by barrels, spiral barrels were introduced, in which the pins, instead of being arranged in circles, were disposed in spiral lines. The instrument, with the exception of the keyboards, was enclosed in a case twenty feet wide and deep, and twenty-four feet high. The mechanical action of the Apollonicon was first exhibited in June 1817, when the barrels performed the overtures to Mozart's 'Clemenza di Tito' and Cherubini's 'Anacreon.' In November following a selection of sacred music was played on the keys by Purkis. The mechanical powers of the instrument were for nearly a quarter of a century exhibited daily, and on Saturday afternoons Purkis performed selections of music on the keys. For some time annual evening performances were given under the superintendence of Thomas Adams.

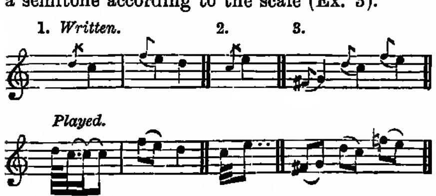
The performance of the overture to 'Oberon' in particular has been recorded as a perfect triumph of mechanical skill and ingenuity, every note of the score being rendered as accurately as though executed by a fine orchestra. The setting of the music on the barrels was entrusted to the younger Flight, who used for the purpose a micrometer of his own invention. About the year 1840, the exhibition of the instrument having become unremunerative, the Apollonicon was taken down and its component parts employed in the construction of other organs. A lengthened technical description, illustrated by engraved figures, of the instrument made for Lord Kirkwall will be found embodied in the article 'Organ' in Rees's *Cyclopedia*. W. H. H.

APPASSIONATA (Ital.), 'Impassioned.' Best known by its use in 'Sonata appassionata' as a title for Beethoven's Op. 57. The title was not his, but was added by Cranz the publisher, or some one else. He himself only uses the term twice—in Sonatas Op. 106 and 111.

APPLICATIO and APPLICATUR are respectively the ancient and modern German terms for Fingering. See Spitta's *Bach*, i. 600 (English translation, ii. 39 and iii. 385).

APPOGGIATURA (Ital. from *appoggiare*, 'to lean upon'; Ger. *Vorschlag, Vorhalt;* Fr. *Port de voix*). One of the most important of melodic ornaments, much used in both vocal and instrumental compositions. It consists in suspending or delaying a note of a melody by means of a note introduced before it; the time required for its performance, whether long or short, being always taken from the value of the principal note. It is usually written in the form of a small quaver, semiquaver, or demisemiquaver, either with or without a stroke across the stem (Ex. 1).

The appoggiatura may belong to the same harmony as the principal note (Ex. 2), or it may be one degree above or below it. In the latter case it is a so-called 'auxiliary note' (sometimes called 'transient' or 'changing' note—*Wechselnote*), and follows the known rule of such notes, that the lower auxiliary note should be only one semitone distant from the principal note, the upper being either a tone or a semitone according to the scale (Ex. 3).



With regard to its length, the appoggiatura is of two kinds, long and short; the long appoggiatura bears a fixed relation to the length of the principal note, as will be seen presently, but the short one is performed so quickly that the abbreviation of the following note is scarcely perceptible. There is also a difference between the two kinds in the matter of accent; the long appoggiatura is always made stronger than the principal note, while in the case of the short one the accent falls on the principal note itself (Ex. 4).

On this subject authorities would seem to differ, Leopold Mozart, Hummel, and others holding the view advanced above, while Emanuel Bach, Marpurg, and Agricola give the rule that *all* appoggiaturas should be accented. It is however evident that a note which passes away so quickly as a short appoggiatura can scarcely receive any effective accent, and besides this it is doubtful whether the above-named writers may not have intended the rule to refer exclusively to the long appoggiatura (*Vorhalt*), as they often used the word *Vorschlag* for both kinds indiscriminately. Since then there is no accent on the short appoggiatura, the term itself, which means a note *dwelt upon*, seems inappropriate, and accordingly the word 'acciaccatura' has been very generally substituted for it, though properly belonging to another similar kind of ornament. (See ACCIACCATURA.)

The rules relating to the length of the long appoggiatura are three, and are thus given by Türk in his 'Clavierschule':—'Whenever it is possible to divide the principal note into two equal parts, the appoggiatura receives one half' (Ex. 5). 'When the principal note is dotted the appoggiatura receives two-thirds and the principal note one' (Ex. 6). If the principal note is tied to another shorter note, the appoggiatura receives the whole value of the principal note' (Ex. 7). The third rule is commonly though not invariably followed when the principal note is followed by a rest (Ex. 8).

Exceptions to the above rules are met with as follows:—to the first and second rules in Bach and Mozart, who frequently employed an appoggiatura (called by Marpurg 'der kürzeste Vorhalt') which was worth one-third or less of the principal note, but which differed

from the short appoggiatura in being accented (Ex. 9). An exception to the second rule occurs whenever its strict observance would occasion a fault in the harmonic progression (Ex. 10), or when it would interfere with the rhythmic regularity of the passage (Ex. 11). Exceptions to the third rule are of still more frequent occurrence; many passages containing a tied note preceded by an appoggiatura would entirely lose their significance if the rule were strictly adhered to. Taste and experience alone can decide where similar exceptions are admissible.

In the works of some of the earlier composers an appoggiatura is occasionally, though very rarely, to be met with, which although placed before a note capable of being halved, yet receives three-fourths of its value. This appoggiatura was usually dotted (Ex. 12).

9. BACH, 'Passionsmusik.'

MOZART, Fantasia in C minor.

10. BACH, 'Suites Françaises.'

11. SCHUBERT, Rondo, Pianoforte and Violin.

12.

The appoggiatura, whether long or short, is always included in the value of the principal note; if therefore it is applied to a chord it delays only the note to which it belongs, the other notes of the chord being played with it (Ex. 13).

13. BEETHOVEN, Andante in F.

MOZART, Sonata in F.

The manner of writing the appoggiatura bears no very definite relation to its performance, and its appearance is unfortunately no sure guide as to its length. In music of the 17th century, at which period the short appoggiatura appears to have first come into use, it was customary to make use of certain signs (Ex. 14), but as after a time the long appoggiatura was introduced, these were given up in favour of the small note still used. This small note ought always to be written of the exact value which it is to bear, if a long appoggiatura (Ex. 15); or if a short one it should be written as a quaver or semiquaver with a short stroke across the stem in the opposite direction to the hook (Ex. 16).

14. *Written.* *Played.*

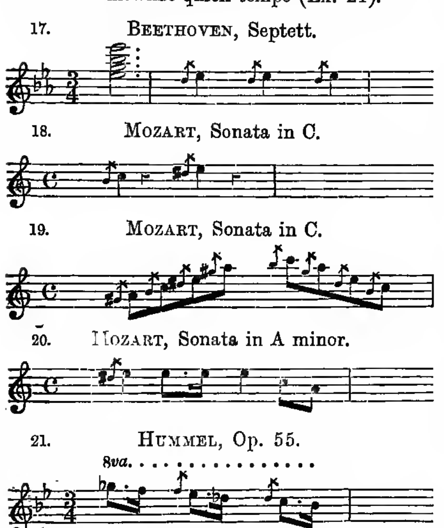
15. 16.

But the earlier writers often wrote the short appoggiatura as a semiquaver or demisemiquaver without the stroke, and in many new editions of old compositions we find the small note printed with the stroke even where it should be played long, while in modern music the semiquaver without the stroke is often met with where the short appoggiatura is obviously intended. In this uncertainty the surest guide is the study of the treatment of the appoggiatura by the great masters in the numerous cases in which they have written it out in notes of the ordinary size (see Beethoven, Bagatelles, Op. 119, No. 4, Bar 2; Mozart, Sonata in C, Hallé's edition, No. 6, Bar 37, etc.), as by analogy we may hope to arrive at

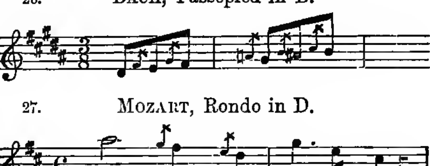
some understanding of their intentions respecting it when we find it merely indicated by the small note.

The following series of examples of the conditions under which the several kinds of appoggiatura are most commonly met with may also be of service in the same direction.

The appoggiatura is short when used before two or more repeated notes (Ex. 17) before detached or staccato notes (Ex. 18), or leaps (Ex. 19), at the commencement of a phrase (Ex. 20), and before groups containing dotted notes in somewhat quick tempo (Ex. 21).

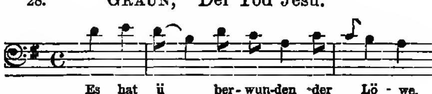


In triplets, or groups of four or more equal notes, the appoggiatura is short (Ex. 22) except in groups of three notes in slow triple time (Ex. 23). The appoggiatura at a distance from its principal note is short (Ex. 24), except sometimes in slow *cantabile* passages (Ex. 25). Appoggiaturas occurring in a melody which ascends or descends by diatonic degrees are *moderately* short (Ex. 26), as are also those which occur in a melody descending by thirds (Ex. 27). Emanuel Bach says of these—'when the appoggiaturas fill up leaps of a third in the melody they are certainly short, but in *adagio* their expression should be smoother, as though representing one of a triplet of quavers rather than a semiquaver.' Türk calls them 'undecided appoggiaturas.'



In groups of two equal notes the appoggiatura is long if in slow tempo or at the end of a phrase (Ex. 28); if otherwise, short (Ex. 29).

28. Graun, 'Der Tod Jesu.'



29. Hummel, 'Pianoforte School.'

When applied to the last note but one of a final cadence the appoggiatura should, according to Emanuel Bach, be short. But later composers have usually preferred the long appoggiatura in these circumstances, especially when accompanied by the seventh of the chord (Ex. 30), or by a part moving in sixths with it (Ex. 31). Beethoven has even lengthened it beyond the value of the principal note, but in this case it is always written as an ordinary note (Ex. 32). When, however, in Haydn, Mozart, and all later composers, the final note of the cadence is *anticipated*, the appoggiatura to the preceding note is short (Ex. 33).

30. Mozart, First Mass.

31. HAYDN, Symphony in E♭.
32. BEETHOVEN, Op. 30, No. 3.
33. MOZART, Sonata in F.

In vocal recitative, at the close of a phrase, or of a section of a phrase, an appoggiatura is often introduced which has the full value of the principal note, and indeed appears in its stead (Ex. 34); such an appoggiatura is often not indicated, but is left to the discretion (or want of discretion) of the singer (Ex. 35). It is more appropriate at the close of the whole recitative than after its component phrases, and is especially so when the melody descends a third or a fourth (Ex. 36).

34. WEBER, 'Der Freischütz.'
35. HAYDN, 'The Seasons.'
36. BACH, 'Passionsmusik.'
HANDEL, 'Messiah.'

When a trill or other ornament appears in combination with an appoggiatura, the latter is long, and the trill is performed on the principal note or on the appoggiatura, according as it is placed above the one or the other (Ex. 37).

37. HAYDN, Sonata in F. TÜRK.

The proper execution of the appoggiatura seems to be most doubtful in the group in which the note bearing the appoggiatura is followed by two or four notes of half its own value. In the majority of such cases the appoggiatura should be long (Ex. 38), and particularly in smoothly flowing passages in moderate or slow tempo (Ex. 39). But there are numerous exceptions, as for example when the employment of the long appoggiatura would alter the rhythm of the passage (Ex. 40), or when (according to Türk) only a single example is present (Ex. 41).

38. BEETHOVEN, Op. 10, No. 3.
MOZART, Sonata in D.
39. MOZART, Sonata in C, Andante.
40. WEBER, 'Der Freischütz.'
41. TÜRK.

In such cases no definite rule can be given, and the question becomes a matter of taste and feeling. F. T.

APPOGGIATURA, DOUBLE (Ital. *Appoggiatura doppia*; Ger. *Doppelvorschlag*; Fr. *Port de voix double*). An ornament composed of two short notes preceding a principal note, the one being placed above and the other below it. They are usually written as small semiquavers.

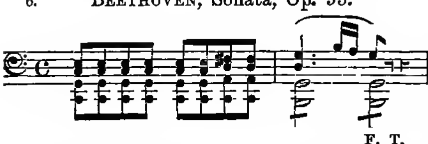
The first of the two may be at any distance from the principal note, but the second is only

one degree removed from it. They have no fixed duration, but are generally slower when applied to a long note (Ex. 1) than when the principal note is short (Ex. 2); moreover, the double appoggiatura, in which the first note lies at a distance from the principal note, should always be somewhat slower than that in which both notes are close to it (Ex. 3). In all cases the time required for both notes is subtracted from the value of the principal note.

The double appoggiatura is sometimes, though rarely, met with in an inverted form (Ex. 4), and Emanuel Bach mentions another exceptional kind, in which the first of the two small notes is dotted, and receives the whole accent, while the principal note becomes as short as the second of the two small notes (Ex. 5).

The dotted double appoggiatura, written as above, is of very rare occurrence; but it is frequently found in the works of Mozart, Beethoven, etc., written in notes of ordinary size (Ex. 6).

6. BEETHOVEN, Sonata, Op. 53.



F. T.

APRILE, GIUSEPPE, born at Bisceglia in Apulia, Oct. 29, 1738, an eminent contralto singer; was educated at the Conservatorio of 'La Pietà' at Naples, and from 1763 sang in all the principal theatres of Italy and Germany. Dr. Burney heard him at Naples in 1770 and says that he had a weak and unequal voice, but was perfectly in tune, had an excellent shake, and great taste and expression. He was an excellent teacher of singing, and was one of Cimarosa's masters. He composed songs, but his best work, a system of solfeggi (London and Paris), has passed through many editions and is still valued. It is included in Peters' edition. He died in 1814. M. C. C.

A PRIMA VISTA (Ital.), 'At first sight.'

A PUNTA D'ARCO (Ital.), 'With the point of the bow' (in violin music).

ARABESQUE (Germ. *Arabeske*). Originally an architectural term applied to ornamentation in the Arabic style, whence its name. (1) The title has been given, for what reason is not very clear, by Schumann to one of his pianoforte pieces (op. 18), which is written in a form bearing some analogy to that of the rondo, and it has been since occasionally used by other writers for the piano. (2) The word 'Arabesque' is sometimes used by writers on music to express the ornamentation of a theme. Thus von Bülow, in his edition of Beethoven's sonatas, in a note on the adagio of the sonata in B♭, op. 106, speaks of the ornaments introduced at the return of the first subject as 'diese unvergleichlich seelenvollen Arabesken'—these incomparably expressive Arabesques. E. P.

ARAJA, FRANCESCO, born at Naples about 1700, died about 1770, a figure of some importance in the history of Russian opera. He was maestro di cappella at St. Petersburg from about 1734 to 1759. Fétis and Clément enumerate 11 operas, all but two produced in Russia. One of them, 'Procris and Cephalus' was the first opera ever performed in the Russian language; it was written in 1755 at the desire of the Empress Elisabeth. Riemann mentions an earlier work, *Berenice*, given in Florence in 1730. A Christmas oratorio was written for Bologna, and Araja contributed to a pasticcio on the subject of Orpheus, with Vinci and Porpora, the songs from which were published by Walsh. Separate songs and harpsichord pieces in MS. are mentioned in Eitner's *Quellen-Lexikon*. M.

ARANAZ, PEDRO, a Spanish priest and composer, born at Soria in Old Castile; was appointed towards the end of the 18th century conductor of the choir in the cathedral at Cuença, and died there in 1825 at a considerable age. His church music, which was good, is to be found at Cuença, in the Escurial, and in various churches of Spain; and Eslava has preserved in his 'Lira Sacro-Hispana' an 'Offertorium' for five voices and a 'Laudate Dominum' *a* 6, with strings, horns, and organ. M. C. C.

ARBEAU, THOINOT, priest of Langres in France. His real name was Jehan Tabourot, of which the above is an anagram. He lived about the end of the 16th century, and was the author of a remarkable book, now of excessive rarity, entitled *Orchésographie et Traité en forme de dialogue par lequel toutes personnes peuvent facilement apprendre et pratiquer l'honnête exercise des danses* (Langres: Jehan des Preys, 1589). It contains a great number of French dance-tunes with words fitted to the melodies, and is of great interest and use in the history of dance-music. It was reprinted in facsimile at Paris in 1888. F. G.

ARBÓS, E. FERNANDEZ, born in Madrid, Dec. 25, 1863, the son and grandson of military band-masters. As a child he lived in

Galicia, his parents being natives of that province; but he was entered at the Conservatoire of Madrid at an early age, under Monasterio, the eminent violinist, and when only twelve years old gained various first prizes. Through his master he gained the patronage of the Spanish Royal family, and the opportunity of pursuing his studies abroad; he was at the Brussels Conservatoire for four years, studying the violin with Vieuxtemps, and compositions with Gevaert. After hearing Joachim play, Arbós left Brussels for Berlin, where he became Joachim's pupil for three more years; for some time he was leader of the Berlin Philharmonic Society. On the completion of his studies, Arbós played in all the principal towns of Germany, and after a tour through France, Holland, Belgium, Portugal, and Poland, he accepted the position of professor of the violin at the Hamburg Conservatorium, but only held it for a short time, returning to Madrid at the request of the Queen of Spain, to fill the post of principal professor of his instrument in the Conservatoire where his education had begun. While at Madrid, he did much to encourage the study of the best chamber music, founding a society for its practice. In 1890 he visited London (he had previously led the Glasgow Orchestra under Manns, for a whole winter), and appeared in Jan. 1891, at four concerts given by Señor Albeniz, and subsequently at the Popular Concert of March 9, where he played a duet and Bach's double concerto with Joachim. In all his work as a violinist he has shown the highest and most artistic aims, but his work as a teacher has been even more important. His wide experience of continental schools of music (he had had practical knowledge of no fewer than five Conservatoires) served him in good stead on his appointment as professor of the violin at the Royal College of Music, a post in which he has gained a very high reputation, and has turned out some of the most successful pupils of the college. While his convictions, whether as a player or a teacher, are of the most earnest kind, in his own compositions he excels in work of a lighter vein; his violin pieces, with orchestral accompaniment, are excessively difficult, but most effective, and in these, as well as in his comic opera, 'El Centro de la Tierra,' (produced at Madrid, Dec. 22, 1895) the characteristics of national Spanish music are employed with the happiest effect. He has also written three trios for piano and strings, as well as songs. An orchestral suite is still in MS. M.

ARCADELT, Jacob, one of the most prominent among the distinguished band of Netherland musicians who taught in Italy in the 16th century, and saw the fruit of their labours in the foundation of the great Italian school. Born about 1514 in the Netherlands, he was a singer at the court of Florence before 1539, in which year he was singing-master to the boys at St. Peter's, Rome, and was admitted to the college of papal singers in 1540, remaining there till 1549. Many masses and motets of Arcadelt are among the manuscripts of the papal chapel, but those of his works which were published during his life in Rome were entirely secular, and consisted chiefly of the famous madrigals which placed him at the head of the so-called 'Venetian school' of madrigal writing. Five books of four-part madrigals, each containing forty or fifty separate numbers, were printed in Venice, the three first originally before 1539, when the earliest existing editions appeared with words implying that the contents had appeared before. In that year the fourth book seems to have appeared for the first time, and the fifth in 1544. Many editions of these were published with great rapidity. An excellent copy of the first four books is in the library of the British Museum, and in the same library may be found a few of the many collections of madrigals which contain compositions by Arcadelt. [The first book of the three-part madrigals was printed in Venice, 1542, together with twelve French 'chansons' and six motets. The chansons, with the addition of several others, were reprinted in Paris by Ballard in 1573.] In the year 1555 he entered the service of Cardinal Charles of Lorraine, Duke of Guise, and went with him to Paris, where he probably ended his life. [The results of the latest researches will be found in the *Monatshefte für Musikgeschichte*, xv. 142, and xix. 121; also in the *Vierteljahrschrift*, iii. 234, etc.] In Paris three books of his masses were published in 1557, and other sacred works appear in collections printed after he left Italy. It seems probable, therefore, that he devoted this second or Parisian period of his life to church composition, but it is as a madrigal writer that his name is most celebrated. Burney gives one, 'Il bianco et dolce cigno' (see article Madrigal) in his *History* (iii. 303); and two to Michel Angelo's words 'Deh dimm' Amor,' and 'Io dico che fra voi,' will be found in Gotti's 'Vita di M.' (1875). An Ave Maria has been edited by Sir Henry Bishop, quoted by Mr. Hullah in his musical lectures, printed in the *Musical Times* (No. 183) and transcribed by Liszt, but the authorship is extremely doubtful. A Pater noster for 8 voices is given by Commer, 'Collectio,' vii. 21. J. R. S.-B.

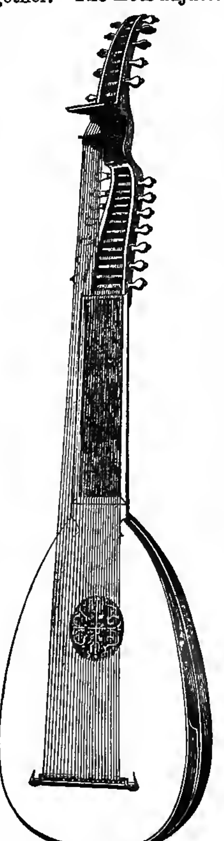
ARCHER, Frederick, born June 16, 1838, at Oxford; in early life was chorister at All Saints, Margaret Street, London; his musical education was received in London and Leipzig. He next became organist of Merton College, Oxford, and in 1873 was appointed to the Alexandra Palace. During the last engagement, on March 4, 1876, he played the pianoforte part of Gade's 'Spring Fantasia' on its

first performance in England. On the resignation of Mr. Weist Hill he became conductor of that establishment, which post he held until 1880. He was also conductor (1878-80) of the Glasgow Select Choir, and director of a provincial opera company. In 1881 he became organist at the Rev. Henry Ward Beecher's church at Brooklyn, U.S.A., and later of the Church of the Incarnation, New York. He founded and edited the *Keynote* in 1885; in 1887 became conductor of the Boston Oratorio Society, and conducted the Pittsburg Orchestra in 1895-98. Mr. Archer is an excellent organist, and has composed many works for that instrument, pianoforte pieces, songs, etc., besides a cantata, 'King Witlaf's Drinking-Horn,' two works, 'The Organ,' a theoretical and practical treatise (Novello & Co.), and 'The College Organist' (Weekes & Co.). A. C.

ARCHLUTE (Fr. *Archiluth*, Ital. *Arciliuto*) a large theorbo or double-neck lute, large especially in the dimensions of the body, and more than 4 feet high; that in the figure being 4 feet 5 inches. The double neck contains two sets of tuning-pegs, the lower—in the subjoined example shown in the Royal Victoria and Albert Museum, South Kensington—holding fourteen, the upper ten. The lower pegbox is for catgut, or sometimes wire, strings in pairs stretched over the fretted fingerboard, and tuned, according to Prætorius ('Syntagma Musicum,' 1618)

The upper pegbox is for single strings, open notes, or diapasons (read an octave lower),

Prætorius gives eight notes for the diapasons, ending at the low D, which leaves eight double or single strings upon the fingerboard. This notation is for his Cammerton, which he says was usual; for his Chorton, rather lower than the modern French pitch, the notation must be transposed a whole tone higher. He calls this variety of bass lute, the Paduan Theorbo, the longer chitarrone being identical with the Roman. There are references to the Archlute in Mersenne ('Harmonie Universelle,' 1636) and Kircher ('Musurgia,' 1650), but not being named in Luscinius (1536) it may be assumed to be of later introduction than that date. It was used in the 17th century in common with the chitarrone and violone (bass viol) for the lowest part in instrumental music and accompaniments, particularly in combination with the clavicembalo for the support of the recitative. Early editions of Corelli's Sonatas had for the bass the violone or arciliuto, and Handel also employed the archlute in 'Giulio Cesare,' 1723. The sound-board, pierced with from one to three ornamental sound-holes, was of spruce, and the vaulted back was built up of strips of spruce or cedar glued together. The frets adjusted along the neck to fix the intervals were of wire or catgut, examples differing. A wealth of ornament was bestowed upon the necks and backs of these beautiful instruments, in common with other varieties of the lute and cither. The chitarrone had a smaller body and much longer neck, and differs so much as to require separate description. In the photographs published by the Liceo Comunale di Musica of Bologna, the application of the names archlute and chitarrone is reversed (see CHITARRONE, LUTE, THEORBO). A. J. H.



ARCO, Italian for 'bow.' As a musical term 'arco' or 'col arco' is employed whenever after a pizzicato passage the bow is to be used again. P. D.

ARDITI, LUIGI, born at Crescentino in Piedmont, July 16, 1822; studied music at the Conservatorio at Milan, and began his career as a violin player. In 1840 he produced an overture, and in the Carnival of 1841 an opera 'I Briganti,' at the Conservatorio. In 1842 he followed these by a second Overture and a 'Sovvenir di Donizetti.' He made his début as director of the opera at Vercelli in 1843, and was made honorary member of the Accademia Filarmonica there. In 1846 he left Italy with Bottesini for the Havannah, where he composed and produced an opera 'Il Corsaro.' He made frequent visits to New York, Boston, and Philadelphia, and amongst other things conducted the opera at the opening of the Academy of Music in New York, and produced a new opera of his own 'La Spia' (1856). The same year he left America for Constantinople, and finally settled in London in 1858 as conductor to Her Majesty's Theatre, under the successive managements of Lumley, E. T. Smith, and Mapleson. Mr. Lumley has left on record his verdict of Signor Arditi, 'than whom, taking all qualities into account, a more able conductor never reigned in this country' (*Reminiscences*, p. 447 note). Arditi took an

Italian company (Piccolomini, Giuglini, etc.) on an artistic tour to Hamburg, Berlin, Dresden, etc., and thus became known and liked by the German public. In the winters of 1871 and 1873 he conducted the Italian Opera at St. Petersburg, and from 1870 he performed the same office each spring at Vienna. [From 1874 to 1877 he conducted the promenade concerts at Covent Garden, dividing his time between London and Vienna. In 1878 he conducted a two-months' season at Madrid. He returned to Her Majesty's Theatre for the season of 1880, the year of the production of 'Mefistofele.' He was connected about the same time with various operatic tours in America organised by Mapleson. In 1885 he was at Covent Garden, and after conducting several provincial tours under Harris, was engaged for the season of 1889. In 1891 he conducted the season of opera at the Shaftesbury Theatre, during which Lago produced 'Cavalleria Rusticana.' In 1892, under the same management at the Olympic Theatre, Arditi was principal conductor, and after a tour with the Carl Rosa Company in 1894, he was engaged for the run of 'Hänsel and Gretel' at Daly's Theatre. He died at Brighton, May 1, 1903.] His compositions, besides those mentioned above, comprise a 'Commemoration Ode,' performed at the Crystal Palace, June 10, 1873. His vocal waltz 'Il Bacio' was a universal favourite. G.

ARENSKY, ANTONY STEPANOVICH, one of the leading composers of the younger Russian school, born at Novgorod, July 31, 1861. He inherited musical talent from both parents; his father, a doctor, played the violoncello, and his mother was an excellent pianist. He studied harmony and composition first with Zikke, and afterwards (1879-82) with Rimsky-Korsakov at the St. Petersburg Conservatorium. Having finished his course with honours, he was appointed professor of harmony and counterpoint at the Moscow Conservatorium in 1882. From 1889 to 1893, Arensky was a member of the Council of the Synodal School of Church-music at Moscow, and for seven years conductor of the concerts of the Russian Choral Society. In 1894 he was recommended by Balakirev for the directorship of the Imperial Chapel at St. Petersburg. In this post he was succeeded by Smolensky in 1901. Arensky's first opera, 'A Dream on the Volga,' was given at Moscow in 1890, with great success. The subject, taken from a play by Ostrovsky, is identical with Tchaikovsky's 'Voyevoda.' In this work Arensky makes considerable use of folk-tunes, which he harmonises and develops most effectively. His operatic style is a compromise between the declamatory and the melodic. A second opera, in one act, 'Raphael,' was composed for the first Congress of Russian Artists held at St. Petersburg in April 1894. A third opera, 'Nal and Damayanti,' was completed in 1899. Both in style and temperament Arenksy shows considerable affinity to Tchaikovsky. He is best known in England by his songs and piano pieces, but more especially by his pianoforte trio in D minor (op. 32), a work full of sincere, elegiac feeling, dedicated to the memory of the great violoncellist, Charles Davidov. As a composer of sacred music Arensky inclines to a florid and cosmopolitan rather than to the strictly ecclesiastical style. Subjoined is a list of his principal works:

OPERAS, CANTATAS, VOCAL MUSIC.

1. A Dream on the Volga. Moscow 1892 (op. 16).
2. Raphael. Opera in one act. St. Petersburg, 1894 (op. 37).
3. Nal and Damayanti. Opera in one act, 1899.
4. Cantata for solo, chorus, and orchestra. Composed for the tenth anniversary of the Coronation (op. 25).
5. The Fountain of Bakhchisarai (poem by Poushkin). Cantata for solo, chorus, and orchestra (op. 46).
6. Songs (op. 6, 10, 17, 21, 27, 38, 44, 49).
7. Chorus for mixed voices, a cappella, 'Anchar' (op. 14)
8. Vocal duets (op. 29, 45).

A considerable quantity of church-music.

INSTRUMENTAL MUSIC.

1. Pianoforte Concerto (op. 2)
2. Symphony, B minor (op. 4).
3. Symphony, A minor (op. 22).
4. Two string Quartets, G major and A minor (op. 11 and 35)
5. Intermezzo for string Orchestra (op. 13).
6. Pianoforte Trio, D minor (op. 32).
7. Fantasia on Russian folk-songs, for Pf. and Orchestra (op. 48)
8. Ballet 'Egyptian Night' (op. 50).
9. Pianoforte Quintet, D major (op. 51).
10. About 100 pieces for piano, including three suites for two pianos, and six pieces for four hands.

THEORETICAL.

1. Guide to the Practical Study of Harmony (German ed. 1900).
2. Guide to the Study of Form, in Vocal and Instrumental Music.

ARETINO, GUIDO. See GUIDO.

ARGHOOL, a wind instrument still used in Egypt, the primitive type of the Chalumeau, and therefore of the modern Clarinet (see CLARINET).

ARGYLL ROOMS. At the commencement of the 19th century there stood in Argyll Street, Oxford Street, a mansion fitted up by Col. Greville for the meetings of a fashionable association termed the Pic-Nics, who had burlettas, vaudevilles, and ballets on a small scale performed there. But the fashionable folk soon deserted the place, and Greville was compelled to seek refuge on the continent, having made over 'The Argyll Rooms' (as he had named them) to one of his creditors, one Slade, who conducted the business of the rooms for several years, letting them for concerts and other entertainments. During his management one of the events of interest which occurred there was a reading by Mrs. Siddons, on Feb. 10, 1813, of Shakespeare's *Macbeth*, for the benefit of the widow of Andrew Cherry, dramatist and actor. In the same year the rooms acquired greater celebrity by being selected by the then newly formed Philharmonic Society as their place of performance. In 1818 the western end of the concert-room falling within the line required for the formation of Regent Street, Slade was awarded by a jury £23,000 as compensation (a sum considered at the time as far beyond the real value of the property), and the whole of the old building was removed and new rooms

erected on the east side of Regent Street at the north-west corner of Little Argyll Street, now 246 Regent Street. The new building was designed by John Nash, and had all the defects of his manner. On the side next Regent Street was a balcony supported by eight heavy and clumsily designed caryatides. The persons by whom the new rooms were erected were twenty-one of the principal professors of music in London, who had formed themselves into an association for the purpose of printing the best music in the best manner, and selling it at a moderate profit. This association, called The Royal Harmonic Institution, occupied the south-western angle of the new building (at the corner of Regent Street and Argyll Place), a circular-fronted erection with a domed roof. The great expense incurred in the erection of the building, joined to other untoward events, soon led to the withdrawal of most of the original speculators, at a loss of about £1800 to each, and the place eventually fell into the hands of two of their body, Welsh and Hawes. After some differences between these two, the concern remained in the hands of Welsh alone. During the Philharmonic Society's tenure of the rooms (old and new), a period of about seventeen years, many events of great interest to musicians occurred there. There, on March 6 and April 10, 1820, Spohr appeared, first as violinist and last as conductor (*Selbstbiog.* ii. 86), when a baton was used for perhaps the first time at an English concert. There also on June 18 following, at his benefit concert, his first wife (Dorette Scheidler) made her only appearance in England (and her last on earth) as a harpist. There, on June 11, 1821, Moscheles made his first appearance in this country; and Liszt's first appearance in England took place there, June 21, 1824. On March 21, 1825, Beethoven's 'Choral Symphony' was given for the first time in England. There, too, Weber, on April 3, 1826, two months before his decease, conducted one of the Philharmonic Society's concerts. And there another great musician first presented himself before an English audience,—on May 25, 1829, the youthful Mendelssohn conducted, at one of the concerts of the Philharmonic Society, his symphony in C minor, and a month later, at the benefit concert of Drouet, the flautist, on midsummer night, June 24, produced for the first time in England his beautiful overture to *A Midsummer Night's Dream*. Besides concerts, the rooms were let for miscellaneous performances and exhibitions. One of the most attractive of the latter was a French exhibition of dramas performed by puppets, called 'The French Theatre du Petit Lazary,' which was given in 1828 and 1829. In 1829-30 the rooms were tenanted by a M. Chabert, calling himself 'The Fire King,' during whose tenure of the place, at 10 o'clock in the evening of Feb. 6, 1830, a fire broke out, which in a short time completely destroyed the building. It was re-edified soon afterwards, but never regained its former reputation. The Philharmonic concerts were removed after the fire to the concert-room of the King's Theatre, and thence to the Hanover Square Rooms, and although a few concerts and other entertainments were occasionally given in the Argyll Rooms the place became by degrees deserted by caterers for public amusement and was, in the course of a few years, converted into shops. W. H. H.

ARIA (Ital.), 'Air.' The word is generally used of the more ambitious musical forms employed in the older operas, so that the English translation is not exactly synonymous with it, as 'air' implies something with a very easily recognisable melody, and as often simple as elaborate. The arias of the time of Handel, when opera was at its worst moment of conventionality, were divided into several classes, and it was a rule that no two arias of the same class were to follow one another. The 'Aria cantabile' consisted of a flowing melody lightly supported, and admitting the introduction of extemporaneous ornament. The 'Aria di portamento' introduced long swelling notes, and ornamentation was considered out of place. The 'Aria di mezzo carattere' was a much more highly developed form than either of the others, and had more variety of treatment. The 'Aria parlante,' with its subdivisions, the 'Aria di nota e parola,' the 'Aria agitata,' and the 'Aria infuriata,' implied a more declamatory style than the others. The 'Aria di bravura,' or 'Aria d'agilità,' was simply a vehicle for display. The 'Cavatina,' in the Handelian times, was a shorter form of 'Aria cantabile'; in later days the absence of a second part was compensated by the addition of a movement in more rapid time, styled the 'cabaletta.' The 'Aria d'imitazione' had reference, in music as well as in words, to some external phenomenon that suggested easily recognised imitations, the 'Aria concertata' had more or less elaborate accompaniment, and the 'Aria senza accompagnamento' none whatever. Of this latter form an example is to be found in Keiser's *Inganno fedele*. The 'Aria all' unisono' is of frequent occurrence in Handel, it was accompanied in unison throughout, and the original form of 'The people that walked in darkness' is a fine example of the class. This classification of the arias is quoted by W. S. Rockstro (*Life of Handel*, pp. 63, 64), from the letters of John Brown, an Edinburgh painter, who discussed the poetry and music of the Italian opera in 1789. M.

ARIETTA, dim. of ARIA. The name of a short air, usually possessing no second part, and of more or less simple kind. The term has been recently applied to a very pretty harpsichord piece in G minor by Leonardo Leo, edited from a MS. in the Conservatorio of Naples, where it is called 'Toccata.' The newer designation, as

well as a good deal of the composition as it now stands, is apparently due to the editor. M.

ARION, the title of a useful collection of madrigals and part-songs published by Laudy and Co. The alternate numbers of the publication, and the alternate volumes, are devoted to ancient and modern works respectively, edited by Sir C. Hubert H. Parry, Messrs. Lionel S. Benson and W. Barclay Squire.

The two volumes of old compositions, at present issued, contain the following:—

VOL. I.

ANON. Amor che deggio far.
Filles de Lyon.
BERTANI, L. Ch' ami la vita mia.
SWEELINCK. Tu as tout seul.
FRANCK, MELCHIOR. Whoso doth love must suffer.
FRIEDERICI, DANIEL. As Cupid once.
LICHFILD, HENRY. All yee that sleepe in pleasure.
GIBBONS, ORLANDO. Trust not too mnch.
WEELKES, TH. Lady your eie.
QUINTIANI, L. At sound of hir sweet voice.
PALESTRINA. Mori quasi il mio core.
LASSO, O. DI. O let me look on thee.
I know a young maiden.
TESSIER, CHARLES. Au joli bois.
WILBYE, J. Love me not for comely grace.

VOL. III.

JOSQUIN DES PRES. Petite Camusette.
CLEMENS NON PAPA. La, la, Maistre Pierre.
VECCHI, ORAZIO. O bella, O bianca.
CALVISIUS, SETHUS. Joseph, lieber Joseph mein.
WEELKES, TH. Loe countrie sports.
WILBYE, JOHN. Adew, sweet Amarillis.
When shall my wretched life.
LEFÈVRE, JACQUES. Aime-moi, bergère.
VECCHI. ORAZIO, Leggiadretto Clorino.
ALBERT, HEINRICH. Hasten hither.
ANON. Cuckow.
WIZLAV, PRINCE. Mancher Thor.
SPERVOGEL. Tritt ein reines Weib.
ANON. Das Waldvöglein.
VERDELOT, PHILIPPE. I vostr' acuti dardi.
GOUDIMEL, CLAUDE. Ps. CV.
WILBYE, J. Sweet Love.
STABILE, ANNIBALE. Io non sò.
BATESON, TH. Phillis, farewell.

ARIOSO. Literally 'airy.' Used substantively, it would seem to mean that kind of air which, partaking both of the character of air and recitative, requires rather to be *said* than *sung*. Mendelssohn's two pieces, 'But the Lord is mindful' and 'Woe unto them that forsake Him' are marked 'Arioso,' and are both of the character indicated. J. H.

ARIOSTI, ATTILIO, a Dominican friar and an operatic composer; was born about the year 1660. [Some works at Upsala, bearing his name, are dated 1663-65, so that if they are really his, his birth must be placed much earlier.] Under a papal dispensation he gave up his ecclesiastical profession for that of music, of which he had from his youth been a regular student. His first opera was 'Dafne,' written to the words of Apostolo Zeno. It was brought out at Venice in 1686. Its success was sufficient to determine the direction of his talent, for thenceforth, with the exception of one oratorio and some cantate to be hereafter mentioned, he wrote only for the stage. In 1690 he became either private composer or maestro di cappella to the Electress of Brandenburg, and from 1698 to 1705 was conductor and composer at the court theatre of Berlin; he remained a member of the Electress's household until 1715, when, at the invitation of the managers of the Italian opera in London, he came to England. This interval, however, he does not seem to have spent altogether at Berlin. Apparently he had paid one visit at least to Italy, and one to Austria, bringing out his 'Nabucodonosor' at Vienna, 1706, his 'La più gloriosa fatica d'Ercole' at Bologna, and his 'Amor tra Nemici' at Venice. His Passion Oratorio was given in 1709 at Vienna, and an earlier treatment of the same subject is dated Modena, 1693. 'La Madre dei Maccabei,' was written for Venice in 1704, and 'La Profezia d'Eliseo' in 1705 for Vienna. His first appearance in London was at the representation of Handel's 'Amadis,' at which he played a solo on the viola d'amore. In 1720 the directors of the opera made formal engagements for a term with Ariosti, Bononcini, and Handel to write operas in turn for the theatre. It was arranged that the first to be produced, which was 'Muzio Scævola,' should be the joint work of the three authors, Ariosti writing the first act. The stipulations of this engagement were rigidly adhered to without the slightest tinge of jealousy or ill-feeling ever having marred the relations of the rival composers. But not the less was it inevitable that the genius of Handel should assert itself, and at the close of the season of 1727 Ariosti and Bononcini were honourably dismissed. Bononcini was subsequently supported by the Marlborough family, but Ariosti, finding himself without a patron, quitted England in 1728, and passed the rest of his life in an obscurity which no biographer has been able to pierce. Fétis says that on the eve of his departure from England he published a volume of Cantate by subscription, and that they realised £1000. It may be hoped that this is a fact, and that the destitution hinted at by other writers was not the absolute condition of his old age.

Ariosti wrote fourteen complete operas, of which the names and dates of publication are as follows:—'Dafne,' 1696; 'Eriphyle,' 1697; 'La Festa d'Imenei,' 1700; 'Atys,' 1700; 'Nabucodonosor,' 1706; 'La più gloriosa fatica d'Ercole,' 1706; 'Amor tra Nemici,' 1708; 'Ciro,' 1721; 'Coriolanus,' 1723; 'Vespasian,' 1724; 'Artaserse,' 1724; Dario,' 1725; 'Lucius Verus,' 1727; 'Teuzone,' 1727. To these are to be added the first act of 'Muzio Scævola'; the Cantate above mentioned, published along with some lessons for the viola d'amore, 1728; and another oratorio 'Radegonda Regina di Francia,' 1693. E. H. P.

ARMES, PHILIP, son of Philip Armes, schoolmaster and bass singer, was born at Norwich, August 15, 1836. In June 1846, he became a chorister in the cathedral under Dr. Zechariah Buck. Upon the removal of the family to Rochester—his father having obtained a lay clerkship there—young Armes joined the cathedral choir on Christmas Day, 1848, one of his fellow-choristers being J. F. (now Sir Frederick) Bridge. At the end of his choristership the Dean and Chapter presented him with a grand pianoforte as a special mark of their appreciation of his services as solo boy. In 1850 he was articled to Dr. J. L. Hopkins, organist of the

cathedral. Four years later he obtained his first organ appointment—Trinity Church, Milton, Gravesend, at a salary of £25. To this succeeded St. Andrew's, Wells Street, London (1857), Chichester Cathedral (1861), and Durham Cathedral, on the death of William Henshaw, Nov. 14, 1862; the last-named office he still (1903) holds.

He took the degree of Mus.B. (Oxford) in 1858 and that of Mus.D. in 1864. He also holds the honorary degrees of Mus.D. and M.A. Durham; he is an Hon. Member of the Royal Academy of Music; an Hon. Fellow of the Royal College of Organists; and has examined for musical degrees at Oxford and for the diplomas of the Royal College of Organists. For ten years, 1873-83, he was honorary conductor of the Durham Musical Society, and now plays first viola in the Durham Orchestral Society. As a lecturer he has been very successful.

Examinations for musical degrees in the University of Durham were instituted by Dr. Armes in Oct. 1890, when eighty-one candidates presented themselves for examination. In 1897 the charter of the University was altered, whereby Dr. Armes was made Professor of Music, an office which he worthily holds.

His compositions include an oratorio 'Hezekiah' (Newcastle, Nov. 9, 1877, and, in a revised and enlarged form, at the Worcester Festival of the following year); two church oratorios, 'St. John the Evangelist' (York Minster, July 7, 1881); and 'St. Barnabas' (Durham Cathedral, July 30, 1891); in addition to services, anthems, many hymn tunes, organ music, and a five-part madrigal, 'Victoria,' which gained the First, or Molineux prize offered by the Madrigal Society and the Society's Medal in 1897. F. G. E.

ARMIDE. One of Gluck's greatest operas, produced (in his sixty-fourth year) on Sept. 23, 1777, at the Académie Royale. The libretto is by Quinault, the same which was set by Lulli in 1686. 'Armide' followed 'Alceste' (1776) and preceded 'Iphigénie in Tauris' (1779). Comparing it with 'Alceste,' Gluck himself says, 'The two operas are so different that you will hardly believe them to be by the same composer. . . . I have endeavoured to be more of the painter and the poet and less of the musician, and I confess that I should like to finish my career with this opera. . . . In "Armide" there is a delicate quality which is wanting in "Alceste," for I have discovered the method of making the characters express themselves so that you will know at once whether it is Armida who is speaking or one of her followers.' The overture was originally written twenty-seven years before for 'Telemacco.'

ARMINGAUD, JULES, born at Bayonne, May 3, 1820, was a violinist in the orchestra of the Paris Opéra. In 1855, with Edouard Lalo, Mas, and Léon Jacquard, he established a string quartet which enjoyed a great reputation, and was subsequently transformed, by the addition of wind-instruments, into the 'Société Classique.' Armingaud, who published some works for violin, died Feb. 27, 1900. G. F.

ARMOURER OF NANTES, THE, an opera in three acts, founded on Victor Hugo's *Mary Tudor*; words by J. V. Bridgman, music by Balfe; produced at Covent Garden, under the Pyne and Harrison management, Feb. 12, 1863.

ARNE, MICHAEL, the son (Burney says the natural son) of Dr. Arne, was born in 1740 or 1741. He was brought on the stage at an early age by his aunt, Mrs. Cibber, who took great pains in teaching him the part of the page in Otway's tragedy, *The Orphan*; and his father was equally assiduous in qualifying him as a singer, and brought him out in that capacity at Marylebone Gardens in 1751. But neither acting nor singing was his vocation. At ten or eleven years of age he had acquired such skill on the harpsichord as to be able to execute, with unusual correctness and rapidity, the lessons of Handel and Scarlatti, and some years later he manifested some ability as a composer. In 'The Flow'ret, a new Collection of English Songs, by Master Arne,' is a song called 'The Highland Laddie,' which attained great popularity, and was in 1755 adapted by Linley to the words 'Ah, sure a pair were never seen,' in Sheridan's opera, 'The Duenna.' In 1763 M. Arne appeared as a dramatic composer with 'The Fairy Tale.' In 1764 he composed, in conjunction with Battishill, the music for the opera of 'Almena,' which was withdrawn after a few nights, not from want of merit in the music, but owing to the dulness of the dialogue. On Nov. 5, 1766, Arne married Miss Elizabeth Wright, a vocalist of some repute. In 1767 he wrote the music for Garrick's dramatic romance, 'Cymon,' which was highly successful, and is his best work. Soon afterwards he gave up his profession and devoted himself to the study of chemistry, and built a laboratory at Chelsea, where he attempted the discovery of the philosopher's stone. Foiled in his object, and ruined by the expenses, he returned to the pursuit of music, and wrote the music for several dramatic pieces—amongst them O'Keeffe's 'Positive Man,' in which is the well-known song, 'Sweet Poll of Plymouth'—and numerous songs for Vauxhall and the other public gardens. [In 1771 and 1772 he travelled in Germany with a pupil, Miss Venables, conducting Handel's 'Alexander's Feast' at Hamburg, Nov. 23, 1771, and the 'Messiah' for the first time in Germany, April 15, 1772 (*Quellen-Lexikon*). At Christmas, 1776, Thomas Ryder engaged Arne to produce 'Cymon' at the Smock Alley Theatre in Dublin. Michael Kelly tells us that Mr. and Mrs. Arne attracted great houses. The composer's love for alchemy reasserted itself, and he took a house near Clontarf for the purpose of pursuing his search for gold. In the summer of 1777

he got into debt and was thrown into a Dublin sponging-house, where he composed 'The Fathers,' and other music. Kelly's father sent him a pianoforte, in return for which Arne gave daily lessons to young Kelly. Ryder made a fresh engagement with Arne in Jan. 1779], and in 1784 and subsequent years he had the direction of some of the Lenten Oratorios at the London theatres. Michael Arne's dramatic compositions were 'The Fairy Tale,' 1763; 'Hymen,' 1763; 'Almena,' 1764; 'Cymon,' 1767; 'The Fathers,' 1778; 'The Belle's Stratagem,' 1780; 'The Choice of Harlequin,' 1781; 'The Positive Man,' 1782; 'Tristram Shandy,' 1783. He died Jan. 14, 1786. [Additional information from Mr. W. H. Grattan Flood.] W. H. H.

ARNE, THOMAS AUGUSTINE, Mus.Doc., was the son of an upholsterer in King Street, Covent Garden, where he was born March 12, 1710. He was educated at Eton, and being intended by his father for the profession of the law, was on leaving college placed in a solicitor's office for three years. But his love for music predominated, and instead of applying himself to the study of the law, he privately conveyed a spinet to his bedroom, and by muffling the strings with a handkerchief contrived to practise during the night undetected. He took lessons on the violin from Festing, and would occasionally borrow a livery in order to gain admission to the servants' gallery at the opera. He made such progress on the violin as to be able to lead a chamber band at the house of an amateur who gave private concerts. There he was one evening accidentally discovered by his father in the act of playing the first violin. After some fruitless efforts to induce his son to devote himself to the profession for which he had designed him, the father gave up the attempt as hopeless, and permitted the youth to follow the bent of his inclination. Being free to practise openly, Arne soon, by his skill on the violin, charmed the whole family, and finding that his sister, Susanna Maria (who afterwards as Mrs. Cibber became famous as a tragic actress) had an agreeable voice, he gave her such instructions as enabled her to appear in 1732 in Lampe's opera 'Amelia.' Her success was such as to induce her brother to reset Addison's opera 'Rosamond' (see CLAYTON), and his composition was produced at Lincoln's Inn Fields Theatre, March 7, 1733, Miss Arne performing the heroine, and her younger brother the page. Soon afterwards Arne got Fielding's 'Tragedy of Tragedies' altered into the 'Opera of Operas,' and, setting it to music 'after the Italian manner,' brought it out at the Haymarket Theatre, his young brother representing the hero, Tom Thumb. On Dec. 19, 1733, he produced at the same theatre a masque called 'Dido and Æneas,' which was performed (as then customary) with a harlequinade intermixed. In 1736 he composed some music for Aaron Hill's tragedy of 'Zara,' in which his sister made 'her first attempt as an actress.' In 1736 Arne married Cecilia, the eldest daughter of Charles Young, organist of Allhallows, Barking, a pupil of Geminiani and a singer of eminence, who was frequently engaged by Handel for his performances. In 1738 Arne was engaged to compose the music for Dr. Dalton's adaptation of Milton's 'Comus,' which was brought out at Drury Lane Theatre. This work fully established his reputation, its graceful and flowing melodies making an immediate and lasting impression. In 1740 he reset Congreve's masque 'The Judgment of Paris,' which was performed at Drury Lane. On August 1 in the same year, to celebrate the anniversary of the accession of the House of Hanover, Thomson and Mallet's masque of 'Alfred,' with music by Arne, was performed, for the first time, in a temporary theatre in the garden of Cliveden, Bucks, then the residence of Frederick, Prince of Wales. The work contains some fine songs, but is more especially distinguished by its finale, the famous patriotic song 'Rule Britannia,' a song which will continue to be heard as long as love of country animates the breasts of Englishmen. On Dec. 20, in the same year, Shakespeare's *As You Like It* being performed at Drury Lane Theatre, after having been laid aside for forty years, Arne gave to the world those beautiful settings of the songs 'Under the greenwood tree,' 'Blow, blow, thou winter wind,' and 'When daisies pied,' which seem to have become indissolubly allied to the poetry. After producing some minor pieces, Arne went in Jan. 1742 with his wife to Dublin, where they remained until 1744. During his stay there he produced, besides his former pieces, his important oratorio 'Abel' (see the announcement in *Musical Times*, 1901, p. 715), his operas 'Britannia' and 'Eliza,' and his 'Comus,' and also gave concerts with great success. On his return he was again engaged as composer at Drury Lane, and on the death of Gordon he succeeded him as leader of the band there. In 1745 Arne was engaged as composer to Vauxhall Gardens, and wrote for Mrs. Arne and Lowe the pastoral dialogue 'Colin and Phœbe,' which proved so successful that it was performed throughout the entire season. He held that engagement for many years, during which he composed for the Gardens, as well as for Ranelagh and Marylebone Gardens, an immense number of songs. On a revival of Shakespeare's *Tempest* in 1746 (at Drury Lane), Arne supplied new music for the masque and the song 'Where the Bee sucks,' a composition of perennial beauty. On March 12, 1755, he revived his 'Abel,' in which the simple and beautiful melody known as the Hymn of Eve became exceedingly popular. On July 6, 1759,

the University of Oxford created Arne Doctor of Music. In 1760, apparently in consequence of a difference with Garrick, Arne transferred his services to Covent Garden Theatre, where on Nov. 28 his 'Thomas and Sally' was produced, apparently for the first time. On Feb. 2, 1762, he ventured on the bold experiment of placing before an English audience an opera composed after the Italian manner, with recitative instead of spoken dialogue. For this purpose he selected the 'Artaserse' of Metastasio, which he himself translated into English. Departing to a great extent from his former style he crowded many of the airs with florid divisions, particularly those in the part of Mandane, which he composed for his pupil, Miss Brent. The other singers were Tenducci, Peretti, Beard, Mattocks, and Miss Thomas. The success of the work was decided, and 'Artaxerxes' retained possession of the stage for upwards of three-quarters of a century. The part of Mandane was long considered the touchstone of the powers of a soprano singer. The composer sold the copyright for sixty guineas, an insignificant amount compared with the sums which later composers obtained, but probably as much as the then more limited demand for music justified the publisher in giving. The popular ballad-opera, 'Love in a Village,' came out in the same year. On Feb. 29, 1764, Dr. Arne produced his second oratorio, 'Judith' (originally performed at Drury Lane, Feb. 27, 1761) at the Chapel of the Lock Hospital, in Grosvenor Place, Pimlico, for the benefit of the charity. In 1764 he set Metastasio's opera 'Olimpiade,' in the original language, and had it performed at the King's Theatre in the Haymarket. It was represented, however, but twice, owing, it has been supposed, to some petty jealousy of an Englishman composing for an Italian theatre. In 1769 Dr. Arne set such portions of the ode written by Garrick for the Shakespeare jubilee at Stratford-on-Avon, as were intended to be sung, and some other incidental music for the same occasion. In 1770 he presented a garbled version of Purcell's 'King Arthur.' One of his last dramatic compositions was the music for Mason's 'Caractacus' published with an interesting preface, in 1775. Dr. Arne produced numerous glees, catches, and canons, seven of which obtained prizes at the Catch Club, and instrumental music of various kinds. He parodied 'Alexander's Feast' in a publication called 'Whittington's Feast' (see *Concordia*, Jan. 22, 1876). He died March 5, 1778, and was buried at St. Paul's, Covent Garden. Mrs. Arne survived her husband about seventeen years, dying in 1795. It must not be forgotten that Dr. Arne was the first introducer of female voices into oratorio choruses; which he did at Covent Garden Theatre on Feb. 26, 1773, in a performance of his own 'Judith.' Dr. Arne was author as well as composer of 'The Guardian outwitted,' 'The Rose,' 'The Contest of Beauty and Virtue,' and 'Phœbe at Court,' and the reputed author of 'Don Saverio' and 'The Cooper.' A fine portrait of him by Zoffany is in the possession of Alfred H. Littleton, Esq.

The following is a list of Dr. Arne's compositions:—

Oratorios: Abel, 1744. Judith, 1764. Operas and other musical pieces: Rosamond, 1733. The Opera of Operas, or Tom Thumb the Great, 1733. Dido and Æneas, 1733. The Fall of Phaeton, 1736. Music in Zara, 1736. Comus, 1738. An Hospital for Fools, 1739. The Judgment of Paris, 1740. Alfred, 1740. Songs in As You Like It, 1740. Songs in Twelfth Night, 1741. The Blind Beggar of Bethnal Green, 1741. Songs in The Merchant of Venice, 1742, Britannia, 1743. Eliza, 1743. The Temple of Dulness, 1745. King Pepin's Campaign, 1745. Music in The Tempest, 1746. Neptune and Amphitrite, 1746. Don Saverio, 1749. Dirge in Romeo and Juliet, 1750. The Prophetess, 1759. The Sultan, 1759. Thomas and Sally, 1760.(?) Artaxerxes, 1762. Love in a Village (chiefly compiled), 1762. The Birth of Hercules (not acted), 1763. The Guardian outwitted, 1764. Olimpiade (Italian opera), 1764. The Ladies' Frolic, 1770. Additions to Purcell's King Arthur, 1770. The Fairy Prince, 1771. The Cooper, 1772. The Trip to Portsmouth, 1772. Reffley Spring, 1772. Choruses in Mason's Elfrida, 1772. The Rose, 1773. The Contest of Beauty and Virtue, 1773. Achilles in Petticoats, 1773. May Day, 1775. Phœbe at Court, 1776. Music in Mason's Caractacus, 1775. Phillis, 1776. Besides these Arne composed many incidental songs, etc., for other plays, as The Tender Husband, The Rehearsal, The Rival Queens, etc. Collections of songs under the following titles: Lyric Harmony, The Agreeable Musical Choice, Summer Amusement, The Winter's Amusement, The Syren, Vocal Melody, 1733. The Vocal Grove, 1774, and nearly twenty books of songs sung at Vauxhall, Ranelagh, and Marylebone Gardens. Glees, Catches, and Canons: thirteen glees, ten catches, and six canons, are printed in Warren's collections, Ode on Chearfulness, 1750. Ode on Shakespeare, 1769. Sonatas or lessons for the harpsichord. Organ Concertos. Overtures etc. for the orchestra.

[Many corrections in the above article are due to Mr. F. G. Edwards, the author of two articles on Arne in the *Musical Times*, Nov. and Dec. 1901.] W. H. H.

ARNOLD, Johann Gottfried, violoncellist and composer, born Feb. 15, 1773, was the son of the schoolmaster of Niedernhall near Oehringen in Würtemberg. From his earliest childhood he showed such a passion and aptitude for music that his father apprenticed him in his twelfth year to the musical director (Stadtmusikus) of the neighbouring town of Künzelsau. During this time he devoted himself chiefly to the practice of the violoncello, at which, under the influence of a most exacting master, he worked with such diligence as, it is said, permanently to injure his health. In 1789 his term of apprenticeship came to an end, and the following year he took his first regular engagement at Wertheim, where his uncle, Friedrich Adam Arnold, was established as musical director. He continued to study with unabated energy. After making concert tours in Switzerland and Germany, he spent some time at Ratisbon in order to take advantage of the instruction of the able violoncellist Willmann. Making constant improvement, he visited Berlin and Hamburg, at which latter town he had the good fortune to make the acquaintance of Bernard Romberg, whose style and method he studied to great advantage. In 1798 he became attached to the theatre at Frankfort as first violoncellist, where he occupied himself much with composition, and enjoyed a great reputation both as executant and teacher. The career, however, of this young

and talented artist was speedily cut short, for he died of an affection of the lungs July 26, 1806, at the early age of thirty-four. Besides compositions and 'transcriptions' for his own particular instrument, he wrote original pieces for the flute and piano, and made quartet arrangements of various operas, etc. Fétis (*Biographie*) gives a list of his compositions, including five concertos for the violoncello; a symphonie concertante for two flutes and orchestra; airs with variations, op. 9 (Bonn); easy pieces for the guitar, etc. T. P. H.

ARNOLD, SAMUEL, Mus.Doc. Born in London, August 10, 1740, and educated in the Chapel Royal under Bernard Gates and Dr. Nares. His progress was so great that before he had attained his twenty-third year Beard engaged him as composer to Covent Garden Theatre, where in 1765 he brought out the opera of 'The Maid of the Mill.' Many of the songs were selected from the works of J. C. Bach, Galuppi, Jommelli, and other Italian writers. This opera was one of the first, since the time of Purcell, in which concerted music was employed to carry on the business of the stage, and it was used by Arnold with great cleverness. The success of the work decided the composer's future connection with the stage, which he cultivated with such diligence and success, that from 1765 to 1802 he produced no less than forty-three operas, musical afterpieces, and pantomimes. His attention was early directed to sacred music, and his first production of this kind was an oratorio called 'The Cure of Saul,' performed in 1767. This was followed by 'Abimelech,' 1768, 'The Resurrection,' 1773, and 'The Prodigal Son,' 1777, which were performed under his own direction.

In 1769 Arnold took a lease of Marylebone Gardens, then a place of fashionable resort, which he rendered more attractive by composing and producing several burlettas, performed by the principal singers of the time. Ultimately, however, he retired from the speculation with considerable loss, owing to the dishonesty of a subordinate (see MARYLEBONE GARDENS). In 1773 Arnold's oratorio of 'The Prodigal Son' was performed at the installation of Lord North as Chancellor of the University of Oxford. On this occasion Arnold was offered the honorary degree of Doctor in Music, but he preferred taking it in the prescribed mode. It is said that Dr. Hayes, the Professor, returned the candidate's exercise unopened, remarking, 'Sir, it is quite unnecessary to scrutinise an exercise written by the composer of "The Prodigal Son."'

Dr. Arnold succeeded Dr. Nares in 1783 as organist and composer to the Chapel Royal, for which establishment he wrote several services and anthems. Shortly afterwards he published a continuation of Boyce's 'Cathedral Music,' in four volumes, a new edition of which was issued in 1847 by the writer of the present article. In 1790 he founded a society of musicians under the title of 'The Graduates' Meeting.' In 1791, in conjunction with Dr. Callcott, he published a work entitled, 'The Psalms of David,' etc. He also published 'An Ode for the Anniversary of the London Hospital.'

In 1786 Dr. Arnold issued proposals for a uniform edition of Handel's works, and the list was headed by George III. as a subscriber for twenty-five copies. He met with sufficient encouragement to carry it on to 168 numbers, or about forty volumes, but not enough to enable him to complete his plan, and the edition is far from perfect in many ways. In 1787, in conjunction with his friend Callcott, he established the GLEE CLUB; and on the death of Stanley he joined Linley as conductor of the oratorios at Drury Lane, for some time a profitable speculation, but at length opposed by Ashley at Covent Garden, who by converting the so-called oratorio into a medley of light compositions, stimulated the public appetite for novelty, and the more classical performance at the rival theatre was deserted. His last oratorio, 'Elisha,' was produced in 1795, but it met with little success, and was not repeated.

In 1789 Dr. Arnold was appointed conductor of the ACADEMY OF ANCIENT MUSIC, a noble institution then in its decline; he retained the post until the termination of the Academy's existence in 1792. In 1793 he succeeded Dr. Cooke as organist of Westminster Abbey, and four years later, on the death of Dr. P. Hayes, was requested to conduct the yearly performance at St. Paul's for the benefit of the Sons of the Clergy. About two years afterwards a fall from the steps of his library occasioned internal injuries and hastened his death. He died Oct. 22, 1802. His remains were deposited near those of his great predecessors, Purcell, Blow, and Croft, in Westminster Abbey.

Dr. Arnold wrote with great facility and correctness, but the demand upon his powers was too varied and too incessant to allow of his attaining great excellence in any department of his art.

The following is a list of his dramatic compositions:—

Maid of the Mill, 1765. Rosamond, 1767. Portrait, 1770. Mother Shipton, 1770. Son-in-Law, 1779. Summer Amusement, 1779. Fire and Water, 1780. Wedding Night, 1780. Silver Tankard, 1780. Dead Alive, 1781. The Agreeable Surprise, 1781. Castle of Andalusia, 1782. Harlequin Teague, 1782. Gretna Green, 1783. Hunt the Slipper, 1784. Peeping Tom of Coventry, 1784. Two to One, 1784. Here, There, and Everywhere, 1784. Turk and No Turk, 1785. Siege of Cuzzola, 1785. Inkle and Yarico, 1787. Enraged Musician, 1788. The Prince of Arcadia, 1788. Battle of Hexham, 1789. New Spain, 1790. Basket Maker, 1790. Surrender of Calais, 1791. Enchanted Wood, 1792. Harlequin Dr. Faustus, 1793. Children in the Wood, 1793. Auld Robin Gray, 1784. Zorinski, 1795. Mountaineers, 1795. Who Pays the Reckoning? 1795. Love and Money, 1795. Bannian Day, 1796. Shipwreck, 1796. Italian Monk, 1797. False and True, 1798. Throw Physic to the Dogs, 1798. The Gipsies, 1798. Cambro-Britons, 1798. Obi, or Three-fingered Jack, 1800. Review, 1801. Corsair, 1801. Veteran Tar, 1801. The Widow of Shunam (oratorio), 1801. Sixty-Third Letter, 1802. Fairies' Revels, 1802.

Many harpsichord compositions, and a set of six overtures in 8 parts, are extant; but the work by which Arnold will be longest

remembered is entitled 'Cathedral Music, being a collection in score of the most valuable and useful compositions for that service by the several English masters of the last 200 years; selected and revised by Dr. Samuel Arnold, Organist and Composer to His Majesty's Royal Chapels.' The Preface is dated 480 Strand, Nov. 1, 1790. The contents are as follows:—

VOL. I.

PATRICK. M. and E. Serv. C minor.
CHILD. M. and E. Serv. E minor.
Do. Full Anth. If the Lord.
Do. F. A. O pray.
CLARK. Sanctus.
KENT. F. A. Hearken unto.
CROFT. Verse Anth. I will give.
KING. F. A. Hear, O Lord.
Do. F. A. Rejoice in the Lord.
Do. M. and E. Serv. B flat.
CROFT. M. Serv. B minor.
ALDRICH. M. and E. Serv. in A.
Do. 2 Chants.
PURCELL. Verse A. Blessed are they.
TALLIS. F. A. All people.
GOLDWIN. M. and E. Serv. in F.
WELDON. Solo A. O God, Thou hast.
ALDRICH. F. A. We have heard.
GOLDWIN. F. A. Behold my servant.
ALDRICH. F. A. Not unto us.
Do. F. A. O praise.

VOL. II.

GREENE. M. and E. Serv. in C.
Do. Solo A. Praise the Lord.
Do. V. A. Like as the hart.
CROFT. V. A. Be merciful.
KING. M. and E. Serv. in F.
Do. F. A. O pray.
GREENE. V. A. O Lord, I will.
Do. V. A. I will magnify.
KING. M. and E. Serv. in A.
TUDWAY. V. A. Thou, O Lord.
WELDON. F. A. Who can tell.
GREENE. V. A. O praise.
BRYAN. M. and E. Serv. in G.
TRAVERS. M. Serv. in F.

VOL. III.

BOYCE. M. Serv. in A.
Do. Solo A. Lord, what is.
Do. F. A. Save me, O God.
Chants by Savage, Travers, Nares, Kent.
BOYCE. Solo A. Lord, teach us.
TALLIS. F. A. Hear the voice.
ALDRICH. V. A. I am well pleased.
TRAVERS. S. A. Ponder my words.
NARES. M. and E. Serv. in F.
Do. F. A. Blessed is he.
Do. F. A. O Lord, grant.
Do. F. A. Try me.
Do. Chant.
TRAVERS. Te Deum in D.
KING. M. and E. Serv. in C.
Do. V. A. Wherewithal.
GREENE. V. A. Hear my prayer.
BOYCE. S. A. Turn Thee.
Do. F. A. Blessing and glory.
KING. M. Serv. in A.
HALL and HINE. Te Deum and Jubilate.
GREENE. V. A. O God, Thou hast.
AYRTON. Chant.
TRAVERS. V. A. Ascribe.
ALDRICH. E. Serv. in F.
DUPUIS. Chant.
BOYCE. S. A. Ponder my words.
GREENE. S. A. O Lord God.

VOL. IV.

The Organ part to the foregoing.

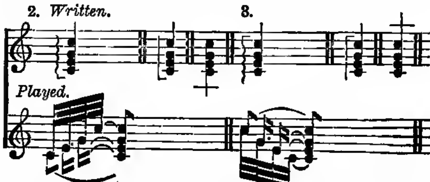
(*Harmonicon* for 1830; *Old Playbills*; *Biog. Dict. U.K.S.*) [*Dict. of Nat. Biog.*] E. F. R.

ARNOULD, MADELEINE SOPHIE, a famous actress and singer, and the original Iphigénie in Gluck's opera. Born in Paris, Feb. 14, 1744, in the same room in the Rue de Bethisy in which Admiral Coligny was murdered, August 24, 1572. The Princess of Modena hearing the child sing in the church of Val de Grâce was so charmed that she recommended her to the royal Intendant of Music. Against the will of her mother, Sophie became a member of the Chapelle Royale, and was taught comedy by Mlle. Hippolyte Clairon, and singing by Mlle. Tel. Mme. de Pompadour hearing her on one occasion was so much struck by the young artist that she characteristically said, 'With such talents you may become a princess.' She made her début on Dec. 15, 1757, and remained on the stage till 1778, the most admired artist of the Paris Opéra. In that year she left the boards and retired into private life. Mlle. Arnould was not less renowned for her wit and power of conversation than for her ability as a singer and actor. The *Arnouldiana* contain a host of her caustic and witty speeches. She died in 1803. F. G.

ARPEGGIO (Ital., from *Arpa*, 'the harp'; *Arpeggiare*, 'to play upon the harp'). The employment in vocal or instrumental music of the notes of a chord in succession instead of simultaneously; also, in pianoforte music, the *breaking* or *spreading* of a chord, either upwards or downwards.

The introduction of the arpeggio as an accompaniment to a melody marks an important epoch in the history of pianoforte music. It is said to have been invented about 1730 by ALBERTI, a Venetian amateur musician, in whose 'VIII Sonate per Cembalo' are found the earliest signs of emancipation from the contrapuntal form of accompaniment exclusively used up to that time. The simple kind of arpeggio employed by him, which is still known as the 'Alberti bass' (Ex. 1) has since become fully developed, not alone as accompaniment, but also as an essential part of the most brilliant instrumental passages of modern music.

Arpeggio passages such as those alluded to are almost invariably written out in full, but the simple spreading of the notes of a chord (in contradistinction to *concento*, the sounding of all the notes together) is usually indicated by certain signs. According to Türk ('Clavierschule') the signs for the arpeggio, beginning with the lowest note, are as in Ex. 2, those for the descending arpeggio as in Ex. 3. The latter is however only met with in old music; the downward arpeggio, which is but rarely employed in modern music, being now always written in full.



The arpeggio in modern music is usually indicated as in Ex. 4, and occasionally (as for instance in some of Hummel's compositions) by a stroke across the chord (Ex. 5). This is however incorrect, as it may easily be mistaken for the combination of arpeggio with ACCIACCATURA, which, according to Emanuel Bach, is to be written and played as in Ex. 6.

In the arpeggio as above, the notes when once sounded are all sustained to the full value of the chord, with the exception only of the foreign note (the acciaccatura) in Ex. 6. Sometimes, however, certain notes are required to be held while the others are released; in this case the chord is written as in Ex. 7.

The arpeggio should, according to the best authorities, *begin* at the moment due to the chord, whether it is indicated by the sign or by small notes, and there can be no doubt that the effect of a chord is weakened and often spoilt by being begun before its time, as is the bad habit of many inexperienced players. Thus the commencement of Mozart's Sonata in C (Ex. 8) should be played as in Ex. 9, and not as in Ex. 10. Nevertheless it appears

to the writer that there are cases in modern music in which it is advisable to break the rule and allow the *last* note of the arpeggio to fall upon the beat, as for instance in Mendelssohn's 'Lieder ohne Worte,' Book v. No. 1, where the same note often serves as the last note of an arpeggio and at the same time as an essential note of the melody, and on that account will not bear the delay which would arise if the arpeggio were played according to rule (see Ex. 11, which could scarcely be played as in Ex. 12).

In music of the time of Bach a sequence of chords is sometimes met with bearing the word 'arpeggio'; in this case the order of breaking the chord, and even the number of times the same chord may be broken, is left to the taste of the performer, as in Bach's 'Sonata for Pianoforte and Violin,' No. 2 (Ex. 13), which is usually played as in Ex. 14.

Sometimes the arpeggio of the first chord of a sequence is written out in full, as an indication to the player of the rate of movement to be applied to the whole passage. This is the case in Bach's 'Fantasia Cromatica' (Ex. 15), which is intended to be played as in Ex. 16. Such indications, however, need not always be strictly followed, and indeed Mendelssohn, speaking of the passage quoted, says in a letter to his sister: 'I take the liberty to play them (the arpeggios) with every possible *crescendo* and *piano* and *ff.*, with pedal as a matter of course, and the bass notes doubled as well. . . . N.B.—Each chord is broken *twice*, and later on only once, as it happens.' (Mendelssohn, *Briefe*, ii. 241). In the same letter he gives as an illustration the passage as in Ex. 17.

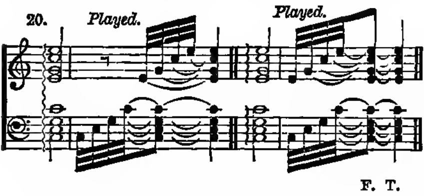
When an appoggiatura is applied to an arpeggio chord, it takes its place as one of the notes of the arpeggio, and occasions a delay of the particular note to which it belongs equal to the time required for its performance, whether it be long or short (Ex. 18).

Chords are occasionally met with (especially

in Haydn's pianoforte sonatas) which are *partly* arpeggio, one hand having to spread the chord while the other plays the notes all together; the correct rendering of such chords is as follows (Ex. 19):

Another instance, where it is of great importance to observe the difference between the arpeggio and the plain chord, is in Brahms's intermezzo in E, op. 116, No. 4.

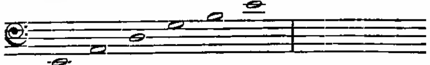
A distinction is, or ought to be, made between the long arpeggio mark joining both staves, and a separate arpeggio mark for each stave:



F. T.

ARPEGGIONE, or GUITAR VIOLONCELLO, a stringed instrument, played with a bow, which was invented by G. Staufer, of Vienna, in 1823, but appears never to have come much into use, and whose very name would probably now be unknown, if it were not for an interesting sonata (in A) for pianoforte and arpeggione by Franz Schubert, written in 1824, published in series 8 of the complete edition by Breitkopf and Härtel.

The arpeggione appears to have been of the size of the viol da gamba, or a small violoncello; the shape of the body something like that of the guitar. The finger-board had frets, and the six strings were tuned thus—



An instruction-book for the arpeggione by Vinc. Schuster, the player for whom Schubert wrote his sonata, has been published by A. Diabelli and Co., of Vienna. P. D.

ARPICORDO. See HARPSICHORD.

ARRANGEMENT, or ADAPTATION, is the musical counterpart of literary translation. Voices or instruments are as languages by which the thoughts or emotions of composers are made known to the world; and the object of arrangement is to make that which was written in one musical language intelligible in another.

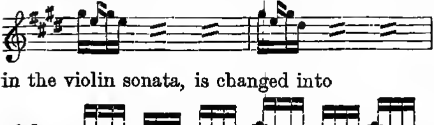
The functions of the arranger and translator are similar; for instruments, like languages, are characterised by peculiar idioms and special aptitudes and deficiencies which call for critical ability and knowledge of corresponding modes of expression in dealing with them. But more than all, the most indispensable quality to both is a capacity to understand the work they have to deal with. For it is not enough to put note for note or word for word or even to find corresponding idioms. The meanings and values of words and notes are variable with their relative positions, and the choice of them demands appreciation of the work generally, as well as of the details of the materials of which it is composed. It demands, in fact, a certain correspondence of feeling with the original author in the mind of the arranger or translator. Authors have often been fortunate in having other great authors for their translators, but few have written their own works in more languages than one. Music has had the advantage of not only having arrangements by the greatest masters, but arrangements by them of their own works. Such cases ought to be the highest order of their kind, and if there are any things worth noting in the comparison between arrangements and originals they ought to be found there.

The earliest things which answered the purpose of arrangements were the publications of parts of early operas, such as the recitatives and airs with merely figured bass and occasional indications of a figure or a melody for the accompaniment. In this manner were published operas of Lulli and Handel, and many now forgotten composers for the stage of their time and before; but these are not of a nature to arouse much interest.

The first arrangements which have any great artistic value are Bach's; and as they are many of them of his own works, there is, as has been before observed, especial reason for putting confidence in such conclusions as can be arrived at from the consideration of his mode of procedure. At the time when his attention was first strongly attracted to Italian instrumental music by the principles of form which their composers had originated, and worked with great skill, he arranged sixteen violin concertos of Vivaldi's for the clavier solo, and three of the same and a first movement for the organ. Bach's concerto for four harpsichords in A minor is an adaptation of a work of Vivaldi's for four violins in B minor, given in the appendix to B.-G. vol. xliii. Of the originals of these it appears from Spitta (Engl. trans. i. 412), that there are six to be found for comparison; but, as Spitta observes, from the freedom with which Bach treated his original in these it is legitimate to infer his treatment

of the others. Vivaldi's existing concertos are excellent in form, but his ideas are frequently crude and unsatisfactory, and their treatment is often thin and weak. Bach's object being rather to have good illustrations of beauty of form than substance, he did not hesitate to alter the details of figures, rhythms, and melodies, and even successions of keys, to amplify cadences, and add inner parts, till the whole is transformed into a Bach-commentary on the form-principles of the Italians rather than an arrangement in the ordinary meaning of the term. It is not however an instance to justify arrangers in like freedom, as it is obviously exceptional, and is moreover in marked opposition to Bach's arrangements of his own works.

Some of these are of a nature to induce the expectation that the changes would be considerable; as for instance the arrangement of the prelude to the Solo Violin Sonata in E, as the introduction in D to the Cantata 'Wir danken dir, Gott'[1] for obbligato organ with accompaniment of strings, oboes, and trumpets. The original movement consists almost throughout of continually moving semiquavers embracing many thorough violin passages, and certainly does not seem to afford much material to support its changed condition. But a comparison shows that there is no change of material importance in the whole, unless an accompaniment of masterly simplicity can be called a change. There are immaterial alterations of notes here and there for the convenience of the player, and the figure



in the violin sonata, is changed into

in the organ arrangement—and so on, for effect, and that is all.

Another instance of a like nature is the arrangement of the fugue from the solo violin sonata in G minor (No. 1) for Organ in D minor (B.-G. vol. xv. p. 148). Here the changes are more important though still remarkably slight considering the difference between the violin and the two manuals and pedals of an organ.

The most important changes are the following:—

The last half of bar 5 and the first of bar 6 are amplified into a bar and two halves to enable the pedals to come in with the subject in the orthodox manner.

In the same manner two half-bars are inserted in the middle of bar 28, where the pedal comes in a second time with a quotation of the subject not in the original. In bar 16 there is a similar point not in the original, which, however, makes no change in the harmony.

The further alterations amount to the filling up and wider distribution of the original harmonies, the addition of passing notes and grace notes, and the remodelling of violin passages; of the nature of all which changes the following bar is an admirable instance—

Two other arrangements of Bach's, namely that of the first violin concerto in A minor, and of the second in E major (B.-G. xxi. pp. 3 and 21) as concertos for the clavier in G minor and D major respectively (B.-G. xvii. pp. 199 and 81), are not only interesting in themselves, but become doubly so when compared with Beethoven's arrangement of his violin concerto in D as a pianoforte concerto.[2]

The first essential in these cases was to add a sufficiently important part for the left hand, and the methods adopted afford interesting illustrations of the characteristics of the two great masters themselves, as well as of the instruments they wrote for. A portion of this requirement Bach supplies from the string accompaniment, frequently without alteration; but a great deal appears to be new till it is analysed; as, for instance, the independent part given to the left hand in the first movement of the concerto in G minor from the twenty-fifth bar almost to the end, which is as superbly fresh and pointed as it is smooth and natural throughout. On examination this

[1] B.-G. vol. v. No. 9.

[2] Breitkopf's edition of Beethoven, No. 73.

passage—which deserves quotation if it were not too long—proves to be a long variation on the original bass of the accompaniment, and perfectly faithful to its source.

Bach's principle in this and in other cases of like nature is contrapuntal; Beethoven's is the exact contrary almost throughout. He supplies his left hand mainly with unisons and unisons disguised by various devices (which is in conformity with his practice in his two great concertos in G and E flat, in which the use of unisons and disguised unisons for the two hands is very extensive); and where a new accompaniment is inserted it is of the very simplest kind possible, such as

after the cadenza in the first movement; or else it is in simple chords, forming unobtrusive answers to figures and rhythms in the orchestral accompaniment.

Both masters alter the original violin figures here and there for convenience or effect. Thus Bach, in the last movement of the G minor clavier concerto, puts

for the violin figure

and in the last movement of the D major puts

for

in the E major violin concerto.

The nature of Beethoven's alterations may be judged of from the following quotation from the last movement, after the cadenza:—

Another typical alteration is after the coda in the first movement, where, in the thirteenth bar from the end, in order to give the left hand something to do, Beethoven anticipates the figure of smoothly flowing semiquavers with which the part of the violin closes, making the two hands alternate till they join in playing the last passage in octaves. In both masters' works there are instances of holding notes being changed into shakes in the arrangements, as in the 7th and 8th bars of the slow movement of the D concerto of Bach, and the 2nd and 5th bars after the first tutti in the last movement of Beethoven's concerto. In both there are instances of simple devices to avoid rapid repetition of notes, which is an easy process on the violin, but an effort on the pianoforte, and consequently produces a different effect. They both amplify arpeggio passages within moderate bounds, both are alike careful to find a precedent for the form of a change when one becomes necessary, and in both the care taken to be faithful to the originals is conspicuous.

The same care is observable in another arrangement of Beethoven's, viz. the Pianoforte Trio[1] made from his second symphony.

The comparison between these is very interesting owing to the unflagging variety of the distribution of the orchestral parts to the three instruments. The pianoforte naturally takes the substance of the work, but not in such a manner as to throw the others into subordination. The strings are used mostly to mark special orchestral points and contrasts, and to take such things as the pianoforte is unfitted for. Their distribution is so free that the violin will sometimes take notes that are in the parts of three or more instruments in a single bar. In other respects the strings are used to reinforce the accompaniment, so that in point of fact the violin in the trio plays more of the second violin part than of the first, and the violoncello of any other instrument from basso to oboe than the part given to it in the symphony.

The changes made are few and only such as are necessitated by technical differences, and are of the same simple kind with those in the concerto, and originating in similar circumstances. Everything in the distribution of the instruments subserves some purpose, and the re-sorting of the details always indicates some definite principle not at variance with the style of the original.

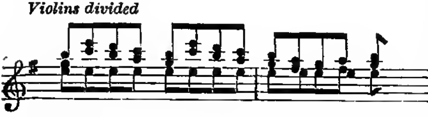
An illustration of the highest order in more modern works is found in the exquisitely artistic arrangement of the *Midsummer Night's Dream* music for four hands on one pianoforte by Mendelssohn himself.

The step from Beethoven to Mendelssohn embraces a considerable development of the knowledge of the technical and tonal qualities of the pianoforte, as well as of its mechanical

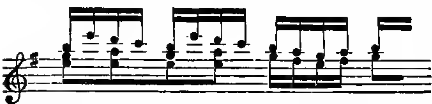
[1] Breitkopf's edition of Beethoven, No. 90.

improvement as an instrument. This becomes apparent in the different characteristics of Mendelssohn's work, which in matter of detail is much more free than Beethoven's, though quite as faithful in general effect.

At the very beginning of the overture is an instance in point, where that which appears in the score as

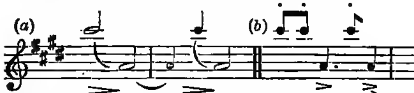


is in the pianoforte arrangement given (in notes of half the original value) as



the object evidently being to avoid the repetition and the rapid thirds which would mar the lightness and crispness and delicacy of the passage.

In one instance a similar effect is produced by a diametrically contrary process, where Bottom's bray, which in the original is given to strings and clarinets (*a*), is given in the pianoforte arrangement as at (*b*):—



It is to be remarked that the arrangement of the overture is written in notes of half the value of those of the orchestral score, with twice the amount in each bar; except the four characteristic wind-chords—tonic, dominant, sub-dominant, and tonic—which are semibreves, as in the original, whenever they occur; in all the rest semiquavers stand for quavers, quavers for crotchets, crotchets for minims, etc., as may be seen by referring to the above examples. The change may possibly have been made in the hope that the players would be more likely to hit the character of the work when playing from the quicker-looking notes; or it may have been a vague idea of conforming to a kind of etiquette noticeable in music, church music affecting the longer-looking notes, such as semibreves and minims, while orchestral music has the faster-looking notes, such as quavers (overtures to 'Coriolan,' 'Leonore,' 'Fidelio,' 'Jessonda,' etc.), and pianoforte music descends to semiquavers—as though to mark the relative degrees of dignity.

The pianoforte arrangement of the scherzo of the *Midsummer Night's Dream* abounds with happy devices for avoiding rapid repetitions, and for expressing contrasts of wind and strings, and imitating the effect of many orchestral parts which it would be impossible to put into the arrangement in their entirety. One of the happiest passages in the whole work is the arrangement of the passage on the tonic pedal at the end of this movement.

(*G pedal, pizzicati bassi, and Corni and Trombe on first beat of each bar.*)

Mendelssohn often takes the freedom of slightly altering the details of a quick passage in order to give it greater interest as a pianoforte figure; which seems to be a legitimate development of the theory of the relative idiomatic modes of expression of different instruments, and its adaptation to details.

A still further development in this direction is found in the arrangement by Brahms of his pianoforte quintet in F minor (op. 34) as a sonata for two pianofortes. In this the main object seems to have been to balance the work of the two pianofortes. Sometimes the first pianoforte, and sometimes the second has the original pianoforte part for pages together, and sometimes for a few bars at a time, but whenever the nature of the passages admits of it, the materials are distributed evenly between the two instruments. There are some changes —such as the addition of a bar in two places in the first movement, and the change of an accidental in the last—which must be referred to critical considerations, and have nothing to do with arrangement. The technical changes in the arrangement are the occasional development of a free inner part out of the materials of the original without further change in the harmonies, the filling up of rhythm-marking chords of the strings, frequent reinforcement of the bass by doubling, and, which is especially noticeable, frequent doubling of both melodies and parts of important figures. It is this latter peculiarity which especially marks the adaptation of certain tendencies of modern pianoforte-playing to arrangement,—the tendency, namely, to double all the parts possible, to fill up chords to the utmost, and to distribute the notes over a wider space, with greater regard to their tonal relations than formerly, and by every means to enlarge the scope and effective power of the

instrument, at the same time breaking down all the obstructions and restrictions which the old dogmas of style in playing placed in the way of its development. [Brahms's arrangement of Joachim's overture to 'Henry IV.,' for two pianofortes, may be referred to, although the original is not available for comparison.]

Another admirable instance of this kind is the arrangement by Brahms of a gavotte of Gluck's in A; which however in its new form is as much marked by the personality of the arranger as that of the composer—a dangerous precedent for ordinary arrangers.

A very remarkable instance of the adaptation of the resources of modern pianoforte-playing to arrangement, is that by Tausig of Bach's toccata and fugue for the organ in D, 'zum Conzertvortrag frei bearbeitet.' The difficulty in such a case is to keep up the balance of the enlarged scale throughout. Tausig's perfect mastery of his art has carried him through the ordeal unscathed, from the first bar, where

down to the end, where Bach's

becomes

and the result in the hands of a competent performer is magnificent.

The point which this arrangement has in common with the foregoing classical examples, is its remarkable fidelity to the materials of the original, and the absence of irrelevant matter. The tendency of high-class modern arrangements is towards freedom of interpretation; and the comparison of classical arrangements with their originals shows that this is legitimate, up to the point of imitating the idioms of one instrument by the idioms of another, the effects of one by the effects of another. Beyond that lies the danger of marring the balance of the original works by undue enlargement of the scale of particular parts, of obscuring the personality of the original composer, and of caricature,—that pitfall of ill-regulated admiration,—instances of which may be found in modern 'transcriptions,' which are the most extreme advance yet achieved in the direction of freedom of interpretation.

The foregoing is very far from exhausting the varieties of kinds of arrangement; for since these are almost as numerous as the possible interchanges between instruments and combinations of instruments, the only course open is to take typical instances from the best sources to illustrate general principles—and these will be found to apply to all arrangements which lay claim to artistic merit. To take for instance an arrangement of an orchestral work for wind band: the absent strings will be represented by an increased number of clarinets of different calibres and corni di bassetto, and by the bassoons and increased power of brass. But these cannot answer the purpose fully, for the clarinets cannot take the higher passages of the violin parts, and they will not stand in an equally strong degree of contrast to the rest of the band. Consequently the flutes have to supplement the clarinets in places where they are deficient, and the parts originally belonging to them have to be proportionately modified; and in order to meet the requirements of an effect of contrast, the horns, trombones, etc., for lower parts, have to play a great deal more than in the original, both of melody and accompaniment. The part of the oboes will probably be more similar than any other, though it will need to be modified to retain its relative degree of prominence in the band. On the whole a very general interchange of the parts of the instruments becomes necessary, which is done with due respect to the peculiarities of the different instruments, both as regards passages and relative tone qualities, in such a manner as not to mar the relevancy and balance of parts of the whole work.

Of arrangements of pianoforte works for full orchestra, of which there are a few modern instances, it must be said that they are for the most part unsatisfactory, by reason of the marked difference of quality between pianoforte and orchestral music. It is like trying to spread out a lyric or a ballad over sufficient space to make it look like an epic. Of this kind are the arrangements of Schumann's 'Bilder aus Osten' by Reinecke, and of Weber's 'Invitation à la Valse' by Berlioz. Arrangements of pianoforte accompaniments are more justifiable, and Liszt's scoring of the accompaniment to Schubert's hymn 'Die Allmacht,' and his development of an orchestral accompaniment to a Polonaise of Weber's out of the materials

of the original, without marring the Weberish personality of the work, are both greatly to the enhancement of the value of the works for concert purposes. The question of the propriety of eking out one work with portions of another entirely independent one—as Liszt has done in the Introduction of his version of this Polonaise—belongs to what may be called the *morale* of arrangement, and need not be touched upon here. Nor can we notice such adaptations as that of Palestrina's 'Missa Papæ Marcelli'—originally written for 6 voices—for 8 and 4, or that by Vincent Novello of Wilbye's 3-part madrigals for 5, 6, and 7 voices.

As might be anticipated, there are instances of composers making very considerable alterations in their own works in preparing them for performance under other conditions than those for which they were originally written, such as the arrangement, so-called, by Beethoven himself of his early Octet for wind instruments in E♭ (op. 103) as a quintet for strings in the same key (op. 4), and Mendelssohn's edition of the scherzo from his Octet in E♭ (op. 20) for full orchestra, introduced by him into his symphony in C minor—which are rather new works founded on old materials than arrangements in the ordinary sense of the term. They are moreover exceptions even to the practice of composers themselves, and do not come under the head of the general subject of arrangement. For however unlimited may be the rights of composers to alter their own works, the rights of others are limited to redistribution and variation of detail; and even in detail the alterations can only be legitimate to the degree which is rendered indispensable by radical differences in the instruments, and must be such as are warranted by the quality, proportions, and style of the context.

It may be convenient to close this article with a list of adaptations of their own works by the composers themselves as far as they can be ascertained :—

1. Bach's arrangements of his own works are numerous. Some of them have already been noticed, but the following is a complete list of those in the edition of the Bach-Gesellschaft.

Concerto in G for violin and two flutes with 5tet acct. (B.-G. xix. p. 85) appears also as a clavier concerto in F, with acct. of two flutes and quartet.—Concerto in G minor for clavier with 5tet acct. (*ib.* xvii. p. 199), as concerto in A minor for violin with 4tet acct. (xxi. p. 3).—Concerto in D major for clavier with 4tet acct. (xvii. p. 81), as concerto for violin in E major with 4tet acct. (xxi. p. 21).—The Prelude and Fugue in A minor for clavier solo (xxxvi. p. 91) appear, with much alteration, as 1st and 3rd movements of concerto for clavier, flute, and violin in same key, with 5tet acct. (xvii. p. 223). The slow movement of the same concerto, in C, is taken from the third organ sonata, where it stands in F (xv. p. 32).—The fugue in G minor for violin solo, from Sonata 1 (xxvii. p. 4), appears in D minor, arranged for the organ (xv. p. 149).—Sonata 2 for violin solo in A minor (xxvii. p. 19) appears in D minor for clavier solo (xlii. p. 3).—The third partita for violin solo in E (xxvii. p. 48) is arranged for clavier alone (xlii. p. 16).—The prelude in E from the same partita is arranged for organ and full orchestra in D, as 'sinfonia' to the Rathswahl cantata 'Wir danken dir, Gott,' No. 29 of the 'Kirchencantaten' (v. p. 273), and the first movement of the 5th Sonata for Violin in C (xxvii. p. 24) appears as a separate movement for clavier in G (xlii. p. 27).—The first movement of the concerto in E for clavier (xvii. p. 45) appears in the Introduction to the cantata 'Gott soll allein' (xxxiii. No. 169); and the two first movements of the concerto in D minor (xvii. pp. 3 and 275) appear in the cantata 'Wir müssen durch viel Trübsal' (xxx. No. 146).

2. Handel was very much in the habit of using up the compositions both of himself and others, sometimes by transplanting them bodily from one work to another—as his own Allelujahs from the Coronation Anthems into 'Deborah,' or Kerl's organ Canzona, which appears nearly note for note as 'Egypt was glad' in 'Israel in Egypt'; and sometimes by conversion, as in the 'Messiah,' where the choruses 'His yoke' and 'All we' are arranged from two of his own Italian Chamber duets, or in 'Israel in Egypt,' where he laid his organ Fugues and an early Magnificat, possibly of his own, under large contribution. In other parts of 'Israel,' and in the 'Dettingen Te Deum' he used the music of Stradella and Urio with greater or less freedom. But these works come under a different category from those of Bach, and will be better examined under their own heads. More to the present purpose are his adaptations of his orchestral works, such as the 2nd, 3rd, 4th, and 5th of the 2nd set of Organ Concertos, which are mere adaptations of the 11th, 10th, 1st, and 6th of the 12 Concerti Grossi (op. 6). No. 1 of the same set of Organ Concertos is partly adapted from the 6th Sonata or Trio (op. 5). See also a series of articles by J. S. Shedlock in the *Musical Times*, July to Nov. 1901.

3. Beethoven. The arrangements of the seventh and eighth symphonies for two hands, published by Steiner at the same time with the scores, although not by Beethoven himself, were looked through and corrected by him. He arranged the grand fugue for string quartet (op. 133) as a duet for piano. No other pianoforte arrangements by him are known; but he is said to have highly approved of those of his symphonies by Mr. Watts. Beethoven, however, rearranged several of his works for other combinations of instruments than those for which he originally composed

them. Op. 1, No. 3, pianoforte trio, arranged as string quintet (op. 104). Op. 4, string quintet (two violins), arranged from the octet for wind instruments (1796), published later as Op. 103. Op. 14, No. 1, pianoforte sonata in E, arranged as a string quartet in F. Op. 16, quintet for pianoforte and wind instruments, arranged as a pianoforte and string quartet. Op. 20, the septet, arranged as a trio for pianoforte clarinet or violin, and violoncello (op. 38). Op. 36, symphony No. 2, arranged as a pianoforte trio. Op. 61, violin concerto, arranged as pianoforte concerto. The above are all that are certainly by Beethoven. Op. 31, No. 1, Pianoforte Sonata—G, arranged as a string quartet, is allowed by Nottebohm to be probably by the composer. So also his Op. 8, Notturno for string trio arranged for pianoforte and tenor (op. 42), and Op. 25, Serenade for flute, violin, and tenor, arranged for pianoforte and flute (op. 41), were looked over and revised by him.

4. Schubert. Arrangement for four hands of overture in C major 'in the Italian style' (op. 170), overture in D major, and overture to 'Rosamunde'; and for two hands of the accompaniments to the Romance and three choruses in the same work. The song 'Der Leidende,' in B minor, is an arrangement for voice and piano of the second trio (in B♭ minor) of the second Entr'acte of 'Rosamunde.'

5. Mendelssohn. For four hands: the Octet (op. 20); the *Midsummer Night's Dream* overture and other music; the 'Hebrides' overture; the overture for military band (op. 24); the andante and variations in B♭ (op. 83*a*), originally written for two hands. For two hands: the accompaniments to the Hochzeit des Camacho, and to the 95th Psalm (op. 46). He also arranged the scherzo from the string octet (op. 20) for full orchestra to replace the minuet and trio of his symphony in C minor on the occasion of its performance by the Philharmonic Society, as noticed above.

6. Schumann. For four hands: Overture, scherzo, and finale; Symphony No. 2 (C major); Overture to 'Hermann und Dorothea.' Madame Schumann arranged the quintet (op. 44) for two pianofortes, and the accompaniments to the opera of 'Genoveva' for two hands.

7. Brahms arranged Nos. 1, 3, and 6 of his 'Ungarische Tänze,' originally published as piano pieces for four hands, for full orchestra. He also arranged his piano string quintet (op. 34) as a 'sonata' for four hands on two pianos, and his two orchestral serenades for piano, à quatre mains. The version of the variations on a theme of Haydn, made for two pianos, is so far above the usual standard of arrangement that it is dignified with a number, 56*b*, in the composer's works, the orchestral version being 56*a*. C. H. H. P.

ARRIAGA Y BALZOLA, JUAN CRISOSTOMO JACOBO ANTONIO, born at Bilbao, Jan. 27, 1806, a violinist and composer of great promise. When a mere child, without having learnt even the elements of harmony, he wrote a Spanish opera, and in 1821 was sent to the Conservatoire at Paris to study the violin under Baillot and harmony under Fétis. In two years he became a learned contrapuntist, and wrote an 'Et vitam venturi' in eight parts, which Cherubini is said to have pronounced a masterpiece. (Fétis.) On his premature death, of decline, at Marseilles in Feb. 1825, this gifted artist left three string quartets (Paris, 1824)—compositions deserving to be better known—an overture, a symphony, and many other unpublished works. M. C. C.

ARRIGONI, CARLO, a lutenist, born at Florence at the beginning of the 18th century, whose only claim to notice is his possible antagonism to Handel. He is said by Fétis and Schoelcher to have been engaged, with Porpora, as composer to the theatre at Lincoln's Inn, which was started as an opposition to Handel in 1734, and to have produced there in that year an opera called 'Fernando' without success; but it is impossible to discover on what this is grounded. That Arrigoni was in London at or about that date is possible, and even probable, since a volume of his *Cantate da Camera* was published there in 1732; and in Arbuthnot's satire *Harmony in an Uproar*, the 'King of Arragon' is mentioned amongst Handel's opponents, a name which Burney (*Commemoration*) explains to mean Arrigoni. But, on the other hand, the impression he made must have been very small, and his opera becomes more than doubtful, for the names neither of Arrigoni nor Fernando are found in the histories of Burney or Hawkins, in the MS. Register of Colman, in the newspapers of the period, nor in any other sources to which the writer has had access. It is in accordance with this that Arrigoni is mentioned by Chrysander in connection with Arbuthnot's satire only (*Händel*, ii. 348).

In 1738, taking a leaf out of his great antagonist's book, he produced an oratorio called 'Esther,' at Vienna, in the title of which he is styled 'compositore di camera del granduca di Toscana.' He is supposed to have died in Tuscany about 1743. G.

ARSIS AND THESIS. Terms used both in music and in prosody. They are derived from the Greek. Arsis is from the verb αἴρω (*tollo*, 'I lift or raise'), and marks the elevation of the voice in singing, or the hand in beating time. The depression which follows it is called θέσις (*depositio* or *remissio*).

When applied to beating time, arsis indicates the strong beat, and thesis the weak; for the ancients beat time in exactly the reverse way to ours, lifting the hand for the strong beat and letting it fall for the weak, whereas we make

the down beat for the strong accents, and raise our hand for the others.

When applied to the voice, a subject, counterpoint, or fugue is said to be 'per thesin' when the notes ascend from grave to acute; 'per arsin' when they descend from acute to grave, for here again the ancient application of the ideas of height or depth to music was apparently the reverse of our own.

A fugue 'per arsin et thesin' is the same thing as a fugue 'by inversion,' that is to say, it is a fugue in which the answer to the subject is made by contrary motion. (See FUGUE, CANON, INVERSION, and SUBJECT.) The terms arsis and thesis may be regarded as virtually obsolete, and are practically useless in these days. F. A. G. O.

ARTARIA. A well-known music-publishing firm in Vienna, the founders of which were Cesare, Domenico, and Giovanni Artaria, three brothers from Blevio on the Lake of Como, who settled in Vienna about the end of the year 1750. In 1769 the privilege of the Empress was granted to Carlo, the son of Cesare, and his cousins, Francesco, Ignazio, and Pasquale, to establish an art business in Vienna. To the sale of engravings, maps, and foreign music, was added in 1776 a music printing press, the first in Vienna, from which two years later issued the first publications of the firm of Artaria and Co. At the same time appeared the first of their catalogues of music, since continued from time to time. From the year 1780 a succession of works by Haydn, Mozart, Beethoven, and other composers, were published by the firm, which is in full activity at the present day. A branch house was founded at Mayence in 1793 by the brothers of Pasquale Artaria, Domenico and Giovanni Maria; this was afterwards extended to Mannheim, in conjunction with the bookselling house of Fontaine, under the name of Domenico Artaria. In 1793 the Vienna firm united with Giovanni Cappi and Tranquillo Mollo, who, however, shortly afterwards dissolved the association, and started houses of their own, Cappi again subsequently joining with Tobias Haslinger, and Mollo with Diabelli. In 1802 the business came into the hands of Domenico, a son-in-law of Carlo. Under his management the business reached its climax, and the house was the resort of all the artists of the city. His valuable collection of autographs by Mozart, Haydn, Beethoven, and other famous composers, was known far and wide, though in course of time in great measure dispersed. Domenico died on July 5, 1842, and the business was carried on under the old name by his son August, who died Dec. 4, 1893. His two sons, C. August and Dominik, are the present partners. Haydn was for many years in most intimate relations with Artaria and Co. What they published for Beethoven may be seen in the fullest detail in Nottebohm's catalogue of the great composer's works. C. F. P.

ARTAXERXES, an opera in three acts composed by Dr. Arne, the words translated from Metastasio's 'Artaserse' by Arne himself. Produced at Covent Garden Theatre Feb. 2, 1762, and long a favourite piece on the London boards. It was given in Dublin as late as 1877.

ARTEAGA, STEFANO, a learned Jesuit, born about 1750 at Madrid. On the suppression of the order he went to Italy and became a member of the Academy of Padua. He afterwards resided at Bologna, and there made the acquaintance of PADRE MARTINI, at whose instance he investigated the rise and progress of the Italian stage. His work, entitled *Rivoluzioni del teatro musicale Italiano, dalla sua origine fino al presente* (two vols. 1783) is of importance in the history of music. A second edition, in three vols., appeared at Venice in 1785. He also left behind him a MS. treatise on the rhythm of the ancients, of which, however, all traces have disappeared. He died Oct. 30, 1799. F. G.

ART OF FUGUE, THE (*Die Kunst der Fuge*), a work of Sebastian Bach's, in which the art of fugue and counterpoint is taught, not by rules but in examples. It was written in 1749, the last year of his life, and is therefore the last legacy of his immense genius and experience. The work consists of fourteen fugues—or in Bach's language 'counterpoints'—four canons, and two fugues for two claviers, all on one theme

in every variety of treatment; and closes with a fugue on three new subjects, in the same key as before, the third being the name of BACH (according to the German notation):—

This fugue leaves off on a chord of A, and is otherwise obviously unfinished, interrupted, according to Forkel, by the failure of Bach's eyes, and never resumed. On the other hand the writing of the autograph (Berlin Library), though small and cramp, is very clear, and not like the writing of a half-blind man. We learn on the same authority that it was the master's intention to wind up his work with a fugue on four subjects, to be reversed in all the four parts; of this, however, no trace exists. The *Art of Fugue* was partly engraved (on copper) before Bach's death, and was published by Marpurg in 1752, first at five then at four thalers, with the addition at the end of a Chorale, 'Vor deinen Thron tret' ich hiemit,' in four parts in florid counterpoint, which is said to have been dictated by the master to his son-in-law,

Altnikol, very shortly before his departure, and is thus his 'Nunc dimittis.' This chorale, which has no apparent connection with the preceding portion, is in G major; it is omitted in the editions of Nägeli and Peters, but will be found in the B.-G. edition, xxv². p. 145.

Thirty copies only of the work were printed by Marpurg, and the plates, sixty in number, came into the hands of Emanuel Bach, who on Sept. 14, 1756, in a highly characteristic advertisement, offered them for sale at any reasonable price. What became of them is not known. There are three modern editions—that of Nägeli of Zürich (1803), published at the instigation of C. M. von Weber, a splendid oblong folio, with the fugues engraved both in score and in compressed arrangement; that of Peters (1839), edited by Czerny; and that of the B.-G. None of these has the Chorale; but the second contains the 'Thema regium' and the 'Ricercar' from the 'Musikalisches Opfer.' An excellent analysis of the work is Hauptmann's 'Erläuterungen,' etc., originally prefixed to Czerny's edition, but to be had separately (Peters, 1841). [See Spitta's *Bach*, Engl. tr. iii. 197-204, and a paper by James Higgs in the *Proceedings of the Musical Association*, Feb. 5, 1877.] G.

ARTE MUSICALE IN ITALIA, L'. A series of finely-printed volumes published by Ricordi and Co., edited by Signor Luigi Torchi, and including compositions, both sacred and profane, from the 14th to the 18th centuries. The first of the two volumes of vocal music that have already appeared is confined to the 14th to 16th centuries, the second to the 16th only.

The list of contents is as follows:—

VOL. I.

JACOPO DA BOLOGNA. Sotto l' imperio del poesente prince, a 3.
ALESSANDRO DEMOPHON. A che son bormai conducto, a 4.
Vidi hor cogliendo rose, a 4.
FRANCESCO D' ANA. Passio sacra nostri redemptoria, motet, a 4.
Sapientissimus nostrae salutis autor, do., a 4.
BARTOLOMEO TROMBONCINO. Incipit lamentatio, a 4.
GIOVANNI SPATARO. Ave gratia plena, a 4.
In illo tempore, a 4.
COSTANZO FESTA. Regem archangelorum, a 4.
Amor che mi consigli? a 2.
Part of a Te Deum, a 5.
SIMON FERRARESE. Ave et gaude, a 5.
GIUSEPPE ZARLINO. Nigra sum sed formosa, a 5.
Ecce tu pulchra es, a 5.
JAN GERO. Però ch' amor mi sforza, a 4.
Ave Maria, a 5.
O beatum pontificem Martinum, a 4.
Felice l' alma che per voi sospira, a 4.
Io mi credea scemare, a 4.
FRANCESCO CORTECCIA. Se per honesti preghi, a 4.
Un dì lieto giamai, a 4.
Benedictus Dominus Deus Israel, a 5.
DOMENICO DA NOLA. Io vo piangendo, a 4.
O verde amena, a 5.
Datemi pace, a 5.
NICOLA VICENTINO. Jerusalem convertere ad Dominum, a 5.
Alleluja haec dies, a 4.
GIOVANNI ANIMUCCIA. Magnificat, a 4.
Kyrie, a 4, and Gloria from Mass. Conditor Alme Syderum.
Qual è maggior la fiamma, a 5.
BALDASSARE DONATO. Viva sempre in ogni etate (Villanesca, a 4).
Che val peregrinar, a 4.
Chi la Gagliarda (Villanella, a 4).
Io vò la notte, a 4.
Arder non sol, a 4.
VINCENZO RUFFO. Et in terra pax, from a Mass, a 5.
Credo from Missa de Feria, a 5.
L' aquila è gita al ciel, a 5.
In convertendo, a 5.
Ma di chi debbo lamentarmi, a 4.
ANNIBALE PADOVANO. A qualunque animal, a 4.
Si traviato è il folle mio desio, a 4.
Spirto real, a 5.
COSTANZO PORTA. Pater Noster, a 6.
Se le mie acerbe pene, a 4.
Lauda Deum, a 8.
ANNIBALE ZOILO. Vaghe luci, a 5.
Clori gentil, a 5.
A che cerchi, a 5.
Chi per voi non sospira, a 5.
PIETRO VINCI. Ne la dolce stagion di primavera, a 5.
Amor per suo diletto, a 5.
Quando il giorno, a 5.
Kyrie from Mass, La, Sol, Fa, Mi, Re, Ut, a 6.
Mirabile misterium, a 5.
Calliope colles, a 5.
ALESSANDRO STRIGGIO. Di questa biond' e vaga, a 5.
Ninfe leggiadre, a 5.
Le vagh' herbette, a 5.
Non visse a la mia vita, a 5.
Eran Ninfe, a 8.
CLAUDIO MERULO. Ma di che debbo, a 4.
Madonna poi ch' uccider mi volete, a 4.
Vergine bella, a 5.
Vergine Madre figlia del tuo figlio, a 5.
De le perle e rubini, a 5.
CLAUDIO MERULO. In Deo speravit, a 8.
VINCENZO BELL' HAVER. Amo sol chi m' ha in odio, a 5.
S' alza nel Ocean, a 5.
La bella pargoletta, a 3.
ANDREA ROTA. Spargete o Ninfe, a 5.
Agnus Dei, a 7.
Dixit Dominus, a 8.
ASCANIO TROMBETTI. Paratum cor meum, a 5.
Misericordiae tuae, a 12.

VOL. II.

GIOVANNI MARIA NANINI DA VALLERANO. O altitudo, a 8.
Chiedei piangendo, a 5.
Exultent et laetentur, a 3.
Cantate domino, a 3.
Qui vult venire, a 5.
Donna gentil, a 5.
BARTOLOMEO SPONTONE. Mass, Così estrema, a 8.
GIACOMO GASTOLDI. Magnificat, a 8.
Al mormorar, a 6.
Il bell' umore, a 5.
ANDREA GABRIELI. Rimanti amor, a 5.
Cor meum conturbatum, a 5.
O sacrum convivium, a 5.
Beati quorum, a 8.
A le guancie di rose, a 8.
Battaglia, a 8.
GIOVANNI GABRIELI. Sacro tempio d' honor, a 5.
Alma cortes' e bella, a 3.
Sacri di Giova augei, a 12.
Angelus ad Pastores, a 12.
Lieto godea sedendo, a 8.
A. and G. GABRIELI. In nobil sangue, a 6.
LUCA MARENZIO. Il vago e bello Armillo, a 5.
La bella man, a 5.
Solo e pensoso, a 5.
LUCA MARENZIO. L' aura che 'l verde lauro, a 5.
ORAZIO VECCHI. E tra verde arbuscelli, a 5.
Corse alla morte, a 4.
Io son fenice, a 4.
Vattene amor, a 8.
Ahi tormentosi, a 5.
Vaga Nigella, a 6.
Cantemus laetis vultibus, a 8.
Or ch' ogni vento tace, a 6.
Beati omnes, a 10.
BENEDETTO PALLAVICINO. Dolcemente dormiva, a 5.
Dolce grave et acuto, a 5.
GIOVANNI CROCE. Buccinate, a 8.
Incipite Domino, a 8.
Or che siam (Il giuoco dell' oca), a 6.
MATTEO ASOLA. In una verde piaggia, a 8.
Nisi Dominus, a 8.
ACHILLE FALCONE. Bianchi cigni, a 5.
S' avien che reticella, a 5.
Sfidi tu forse, a 5.
Sopra le verdi chiome, a 5
LEONE LEONI. Cor mio, a 5.
Dimmi Clori, a 5.
RUGGERO GIOVANELLI. O come vaneggiate donna, a 5.
Jubilate Deo, a 8.
In mandatis ejus, a 8.

The third volume (published 1903) contains compositions for the organ or harpsichord, dating from the 16th, 17th, and 18th centuries.

GIROLAMO CAVAZZONI. Ricercari, canzoni, inni, 2 magnificats.
ANTONIO VALENTE. Versi.
VINCENZO PELLEGRINI. 2 canzoni.
BERTOLDO SPERINDIO. 2 ricercari.
ANDREA GABRIELI. Ricercare, fantasia, pass' e mezzo, and toccate.
ANNIBALE PADOVANO. 2 ricercari.
CLAUDIO MERULO. 4 toccatas.
GIOVANNI GABRIELI. Intonazioni, toccata.
GIOVAN PAOLO CIMA. Ricercare.
ASCANIO MAJONE. Ricercare.
LUZZASCO LUZZASCHI. 2 ricercari and toccata.
COSTANZO ANTEGNATI. 3 ricercari.
GABRIEL FATORINI. 2 ricercari.
GIROLAMO DIRUTA. Ricercare, 2 toccatas.
ANTONIO ROMANINI. Toccata.
PAOLO QUAGLIATI. Toccata.
VINCENZO BELL' HAVER. Toccata.
GIOSEFFO GUAMI. Toccata.
AGOSTINO SODERINI. 2 canzoni.
GIOVANNI CAVACCIO. Toccata, ricercare, and canzona.
FABRIZIO FONTANA. 3 ricercari.
GIROLAMO FRESCOBALDI. Componimenti per cembalo (12 pieces).
Partite, corrente, passacagli, capriccio pastorale, 2 toccatas, 3 canzoni, 2 fugues.
ERCOLE PASQUINI. Canzona francese.
BERNARDO PASQUINI. Pastorale, toccate and sonata.
MICHELANGELO ROSSI. 10 toccatas for harpsichord, and 10 correnti for harpsichord or organ.
POLLAROLI. Sonata.
TARQUINIO MERULA. Sonata cromatica.
ADRIANO BANCHIERI. Ricercare and componimenti for organ (9 pieces).
GIO. MARIA TRABACI. 7 pieces.
DOMENICO ZIPOLI. Sonate for organ or harpsichord (13 pieces).
FLORIANO ARRESTI. Elevazione and ricercare.
GIUSEPPE BENCINI. Fugue and sonate for organ or harpsichord.
GIOVAN MARIA CASINI. 2 pensieri.
NICOLA PORPORA. Fugue.
BERNARDO SABADINI. Grave.

M.

ARTÔT, ALEXANDRE JOSEPH MONTAGNEY, born Jan. 25, 1815, at Brussels, was the son of Maurice Artôt[1] (1772-1829) first horn-player at the theatre there, by his wife Theresa Eva, daughter of Adam and cousin of Ferdinand Ries. He received instruction in music and on the violin from the former, and at the age of seven played at the theatre a concerto of Viotti. He received further instruction from Snel, principal

[1] His real surname was Montagney, but he adopted professionally the name of Artôt instead, which name was retained by all his family.

first violin at the theatre, and afterwards at the Paris Conservatoire from Rodolphe and August Kreutzer, and in 1827 and 1828 he obtained the second and first violin prizes respectively. According to Fétis, Artôt then played in concerts in Brussels and London with the greatest success, and became for a time player in the various Parisian orchestras. He became famous as a soloist, and made tours through Belgium, Holland, Italy, Germany, etc. On June 3, 1839, on the same occasion that Mario first appeared in England, Artôt played at the Philharmonic a fantasia of his own for violin and orchestra, and was well received, rather on account of the delicacy and feeling of his playing and his remarkable execution, than from his tone, which was very small.[1] We do not find that he played at any other public concert, and this is borne out by a letter of August 6 of the same year from Berlioz to Liszt, wherein details are given concerning musical taste in London at the time, received from Batta, who had just returned from there, and whose mutual conversation he reports at length: 'I arrived too late, and it is the same with Artôt, who, despite his success at the Philharmonic, despite the incontestable beauty of his talent, has a tedious time of it.'[2] In 1843 he went to America, Cuba, etc., on a concert tour with Mme. Cinti-Damoreau, and while there he showed the first symptoms of a lung disease. He never recovered, but died July 20, 1845, at Ville d'Avray, near Paris.

Artôt's compositions for the violin include a concerto in A minor, various fantasias and airs with variations with piano or orchestral accompaniment, and in MS. string quartets, and a quintet for piano and strings. 'He was, perhaps, the most finished and the most elegant of all the Rubini school of players; one of the handsomest men in our recollection; and much beloved, we are told, among his comrades for his gentleness and amiability' (*Athenæum*, August 2, 1845). A. C.

ARTÔT, Marguérite Josephine Désirée Montagney, born July 21, 1835, in Paris, daughter of Jean Désiré Montagney Artôt, horn professor at the Brussels Conservatoire, niece both of the above and of Baugniet the Belgian portrait-painter. She was taught singing by Mme. Viardot-Garcia, and first appeared in concerts in Belgium, Holland, and England, viz. at a state concert June 19, 1857. In 1858 she was engaged at the Paris Opera, through Meyerbeer, where on Feb. 5 she made her début with great success as Fidès, and subsequently played the heroine in a condensed version of Gounod's 'Sapho.' In spite of praise lavished on her by many critics, among others by Berlioz in the *Débats*, Feb. 17, she abandoned the French in favour of the Italian stage. In 1859 she sang in opera in Italy, and at the end of the year at Berlin, on the opening of the Victoria Theatre, as a member of Lorini's Italian company. In that city she made a furore in the 'Barbiere' and 'Cenerentola,' in 'Trovatore,' and even in the small part of Maddalena in 'Rigoletto,' from which time the greater part of her career was passed in Germany both in Italian and German opera, she having in the meantime abandoned the mezzo for soprano parts. In 1859-60 she sang with great applause at the Philharmonic and at other concerts. In 1863 she sang at Her Majesty's as Maria ('La Figlia') in which she made her début, May 19, as La Traviata, and as Adalgisa to the Norma of Titiens. In 1864 and 1866 she sang at the Royal Italian Opera in the first two parts, in 'Faust,' 'Figaro,' and the 'Barbiere,' but in spite of the great impression she invariably made, being an admirable and very complete artist, she never reappeared in England. On Sept. 15, 1869, she married at Sèvres the Spanish baritone Padilla-y-Ramos,[3] and sang with him in Italian opera in Germany, Austria, Russia, and elsewhere, until her retirement. Among other parts she has played in German with great success the heroines in 'Domino Noir' and 'Les Diamants.' On March 22, 1887, she appeared with her husband in a scene from 'Don Juan,' performed for the Emperor's birthday at the Schloss at Berlin, in which city she settled as a teacher of singing until 1889, when she went to live in Paris. A. C.

ARTUSI, Giovanni Maria, born at Bologna in the second half of the 16th century, was a canon of San Salvatore, Venice, a learned musician, and a conservative of the staunchest order, whose life was devoted to combating the innovations of the then 'music of the future.' His *Arte del contrapunto ridotta in tavole* was published in 1586 and 1589 (translated into German by Frost), but his principal works are controversial, *Delle imperfezioni delle musica moderna,* 1600 and 1603, directed against Monteverde's use of unprepared sevenths and ninths; *Difesa ragionata delle sentenze date di Ghisilino Dankerts; Impresa del Zarlino,* 1604; *Considerazione Musicali,* 1607. Artusi was active also as a composer; he published 'Canzonette' for four voices, 1598, and a 'Cantate Domino' of his will be found in the Vincenti collection dedicated to Schieti. He died August 18, 1613. F. G.

ASANTSCHEWSKY, Michel von, born 1838 at Moscow, completed his education in counterpoint and composition under Hauptmann and Richter at Leipzig between the years 1861 and 1864, and lived during some years subse-

[1] *Athenæum,* June 8, 1839.

[2] Berlioz, *Correspondance Inédite* (1879), p. 124.

[3] Padilla-y-Ramos, born 1842 at Murcia, studied under Mabellini of Florence, and has sung in Italian opera ever since. On Oct. 1, 1881, he first appeared with success in England as Hoel in 'Dinorah,' at a winter season at the Lyceum. He played in 1886 in the short but disastrous season at Her Majesty's, in the autumn with Mapleson in the provinces, and in 1887 at Covent Garden Theatre.

quently, alternately at Paris and at St. Petersburg, being director of the Conservatorium in the latter city from 1870 to 1876. He died at Moscow, Jan. 24, 1881. He acquired a reputation among book-collectors as the possessor of one of the finest private libraries of works upon music in Europe. Among his printed compositions the following should be noted: op. 2, Sonata in B minor for pianoforte and violoncello; op. 10, Trio in F sharp minor for piano and strings; op. 12, Fest-Polonaise for two pianofortes; Passatempo for piano *à quatre mains.* E. D.

ASCHENBRENNER, CHRISTIAN HEINRICH, violinist, born Dec. 29, 1654, at Altstettin, was the son of the ducal capellmeister at Wolfenbüttel. Amongst his teachers were Schütz, Theile, and finally Schmelzer of Vienna. Although he held at intervals some good appointments, and played on one occasion (in 1690) before the Emperor of Austria, to whom he dedicated six violin sonatas, his existence was, throughout, a very struggling one, and he died in straitened circumstances at Jena, Dec. 13, 1732. His most important appointments were in the ducal chapels of Zeitz and Merseburg (first violin in the former, 1677-81, and musical director 1695-1713; first violin at Merseburg 1683-90 and capellmeister 1713-19), Duke Wilhelm of Merseburg eventually allowing him a very small pension. His best-known work has the following title, 'Gast und Hochzeitfreude, bestehend in Sonaten, Präludien, Allemanden, Couranten, Balletten, Arien, Sarabanden, mit drei, vier und fünf Stimmen, nebst dem basso continuo,' 1673. It is uncertain, according to Fétis, if the above-mentioned six violin sonatas were ever published. W. W. C.

ASCHER, JOSEPH, was born at Groningen, Holland, June 4, 1829, died in London, June 20, 1869. A fashionable pianist, and composer of drawing-room pieces. He was taught by Moscheles, and followed his master to the Conservatorium at Leipzig. His successful career began in Paris, where he was nominated court pianist to the Empress Eugénie. His compositions amount to above a hundred *salon* pieces—mazurkas, galops, nocturnes, études, transcriptions, etc.—well written and effective, of moderate difficulty, and rarely if ever without a certain elegant grace and finish. Among the best are 'La perle du Nord' and 'Dozia,' both mazurkas, and 'Les gouttes d'eau,' an étude. Ascher believed in himself, and in his earlier compositions at least, offered his best; but the dissipated habits he gradually fell into ruined both his health and his taste. E. D.

ASHDOWN AND PARRY. See WESSEL.

ASHE, ANDREW, was born at Lisburn in Ireland, about the year 1759. Before he had completed his ninth year he was sent to England to an academy near Woolwich, where he remained more than three years, when Count Bentinck, a colonel in the army, took the boy under his protection. Ashe accompanied his patron to Minorca, where he received instruction on the violin. He next went with the Count through Spain, Portugal, France, and Germany, and lastly to Holland, where he was educated in order to become his benefactor's confidential agent in the management of his estates. But Ashe's mind was too strongly attracted towards music to suffer him to attend to anything else, and the Count perceiving it permitted him to follow the bent of his inclination. He acquired a general knowledge of several wind-instruments, and pursued the study of the flute so assiduously that in the course of a few years he became the admiration of Holland. Quitting the roof of Count Bentinck he engaged himself as chamber musician at Brussels, first to Lord Torrington, and next to Lord Dillon. About 1778 he obtained the post of principal flute at the opera-house of Brussels. About 1782 he returned to Ireland, where he was engaged at the concerts given at the Rotunda, Dublin. In 1791 Salomon engaged him for the concerts given by him in Hanover Square, at which Haydn was to produce his grand symphonies, and he made his appearance at the second concert, on Feb. 24, 1792, when he played a concerto of his own composition with decided success. He soon became engaged at most of the leading concerts, and on the resignation of Monzani was appointed principal flute at the Italian opera. In 1799 he married Miss Comer, a pupil of Rauzzini, who, as Mrs. Ashe, was for many years the principal singer at the Bath concerts, the direction of which after the death of Rauzzini in 1810, was confided to Ashe. After conducting these concerts with considerable ability for twelve years, Ashe relinquished the direction in 1822, having, during the last four years of his management, been a considerable loser by them. Mrs. Ashe first appeared at the Concert of Ancient Music in 1807, and also sang in the oratorios. Two of Ashe's daughters, one a harpist and the other a pianist, performed in London in 1821. W. H. H.

[Ashe went to Dublin in 1823, and lived there in retirement until his death in 1838. W. H. G. F.]

ASHLEY, JOHN, a performer on the bassoon at the end of the 18th century. In 1784 he was assistant conductor, under Joah Bates, at the commemoration of Handel in Westminster Abbey. [The 'Mr. Ashley of the Guards' who played the double bassoon on that occasion was most probably a brother of John Ashley's named Jane, who was born in 1740, and died April 5, 1809.] In 1795 he undertook the direction of the Lent 'oratorios' at Covent Garden. These performances, which took place on the Wednesdays and Fridays in Lent, were originated by Handel, under whose direction, and afterwards that of Smith and Arnold, they were correctly designated—that is, they con-

sisted of an entire oratorio or musical drama. Under Ashley's management this character was lost, and the performances (with few exceptions) were made up of selections, including every class of music, sacred and secular, 'in most admired disorder.' [The first performance in England of Mozart's 'Requiem' and Haydn's 'Creation' took place at these concerts, and] it was here that Braham obtained celebrity by his fine rendering of sacred music. For many years Ashley and his four sons visited different parts of England, giving what they called 'Grand Musical Festivals.' The father and sons performed themselves, and with some popular singer, and a little provincial help, they contrived to interest the public, and to fill their own pockets. On the death of Dr. Boyce, Ashley bought the plates of his 'Cathedral Music,' and the second edition (1788) bears his name as the publisher. He died March 2, 1805.

ASHLEY, GENERAL CHARLES, his eldest son, born about 1770, was a pupil of Giardini and Barthélemon, and a fair performer on the violin, of which instrument he was considered an excellent judge. He was scarcely known out of his father's orchestra. He took part with two of his brothers in the Handel Commemoration, and there got into trouble by nailing the coat of some Italian violinist to his seat, and filling his violin with halfpence. (*Dict. of Nat. Biog.*) He died August 21, 1818. ASHLEY, CHARLES JANE, born in 1773, was a performer of considerable excellence on the violoncello. In conjunction with his brother, 'the General' (as he was always called), he carried on the oratorios after his father's death. He had great reputation as an accompanist, and was considered second only to Lindley. He was one of the founders of the GLEE CLUB in 1793, an original member of the Philharmonic Society, and for some years Secretary to the Royal Society of Musicians. Nearly twenty years of his life were passed in the rules of the King's Bench Prison. In the latter part of his career (when nearly seventy), he became the proprietor of the Tivoli Gardens, Margate, the anxieties of which undertaking hastened his death, which occurred on August 29, 1843. Another of Ashley's sons, JOHN JAMES, born 1772, was a pupil of Johann Schroeter, and a good organ and pianoforte player. He was for some time organist at Covent Garden Theatre. He is remembered as an excellent singing-master, numbering among his pupils Mrs. Vaughan, Mrs. Salmon, Master Elliot (afterwards the glee composer), Charles Smith, etc. He died Jan. 5, 1815.

ASHLEY, RICHARD, was a viola performer, connected with the principal orchestras in London and the provinces. Nothing is known of his career. He was born in 1775, and died in 1836. E. F. R.

ASHLEY, JOHN, known as 'Ashley of Bath,' was, for upwards of half a century, a performer on the bassoon, and a vocalist in his native city. He is chiefly remembered as the writer and composer of a large number of songs and ballads (between the years 1780 and 1830), many of which acquired considerable popularity. He is also deserving of notice as the author of two ingenious pamphlets in answer to Mr. Richard Clark's work on the origin of our National Anthem:—'Reminiscences and Observations respecting the Origin of God save the King,' 1827; 'A Letter to the Rev. W. L. Bowles, supplementary to the Observations, etc.' 1828, both published at Bath. He died in 1830. E. F. R.

ASHTON, ALGERNON BENNET LANGTON, third son of Charles Ashton, a tenor lay-clerk in Durham Cathedral, was born at Durham, Dec. 9, 1859. The family went to reside at Leipzig, where the boy's talent enlisted the interest of Moscheles. His first teachers were Franz Heinig and Iwan Knorr. He entered the conservatorium at the age of fifteen and studied under Karl Reinecke, E. F. Richter, Jadassohn, Papperitz, and Coccius. On leaving the institution (in 1879) he obtained the Helbig prize for composition. After a visit to England he studied under Raff at Frankfort (1880-81). He subsequently settled in London, and in 1885 was appointed a professor of the pianoforte at the Royal College of Music, a post he still (1903) holds.

Mr. Ashton has claims to be regarded as a voluminous composer. His published works number 130; to these must be added 25 compositions in manuscript and about 50 productions of his youthful period (1872-76). These creations include symphonies, overtures, a suite, concertos (violin, pianoforte), quintet for wind instruments, quartets, trios, sonatas, and other music for the pianoforte, organ music, many songs, etc.

With the exception of a set of English Dances for four hands, few of these have attained great success, a fact which is no doubt due to a certain want of spontaneity and geniality in the themes themselves, not to any shortcomings in the way they are treated.

Mr. Algernon Ashton has obtained some notoriety in the pursuit of his favourite hobby —seeking out and keeping in repair the graves of distinguished persons. F. G. E.

ASHTON, HUGH. See ASTON.

ASHWELL, THOMAS, English composer of the first half of the 16th century. Morley names him in his *Plain and Easy Introduction*, 1597, among the practitioners in his list of authors. One song by him 'She may be called' was printed in Wynkyn de Worde's Song-Book, 1530. The following compositions exist in MS.:—Two Masses a 6 ('Jhesu Christe,' and 'Ave Maria') are in the Oxford Music School Collection; another incomplete Mass ('God save

King Herry') is in the University and St. John's College Libraries, Cambridge. Single parts of a 'Stabat Mater' and of a 'Te Matrem' are in the British Museum (*Harl. MS.* 1709).

G. E. P. A.

ASIOLI, BONIFACIO, born at Correggio, August 30, 1769; began to study at five years of age. Before eight he had written several masses, and a concerto for pianoforte. At ten he went to study at Parma under Morigi. After a journey to Venice, where he enjoyed his first public success, he was made maestro di cappella at his native town. By eighteen he had composed five masses, twenty-four pieces for the church and the theatre, and a number of instrumental pieces. In 1787 he changed his residence to Turin, where he remained nine years, composing five cantatas and instrumental music. In 1796 he accompanied the Duchess Gherardini to Venice, and remained there till 1799, when he removed to Milan, where in 1808 he was appointed censor of the newly established Conservatorio. In 1810 he went to Paris in the service of the Empress Marie Louise, returning to Correggio on the fall of the empire; he died there May 18, 1832. Besides his compositions, for a list of which see the *Quellen-Lexikon*, he published a book of 'Principi elementari di musica' (1809, etc.), which went through seven editions, and was translated into French, English, German, and Dutch; a 'Trattato d'armonia' (1813); a book of dialogues on the same (1814); 'Osservazioni sul temperamento,' etc. (1816); and 'Disinganno' on the same. His principal work is 'Il Maestro di composizione' (posth. 1832). All these works are written with accuracy and a clear and brilliant style. Asioli's biography was written by Coli, a priest of Correggio, under the title of *Vita di B. Asioli*, etc. (Milan, Ricordi, 1834). F. G.

ASOLA, or ASULA, GIOVANNI MATTEO, born at Verona in the latter half of the 16th century; priest and composer of church music and madrigals. He was one of the first to use figured basses. He was maestro di cappella at Treviso in 1578 and at Vicenza in 1581. A list of his very numerous compositions is in the *Quellen-Lexikon.* In 1592 he joined other composers in dedicating a collection of Psalms to Palestrina. Riemann gives Oct. 1, 1609, as the date of his death.

ASPULL, GEORGE, born at Manchester, in June 1813, at a very early age manifested an extraordinary capacity as a pianoforte player. At eight years of age, notwithstanding that the smallness of his hands was such that he could not reach an octave, so as to press down the two keys simultaneously, without great difficulty, and then only with the right hand, he had attained such proficiency as to be able to perform the most difficult compositions of Kalkbrenner, Moscheles, Hummel, and Czerny, besides the concertos of Handel, and the fugues of Bach and Scarlatti, in a manner almost approaching the excellence of the best professors. He first appeared at a concert in Jan. 1822. In the following year he played to Clementi in London, and on Feb. 20, 1824, before George IV. at Windsor. He played Weber's Concertstück for the first time in England at a concert at Brighton. After a visit to Paris in April 1825 he undertook a number of concert tours throughout Great Britain and Ireland. The high hopes of his friends were disappointed by his death from a pulmonary disease, at the age of eighteen, the result of a cold caught at the funeral of Clementi. He died August 19, 1832, at Leamington, and was buried two days afterwards at Nottingham. Aspull left several manuscript compositions for the pianoforte, which were subsequently published, with his portrait prefixed, under the title of 'George Aspull's posthumous Works for the Pianoforte.' See the *Mus. World*, Feb. 14, 1839, the *Harmonicon*, 1832, p. 212, the *Dictionary of Nat. Biog. s.v.*; and the *Quarterly Musical Review*, vol. vi. pp. 240, 241. W. H. H.

ASSAI (Ital.), 'Very'; *e.g.* 'Allegro assai,' very fast; 'Animato assai,' with great animation; 'Maestoso assai,' with much majesty, etc.

ASSMAYER, IGNAZ, born at Salzburg, Feb. 11, 1790; in 1808 organist of St. Peter's in that city, where he wrote his oratorio 'Die Sündfluth' (The Deluge), and his cantata 'Worte der Weihe.' In 1815 he removed to Vienna; in 1824 became organist to the Scotch church; in 1825 Imperial organist; in 1838 vice, and in 1846 second capellmeister to the court. He died August 31, 1862. His principal oratorios—'Das Gelübde' (The Vow); 'Saul und David,' and 'Saul's Tod'—were frequently performed by the 'Tonkünstler-Societät,' of which Assmayer was conductor for fifteen years. Besides these larger works he composed fifteen masses, two requiems, a Te Deum, and various smaller church pieces, as well as nearly sixty secular compositions. These last are all published. His music is correct and fluent, but wanting in invention and force. C. F. P.

ASSOCIATION ARTISTIQUE D'ANGERS, L', an orchestral institution founded in 1875 by Michel, Jules Bordier, and Comte Louis de Romain, for the cultivation of orchestral music in Angers and the neighbourhood. In spite of many difficulties, which almost compelled the association to cease its work, it has won an honoured place, and has made known a great number of modern French works, as well as compositions of other schools. On March 23, 1902, the association gave its 500th concert; on that occasion the Comte de Romain, who has been sole president since the deaths of Michel, and Jules Bordier (1846-96), received the cross of the Légion d'honneur. G. F.

ASTON, HUGH (whose name also appears in MSS. as Ashton, Aystoun, and Austen), was one of the leading English pre-Reformation com-

posers (fl. c. 1500-20). His identity with an ecclesiastic of this name (for whom see the *Dict. Nat. Biog.*) cannot be proved. Among the MS. copies of his church music are a Mass a 6 ('Videte manus meas') and a Mass a 5 ('Te Deum') in the Oxford Music School Collection; a Te Deum a 5 in the Bodleian Libr. (*MS. Mus.* e 1-5); and the following Motets: 'Ave Maria divæ Matris,' 'Ave Maria ancilla,' 'Gaude Virgo,' 'O Baptista,' all in the Peterhouse Library, Cambridge; 'Ave Domina sancta Maria' (incomplete), *B. M. Harl.* 7578; 'Te Matrem Dei' (incomplete), University and St. John's Coll. Libraries, Cambridge. A hornpipe for the Virginals by him (*Brit. Mus. Royal MSS.* App. 58) is interesting as an early example of this kind of music. 'Hugh Aston's Grownde' was used by later composers as a theme for variations. A composition for the Virginals by Byrd is found under this name in Lady Nevell's *Virginal Book;* the same piece called Treg(ian's) Ground is in the *Fitzwilliam Virginal Book* (ed. Fuller Maitland and Squire, vol. i. p. 226). A composition by Whytbroke called 'Hugh Aston's Maske' (Ch. Ch. Library, Oxford) is apparently based upon the same ground. G. E. P. A.

ASTORGA, EMANUELE, BARON D', born at Naples, Dec. 11, 1681. He began the serious business of life by witnessing the execution of his father, the Marchese Capece da Roffrano, who was captain of a mercenary troop, and perished in 1701 on the scaffold along with several Sicilian nobles after an unsuccessful resistance to the power of Spain. In the agony of this terrible occasion his mother actually died, and the child himself fainted away. After a time the orphan attracted the notice of the Princess Orsini, maid of honour to the wife of Philip V., who placed him in the convent of Astorga in Spain. In this asylum it was that he completed the musical education which there is reason to believe he had commenced under Francesco Scarlatti at Palermo. He quitted it after a few years, and on his entrance into the world obtained, through the influence of his patroness, the title of Baron d'Astorga. In 1704 he was sent on a diplomatic mission to the court of Parma. There he soon became a favourite for his music's sake and for his personal gifts, for he was a handsome man, composed with ease and ability, and sang with extraordinary finish and feeling his own graceful and original melodies. It is not otherwise than consonant with a character of which we have only slight and not very trustworthy glimpses, to hear that on the termination of his mission he still lingered at the court of Parma, forgetful of his Spanish ties, and fettered by a secret love affair with his pupil Elisabetta Farnese, the niece of the reigning duke. Nor is it surprising that his entertainer should soon have found means to transfer so dangerous an ornament of his palace to some distant capital. Accordingly we find Astorga dismissed, early in 1705, with a letter of recommendation to Leopold I. at Vienna. The emperor yielded at once to the fascinations of his visitor, and would have attached him to his person had not his own death too rapidly interrupted his intentions. Astorga remained in or returned to Vienna during the reigns of Joseph I. and Charles VI., and for many years led a romantic life of travel and adventure, in the course of which he visited and revisited Spain, Portugal, England, and Italy, reconciling himself on his way to the neglected protectress of his boyhood. In 1712 he was in Vienna, and acted as godfather to the daughter of his friend CALDARA, whose register (May 9) may still be seen at St. Stephen's. In 1720 he reappeared there for a short time, and thence he finally retired to Bohemia, where he died, August 21, 1736, in the Schloss Raudnitz, which had been given up to him by its owner, the prince of Lobkowitz, and the archives of which contain evidence of the fact.

Among Astorga's compositions are his renowned 'Stabat Mater,' for four voices and orchestra, probably composed for the 'Academy of Antient Musick' of London, and executed at Oxford in 1713, MS. copies of the score of which are to be found in the British Museum and the imperial libraries of Berlin and Vienna; and a pastoral opera 'Dafni' (not 'Dafne'), composed and performed at Barcelona in June 1709, and to be found in the royal collection at Dresden. His name is also known by his beautiful cantatas, of which a great number are extant. The Abbé Santini had no less than 98 of these, 54 for soprano, and 44 for contralto, with accompaniment for figured bass on the harpsichord, besides ten composed as duets for the same two voices. See list in *Quellen-Lexikon*. The work is published (with pianoforte accompaniment) in the Peters Edition, and has been re-instrumented by Franz and issued by Leuckhart. C. F. P.

A TEMPO (Ital.), 'In time.' When the time of a piece has been changed, either temporarily by an *ad libitum*, *a piacere*, etc., or for a longer period by a *più lento*, *più allegro*, or some similar term, the indication *a tempo* shows that the rate of speed is again to be that of the commencement of the movement.

ATHALIA. The third of Handel's oratorios; composed next after 'Deborah.' Words by Humphreys. The score was completed on June 7, 1733. First performed at Oxford, July 10, 1733. Revived by Sacred Harmonic Society June 20, 1845.

ATHALIE. Mendelssohn composed overture, march, and six vocal pieces (op. 74) to Racine's drama. In the spring of 1843 the choruses alone (female voices), with pianoforte. In May or June 1844, in London, the overture and march. Early in 1845, choruses re-written and scored for orchestra. First performed at Berlin,

Dec. 1, 1845; in England, Windsor Castle (in French), Jan. 1, 1847; Philharmonic, March 12, 1849.

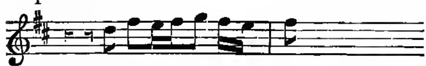
ATKINS, Ivor Algernon, born at Cardiff, Nov. 29, 1869, received his first musical instruction from his father, the organist of St. John's Church, Cardiff, and afterwards was a pupil of C. Lee Williams, whose assistant he became at Truro Cathedral in 1885, following him to Hereford in the same capacity in 1890. In 1893 he became organist of Ludlow Parish Church, and in 1897 was appointed to Worcester Cathedral; he conducted the Three Choir Festivals of 1899 and 1902 with great success. M.

ATTACCA, *i.e.* 'begin' (Ital.), when placed at the end of a movement—as the Scherzo of Beethoven's C minor Symphony, or the first three movements of Mendelssohn's Scotch Symphony—signifies that no pause is to be made, but that the next movement is to be joined immediately to the preceding.

ATTACCO (verbal substantive, from *attacare*, 'to unite,' 'to bind together'). A short phrase, treated as a point of imitation; and employed, either as the subject of a fugue, as a subordinate element introduced for the purpose of increasing the interest of its development, as a leading feature in a motet, madrigal, full anthem, or other choral composition, or as a means of relieving the monotony of an otherwise too homogeneous part-song.

A striking instance of its employment as the subject of a fugue will be found in book ii. No. 3, *Das Wohltemperirte Clavier.*

When used merely as an accessory, it almost always represents a fragment of the true subject; as in 'Ye House of Gilead,' from Handel's 'Jephthah.'



In the madrigal, and motet, a new Attacco is usually introduced with each new paragraph of the verbal text; in the glee, properly so called, the part played by the Attacco is less important; while, in the part-songs, its appearance as a prominent feature is still less frequent. Exception to the rule will, however, be found in Dr. Callcott's 'Go, plaintive Breeze,' in Mendelssohn's 'Setze mir nicht, du Grobian,' and in other well-known modern compositions. [See Andamento and Soggetto.] W. S. R.

ATTACK. A technical expression for decision and spirit in beginning a phrase or passage. An orchestra or performer is said to be 'wanting in attack' when there is no firmness and precision in their style of taking up the points of the music. This applies especially to quick *tempo.* It is equivalent to the *coup d'archet,* once so much exaggerated in the Paris orchestras, and of which Mozart makes such game (Letter, June 12, 1778).

The *chef d'attaque* in France is a name for the leader of the first violin, or what we in England call the leader of the orchestra.

ATTAIGNANT, or ATTAINGNANT, Pierre, a music printer of Paris in the second quarter of the 16th century, 'demourant en la rue de la Harpe devant le bout de la rue Mathurins près de l'église de Sainct Cosme.' He is said to have been the first in Paris to print music from movable types, using the newly-devised type of Pierre Hautin, in which fragments of the stave were for the first time combined with the note. In an Avignon catalogue of 1778 a 'Chansons nouvelles de musique à quatre parties' of 1527 is cited as a publication of Attaignant, but the earliest dated book now extant bearing his imprint is 'Trente et quatre chansons musicales à quatre parties,' of which there is a copy in the National Library at Paris, dated Jan. 23, 1528.

A list of Attaignant's publications is given in the *Quellen-Lexikon.* They are very numerous and include, besides detached collections of songs, motets, and masses, an Introduction to the Lute (1529), 18 basse-dances in tablature for the lute (1529), 9 basse-dances, 2 branles, 25 pavans and 15 galliards (1530), a splendid folio volume containing 7 books of masses (1532), 13 books of motets (1534-35) and 35 books of songs (1539-49). This last series contains no fewer than 927 songs in four parts by French and Flemish composers. There is a complete set in the Munich Library, from which Eitner has recently published sixty selected specimens. One of the earlier collections, 'Trente et une chansons musicales à quatre parties' (1529), has been reprinted by M. Henry Expert in the series entitled 'Les Maîtres Musiciens de la Renaissance Française.' All the leading composers of the period, Arcadelt, Certon, Clemens non papa, Consilium, Courtois, Fevin, Gombert, Jacotin, Jannequin, Josquin, Le Jeune, Mouton, Richafort, Sandrin, Sermisy, Willart and many others, are represented in Attaignant's collections. The latest date appearing on his title-pages is Dec. 3, 1549, and on the 20th of the following January Nicholas du Chemin issued the first of *his* series of 'Chansons à quatre parties.' There is, however, no certain evidence of Attaignant's death before 1553, in which year his widow's name appears on the title-page of a collection of songs. J. F. R. S.

ATTAQUE DU MOULIN, L', opera in three acts, libretto by Louis Gallet, founded on a story in Zola's *Soirées de Meudon.* Music by Alfred Bruneau. First performed at the Opéra Comique, Paris, Nov. 23, 1893 (the action of the piece being transferred from the period of the war with Germany to the Napoleonic period); at Covent Garden, with the action restored to the date of the Franco-Prussian war, July 4, 1894.

ATTERBURY, Luffman, originally a car-

penter, became one of the musicians-in-ordinary to George III., and composed numerous catches and glees. Between 1778 and 1780 he obtained from the Catch Club prizes for three glees and two catches. He also composed an oratorio called 'Goliah,' which was performed for the first time at the Haymarket Theatre on Wednesday, May 5, 1773, being announced as 'for that night only.' It was again performed in West Wycombe church on August 13, 1775, on the occasion of the singular ceremony of depositing the heart of Paul Whitehead, the politician and versifier, enclosed in a marble urn, as directed by his will, in the mausoleum there of his patron, Lord Le Despencer. He sang in the Handel Commemoration of 1784, and about 1790 he published 'A Collection of Twelve Glees, Rounds,' etc. Eleven glees and nineteen catches by him are included in Warren's collections. His glee, 'Come, let us all a-Maying go,' still retains its popularity. He died in Marsham Street, Westminster, June 11, 1796, during one of a series of concerts given in aid of his reduced finances. W. H. H.

ATTEY, John, a composer of part-songs, who flourished in the first quarter of the 17th century. He appears to have been patronised by the Earl and Countess of Bridgewater, to whom he dedicates his 'First Booke of Ayres of Foure Parts, with Tableture for the Lute,' in 1622. On the title-page of this work he calls himself 'Gentleman and Practitioner of Musicke.' It contains fourteen songs in four parts, which may be sung as part-songs or as solos by a soprano voice, accompanied by the lute, or the lute and bass-viol. As no second collection appeared, it is probable that the composer did not meet with sufficient encouragement in all cases. The madrigalian period was rapidly declining. He died at Ross about 1640. E. F. R.

ATTWOOD, Thomas, the son of a trumpeter, viola-player, and coal-merchant, was born in London, Nov. 23, 1765. At nine years of age he became a chorister in the Chapel Royal, where he had for his masters successively Dr. Nares and Dr. Ayrton, and where he remained about five years. In his sixteenth year, performing in a concert at Buckingham House, he attracted the attention of the Prince of Wales (afterwards George IV.), who sent him to Italy to study. In 1783 he went to Naples, where he remained for two years under the tuition of Filippo Cinque and Gaetano Latilla. From Naples he went to Vienna, and studied under Mozart—who expressed a highly favourable opinion of his talent (Kelly's *Reminiscences*, i. 228)—until February 1787, when he accompanied the Storaces to England. He became organist [or more probably deputy to F. C. Reinhold, organist] of St. George the Martyr, Queen Square, and a member of the Prince of Wales's chamber band. He was appointed musical instructor to the Duchess of York in 1791, and to the Princess of Wales in 1795. In 1796, on the decease of John Jones, organist of St. Paul's Cathedral, Attwood became his successor; and in June 1796, on the death of Dr. Dupuis, he was appointed Composer to the Chapel Royal. In 1821 he was nominated organist of George IV.'s private chapel at Brighton. Attwood was one of the original members of the Philharmonic Society on its establishment in 1813, was treasurer in 1820, and for some years occasionally conducted its concerts. On the foundation of the Royal Academy of Music in 1823, he was one of the professors. In 1836, on the decease of John Stafford Smith, he succeeded him as organist of the Chapel Royal. Attwood died at his residence in Cheyne Walk, Chelsea, on March 24, 1838. He was buried in St. Paul's Cathedral, under the organ. In the early part of his life Attwood was much engaged in dramatic composition, in which he was very successful.

The pieces set by him were—

The Prisoner, 1792; The Mariners, 1793; Caernarvon Castle, 1793; The Adopted Child, 1795; The Poor Sailor, 1795; The Smugglers, 1796; The Mouth of the Nile, 1798; The Devil of a Lover, 1798; A Day at Rome, 1799; The Castle of Sorrento, 1799; The Red Cross Knights, 1799; The Old Clothesman, 1799; The Magic Oak, 1799; True Friends, 1800; Harlequin's Tour, 1800; The Domination of Fancy, 1800; The Escapes, or The Water Carrier (partly selected from Cherubini's 'Les Deux Journées,' and partly original), 1801; St. David's Day, 1801; Il Bondocani, 1802; Adrian and Orilla, 1806, and The Curfew, 1807. He also contributed two songs to 'Guy Mannering,' 1816.

Later in life Attwood devoted his attention more to cathedral music. A volume of his church compositions, containing four services, eight anthems, and nine chants, was published about fifteen years after his death, under the editorship of his godson, Dr. Thomas Attwood Walmisley. Besides these compositions Attwood produced a fifth service in B flat (unpublished), two anthems with orchestral accompaniments; one, 'I was glad' (a remarkably fine composition), for the coronation of George IV., and the other, 'O Lord, grant the King a long life,' for that of William IV.; and he had commenced a third, intended for the coronation of Queen Victoria, when his career was closed by death. [Nine other anthems are mentioned in the long and valuable article in the *Musical Times*, 1900, p. 788, etc.] He also, following the example of Matthew Lock, composed a 'Kyrie eleison,' with different music for each repetition of the words. Attwood produced many sonatas and lessons for the pianoforte, and numerous songs and glees. Of his songs, 'The Soldier's Dream' long maintained its popularity; and of his glees, 'In peace Love tunes the shepherd's reed,' and 'To all that breathe the air of Heaven,' are still well known to all admirers of that species of music. Attwood's compositions are distinguished by purity and taste as well as by force and expression.

It is interesting to notice that Attwood, a favourite pupil of Mozart, was one of the first

among English musicians to recognise the genius of the young Mendelssohn. A friendship sprang up between the two composers which was only broken by the death of the elder. Thus the talented Englishman appears as a connecting link between the two gifted Germans. Several of Mendelssohn's published letters were written from Attwood's villa at Norwood, his three Preludes and Fugues for the organ are dedicated to him, and the autograph of a Kyrie eleison in A minor is inscribed 'For Mr. Attwood; Berlin, March 24, 1833.' W. H. H.

AUBADE. A French term (from *aube*, 'the dawn'), the counterpart of nocturne or serenade. It was originally applied to music performed in the morning, and apparently to concerted music (Littré); this condition is fulfilled in Lalo's charming work in G minor for five wind instruments and five strings. Stephen Heller and Schulhoff have written pianoforte pieces bearing this title.

AUBER, Daniel-François-Esprit, was born Jan. 29, 1782, at Caen, where his parents were on a visit. The family, although of Norman origin, had been settled in Paris for two generations, and that metropolis was always considered as his home by our composer. In his riper years he hardly ever left it for a single day, and not even the dangers of the Prussian siege could induce the nonagenarian to desert his beloved city. Although destined by his father for a commercial career, young Auber began to evince his talent for music at a very early period. At the age of eleven he wrote a number of ballads and 'Romances,' one of which, 'Bonjour,' is said to have been very popular at the time. A few years later we find Auber in London, nominally as commercial clerk, but in reality more than ever devoted to his art. Here also his vocal compositions are said to have met with great success in fashionable drawing-rooms; his personal timidity however —a feature of his character which remained to him during his whole life—prevented the young artist from reaping the full benefit of his precocious gifts. In consequence of the breach of the Treaty of Amiens (1804) Auber had to leave England, and on his return to Paris we hear nothing more of his commercial pursuits. Music had now engrossed all his thoughts and faculties. His début as an instrumental composer was accompanied by somewhat peculiar circumstances. Auber had become acquainted with Lamarre, a violoncello player of considerable reputation; and to suit the peculiar style of his friend, our composer wrote four concertos for his instrument, which originally appeared under Lamarre's name, but the real authorship of which soon transpired. The reputation thus acquired Auber increased by a violin-concerto written for and first played by Mazas at the Conservatoire with signal success; it was introduced to London by M. Sainton. His first attempt at dramatic composition was of a very modest kind. It consisted in the re-setting of an old opera-libretto called 'Julie' for a society of amateurs (in 1811). The orchestra was composed of two violins, two violas, violoncello, and double-bass. The reception of the piece was favourable. Cherubini, the ruler of the operatic stage at that time, was amongst the audience, and recognising at once the powerful though untrained genius of the young composer, he offered to superintend his further studies. To the instruction of this great composer Auber owed his mastery over the technical difficulties of his art. As his next works, we mention an opera 'Jean de Couvin' (1812), a mass written for the private chapel of the Prince de Chimay, from which the beautiful *a cappella* prayer in 'Masaniello' is taken. His first opera publicly performed was 'Le séjour militaire,' 1813, at the Théâtre Feydeau. Its reception was anything but favourable, and so discouraged was the youthful composer by this unexpected failure that for six years he refrained from repeating the attempt. His second opera, 'Le Testament, ou les Billets-doux,' brought out at the Opéra Comique in 1819, proved again unsuccessful, but Auber was now too certain of his vocation to be silenced by a momentary disappointment. He immediately set to work again, and his next opera, 'La bergère châtelaine,' first performed in 1820, to a great extent realised his bold expectations of ultimate success. The climax and duration of this success were, to a great extent, founded on Auber's friendship and artistic alliance with Scribe, one of the most fertile playwrights and the most skilful librettist of modern times. To this union, which lasted unbroken till Scribe's death, a great number of both comic and serious operas owe their existence, not all equal in value and beauty, but all evincing in various degrees the inexhaustible productive power of their joint authors. The list of his operas is as follows:—

Julie, 1811.
Jean de Couvin, 1812.
Le séjour militaire, 1813.
Le testament, 1819.
Le bergère châtelaine, 1820.
Emma, 1821.
Leicester, 1822.
La neige, 1823.
Vendôme en Espagne (with Hérold), 1823.
Les trois genres (with Boieldieu), 1824.
Le concert à la cour, 1824.
Léocadie, 1824.
Le maçon, 1825.
Le timide, 1826.
Fiorilla, 1826.
Le muette de Portici, 1828.
Le fiancée, 1829.
Fra Diavolo, 1830.
Le Dieu et la Bayadère, 1830.
La marquise de Brinvilliers, 1831, (with 8 other composers).
Le philtre, 1831.
Le serment, 1832.
Gustave III, 1833.
Lestocq, 1834.
Le cheval de bronze, 1835.
Actéon, 1836.
Les chaperons blancs, 1836.
L'ambassadrice, 1836.
Le domino noir, 1837.
Le lac des fées, 1839.
Zanetta, 1840.
Les diamants de la couronne, 1841.
Carlo Broschi, 1842.
Le duc d'Olonne, 1842.
La part du Diable, 1843.
La Sirène, 1844.
La barcarolle, 1845.
Haydée, 1847.
L'enfant prodigue, 1850.
Zerline, 1851.
Marco Spada, 1852.
Jenny Bell, 1855.
Manon Lescaut, 1856.
Magenta, 1859.
La Circassienne, 1861.
La fiancée du roi des Garbes, 1864.
Le premier jour de bonheur, 1868.
Le rêve d'amour, 1869.

In 1857, 'Le Cheval de Bronze' and 'Marco Spada' were expanded into grand ballets.

Auber's position in the history of his art may

DANIEL-FRANÇOIS-ESPRIT AUBER

be defined as that of the last great representative of opéra comique, a phase of dramatic music in which more than in any other the peculiarities of the French character have found their full expression. In such works as 'Le Maçon' or 'Les Diamants de la Couronne,' Auber has rendered the chivalrous grace, the verve, and amorous sweetness of French feeling in a manner both charming and essentially national. It is here that he proves himself to be the legitimate follower of Boieldieu and the more than equal of Hérold and Adam. With these masters Auber shares the charm of melody founded on the simple grace of the popular *chanson*, the piquancy of rhythm and the care bestowed upon the distinct enunciation of the words characteristic of the French school. Like them also he is unable or perhaps unwilling to divest his music of the peculiarities of his own national type. We have purposely cited the 'Diamants de la Couronne' as evincing the charm of French feeling, although the scene of that opera is laid in Portugal. Like George Brown and the 'tribu d'Avenel' in Boieldieu's 'Dame Blanche,' Auber's Portuguese are in reality Frenchmen in disguise; a disguise put on more for the sake of pretty show than of actual deception. In comparing Auber's individual merits with those of other masters of his school, of Boieldieu for instance, we should say that he surpasses them all in brilliancy of orchestral effects. He is, on the other hand, decidedly inferior to the last-mentioned composer as regards the structure of his concerted pieces. Auber here seems to lack that firm grasp which enables the musician, by a distinct grouping of individual components, to blend into a harmonious whole what seems most contradictory, yet without losing hold of the single parts of the organism. His ensembles are therefore frequently slight in construction; his style indeed may be designated as essentially homophonous; but he is (perhaps for the same reason) a master in the art of delineating a character by touches of subtlest refinement.

Amongst his serious operas it is particularly one work which perhaps more than any other has contributed to its author's European reputation, but which at the same time differs so entirely from Auber's usual style, that without the most indubitable proofs one would hardly believe it to be written by the graceful and melodious but anything but passionately grand composer of 'Le Dieu et la Bayadère' or 'Le Cheval de Bronze.' We are speaking of 'La Muette de Portici,' in England commonly called, after its chief hero, 'Masaniello.' In it the most violent passions of excited popular fury have their fullest sway; in it the heroic feelings of self-surrendering love and devotion are expressed in a manner both grand and original; in it even the traditional forms of the opera seem to expand with the impetuous feeling embodied in them. Auber's style in 'Masaniello' is indeed as different as can be imagined from his usual elegant but somewhat frigid mode of utterance, founded on Boieldieu with a strong admixture of Rossini. Wagner, who was undoubtedly a good judge in the matter, and certainly free from undue partiality in the French master's favour, acknowledges in this opera 'the bold effects in the instrumentation, particularly in the treatment of the strings, the drastic grouping of the choral masses which here for the first time take an important part in the action, no less than original harmonies and happy strokes of dramatic characterisation.' Various conjectures have been propounded to account for this singular and unique flight of inspiration. It has been said for instance that the most stirring melodies of the opera are of popular Neapolitan origin, but this was contradicted emphatically by the composer himself. The solution of the enigma seems to us to lie in the thoroughly revolutionised feeling of the time (1828), which two years afterwards was to explode the established governments of France and other countries. This opera was indeed destined to become historically connected with the popular movement of that eventful period. It is well known that the riots in Brussels began after a performance of the 'Muette de Portici' (August 25, 1830), which drove the Dutch out of the country, and thus in a manner acted the part of 'Lilliburlero.' There is a sad significance in the fact that the death (May 12-13, 1871) of the author of this revolutionary inspiration was surrounded and indeed partly caused by the terrors of the Paris Commune.

About Auber's life little remains to be added. He succeeded Gossec as member of the Académie in 1829: and he received marks of highest distinction from his own and foreign sovereigns. Louis Philippe made him Director of the Conservatoire in 1842, and Napoleon III. added the dignity of Imperial Maître-de-Chapelle in 1857. He however never acted as conductor, perhaps owing to the timidity already alluded to. Indeed he never was present at the performance of his own works. When questioned about this extraordinary circumstance, he is said to have returned the characteristic answer, 'Si j'assistais à un de mes ouvrages, je n'écrirais de ma vie une note de musique.' His habits were gentle and benevolent, slightly tinged with epicureanism. He was a thorough Parisian, and the bon-mots related of him are legion. A useful memoir by Ad. Kohut appeared in 1895. F. H.

AUBERT, JACQUES ('le vieux'), an eminent French violinist and composer, born towards the end of the 17th century. He was violinist in the royal band, the orchestra of the Opéra, and the Concerts Spirituels. In 1747 he was nominated leader of the band and director of the Duc de Bourbon's private music. He

retired in 1752, and died at Belleville near Paris, May 19, 1753.

The catalogue of his published compositions contains five books of violin sonatas with a bass; twelve suites ('concerts de simphonies'); various works for musette, vielles, violins, flute and oboe; many airs and minuets for two violins and bass; an opera 'La Reine des Péris' (1725), and several ballets. All these works are of good, correct workmanship, and some movements of the sonatas are certainly not devoid of earnest musical feeling and character.

His son LOUIS, born May 15, 1720, was also violinist at the Opéra (from 1731) and the Concert Spirituel, and succeeded his father at the former in 1755, retiring in 1771. He published a number of violin compositions and some ballets, which, however, are very inferior to his father's works. He was still living in 1798. P. D.

AUBERT, PIERRE FRANÇOIS OLIVIER, violoncellist, born at Amiens in 1763, for twenty-five years member of the orchestra of the Opéra Comique at Paris. His chief merit is having published two good instruction books for the violoncello at a time when a work of that kind was much needed. He wrote also sonatas and duets for violoncello, and a pamphlet entitled 'Histoire abrégée de la musique ancienne et moderne,' 1827. T. P. H.

AUDRAN, EDMOND, was born April 11, 1842, at Lyons, and received his musical education at the École Niedermeyer, Paris, where he obtained in 1859 the prize for composition. In 1861 he became organist of the church of St. Joseph, Marseilles. His compositions include a Funeral March on the death of Meyerbeer, played at the Grand Theatre, Marseilles; a Mass produced in 1873 at the above church, and later at St. Eustache, Paris; a motet, 'Adoro te,' Paris (1882); 'Cour d'Amour,' song in Provençal dialect, and other songs. He is best known, however, as an 'opéra bouffe' composer, and among such works may be named 'L'Ours et le Pacha,' Marseilles (1862), his first work, founded on Scribe's well-known vaudeville of that name; 'La Cherchense d'Esprit,' Marseilles (1864), revived at the Bouffes, 1882, a new setting of an opera of Favart (1741), 'Le Grand Mogol,' Marseilles (1876), at Gaîté, Paris, Sept. 19—in English, at the Comedy Theatre, London, Nov. 17, 1884; 'Les Noces d'Olivette,' Bouffes, Nov. 13, 1879—in English at the Strand as 'Olivette,' Sept. 18, 1880; 'La Mascotte,' Bouffes, Dec. 29, 1880—in English, Sept. 19, at Brighton, and Oct. 15, 1881, at the Comedy Theatre; 'Gillette de Narbonne,' Bouffes, Nov. 11, 1882, plot founded on Boccaccio's story, used by Shakespeare for 'All's Well that Ends Well'; and 'La Cigale et le Fourmi,' Gaîté, Oct. 30, 1886—in English, Lyric Theatre, Oct. 9, 1890; ['Miss Helyett' (1890)—in English as 'Miss Decima,' Criterion, July 23, 1891; 'L'Œuf rouge' (1890); 'L'Oncle Célestin' (1891); 'Article de Paris' (1892); 'Sainte Freya' (1892); 'Madame Suzette' (1893); 'Mon prince' (1893); 'L'enlèvement de la Toledad' (1894); 'La Duchesse de Ferrare' (1895, not very successful); 'Photis' (Geneva, 1896); 'La Poupée' (1896)—in English at Prince of Wales's Theatre, Feb. 24, 1897; 'Monsieur Lohengrin' (1896); Les Petites Femmes' (1897). Audran died at Paris, Aug. 16, 1901.] A. C.

AUER, LEOPOLD, born June 7, 1845, at Veszbrem in Hungary, an eminent violin-player, was a pupil of Dont at the Vienna Conservatorium, 1857-58, and afterwards of Joachim. From 1863 to 1865 he was leader of the orchestra at Düsseldorf, from 1866 to 1867 at Hamburg, and since 1868 he has lived at St. Petersburg as solo-violinist to the court. He is at the present day a very prominent figure in the musical life of St. Petersburg, where he has held the post of professor at the Conservatoire since the death of Wieniawski, and where he frequently acts as conductor of the Symphony concerts given by the Imperial Musical Association. In the latter capacity he has introduced many important works to the Russian public, amongst them the 'Requiem' of Berlioz and the 'Manfred' music of Schumann with complete text translated into the Russian language. One of his functions as court violinist is to perform the violin solo in the Ballet at the Imperial Opera House, for which special work he receives from the Czar an annual stipend, equivalent to about £300 of our money. It has been a traditional custom at St. Petersburg to engage a famous violinist for this purpose, Herr Auer's predecessors being Wieniawski and Vieuxtemps, and as a consequence, Tchaikovsky and other composers of ballet music have written some very fine numbers for violin solo. He plays all the classical concertos, as well as that of Tchaikovsky which was composed for him, and has founded a quartet of which Davidov was the violoncellist until his (Davidov's) death in 1890. He interprets chamber music with much distinction. Indeed for nobility of style he is second only to Joachim. That he no longer visits London must be the regret of all amateurs who heard him at Ella's Musical Union Concerts in the seventies. It is precisely such art as his which is becoming scarce in the concert room. W. W. C.

AUFLÖSUNGSZEICHEN, the German name of the sign for the natural, the sharp and the flat, when these are used to restore the original form of notes to which accidentals have been applied. Strictly speaking, as the accidental affects only the bar in which it appears, after a bar-line, no sign for restoration is needed, but such signs are usually added to make the

composer's meaning clear. If the key-signature alters from one that requires a number of sharps to one requiring a number of flats, it is usual to place naturals on the stave in the positions occupied by the signs in the earlier movement; thus a change from A flat to C sharp minor would be indicated thus:— M.

AUFTAKT (German), 'Up-beat.' The musical phrases which begin exactly on the first note of the bar are very few; the great majority of melodies begin on the last beat of an imperfect bar, and the accurate performance of the passage from the up-beat to the down-beat is one of the surest signs of musical instinct. Dr. Riemann, in his *Musikalische Dynamik und Agogik* (1884), and in the various issues of his *Phrasierungsausgabe* makes the importance of the Auftakt so prominent to the eye that it can hardly escape attention. M.

AUGARTEN. The well-known public garden on the Au, or meadow, between the Danube and the Donau-Canal, in the Leopoldstadt suburb of Vienna, interesting to the musician from its having been, like our own Vauxhall and Ranelagh, the place of performance—often first performance—of many a masterpiece. It was dedicated to the public by the Emperor Joseph II., and was opened on April 30, 1775. At first it appears to have been merely a wood; then a garden—'the Tuileries garden of Vienna'—but after a time a concert-room was built, and in 1782 summer morning concerts were started by Martin, a well-known entrepreneur of the day, in association with Mozart, then at the height of his genius. Mozart mentions the project in a letter (May 18, 1782) to his father, and the first series of the concerts opened on May 26, under brilliant patronage, attracted alike by the novelty of music so nearly in the open air, by the beauty of the spot, and by the excellence of the music announced. The enterprise changed hands repeatedly, until, about the year 1799, the concerts were directed by Schuppanzigh, the violin-player, of Beethoven notoriety. They did not, however, maintain their high character or their popularity, but had to suffer the inevitable fate of all similar institutions which aim over the heads of those whom they wish to attract. In 1813 they were in the hands of the 'Hof-Traiteur' and Wranitzky the musician. By 1830 performers of eminence had ceased to appear, then the performances in the Augarten dwindled to one on May 1, a great annual festival with the Viennese; and at length they ceased altogether in favour of other spots more fashionable or less remote, and the garden reverted to its original use as a mere place for walking and lounging. But its musical glories cannot be forgotten. Here Mozart was to be seen and heard in at least one series of concerts, at each of which some great symphony or concerto was doubtless heard for the first time; and here Beethoven produced one (if not more) of his masterpieces —the Kreutzer sonata, which was played there (May 1803) by Bridgetower and himself, the two first movements being read from autograph and copy dashed down only just before the commencement of the concert. Besides this, his first five symphonies, his overtures, and three first pianoforte concertos were stock pieces in the programmes of the Augarten. The concerts took place on Thursday mornings, at the curiously early hour of half-past seven, and even seven. Mayseder, Czerny, Stein, Clement, Linke, Moscheles, and many other great artists were heard there. (The above information is obtained from Hanslick's *Concertwesen in Wien*, and Ries's *Notizen.*) G.

AUGENER. The music-publishing business of Augener & Co. was founded at 86 Newgate Street, London, in 1853. Later on branch warehouses were established at 1 Foubert's Place, 22 Golden Square, and 81 The Quadrant, Regent Street. The retail business is now carried on at 199 Regent Street, the premises at 81 Regent Street being confined to school and library work.

Augener & Co.'s Catalogue contains upwards of 6000 works, of which nearly 1000 are cheap volumes; among these is a comprehensive collection of pianoforte classics edited by Professor Ernst Pauer, as well as various important series of educational works edited by him, by John Farmer, and other well-known musicians.

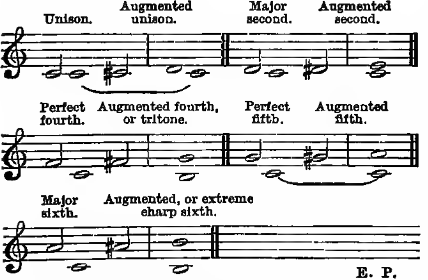
In the last twenty years Augener & Co. have introduced the works of some of the most important composers of the Neo-German school, including Xaver Scharwenka, Jean L. Nicodé, and Moszkowski. They have a large and varied stock of music, and the sole agency for this country of the famous Peters Edition published at Leipzig. The *Monthly Musical Record* is published by this firm, and has among its contributors prominent names in English musical literature. Its circulation is about 6000. [See MUSICAL PERIODICALS.] A. J. H.

AUGMENTATION. This term is used to express the appearance of a musical theme in notes of double the original value, *e.g.* crotchets for quavers, minims for crotchets, etc., and is thus the opposite to DIMINUTION. Or it is a kind of imitation, or canon, where the same thing takes place. Dr. Benjamin Cooke's

celebrated canon by double augmentation (engraved on his tombstone) begins as above, and is perhaps the best instance on record. We subjoin, by way of example, one of a simpler kind by Cherubini.

When introduced into the development of a fugue, augmentation often produces a great effect. As examples we may cite the latter part of Handel's chorus 'O first created beam' in 'Samson'; the concluding chorus of Dr. Hayes' anthem 'Great is the Lord'; Dr. Croft's fine chorus 'Cry aloud and shout'; Leo's 'Tu es Sacerdos' in F, in his 'Dixit Dominus' in A; and several of J. Sebastian Bach's fugues in his 'Wohltemperirtes Clavier.' The old Italian church composers were very fond of introducing augmentation, especially towards the end of a choral fugue, and in the bass. They would call it 'La fuga aggravata nel Basso.' Fine examples are found in 'Amens' by Leo, Bonno, and Cafaro, in Novello's Fitzwilliam music. F. A. G. O.

AUGMENTED INTERVAL. An interval which is extended by the addition of a semitone to its normal dimension. The following examples show the augmentations of intervals commonly used: —



E. P.

AUGUEZ, Numa, eminent French baritone, born at Saleux (Somme) in 1847, entered the Paris Conservatoire in 1867, and sang at the Grand Opéra from 1871 to 1881. He sang in Italy in 1883 and 1884, and when Lamoureux made his brief but famous experiment of producing 'Lohengrin' at the Eden Théâtre he sang the part of the herald with phenomenal success. It was at concerts that he made his greatest effect, and all over France his beautiful voice, excellent style, and perfect diction were universally admired. He sang often in Paris in the Ninth Symphony of Beethoven and Berlioz's 'Damnation de Faust.' He was appointed one of the professors of singing at the Paris Conservatoire in 1899 in succession to Archaimbaud. He died in Paris, Jan. 27, 1903. G. F.

AULIN, Tor, born in 1866 at Stockholm, is the most distinguished of the Scandinavian violinists since Ole Bull. He has led the opera band at Stockholm since 1889, and founded in 1887 the 'Aulin Quartet,' a combination heard at its best in chamber music of a national character. He has recently been appointed conductor of a newly-established orchestral society in Stockholm, called the Philharmonic, and employed chiefly in music by Scandinavian composers. W. W. C.

AULOS (Greek), generally translated flute, but apparently referring quite as often to a reed instrument. See Flute.

AUSDRUCK. See Expression.

AUSGEWÄHLTE MADRIGALE und Mehrstimmige Gesänge berühmter Meister des 16-17 Jahrhundert. The name of a series of madrigals, etc., edited by W. Barclay Squire, and published by Breitkopf and Härtel. The following is a list of the numbers already issued:—

1. J. P. Sweelinck. 'Poi che voi non volete.'
2. J. P. Sweelinck. 'Madonna con questi occhi.'
3. J. Dowland. 'Shall I seek?'
4. J. Ward. 'Hope of my heart.'
5. G. Gastoldi. 'Al mormorar.'
6. T. Bateson. 'Have I found her?'
7. Bateson. 'Sister, awake.'
8. H. C. Haiden. 'Mach mir ein lustige Liedelein.'
9. O. di Lasso. 'Quand mon mari.'
   Claude le Jeune. 'O Villanella.'
10. T. Tomkins. 'See, the Shepherds' Queen.'
11. H. L. Hassler. 'Luce negl' occhi.'
    J. Dowland. 'Say, Love, if ever thou didst find.'
12. W. Byrd. 'I thought that Love had been a boy.'
13. J. Wilbye. 'Down in a valley.'
14. H. Waelrant. 'Musiciens qui chantez.'
15. T. Morley. 'I will no more come to thee.'
16. L. Marenzio. 'Scendi dal Paradiso Venere.'
17. T. Morley. 'Come, lovers, follow me.'
18. C. Jannequin. 'Petite nymphe folastre.'
    C. Le Jeune. 'O occhi manza mia.'
19. Giaches de Wert. 'Chi a salira per me.'
20. T. Tomkins. 'Fusca, in thy starry eyes.'
21. O. Gibbons. 'What is our life?'
22. J. Arcadelt. 'Il bianco e dolce Cigno.'
23. O. Vecchi. 'Il bianco e dolce Cigno.'
24. L. Marenzio. 'Scaldava il Sol.'

AUSWAHL VORZÜGLICHER MUSIKWERKE, a collection of ancient and modern music in strict style, published with the countenance of the *Königliche Akademie der Künste* of Berlin in 1840 (8vo, Trautwein). It contains:—

1. Graun. Fugue, 'Tu Rex.'
2. Fasch. Do. 'Meine Zunge.'
3. J. Haydn. Do. from 4tet, F min.
4. Handel. Do. 'Halleluja.'
5. Naumann. Do. 'Di l' alimenta.'
6. W. F. Bach. Do. for Org., G minor.
7. C. P. E. Bach. Fugue, 'Auf, dass wir.'
8. Fesca. Do. 'Lobet seinen Namen.'
9. Kirnberger. Do. for Piano, B♭.
10. Fux. Canon, Kyrie.
11. J. S. [J. C.] Bach. Fig. Choral, Ich lasse.
12. Clementi. Fugue for Piano in F.
13. Keiser. Do. 'Gott ist offenbaret.'
14. Lotti. Kyrie.
15. Marpurg. Fugue for Piano, D minor.
16. J. C. Bach. Do. 2 choirs, 'Durch denselbigen.'
17. Graun. Christe.
18. Telemann. Fugue for Piano, A min.
19. Hasse. Do 'Christe.'
20. M. Haydn. Do. 'Quam olim.'
21. Mozart. Do. for Piano in C.
22. H. Schütz. Motet, 'Was betrübst.'
23. Zelter. Fig. Choral, 'Ewiger Lob.'
24. Pachelbel. Fugue for Org. in C.
25. F. Schneider. Kyrie.
26. Spohr. Fugue, 'Lasst uns.'
27. Kelz. Do. for 4tet in C.
28. Palestrina. Motet (a 6) 'Tu es Petrus.'
29. Horsley. Canon, 'Sanctus' and 'Hosanna.'
30. Pasterwitz. Fugue for Organ, in B♭.
31. Salieri. Benedictus, etc.
32. Rungenhagen. Fugue, 'Tu ad dexteram.'
33. Albrechtsberger. Do. for Org., B♭.
34. Homilius. Motet, 'Hilf Herr.'
35. Jommelli. Fugue, 'Tunc imponent.'
36. Gassmann. Do. for 4tet, A min.
37. Marcello. Do. 'Mai non turbarsi.'
38. Klein. 'Ave Maria.'
39. Henning. Fugue, for 4tet in C.
40. Visrlino. Do. 'Timentibus.'
41. Caldara. Do. 'Et in sæcula.'
42. Frescobaldi. Do. for Organ (4 subj.).
43. Astorga. 'Eja mater.'
44. Reissiger. Fughetta, 'Cum Sancto.'

45. M. G. Fischer. Introd. and Fugue for Org.
46. J. A. Perti. Motet, 'O d' immenso.'
47. G. Harrer. Fugue, 'Halleluja.'
48. N. Le Begue. Do. for Piano, in F.

Some copies have an Appendix:
Durante. Aria, 'Ingemisco.'
J. S. Bach. Do. Agnus.
Steffani. Duet, 'Occhi perché.'
Pergolesi. 'Salve Regina.'
Handel. 'O my Irene' (Theodora).
C. P. E. Bach. Chorus and Air (Israeliten).
Reichardt. Duet and Chorus (Morgengesang).
Do. Solo and Chorus. (Do.)
Hasse. Aria, 'Pietà Signore.'
Naumann. Scena (Davidde pen.).
Leo. Trio, 'Dominus.'
F. Feo. 'Gratias' and 'Deus Pater.'

AUTHENTIC. Such of the ecclesiastical modes are called authentic as have their sounds comprised within an octave from the final. See Modes.

AUTOMATIC APPLIANCES CONNECTED WITH MUSIC. The earliest instance of mechanical music-making seems to be the Carillon, which is described under its own heading, as it could be played either by the hand or by mechanism. For the same reason, see Apollonicon for a description of that instrument. The oldest of the ordinary appliances seems to be that of the

(i) Barrel Organ. A musical instrument, of all others the most easy of manipulation, as it requires nothing beyond the regular rotary motion of a handle to keep it playing. In some examples even this power is applied mechanically, either by means of clock-work, or by weights. These instruments are of the most various capacities, from the simple street organ—the 'barrel organ' of ordinary parlance—to large and complicated machines representing the full orchestra. But the principle of action is the same in all. A wooden cylinder, or barrel, placed horizontally, and armed on its outside circumference with brass staples or pins, slowly revolves, in the direction from back to front; and in doing so the pins raise certain trigger-shaped keys, which correspond with simple mechanism communicating with valves that on being opened allow wind to enter the required pipes. In this way either melody or harmony is produced. The wind is produced by bellows which are worked by the same motion that turns the barrel. The most simple kind of instrument of this nature is the small 'bird organ,' used, as its name implies, for teaching bullfinches to pipe—which plays the simplest music in melody only.

It is not positively known when barrel organs were first made, but they are supposed to date from about the beginning of the 18th century. An organ-builder of the name of Wright, the great-grandfather of the present firm of Robson, made a barrel organ for Fulham Church, which alone would carry the date a long way back. Mr. Flight of Exeter Change, the grandfather of the present builder of that name, was also a celebrated maker of barrel organs in his day. The finest and most elaborate specimen of a 'Finger and Barrel' organ that was ever made, was the Apollonicon (which see). The firms of Flight and Robson, and of Bryceson, father of the present builder of that name, made perhaps the greatest number of barrel organs, a kind of instrument in much demand many years ago, for churches and chapels, though now seldom met with. These were set with psalm and hymn tunes, chants, and occasionally with voluntaries.

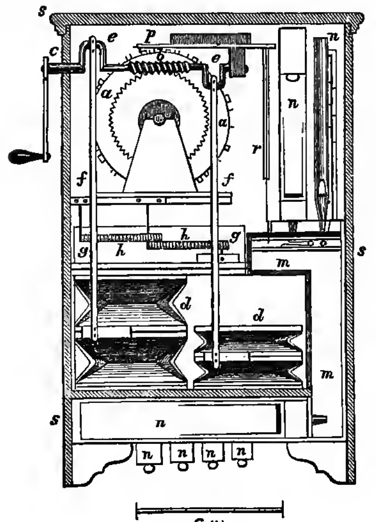
A church barrel organ had rarely a chromatic compass of notes, but usually only a greater or less approximation thereto. Thus it would generally have either 8, 14, 17, 21, 27, 28, or 31 keys. In the case of one having 14 keys, two diatonic scales, of short range, would be presented, namely G and D, into which all the tunes 'marked' upon the barrel would be transposed, and a few pipes at somewhat large intervals apart would be supplied by way of bass, such as D and G. In organs with more keys, the G♯ would be inserted, allowing the scale of A to be used. In organs having a further increased number of keys the D♯ would be introduced, permitting the scale of E to be employed; and so on. Strange to say, scales with flats were never planned unless specially ordered; nor was there much provision for tunes in the minor mode in organs with comparatively but few 'keys.'

Some organs are made having the complete compass and with all the chromatic semitones, and are 'marked' to play overtures, movements of symphonies, selections from operas, sets of waltzes, and other music of that class in the most beautiful manner. The place occupied in the making of these instruments by John Robson has been taken by Messrs. Imhof and Mukle of London, who supply a large number of mechanical organs to private houses in the country at prices ranging from £100 to £1500. One of the completest of these instruments contains 8 ordinary stops, ranging through a complete chromatic scale of 5⅓ octaves, and six solo stops; with a swell of three stops in addition to drums, triangle, cymbals, and castanets—in fact a representation of the entire orchestra. Three machines work the whole of this elaborate apparatus. The barrels can be changed very rapidly, and as each barrel takes 11½ minutes to complete its revolution there are few movements of the great symphonies and few overtures which cannot be performed, and in fact the best machines contain barrels for such movements as well as for the operatic selections more usually found on them. The mechanical contrivances in these instruments are highly ingenious, the music, as already remarked, is often of the best, and the effect in a suitable space and under proper circumstances is very pleasing. Instruments of this character are occasionally furnished with a manual, and are then known as 'Barrel and Finger Organs.'

The ordinary street organ was first made by a builder named Hicks at the beginning of the 19th century. At present the smallest kind has 24 keys, sounding the following notes:—

In the second size the a is added, and a c'♯ in the treble; in the third size the f''', f'''♯, g''', and a'''; and in the fourth, the largest of all, the scale is continued up to e'''', and c''♯ is added. The effect even of simple modulations with such imperfect means will be easily understood. In fact the 'setting' the barrels of a street organ—like the hearing them—must be a constant struggle with difficulties. There are 2 stops, an open (rarely of metal) and a closed (wood). The barrel is set to play 9 or 10 tunes. These instruments weigh from 40 to 56 lbs., and cost from £18 upwards. The pipes and all other parts are made at the factory of the firm already mentioned, in the Black Forest, but the barrels are 'set'—*i.e.* the pins are inserted—and the whole put together in London. Street organs are chiefly used in England, but are also largely exported to South America, the West Indies, and other places.

The annexed illustration shows a cross section of an ordinary barrel organ. a is the



barrel, 'set' round its circumference with 'pins,' at the various intervals, and of the various lengths, necessary for the music, and turned by the worm b on the shaft c; d d are the bellows worked by the cranks e e on the shaft and the connecting rods f f, and delivering the wind into an air chamber g, which runs to the further end of the case, and is kept at a uniform pressure by the spiral springs h h. The air vessel again delivers the wind into the wind-chest m, which communicates with the pipes n n. Each pipe has its valve o, which is kept closed by a spring until the corresponding pin on the barrel raises the trigger p, and forcing down the connecting wire r, opens the valve and admits wind to the pipe. s s is the case. Space being very valuable in these instruments, the pipes are packed together very closely, and are often bent in shape to fit the demands of the case. In the diagram one is shown lying beneath the floor of the bellows.

The barrel is made of staves, about 2½ inches wide, of the best pine wood without knots or sap, and seasoned for many years before being used. At each end of the barrel, and sometimes also in the middle, is a circular piece of hard mahogany called a barrel-head, to which the staves are glued and pegged. The barrel is then handed to the turner, who makes it perfectly cylindrical, and it is then covered with cartridge paper and sometimes painted. At one end of the barrel the 'head' is furnished with a circle of teeth for the *worm* connected with the handle to work in when slowly rotating the barrel. Projecting from this 'head' is the notch-pin. The number of notches in the pin corresponds to the number of tunes played by the barrel. A knife lowered into the notch prevents the barrel from shifting its position. The simplest arrangement is for the barrel to play a tune completely through in the course of a single revolution.

The keys are usually ⅞ths of an inch apart, and the intervening space upon the barrel may be filled either with pins for producing fresh tunes to the number of nine or ten, or with a continuation of the original piece lasting for the same number of revolutions of the barrel. In the latter case the 'notches' are arranged in a spiral so as to allow the barrel to shift horizontally to left or right at the end of each revolution without the intervention of the hand.

Barrel organs have been made with three and four barrels in a circular revolving iron frame. The first of the kind, containing four barrels, was made by Mr. Bishop, sen., the father of the present organ-builder of that name, for Northallerton Church, Yorkshire, about the year 1820. Many years later Messrs. Gray and Davison made grinder organs with three barrels in one frame. E. J. H.

(ii) Piano Mécanique. An invention of M. Debain of Paris (died 1877), for the mechanical performance of musical compositions upon a pianoforte without disturbing its keyboard, or its capability for manual performance. To manage this the pinned barrel employed in the street pianos and barrel-organs has to give place to a novel and ingenious apparatus invented and adapted to his 'Piano mécanique' by Debain, about the year 1850. To an ordinary upright piano he supplied a second set of hammers working the reverse way to the ordinary ones, that is, from above. These hammers are set in motion by iron levers, the

further ends of which are tempered hard, and project as 'beaks' through a comb of four or five inches long, into which space five octaves of the keyboard are ingeniously compressed. The comb crosses transversely a smooth iron plate fixed along the top of the instrument. 'Planchettes,' or small boards upon which the piece to be played is pinned (as on a barrel), are by simple machinery connected with a handle, made to travel along this plate, the pins doing the work of the fingers upon the levers. The dynamic shades of piano and forte, accent, etc., are produced by varying the height of the pins. In this way a mechanical substitute for expression is obtained. The planchettes may be endless, and are sold by the mètre or yard. Perhaps the greatest merit of Debain's invention is that his upper system of hammers has the same 'striking-place' (*i.e.* measured division of the string for the impact of the hammers) that the keyboard hammers have. This is achieved by moving the latter forward when the mechanical apparatus comes into play. The great defect of the contrivance is the want of damping during performance, but the dampers can be brought down bodily upon the strings by a stop adjacent to the 'beaks' when the playing is over. The additional cost of the planchette mechanism is 25 guineas; it does not disfigure the instrument. When applied by Debain and Co. to the organ or harmonium it is styled 'Antiphonal.'

The mechanical pianos called 'Handle-pianos' that are so much used in and about London, come principally from Italy. According to particulars supplied by Messrs. Imhof and Mukle of Oxford Street, London, there are about 400 of these instruments in daily use in the metropolis, ranging in value from £16 to £100. Some are let upon hire by masters who charge from 8s. to 18s. a week for them; but in most instances they are the property of the Italians who take them about, the price having been paid by instalments. These instruments are strongly made, to stand hard work and weather; the felt hammers have leather coating, and there are three, and in the treble often four, strings to each note. The action is of the simplest kind, the pin of the barrel pressing down a crank, which gives the blow; a spring causing the immediate return of the hammer. There are no dampers excepting in a few instances in the lowest bass notes, and no attempt to regulate the pinning of the barrel to produce louder or softer notes. Messrs. Imhof and Mukle make superior mechanical pianos with chromatic scale; the perambulating 'handle-pianos' having at best a diatonic scale, with one or two accidentals. A. J. H.

(iii) Pianola, etc. Of late years a refined form of mechanical piano has come into extraordinary vogue for domestic use. A patent was taken out in the United States as early as 1860 for a keyboard piano-player, and the first pneumatic keyboard instrument was made in France in 1863. The main principles of the action are much the same in all these attachments. A roll of cardboard pierced with openings corresponding to the duration and pitch of the notes in the composition to be repeated, passes over a cylinder furnished with small apertures, through which a puff of air is drawn or pushed as often as the passage is left free by the occurrence of one of the openings in the cardboard roll. This puff of air, by an extremely ingenious mechanical contrivance, sets in motion a series of hammers which act as substitutes for the human fingers; the movement of the roll, and the force with which the notes are struck, are regulated by pedals like those of the harmonium, with the assistance of certain handles by which the speed and force of the apparatus can be more or less rapidly changed. In the article on Piano in the supplement to the ninth edition of the *Encyclopædia Britannica*, an excellent diagram of the mechanism of the Pianola is given and minutely explained. It is not necessary to discuss the relative merits of the various inventions which are now before the public; all of them claim that the performer can put an individual interpretation into music for which his manual technique would be quite insufficient, and that one person's manner of manipulating the instruments will be altogether different from another's. It is claimed for each and all that they have an important influence in musical education, in so far that their popularity tends to bring music of all kinds under the notice of some who might otherwise have no opportunity of becoming practically acquainted with the music. When passages of the most formidable technical difficulty can be perfectly executed by a machine, the popularity of the mere virtuoso must needs wane to a certain extent, and greater value will be put upon the qualities which neither the virtuoso nor the mechanical contrivance can give.

It must suffice to enumerate a few of the peculiarities of the most prominent of the instruments: the Æolian or Orchestrelle is practically the action of the Pianola applied to an organ or harmonium; the Angelus, patented in 1897, contains a few harmonium or American organ stops which can be combined with the pianoforte if required; the Apollo, patented 1900, has an arrangement for transposing the music; the Cecilian approaches nearer than any other of the contrivances to the solution of the difficult problem of bringing one part into the prominence it would have in real music, by a device for making either the treble or the bass half of the keyboard softer or louder than the other; the Pianola, patented 1898, seems at present to be the most popular of the rivals, and to possess a larger library of the rolls than any of the others; the Pianotist has the advantage that the keys of the piano to which it is attached

are not covered by the machine, but in order to attain this result the piano employed must be opened below the keys so as to allow the machine to be adjusted; the Simplex, as its name implies, is extremely easy to manipulate, as the force required for its working is not entirely supplied by the feet, which are thus only employed to regulate the speed and force. Until the problem above referred to is satisfactorily solved, and one part can be made prominent above the rest the kind of music which can be effectively played by these attachments must be more or less limited, and their artistic work very slight. M.

(iv) Musical Snuff-box. A mechanical invention which has given pleasure to thousands from the peculiar—what for want of a better expression we may call Æolian—charm arising from the production of harmonics in the solid part of the steel comb which provides the necessary reinforcement to the sounds emitted by the teeth of the comb. The motive power is a pinned cylinder resembling the barrel of a mechanical organ, and made to shift on the same principle; the working power is a spring; the mechanism and rotation are closely allied to those of a watch or clock; and the teeth of the comb which produce the notes are measured to scale.

Musical boxes were invented about the beginning of the 19th century, probably in Switzerland, the chief seat of their production, where there are now some twenty principal manufactories. About 30,000 are said to be made annually, half of which are below the selling value of 50 francs each. The original musical boxes are small and not unlike a snuff-box in appearance. They are now made of all sizes, the cost ranging from 20s. to £50.

About 1830 a very favourite composition with amateurs of the pianoforte was the 'Snuff-box Waltz,' the composer of which preserved his anonymity under the initials M. S. Such a passage as the following illustrates the kind of imitation that was possible:—

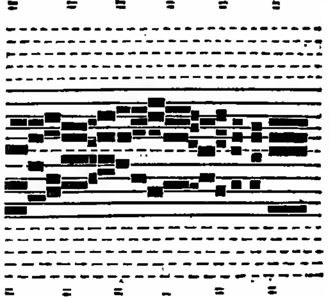
Bells, drums, castagnettes, free reeds worked by bellows, and more recently a 'zither,' produced by a sheet of thin paper resting on the teeth of the comb, have been introduced, and have not raised the musical value of the instrument, any more than similar introductions early in the 19th century raised the value of the pianoforte. As pointed out by Mr. Moonen in his Report on the Melbourne Exhibition, the real improvements have been in the mechanical portion, by the accurate 'pointing' or adjustment on the cylinder of as many as 36 airs; the obtaining a constant movement for an hour and a half without requiring to wind up the spring during that time; the possibility of shifting the barrel in such a manner that an air 'noted' may be played without the necessity of going through all the others in rotation, and the important one of the interchange of barrels made to fit any box. A. J. H.

(v) Extemporising Machine. An invention for printing the notes of an extemporaneous performance, by means of mechanism connected with the keyboard of a pianoforte or organ. The idea of being able to preserve the improvisations of great musicians is certainly an attractive one, and has often engaged the attention of mechanicians, but without any very practical result. The earliest endeavour in this direction appears to have been made by an English clergyman named Creed, who wrote a 'Demonstration of the Possibility of making a machine that shall write Extempore Voluntaries or other Pieces of Music as fast as any master shall be able to play them upon an Organ, Harpsichord, etc.' This was communicated by John Freke to the Royal Society, after Creed's death, and was published in the Philosophical Transactions for 1747, vol. xliv. part ii. p. 445. A similar invention, called the Melograph, was conceived by Euler the mathematician, and was constructed according to his directions by Hohlfeld of Berlin, about 1752. It consisted of two revolving cylinders with a band of paper passing over them, on which the notes were marked by means of pencils attached to the action of a pianoforte, their duration being shown by the relative length of the lines formed. The machine was placed in the Academy of Arts and Sciences at Berlin, but was subsequently destroyed in a fire. The priority of invention of the Melograph was disputed by Unger, of Einbeck, who, in a long correspondence with Euler (afterwards published), states that the idea occurred to him as early as 1745. There have also been several more modern inventions for the same end, notably one by Pape of Paris in 1824; in 1827 M. Carreyre exhibited before the French Institute a 'Melographic piano,' in which the music played was represented by certain signs impressed on a thin plate of lead. A committee was appointed to examine the apparatus, but inasmuch as they never reported, the machine was doubtless not a success. M. Boudouin afterwards read before the same body a paper concerning another scheme of this kind, but nothing is known of his plan. In 1836 an English patent was taken out on behalf of M. Eisenmenger of Paris for an apparatus of the depressed stylus and carbonised paper type, and it is notable as showing the first attempt made to measure off

the bars. The inventor suggested that this could be accomplished by the performer's beating time with his foot on a pedal; mechanism connected with this punctured the moving band of paper, dividing it into regulated spaces. It is uncertain whether a machine was ever made on this plan. Towards the close of 1840, M. Duprat de Tressog patented at Paris an apparatus of this kind, but no description of the plan has been published. In 1856 I. Merzolo, an Italian engineer, applied for a provisional patent for an apparatus to give an 'identical repetition with types like those used in ordinary printing.' The specification is very brief, and too vague to indicate how the desired object could be accomplished. In 1863 electricity is first mentioned in connection with this subject, a patent being taken out by Mr. F. B. Fenby of Worcester, for 'The Electro-Magnetic Phonograph' (the same word which Edison employed some sixteen years later). The main principle of Fenby's instrument was identical with that which underlies all telegraphic operations, viz. the making a bent piece of soft iron into a temporary magnet by passing an electric current round it; by the motion so obtained from its armature a small inked wheel was pressed against a band of moving paper. The scheme seems to be complicated, and there is no evidence that the machine was ever made. In 1864 Mr. E. S. Endres applied for a patent, but it was refused him. His chimerical proposal was to have as many type-wheels as there were pianoforte keys; on the periphery of these wheels there were cut notes of various values, from a semibreve to a demisemiquaver. Upon the finger rising from a note struck, the intention was, that the revolving wheel should print on paper an ordinary note of the exact time-value of the sound played. Pedals had to be depressed when accidentals were used. An examination of the mechanism drawn shows that the idea was quite impracticable. In 1880 Schwetz a German, Hoyer a Frenchman, in 1884 Allen an Englishman, and in 1885 Greiner of New York, amongst others, took out patents for apparatuses of the depressed pencil order. At the Paris Exhibition of 1881, M. J. Charpentier exhibited 'La Mélographie Répétiteur,' attached to a small harmonium. Its inventor stated that it was to write down ordinary music played extemporaneously on the instrument *dans le langage de Jacquard*. The process was to be effected by means of electro-magnets connected with the keys putting into action a series of cutters which cut slits in a band of moving paper, the slits corresponding to the length and position of the notes. By an after arrangement the perforated paper allows the wind to pass through its slits, and thus reproduces the music previously played. M. Charpentier was enthusiastic enough to believe he could also make his machine print the music executed in the ordinary notation, but avowed that this was only a project. The apparatus shown did not appear to be in working order. In 1887 M. Charpentier took out another patent, in which metal styles attached to the under part of the keys acted on the balanced ribs of a revolving cylinder; these were kept inked, and marked the paper as it gradually unwound. He also provided for depressing by electro-magnets or pneumatic agency. In 1880 Mr. H. J. Dickenson proposed to apply the principle of the Casselli electro-chemical telegraph to recording music played on the piano; from the meagre account of his plan printed in the specification it is impossible to describe its mechanism. In 1881 M. A. P. Hodgson, an engineer of Paris, took out a patent (No. 573) for an 'Apparatus for correctly transcribing musical compositions.' The instrument is termed by the inventor the 'Pianograph Metronome.' To judge from the specification and drawings attached to the patent, this apparatus was of the most complicated description. The machine was furnished with a metronome for governing the rate of motion at which a cylinder should revolve, and so regulating the time; this had to be mathematically exact, otherwise the mechanism would not synchronise with the performance. If all went right, the machine was supposed to print on a huge band of paper about four feet broad, lines representing in their length the duration of the notes held down. As no provision was made for indicating any variation of the time-measure, or for *accelerandos*, *ritardandos*, etc., M. Hodgson's machine would not have proved of much utility, even if it could have been constructed; he had so little idea of music that he directed the player 'to end his composition by a perfect chord in the key of F, and not by the tonic a third or a fifth.'

In 1881 Herr J. Föhr showed at the Stuttgart Exhibition of that year an excellent contrivance which accomplishes the object aimed at in a more complete way than before. The apparatus was exhibited in action in London, and a paper was read upon the subject by the present writer at the June meeting 1882, of the Musical Association; it is described at length in the 1881-82 volume of the society's proceedings. The machine was also shown in operation before the members of the College of Organists. The mechanism of this *Electro-chemischer Notenschreib-apparat* is simple. The apparatus is contained in a small pedestal which may be placed at the side of a piano, and connection is made with the instrument through a cable of wires attached to a long frame resting on the keyboard of the instrument. This is furnished with a series of studs each one touching the back of the ivories and ebonies just in front of the usual name board; these studs, by means of insulated wires, are in connection with platinum points which press on a

band of paper, five inches broad, unwound from a drum by means of clockwork. The paper, as it passes through the mechanism, is saturated with a solution of ferrocyanide of potassium, ammonia, sulphuric acid and water; it is afterwards ruled by means of an aniline inking roller with the five lines of the stave, and some dotted ledger-lines are added above and below. On the pianoforte key being depressed, the circuit is completed and the current runs from a Leclanché battery, passing through the saturated paper by the particular style or styles in connection with the keys struck, and staining it a bluish colour; the electric current decomposing the salts with which the paper is charged. The length of the stain depends upon the time the key is held down; a semibreve, for instance, appearing as a long streak, while a quaver would be but a dash, and a demisemiquaver a mere dot. The blank spaces on the paper represent the periods of silence; thus, marks are formed by the passing current, and rests are indicated by its absence. The stains representing the white notes ▬ are twice as broad as those standing for the black ones –. A pedal serves to indicate the bar lines. On depressing this (as in the ordinary mode of beating time) the position of the first beat in the bar is indicated by short double lines = stained at the moment of depression on the top and bottom of the stave. The rate of motion of the paper is governed by a sliding lever, which also serves to start and stop the clockwork arrangement. Herr Föhr's apparatus is simple in design, and the musical shorthand it produces is translatable without much difficulty. It is worked upon much the same plan as that of the electro-chemical telegraph of Bain. In 1872 Mr. Alexander A. Rossignol took out a patent (No. 990) for an 'Apparatus for tracing music,' and his scheme is substantially the same as that of Herr Föhr. The only modification would seem to be that M. Rossignol employed styles made of two different metals which severally stain



the saturated paper red and blue, representing the black and white keys of the piano. There is no record of this instrument having been constructed. As it is stated that Herr Föhr's design dates from many years ago, and that he has been long working it out, the question as to priority of invention is uncertain. The foregoing illustration is a reduced representation of the first section of 'God Save the King,' as produced by Herr Föhr's contrivance; it is in the key of A and in four parts, 3-4 time.

In 1886 Mr. H. H. Muir took out a patent for recording music, the principle of which was practically the same as that of Herr Föhr. T. L. S.

[In Oct. 1901 there was exhibited at the Queen's Hall an invention for recording music in a perfectly readable form, patented by a Mr. Neale and called the Pianotype. The apparatus was contained in a cabinet placed at any desired distance from the piano, and connected with the keys by electricity. Another invention of much the same kind was described in 1903 in the specification of inventions, No. 7045.]

AUXCOUSTEAUX, ARTHUR D', born in Picardy at Beauvais (Magnin) or St. Quentin (Gomart). His family coat of arms contains a pun on his name; it is 'Azur à trois cousteaux, d'argent garnis d'or.' About 1627 he was a singer in the church of Noyon, of which fact there is a record in the library of Amiens. Then he became 'Maistre de la Sainte Chapelle' at Paris, and, as appears from the preface to a psalter of Godeau's published by Pierre le petit, 'haut contre' in the chapel of Louis XIII. He died in 1656, the year of publication of the psalter just mentioned. Three masses, two books of psalms, and quatrains, noëls, and chansons, are mentioned in the *Quellen-Lexikon.* His style is remarkably in advance of his contemporaries, and Fétis believes him to have studied the Italian masters. F. G.

AVERY is the name of one of the English practitioners in music, whose works Thomas Morley 'diligently perused for finding the true use of the moods.' The organ part of a Te Deum by 'Master Avere' is preserved in Add. MS. 29,996 at the British Museum. He lived about the middle of the 16th century, and is probably to be identified with the 'Avery Burton' whose mass for five voices 'Ut Re Mi Fa Sol La' is included in the Forrest-Heyther collection at Oxford. J. F. R. S.

AVERY, JOHN. A celebrated organ-builder, who built a number of instruments, ranging between 1775 and 1808. Nothing whatever is known of his life: he died in 1808, while engaged in finishing the organ of Carlisle Cathedral. The organs he is recorded to have built, are—St. Stephen's, Coleman Street, 1775; Croydon Church, Surrey, 1794 (destroyed by fire in 1866); Winchester Cathedral, 1799; Christ Church, Bath, 1800; St. Margaret's Church, Westminster, 1804; King's College Chapel, Cambridge, 1804 (some of the earlier work of Dallam's organ was, no doubt, incorporated in this instrument, but the case is the original one, erected by Chapman and Hartop

in 1606); Sevenoaks Church, Kent, 1798; Carlisle Cathedral, 1808. E. F. R.

AVISON, CHARLES, born at Newcastle-upon-Tyne, about 1710. When a young man he visited Italy for the purpose of study, and after his return to England became a pupil of Geminiani. On July 12, 1736, he was appointed organist of the church of St. Nicholas, in his native town. In addition to his musical attainments, he was a scholar, and a man of some literary acquirement. In 1752 he published the work by which he is best known, 'An Essay on Musical Expression.' It contains some judicious reflections on the art, and throughout the work we find the highest encomiums on Marcello and Geminiani, frequently to the disparagement of Handel. In the following year it was answered anonymously by Dr. W. Hayes, the Oxford professor, in a pamphlet entitled 'Remarks on Mr. Avison's Essay on Musical Expression.' Hayes points out many errors against the rules of composition in the works of Avison; and infers from thence that his skill in the science was not very profound. He then proceeds to examine the book itself, and seldom fails to establish his point, and prove his adversary in the wrong. Before the conclusion of the same year, Avison republished his Essay, with a reply to these Remarks, in which he was assisted by the learned Dr. Jortin, who added 'A Letter to the Author, concerning the Music of the Ancients.' In 1757 Avison joined John Garth, organist of Durham, in editing an edition of Marcello's Psalms, adapted to English words. He prefixed to the first volume a Life of Marcello, and some introductory remarks.

As a composer, Avison is known, if at all, by his concertos. Of these he published five sets (50 concertos in all) for a full band of stringed instruments, some quartets and trios, and three volumes of sonatas for the harpsichord and two violins—a species of composition little known in England until his time. The once favourite air, 'Sound the loud timbrel,' is found in one of the concertos. Geminiani held his pupil in high esteem, and in 1760 paid him a visit at Newcastle. Avison died May 9, 1770, and was buried in the churchyard of St. Andrew there. He was succeeded as organist of St. Nicholas by his son and grandson. The former died in 1793; the latter in 1816. (Hawkins, *Hist.*; Kippis, *Biog. Brit.*; Brand, *Newcastle*, etc.) E. F. R.

AVOGLIO, SIGNORA, was one of those who accompanied Handel in his visit to Ireland, at the end of 1741. In the newspapers of the time she is called 'an excellent singer,' and she had the honour of sharing with Mrs. Cibber the soprano music of the 'Messiah' at its first and succeeding performances in Dublin. Handel, in a letter to Jennens, Dec. 29, 1741, says—'Sig^ra^ Avolio, which I brought with me from London, pleases extraordinary.' She sang again in the 'Messiah,' when given in London, after Handel's return from Dublin, dividing the soprano part with Mrs. Clive. Before this time, she had sung with success in the 'Allegro, Penseroso, and Moderato'; and she appeared subsequently in 'Semele' and in 'Samson,' 1743. In this last she sang the famous 'Let the bright Seraphim' at the first performance of the oratorio, Feb. 18. J. M.

AYLWARD, THEODORE, Mus.Doc., was born in 1730. Of his early career but little information can be gleaned. We find him in 1755 composing for the Church, and in 1759 for the theatre. He became organist of Oxford Chapel, London, about 1760; of St. Lawrence, Jewry, in 1762; and of St. Michael's, Cornhill, 1768. In 1769 the Catch Club awarded him the prize medal for his serious glee, 'A cruel fate,' a surprising decision, as one of the competing compositions was Arne's fine glee, 'Come, shepherds, we'll follow the hearse.' On June 5, 1771, Aylward was appointed Professor of Music in Gresham College. In 1784 he was nominated one of the assistant directors of the Commemoration of Handel. In 1788 he succeeded William Webb as organist and master of the choristers of St. George's Chapel, Windsor. On Nov. 19, 1791, he took the degree of Bachelor of Music at Oxford, and two days afterwards proceeded to that of Doctor. He died in London, Feb. 27, 1801, aged 70, and was buried at St. George's Chapel, Windsor. Dr. Aylward published 'Six Lessons for the Organ, Op. 1': 'Elegies and Glees, Op. 2'; 'Six Songs in Harlequin's Invasion, Cymbeline, Midsummer Night's Dream,' etc.; and 'Eight Canzonets for two soprano voices.' Two glees and a catch by him are included in Warren's collections. His church music, with the exception of two chants, remains in manuscript. Dr. Aylward is said (on the authority of Bowles, the poet) to have been a good scholar, and possessed of considerable literary attainments. Hayley, the poet, inscribed some lines to his memory (see West's *Cath. Org.* p. 133). Dr. Aylward's great-great-nephew, THEODORE EDWARD AYLWARD, born at Salisbury, 1844, was a pupil of S. S. Wesley, and was appointed organist of Llandaff Cathedral in 1870, of Chichester Cathedral, 1876, and of St. Andrew's Church and the Public Hall, Cardiff, 1886. He edited the *Sarum Hymnal* in 1870 (West's *Cath. Org.* p. 18). W. H. H.

AYRTON, EDMUND, Mus.Doc., was born at Ripon in 1734, and educated at the grammar school there. His father, a 'barber chirurgion' there, a magistrate of the borough, and mayor in 1760, intended him for the Church, but his strong predilection for music induced his father to let him study for that profession. An elder brother, William, born 1726, was organist of Ripon Cathedral, 1748-79, and was succeeded by his son, W. F. M. Ayrton (1778-1850), the post being held from 1802 to 1822 by another son of William Ayrton's named Thomas, born

1782. Edmund was placed under Dr. Nares, organist of York Minster, and made such rapid progress that in 1754 he was elected organist, auditor, and *rector chori* of the collegiate church of Southwell, where he remained until 1764, when he was appointed a gentleman of the Chapel Royal. In 1767 he was installed as a vicar-choral of St. Paul's, and in 1780 became one of the lay clerks of Westminster Abbey. In 1780 he was promoted by Bishop Lowth to the office of Master of the children of His Majesty's chapels, on the resignation of Dr. Nares. In 1784 the University of Cambridge created him Doctor in Music, and he was admitted *ad eundem* by the University of Oxford in 1788. The anthem by which he obtained his degree, 'Begin unto my God with timbrels,' was performed in St. Paul's Cathedral, July 28, 1784, the day of general thanksgiving for the termination of the American revolutionary war, and was afterwards published in score. In 1805 he relinquished the mastership of the children of the chapel, having been allowed during many years to execute the duties of his other offices by deputy. He died May 22, 1808, and his remains were deposited in the north cloister of Westminster Abbey. Dr. Ayrton's contributions to the Church consist of two complete morning and evening services, and several anthems. (*Mus. Periodicals; Biog. Dict. U.K.S.*) [with additions from *Dict. of Nat. Biog.* and West's *Cath. Org.*] E. F. R.

AYRTON, WILLIAM, son of the preceding, was born in London, Feb. 24, 1777. He was educated both as a scholar and musician, and was thus qualified to write upon the art. He married in 1803, a daughter of Dr. S. Arnold, a circumstance which introduced him into musical society, and he became a fashionable teacher. Upon the death of Dr. Aylward, in 1801, he was a candidate for the office of Gresham Professor of Music, but was unsuccessful, on account of his youth. In the palmy days of the *Morning Chronicle* Ayrton was its honorary musical and literary critic from 1813-26; and he wrote the reviews of the Ancient Concerts and Philharmonic Society in the *Examiner* from 1837-51, also gratuitously. He was a Fellow of the Royal and Antiquarian Societies, and an original member of the Athenæum Club. He was one of the promoters and members of the Philharmonic Society at its foundation in 1813, and subsequently a director. More than once he held the important post of musical director of the King's Theatre, and in that capacity had the merit of first introducing Mozart's 'Don Giovanni' to an English audience in 1817, and afterwards others of Mozart's operas. According to a writer of the period he twice, if not oftener, regenerated that theatre, when its credit was weakened by repeated failures. In 1823 he commenced, in conjunction with Mr. Clowes the printer, the publication of the *Harmonicon*, a monthly musical periodical, which was continued for eleven years. Independently of the valuable essays, biography, and criticism in this work, it contains a choice selection of vocal and instrumental music. The writing of this journal and its criticisms upon the art were much in advance of anything that had previously appeared in England. This was followed in 1834 by the *Musical Library*, a collection of vocal and instrumental music, consisting of songs, duets, glees, and madrigals, and a selection of pianoforte pieces and adaptations for that instrument, and extending to eight volumes. A supplement containing biographical and critical notices, theatrical news, etc., was issued monthly, making three extra volumes. He wrote the musical articles for the *Penny Cyclopædia;* the chapters on music in Knight's *Pictorial History of England;* and the musical explanations for the *Pictorial Shakespeare.* His latest work was a well-chosen collection of 'Sacred Minstrelsy,' published by J. W. Parker, in two vols. He died at Bridge Street, Westminster, March 8, 1858 (*Imp. Dict. of Biog.; Private Sources*). E. F. R.

AYTON, FANNY, born 1806 at Macclesfield, was taught singing by Manielli at Florence, and first appeared in Italy, so successfully that Ebers engaged her for the season of 1827 at the King's Theatre, at a salary of £500. She made her appearances there as Ninetta in 'La Gazza' (Feb. 23), and as Fiorilla in 'Il Turco in Italia.' In the same year she sang at Drury Lane in an English version of 'Il Turco' and as Rosetta in 'Love in a Village.' She also played in the provinces, and sang in concerts with fair success. In 1829 she sang at the Birmingham Festival in opera with Malibran and Michael Costa. In 1831 she sang again at the King's Theatre for the season, as Creusa, in 'Medea' (Simon Mayr), and she played Isabel in a mutilated version of 'Robert' ('The Dæmon, or the Mystic Branch,' Feb. 21, 1832), after which she disappears from view. She had considerable execution, a piquancy and taste of her own, a certain ease on the stage, and a great fluency in Italian. But she had the misfortune to compete with some of the greatest Italian singers, and her intonation gave way after her first season. (Chorley). A portrait of her, drawn and engraved by B. Holl, was published in July 1828. A. C.

AZOR AND ZEMIRA, OR THE MAGIC ROSE, in three acts; the English version of Spohr's opera ZEMIRE UND AZOR, produced at Covent Garden Theatre, April 5, 1831.

AZZOPARDI, FRANCESCO. A learned Italian theorist of the latter half of the 18th century, from whose work, *Il musico prattico*, published in the form of a French translation only (Paris, 1786) Cherubini quotes some interesting examples in his *Course of Counterpoint and Fugue.* Azzopardi held the appointment of maestro di cappella in Malta. W. S. R.

B

B. The name of the seventh degree of the natural scale of C. In French and Italian it is called *Si*, and in German *H* (*Ha*), the name *B* being given to our B♭. The reason of this anomalous arrangement is explained in the article ACCIDENTALS.

In the Hexachordal system it was found necessary to lower the note B by a semitone in the third hexachord beginning on F, in order to avoid a succession of three whole tones and the interval of an augmented fourth. In the fourth hexachord beginning on G no such alteration was necessary, and the natural B was retained. The flattened B was termed *B molle* and the unflattened B *B durum.* For the purpose of distinction in notation the two B's were made of different shapes, the *B molle* round, ♭ (*B rotundum*), and the *B durum* square, ♮ (*B quadrum* or *quadratum*). The former is the origin of our modern *flat*, which is still called in German a *B*, and in French a *Bémol*, and the latter of our modern *natural*, which is still called in French a *Bécarre.*

In the Gamut of twenty notes the *B molle* and *B durum* were counted as one note only, constituting a *fa* in the F or soft hexachord, and a *mi* in the G or hard hexachord.

The importance of the juxtaposition of the two forms of B in the Gamut can hardly be overrated. It led by slow degrees to the general admission of accidentals, at first by the unwritten conventions of *Musica Ficta* (*q.v.*) and afterwards by the insertion of the letter B in its round or square form before other notes of the scale. In short it laid the foundation of all chromaticism in music. In modern German the terms *B dur* and *B moll* have nothing to do with the older Latin names, but represent the major and minor forms of the modern scale of B flat.

B♭ is the key in which one of the clarinets in use in the orchestra is set. The bulk of the clarinets in a military band are also pitched in B♭, and it is the natural key of the larger number of the brass instruments, both in military and brass bands.

The letter *B.* or *col B.* in a score is an abbreviation of *Basso*, or *col Basso* (see also ACCIDENTALS, ALPHABET). J. F. R. S.

BABAN, GRACIAN, a Spanish composer, musical director in the cathedral of Valencia 1657-75. Two Lamentations for two choirs and organ are in the Hofbibliothek at Munich (*Quellen-Lexikon*). A Psalm of his is given by ESLAVA.

BABBINI, MATTEO, a celebrated Italian tenor, was born at Bologna, Feb. 19, 1754. He was intended for the practice of medicine; but, on the death of his parents, took refuge with an aunt, the wife of a musician named Cortoni. The latter instructed him, and cultivated his voice, making him a good musician and first-rate singer. His début was so brilliant that he was at once engaged for the opera of Frederick the Great. After staying a year at Berlin, he went to Russia, into the service of Catherine II. In 1785, he sang with success at Vienna; and in the next season in London, with Mara, when he took, though a tenor, the first man's part, there being no male soprano available. As far as method and knowledge went, he was a very fine singer, but he did not please the English *cognoscenti;* his voice was produced with effort, and was not strong enough to have much effect. He sang again, however, the next year (1787), and returning to Italy in 1789, appeared in Cimarosa's 'Orazi,' and was afterwards engaged at Turin. In 1792, the King of Prussia recalled him to Berlin, where he distinguished himself in the opera of 'Dario.' During the next ten years he sang at the principal theatres of Italy, and appeared in 1802, at Bologna, though then fifty years old, in the 'Manlj' of Niccolini, and Mayr's 'Misteri Eleusini.' He now retired from the stage and settled in his native town, where he lived generally esteemed and honoured for the noble use he made of his riches; and died Sept. 22, 1816. His friend, Doctor Pietro Brighenti, published *Elogio di Matteo Babbini*, Bologna, 1822. J. M.

BABELL, WILLIAM, the son of a bassoon-player, was born about 1690, and instructed in the elements of music by his father, and in composition by Dr. Pepusch. He was celebrated for his proficiency on the harpsichord, and was also a good performer on the violin. He was a member of the royal band, and for some years organist of All Hallows, Bread Street. Taking advantage of the rise and popularity of the opera in England, he was the first to arrange the favourite airs as lessons for the harpsichord. In this he was highly successful, and his arrangements of 'Pyrrhus and Demetrius,' 'Hydaspes,' 'Rinaldo,' etc., were standard works of their class at the beginning of the 18th century. Babell's fame reached even to Germany, where some of his works were printed. He was the author of several 'Suits of the most celebrated Lessons, collected and fitted to the Harpsichord or Spinnet'; 'Twelve Solos for a Violin or Hautboy'; 'Twelve Solos for the German Flute or Hautboy'; 'Six Concertos for small Flutes and Violins,' and a MS. concerto grosso for two violins with string accompaniment, in the town library at Hamburg. He died at Canonbury, Sept. 23, 1723, and was buried in the church of which he had been organist (Hawkins, *Hist.; Private Sources*). E. F. R.

BACCUSI, IPPOLITO, an Italian monk and musical composer of the 16th century. The

date of his birth is unknown, but he is to be traced at Ravenna in 1570. He was maestro di cappella at the church of Sant' Eufemia at Verona in 1572, and from 1584 at the cathedral of Mantua. He must have returned to Verona as maestro di cappella before 1596, and he died there 1609 (*Quellen-Lexikon*). Baccusi was one of the first composers who introduced into his accompaniments to church music instrumental parts in unison with the voice, in order to support the singers. The works in which he applied this system are printed; the first is intituled *Hippolyti Baccusi, Eccl. Cath. Veronæ musicæ magistri, missæ tres, tum vivâ voce tum omni instrumentorum genere cantatu accommodatissimæ, cum octo vocibus, Amadino*, Venice, 1596. The other is a volume containing the psalms used at vespers, with two Magnificats, Venice, 1597. It has a frontispiece occupied by an analogous inscription of even greater length and, if possible, of even less elegant latinity. The rest of his compositions consist principally of masses, madrigals, motetti, and psalms, and were published for the most part during his lifetime by Venetians such as Gardano, Vincenti, and Rampazetti. Isolated pieces of his are found in several miscellaneous publications of the period. Perhaps the most interesting of these is that contributed by him to the volume dedicated by fourteen different Italian composers to their great contemporary, Palestrina. E. H. P.

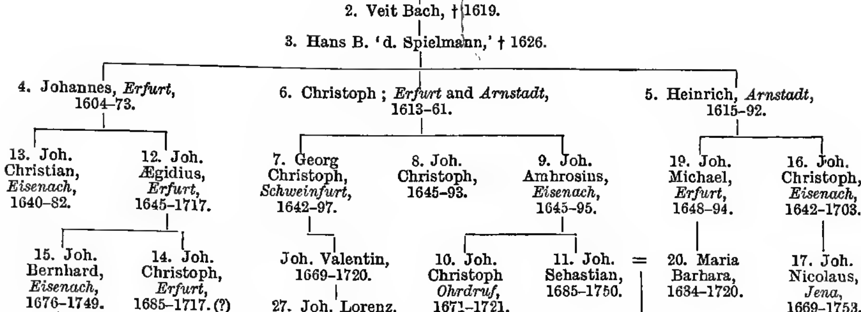
BACH. The name borne by a very numerous family of musicians who occupied not merely honourable but prominent places in the history of their art through a period of nearly two hundred years. In this family musical talent was as it were bequeathed, and it seems almost like a law of nature that the scattered rays of the gift should, after a hundred years, finally concentrate in the genius of JOHANN SEBASTIAN. The history of the Bach family is not only a guide towards a just appreciation of the greatness of Sebastian, but it has an independent interest of its own through the eminence of some of its individual members. Born and bred in Thuringia, the family for the most part remained there throughout two centuries; the sons of Sebastian being the first to spread to more distant parts. This stationary condition naturally produced a strong family feeling. According to tradition, meetings of all the members took place for the purpose of social intercourse and musical recreation. The Bachs always learned from one another, for they rarely had means for seeking their education elsewhere; thus the artistic sense and capacity of the family was, as we have said, hereditary, and by its undisturbed activity during a whole century became an important element in the development of Johann Sebastian. To this family unity also we may ascribe the moral excellence and cultivation of the Bachs.

Fully to appreciate the importance of these qualities in the development of the race, we must consider that these predecessors of Johann Sebastian lived in the miserable time of the Thirty Years' War, and in the midst of the moral indifferentism and collapse of intellectual power which distinguished that unhappy period. Yet the house of Bach exhibits an almost uniform example of moral worth, together with a constant endeavour after the highest ideals—qualities which are all the greater because in the circumstances of the time they could hardly meet with recognition or encouragement.

In course of time the towns of Arnstadt, Erfurt, and Eisenach became the centres of the family; there we find its most important representatives, and an uninterrupted sequence through several generations filling the same office; so that, for instance, in Erfurt the town musicians were known as 'the Bachs,' even though there had ceased to be any Bach among them. Another proof of the strong family feeling (and a valuable source of information) is the genealogy of the Bach family, begun by the great Sebastian himself, and added to by his son Carl Philip Emanuel. It contains fifty-three male members of the family, and gives the origin and dates of birth and death of each, and the most important events in their lives. This genealogical table soon became circulated amongst the family, and a copy of it in Emanuel's handwriting is to be found in the Royal Library at Berlin. For an account of the Bach-literature see the article on JOHANN SEBASTIAN.

The following table exhibits the chief members of this remarkable family, and contains all those whose lives are touched on below. The same numeral is affixed to each in both genealogy and biography. The references in brackets are to the English translation of Spitta's *Bach*.

The earliest notices go back to the beginning of the 16th century, and mention four distinct branches, of which the last only is of general interest, because it is that from which Johann Sebastian is descended. This, the actual musical branch, lived in Wechmar, a small place near Gotha. HANS BACH [1] (Sp. i. 4), the eldest of the Bachs, is mentioned as a *Gemeinde-Vormundschaftsglied* there in 1561. Then comes VEIT [2] (Sp. i. 5), possibly the son of the former, born between 1550 and 1560, and generally considered the progenitor of the race. He is said to have been a baker, and to have moved into Hungary with many other Evangelicals for protection from persecution. But under the Emperor Rudolf II. the Catholic reaction gave the Jesuits the upper hand, and this caused Veit to return home and settle at Wechmar as a baker and miller. The genealogy states that he loved and practised music; his chief delight was in a 'Cythringen' (probably a zither), upon which he used to play while his



mill was at work. He died March 8, 1619. But the real musical ancestor of the family was Hans [3] (Sp. i. 7), the son of Veit, born somewhere about 1580, and mentioned as 'the player'—that is to say, a professional musician. He was also a carpet-weaver, and is said to have been of a cheerful temperament, full of wit and fun. These characteristics are allnded to in a portrait formerly in the possession of Emanuel, in which he was represented as playing the violin with a bell on his shoulder, while below is a shield with a fool's cap. His profession took him all over Thuringia, and he was well known and beloved everywhere. He died Dec. 26, 1626, in the year of the first great plague. Of Hans's many children three sons deserve mention:—

Johannes Bach [4] (Sp. i. 14), born Nov. 26, 1604, apprenticed at Suhl to the 'Stadtpfeifer,' became organist at Schweinfurt, and perhaps also temporarily at Suhl. After an unsettled life amidst the turmoil of the Thirty Years' War, he settled at Erfurt in 1635 as director of the 'Raths-Musikanten,' and in 1647 became organist in the church there, thus representing both sacred and secular music. He was the forefather of the Bachs of Erfurt, and died there in 1673. His sons were Johann Christian and Johann Ægidius (see below, Nos. 12 and 13, p. 145).

Heinrich [5] (Sp. i. 27), born Sept. 16, 1615. As a boy showed a remarkable taste for organ-playing; to satisfy which he would go off on Sundays to some neighbouring town to hear the organ, there being none at Wechmar. He received his musical education from his father and his elder brother Johann, probably during his residence at Schweinfurt and Suhl, and followed his father to Erfurt. In 1641 he became organist at Arnstadt, where he died July 10, 1692, having filled his post for more than half a century. With him begins the line of Arnstadt Bachs. Besides his father's great musical gifts he inherited his cheerful disposition, which, coupled with great piety and goodness, enabled him to overcome the disastrous effects of the war, and so to educate his children, all of them more or less gifted, as to enable them to fill honourable places in the history of music. For the life of Heinrich we have complete material in his funeral sermon by Gottfried Olearius (Arnstadt, 1692). In his sons, Johann Christoph and Johann Michael (see Nos. 16 and 19, pp. 146*b* and 147*b*), the artistic importance of the elder Bachs before Johann Sebastian reaches its climax. In Ritter's 'Orgelfreund,' vol. vi. No. 14, there is an organ piece on the chorale 'Christ lag in Todesbanden,' which is ascribed to Heinrich Bach; of his other compositions nothing is known.

Christoph [6] (Sp. i. 142), the second son, born at Wechmar, April 19, 1613, we mention last because he is the grandfather of Johann Sebastian. After a temporary post at the court of Weimar, and a stay at Prettin in Saxony, he settled at Erfurt in 1642, as member of the 'Raths-Musik'; moved from thence to Arnstadt 1653-54, and died there Sept. 14, 1661, as 'Stadt-Musikus' and 'Hof-Musikus' to the Count of Schwarzburg. Unlike his brother Heinrich he occupied himself exclusively with the town music—the 'Kunst-Pfeiferthum.' Further details of his life are wanting. His sons were—

Georg Christoph [7] (Sp. i. 155), born Sept. 6, 1642, at Erfurt, first school teacher, then cantor at Themar near Meiningen, 1668; twenty years afterwards removed to Schweinfurt in the same capacity, and died there April 24, 1697. None of his compositions are now extant, but one, a cantata, 'Siehe, wie fein und

lieblich,' is mentioned in Philipp Emanuel Bach's collection of music.

JOHANN CHRISTOPH [8] (Sp. i. 156-164), and his twin brother JOHANN AMBROSIUS [9], born Feb. 22, 1645, at Erfurt, were so much alike in appearance and character that they were regarded as curiosities. After the early death of the father, who taught them the violin, and after they had completed their years of study and travel, Johann Christoph came to Arnstadt as Hof-Musikus to the Count of Schwarzburg. Disputes with the Stadt-Musikus caused the dismissal of all the court musicians, including Christoph, but he was afterwards restored to his post. He devoted himself to the church music, which had been much neglected, helped his old uncle Heinrich in his official work with the utmost disinterestedness, and died August 25, 1693. With his sons the musical activity of this branch of the family ceased. AMBROSIUS (Sp. i. 156) was more important. He remained with his brother till 1667, when he entered the association of the Erfurt 'Raths-Musikanten.' We have already mentioned that he was a violinist, but his importance in the history of music is due to the fact of his being the father of Johann Sebastian. He left Erfurt after a few years, and in 1671 settled at Eisenach, where he died in 1695. Of his numerous children we need only mention his two sons,

JOHANN CHRISTOPH [10] (Sp. i. 174 etc.), born June 16, 1671. After receiving instruction from the celebrated organ-player Pachelbel in Erfurt, he became organist at Ohrdruf, and died in 1721. Further details about him will be found in the biography of his younger brother, the great Johann Sebastian (see the article on him).

Having thus sketched the general course of the family, we will take its various members in alphabetical order, reserving Johann Sebastian for the crown of all.

CARL PHILIPP EMANUEL [25] (Sp. ii. 8 etc.), third son of Sebastian, often styled the Berlin or Hamburg Bach, born at Weimar, March 8, 1714. His general precocity, quickness, and openness to impressions, induced his father to bring him up to the study of philosophy. With this view he went to the Thomasschule and afterwards to the universities of Leipzig (1731) and Frankfort-on-the-Oder (1734), where he entered on the study of law. But the thorough grounding in music which, as a matter of course, he had received from his father, and the natural influences of so musical a house, had virtually decided his future. When he entered at Frankfort he was already not only a fine player but a thorough musician. Emanuel Bach entered the service of the Crown Prince of Prussia (afterwards Frederick II.) in 1738, and remained in it uninterruptedly until 1767, when he went to Hamburg as Telemann's successor. On his father's death he competed for his post, but without success. As composer, director, teacher, and critic, his influence was very great, and he was beloved and respected both by his brother professionals and by the whole town. His goodness, pleasant manners, literary culture, and great activity in music, all combined to place him at the head of his father's sons and scholars. But when we remember that for a Bach his musical gifts were by no means extraordinary—far below those of Friedemann, for example—it is plain that he stands so high because he is recognised historically as one of the most remarkable figures in the transition period between J. S. Bach and Haydn. In such periods a man is eminent and influential more from his general cultivation than from proficiency in any special branch. At the particular time at which E. Bach achieved his most important work, the gigantic days of Handel and Bach were exchanged for a time of peruke and powder, when the highest ideal was neatness, smoothness, and elegance. Depth, force, originality, were gone, and 'taste' was the most important word in all things. But taste has to do with externals, and therefore lays an undue stress on outward form in art, and this was the direction taken by the musical works which acted as important precursors of the so-called classical period. Nowhere does the tendency to formal construction show itself so strongly as in the works of Emanuel Bach, and he is therefore to be regarded as the immediate precursor of Haydn. No doubt he is affected and restricted by the tendencies of the time, but he had the power of bringing them together and throwing them into artistic form, and therefore his works are of greater importance than those of any of his contemporaries. To form a right judgment of him as a composer he must be regarded apart from his father, and solely from the point of view of his own time; and when so judged it is impossible to deny that he surpassed most of his contemporaries, and is of paramount importance as a connecting link between the periods of Handel and Bach on the one hand and Haydn and Mozart on the other. His music is wanting in depth and earnestness, but it is always cheerful, highly finished, often full of intelligence and charm; and in regard to form, where his relation to Haydn—a man far more gifted than himself—is most evident, we find him in possession of all those germs which in Haydn's hands sprang into such luxuriant growth—the homophonic thematic movement, the cyclical sonata-form, and new treatment of the orchestra.

His compositions in all departments are extraordinarily numerous; a complete list of them will be found in Gerber, and in Eitner's *Quellen-Lexikon*. Historically his instrumental compositions are the most valuable, because the development of the larger forms of instrumental

music is the great characteristic of modern times. His vocal music, chiefly for the Church, is for the most part flat and monotonous, a quality perhaps partly due to the dry and unenthusiastic rationalism of that day. Most important of all are his numerous compositions for the clavier—210 solo pieces; 52 concertos with orchestral accompaniments; sonatas, trios, etc.—in which he has exhibited and developed his father's principles of *technique*. Many of these pieces have been republished in the various collections of ancient music; and his principal work, 'Sonaten, nebst Rondos und freien Phantasien, für Kenner und Liebhaber' (6 parts, 1779-87), was republished in 1863 by Baumgart. Of his orchestral works, eighteen in number, several have been recently reissued by Breitkopf and Härtel. Two very beautiful sonatas for violin and piano, in B minor and C minor respectively, were published by Rieter-Biedermann, and though no editor's name appears, a rumour is current that the work of editing was done by Johannes Brahms. Bach's vocal works comprise—2 Oratorios, 'Die Israeliten in der Wüste' and 'Die Auferstehung und Himmelfahrt Jesu'; a celebrated 'Heilig' (Sanctus) for 2 Choirs; 'Melodien' to Gellert's sacred songs; 22 Passions; sacred Cantatas; a so-called 'Singode'; secular songs, etc. etc. That he was not without ability in literature is shown by his great work 'Versuch über die wahre Art das Clavier zu spielen' (part 1, 1753, the 2 parts together 1762, 1780, 1787, 1852, 1856) with examples and 18 specimen pieces. This book deserves notice as the first methodical treatise on clavier-playing; but it is more important still as containing the foundation of those principles which were first laid down by the great John Sebastian, and were afterwards developed by Clementi, Cramer, Field, and Hummel, into the pianoforte-playing of the present day. Bach lays special stress on refinement and taste in execution, in connection with which he gives detailed rules for the execution of the ornaments or 'Manieren' then considered so indispensable, and in this respect, as the most complete and authentic authority, his work will always possess considerable value.

JOHANN ÆGIDIUS [12] (Sp. i. 23), younger son of the old Johannes of Erfurt, born Feb. 9, 1645, was a member of the society directed by his father, became organist in St. Michael's Church, and in 1682 succeeded his brother JOHANN CHRISTIAN [13], as 'Raths-Musik director.' He died at Erfurt in 1717. Of his numerous children only two sons survived him—JOHANN CHRISTOPH [14] (Sp. i. 27), born August 15, 1685, who succeeded to the post of his father, still holding it in 1735—and

JOHANN BERNHARD [15] (Sp. i. 23), born Nov. 23, 1676. He was organist first at the Kaufmannskirche in Erfurt, then at Magdeburg, and finally at Eisenach, where, in 1703, he succeeded the older and more famous JOHANN CHRISTOPH [16]. These appointments, especially the last, give a favourable idea of his ability as an organist and composer. Of his compositions there still exist preludes on chorales, as well as pieces for clavier and four suites for orchestra (or 'overtures after the manner of Telemann,' as they were called). They are now in the Royal Library at Berlin. Johann Bernhard died June 11, 1749.

Another JOHANN BERNHARD, son of Sebastian's brother Christoph [10], was born Nov. 24, 1700, succeeded his father as organist at Ohrdruf, and died in 1744.

JOHANN CHRISTIAN [13] (Sp. i. 21), eldest son of Johann of Erfurt, born August 2, 1640, was at first a member of his father's musical society; then removed to Eisenach, his younger brother Ægidius taking his place. Christian was the first of the family to go to Eisenach, but in 1668 we find him again at Erfurt; he succeeded his father in the direction of the musical society, and died in 1682. He was succeeded by his younger brother Ægidius. One son, Johann Christoph (1673-1727) (Sp. i. 22) is mentioned as organist at Gehren (near Arnstadt), where he succeeded the famous MICHAEL (see that name, p. 147*b*). He had studied theology, but was of a quarrelsome haughty disposition, and had many conflicts with his superiors.

JOHANN CHRISTIAN [21] (Sp. iii. 275), known as the Milanese or English Bach, eleventh son of Johann Sebastian, and youngest of those who survived their father, was born at Leipzig in 1735, and was baptized on Sept. 7. Next to his brother Emanuel he is probably the best known amongst the sons of Sebastian, and the only one who broke through family traditions by travelling and adopting modern fashions in composition. His talent was certainly very remarkable, but his character and temperament forced him into directions very different from those of his ancient and honourable family. He was only fourteen when his father died [the legacy of three harpsichords implies decided proficiency], and he then went to live with his brother Emanuel in Berlin, where he studied pianoforte-playing and composition. The sound technical principles he received from his brother bore fruit in after years in a 'Méthode ou recueil de connaissances élémentaires' etc. published in Paris. A certain gaiety of disposition, possibly increased by his acquaintance with Italian singers, led him to Milan, where in 1754 he became a pupil of Padre Martini. [Letters discovered in the Liceo Musicale of Bologna by Herr Max Schwarz, prove that Bach's education was completed at the expense of a Conte Cav. Litta, that he was at Naples in 1757, and that he held the position of organist in the cathedral of Milan from June 1760 to the autumn of 1762. In that year he

came to London at the invitation of Signora Mattei, the impresaria of the King's Theatre, and produced the first of the operas he wrote for London on Feb. 19, 1763; 'Orione, ossia Diana vendicata,' as it was called, had a great success and was followed, on May 7, by 'Zanaida.' His first opera, 'Catone,' seems to have been given in Milan as early as 1758, and his second, 'Alessandro nell' Indie,' Jan. 20, 1762. His music was in the pleasant and somewhat superficial manner of the Neapolitans then in vogue, which was in great favour with singers and amateurs. During his residence in Italy he produced a Mass (San Fedele, Milan, August 23, 1757); a Requiem, Magnificat, Paternoster, Te Deum, and a Mass for the festival of St. Joseph, 1760. After his arrival in England he seems to have abandoned the composition of sacred music. Soon after the success of his second London production, he was appointed music master to the Queen and the Royal Family, and his famous partnership with Abel began in 1764. The subscription concerts, managed by Mrs. Cornelys, were conducted from 1765 by Bach and Abel, who started on their own account in 1775 at Hanover Square Rooms, carrying on the concerts till 1782. In 1765 Bach contributed to the pasticcio of 'Berenice,' and brought out his own 'Adriano in Siria'; in 1767 he married the singer Cecilia Grassi, and produced his 'Caratacco'; and in the winter of 1769-70 he made additions to Gluck's 'Orfeo.' In 1770 a grand oratorio, 'Gioas, rè di Giuda,' was given, and in 1772 and 1774 he visited his native country, producing at Mannheim his 'Temistocle' on the first occasion and 'Lucio Silla' on the second. Between these two came the production of 'La Clemenza di Scipione' in London, and possibly an opera, 'Siface,' and contributions to a pasticcio, 'Ezio,' may date from the time of his final return to England. In August 1778 he was in Paris, but no large work of his was given there. In spite of easy circumstances he died much in debt on Jan. 1, 1782. He was buried in St. Pancras Old Churchyard, in a piece of ground occupied by other members of the Roman Church.] The elegance and brilliance of his pianoforte compositions made him the favourite of all amateur pianoforte-players, and did much towards the general diffusion of the taste for pianoforte-playing. Some of his sacred works, however, seem more important, and in them we find such echoes of the hereditary musical spirit of the family as prove that Christian was still a member of the race. Burney kept up an intimate intercourse with him for many years, and gives a detailed account of him in his *History of Music*, vol. iv. [The above is amplified from the original article on J. C. Bach (by Herr A. Maczewski) with the aid of a most careful study of the composer contained in the *Sammelbände* of the Internationale Musik-Gesellschaft, Jhrg. II. p. 401, by Max Schwarz. A complete catalogue of works is also given there.]

JOHANN CHRISTOPH [16] (Sp. i. 38, 40 ff.), the most famous of this oft-recurring name, and also the most famous of the older generations, was the son of the old HEINRICH [5], of Arnstadt, and was born Dec. 8, 1642. He was a highly gifted musician, and through his own merits alone, independent of his illustrious nephew, occupies a very prominent place in musical history. His life was extremely simple. He was educated by his father, and in 1665 became organist to the churches at Eisenach. Later he also became court organist there, and died March 31, 1703. Of his four sons we may mention JOHANN NICOLAUS [17], 1669-1753. Christoph's moral excellence, his constant striving after the highest ideals, his industry, and his technical proficiency, give him the most prominent place amongst the elder branch of the family. He was not only, as the old authorities tell us, one of the finest organ-players and greatest contrapuntists of his day, but he was altogether one of the most important artists and composers of the whole 17th century. He was regarded with undisputed consideration by the family, and both Johann Sebastian and his son Emanuel had the greatest respect for him. In spite of this, his importance during his lifetime was not very widely recognised, and after his death he was but too soon forgotten; but this may be explained by the overpowering fame of his great nephew, by the quiet, reserved, simple nature of the man, who lived only for his art and his family, and lastly by the nature of his compositions. His few remaining works prove him to have been of a thoroughly independent and original nature, which, though affected by the influences of the time, was so in its own individual way. Having no sympathy with the prevalent Italian style, he endeavoured to carry on the art in his own way, and therefore to a certain degree stood aloof from his contemporaries. The leading feature in the development of the 17th century is the rise of instrumental music,—the struggle of the modern scales with the old ecclesiastical modes, the development of homophony with its melodious character, and its richness of harmony, in contradistinction to the old strict polyphony. These chief points in the general tendency of the time are not wanting in Johann Christoph. His cultivated sense of form enabled him to give his compositions that firm and compact structure which was a result of the new principles, while his natural musical feeling supplied due expression. His most important compositions are his vocal works, especially his motets; the few that exist only increase our regret at the loss of further proofs of his great ability. One of his best works was a cantata for double chorus and orchestra, 'Es erhub sich

ein Streit' (Rev. xii. 7-12); Johann Sebastian valued it very highly, and had it performed at Leipzig, as did Emanuel after him at Hamburg. It is minutely analysed in Sp. i. 44-50. Some of his motets are given in the *Musica Sacra* (of the Berlin Domchor) by Neidhart and Hertzberg; and others in a collection by Naue ('Neun Motette . . . von Johann Christoph und Johann Michael Bach,' Leipzig, Hofmeister). The complete list is as follows:—(Printed) 'Lieber Herr Gott' (Naue, book ii. 4); 'Der Gerechte, ob er gleich zu zeitig stirbt' (Naue, i. 1); 'Unsers Herzens Freude hat ein Ende' (*Musica Sacra*, Berlin, Bote and Bock, vol. xvi. 18); and the doubtful 'Ich lasse dich nicht' (Naue, iii. 9, and elsewhere). The following are in manuscript:—'Der Mensch, vom Weibe geboren'; 'Sei getreu bis in den Tod'; 'Herr, nun lässest du deinen Diener'; and 'Fürchte dich nicht, denn ich habe dich erlöst.' The best known of them is 'Ich lasse dich nicht,' familiar in England under the title of 'I wrestle and pray,' for a long time attributed to Johann Sebastian himself, and in fact so published by Schicht in his six motets. Johann Christoph's motets are admirably analysed in Sp. i. 75-96. His few remaining instrumental works—arrangements of chorales, and variations for clavier—are less important, owing perhaps to the absence of Italian influence, and were soon forgotten. But see Sp. i. ch. v. Gerber was in possession of a MS. volume of organ-music originally belonging to the Bach family, containing eight pieces by Johann Christoph; this invaluable book comprised works by all the celebrated organ-masters from 1680 to 1720, but most of the collection has, unfortunately, been lost through the carelessness of Gerber's legatees.

JOHANN ERNST [18] (Sp. iii. 239), the son of JOHANN BERNHARD, of Eisenach, born there Sept. 1, 1722, studied law at the Leipzig University, where he was a pupil of the great Sebastian, and established himself as a lawyer at Eisenach. He was also so clever a musician as to be of great use to his father in his profession. He was at first appointed his assistant in 1748, and afterwards succeeded him; he also became capellmeister at the court of Weimar in 1756, but kept up his house at Eisenach. Some of his vocal pieces are preserved (see *Quellen-Lexikon*), and show that he was superior to his time as a composer of sacred music, which was then rapidly declining. A fantasia and fugue for clavier are to be found in Pauer's 'Alte Meister,' series 2, bk. 3.

JOHANN CHRISTOPH FRIEDRICH [22] (Sp. iii. 270), called the Bückeburg Bach, ninth son of Sebastian, born at Leipzig, June 23, 1732. He at first studied jurisprudence, but true to family tradition soon forsook the law, and under the direction of his father and elder brother became a thorough musician. In 1750 he entered the service of Count Schaumburg as capellmeister at Bückeburg, where he remained till his death, Jan. 26, 1795, leaving behind him the reputation of an upright, modest, amiable man. As a composer he was industrious in all branches, especially in oratorios and passion music, and occasionally in opera. Though not attaining the eminence of his brothers, his compositions do no discredit to the family. In style he approaches nearest to his brother Emanuel. He left one son, WILHELM FRIEDRICH (see p. 149*a*). A. M.

JOHANN GOTTFRIED BERNHARD [26] (Sp. ii. 8), the youngest of Sebastian's sons, born May 11, 1715, was appointed organist to the Marienkirche at Mühlhausen in 1735, and to the Jacobikirche of Sangerhausen in 1736. He seems to have had a wandering disposition, for in 1738 he was studying law at Jena, where he died May 27, 1739. In addition to the letter written by Sebastian in regard to the first appointment (given in Sp. iii. 269), three more, soliciting the patronage of a Herr J. F. Klemm, or inquiring with pathetic eagerness for the whereabouts of his son, have been published in the *Zeitschrift* of the Int. Mus. Ges. iii. 351.

JOHANN LORENZ [27] (Sp. i. 156), the son of Joh. Valentin (1669-1720), and the grandson of Georg Christoph [7], deserves mention as the author of a prelude and fugue in D, which, says Spitta, 'shows him to have been a skilled and original composer.' He was born at Schweinfurt, Sept. 10, 1695, was organist at Lahm in Franconia, and died Dec. 14, 1773.

JOHANN LUDWIG [28], was probably a descendant of Veit Bach's; he was the son of Jakob Bach (1655-1718), and was born at Steinbach in 1677. He was court cantor at Meiningen in 1708, and by 1711 he was capell-director there, and died in 1741. His importance in the history of music consists in the fact that Sebastian Bach admired him more than any other of his relatives, and transcribed no fewer than twelve of his church cantatas. Spitta analyses some of his works very minutely (see *Bach*, i. 10, 389, 574-582; ii. 144; iii. 263). In vol. xli. of the B.-G. edition, a thematic catalogue of seventeen church cantatas is given, as well as of the sections of a mass in E minor, unmentioned in the *Quellen-Lexikon* of Eitner, which gives a 'Trauermusik' composed in 1724, and the overture or suite in G, which is analysed by Spitta. M.

JOHANN MICHAEL [19] (Sp. i. 39 ff.), younger son of old Heinrich, and brother of Johann Christoph of Eisenach, born August 9, 1648. He, like his brother, was educated by his father, whom he afterwards supported and helped in his professional duties. In 1673 he was appointed organist at Gehren near Arnstadt, where he died in May 1694, in the prime of life. He had six children, a boy who died early, and five daughters, the youngest of whom, Maria Barbara [20], became the first wife of Johann

Sebastian, and died 1720. Johann Michael had the same nature and character as his brother, the same simple pious mind and constant lofty aims. In depth of intention, flow of ideas, he vied with his brother, but the latter surpassed him in feeling for form. His invention is remarkable, but form is always his difficulty; in him we feel the want of certainty so characteristic of that time, which resulted from the constant seeking after new forms; and the defect is equally evident in his stiff counterpoint. We may, however, assume that with his great gifts Michael would have developed more in this direction but for his early death. The decline of the polyphonic style is especially felt in his motets, because he failed to build up his movements in the definite forms demanded by the new homophonic style. The motets are analysed in Sp. i. 59-73. In instrumental music he seems to have been more important, perhaps because he was more accessible to the influence of Italy than his brother. Walther says that he wrote 'Starke Sonaten' (*i.e.* for many instruments). In Adlung's copy of Walther's *Lexikon*, now in the Royal Library at Berlin, is the following note in Adlung's hand:—'2 choric (chörichte) sonatas by Joh. Mich. Bach were engraved on copper.' These are evidently the works referred to. In Gerber's organ-book already mentioned there were no less than seventy-two fugued and figured chorale-preludes of his, showing how much those of his compositions were then valued. Of his vocal works, several motets, with and without instrumental accompaniments, are still preserved. In the depth and force of his expression his relationship with Sebastian is clearly felt (see the above-mentioned collections of Naue and Neidhardt). Michael Bach also employed himself in making instruments.

There is a younger Johann Michael, born in 1754 or 1755, whose connection with the family is not quite clear; he was perhaps descended from the branch which settled at Schweinfurt. He became cantor at Tonna, and also travelled to Holland, England, and even to America. On returning to Germany he studied at Göttingen in 1779 and 1780, and then established himself as a lawyer at Güstrow, in Mecklenburg. In 1780 he published a book or pamphlet called 'Kurze und systematische Anleitung zum Generalbass,' etc. Three cantatas are preserved at Berlin and Schwerin, and a set of six harpsichord concertos with orchestra was published at Amsterdam.

JOHANN NICOLAUS [17] (Sp. i. 131), as on of the celebrated Johann Christoph, born 1669, became organist of the town and university at Jena, and died there Nov. 4, 1753. For a long time he was in the position of senior to the whole family; but none of his sons lived, and thus his branch died out with him. He journeyed to Italy, and entered the Danish army, rising to be commandant of the fortress of Aggershus in Norway. He was known as a composer of 'suites,' and a mass by him in MS. exists in the Royal Library at Berlin, remarkable for the fusion of Italian and German styles. There is also a comic operetta by him called 'Der Jenaische Wein- und Bier-Rufer' (The Wine and Beer Crier of Jena), a scene from Jena college life. He acquired great reputation in the manufacture of instruments. Incited, and perhaps even directed, by his uncle Johann Michael, he made many improvements in the construction of pianos, but his efforts were chiefly directed towards establishing equal temperament in the tuning of organs and pianos, an idea which at that time met with universal opposition.

WILHELM FRIEDEMANN [23] (Sp. ii. 8, etc.), called the Halle Bach, eldest of Johann Sebastian's sons, born at Weimar, Nov. 22, 1710. In the opinion of all his acquaintances he was not only the most gifted of the brothers, but altogether an unusually able man, a genius on whom the father built great hopes, and to whom the brothers looked for replacing him. Unhappily he entirely departed from the respectable and honourable ways of the Bachs. An obstinate character and utter moral recklessness prevented him from attaining the eminence which his youth seemed to promise, and his life exhibits the melancholy spectacle of a ruined genius. He was educated chiefly by his father, who fully appreciated his remarkable abilities, and devoted special care to them; he also received instruction on the violin from Graun. He attended the Thomasschule, in 1723 matriculated at, and in 1729 entered the university at Leipzig, and distinguished himself greatly in mathematics. In 1733 he became organist at the Sophienkirche at Dresden, and in 1747 music director and organist of the Liebfrauenkirche at Halle. He held this office till 1764, when he was obliged to give it up, his way of life becoming more and more disorderly and dissolute, and making him careless and irregular in his duties. He then lived without regular occupation at Brunswick and Göttingen, and also at Berlin, where Forkel, his father's biographer, looked after him with the greatest devotion; he occasionally gave concerts on the piano or organ, or wandered about with travelling musicians, but always sinking deeper and deeper. In 1767 he seems to have received an appointment as capellmeister at Hesse-Darmstadt, but he never took the post; in the spring of 1774 he was announced to give an organ-concert in the Marienkirche in Berlin, but it seems never to have taken place. He died at Berlin, July 1, 1784, in a state of great degradation and want. He was the greatest organ-player of his time, a thorough master of the theory of music, in which his remarkable mathematical knowledge

JOHANN SEBASTIAN BACH

was of great service to him, a master of fugue, and a famous improviser. Very few of his compositions have been published; he only wrote them down when necessity forced him to do so. This shows with what facility he could compose, but also how indifferent a matter it was to him. The Royal Library at Berlin possesses a good many of his writings, including twenty-three church cantatas and seventeen sets of instrumental compositions; for a list of these and of the numerous other MSS. see the *Quellen-Lexikon*. Some, such as the two noble fantasias introduced by Madame Arabella Goddard at the Monday Popular Concerts, have been printed in different collections of old pianoforte music.

WILHELM FRIEDRICH ERNST [24], son of the Bückeburg Bach, and the last grandson of Sebastian. Born at Bückeburg, May 27, 1759, he was educated under his father's care until able to perform in public; he then accepted an invitation from his uncle Christian in London. There he remained some years, much sought after and respected as a pianoforte teacher. On his uncle's death in 1782 he returned to Germany and after a visit to Paris (*Riemann*) settled at Minden. On the accession of King Frederick William II. of Prussia he wrote a 'Huldigungs cantata,' and was rewarded by being called to Berlin in 1790 as 'cembalist' to the Queen, with the title of capellmeister. This post he retained under Queen Louise, wife of Frederick William III., and after her death retired into private life. He was the teacher of the royal children, as he had been of Frederick William III. and his brothers. He lived in complete retirement till Dec. 25, 1845. As the sole and last representative of the family, he assisted, with his wife and two daughters, at the inauguration of the monument erected to the memory of Johann Sebastian in front of the Thomasschule at Leipzig in 1843 through the efforts and instigation of Mendelssohn. With him the descendants of Johann Sebastian Bach became extinct. He was a good pianoforte and violin player, but his modesty prevented him from often appearing, and although he wrote much, some songs, an overture for harpsichord, and a cantata, are all that were published. Some concertos and other pieces for piano are in the royal Hausbibliothek in Berlin (*Quellen-Lexikon*). A. M.

BACH, JOHANN SEBASTIAN—'to whom,' in Schumann's words, 'music owes almost as great a debt as a religion owes to its founder'—youngest son of Ambrosius Bach, was born at Eisenach, March 21, 1685. The only direct evidence as to the day of birth is that he was baptized on March 23. His life, like that of most of his family, was simple and uneventful. His father began by teaching him the violin, and the old-established family traditions and the musical importance of Eisenach, where the famous Johann Christoph was still actively at work, no doubt assisted his early development. In his tenth year the parents both died, and Sebastian was left an orphan. He then went to live with his elder brother, Johann Christoph, at that time organist at Ohrdruf, and under his direction began the clavier, at the same time carrying on his education at the Ohrdruf 'Lyceum.' The remarkable genius of the boy began at once to show itself. He could soon play all his lessons by heart, and aspired to more advanced music. This impulse his brother, it seems, did not encourage. We are told that he possessed a MS. volume containing pieces by Frohberger, Pachelbel, Kerl, Buxtehude, and other celebrated composers of the day. This book became an object of longing to the young Sebastian, but was strictly withheld from him by his brother. Determined nevertheless to gain possession of the volume, the boy managed with his little hands to get it through the latticed door of the cupboard in which it was kept, and at night secretly copied the whole of it by moonlight, a work which occupied him six months. When the stern brother at last discovered the trick, he was cruel enough to take away from the boy his hardly-earned treasure.

At the age of fifteen (1700) Johann Sebastian entered the convent school of St. Michael at Lüneburg; his beautiful soprano voice at once procured him a place among the 'Mettenschüler,' who took part in the church music, and in return had their schooling free. Though this gave him an opportunity of becoming acquainted with vocal music, instrumental music, especially organ and pianoforte playing, was always his chief study. Böhm, the organist of St. John's at Lüneburg, no doubt had an inspiring effect upon him, but the vicinity of Hamburg offered a still greater attraction in the person of the famous old Dutch organist Reinken. In his holidays Bach made many expeditions to Hamburg on foot to hear this great player. On one of these journeys nearly all his money was spent; he had seated himself outside an inn about half-way on the return journey, sniffing the delicious odours proceeding from the kitchen, when a window was opened and two herrings' heads were flung out. The hungry lad found in each of them a Danish ducat, and not only satisfied his hunger, but made another expedition to Hamburg. The identity of his benefactor was never known. Another powerful incentive to his development was the ducal 'Hof-kapelle' at Celle, which, being in a great measure composed of Frenchmen, chiefly occupied itself with French instrumental music, and thus Bach had many opportunities of becoming acquainted with a branch of chamber and concert music, at that time of great importance. After remaining three years at Lüneburg he became for a short time 'Hofmusikus' at Weimar in the band of Prince Johann Ernst,

brother of the reigning duke. He was appointed to the 'new church' at Arnstadt on August 14, 1703, and at Easter of the same year he had gone to Weimar as Hofmusikus, so that his residence at the latter place can only have lasted a few months. He visited Lübeck at the end of Oct. 1705. This detail is worthy of mention, since it proves that he went in order to hear the 'Abendmusiken' there, which were held on the last two Sundays after Trinity, and on the 2nd, 3rd, and 4th Sundays in Advent [see BUXTEHUDE]. He seems to have considered his stay there of so much importance that he prolonged it for three months, until Feb. 1706. This liberty, and his habit in accompanying the services of indulging his fancy to the disturbance of the congregation, drew upon him the disapprobation of the church authorities (Sp. i. 315 ff.), but without interfering with his position as organist—a fact which proves that the performances of the young genius were already appreciated. It was in 1704 that Joh. Jakob Bach, the second of Sebastian's elder brothers, entered the Swedish Guard as oboe-player, and that Sebastian wrote his famous 'Capriccio on the departure of a brother' to commemorate the event. It seems that his reputation as an organist was even then so great that he had received applications from various quarters. In 1707 he went to Mühlhausen in Thuringia, as organist of the church of St. Blasius, and on Oct. 17 of that year married his cousin Maria Barbara Bach, daughter of Joh. Michael of Gehren. In 1708 he went to Weimar as court organist and Kammermusikus. From this time we may consider his studies to have been completed; at Weimar his fame as the first organist of his time reached its climax, and there also his chief organ compositions were written,—productions unsurpassed and unsurpassable. In 1714, when twenty-nine years of age, Bach was appointed 'Hof-Concertmeister,' and his sphere of activity became considerably enlarged. An interesting event took place at this time. Bach used to make yearly tours for the purpose of giving performances on the organ and clavier. Visits to Cassel, Leipzig, and Halle are recorded, and to Meiningen, where a distant cousin, Joh. Ludwig Bach, was director of the Ducal band. On his arrival at Dresden in the autumn of 1717, he found there a French player of great reputation named Marchand, whose performances completely carried away his hearers, though he had made many enemies by his arrogance and intolerance of competition. Bach was induced to send a written challenge to the Frenchman for a regular musical contest, offering to solve any problem which his opponent should set him, of course on condition of being allowed to reciprocate. Marchand agreed, in his pride picturing to himself a glowing victory; time and place were fixed upon, and a numerous and brilliant audience assembled. Bach made his appearance—but no Marchand: he had taken himself off that very morning; having probably found an opportunity of hearing his opponent, and no longer feeling the courage to measure his strength with him.

On his return from Dresden in 1717 Bach was appointed capellmeister at Cöthen by Prince Leopold of Anhalt-Cöthen, with the comparatively high salary of 400 thalers (1200 marks, or £60) a year. This young Prince, a great lover of music, esteemed Bach so highly that he could not bear to be separated from him, and even made him accompany him on his journeys. Bach went with him to Carlsbad in 1718 and 1720, and on his return from the latter expedition learnt that his wife had died suddenly and was already buried. Bach's duties consisted merely in directing the Prince's chamber-music, as he had nothing to do with the church music or organ-playing. Accordingly this period of his life proved extraordinarily fertile in the production of instrumental music. In 1719 he was at Halle, where he tried to make the acquaintance of Handel, who was at that time on a visit to his family. This, and a second attempt in 1729, fell through, so that the two composers never met. A journey to Hamburg in 1720 brought him again in contact for the last time with the aged Reinken; on this occasion he was a candidate for the post of organist at the 'Jacobi Kirche,' where he was attracted by the splendid organ. In spite of his great fame, and notwithstanding his having again excited the most unmixed admiration by his organ-playing in Hamburg, he failed to obtain the post; an unknown and insignificant young man being preferred to him, —possibly because he offered to pay 4000 marks for the office. At length, in 1723, Bach was appointed cantor at the Thomasschule in Leipzig, and director of the music in the two chief churches. Cöthen was no field for a man of his genius, and the Duke's love of music had considerably cooled since his first marriage. Bach therefore quitted the place for his new post, though retaining sufficient interest in it to write a funeral ode (Trauer-Ode) on the death of the Duke in 1728. An earlier funeral ode was occasioned by the death of Christiane Eberhardine, Electress of Saxony, and was performed on Oct. 17, 1727. Besides the Trauermusik, Bach wrote for the court of Cöthen a whole series of occasional cantatas, proving his intimate connection with the Ducal family: for Dec. 10 (the Duke's birthday), in 1717, 1718, and 1720; for New Year's Day, 1719 and 1720 (Gratulationscantaten); for Nov. 30 (the birthday of the Duke's second wife), 1726. Only three of these compositions are preserved; most of the poems to which they were set were written by C. F. Hunold. Bach took up his residence in Leipzig in May 1723. As cantor

he had to teach singing, and, at first, to give a certain amount of scientific instruction; as director of music he had to superintend the choral music in the churches of St. Thomas and St. Nicholas. The choirs were composed of the scholars of the Thomasschule, with the addition of students and amateurs, the so-called 'Adjuvanten.' The size of the chorus, according to our present ideas, was very small; the average number for a four-part chorus was about 12 voices. These were supplemented by a body of instrumentalists averaging 18 in number, and composed of the town musicians with the assistance of students, scholars, and amateurs. Part of the duties of University Music-director were fulfilled by Bach, and from 1729 to 1736 he conducted a students' musical society, in which secular chamber music was practised, and which held for some time an important place in the musical life of the town. Several public concerts were also given by the society under Bach's direction.

Bach's official duties were not very pressing, and he had time enough for composition. The musical materials with which he had to deal were, however, far from satisfying his requirements, especially as compared with the state of music at the court. Besides this, his governing authorities, the town council of Leipzig, showed themselves entirely incapable of understanding the exceptional greatness of this musician. They did everything to impede his freedom of action, and pestered him with petty accusations. In the summer of 1730 Bach's irritation was so great that he nearly resolved to leave Leipzig altogether. His intercourse with the rector and colleagues of the Thomasschule was at first not unpleasant, and during the rectorate (1730-34) of the celebrated philologist, Johann Mathias Gesner, it was very agreeable. Bach could not get on with the next rector, however, Johann August Ernesti, a man still very young and without any tact. Certain differences as to the appointment of one of the choir-prefects, who had to direct the choir in the absence of the cantor, led to a breach which in the course of the year became quite irreconcilable. Bach, with all his great and noble qualities, was easily irritated, and possessed unyielding obstinacy. The protracted conflict had very bad results on the discipline and working of the school, and even ten years after Bach's death the rector and cantor were accustomed to regard each other as natural enemies.

Bach's position in Leipzig was a highly respected one, and he soon became a celebrity in the town. Few musicians went there without paying him a visit, and even the 'stars' of the Italian Opera in Dresden did not fail to pay him respect. He kept up a friendly intercourse with the musicians of the Saxon capital. Pupils came to him from far and near; his house was a centre of refined and earnest musical culture; with his wife, an excellent singer and an accomplished musician, his talented sons and daughters, and his numerous pupils, he could organise, in his spacious house, performances of vocal and instrumental works, even of those which required a large number of executants. That he mixed in the literary and university society of the town is proved by his relations with the poetess Mariane von Ziegler and Professor Gottsched. In later life he seems to have withdrawn more and more from society. In the new impulse which was given to music about the middle of the century by the influence of the rich mercantile element, and which resulted in the foundation of the 'Gewandhaus Concerts,' Bach, so far as we can learn, took no part.

Bach made frequent journeys from Leipzig. As he was still capellmeister at Cöthen ('von Haus aus,' as the phrase was), he had to appear there occasionally and to place his services at the disposal of the reigning family. At the same time he kept up his connection with the court of Weissenfels, to which he had been appointed capellmeister in 1723. He often went to Dresden, where, since his passage of arms with Marchand in 1717, he had been in high favour. In 1727 he was—as far as we know, for the last time—in Hamburg, and his native Thuringia had been visited occasionally.

It was at Leipzig that he wrote for the services of the Church his great Passions and the finest series of his cantatas, and his High Mass in B minor (1733), which exhibit the power of his unique genius in its full glory. In 1736 he received the honorary appointment of Hof-Componist to the Elector of Saxony. In 1747, when already somewhat advanced in age, he received an invitation to Berlin to the court of Frederick the Great, where his son Emanuel held the post of cembalist, a fact which made the king desirous of hearing and seeing the great master himself. Bach accepted the invitation, was received with the utmost respect and kindness by the King (April 7, 1747),[1] had to try all the Silbermann pianofortes and organs at Potsdam, and excited the greatest wonder by his improvisation on given and self-chosen themes. On his return to Leipzig he worked out the theme which the King had given him, and dedicated it to him under the title of 'Musikalisches Opfer.' As early as 1749 the failure of his eyesight made him at times so incapable of work that the town council thought seriously of appointing his successor. He had been accustomed from earliest youth to strain his naturally weak sight, and this brought on his blindness. The oculist to whom he ultimately had recourse was the English Taylor, who

[1] I owe this date to Mr. Carlyle, though he has omitted all mention of the occurrence in his Life of Frederick. O.

[The letter from Carlyle is given in *The Life and Letters of Sir George Grove*, by C. L. Graves, 1903; pp. 43, 44; on the latter page is quoted Sir George's own conviction that Bach's learning was a very subordinate thing, and that 'not *it*, but feeling, tender passionate sentiment, a burning genius, and a prodigious flow and march of ideas, are his characteristics.']

travelled through Germany in 1750 and 1751. An operation was performed, but was unsuccessful. By a curious coincidence the same oculist operated, a few years later, upon Handel, and also without success. On July 28, 1750, his life was brought to an end by a fit of apoplexy. [He was buried on July 31 near the south portal of the church of St. John, but when the graveyard was altered to make a new road, the grave was obliterated. In 1894, Professor Wilhelm His of Leipzig discovered a grave which seemed to correspond with that of Bach, and which contained human remains conforming so exactly to the descriptions of Bach's measurements, etc., that no reasonable doubt was possible as to their identity. By using the skull as a foundation, and covering it with wax, a portrait was obtained which, compared with the authentic portraits of the composer, entirely substantiated the theory that Bach's grave had been found; his remains were reinterred in a specially erected crypt below the altar of the church, on the 150th anniversary of Bach's death, July 28, 1900. Prof. His's discovery was minutely described, with illustrations, in vol. xxii. of the *Abhandlungen der mathem.-physischen Classe der kgl. Sächs. Gesellschaft der Wissenschaften*, No. v., published by S. Hirzel of Leipzig, 1895.]

Bach was twice married (Oct. 17, 1707, and Dec. 3, 1721); by his first wife, Maria Barbara, the daughter of Michael Bach of Gehren, he had seven children. She died at Cöthen in 1720, during her husband's absence at Carlsbad with the Prince. Three only of her children survived their father—an unmarried daughter and two sons, Wilhelm Friedemann and Philip Emanuel. His second wife, Anna Magdalena Wülkens, youngest daughter of the Weissenfels Hof-Trompeter, had a musical nature and a fine voice, and showed a true appreciation for her husband. She helped to encourage a strong artistic and musical feeling in his house, and besides attracting foreign artists, exerted a beneficial influence on the sons, who were one and all musically gifted. This marriage produced thirteen more children, six sons, of whom only two survived the father, Johann Christoph Friedrich (1732-95) and Johann Christian (1735-82).

In Johann Sebastian centres the progressive development of the race of Bach, which had been advancing for years; in all the circumstances of life he proved himself to be at once the greatest and the most typical representative of the family. He stood, too, on the top step of the ladder: with him the vital forces of the race exhausted themselves; and further power of development stopped short.

All the family traits and qualities of the Bachs to which we drew attention in the introduction to this article, and which were handed on by natural disposition as well as education and tradition, stand out in Johann Sebastian with full decision and typical clearness:—a deeply religious sentiment which, though in many points closely approaching to the pietism then developing itself, yet adhered with a certain naïve severity to the traditional, orthodox, family views; a truly wonderful moral force, which, without any show, embraced the problem of life in its deepest sense; and a touching patriarchal spirit, which was satisfied with humble circumstances, rejoiced in the blessing of an unusually numerous family, and regarded the family life as the chief object of existence. With and above all this there was an artistic striving, founded exclusively on ideal views, and directed with complete self-forgetfulness to ideal aims alone. His art and his family,—those were the two poles around which Bach's life moved; outwardly, simple, modest, insignificant; inwardly, great, rich, and luxurious in growth and production. His activity was extraordinary and unceasing. Besides his official duties and his actual labour as a composer, which in themselves alone are astonishing, he made copies for himself of other composers' works, including those of the Bach family; it cannot be proved that he engraved on copper, as has been often stated, but he occupied himself with the manufacture of instruments. He invented an instrument between the violoncello and viola, which he called viola pomposa (see that word), and devised a clavier with catgut strings which he called Lauten-clavicymbalum. At the same time he was a model paterfamilias, made the musical education of his sons his especial and peculiar care, wrote educational works for his pupils like the 'Clavierbüchlein' for his son Friedemann, and the famous 'Kunst der Fuge,' and also trained a great number of pupils who afterwards themselves became famous, such as Johann Caspar Vogler, Agricola, Altnikol, afterwards his son-in-law, Marpurg, Kirnberger, and Ludwig Krebs. Bach's development points to a steady and indefatigable pursuit of a definite and fixed aim, guided by his genius alone. He had a clear insight into his artistic mission; developed himself with a perfect unity of purpose, holding aloof from external influences in the field of art, but rather drawing them to himself and so appropriating them through the power of his genius as to mould them into a complete whole. If in a measure he ran counter to the continual encroachments of Italian opera, this may be attributed less to his artistic than to his moral and religious views.

Bach's importance for the history of music lies in the fact that, starting with instrumental music, and adhering to the spirit of it, he developed all forms and species of composition in an entirely new and independent manner. The old vocal style, which was founded exclusively on polyphony, was exhausted. Bach created an entirely new vocal style based on instrumental principles, carried it to the summit of perfection, and there left it.

TITLE-PAGE OF BACH'S "WELL-TEMPERED CLAVICHORD"

Bach's masterly counterpoint is generally spoken of as the special mark of his genius; and unapproachable as he is in this branch, his real power lies less in the almost inconceivable facility and dexterity with which he manages the complicated network of parts, than in that formal conformation of the movements which resulted from this manner of writing; in this he exhibits a consistency, fertility, and feeling for organic completeness which are truly inimitable. His melody, his harmony, and his periods all seem to be of one mould: an indestructible spirit of severe logic and unalterable conformity to law pervades the whole as well as the parts. These formal principles are governed, pervaded, and animated from first to last by the idea of the musical composition; so that the materials, though in themselves void of expression, become imbued with an inexhaustible depth of meaning, and produce infinite varieties of form. This wonderful unity of idea and formal construction gives the stamp of the true work of art to Bach's compositions, and explains the magical attraction which they exert on those who make them their earnest study. Besides these less obvious qualities, Bach's importance in the history of music shows itself in the immediate influence he exerted in various ways towards its greater development. He first settled the long dispute between the old church modes and the modern harmonic system; in his chorales he often makes use of the former, but the harmonic principle is predominant in his works, just as it still lies at the root of modern music. Connected with this was the 'equal temperament' which Bach required for instruments with fixed intonation. He put this in practice by always tuning his claviers himself, and, moreover, embodied his artistic creed in relation to it in his famous 'Wohltemperirtes Clavier,' a collection of preludes and fugues in all keys. Bach's influence on the technical part of piano-playing must not be forgotten. The fingering which was then customary, which hardly ever employed the thumb, and very seldom the little finger, was inadequate for the performance of his works. But he stood entirely upon his own ground, and formed for himself a new system of fingering, the main principle of which was the equal use and development of all the fingers, thus laying the foundation of the modern school; on the other hand he laid down many rules which, though no longer binding, to a certain degree reconciled the old and the new schools, and gave the whole system a thoroughly personal stamp, making it appear, like everything else of Bach's, unique.

Bach wrote unceasingly in every form and branch, and the quantity of his works is enormous. A tolerably complete catalogue (by Emanuel Bach and Agricola) is given in Mizler's *Musikalisches Bibliothek* (1754), of which the following is a summary:—

1. *Vocal Works.* Five sets of Sacred Cantatas (Kirchen-Cantaten) for every Sunday and Holyday in the year, besides many single ones, and others for special occasions; 5 Passions; the Christmas Oratorio (in 5 parts); the 'High' Mass in B minor, and 4 smaller do.; Motets; 2 Magnificats, 5 Sanctuses, as also many Secular Cantatas, including two comic ones, a 'Bauern-Cantate' and a 'Caffee-Cantate.'

2. *Instrumental Works.* A vast number of clavier pieces of all kinds—Inventions, in 2 and 3 parts; Suites (6 small, called 'French Suites,' 6 large 'English Suites,' and 6 'Partitas'); Preludes and Fugues, amongst them the 'Wohltemperirtes Clavier' in two parts, 48 Preludes and Fugues in all keys; the 'Kunst der Fuge'; Sonatas for clavier with one or more instruments, Solo-sonatas for violin and for violoncello; Solos, Trios, etc., for different instruments in various combinations; Concertos for 1 to 4 harpsichords; Do. for violin and other instruments with orchestra; Overtures and Suites for orchestra; lastly an endless quantity of organ compositions—Fantasias, Toccatas, Preludes, Fugues and arrangements of Chorales. (See the catalogue under the heading BACH-GESELLSCHAFT.) Of this almost inexhaustible mass a few only were printed during Bach's lifetime. These were—the 'Clavierübung,' a collection of pieces for harpsichord and organ, in 4 parts (1731-42); the 'Musikalisches Opfer,' dedicated to Frederick the Great, and a few organ arrangements of chorales; and shortly after his death the Art of Fugue (1752), and a collection of Chorales selected by Emanuel Bach from his father's Cantatas, and published in two volumes (1765-69). These were afterwards reprinted in a more complete form by Breitkopf and Härtel, and in 1843 a 4th edition in score, specially arranged, was published in Leipzig by C. F. Becker.[1] The great mass of Bach's MSS., however, lay untouched and unknown for many years; the vocal works seem to have been more especially ignored. The time immediately following Bach had no sympathy with the depth and individuality of his genius. True, his pupils and sons revered him as a consummate and inimitable contrapuntist and a masterly composer, and with true instinct set themselves to collect and copy all his existing works for piano and organ which they could procure. But with their generation all real interest in this mighty genius vanished, and it is not too much to say that within forty years after Bach's death, his fame, though still unapproachable, had become a mere historic tradition. How quickly and how generally this was the case is evident from the fact that the works of his son Emanuel were esteemed at least as highly as his own,[2] and that even a man like Adam

1 This edition contains the Chorale which [illegible] the original edition of the *Art of Fugue*.

2 See, for example, Burney's *Present State* (Ge[illegible]any), ii. 244.

Hiller, one of the most prominent and influential musicians of Bach's school, and one of his successors as cantor at the Thomasschule, in his *Lebensbeschreibung berühmter Musikgelehrten und Tonkünstler* (Leipzig, 1784) chiefly admires his counterpoint and part-writing, and finds his melodies 'peculiar' (*sonderbar*).

Bach's musical development proceeded from the sphere of organ music, and it is to this branch of art that the greatest and most important part of his compositions, up to the year 1717, belongs. It was in the time of his residence at Weimar that he reached his full greatness as an organ-player. At Cöthen he did not write much for the organ; the Orgelbüchlein, compiled there, consists for the most part of compositions of the Weimar, or even of an earlier, period. In all probability the celebrated G minor Fugue with the Prelude (B.-G., xv. p. 177) was composed in 1720 at the time of his journey to Hamburg. Of the great Preludes and Fugues only four can with certainty be ascribed to the Leipzig period:—C major, B minor, E minor, and E♭ major (B.-G., xv. pp. 228, 236; and iii. pp. 173 and 254): and of the chorale arrangements, probably not more are to be referred to this time than those twenty-one which constitute the chief part of the 'Clavierübung,' and the canonic variations on the Christmas hymn 'Vom Himmel hoch.' The six organ sonatas received their final corrections at Leipzig, but most of them date from Cöthen or earlier, and were not originally written for the organ, but for a pedal harpsichord with two manuals.

The Cöthen period was principally devoted to instrumental chamber music. Here the great 'Brandenburg' concertos were completed in 1721; the first part of the 'Wohltemperirtes Clavier' written in 1722 (the second part was finished about 1742); and in 1723 the Inventions and Symphonies for clavier were produced. Besides these, to this period are to be assigned the six 'French' and perhaps also the six 'English' suites, to which Bach added the six 'Partitas' (written in Leipzig between 1726 and 1731): very probably the sonatas and suites for violin and violoncello, as well as the sonatas for violin and clavier, are also to be ascribed to this time.

Lastly, in the Leipzig period, the composer laid most stress upon church music for voices with instrumental accompaniment. He wrote some 300 so-called church cantatas, of which more than 200 are extant. Only a small number of these, about 30, belong to the earlier period; the earliest is probably the Easter cantata, 'Denn du wirst meine Seele' (B.-G., ii. No. 15); it seems to have been written at Arnstadt in 1704. A good number of cantatas can be assigned to the Weimar period, but to the Cöthen period belong only one or two. But to the Leipzig period are to be referred not only the great majority of cantatas, but also almost all the great church compositions. Of the five Passion settings only that according to St. Luke belongs to an early time; the 'John' Passion was performed for the first time in 1724, the 'Matthew' in 1729, while two are lost. The Christmas Oratorio was written in 1734, the Magnificat, apparently for Christmas, 1723, and the Mass in B minor between 1732 and 1738. The German sacred poems set by Bach are the work of Erdmann Neumeister, Salomo Franck, Chr. Fr. Henrici (Picander), Mariane von Zeigler, and others. Many of them were compiled by Bach himself.

It was the revolution produced by the composers of the classical period which first paved the way back to the understanding of Bach; at the end of the 18th and beginning of the 19th centuries the music publishers began to recollect the existence of these forgotten works. In 1799 A. F. C. Kollmann printed one of the '48' in London, in his *Essay on Practical Musical Composition*, and announced that he intended to publish the whole. Although the intention was never fulfilled the annouucement seems to have attracted such attention in Germany (see the *Allgemeine musikalische Zeitung*, Oct. 2, 1799), that about a year afterwards the whole work was published by Nägeli at Zürich, Simrock at Bonn, Kühnel (now Peters) and Breitkopf and Härtel in Leipzig, with a number of piano and organ works (see *Musical Times*, 1896, p. 587). The six[1] unaccompanied motets, for 5 and 8 voices, edited by Schicht, were published by Breitkopf and Härtel as early as 1802. Wesley and C. F. Horn issued in 1807 twelve fugues arranged as string quartets, and in 1809 the performances of Bach's Fugues and Trios by Samuel Wesley and Benjamin Jacob on the organ of Surrey Chapel, London (one of the very few pedal organs at that time in England), caused an extraordinary sensation, which was followed up by the publication, by subscription, of the 48 Preludes and Fugues (Birchall, 1810-1813) and the 6 organ trios (arranged for three hands on the pianoforte), all edited by Wesley and Horn. [Before this, Wesley had played 'several admired compositions of the celebrated Sebastian Bach' at his concert in 1808, and at his 'Musical Morning Party' on June 3, 1809, at the Hanover Square Rooms, he performed the motet 'Jesu, meine Freude,' this being in all probability the first performance of any of Bach's vocal music in England. Other Bach pieces found their way into the programmes of Wesley's annual concerts in subsequent years.] Wesley's admiration for Bach was quaintly and forcibly expressed in a series of letters to Jacob, not published until 1875, though written in 1808 and 1809. But it

[1] Including 'Ich lasse dich nicht,' now known to be by J. Christoph Bach.

was Mendelssohn who gave the permanent impetus to the growing worship of Bach in Europe by the performance[1] of the 'Matthew' Passion in Berlin, March 12, 1829, exactly one hundred years after its production. A powerful excitement seized the musical world; people began to feel that an infinite depth and fulness of originality united with a consummate power of formal construction was lying hidden in these neglected works. Performances of the Passion and of other vocal music of Bach took place in Berlin and elsewhere—*e.g.* in Breslau by the 'Singakademie' under Mosewius—the editions increased in number and began to include the vocal works. The most important of these is that of Peters (dating from 1837), *Gesammt Ausgabe der instrumentalen Werke Bach's*, edited by Czerny, Griepenkerl, and Roitzsch, with whom Hauptmann, David, Dehn, etc., were afterwards associated. This edition is practically complete, and includes an excellent thematic catalogue by A. Dörffel (1866). The same firm's edition of the vocal works includes full and compressed scores of the 'Matthew' and 'John' Passions, the Christmas Oratorio, the B minor Mass, and 4 smaller ditto, the 6 Motets, the Magnificat and 4 Sanctuses, and Cantatas with piano accompaniment—all at the well-known low prices of this firm. Mention should be made of 4 Kirchengesänge, published in score with pianoforte arrangement by J. P. Schmidt (Trautwein); of Cantatas, and 'Lob, Ehre, Weisheit' (8 voc.), issued by Breitkopfs, of Novello's editions of the 'Matthew' and 'John' Passions, of various Cantatas with English translations, and of several Sanctuses, Motets, etc., in *The Bach Choir Magazine*; of the two comic Cantatas, edited by Dehn and published by Crantz—all harbingers of the edition of the Bach-Gesellschaft.

Mendelssohn was not content with the revival of the Passion music; through his efforts[2] a monument was erected, in 1842, which perpetuates the features of the great master in front of the Thomasschule, over which he presided, and under the very windows of his study. Nor was the result of Mendelssohn's enthusiasm to stop here. In 1850, the centenary of Bach's death, the 'Bach-Gesellschaft' was founded at Leipzig for the publication of his entire works. This gave a real and powerful impulse to the worship of Bach; the discovery of the unsuspected treasures which were revealed even by the first annual volume led to the foundation of 'Bach Societies' all over Germany, which devote themselves to the performance of his works, especially the vocal works, and have thereby awakened such an enduring interest that now the Cantatas, Passions, and Masses of Bach rank with Handel's oratorios in the standing repertoires of all great German choral societies, and are regarded as tests for their powers of execution. No doubt the first impulse to these societies was given by the original Bach Society mentioned above [see also BACH-GESELLSCHAFT].

Besides all these efforts for diffusing the knowledge of Bach's works, we must mention the labours of Robert Franz, the famous song-writer at Halle. In the performance of Bach's great vocal works with instrumental accompaniment, the organ forms an essential part, being necessary for carrying out Bach's obbligato accompaniments. At concerts, where Bach is most frequently to be heard now, an organ not being always attainable, Franz devoted himself to replacing the organ part by arranging it for the orchestral instruments now in use. His thorough understanding of Bach's manner of writing, the musical affinity of his own nature, made him pre-eminently fitted for this work. A number of his arrangements, some in full score, some arranged for piano, have been published by C. F. Leuckart at Leipzig [see ADDITIONAL ACCOMPANIMENTS].

Amongst the literature relating to Bach we must first mention a biography or 'Necrology' written by his son Emanuel and his pupil Agricola. It appeared in the *Musikalische Bibliothek* of Mizler in 1754, and is especially important because it contains a catalogue of Bach's works which may be considered authentic; it includes both the then published works and all the MS. works which could be discovered, and is the chief source of all investigations after lost MSS. The first detailed biography of Bach was written by Professor Forkel of Göttingen, *Ueber Bach's Leben, Kunst und Kuntswerke*, 2 vols., Leipzig, 1802 [in an English version by Samuel Wesley, 1820]; afterwards, in 1850, there appeared, amongst others, Hilgenfeldt's *J. S. Bach's Leben, Wirken, und Werke*, 4to; in 1865 *J. S. Bach*, by C. H. Bitter (2 vols. 8vo, Berlin), and in 1873 the 1st vol. of Spitta's exhaustive and valuable *J. S. Bach*, the second following in 1880. The English translation by Clara Bell, and J. A. Fuller Maitland (Novello, 3 vols., 1884) has so much additional matter that it ranks as the second edition of the work. The English reader will find a useful manual in Miss Kay Shuttleworth's unpretending *Life*, and a republished lecture by Mr. Sedley Taylor (Cambridge, 1897) should also be consulted. There are also biographical notices in Gerber, Fétis, and the other biographical dictionaries; and monographs by Mosewius on the 'Matthew' Passion (Trautwein, 1845) and on the sacred cantatas and chorales (*Id.* 1852). In von Winterfeld's well-known work, 'Der evangelische Kirchengesang,' there is frequent reference to Bach. Mention should also be made of Hauptmann's *Erläuterungen* of the *Art of Fugue* (Peters), and of the admirable Prefaces

[1] See Devrient's *Recollections of Mendelssohn*, p. 38, etc. etc.

[2] See his Letters, Nov. 30, 1839; August 10, 1840; Dec. 11, 1842; and a paper by Schumann entitled 'Mendelssohn's Orgel-Concert,' in his *Gesammelte Schriften* (iii. 256).

to the various annual volumes of the Bach-Gesellschaft.

[The above article incorporates, with the original article by Herr A. Maczewski, the additional matter by Dr. Philipp Spitta, first published in the Appendix to the *Dictionary*.]

[In the study of Bach, England has kept pace with Germany, though with shorter strides. It is difficult to say when his music first became known in England. A transcript of the C major organ fugue (beginning with the first four notes of the scale of C) is preserved in the library of the Royal College of Music. It is transposed into the key of B flat, and in the handwriting of Dr. Ben Cooke (died 1793), who assigns the composition to John Robinson, his predecessor as organist of Westminster Abbey! How it came to be assigned to Robinson will probably not be discovered, but it may be assumed that this familiar Bach fugue was heard on the Abbey organ not so long after the death of the great Cantor. The publication of Kollmann, and the performances and editions of Wesley have been already mentioned. In 1806 Kollmann issued the 'Chromatic Fantasia,' and between 1799 and 1808 Broderip and Wilkinson, 13 Haymarket, published, with a French title, what appears to be a reprint of the first edition of the '48,' issued by Simrock in 1800. Dr. Crotch—like Wesley a Bach enthusiast—is said to have been the first to introduce the St. Anne's fugue in public, at one of his lectures at the Surrey Institution in 1816, when he played it on the pianoforte; Dr. Gauntlett claimed to have been the first to play it on the organ, at St. Stephen's Church, Coleman Street, Oct. 17, 1827. The change of the compass of English organs—from G to C, *circa* 1835-40—gave a great impetus to the performance of the organ fugues, Mendelssohn being one of the first to lead the way during his visits to England. At the Birmingham Musical Festival of 1837 an extract from the St. Matthew Passion was performed at the instigation of Mendelssohn, and at the Ancient Concert of April 25, 1838, Nos. 1, 2, and 11 of the Magnificat were sung 'well scored by Mr. Kearns.' During the same season a selection from the B minor Mass (*Gloria*, *Qui sedes*, and *Quoniam tu solus*) was badly performed. Gauntlett edited the 'Choral and Instrumental Fugues' (a collection of various works), and in one number of the *Musical World* (April 19, 1838) no fewer than *thirty* different compositions of Bach's were reviewed.

The Overture and Suite in D were introduced at the Philharmonic Concert of June 24, 1844, conducted by Mendelssohn. The Bach propaganda in England was continued by the Bach Society (founded in 1849) and the Bach Choir (inaugurated in 1875), both noticed separately under their respective headings. Finally, the small E minor fugue and the organ chorales were published in England before they appeared on the Continent—both circumstances being due to the zeal of Mendelssohn, who edited them for English publishers. Messrs. Coventry and Hollier published in 1844 or 1845 fourteen of the grand organ preludes and fugues and two toccatas. These appear to have been edited by Mendelssohn.[1] They are printed in three staves, and a separate copy of the pedal part 'arranged by Signor Dragonetti' (probably at the instigation of Moscheles), was published for the violoncello or double bass. About the same time Dr. Gauntlett edited some choruses for the organ. On April 6, 1871, took place the first performance of the 'Matthew' Passion in Westminster Abbey, an example since followed at St. Paul's, St. Anne's, Soho, and other churches. For a more detailed account of the spread of Bach's music in England, see a series of articles in the *Musical Times*, Sept.-Dec. 1896. F. G. E.]

BACH CHOIR, THE. In 1875 a body of amateurs was got together by Mr. A. D. Coleridge for the purpose of studying Bach's Mass in B minor, a work concerning which musicians in England were then in almost total ignorance. The music was studied under the direction of Mr. Otto Goldschmidt [see that name], who had devoted much preparatory care to the Mass; and the work was performed at St. James's Hall on April 26, 1876, and again in May of the same year. Its success was such as to encourage the promoters of the scheme to convert the temporary choir into a permanent association for the production of classical vocal music. The new society was called 'The Bach Choir' (in commemoration of the inaugural performance), and its object was defined by the rules to be the practice and production of choral works of excellence of various schools. Lord Coleridge became president, Mr. Goldschmidt musical director and conductor, and Mr. Coleridge honorary secretary, while the details of the administration were handed over to a salaried secretary and librarian. In March 1879 Queen Victoria graciously consented to become patron of the choir. In June of that year Mr. Prendergast was appointed secretary and librarian, with the whole of the administrative work, Mr. Coleridge retaining the office of honorary secretary.

While practising and producing other choral works, the Mass was not neglected, and it was performed, for the eighth time in London, in the Albert Hall on March 25, 1885, in celebration of the bicentenary of Bach's birth. For this performance the choir was largely augmented by voices selected from other leading societies, and many retired members resumed for the occasion their places in the chorus. Interest was also lent to this performance by the use for the first time in England of the trumpet and *oboi d' amore*

[1] See his letter printed in the Appendix to Polko's *Reminiscences of Mendelssohn* (Longmans, 1869). Some of the pieces are headed 'arranged by Mendelssohn.'

parts as written by Bach. The whole forces were directed by Mr. Otto Goldschmidt, who shortly afterwards resigned the post of conductor, and, declining re-election, was succeeded by Dr., now Sir C. Villiers Stanford. In the same year Lord Coleridge retired from the office of president, and Lord Monteagle was elected to succeed him. At the end of this year Mr. Prendergast resigned the office of secretary and librarian, and the work was undertaken by Mr. Morton Latham as honorary secretary, Mr. Coleridge resigning the office which he had held since the commencement. In April 1895, a Bach Festival of three days was held in the Queen's Hall, and a second in 1897. In 1902 Sir C. V. Stanford retired from the conductorship, and was succeeded, at the beginning of 1903, by Dr. H. Walford Davies.

Subjoined is a list of the principal works which have been introduced to London through the agency of the Bach Choir. Many of these have been specially published for the society in the Bach Choir Magazine.

J. S. BACH. Mass in B minor; Missa Brevis in A; Cantatas 'Ein' feste Burg,' 'Herr, wie du willst,' 'O ewiges Feuer,' 'O Ewigkeit' (ii.), 'Wachet auf,' 'Wachet, betet,' and Trauerode. Chorus, 'Now shall the Grace'; Sanctus in D; Do. in C.
BERLIOZ. Te Deum.
BRAHMS. Fest- und Gedenksprüche.
BRUCH. 'Odysseus.'
BRUNEAU. Requiem.
CHERUBINI. Mass in D.
GADE. 'Comala.'
KIEL. 'The Star of Bethlehem.'
PALESTRINA. Missa Papæ Marcelli; Missa 'Assumpta est Maria.'
C. H. H. PARRY. 'Prometheus unbound'; 'Blest Pair of Sirens.'
PURCELL. Anthem, 'Jehovah, quam multi.'
SOMERVELL. Mass in C minor.
SPOHR. Ps. xxiii.

MOTETS AND SHORTER WORKS.

ANERIO. 'Alleluia.'
J. C. BACH. 'Lieber Herr Gott.'
STERNDALE BENNETT. 'In Thee, O Lord.'
BRAHMS. 'Es ist das Heil.'
ECCARD. 'When to the temple Mary came.'
GOSS (finished by Sullivan). 'The God of Jeshurun.'
MARENZIO. 8 pt. Magnificat.
MENDELSSOHN. 'Tu es Petrus.'
PALESTRINA. 'Adoramus Te.'
VITTORIA. 'O quam gloriosum,' and 'Jesu dulcis.'
DR. C. WOOD. 'Full fathom five.'

M. L.

BACH-GESELLSCHAFT. A German society formed for publishing a complete critical edition of the works of JOHN SEBASTIAN BACH, in annual instalments, as a memorial of the centenary of his death—July 28, 1850. The idea originated with Schumann, Hauptmann, Otto Jahn, C. F. Becker, and the firm of Breitkopf and Härtel; was cordially endorsed by Spohr, Liszt, and all the other great musicians of the day (how enthusiastically would Mendelssohn have taken a lead, had he been spared but three years longer!), and the prospectus was issued to the public on the anniversary itself. The response was so hearty and immediate, both from musicians and amateurs, at home and abroad, as to leave no doubt of the feasibility of the proposal; the society was therefore definitely established. Its affairs were administered by a committee (Hauptmann, Becker, Jahn, Moscheles, Breitkopf and Härtel), whose headquarters were at Leipzig; the annual subscription was fixed at 5 thalers, or 15s., and the publications were issued to subscribers only, so as to prevent anything like speculation. The first volume appeared in Dec. 1851, and contained a preface and list of subscribers, embracing crowned heads, nobility, public libraries, conservatoires and other institutions, and private individuals. The total number of copies subscribed for was 403, which had increased at the last issue (xlvi.—issue 1899) to 652, the English contingent having risen at the same time from 23 to 77—or from 5·7 per cent to 11·8 per cent of the whole.

The principles laid down for editing the volumes are stated in the preface to vol. i. as follows:—The original MS. to be consulted wherever possible; and also, as of extreme importance, the separate parts, which are often either in Bach's own writing or revised and corrected by him, exhibiting notes and marks of great consequence, both as corrections and as evidence of his practical care for the performance of his music, often making the separate parts more valuable than the score itself. Where such originals are not obtainable, recourse to be had to the oldest copies, especially those by Bach's own scholars; or, in default of these, the earliest printed editions, particularly when issued during his lifetime. No conjectural readings to be admitted. Where doubts exist as to authenticity, the edition errs, if at all, on the side of liberality. Thus a sonata for two claviers, in F, by W. F. Bach, appears in vol. xliii., and a toccata by Purcell was printed as a 'doubtful' work of Bach in vol. xlii. p. 250. The editors fully recognised the necessity for revision, and an appendix to the B minor Mass was edited by Jul. Rietz many years after the publication of the score in vol. vi. practically cancelling the second half of that volume.

The discovery of the original MSS. is beset with difficulties. Bach's MSS., except a few which were in the hands of Kirnberger and Kittel, came first into the possession of his sons, Friedemann and Emanuel. Those entrusted to Friedemann were lost, mislaid, or sold. Emanuel, on the contrary, took the greatest care of his, and left a catalogue which has proved of material value to investigators. A portion of his collection was acquired by Nägeli the publisher, of Zürich, but the principal part is now in the Berlin Imperial Library, and in that of the Joachimsthaler Gymnasium in the same city, which latter contains also the MSS. formerly belonging to Kirnberger and his pupil the Princess Anna Amalia. The library of the Thomasschule at Leipzig once contained a large number of cantatas, both in score and parts; but they were neglected by Cantor Müller (1801-9), and on his death all but a very small portion had vanished. Thus, although the bulk of the existing autographs is now to be found in Berlin, a considerable number remain widely scattered in private collections, access to which for such purposes as those of the Bach-Gesellschaft is naturally attended with much trouble.

It has been the aim of the editors, by the means just indicated, to obtain a text which should express the composer's intentions as nearly as possible. Each volume contains a preface, setting forth the sources drawn upon for the contents of the volume, and the critical method employed in dealing with them, with a host of interesting particulars on the nature and condition of the MSS., on Bach's method of writing, on his efforts to find the most perfect expression for his ideas (as shown by the incessant variations in his numerous copies of the same work), on the practical execution of Bach's music, etc., so that these prefaces may really be said to contain the sum of the present knowledge on the subject of Bach and his music in general. The first and second years' volumes were edited by Hauptmann, the third by Becker, the fourth and sixth by Rietz, the fourteenth by Kroll, and the rest until 1878, vol. xxviii. (except vol. xxvii. (i.) edited by A. Dörffel), by W. Rust, who has shown himself in these prefaces the accurate indefatigable investigator which his friends have long known him to be. The following is a complete list of the yearly issues:—

1851. First Year.
Church Cantatas. Vol. I.

1. Wie schön leuchtet.
2. Ach Gott, vom Himmel.
3. Ach Gott, wie manches.
4. Christ lag in Todesbanden.
5. Wo soll ich fliehen hin.
6. Bleib' bei uns.
7. Christ unser Herr.
8. Liebster Gott, wann werd' ich sterben?
9. Es ist das Heil.
10. Meine Seel' erhebt.

1852. Second Year.
Church Cantatas. Vol. II.

11. Lobet Gott.
12. Weinen, Klagen.
13. Meine Seufzer.
14. Wär' Gott nicht mit uns.
15. Denn du wirst meine Seele.
16. Herr Gott dich loben wir.
17. Wer Dank opfert.
18. Gleich wie der Regen.
19. Es erhub sich ein Streit.
20. O Ewigkeit, du Donnerwort.

1853. Third Year.
Clavier Works. Vol. I.

15 Inventions and 15 Symphonies.
Clavierübung:
Pt. 1. 6 Partitas.
Pt. 2. Concerto and Partita.
Pt. 3. Choral-Preludes and 4 duets.
Pt. 4. Air, with 30 Variations.
Toccata in F♯ minor.
Toccata in C minor.
Fugue in A minor.

1854. Fourth Year.
Passion Music (St. Matthew).

1855. Fifth Year.
Church Cantatas. Vol. III.

21. Ich hatte viel Bekümmerniss.
22. Jesus nahm zu sich.
23. Du wahrer Gott.
24. Ein ungefärbt Gemüthe.
25. Es ist nichts Gesundes.
26. Ach wie flüchtig.
27. Wer weiss, wie nahe mir.
28. Gottlob! nun geht.
29. Wir danken dir, Gott.
30. Freue dich, erlöste Schaar.

Christmas Oratorio.

1856. Sixth Year.
Mass in B minor.

1857. Seventh Year.
Church Cantatas. Vol. IV.

31. Der Himmel lacht.
32. Liebster Jesu.
33. Allein zu dir, Herr.
34. O ewiges Feuer.
35. Geist und Seele.
36. Schwingt freudig euch.
37. Wer da glaubet.
38. Aus tiefer Noth.
39. Brich dem Hungrigen.
40. Dazu ist erschienen.

1858. Eighth Year.
Four Masses: in F, A, G minor, and G.

1859. Ninth Year.
Chamber Music. Vol. I.

3 Sonatas for Clavier and Flute.
Suite for Clavier and Violin.
6 Sonatas for ditto, ditto.
3 ditto for Clavier and Viol da gamba.
Sonata for Flute, Violin, and figured bass.
Ditto for 2 Violins and ditto.

1860. Tenth Year.
Church Cantatas. Vol. V.

41. Jesu, nun sei gepreiset.
42. Am Abend aber desselbigen.
43. Gott fähret auf.
44. Sie werden euch.
45. Es ist dir gesagt.
46. Schauet doch und sehet.
47. Wer sich selbst erhöhet.
48. Ich elender Mensch.
49. Ich geh' und suche.
50. Nun ist das Heil.

1861. Eleventh Year.
Magnificat in D.
Four Sanctuses, in C, D, D minor, and G.

Chamber Music. Vocal.
Phœbus und Pan.
Weichet nur, betrübte Schatten.
Amore traditore.
Von der Vergnügsamkeit.
Der zufriedengestellte Aeolus.

1862. Twelfth Year.
Passion Music (St. John.)

Church Cantatas. Vol. VI.

51. Jauchzet Gott.
52. Falsche Welt.
53. Schlage doch.
54. Widerstehe doch.
55. Ich armer Mensch.
56. Ich will den Kreuzstab.
57. Selig ist der Mann.
58. Ach Gott, wie manches. (2nd version.)
59. Wer mich liebet.
60. O Ewigkeit. (2nd version.)

1863. Thirteenth Year.
Betrothal Cantatas.

Dem Gerechten muss das Licht.
Der Herr denket an uns.
Gott ist unsere Zuversicht.
Three Chorales.

Clavier Works. Vol. II.
The French Suites.
The English Suites.

Funeral Ode on the Duchess of Saxony.

1864. Fourteenth Year.
Clavier Works. Vol. III.

Das wohltemperirte Clavier, complete with Appendix.

1865. Fifteenth Year.
Organ Works:

6 Sonatas.
18 Preludes and Fugues.
3 Toccatas.
Passacaglia.

1866. Sixteenth Year.
Church Cantatas. Vol. VII.

61. Nun komm, der Heiden.
62. Ibid. (2nd version.)
63. Christen, ätzet diesen Tag.
64. Sehet, welch' eine Liebe.
65. Sie werden aus Saba.
66. Erfreut euch, ihr Herzen.
67. Halt' im Gedächtniss.
68. Also hat Gott die Welt.
69. Lobe den Herrn.
70. Wachet, betet, seid bereit.

1867. Seventeenth Year.
Chamber Music. Vol. II.

Concertos for Clavier and Orchestra: D minor; E; D; A; F minor; F; G minor.
Concerto for Clavier, Flute, and Violin, with Orchestra.

1868. Eighteenth Year.
Church Cantatas. Vol. VIII.

71. Gott ist mein König.
72. Alles nur nach Gottes Willen.
73. Herr, wie du willst.
74. Wer mich liebet, 2nd version.
75. Die Elenden sollen essen.
76. Die Himmel erzählen.
77. Du sollst Gott.
78. Jesu, der du meine Seele.
79. Gott der Herr ist Sonn'.
80. Ein' feste Burg.

1869. Nineteenth Year.
Chamber Music. Vol. III.

6 Concertos for various instruments, with Orchestra.

1870. Twentieth Year.
Church Cantatas. Vol. IX.

81. Jesus schläft.
82. Ich habe genug.
83. Erfreute Zeit.
84. Ich bin vergnügt.
85. Ich bin ein guter Hirt.
86. Wahrlich, ich sage euch.
87. Bisher habt ihr nichts.
88. Siehe, ich will viel Fischer.
89. Was soll ich aus dir machen.
90. Es reifet euch.

3 Dramas for various festivities.

1871. Twenty-first Year.
Chamber Music.
Vols. IV. and V.

2 Concertos for Violin and Orchestra.
1 ditto for 2 ditto and ditto.
1 Symphony movement for Violin.
3 Concertos for 2 Claviers and Orchestra.

Easter Oratorio.

1872. Twenty-second Year.
(Issued in 1876.)
Church Cantatas. Vol. X.

91. Gelobet seist du.
92. Ich hab' in Gottes.
93. Wer nur den lieben Gott.
94. Was frag' ich.
95. Christus der ist mein Leben.
96. Herr Christ, der ein' ge.
97. In allen meinen Thaten.
98. Was Gott thut, das.
99. Ditto. (2nd version.)
100. Ditto. (3rd version.)

1873. Twenty-third Year.
(Issued August 1876.)

101. Nimm von uns Herr.
102. Herr, deine Augen sehen.
103. Ihr werdet weinen und heulen.
104. Du Hirte Israel.
105. Herr, gehe nicht ins Gericht.
106. Gottes Zeit ist die allerbeste Zeit.
107. Was willst du dich betrüben.
108. Es ist euch gut.
109. Ich glaube lieber Herr.
110. Unser Mund sei voll Lachens.

1874. Twenty-fourth Year.
(Issued Dec. 1876.)

111. Was mein Gott will.
112. Der Herr ist mein getreuer Hirt.
113. Herr Jesu Christ, du höchster Gut.
114. Ach, lieben Christen.
115. Mache dich mein Geist bereit.
116. Du Friedefürst Herr Jesu Christ.
117. Sei Lob und Ehr.
118. O Jesu Christ mein's Leben's Licht.
119. Preise Jerusalem, dem Herrn.
120. Gott, man lobet dich.

1875. Twenty-fifth Year.
(Issued in 1878.)
Clavier Works. Vol. IV.
The Art of Fugue.

Organ Works.
Orgelbüchlein.
6 Chorales.
18 Chorales.

1876. Twenty-sixth Year.
(Issued in 1878.)
Church Cantatas. Vol. XIII.

121. Christum wir sollen loben schon.
122. Das neugebor'ne Kindelein.
123. Liebster Immanuel.
124. Meinen Jesum lass' ich nicht.
125. Mit Fried' und Freud'.
126. Erhalt' uns Herr.
127. Herr Jesu Christ.
128. Auf Christi Himmelfahrt.
129. Gelobet sei der Herr.
130. Herr Gott, dich loben alle wir.

1877. Twenty-seventh Year.
(Issued in 1879.)
Chamber Music. Vol. VI.

6 Sonatas for Violin.
6 Suites for Violoncello.

Thematic Index to the Church Cantatas. Nos. 1-120.

1878. Twenty-eighth Year.
(Issued in 1881.)
Church Cantatas. Vol. XIV.

131. Aus der Tiefe.
132. Bereitet die Wege.
133. Ich freue mich in dir.
134. Ein Herz, das seinen Jesum.
135. Ach, Herr, mich armen Sünder.
136. Erforsche mich.
137. Lobe den Herren.
138. Warum betrüb'st du dich.
139. Wohl dem, der sich auf seinen Gott
140. Wachet auf, ruft uns die Stimme.

1879. Twenty-ninth Year.
(Issued in 1881.)
Chamber Music. Vocal.

Was mir behagt.
Non sa che sia dolore.
O holder Tag.
Höchstorwünschtes Freudenfest.
Schweigt stille.
Mer hahn en neue Oberkeet.
(With appendix.)

1880. Thirtieth Year.
(Issued in 1884.)
Church Cantatas. Vol. XV.
141. Das ist je gewisslich wahr.
142. Uns ist ein Kind.
143. Lobe den Herrn.
144. Nimm, was dein ist.
145. So du mit deinem Munde.
146. Wir müssen durch viel Trubsal.
147. Herz und Mund und That.
148. Bringet dem Herrn Ehre.
149. Man singet mit Freuden.
150. Nach dir, Herr.

1881. Thirty-first Year.
(Issued in 1885.)
Orchestral Works.
4 Overtures (Suites).
Symphony in F.

Musikalisches Opfer.

2 Concertos for 3 Claviers.

1882. Thirty-second Year.
(Issued in 1886.)
Church Cantatas. Vol. XVI.
151. Süsser Trost.
152. Tritt auf die Glaubensbahn.
153. Schau', lieber Gott.
154. Mein liebster Jesu.
155. Mein Gott, wie lang'.
156. Ich steh' mit einem Fuss.
157. Ich lasse dich nicht. (Duet.)
158. Der Friede sei mit dir.
159. Sehet, wir geh'n hinauf.
160. Ich weiss, das mein Erlöser.

1883. Thirty-third Year.
(Issued in 1887.)
Church Cantatas. Vol. XVII.
161. Komm, du süsse Todesstunde.
162. Ach, ich sehe.
163. Nur Jedem das Seine.
164. Ihr, die ihr euch von Christo nennet.
165. O heil'ges Geist- und Wasserbad.
166. Wo gehest du hin?
167. Ihr Menschen, rühmet Gottes Liebe.
168. Thue Rechnung! Donnerwort.
169. Gott soll allein.
170. Vergnügte Ruh'.

1884. Thirty-fourth Year.
(Issued in 1887.)
Secular Cantatas. Vol. IV.
Serenata, Durchlaucht'ster Leopold.
Schwingt freudig euch empor, *or* Die Freude reget sich.
Hercules auf dem Scheidewege.
Tönet, ihr Pauken (Birthday Ode for the Queen of Poland, 1733).
Preise dein Glücke (Cantata gratulatoria).
Appendix. Angenehmes Wiederau, and Auf, schmetternde Töne.

1885. Thirty-fifth Year.
(Issued in 1888.)
Church Cantatas. Vol. XVIII.
171. Gott, wie dein Name.
172. Erschallet, ihr Lieder.
173. Erhöhtes Fleisch und Blut.
174. Ich liebe den Höchsten.
175. Er rufet seinen Schafen.
176. Es ist ein trotzig und verzagt Ding.
177. Ich ruf' zu dir, Herr Jesu Christ.
178. Wo Gott der Herr.
179. Siehe zu, dass deine Gottesfurcht.
180. Schmücke dich, o liebe Seele.

1886. Thirty-sixth Year.
(Issued in 1890.)
Clavier Works. Vol. IV.
Suites, Toccatas, Preludes, Fugues, Fantasias, etc.

1887. Thirty-seventh Year.
(Issued in 1891.)
Church Cantatas. Vol. XIX.
181. Leichtgesinnte Flattergeister.
182. Himmelskönig, sei willkommen.
183. Sie werden euch in den Bann thun.
184. Erwünschtes Freudenlicht.
185. Barmherziges Herze der ewigen Liebe.
186. Aerg're dich, o Seele, nicht
187. Es wartet Alles auf dich.
188. Ich habe meine Zuversicht.
189. Meine Seele rühmt und preist.
190. Singet dem Herrn.

1888. Thirty-eighth Year.
(Issued in 1891.)
Organ Works. Vol. III.
Preludes, Fugues, Fantasias, etc., and Concertos arranged from Vivaldi.

1889. Thirty-ninth Year.
(Issued in 1892.)
Motets, Chorales, and Hymns from Schemelli's book.

1890. Fortieth Year.
(Issued in 1893.)
Chorale Preludes for Organ.

1891. Forty-first Year.
(Issued in 1894.)
Church Music (supplementary volume).
Gloria in Excelsis (a version of that in the B minor Mass).
Church Cantatas, etc. (incomplete).
Nun danket alle Gott.
Ihr Pforten zu Zion.
Ehre sei Gott.
O ewiges Feuer.
Herr Gott, Beherrscher aller Dinge.
Fragments.
Four Cantatas, not certainly by Bach.
Gedenke, Herr, wie es uns gehet.
Gott der Hoffnung.
Siehe, es hat überwunden.
Lobt ihn mit Herz und Munde.
Catalogue of the church compositions of J. Ludwig Bach.

1892. Forty-second Year.
(Issued in 1894.)
Clavier Works. Vol. V.
Arrangements from other works, including sixteen concertos from Vivaldi.
Preludes, fugues, etc.

1893. Forty-third Year.
(Issued in 1894.)
(i.) Three sonatas for flute, one and a fugue for violin, sonata for two claviers (by W. F. Bach), concerto for four claviers (from Vivaldi).

(ii.) Contents of Anna Magdalena Bach's music-book.

1894. Forty-fourth Year.
(Issued in 1895.)
Facsimiles of Bach's handwriting at various dates.

1895. Forty-fifth Year.
(Issued in 1895, 1897, and 1898.)
(i.) Clavier and Chamber Music. Supplementary Vol.
New versions of the English and French Suites, canons, a prelude and fugue, two suites, a sonata, four inventions (clavier), an overture for strings, the contents of the 'Clavierbüchlein for W. F. Bach.'
Appendix, including various readings for the 'Wohltemperirtes Clavier.'
(ii.) Passion (St. Luke).

1898. Forty-sixth Year.
(Issued in 1899.)
Indexes, prefaced by a history of the Bach-Gesellschaft.

On the completion of the edition, a 'Neue Bach-Gesellschaft' was founded, with the object of issuing the complete works in pianoforte score.

BACH SOCIETY, THE. This Society, instituted in London, Oct. 27, 1849, had for its objects—(1) the collection of the compositions of J. S. Bach, either printed or in MS., and of all works relating to him, his family, or his music; and (2) the furtherance of a general acquaintance with his music by its public performance. The original committee consisted of Sterndale Bennett (chairman), R. Barnett, George Cooper, F. R. Cox, J. H. B. Dando, W. Dorrell, W. H. Holmes, E. J. Hopkins, C. E. Horsley, John Hullah, H. J. Lincoln, Oliver May, and Henry Smart, with Sir George Smart and Cipriani Potter as auditors, and Dr. Charles Steggall as hon. secretary. Under the auspices of the Society the first performance in England of the 'Matthew' Passion took place at the Hanover Square Rooms on April 6, 1854, Sterndale Bennett conducting. The principal vocalists were Mme. Ferrari, Misses B. Street, Dolby, Dianelli, and Freeman, and Messrs. Allen, Walworth, W. Bolton, and Signor Ferrari. W. Thomas was principal violin, Grattan Cooke first oboe, and E. J. Hopkins was at the organ. The English version of the words was by Miss Helen F. H. Johnston. It was repeated on Nov. 28, and a third performance was given at St. Martin's Hall on March 23, 1858, Bennett again conducting. On June 21, 1859, the Society gave a performance of miscellaneous works by Bach, including the Concerto in C minor for two pianofortes, the Chaconne for violin (played by Joachim), and the Fugue for pianoforte solo in D. The concert of 1860, on July 24, included the first eleven movements from the Mass in B minor. Three years later, on June 13, 1861, the Society gave the first performance in England of the 'Christmas Oratorio' also under Bennett's direction. The Society was dissolved on March 21, 1870, when the library was handed over to the Royal Academy of Music. C. M.

BACHE, FRANCIS EDWARD, born at Birmingham, Sept. 14, 1833; died there August 24, 1858, in his twenty-fifth year. As a child he showed very great fondness and aptitude for music, studied the violin with Alfred Mellon (then conductor of the Birmingham Theatre), and in 1846 was allowed to play in the festival orchestra when Mendelssohn conducted 'Elijah.'

In the autumn of 1849 he left school at Birmingham to study under Sterndale Bennett in London. His first overture was performed at the Adelphi Theatre in Nov. 1850, and about a year later his 'Three Impromptus' (his first piano piece) came out. He remained studying with Bennett, and during the latter part of the time writing for Addison, Hollier, and Lucas, from 1849 to 1853. In June 1852 he played the allegro of a MS. pianoforte concerto with much success. In Oct. 1853 he

went to Leipzig, studied with Hauptmann and Plaidy, and took occasional organ lessons from Schneider at Dresden. He returned to London (after a short visit to Paris) in February 1855. In Jan. 1856 he was driven by severe illness to Algiers, but returned to Paris and Leipzig for the summer and autumn; then went to Rome for the winter, calling on Czerny in Vienna, who was much pleased with him, and wrote to that effect to Kistner. He reached England very ill in June 1857, passed that winter in Torquay, where he gave a concert, in Feb. 1858, and returned to Birmingham, which he never again left, in April.

Bache's published compositions are numerous, and include four mazurkas, op. 13; five characteristic pieces, op. 15; Souvenirs d'Italie, op. 19, for piano solo; polonaise, for piano and orchestra, op. 9; trio for piano and strings, op. 25; romance for piano and violoncello, op. 21; six songs, op. 16. Also a concerto in E for piano and orchestra, and two operas, 'Rübezahl' and 'Which is Which,' all unpublished. With all their merit, however, none of these can be accepted by those who knew him as adequate specimens of his ability, which was unquestionably very great. His youth, his impressionable enthusiastic character, and continual ill-health must all be considered in forming a judgment of one who, had he lived, would in all probability have proved a lasting ornament to the English school. [In 1901, Miss Constance Bache published a very interesting memoir of her two brothers, entitled *Brother Musicians*, from which many corrections and additions in this and the following article are taken.] G.

BACHE, WALTER, born at Birmingham, June 19, 1842, a younger brother of Francis Edward BACHE. He studied the pianoforte and theory under James Stimpson, organist of the Birmingham Town Hall. In August 1858 he went to Leipzig, where he studied under Plaidy, Moscheles, Hauptmann, Reinecke, and Richter. After a short stay in Milan and Florence, he went in the summer of 1862 to Rome, where for three years he received regular lessons from Liszt. In May 1865 Mr. Bache came to London, where he subsequently resided, with the exception of a short stay in Florence in 1871, where he had lessons from Hans von Bülow. Mr. Bache was chiefly known by his unflinching advocacy of Liszt's claims to be recognised as a composer of the first rank. He appeared for the first time at the Crystal Palace in the autumn of 1874, playing Liszt's transcription of Weber's Polonaise in E. For several years he gave orchestral and vocal concerts, at which he brought forward the following important works of his master, many of which had not been heard in London before:—Symphonische Dichtungen: Les Préludes, Orpheus, Tasso, Festklänge, Mazeppa; 'Von Fels zum Meer' march, Rhapsodie Hongroise, No. 4; 'The Legend of St. Elizabeth'; Psalm xiii.; Reapers' Chorus (Prometheus); 'Loreley'; 'Jeanne d'Arc'; Faust Symphony; Mephisto Walzer; Piano Concertos, Nos. 1 and 2, and Fantasie über Ungarische Volksmelodien. During Liszt's visit to England in the spring of 1886 Mr. Bache gave a memorable reception at the Grosvenor Gallery on April 8, when the master played the finale of Schubert's 'Divertissement à la Hongroise,' and his own Hungarian Rhapsody in A minor. Mr. Bache's contribution to the programme was Liszt's 'Bénédiction de Dieu.' He was mainly instrumental in founding the Liszt Scholarship at the Royal Academy of Music, where he was a professor of the piano. He died in London, March 26, 1888, and was buried in Hampstead Cemetery. W. B. S.

BACHELOR OF MUSIC. See DEGREES.

BACHOFEN, JOHANN CASPAR, born at Zürich, 1697, in 1718 singing-master in the Latin school, and cantor of one of the Zürich churches. Succeeded Albertin as director of the 'Chorherrn-Gesellschaft'; died at Zürich, 1755. His hymns were very popular all over Switzerland, and his works give abundant evidence of his diligence and the wide range of his talent. (1) 'Musikalisches Halleluja oder schöne und geistreiche Gesänge,' etc., 1727, containing 600 melodies for two and three voices, with organ and figured bass. Eight editions down to 1767. (2) 'Psalmen Davids . . . sammt Fest- und Kirchengesängen,' etc., 8vo, 1759 (second edition). (3) 'Vermehrte Zusatz von Morgen, Abend . . . Gesängen,' 1738. (4) Twelve monthly numbers containing sacred airs arranged in concert-style for two and three voices; 1755 (4th ed.). (5) Brockes' 'Irdisches Vergnügen in Gott,' set to music; 1740. (6) 'Musikalische Ergetzungen'; 1755. (7) 'Der für die Sünden der Welt,' etc. (Brockes' 'Passion'), 1759. (8) 'Music. Notenbüchlein,' an instruction-book in music and singing. F. G.

BACK. In stringed instruments, the lower or posterior part of the resonant box across the upper part or 'belly' of which the strings are extended. The belly vibrates freely under the strings, and has one or more sound-holes; the back has no sound-holes, and its functions are distinct from those of the belly, to which it is sometimes similar, sometimes different, in shape. Thus, the crwth, guitar, and cittern have a flat back and a flat belly; the violin, in all its sizes, a curved back and a curved belly; the rebec, lute, and mandoline, a curved back and a flat belly; the viol, in all its forms, a flat back and a curved belly. The banjo has no back, the piece of vellum strained over the metal drum, and serving as a belly, being sufficiently resonant to enable the back to be dispensed with. This illustrates the fact that the primary function of the back is to produce a reverberation of the air-waves generated by the vibration of the belly under the strings. In bowed instruments the

back also serves as a support to the rigid sound-post, which in its turn supports the vibrating bridge, the two forming a compound apparatus resting on the thick part of the back as its foundation, and analogous to the reed, fixed at one end and vibrating at the other in the clarinet. In the violin the back has a third function. By reason of its similarity to the belly it vibrates sympathetically with the vibrations produced in the belly by those of the strings and bridge, and thus reinforces the reverberation of the air-waves in the interior. The more powerful tone of the violin, as compared with the viol, is due to this function.

While the belly of stringed instruments is always of pine, the back is usually of maple, pear, or some other harder wood. The deeply-hollowed backs of the lute and mandoline are built up in sections, and it is customary to give contrast in colour by making these alternately of a white wood, such as maple or pear, and a dark wood, such as walnut or cedar. Some old makers of 'fancy' viols did the same, making the back of alternate strips of maple and cedar or walnut, but the practice is detrimental to the tone. The back of the viol and violin is usually made in two parts cut from a single block, the halves being so disposed as to show a similar but opposite figure in the grain of each. Occasionally the back is made in a single piece; but this practice, as is shown elsewhere, is wasteful.

The viol, especially in its larger sizes, was long kept in use by the comparative simplicity and cheapness of its back, which is made of two or more flat sections of maple strengthened and made more resonant by stout pieces of pine glued across it. Such a back produces tone of a penetrating quality, but small volume; hence the gradual abandonment of the viol for the more powerful violin with its curved or 'model' back, so called because assimilated to the model of the belly. Like the belly of the violin, the back is thickest in the middle and thins out towards the edges. In a flat-modelled violin the rise of the back is about equal to that of the belly; in a high-modelled one, something less. The earliest Italian violin-makers often painted or elaborately inlaid the backs of their instruments; later ones were content to utilise the opportunity for decoration afforded in the unbroken expanse of the back by displaying the sparkling grain of their finest wood, finishing its curves, both of outline and of section, with mathematical exactness, and covering it with lustrous varnish. Usually the blocks for the back are sawn as wedges radiating from the centre of the tree. Occasionally they are sawn the reverse way, *i.e.* the tree is squared, as for ordinary use as timber, and the blocks are sawn as planks from the outside; such backs are called 'slab' backs. A 'handsome back' is usually considered a desideratum by purchasers, but some excellent instruments have very plain backs. E. J. P.

BACKER-GRÖNDAHL, AGATHE URSULA, a famous Norwegian pianist and composer, born Dec. 1, 1847, at Holmestrand. After studying with Kjerulf in her own country, she was a pupil of Kullak in Berlin (1866) and of Bülow in Florence (1867). In 1875 she married O. A. Gröndahl of Christiania. She has composed many songs and pianoforte pieces; the best known of the former is an exquisitely graceful setting of a translation of Shelley's 'To the Queen of my heart.' She has frequently visited England with success (Riemann's *Lexikon*). M.

BACKFALL. See AGRÉMENS, p. 53*b*.

BACON, RICHARD MACKENZIE, born at Norwich, May 1, 1776, was a musical critic of great acumen, and wrote at a time when sensible musical criticism was a rare thing. His father was proprietor of the *Norwich Mercury*, which he inherited, and bequeathed to his son. Richard began to write for this journal at seventeen, and its editorship was the standard occupation of his whole life. He is known to musical men as the projector, editor, and chief writer of the *Quarterly Musical Magazine and Review*, which was the first journal devoted to music in England. The first number was issued in Jan. 1818, and it was for some time continued, as its name implies, quarterly, but the late numbers came out irregularly, the last (completing the tenth volume) appearing in 1829. He contributed musical notes to *Colburn's Magazine*, and other periodicals. He issued proposals for an extensive musical dictionary, for which he is said to have collected the materials, but it was never printed. In 1824 he published *The Elements of Vocal Science*, a work of considerable merit, the materials of which had previously appeared in the *Musical Magazine*. He claims the merit of originating the Norwich Triennial Musical Festival, the first celebration of which was held in 1824 [see *History of the Norwich Festival*]. He was the author of a *Life of Pitt*, a *Life of the Earl of Suffolk*, and of numerous political pamphlets. He died at Cosey, near Norwich, Nov. 27, 1844 (*Imp. Dict. of Biog.*; *Private Sources*). E. F. R.

BADIALI, CESARE, a very distinguished basso cantante; made his first appearance at Trieste, 1827. After achieving a brilliant success at every one of the chief theatres of Italy, and especially at Milan, where he sang in 1830, 1831, and 1832, he was engaged for the opera of Madrid, then at Lisbon, and did not return to Italy till 1838. On his reappearance at Milan, he was welcomed with enthusiasm; and continued to sing there, and at Vienna and Turin, until 1842, when he was appointed principal chamber-singer to the Emperor. He sang afterwards at Rome, Venice, Trieste, Turin, and other towns of less importance. In 1845 he was at Leghorn. The Accademia di S. Cecilia of Rome received him as a member of its body. In 1859 he made his first appearance in London, when

he made the quaint remark, 'What a pity I did not think of this city fifty years ago!' He retained at that time, and for some years longer, a voice of remarkable beauty, an excellent method, and great power of executing rapid passages. He was one of the few who have ever sung the music of Assur in Rossini's 'Semiramide' as it was written: in that part he was extremely good, and not less so in that of the Conte Robinson in the 'Matrimonio Segreto.' A singular feat is ascribed to him. It is said that, when supping with friends, he would drink a glass of claret, and, while in the act of swallowing it, sing a scale; and if the first time his execution was not quite perfect, he would repeat the performance with a full glass, a loud voice, and without missing a note or a drop.

He was a good musician, and left a few songs of his own composition. For the last ten years of his life he resided and sang in Paris. He died Nov. 17, 1865, at Imola, where he was born. J. M.

BÄRMANN. The name of a remarkable family of musicians. (1) HEINRICH JOSEPH, one of the finest of clarinet players—'a truly great artist and glorious man,' as Weber calls him—born at Potsdam, Feb. 14, 1784, and educated at the oboe school there, where his ability procured him the patronage of Prince Louis Ferdinand of Prussia, and a place in a regiment of Guards at Berlin. The peace of Tilsit (1807) released him from a French prison, and he then obtained a place in the court band at Munich. He next undertook a tour through Germany, France, Italy, England, and Russia, which established his name and fame far and wide. His special claim on our interest arises from his intimate connection with C. M. von Weber, who arrived in Munich in 1811, and wrote various concert-pieces for Bärmann, which remain acknowledged masterpieces for the clarinet. Meyerbeer also became closely acquainted with him during the congress at Vienna in 1813. Not less interesting and creditable was his intimacy with Mendelssohn, who was evidently on the most intimate footing with him and his family, and wrote for him the two duets for clarinet and basset-horn published as op. 113. He died at Munich June 11, 1847, leaving compositions behind him which are highly esteemed for their technical value. (2) His brother KARL, born at Potsdam, 1782, and died 1842, was a renowned bassoon player, and belonged to the royal band at Berlin. More important was (3) KARL, the son of Heinrich, and the true scholar and successor of his father. He was born at Munich, 1820, and during a lengthened tour in 1838 was introduced by his father to the musical world as a virtuoso of the first order. After this he at once took the place of first clarinet in the Munich court band, with which he had indeed been accustomed to play since the age of fourteen. He died May 24, 1885. His compositions for the clarinet are greatly esteemed, especially his 'Clarinet School' (Andre, Offenbach) in two parts, the second of which contains twenty grand studies; also a supplement thereto, 'Materialien zur weiteren technischen Ausbildung,'—a collection of difficult passages from his own works. (4) His son, KARL jun., born July 9, 1839, a fine pianoforte player, pupil of Liszt, and of F. Lachner for composition, was teacher in the music school at Munich, and has been a successful and highly esteemed teacher in Boston, U.S.A., since 1881.

Weber's friendship for the Bärmanns has been already mentioned. Two of his letters to them will be found in *Letters of Distinguished Musicians* (pp. 351, 381). The same collection contains no less than thirteen letters from Mendelssohn to Heinrich, and one to Carl—letters delightful not only for their fun and cleverness, but for the close intimacy which they show to have existed between the two, and the very great esteem which Mendelssohn—a man who did not easily make friends—evidently felt for the great artist he addresses. Other references to Bärmann will be found in Mendelssohn's *Reisebriefe*. A. M.

BAGATELLE (Fr. 'a trifle'). A short piece of pianoforte music in a light style. The name was probably first used by Beethoven in his 'Seven Bagatelles,' op. 33, who subsequently also wrote three other sets, two of which are published as opp. 119 and 126; the third, consisting of two pieces only, composed 1797, was first printed in Breitkopf and Härtel's complete edition, supplementary volume, p. 350. As bearing upon the title, it is worth while to mention that Beethoven's manuscript of his op. 119 has the German inscription 'Kleinigkeiten,' instead of the French equivalent. The name Bagatellen is given to Dvořák's op. 47, four pieces for harmonium (or pf.), two violins and violoncello. The form of the bagatelle is entirely at the discretion of the composer, the only restriction being that it must be short and not too serious in its character. E. P.

BAGGE, SELMAR, musician and critic, born at Coburg, June 30, 1823, son of the Rector of the Gymnasium there. His musical studies began early, and in 1837 he entered the Conservatorium at Prague under D. Weber. Later still he was a pupil of Sechter at Vienna, where in 1851 he became professor of composition at the Conservatorium, and in 1854 organist at Gumpendorf, near Vienna. In 1855 he resigned his professorship and took to writing in the *Monatsschrift für Theater und Musik*, and in 1860 in the *Deutsche Musikzeitung*, of which periodical he was founder and editor. In 1863 he transferred himself to Leipzig as editor of the *Allgemeine Musikalische Zeitung*, but this he relinquished in 1868 for the directorship of

the music school at Basle. He died there July 17, 1896. Bagge was a strong conservative and an able writer. Beethoven and Schumann were his models in art, and he had no mercy on those who differed from him, especially on the New German school. His music is correct and fluent, but poor in invention and melody. G.

BAGPIPE (Fr. *Cornemuse;* Ital. *Cornamusa;* Germ. *Sackpfeife*). An instrument, in one or other of its forms, of very great antiquity. By the Greeks it was named ἄσκαυλος or *συμφώνεια*; by the Romans *Tibia utricularis*. Mersennus calls it *Surdeline*, and Bonani *Piva* or *Ciaramella*. In Lower Brittany it is termed *Bignou*, from a Breton word *bigno*—'se renfler beaucoup.' It has been named *Musette* (possibly after Colin Muset, an officer of Thibaut de Champagne, king of Navarre). Corruptions of these names, such as *Samponia* or *Samphoneja*, and *Zampogna*, are also common.

It appears on a coin of Nero, who, according to Suetonius, was himself a performer upon it. It is mentioned by Procopius as the instrument of war of the Roman infantry. In the crozier given by William of Wykeham to New College, Oxford, in 1403, there is the figure of an angel playing it. Chaucer's miller performed on it—

A bagpipe well couth he blowe and sowne.

[During the Middle Ages the bagpipe was largely used both in England and on the Continent, and may have served as an accompaniment to the chanting in monasteries and religious houses, for an illustration of an instrument of this kind of the 9th century is given by Gerbert, Abbot of St. Blaise (*De Cantu et Musica Sacra*), and called by him 'Chorus.' It appears to have retained its popularity for some centuries later, and to have been in general use, for on the Minstrels' gallery in Exeter Cathedral another representation of it is seen. The gallery dates from the 14th century. At the close of the 15th century the bagpipe seems to have come into general favour in Scotland.]

Shakespeare often alludes to it. He speaks of 'the drone of a Lincolnshire bagpipe,' of the antipathy some people have to its sound, and of some who laugh like parrots at a bagpiper.

Its essential characteristics have always been, first, that it is a reed instrument, having a combination of fixed notes or 'drones,' with a melody or 'chaunter'; secondly, the presence of a wind-chest or bag. From these peculiarities, the Greek, and from the second of them the Latin names clearly come. The reeds in various pipes vary but little from those described under HIGHLAND BAGPIPE.

The wind has been variously supplied, either from the breath of the player, or from a small pair of bellows placed under one arm, the sac or bag being under the other. In the latter form it contains all the essentials of the organ. It is somewhat remarkable that the use of the lungs themselves as the wind-chest to reed instruments should have been adopted later and less universally.

[The two systems of supplying wind—one, from the breath, and the other, from bellows—afford a convenient means of grouping bagpipes.

(*a*) *Blown from the mouth*.—Historically, the varieties inflated by the breath have the first place, and in addition to the mediæval instruments referred to above, the following may be noted:—

GERMAN SACKPFEIFE.—Praetorius in his 'Syntagma Musicum' (1618) gives minute descriptions of four or five different varieties, ranging from the Grosser Bock with a single drone sounding the sixteen foot G (*i.e.* $G_{,}$) to the little Dudey with three drones sounding $e\flat'$, $b\flat'$, and $e\flat''$, and a chaunter going up to c'''.

CORNEMUSE.—Formerly a popular rustic instrument in France and the Netherlands. The chaunter has eight finger-holes and a vent-hole not fingered. The drones were latterly two, tuned an octave apart, and known as le grand and le petit bourdon.

BIGNOU, OR BRETON BAGPIPE.—A small instrument having one drone, and a chaunter with seven finger-holes.

CALABRIAN BAGPIPE, OR ZAMPOGNA.—In this instrument four drones, two of them with finger-holes, are fitted to one stock or base. The reeds are all double, and the melody is not given from the main instrument, but from a small rude chaunter or oboe with five finger-holes played by a second performer.

OLD IRISH BAGPIPE.—Before the 16th century, the Irish pipe did not differ much from the Scotch pipe of the same time. The Irish had a chaunter with six finger-holes, and two drones.[1]

HIGHLAND BAGPIPE.—In this instrument a valved tube leads from the mouth to a leather air-tight bag, which has five orifices, into which are bound five short tubes or 'stocks.' Into these stocks are fitted the three long tubes or drones, the blow-pipe, and the melody-pipe or 'chaunter.' The chaunter and the three drones are fitted with reeds.] The drone reeds are made by splitting a round length of 'cane' or reed backwards towards a joint or knot from a cross cut near the open end; they thus somewhat resemble the reed in organ pipes, the loose flap of cane replacing the tongue, the uncut part the tube or reed proper. These are then set downwards in a chamber at the base of the drone, so that the current of air issuing from the bag tends to close the fissure in the cane caused by the springing outwards of the cut flap, thus setting it in vibration. The drone reeds are only intended to produce a single note, which can be tuned by a slider on

[1] [The antiquity of the Irish bagpipe is shown by the fact that it is mentioned in the Brehon Laws of the 5th century (Rolls Series). There is a drawing of the Irish pipes in a MS. in the British Museum, dated 1300, describing the Irish who accompanied King Edward to Calais.] W. H. G. F.

the pipe itself, varying the length of the consonating air-column.

The chaunter reed is different in form, being made of two approximated edges of cane tied together, and is thus essentially a double reed, like that of the oboe or bassoon, while the drone reed roughly represents the single beating reed of the organ or clarinet. The drone reed is an exact reproduction of the 'squeaker' which children in the fields fashion out of joints of tall grass, probably the oldest form of the reed in existence.

The drone tubes are in length proportional to their note, the longest being about three feet high. The chaunter is a conical wooden tube, about fourteen inches long, pierced with eight sounding holes, seven in front for the fingers, and one at the top behind for the thumb of the right hand. Two additional holes bored across the tube below the lowest of these merely regulate the pitch, and are never stopped.

The compass is only of nine notes, from G to A inclusive [music notation]. They do not form any diatonic scale whatever, nor indeed are they accurately tuned to one another. The nearest approximation to their position can be obtained by taking the two common chords of G and A superposed, and adding one extra note in the neighbourhood of F, or F♯. In the former common chord, which is tolerably true, we have G, B, D, G, upwards, and in the latter A, C♯, E, A, which is far less accurate. G to A is not however a whole tone, only about ¾ of one. C♯, unlike that of the tempered scale, which is nearly a comma sharp, is here as much flat. The B and D accord with the low G, and not with the low A. It appears to the writer better thus to describe the real sounds produced than to indulge in speculation as to Lydian and Phrygian modes.

In the tuning of the drones there seems to be difference of practice. Glen's *Tutor for the Great Highland Bagpipe* states that the drones are all tuned to A; the two smaller in unison with the lower A of the chaunter, the largest to the octave below; whereas from other works it appears that the sequence G, D, G, as well as D, A, D, are both admissible. But the Northumbrian or Border pipe, a far more accurate instrument according to modern musical notions than the Scotch, provides for a possible change of key by the addition of a fourth supplementary drone; probably the three notes G, D, and A might be tolerated, in alternate pairs, according to the predominant key of G or A in the melody. There is good ground, however, for believing that any attempt to accommodate the bagpipe to modern scale-notation would only result in a total loss of its archaic, semi-barbarous, and stimulating character.

Some confirmation of the view here taken as to the scale of the bagpipe may be derived from an examination of the music written for it. It is known to all musicians that a fairly passable imitation of Scotch and Irish tunes may be obtained by playing exclusively on the 'black keys.' This amounts simply to omission of semitones; and in semitones lies the special character of a scale, whether major or minor. The minor effect may indeed be obtained; and is usually remarkable in all tunes of the Keltic family, but it is done by chord rather than by scale. None of the oldest and most characteristic Scotch melodies contain scales; all proceed more or less by leaps, especially that of a sixth, with abundant use of heterogeneous passing notes. If the airs of the pibrochs be read with a view to map out the resting or sustained notes in the melody, it will be found, in the most characteristic and original tunes, that the scale is A, B, D, E, F♯ and high A. This is equivalent to the black-key scale, beginning on D♭. 'Mac Rimmon's Lament' is a good example. The minor effect named above is gained through the major sixth, with the help of the drone notes; a fact which, though rather startling, is easily demonstrable.

This use of ornamental notes has in course of time developed into a new and prominent character in bagpipe music. Such a development is only natural in an instrument possessing no real diatonic scale, and therefore relying for tolerance of jarring intervals on perpetual suspension, or on constant discord and resolution; with a 'drone bass' in the strictest sense of the term. The ornamental notes thus introduced are termed 'warblers,' very appropriately, after the birds, who, until trained and civilised, sometimes by the splitting of their tongues, entirely disregard the diatonic scale, whether natural or tempered. First-rate pipers succeed in introducing a 'warbler' of eleven notes between the last up-beat and the first down-beat of a bar. Warblers of seven notes are common, and of five usual.

Until recently music for the bagpipe was not written according to the usual system of notation, but was taught by a language of its own, the notes having each names, such as hodroho, hananin, hiechin, hachin, etc. A collection of piobaireachd (pibrochs) in this form was published by Capt. Niel Macleod at Edinburgh in 1828.

[(Since the publication of the first edition of the Dictionary, more particular attention has been given to the exact character of the chaunter scale, some notes on which appear at the end of this article.)

(*b*) *Blown from bellows.*—Pipes blown with bellows appear to have come into use in Europe generally about the 16th century. In these instruments the reservoir or wind-bag is under the control of one arm, and is supplied by a

feeder worked by the other. Of the different varieties, the following have distinctiveness, and are therefore briefly described :—

Musette.—In France the bagpipe blown from bellows eventually took the form of the musette, which has double reeds throughout, and a chaunter with a narrow cylindrical bore. To the original chaunter, known as le grand chalumeau, the elder Hotterre added a smaller one (le petit chalumeau) for the extension of the compass upwards, one well-known specimen having a chalumeau compass from *f'* to *d'''*, the grand and the petit chalumeau having respectively seven and six keys, and the former eight finger-holes. The drones, four or five in number, are all fitted into one cylinder, being brought into small space by the doubling of the tubes within this cylinder, which is provided with sliding stops for tuning the drones. The instrument, as fully developed and perfected, became popular and fashionable in the reign of Louis XIV., in whose time it was one of the instruments included in the band of the 'Grande Ecurie,' and was played at court concerts. It was introduced into the orchestra by Lully ; but towards the latter part of the 18th century fell into disuse. The musette here described must not be confounded with a totally different instrument of the same name, played like an oboe from the mouth.

Lowland Bagpipe.—The chief difference between this and the Highland form is the blowing from bellows instead of from the mouth.

Northumbrian Bagpipe.—The chaunter, which has seven finger-holes and one thumb-hole, is stopped at the lower end, as are also the drones, so that when all the holes are closed, the pipe is silent. The drones were formerly three in number ; but the modern instruments have four, and chaunters fitted with seven keys. The tone is small and pleasant.

Irish Bagpipe.—The most modern form of the Irish bagpipe is known as the Union pipes, and is an elaborate and complicated instrument. The chaunter, with seven finger-holes, a thumb-hole, and eight keys, has a chromatic scale of two octaves from *d'* to *d'''*. In addition to the drones there are three pipes known as regulators, and fitted with keys worked by the elbow of the player. The drones are tuned to A in different octaves, and the regulators are capable of giving a rude harmony.]

Considering the small compass of the bagpipe, the music written for it appears singularly abundant. Patrick Macdonald's *Airs for the Scotch Bagpipes* was published in 1784. *Tutors* for the instrument have been published by Donald MacDonald and Angus Mackay. Glen's collection of music for the great Highland bagpipe contains instructions for the management of the reeds, etc., with 213 tunes. Ulleam Ross, Queen Victoria's Piper, published a collection of pipe music in 1869 consisting of 243 marches, piobaireachd (pibrochs), strathspeys, and reels, selected from a thousand airs, amassed during thirty years from old pipers and other local sources. The chief collection of Northumbrian music is known as Peacock's—a book which is now so scarce as to be almost unprocurable.

Many composers have imitated the tone of the bagpipe by the orchestra ; the most familiar cases occur in the 'Dame Blanche' of Boieldieu and the 'Dinorah' of Meyerbeer. [w. h. s.; additions, in square brackets, by d. j. b.]

Scale of the Highland Bagpipe Chaunter.—An interest has been added to the examination of this scale since the publication by the late Mr. A. J. Ellis of *The Musical Scales of various Nations*. The intonation of the chaunter, which had been regarded by ears accustomed only to the diatonic scale or to its modern representative in equal temperament, as a result either simply accidental or merely barbarous, was found to be so closely similar to certain Arabic and Persian scales, as to suggest derivation from an Eastern source, possibly through the Crusades. The intervals between *b'* and *d''*, and between *e''* and *g''* are equally divided, so that the *c'* and *f''* are each about a quarter of a tone sharp, and this peculiar tuning has been traditionally maintained by the pipers. The particular instrument the intervals of which were recorded by Mr. Ellis, was played by the late Charles Keene ; but the writer has supplemented this observation by others taken from different chaunters in the hands of good players. The result of these different trials is here noted, the octave being divided into twelve equal-tempered semi-tones, of one hundred cents each, and the figures showing the interval in cents between each pair of notes.

I. Mr. Ellis's record of Mr. Chas. Keene's chaunter by MacDonald.

II. Mean of three records of other modern chaunters taken by the writer.

III. Scale in equal temperament.

	Octave divided into 1200 cents.

D. J. B.

BAI, Tommaso, was born at Crevalcuore, near Bologna, in the latter part of the 17th century, and was for many years one of the tenor singers in the chapel of the Vatican. In 1713 he was made maestro of that basilica, according to an extract from the chapel books cited by Baini, because he was the oldest and most accomplished member of the choir.[1] He died Dec. 22, 1714. His fame rests on a single

[1] 'Come il più antico e virtuoso della Cappella.'

achievement. His 'Miserere,' written at the request of his choir, is the only one (if we except that by Baini) out of a long series by composers known and unknown, including Naldini, Felice Anerio, Tartini, and Alessandro Scarlatti, which has been thought worthy to take permanent rank with those of Allegri and Palestrina. Other works by Bai exist, but they are in manuscript. They consist of two masses, thirteen motetti for four, five, and eight voices, and a 'Miserere' for eight voices. [See Eitner's *Quellen-Lexikon.*] E. H. P.

BAILDON, JOSEPH [born about 1727], a gentleman of the Chapel Royal, and lay-vicar of Westminster Abbey in the middle of the 18th century. In 1763 he obtained one of the first prizes given by the Catch Club for a catch, and in 1766 was awarded a prize for his fine glee, 'When gay Bacchus fills my breast.' In 1762 he was appointed organist of the churches of St. Luke, Old Street, and All Saints, Fulham. Ten catches and four glees by him are contained in Warren's collections, and others are in print. Baildon published a collection of songs in two books entitled *The Laurel*, and 'Four Favourite Songs sung by Mr. Beard at Ranelagh Gardens.' He died May 7, 1774. W. H. H.

BAILLOT, PIERRE MARIE FRANÇOIS DE SALES, takes a prominent place among the great French violin-players. He was born Oct. 1, 1771, at Passy, near Paris, where his father kept a school. He showed very early remarkable musical talent, and got his first instruction on the violin from an Italian named Polidori. In 1780 Sainte-Marie, a French violinist, became his teacher, and by his severe taste and methodical instruction gave him the first training in those artistic qualities by which Baillot's playing was afterwards so much distinguished. When ten years of age, he heard Viotti play one of his concertos. His performance filled the boy with intense admiration, and, although for twenty years he had no second opportunity of hearing him, he often related later in life, how from that day Viotti remained for him the model of a violin-player, and his style the ideal to be realised in his own studies. After the loss of his father in 1783, a Mons. de Boucheporn, a high Government official, sent him, with his own children, to Rome, where he was placed under the tuition of the violin-player Pollani, a pupil of Nardini. Although his progress was rapid and soon enabled him to play successfully in public, we find him during the next five years living with his benefactor alternately at Pau, Bayonne, and other places in the south of France, acting as his private secretary, and devoting but little time to his violin. In 1791 he came to Paris, determined to rely for the future on his musical talent. Viotti procured him a place in the band of the Théâtre Feydeau, but Baillot very soon resigned it, in order to accept an appointment in the Ministère des Finances, which he kept for some years, devoting merely his leisure hours to music and violin-playing. After having been obliged to join the army for twenty months, he returned, in 1795, to Paris, and, as Fétis relates, became accidentally acquainted with the violin-compositions of Corelli, Tartini, Geminiani, Locatelli, Bach (?), and Handel. The study of the works of these great masters filled him with fresh enthusiasm, and he once more determined to take up music as his profession. He studied theory under Catel, Reicha, and Cherubini, and soon made his appearance in public with a concerto of Viotti, and with such success, that his reputation was at once established, and a professorship of violin-playing was given him at the newly-opened Conservatoire. In 1802 he entered Napoleon's private band, and afterwards travelled for three years in Russia (1805-1808) together with the violoncello-player Lamare, earning both fame and money. In 1814 he started concerts for chamber music in Paris, which met with great success, and acquired him the reputation of an unrivalled quartet-player. In 1815 and 1816 he travelled in Holland, Belgium, and England, where he performed at the Philharmonic concert of Feb. 26, 1816, and afterwards became an ordinary member of the Society. From 1821 to 1831 he was leader of the band at the Grand Opéra; from 1825 he filled the same place in the Royal Band; in 1833 he made a final tour through Switzerland and part of Italy. He died Sept. 15, 1842, working to the end with unremitting freshness. He was the last representative of the great classical Paris school of violin-playing. After him the influence of Paganini's style became paramount in France, and Baillot's true disciples and followers in spirit were, and are, only to be found among the violinists of the modern German school. His playing was distinguished by a noble powerful tone, great neatness of execution, and a pure, elevated, truly musical style. An excellent solo-player, he was unrivalled at Paris as interpreter of the best classical chamber music. Mendelssohn and Hiller both speak in the highest terms of praise of Baillot as a quartet-player. An interesting account of some of his personal traits will be found in a letter of the former, published in *Goethe and Mendelssohn* (1872). Although his compositions are almost entirely forgotten, his 'Art du Violon' (1834) still maintains its place as a standard work. He also took a prominent part with Rode and Kreutzer in compiling and editing the 'Méthode de Violon,' and a similar work for the violoncello. His obituary notices of Grétry (Paris, 1814) and Viotti (1825), and other occasional writings, show remarkable critical power and great elegance of style.

His published musical compositions are:—

15 trios for 2 violins and bass; 6 duos for 2 violins; 12 études for violin; 9 concertos; symphonie concertante for 2 violins, with orchestra; 30 airs variés; 3 string quartets; 1 sonata for piano and violin; 24 préludes in all keys, and a number of smaller pieces for the violin. P. D.

BAINI, GIUSEPPE, commonly known as the Abbé Baini, was born at Rome, Oct. 21, 1775. He was the nephew of Lorenzo Baini, a Venetian composer who had become maestro di cappella at the Church of the Apostoli. Giuseppe received his first musical instruction at the competent hands of his uncle, and completed his studies under the well-known Jannaconi, with whom he came to be on terms of very close friendship. Shrewd, enthusiastic, studious and devout, by the time of his entry into holy orders he was at once an erudite theologian, an expert musician, and an accomplished literary man. His powers of assimilation and criticism were equal to his capacity for learning; and his love for antiquity and the antique forms of art was as absorbing as his taste was keen and his judgment true. Further, nature had endowed him with a beautiful bass voice which he had carefully cultivated. With such qualifications his reception into the Pontifical choir was easy, and once a member of it (1802), his succession to the Mastership was a certainty. As composer and maestro di cappella he was alike an exponent and a representative of the old Roman school of the 16th century. He was indeed a cinque-cento priest of the higher order born out of due time. For him the sun of music had begun to set at the close of the one period which he loved and understood. Very few of his musical compositions have been published (see *Quellen-Lexikon*), but one of them at least is famous. His ten-part 'Miserere,' composed for Holy Week (in 1821) by order of Pope Pius VII., is the only one out of the hundreds that have been produced in Rome which has taken its place permanently in the services of the Pontifical Chapel side by side with the two celebrated compositions of Allegri and Bai. His first contribution to the literature of music was a pamphlet evoked by the ignorance of the directors of the Accademia Napoleone in Lucca, who in the year 1806 bestowed their annual prize upon a motet for four choirs written by Marco Santucci, as though it were a production of a new order. Baini exposed their mistake, and cited a long list of similar pieces by Antonelli, Agostini, Benevoli, Abbatini, Beretta, and a host of other composers, dating from the 16th century downwards, and including one by his own master and friend Jannaconi. His second literary work was an essay on the identity of Musical and Poetic rhythm (1820). It was written in obedience to a request of the Comte de St. Leu, brother to the Emperor Napoleon; the subject was one well calculated to display the solid learning and delicate analysis of Baini, but it may be doubted whether it is not one of those efforts in which abstruseness and mysticism are unaccompanied by any practical result. But the masterpiece of Baini, to which and for which he was alike led by temperament and fitted by power, is his great monograph on Palestrina (*Memorie Storico-critiche*, etc., Rome, 1828, 2 vols. 4to). It is something more and something less than a biography. For the details of the life of Palestrina are somewhat scanty, although the account of his works is absolutely exhaustive. Still, the portrait of the man, the lovable husband, father, and friend, the conscientious worker, the devoted man of genius, the pure liver, and faithful Catholic, is full and finished. Moreover any lack of view into his family interior is more than compensated by the glimpses we get of cinque-cento life and society in Rome. To snatch these from the materials to which he had access, and to reproduce without intruding them, was a task absolutely congenial to the nature and genius of Baini, and he performed it to perfection. But the book is as valuable to the musical historian as it is to the general reader. A hundred subsidiary notices of the composers of the Italian school from the days of Goudimel to the middle of the 17th century are grouped around that of the central figure; and it is hardly too much to say that in it we have a sketch of the rise and progress of Italian music from the deposition of the Flemings and the establishment of a national school to the close of the ecclesiastical era and the rise of opera.

Baini thought to publish a complete edition of the works of the great master, whom, with a constantly recurring enthusiasm, he calls 'Il Principe della Musica'; but he died before he had transcribed and published more than two volumes out of the vast mass of his compositions. He was as devoted to his profession as he was to his art; and his death, which took place on May 21, 1844, in the sixty-ninth year of his age, was attributed to over fatigue arising from persistence in his duties as a confessing priest. E. H. P.

BAKER, GEORGE, Mus.Bac., was born at Exeter probably in 1773. The assumption of an earlier date, 1750, rests on Baker's statement in later life, but as he gave his age as twenty-four when he matriculated at Oxford, the year usually given is most probably correct. Taught by his aunt, he was able at seven years of age to play upon the harpsichord, and about the same time was placed under the tuition of Hugh Bond and William Jackson, then organist of Exeter Cathedral. He also received lessons on the violin from Ward. In 1790 he quitted Exeter for London, where he was received into the family of the Earl of Uxbridge, who placed him under William Cramer and Dussek for instruction on the violin and pianoforte. [He

performed a piece of his own, called 'The Storm,' at the Hanover Square Rooms, a piece which seems to have got him into trouble soon after his appointment as organist of St. Mary's Church, Stafford, in 1795, for in July of that year there is an entry in the Corporation Books 'that Mr. George Baker be in future prohibited from playing the piece of music called "The Storm."' Subsequent entries show that he neglected his duties, and on May 19, 1800, his resignation is entered. He seems to have taken the degree of Mus.Bac. at Oxford in 1797 (Williams, *Degrees in Music*, p. 97), but there is no proof that he was ever Mus.D. He was appointed organist of All Saints, Derby, in 1810, and at Rugeley 1824. He retained this post until his death, Feb. 19, 1847, but his duties were performed by a deputy from 1839 (*Dict. of Nat. Biog.*).] His compositions comprise anthems, glees, organ voluntaries, pianoforte sonatas, and other pieces, the music to an unfortunate musical entertainment called 'The Caffres,' produced for a benefit at Covent Garden Theatre, June 2, 1802, and at once condemned, and numerous songs, many of them composed for Incledon, his former fellow-pupil under Jackson. W. H. H.

BALAKIREV, Mily Alexeivich, to whose initiative the New School of Russian music owes its remarkable activity, was born at Nijny-Novgorod, Dec. 31, 1836 (O.S.). His mother taught him the rudiments of music, but the most valuable part of his musical education was derived from Oulibishev, author of the *Life of Mozart*, in whose country house Balakirev spent part of his youth, profiting by a fine musical library to become acquainted with all the classical masterpieces. Practice with Oulibishev's private band taught him something of instrumentation; and, what was even more important to his development, he became completely imbued with the music of the people. In this remote province of Russia, surrounded by conservative influences, his sensitive intelligence seemed to divine the changes which Wagner, Berlioz, and Liszt were effecting in Western Europe. As a mere boy he faced the problem of infusing fresh vitality and interest into forms which seemed too inelastic for modern requirements. The idea of solving the question by Wagnerian principles never occurred to Balakirev, for in 1860-70, Wagner was hardly known in Russia. Besides, there existed for the Russians a source of fresh inspiration: the fountain of national melody which Glinka had but just unsealed. Full of zeal for the national idea, Balakirev, at eighteen, arrived in St. Petersburg to preach the gospel of nationality to the worshippers of Bellini and Meyerbeer. His enthusiasm and intelligence made a deep impression on Glinka, then in failing health, and bitterly disappointed by the public indifference to his opera 'Rousslan and Lioudmilla.' The older composer formally recognised Balakirev as destined to continue his own work. Though young, he was well fitted for the task, possessing not merely extraordinary musical erudition and untiring zeal, but that persuasive and contagious enthusiasm which goes with true conviction. From 1861, Balakirev became the centre of a new musical movement. His first disciple was César Cui, then a sub-lieutenant of engineers. Later on, Moussorgsky submitted his wayward genius to Balakirev's discipline, and finally Rimsky-Korsakov and Borodin joined this school, which was consolidated by the idea of nationality in music. Tchaikovsky received his education from other sources, but his correspondence, recently published, clearly shows that he, too, came under the influence of Balakirev's ideas. (See Tchaikovsky.) He was both teacher and comrade in this circle of earnest workers, several of whom were older than himself. They began by studying the classics, particularly Bach and Handel, before passing on to more modern music; and among contemporary masters, Schumann, Berlioz, and Liszt influenced them far more than Brahms or Wagner. Balakirev analysed each work with his pupils, pointing out every peculiarity of harmony or rhythm, noting every new instrumental combination, or deviation from accepted form. He aimed at a thorough æsthetic grounding, without undue deference to tradition; and we must bear in mind that at this period, following immediately on the emancipation of the serfs, individual liberty was the keynote of Russian intellectual life. The discarding of academical principles ended in a wider differentiation of aims and methods than Balakirev had reckoned upon. As Borodin graphically puts it: 'so long as we were eggs laid by one hen (Balakirev) we were more or less alike, but when the young birds appeared, each was clad in different feathers and flew off in a different direction.' Thus, to the principles of reformed opera, laid down by Dargomijsky in 'The Stone Guest,' only Moussorgsky can be said to have approached; while the national idea, so innately strong in Borodin and Balakirev himself, became attenuated in the music of Cui. In 1862, Balakirev, with the assistance of the famous choral conductor Lomakin, and the critic V. Stassov, established the Free School of Music in St. Petersburg. This institution rendered great educational service to Russia by its excellent symphony concerts, conducted by Balakirev on less conservative lines than those of the Imperial Musical Society. At these concerts, works by Borodin, Cui, Moussorgsky and, later on by Glazounov and Liadov were given for the first time. The school exists no longer, although concerts are still given in its name at long intervals. Balakirev also conducted performances at Prague of Glinka's operas in 1866 and 1867. In 1869, he reached the climax of his musical career, being appointed

director of the Imperial Chapel and conductor of the Imperial Russian Musical Society. Balakirev's programmes are the most eclectic imaginable. It is one of his chief merits that, while devoted to the interests of his compatriots, he used these high positions for the propagation of the best music, without distinction of school or nationality. For many years past he has led a secluded life. As with Gogol, Dostoievsky, and Tolstoi, mysticism has claimed Balakirev in middle-age. Occasionally he is heard at a charity concert, for he is reckoned a fine pianist, even in the land which produced the two Rubinsteins.

Balakirev's output, though remarkable, is not great in quantity. As a composer he stands in close relationship to Glinka. He has the same lyrical sentiment, the same poetical sensibility; but more passion and a greater command of technical resources. A series of songs published between 1858 and 1860, displays the exquisite and finished quality of his workmanship. He touches every chord of passion and tenderness. A book of Ten Songs, published more recently by Jurgenson (Moscow), has not the ardour and fascination of the earlier collection, although it contains some graceful and vocal examples. Balakirev has added some new elements to Russian song and given a variety and independence to his accompaniments not to be found in any of his predecessors; his two collections of National Songs are the best that have been made. Balakirev has appended no definite programme to his first orchestral works, although M. Stassov unhesitatingly places them in the category of 'programme music.' The 'Overture on Russian Themes' (1858) is built on three folk-songs, one of which ('In the fields stood a birch-tree') reappeared twenty years later as the chief subject of the Finale of Tchaikovsky's Fourth Symphony. In 1867 he wrote a companion work, the 'Overture on Czechish Themes.' A third 'Overture on Spanish Themes,' rewritten and published in 1869, actually dates from 1857. Balakirev has given me the following account of this work: 'The first theme is my own, written in the Oriental style, in accordance with the programme which depicts the struggle between the Moors and the Spaniards and the victory of the latter with the help of the *auto da fé* of the Inquisition. The second theme is the original one of the Spanish March, given to me by Glinka when I was twenty. Just before his departure for Berlin, where he died, Glinka proposed that I should write an Overture on this theme. But he did not suggest the programme, which is entirely of my own invention.' In all Russian music there is nothing more brilliant and piquant than the orchestration of the chivalric march which closes this Overture. These three works show how greatly Balakirev was attracted by the ethnographical side of music. Not in Russia only, but in other lands, it is the intimate melody of race which appealed to him most directly. The fascination of the East is reflected in Balakirev's Fantasia for pianoforte 'Islamey,' and still more in the Symphonic Poem 'Tamara.' This work, which seems too fantastic to please Western audiences, is programme music of a highly-coloured description, scored in the style of Berlioz. The Overture and Entr'actes to 'King Lear,' a picturesque commentary on the Shakespearian tragedy, dates from 1861. The Symphonic Poem 'Russ' (old Slavonic form of Russia) was composed in 1862 for the 1000th anniversary of the Russian nation. It is an orchestral epic, built upon three national melodies, each of which characterises a particular period in Russian history, while the finale, it is said, breathes a prayer for the future welfare of the country. Balakirev has written but one Symphony in the strict sense of the word. This work was first heard in England at the Promenade Concerts of 1901.

The following is a complete list of Balakirev's works:—

FOR ORCHESTRA.

1. Overture on the theme of a Spanish March.
2. 'Russia,' Symphonic Poem.
3. Overture on three Russian Themes.
4. 'Tamara,' Symphonic Poem.
5. Symphony.
6. Overture, 'King Lear.'
7. Overture to Lvov's opera 'Andine,' orchestrated by Balakirev.

VOCAL.

1. 20 Songs.
2. 10 Songs.
3. A collection of Folk-songs.
4. 30 National Songs.

PIANOFORTE.

3 Scherzos, 6 mazurkas, 3 nocturns, 4 waltzes, 'Islamey' Oriental fantasia, Spanish serenade on themes given by Glinka, miscellaneous pieces, and transcription of Berlioz's overtures, 'La Fuite en Egypte,' the cavatina from Beethoven's quartet op. 130, Glinka's 'Lark,' Glinka's 'Komarinskaya,' and a fantasia on 'Life for the Tsar.'

R. N.

BALBI, Lodovico, born at Venice about the middle of the 16th century; a pupil of Costanzo Porta's, a monk of the Minorite order, singer in the choir of St. Mark's, about 1570, subsequently in the cathedral of Verona; about 1578, he became maestro di cappella at the Frari in Venice, and was appointed in 1585 to the church of St. Antonio in Padua, retaining the post till 1591. He retired to the convent of his order in Venice, and died before Dec. 15, 1604. His published works are as follows:—1570, First book of Madrigals (25); 1578, Ecclesiasticarum cantionum, 4 voc.; 1580, Missæ 4, a 5 voc.; 1586, Capricci, a 6 voc. (21); 1587, Graduale and Antiphonarium; 1589, Musicale Essercitio, 5 voc. (27 madrigals in which Balbi used the upper voice of various well-known examples by other composers; 1595, Missæ 5, a 5; 1605, Masses and motets with a Te Deum, a 8 voc.; 1606, Ecclesiastici concentus, bk. i. compositions with and without accompaniment; 1609, Completorium, a 12 voc. Besides these Eitner enumerates (*Quellen-Lexikon*) motets and masses in the libraries of Breslau, Leipzig, and Munich. One seven-part and four eight-part motets by him are printed in Bodenschatz's *Florilegium Portense*, pt. 2. M.

BALDASSARRI, Benedetto, an eminent Italian singer, who sang the tenor part of Timante

m

in Handel's opera 'Floridante,' at its first and succeeding performances in 1721. He appeared also in Bononcini's 'Crispo,' and other pieces, in the next year. He had already sung in 'Numitor' by Porta, and other operas, with Durastanti and her companions of the old troupe. J. M.

BALDENECKER, Nicolaus, member of an extensive family of musicians, born at Mayence 1782, first violin at the Frankfort theatre from 1803-51, and joint-founder with Schelble of the amateur concerts which resulted in the famous 'Cäcilien-Verein' of that city.

BALDI, a counter-tenor singer, who sang in London in operas of Handel, Bononcini, and others, from 1725-28. In the first year he sang in 'Elisa' and Leonardo Vinci's 'Elpidia,' replacing Pacini in the latter, who previously sang in it. In 1726 he appeared in Handel's 'Alessandro,' 'Ottone,' and 'Scipione'; in 1727 in 'Admeto' and 'Riccardo,' as well as in Bononcini's 'Astianatte'; and in 1728 he sang in 'Tolomeo,' 'Siroe,' and 'Radamisto,'—all by Handel. He seems to have been an excellent and useful artist, only eclipsed by the great Senesino, who monopolised the leading parts. J. M.

BALELLI, an Italian basso engaged at the opera in London towards the end of the 18th century. In 1787 he sang in 'Giulio Cesare in Egitto,' a pasticcio, the music selected by Arnold from various works of Handel's; and in the 'Re Teodoro,' a comic opera of Paisiello. In 1788 he appeared in Sarti's 'Giulio Sabino'; and the next year in Cherubini's 'Ifigenia,' and in operas both comic and serious by Tarchi. J. M.

BALFE, Michael William, was born at Dublin, May 15, 1808. When he was two years old his family removed to Wexford, and he soon began to take lessons on the violin from the bandmaster of the Kerry militia, after which, in 1814, he was placed under a Mr. Meadows. William Balfe, the father, was a dancing-master, and Michael's first appearance as a musician was in the capacity of violinist for the dancing-class, during the season 1814-15. At the age of seven he was able to score a polacca composed by himself for a band. His father now sought better instruction for him, and placed him under O'Rourke (afterwards known in London as Rooke), who brought him out as a violinist in June 1817. In that year he composed a ballad, 'Young Fanny,' afterwards sung by Madame Vestris in the comedy of 'Paul Pry,' under the title of 'The Lover's Mistake,' which even now is remarkable for the freshness of its melody, the gift in which he afterwards proved so eminent. On Jan. 6, 1823, his father died, and left him to his own resources; he accordingly came to London as an articled pupil of Charles Edward Horn, the singer; he gained considerable credit by his performance of violin solos at the so-called oratorios. He was then engaged in the orchestra at Drury Lane, and when T. Cooke, the director, had to appear on the stage (which was sometimes the case in the important musical pieces), he led the band. At this period he took lessons in composition from C. F. Horn, organist of St. George's Chapel, Windsor, and father of his former teacher. About this time he tried his fortune on the operatic stage, and appeared at Norwich in a garbled version of 'Der Freischütz'; he failed, but in 1825 he met with a patron, Count Mazzara, whom he accompanied to Italy, being introduced to Cherubini on the way. At Rome he was located in the house of his patron, studying in a desultory manner with Paer; he was afterwards sent to Milan, where he studied counterpoint under Federici, and singing under Filippo Galli. Here he made his first public essay as a dramatic composer by writing the music to a ballet entitled 'La Pérouse,' the melody and instrumentation in which created a favourable sensation. He was now in his 20th year. Visiting Paris, he was introduced to Rossini, then director of the Italian Opera; the maestro was not slow to perceive his talent, and offered him an engagement for three years as principal baritone, on condition that he should take a course of preparatory lessons from Bordogni. He made his first appearance at the close of 1827, as Figaro in the 'Barbiere,' with decided success. At the close of his Paris engagement which was curtailed by his ill-health, he returned to Italy, and was welcomed by a new patron, the Count Sampieri of Bologna. In the carnival season of 1829-30 he was principal baritone at Palermo, and here produced his first complete opera, 'I Rivali di se stessi,' written in the short space of twenty days. This was followed in rapid succession by 'Un Avvertimento ai gelosi,' produced at Pavia, and 'Enrico Quarto' at Milan, where he was engaged to sing with Malibran at the Scala. At Bergamo he met Mlle. Lina Rosa, a Hungarian singer, whom he married. He continued to sing on the stage in Italy until the spring of 1833, when he came to London, and appeared at several public and private concerts.

Balfe's career as a writer of English operas commenced from 1835, when he produced the 'Siege of Rochelle' at Drury Lane (Oct. 29), with distinguished success. It was played for more than three months without intermission, and completely established the composer's fame. 'The Maid of Artois' came out on May 27, 1836, its success heightened by the exquisite singing of Malibran. 'The Light of other days' in this opera, says one of his biographers, 'is perhaps the most popular song in England that our days have known.' In the autumn of this year Balfe appeared as a singer at Drury Lane. He sang the part of Papageno in the first performance of 'Die Zauberflöte' in English, March 10, 1838. In 1837 he brought out his 'Catherine Grey' and 'Joan of Arc'—himself singing the part of Theodore; and in the following year (July 19, 1838), 'Falstaff' was produced at Her

Majesty's Theatre, the first Italian opera written for that establishment by an English composer since Arne's 'Olimpiade.' Two months previously 'Diadeste' was given at Drury Lane. In 1839, after a successful tour in Ireland, he was much on the boards, playing Farinelli in Barnett's opera of that name at Drury Lane, and in an English version of Ricci's 'Scaramuccia' at the Lyceum. On March 9, 1841, he entered the field as manager of the Lyceum, and produced his 'Keolanthe' for the opening night, with Madame Balfe in the principal character; but with all its merited success the opera did not save the enterprise from an untoward close.

Balfe now migrated to Paris, where his genius was recognised, and MM. Scribe and St. George furnished him with the dramatic poems which inspired him with the charming music of 'Le Puits d'Amour' (1843, performed in London under the title of 'Geraldine'), and 'Les Quatre fils d'Aymon' (1844, known here as 'The Castle of Aymon'), both given at the Opéra Comique. While thus maintaining his position before the most fastidious audience of Europe, Balfe returned *en passant* to England, and produced the most successful of all his works, 'The Bohemian Girl' (Nov. 27, 1843). This opera was translated into German, Italian, and French. In 1844 he brought out 'The Daughter of St. Mark,' and in the following year 'The Enchantress'—both at Drury Lane. In 1845 he wrote 'L'Etoile de Seville' for the Académie Royale, in the course of the rehearsals of which he was called to London to arrange his engagement as conductor of Her Majesty's Theatre, which office he filled from the secession of Costa to the closing of the establishment in 1852. 'The Bondman' came out at Drury Lane in Dec. 1846, Balfe having arrived from Vienna specially for the rehearsals. In 1847 he brought out 'The Devil's in it' at the Surrey Theatre, and 'The Maid of Honour'—the subject of which is the same as Flotow's 'Martha'—at Covent Garden. In 1849 he went to Berlin to reproduce some of his operas, when the King offered him the decoration of the Prussian Eagle, which as a British subject he was unable to accept. Between this year and 1852, when the 'Sicilian Bride' was given at Drury Lane, Balfe had undertaken to conduct a series of National Concerts at Her Majesty's Theatre: the plan of these performances was devised with a view to the furtherance of the highest purposes of art, and several important works were produced in the course of the enterprise, which did not, however, meet with success.

At the close of 1852 Balfe visited St. Petersburg with letters of introduction from the Prince of Prussia, where he was received with all kinds of distinction. Besides popular demonstrations and imperial favour, he realised more money in less time than at any other period. The expedition to Trieste, where his next work, 'Pittore e Duca,' was given during the Carnival of 1856, with such success as the failure of his prima donna could permit, brings us to his return to England. It was not till 1882 that 'Pittore e Duca' was given in London, where it was produced at Her Majesty's Theatre by the Carl Rosa Company, as 'Moro.'

In the year after his return Balfe brought out his daughter Victoire (afterwards married to Sir John Crampton, and subsequently to the Duke de Frias), as a singer at the Italian opera at the Lyceum; and his next work, 'The Rose of Castile,' was produced by the English company also at this theatre on Oct. 29, 1857. This was succeeded, in 1858, by 'La Zingara,' the Italian version of 'The Bohemian Girl,' at Her Majesty's Theatre, and by 'Satanella' at the Lyceum. 'Satanella' had a long run, and one of the songs, 'The Power of Love,' became very popular. His next operas were 'Bianca,' 1860; 'The Puritan's Daughter,' 1861; 'The Armourer of Nantes,' Feb., and 'Blanche de Nevers,' Nov. 1863.

In Dec. 1869 the French version of his 'Bohemian Girl' was produced at the Théâtre Lyrique of Paris under the title of 'La Bohémienne,' for which the composer wrote several additional pieces, besides recasting and extending the work into five acts. The success attending this revival procured him the twofold honour of being made Chevalier de la Légion d'Honneur by the Emperor of the French, and Commander of the Order of Carlos III. by the Regent of Spain.

In 1864 Balfe retired into the country, became the proprietor of a small landed property in Hertfordshire, called Rowney Abbey, and turned gentleman farmer. Here he amused himself with agriculture and music, making occasional visits to Paris. He had several severe attacks of bronchitis, and suffered much from the loss of a favourite daughter. In Sept. 1870 he caught a violent cold, which caused a return of his old complaint, spasmodic asthma, and on Oct. 20 he expired. He was buried at Kensal Green, and a tablet with a medallion portrait was unveiled in Westminster Abbey, Oct. 20, 1882. Mme. Balfe died on June 8, 1888.

'Il Talismano,' the Italian version of Balfe's last opera, 'The Knight of the Leopard,' was produced at Drury Lane, on June 11, 1874; and on September 25 in the same year a statue to his memory, by a Belgian artist, M. Mallempré, was placed in the vestibule of Drury Lane, the scene of so many of his triumphs.

Balfe's miscellaneous pieces are numerous, including the operetta of 'The Sleeping Queen,' performed at the Gallery of Illustration; three cantatas—'Mazeppa,' performed in London, and two others composed at Paris and Bologna. Many of his ballads are not likely to be soon forgotten. His characteristics as a composer are summed up by a brother artist (Professor Macfarren) in the following words:—'Balfe possesses in a high degree the qualifications that

make a natural musician, of quickness of ear, readiness of memory, executive facility, almost unlimited and ceaseless fluency of invention, with a felicitous power of producing striking melodies. His great experience added to these has given him the complete command of orchestral resources, and a remarkable rapidity of production. Against these great advantages is balanced the want of conscientiousness, which makes him contented with the first idea that presents itself, regardless of dramatic truth, and considerate of momentary effect rather than artistic excellence; and this it is that, with all his well-merited success with the million, will for ever prevent his works from ranking among the classics of the art. On the other hand it must be owned that the volatility and spontaneous character of his music would evaporate through elaboration, either ideal or technical; and that the element which makes it evanescent is that which also makes it popular.' (*Imp. Dict. of Univ. Biog.;* Kenney's *Memoir*, 1875.) E. F. R., with many corrections from the *Dictionary of National Biography*.

BALINO. See FABRI.

BALLABILE (Ital., from *ballare*, 'to dance'). A piece of music adapted for dancing. The term can be applied to any piece of dance music. Meyerbeer frequently uses it in his operas, *e.g.* in 'Robert le Diable,' where the three dances in the scene of the resurrection of the nuns in the third act are entitled in the score '1°. 2do. and 3°. ballabile.' He also applies the term to the dance music of the ball-room scene at the commencement of the fifth act of the 'Huguenots.' More recently Dr. Hans von Bülow has given the title of 'Ballabili' to the dance-numbers of his 'Carnevale di Milano,' these dances being respectively a polacca, a waltz, a polka, a quadrille, a mazurka, a tarantella, and a galop. E. P.

BALLAD, from the Italian *ballata*,[1] 'a dance,' and that again from *ballare*, 'to dance.' The form and application of the word have varied continually from age to age. In Italy a Balletta originally signified a song intended to be sung in dance measure, accompanied by or intermixed with dancing; 'in the Crusca dictionary,' says Burney, 'it is defined as Canzone, che si canta ballando'—a song sung while dancing. The old English ballads are pieces of narrative verse in stanzas, occasionally followed by an envoi or moral. Such are 'Chevy Chase,' 'Adam Bell, Clym of the Clough and William of Cloudeslee,' 'The Babes in the Wood'; and, to come to more modern times, such are 'Hozier's Ghost' (Walpole's favourite), Goldsmith's 'Edwin and Angelina,' and Coleridge's 'Dark Ladie.' But the term has been used for almost every kind of verse—historical, narrative, satirical, political, religious, sentimental, etc. It is difficult to discover the earliest use of the word. Many references which have been made to old authors reputed to have employed it are not to the point, as it will be found in such cases that the original word in the old Latin chronicles is some form of the noun 'cantilena.'

In a MS. of the Cotton collection, said to be as ancient as the year 1326, mention is made of ballads and roundelays (Hawkins, *Hist. of Music*). John Shirley, who lived about 1440, made a collection of compositions by Chaucer, Lydgate, and others, and one of the volumes, now in the Ashmolean collection, is entitled 'A Boke cleped the abstracte brevyaire, compyled of diverse *balades*, roundels, . . . collected by John Shirley.' In the devices used at the coronation of Henry VI. (Dec. 17, 1431) the king was portrayed in three several ways, each 'with a ballad' (Sharon Turner). Coverdale's Bible, printed in 1535, contains the word as the title of the Song of Solomon—'Salomon's Balettes called Cantica Canticorum.'

Ballad making was a fashionable amusement in the reign of Henry VIII., who was himself renowned for 'setting of songes and makyng of ballettes.' A composition attributed to him, and called 'The Kynges Ballade' (Add. MSS. Brit. Mus. 5665), became very popular. It was mentioned in *The Complainte of Scotland*, published in 1548, and also made the subject of a sermon preached in the presence of Edward VI. by Bishop Latimer, who enlarged on the advantages of 'Passetyme with good companye.' Amongst Henry's effects after his decease, mention is made of 'songes and ballades.' In Queen Elizabeth's reign ballads and ballad-singers came into disrepute, and were made the subject of repressive legislation. 'Musicians held ballads in contempt, and great poets rarely wrote in ballad metre.'

Morley, in his *Plaine and easie introduction to Practical Musicke*, 1597, says, after speaking of *Vilanelle*, 'there is another kind more light than this which they tearm *Ballete* or daunces, and are songs which being sung to a dittie may likewise be danced, these and other light kinds of musicke are by a general name called *aires*.' Such were the songs to which Bonny Boots, a well-known singer and dancer of Elizabeth's court, both 'tooted it' and 'footed it.' In 1636 Butler published *The Principles of Musicke*, and in that work spoke of 'the infinite multitude of Ballads set to sundry pleasant and delightful tunes by cunning and witty composers, with *country dances* fitted unto them.' After this the title became common.

The music of many real old ballads has survived, for which the reader may be referred to Chappell's *Popular Music of the Olden Time*, or the new edition, *Old English Popular Music*, edited by Prof. Wooldridge. 'Chevy Chase' appears to have been sung to three different melodies. One of these, 'The hunt is up,' was a favourite popular air, of which we give the notes—

[1] *Ballata* = a dancing piece, as *Suonata*, a sounding piece, and *Cantata*, a singing piece.

This old tune was otherwise employed. In 1537 information was sent to the Council against John Hogon, who, 'with a crowd or a fyddyll,' sang a song with a political point to the tune 'The hunt is up.' 'If a man,' says Fletcher of Saltoun, 'were permitted to make all the ballads, he need not care who should make the laws of a nation.' 'Lilliburlero' (beloved of my uncle Toby), is a striking proof of the truth of Saltoun's remark, since it helped to turn James II. out of Ireland. The tune and the history of the song will be found under LILLIBURLERO. 'Malbrouck,' the 'Marseillaise,' and the 'Wacht am Rhein,' are other instances of ballads which have had great political influence.

Ballads have sunk from their ancient high estate. Writing in 1802 Dr. Burney said, 'A ballad is a mean and trifling song such as is generally sung in the streets. In the new French *Encyclopédie* we are told that we English dance and sing our ballads at the same time. We have often heard ballads sung and seen country dances danced; but never at the same time, if there was a fiddle to be had. The movement of our country dances is too rapid for the utterance of words. The English ballad has long been detached from dancing, and, since the old translation of the Bible, been confined to a lower order of song.' Notwithstanding the opinion of Dr. Burney the fact remains incontrovertible that the majority of our old ballad tunes are dance tunes, and owe their preservation and identification to that circumstance alone—the words of old ballads being generally found without the music but with the name of the tune attached, the latter have thus been traced in various collections of old dance music. The quotation already made from Butler shows that the use of vocal ballads as dance tunes implied in the name had survived as late as the reign of Charles I. One instance of the use of the word where dancing can by no possibility be connected with it is in the title to Goethe's 'Erste Walpurgisnacht,' which is called a Ballad both by him and by Mendelssohn, who set it to music. The same may be said of Schiller's noble poems 'Der Taucher,' 'Ritter Toggenburg,' and others, so finely composed by Schubert, though these are more truly 'ballads' than Goethe's 'Walpurgisnacht.' So again Mignon's song 'Kennst du das Land,' though called a 'Lied' in Wilhelm Meister, is placed by Goethe himself at the head of the 'Balladen' in the collected edition of his poetry. In fact both in poetry and music the term is used with the greatest freedom and with no exact definition. W. H. C.

Besides the many ballads among Schubert's songs, the ballads of Zumsteeg and Carl Loewe may be referred to as having helped to fix the type of German ballad that reached its ultimate perfection in Brahms. In nearly all these instances the narrative idea is present, and the connection of the word with the dance is more and more lost sight of. Choral ballads are, generally speaking, musical settings of poems that would naturally be described as ballads; and orchestral ballads, specimens of which have been fairly abundant in recent days, are very often named from some well-known poem, of which they give instrumental illustration. Such are Somervell's 'Helen of Kirkconnel,' MacCunn's 'Ship o' the Fiend,' and many others. The four famous examples of pianoforte ballades by Chopin have the same rhythm of six-four or six-eight time; but beyond this it would be difficult to obtain any musical definition, and even this rhythmic feature is as often as not disregarded by other composers. Of the four ballades of Brahms, op. 10, one only is in six-eight time throughout; but in two of the others the middle section is in six-eight or six-four time, only the first being in common time from beginning to end. Liszt has written two ballades for piano solo. Vieuxtemps' 'Ballade and Polonaise' is one of the favourite pieces in the common violin repertory, and among works of younger composers, the Ballade in D minor for violin and piano by Dr. Ernest Walker may be mentioned.

The word 'ballad,' as applied to certain kinds of modern English songs, implies a composition of the slightest possible degree of musical value nearly always set to three verses (neither more nor less) of conventional doggrel. 'Ballad Concerts' are carried on for the purpose of bringing such things before the notice of the public, although their programmes do not of course consist exclusively of what are sometimes called 'shop-songs.' M.

BALLAD OPERA. See ENGLISH OPERA.

BALLARD, a family of printers, who for nearly 200 years virtually enjoyed the monopoly of printing music in France. Their types were made by Guillaume le Bé in 1540, and remained in use as late as 1750. The first patent was granted to Robert Ballard by Henri II. in 1552, and he and his son-in-law Adrien Leroy printed many tablatures for the lute and other music. They were followed by Pierre alone in 1606, and he again by his son Robert in 1639, under whom the house rose to its greatest height both in privileges and position. He was succeeded by Edouard Christophe (1673), Jean Baptiste Christian in 1695, and Christophe Jean François, 1750, who died in 1765. Pierre Robert Christophe held the patent from 1763 until it lapsed in 1766. One of the earliest specimens of their art of printing is 'The Psalms of Marot,' 1562. Lully's operas were printed by the Ballards—first about 1700, from movable types, and afterwards from engraved copper-plates. F. G.

BALLERINA (Ital.), a female ballet-dancer.

BALLET. The ballet is a more modern entertainment even than the opera, with which it has long been intimately connected. The name seems to have been derived from the Italian *ballata*, the parent of our own 'ballad'; and the earliest ballets (Ballets de Cour), which corresponded closely enough to our English masques, were entertainments not of dancing only, but also of vocal and instrumental music. M. Castil Blaze, in an interesting monograph ('La Danse,' etc.; Paris, Paulin), traces back the ballet from France to Italy, from Italy to Greece, and through the Greek stage to festivals in honour of Bacchus. But the ballet as signifying an entertainment exclusively in dancing dates from the foundation of the Academie Royale de Musique, or soon afterwards. In 1671, the year in which Cambert's 'Pomone,' the first French opera heard by the Parisian public, was produced, 'Psyche,' a so-called tragedie-ballet by Molière and Corneille, was brought out. Ballets, however, in the mixed style were known much earlier; and the famous 'Ballet comique de la Royne,' the 'mounting' of which is said to have cost three and a half millions of francs, was first performed at the marriage of the Duke of Joyeuse in 1581. [BALTAZARINI.] The work in question consisted of songs, dances, and spoken dialogue, and seems to have differed in no important respect from the masques of an earlier period. Another celebrated ballet which by its historical significance is better worthy of remembrance than the 'Ballet comique de la Royne,' was one represented on the occasion of Louis XIV.'s marriage with Maria Thérèse, and entitled 'Il n'y a plus de Pyrénées.' In illustration of this supposed political fact half the dancers were dressed in the French and half in the Spanish costume, while a Spanish nymph and a French nymph joined in a vocal duet. Other ballets of historical renown were the 'Hercule amoureux,' at which more than 700 persons were on the stage, and the 'Triomphe de l'Amour' in 1681. Louis XIV. took such a delight in ballets that he frequently appeared as a ballet-dancer, or rather as a figurant, himself. For the most part His Majesty contented himself with marching about the stage in preposterous costumes, and reciting verses in celebration of his own greatness. Occasionally, however, he both sang and danced in the court ballets. When in 1669 the 'Great Monarch' assumed, ostensibly for the last time, the part of the Sun in the ballet of 'Flora,' it was thought that His Majesty's theatrical career had really come to an end. He felt, however, as so many great performers have since done under similar circumstances, that he had retired too soon; and the year afterwards he appeared again in 'Les Amants magnifiques,' composed by himself, in collaboration with Molière. In this work Louis executed a solo on the guitar—an instrument which he had studied under Francesco Corbetta, who afterwards went to England and obtained great success at the court of Charles II. It is indeed recorded of him that in connection with 'Les Amants magnifiques,' he played the part of author, ballet-master, dancer, mimic, singer, and instrumental performer. As Louis XIV. did not think it beneath his dignity to act at court entertainments, he had no objection to his courtiers showing themselves publicly on the stage. In the royal letters patent granted to the Abbé Perrin, the first director of the French Opera, or 'Académie Royale de Musique,' as from the beginning it was called, free permission was given to 'all gentlemen and ladies wishing to sing in the said pieces and representations of our royal academy without being considered for that reason to derogate from their titles of nobility, or from their privileges, rights, and immunities.' The right to sing seems to have been interpreted as including the right to dance; and several ladies and gentlemen of good birth profited by the King's liberality to appear in the ballets represented at the Académie Royale. The music of Louis XIV.'s ballets was for the most part written by Lulli, who also composed the songs and symphonies for the dance-interludes of Molière's comedies. The dramatic ballet or *ballet d'action* is said to have been invented by the Duchess du Maine, celebrated for her evening entertainments at Sceaux, which the nobles of Louis XIV.'s court found so exhilarating after the formal festivities of Versailles. With a passion for theatrical representation the Duchess combined a taste for literature; and she formed the project of realising on the stage of her own theatre her idea of the pantomimes of antiquity, as she found them described in the pages of her favourite authors. She went to work precisely as the arranger of a ballet would do in the present day. Thus taking the fourth act of 'Les Horaces' as her libretto (to use the modern term), she had it set to music for orchestra alone, and to the orchestral strains caused the parts of Horace and of Camille to be performed in dumb show by two celebrated dancers who had never attempted pantomime before. Balon and Mademoiselle Prévost, the artists in question, entered with so much feeling into the characters assigned to them that they drew tears from the spectators.

Mouret, the musical director of the Duchess's 'Nuits de Sceaux,' composed several ballets, on the principle of her ballet of 'Les Horaces,' for the Académie Royale. During the early days of the French opera, and until nearly the end of the 17th century, it was difficult to obtain dancers in any great number, and almost impossible to find female dancers. The company of vocalists was recruited from the cathedral choirs, but for the ballet there were only the dancing masters of the capital and their pupils of the male sex to select from. There were no dancing mis-

tresses, and ladies would not under any circumstances have consented to dance in public. On this point, however, the fashion was destined soon to change. Nymphs, dryads, and shepherdesses were for a time represented by boys, who equally with the fauns and satyrs wore masks. But at last ladies of the highest position, with Madame la Dauphine and the Princesse de Conti amongst them, appeared by express desire of the King in the ballets at Versailles; and about the same time several ladies of title, taking advantage of the royal permission, joined the opera in the character of ballet-dancers. The first professional ballerina of note at the Académie was Mlle. Lafontaine, who with three other danseuses and a befitting number of male dancers, formed the entire ballet company. It is not necessary to relate the stories, more or less scandalous, told of various ballet-dancers —of the Demoiselles de Camargo, of Mlle. Pélissier (who, expelled from Paris, visited London, where she was warmly received in 1734); or Mlle. Petit, dismissed from the Opera for misconduct, and defended in a pamphlet by the Abbé de la Marre; of Mlle. Mazé, who, ruined by Law's financial scheme, dressed herself in her most brilliant costume, and drowned herself publicly at noon; or of Mlle. Subligny, who came to England with letters of introduction from the Abbé Dubois to Locke. The eminent metaphysician, who had hitherto paid more attention to the operations of the human mind than to the art of dancing, did honour to the abbé's recommendation, and (as Fontenelle declared in a letter on the subject) 'constituted himself her man of business.' We now, however, come to a ballerina, Mlle. Sallé, who besides being distinguished in her own particular art, introduced a general theatrical reform. In the early part of the 18th century—as indeed at a much later period—all sorts of anachronisms and errors of taste were committed in connection with costume. Assyrian, Greek, and Roman warriors appeared and danced *pas seuls* in the ballets of the Académie Royale, wearing laced tunics and powered wigs with pigtails a yard long. The wigs were surmounted by helmets, and the manly breasts of the much-beribboned warriors were encased in a cuirass. Mlle. Sallé proposed that each character should wear the costume of his country and period; and though this startling innovation was not accepted generally in the drama until nearly a century later, Mlle. Sallé succeeded in causing the principles she advocated to be observed at the Opera—at least during her own time, and so far as regarded the ballet. Mlle. Sallé's reform was not maintained even at the Académie; for about half a century later Galatea, in Jean Jacques Rousseau's 'Pygmalion,' wore a 'damask dress made in the Polish style over a basket hoop, and on her head an enormous *pouf* surmounted by three ostrich feathers.'

Mlle. Sallé came to England with an introduction from Fontenelle to Montesquieu, who was then Ambassador at the Court of St. James's. This artist was, indeed, highly esteemed by the literary society of her time. She enjoyed the acquaintance not only of Fontenelle, Montesquieu, and our own Locke, but also of Voltaire, who wrote a poem in her honour. In London Mlle. Sallé produced a 'Pygmalion' of her own, which, at least as regards the costumes, was very superior to the 'Pygmalion' of Rousseau brought out some forty or fifty years afterwards. In representing the statue about to be animated, she carried out her new principle by wearing not a Polish dress, but simple drapery, imitated as closely as possible from the statues of antiquity. A full and interesting account of Mlle. Sallé's performance, written by a correspondent in London, possibly Montesquieu himself, was published on March 15, 1734, in the *Mercure de France.* 'She ventured to appear,' says the correspondent, 'without skirt, without a dress, in her natural hair, and with no ornament on her head. She wore nothing in addition to her bodice and under-petticoat but a simple robe of muslin arranged in drapery after the model of a Greek statue. You cannot doubt, sir,' he adds, 'the prodigious success this ingenious ballet so well executed obtained. At the request of the king, the queen, the royal family, and all the court, it will be performed on the occasion of Mlle. Sallé's benefit, for which all the boxes and places in the theatre and amphitheatre have been taken for a month past.'

Madeleine Guimard, a celebrated *danseuse* at the French Opera during the Gluck and Piccinni period, is frequently mentioned in the correspondence of Grimm and of Diderot. Houdon, the sculptor, moulded her foot. Fragonard, the painter, decorated her rooms, until presuming to fall in love with her it was found necessary to replace him by Louis David—afterwards so famous as a historical painter in the classical style; Marie Antoinette consulted her on the subject of dress, and when by an accident on the stage she broke her arm, prayers were said at Notre Dame for Mlle. Guimard's injured limb. Marmontel, referring to her numerous acts of charity, addressed to her a flattering epistle in verse; and a popular divine made her munificence the subject of a sermon. The chronicles of the time laid stress on Guimard's excessive thinness, and she was familiarly known as the 'Spider,' while a wit of the period called her *la squelette des Grâces.* The French Revolution drove numerous French artists out of the country, many of whom visited London. 'Amongst them,' says Lord Mount-Edgcumbe in his Memoirs, 'came the famous Mlle. Guimard, then near sixty years old, but still full of grace and gentility; and she had never possessed more.'

Gaetan Vestris, the founder of the Vestris family, was as remarkable for his prolonged

youthfulness as Mlle. Guimard herself—who, however, instead of being 'near sixty,' was not more than forty-six when she arrived in London). Gaetan Vestris made his début at the French Opera in 1748; and M. Castile Blaze, in his *Histoire de l'Académie Royale de Musique*, tells us that he saw him fifty-two years afterwards, when he danced as well as ever, executing the steps of the minuet 'avec autant de grâce que de noblesse.' The family of Vestris—originally Vestri—came from Florence. Gaetan had three brothers, all dancers; his son Auguste was not less famous than himself ('Auguste had Gaetan Vestris for his father,' the old man would say —'an advantage which nature refused me'); Auguste's nephew was Charles Vestris, and Auguste's favourite pupil was Perrot, who married Carlotta Grisi, and who by his expressive pantomime more even than by his very graceful dancing, enjoyed in London an amount of success which male dancers in this country have but rarely obtained. Innumerable anecdotes are told of the vanity and self-importance of Gaetan Vestris, the head of this family of artists. On one occasion when his son was in disgrace for having refused, on some point of theatrical honour, to dance in the divertissement of Gluck's 'Armide,' and was consequently sent to Fort-l'Evêque, the old man exclaimed to him in presence of an admiring throng: 'Go, Augustus; go to prison! Take my carriage, and ask for the room of my friend the King of Poland.' Another time he reproved Augustus for not having performed his duty by dancing before the King of Sweden, 'when the Queen of France had performed hers by asking him to do so.' The old gentleman added that he would have 'no misunderstanding between the houses of Vestris and of Bourbon, which had hitherto always lived on the best terms.' The ballet never possessed in London anything like the importance which belonged to it in France, from the beginning of the 18th century until a comparatively recent time. For thirty years, however, from 1820 to 1850, the ballet was an attractive feature in the entertainments at the King's (afterwards Her Majesty's) Theatre; and in 1821 the good offices of the British ambassador at the court of the Tuileries were employed in aid of a negotiation by which a certain number of the principal dancers were to be temporarily 'ceded' every year by the administration of the Académie Royale de Musique to the manager —at that time Mr. Ebers—of our Italian Opera. Mlles. Noblet and Mercandotti seem to have been the first *danseuses* given, or rather lent, to England by this species of treaty. Mlle. Taglioni, who appeared soon afterwards, was received year after year with enthusiasm. Her name was given to a stage-coach, also to a greatcoat; and—more enduring honour—Thackeray has devoted some lines of praise to her in the *Newcomes*, assuring the young men of the present generation that they will 'never see anything so graceful as Taglioni in "La Sylphide."' Among the celebrated dancers contemporary with Taglioni must be mentioned Fanny Ellsler (a daughter of Haydn's old copyist of the same name) and Cerito, who took the principal part in the once favourite ballet of 'Alma' (music by Costa). Fanny Ellsler and Cerito have on rare occasions danced together at Her Majesty's Theatre the minuet in 'Don Giovanni.' To about the same period as these eminent *ballerine* belonged Carlotta Grisi, perhaps the most charming of them all. One of her most admired characters was that of Esmeralda in the ballet arranged by her husband, the before-mentioned Perrot, on the basis of Victor Hugo's *Notre Dame de Paris*. Pugni, a composer, who made ballet music his speciality, and who was attached as composer of ballet music to Her Majesty's Theatre, wrote music for Esmeralda full of highly rhythmical and not less graceful melodies. In his passion for the ballet Mr. Lumley once applied to Heinrich Heine for a new work, and the result was that 'Mephistophela,' of which the libretto, written out in great detail, is to be found in Heine's complete works. The temptation of Faust by a female Mephistopheles is the subject of this strange production, which was quite unfitted for the English stage, and which Mr. Lumley, though he duly paid for it, never thought of producing. In one of the principal scenes of 'Mephistophela' the temptress exhibits to her victim the most celebrated *danseuses* of antiquity, including Salome the daughter of Herodias. King David, too, dances a *pas seul* before the ark. Probably the most perfect ballet ever produced was 'Giselle,' for which the subject was furnished by Heine, the *scenario* by Theophile Gautier, and the music by Adolphe Adam. Adam's music to 'Giselle' is, as Lord Mount-Edgcumbe said of Madeleine Guimard, 'full of grace and gentility.' The 'Giselle Waltz' will long be remembered: but we must not expect to see another 'Giselle' on the stage until we have another Carlotta Grisi; and it is not every day that a dancer appears for whom a Heine, a Gautier, and an Adam will take the trouble to invent a new work. Beethoven's 'Prometheus' is perhaps the only ballet which has been performed entire in the concert room, for the sake of the music alone. The Airs de Ballet from Auber's 'Gustave' and Rossini's 'William Tell' are occasionally found in concert programmes, and those in Schubert's 'Rosamunde' and Gounod's 'Reine de Saba' have immortalised those operas after their failure on the stage. H. S. E.

In modern days there has been a growing tendency in England to shorten or omit the extensive 'ballet-divertissements' which were an indispensable part of almost all grand operas. The omission of the beautiful ballet music from the last act of Gounod's 'Faust' is due to other causes; and in the case of one opera of equal popularity, 'Carmen,' Bizet's own 'Jolie Fille

de Perth' has been laid under contribution for the ballet introduced into the final scene. One other exception to the tendency above referred to is in regard to Mozart's 'Seraglio,' in the course of which, when it was last given in England, the master's 'Rondo alla Turca' from the piano sonata in A was used for a ballet. For the version of 'Der Freischütz' given in Paris in 1841, Berlioz not only wrote recitatives, but orchestrated Weber's 'Invitation à la Valse' to serve as ballet music. The place of the ballet in the opera was never as important to London opera-goers as to the Paris public; the failure of 'Tannhäuser' in the latter capital in 1861 was ostensibly caused by the circumstance that the ballet, or in other words, the Venusberg scene, came in the first act instead of later.

The ballet, as an independent entertainment, has been associated with variety theatres, such as the Empire and the Alhambra, where for a considerable number of years a series of gorgeous *ballets d'action* have established a tradition of their own. Besides the music regularly provided at the former by Herr L. Wenzel and at the latter by M. Jacobi (and latterly by Mr. G. W. Byng), these institutions have occasionally ventured to produce works that were calculated to attract on account of their inherent musical value. Delibes's 'Coppélia' has been seen in London, but not his more charming 'Sylvia'; and of all the fine works of the French and other schools, not one has been produced on the London stage, though Tchaikovsky's 'Casse-Noisette' music is familiar to every one. At one time it seemed as if better things were to be expected; but beyond the admirable 'Faust' ballet (1895) and 'La Danse' (1896) both by Ernest Ford, and the Jubilee ballet 'Victoria and Merrie England' by Sir Arthur Sullivan (1897), nothing was done in the same direction. M.

BALLETS, compositions of a light character, but somewhat in the madrigal style, frequently with a 'Fa la' burden which could be both sung and danced to; these pieces, says Morley (Introduction), were 'commonly called Fa las.' Gastoldi is generally supposed to have invented or at all events first published ballets. His collection appeared in 1591, and was entitled 'Balletti a cinque voci, con li suoi versi per cantare, sonare et ballare.' The first piece in the book is a musical 'Introduzione al Balletto,' with directions for the performers 'Su cacciam man a gli stromenti nostri, e suoniam et cantiam qualche Balletti.' These must, therefore, have had both instrumental and dancing accompaniments. In 1595 Morley published a collection of 'Ballets for five voices,' professedly in imitation of Gastoldi, and was followed three years later by Weelkes, with 'Ballets and Madrigals to 5 voices.' 'Balletto' is used by Bach for an allegro in common time. Two specimens are in the four inventions for violin and clavier, included in the B.-G. vol. xlv. (i.), pp. 173 and 182. W. H. C.

BALLO IN MASCHERA, IL. Opera in four acts, libretto by Somma, music by Verdi. Produced at Rome Feb. 17, 1859; at Paris, Théâtre des Italiens, Jan. 13, 1861; and in London, Lyceum, June 15, 1861.

BALTAZARINI (or BALTAGERINI), an Italian musician; the best violinist of his day. He was brought from Piedmont in 1577 by Marshal de Brissac to Catherine de' Medicis, who made him intendant of her music and her first valet de chambre, and changed his name to M. de Beaujoyeulx, which he himself adopted. He seems to have been the first to introduce the Italian dances into Paris, and thus to have been the founder of the ballet, and, through the ballet, of the opera. He associated the best musicians of Paris with him in his undertaking. Thus in the entertainment of 'Circe,' produced by him at the marriage of the Duc de Joyeuse and Mlle. de Vandemont, on Sunday Oct. 15, 1581, known under the title of 'Ballet comique de la royne,' etc. (Paris, 1582), he states in the preface that the music was by Beaulieu and Maistre Salmon. Several numbers from it are given by Burney (*Hist.* iii. 279-283); and the Ballet in all its details and its connection with the opera has been made the subject of a work ('Les origines de l'Opéra,' etc., by L. Cellier, Paris, 1868). The MSS. of others of Baltazarini's ballets are in the Bibliothèque Nationale. G.

BALTZAR, THOMAS, born at Lübeck about 1630; the finest violinist of his time, and the first really great performer heard in England. He came to England in 1656, and stayed for some time with Sir Anthony Cope, of Hanwell, Oxon. Evelyn heard him play March 4, 1656-57, and has left an account which may be read in his Diary under that date. Anthony Wood met him on July 24, 1658, and 'did then and there to his very great astonishment, heare him play on the violin. He then saw him run up his Fingers to the end of the Fingerboard of the Violin, and run them back insensibly, and all with alacrity, and in very good tune, which he nor any in England saw the like before . . . Wilson thereupon, the public Professor, . . . did, after his humoursome way, stoop downe to Baltzar's Feet, to see whether he had a Huff on; that is say, to see whether he was a Devill or not, because he acted beyond the parts of a man. . . . . Being much admired by all lovers of musick, his company was therefore desired; and company, especially musicall company, delighting in drinking, made him drink more than ordinary, which brought him to his grave.' In 1661 Baltzar was appointed leader of the King's celebrated band of twenty-four violins, but only held the post until 1633, when he died, and was buried in the cloister of Westminster Abbey. He is entered on the Register as 'Mr. Thomas Balsart, one of the violins in the King's Service, July 27, 1663.'

Baltzar did much towards placing the violin

in England in its present position, at the head of all stringed instruments. Playford's 'Division Violin' contains all that appear to have been printed of his compositions, but Burney speaks in high terms of some MS. solos in his possession; and a set of sonatas for a 'lyra violin, treble violin, and bass viol,' were sold at the auction of Thomas Britton the 'musical small-coal man.' [A prelude and an allemande were printed in the *Monatshefte für Musikgeschichte*, xx. 5; four suites for strings are in the Music School Library, Oxford, and on one of them, dated 1659, is written 'Mr. Baltzar, commonly called the Swede.'] M. C. C.

BANCHIERI, ADRIANO, born at Bologna, about 1567, pupil of Guami the organist of the Cathedral of Lucca and afterwards of S. Marco in Venice. [He was organist of S. Michele in Bosco near Bologna in 1599, and from about 1600 to 1607 was at Imola, as organist of Santa Maria in Regola. In 1607 he was at Monte Oliveto, and on many of his works he is described as 'monaco olivetano.' From the title-pages of some it would appear that in 1609-13 he was again organist of San Michele in Bosco, and in 1613 returned to Monte Oliveto, where he became abbot. He was the founder of the *Accademia Florida* which met at Bologna from about 1623. He died in 1634, in the convent of San Bernardo at Bologna. (Eitner's *Quellen-Lexikon*).] He was great in all departments, theory, the church, and the theatre. His most important theoretical work is probably his 'L'Organo suonarino' (Amadino, Venice, 1605), which was often reprinted. It contains the first precise rules for accompanying from a figured bass—afterwards published separately by Lomazzo at Milan. In a later work, 'Moderna practica musicale' (Venice, 1613),[1] he treats of the influence of the basso continuo on the ornaments in singing, and the alterations necessary in consequence thereof. At the same time he mentions the changes in harmony and tonality which were at that time beginning to prevail, as incomprehensible. In addition to his many compositions for the church, masses, 'Ecclesiastiche sinfonie,' etc., Banchieri wrote what were then called 'intermedi' for comedies. In his 'La Pazzia senile,' published at Venice in 1598 and reprinted at Cologne—itself a kind of imitation of the 'Amfiparnasso' of Orazio Vecchi—the transition from the madrigal to the new form of the intermedio is very obvious; the work may be almost called the first comic opera. He afterwards composed a pendant to it under the name of 'La Saviezza giovenile,' published by Gardano, Venice, 1628. Other analogous works were 'Il Zabaione,' 1603, 'La barca di Venezia a Padua,' 1605, and 'La fida fanciulla, commedia esemplare, con musicali intermedi apparente de inapparenti,' Bologna, 1628 and 1629. Banchieri was a poet as well as a musician, and wrote comedies under the name of Camillo Scaligeri della fratta. In his 'Cartella musicale' (1614) we find a project for the foundation of an academy of science and art in his monastery at Bologna, and a 'Direttorio monastico di Canto Fermo' (1615) appeared in 1615. [Ten of his organ pieces are printed in vol. iii. of *L'Arte Musicale in Italia.*] F. G.

[1] Not mentioned in Eitner's *Quellen-Lexikon*.

BAND. A combination of various instruments for the performance of music. The old English term was 'noise.' The French word 'bande' was applied to the 'vingt-quatre violins' of Louis XIV. (Littré). Charles II. had his 'four-and-twenty violins,' and the word doubtless accompanied the thing. It first appears in a MS. order (Ld. Chamberlain's Warrt. Bks. May 31, 1661) that the King's band of violins shall take instructions from Hudson and Mell. (See also State Papers, Domestic, lxxvii. No. 40, and lxxix. Aug. 19, 1663.) It is not mentioned by Johnson (nor indeed in Latham's Johnson), Richardson, or Webster. The various kinds of bands will be found under their separate heads, viz. BRASS BAND; HARMONIE; ORCHESTRA; KING'S BAND OF MUSIC; WIND BAND. BANDMASTER and BANDSMEN are respectively the leader and members of a Military Band. G.

BANDERALI, DAVIDDE, born at Lodi, Jan. 12, 1789, died in Paris, June 13, 1849; first appeared in 1806, as a buffo tenor singer, which part may be said to have been created by him. He soon relinquished the stage, and became professor of singing in the Conservatoire first of Milan, and afterwards—on the recommendation of Rossini—in that of Paris (1828). In both places he trained singers who became celebrated, and published some songs. M. C. C.

BANDINI, UBERTO, was born at Rieti in Umbria on March 28, 1860. His father, Guglielmo, was a provincial inspector of engineering. In 1865 Uberto was sent to the Liceo of Perugia, where he first studied the rudiments of music under Prof. Giustiniani, and later on received instruction in harmony from Prof. Bolzoni at the Instituto Communale Morlacchi in the same town. In 1876, on leaving the Liceo, instead of studying law, he went to Naples, where he attended the Conservatorio S. Pietro a Majella for a year, his master being Lauro Rossi. Being obliged to leave Naples on account of private misfortunes, he went to Rome, where he studied at the Liceo S. Cecilia under Tergiani and Sgambati. His first important composition was an overture, 'Eleonora' (Crystal Palace, March 12, 1881), which won the prize among 87 competitors in a musical competition at Turin. He next produced a successful symphony at the Roman Royal Philharmonic Society's concerts, which was followed by 'Il Baccanale' for orchestra, produced at Perugia in Oct. 1880. W. B. S.

BANDORA. See PANDORE.

BANESTRE, GILBERT, succeeded Henry Abingdon as Master of the Children of the Chapel Royal, and, 'according to the Act of

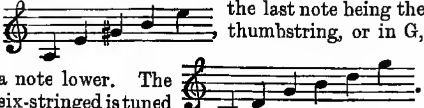
Resumption of the 22 Edward IV. (1482-83) was protected in the enjoyment of the same salary as his predecessor, for "the exhibition, instruction, and governaunce of the children of the chapelle"' (Rimbault, *Cheque-book of the Chapel Royal*, 1872, p. 5). Author of *The Miracle of St. Thomas*, MS. in Benet College Library, of which an account is given by Warton (*ibid.*). The Fayrfax MS. (B.M. Add. 5465) contains 'My feerful dreme' by him. A Motet à 3 'Vos secli justi judices' and an 'Alleluja Laudate' *a* 2 are in the Pepys Collection (1236) in the Magdalene College Library, Cambridge. A 5 part 'O Maria et Elizabeth' is in the Eton College Library. G. E. P. A.

BANISTER, Henry Charles, born in London, June 13, 1831, the son of John Banister, a violoncellist, entered the Royal Academy of Music at the age of fifteen, and was a pupil of Cipriani Potter there; he was subsequently subprofessor, and from 1853 professor of harmony. From 1880 he was professor at the Guildhall School of Music, and taught at the Royal Normal College for the Blind. He was a prominent member of the Incorporated Society of Musicians, and a member of the Board of Musical Studies in Cambridge, etc. He died at Streatham, Nov. 20, 1897. His compositions include symphonies, overtures, pianoforte pieces, and songs, but none of them have the importance that attaches to his work as a theorist. His *Musical Art and Study*, 1888, went through three editions; his *Life of Sir George Macfarren*, 1892, is a sympathetic and instructive work; and in the year of his death was published *The Harmonising of Melodies*, a very useful little treatise. Seven of the lectures delivered between 1891 and 1897 were published under the title of *Interludes*, and edited by Stewart Macpherson, in 1898. M.

BANISTER, John, born 1630, son of one of the waits of the parish of St. Giles'-in-the-Fields, London. He received the rudiments of his musical education from his father, and arrived at great proficiency on the violin. He was noticed by Charles II., who sent him to France for improvement; and on May 3, 1662, he was appointed leader of the King's band. The State Papers inform us, '1663, Mr. Banister appointed to be chief of His Majesty's violins.' Pepys, in his Diary, under the date Feb. 20, 1666-67, says:—'They talk how the King's violin, Banister, is mad that a Frenchman is come to be chief of some part of the King's musique.' The Frenchman here alluded to was the impudent pretender Louis Grabu. It is recorded, we know not upon what authority, that Banister was dismissed the King's service for saying, in the hearing of His Majesty, that the English performers on the violin were superior to those of France. This musician is entitled to especial notice as being the first to establish lucrative concerts in London. These concerts were made known through the medium of the *London Gazette;* and on Dec. 30, 1672, there appeared the following advertisement:—'These are to give notice that at Mr. John Banister's house, now called the Musick-school, over against the George Tavern in White Friars, this present Monday, will be musick performed by excellent masters, beginning precisely at four of the clock in the afternoon, and every afternoon for the future, precisely at the same hour.' Many similar notices may be found in the same paper (1673-78), from which it appears that Banister carried on these concerts till near the period of his decease, which occurred on Oct. 3, 1679. He was buried in the cloisters of Westminster Abbey. Banister wrote the music to the tragedy of 'Circe,' written by Dr. Charles Davenant, eldest son of Sir William Davenant, performed at the Duke of York's Theatre in 1677. Downes (*Roscius Anglicanus*, 1703) calls it an 'opera' and says 'All the musick was set by Mr. Banister, and being well performed, it answered the expectation of the company.' One of the songs is printed in the second book of 'Choice Ayres and Songs,' 1679, and a MS. copy of the first act is preserved in the library of the Royal College of Music. Jointly with Pelham Humfrey he wrote the music to 'The Tempest,' performed in 1667, some of the songs of which were published in the first book of 'Choice Ayres,' 1676. He contributed to Playford's 'Courtly Masquing Ayres,' 1662, and to Lock's 'Melothesia,' 1673; two slight compositions of his in two parts are included in some 'Lessons for Viols or Violins,' appended to a small volume entitled 'New Ayres and Dialogues,' 1678. Some of his compositions, including a song from Davenant's 'The Man's the Master' (1673), are in MS. at Christ Church, Oxford. His son, John, was educated in music under his father, and attained great excellence as a performer on the violin. He was one of the 'musicians' of Charles II., James II., William and Mary, and Anne; and, at the beginning of the 18th century, when Italian operas were first introduced in English form into this country, he occupied the post of principal violin. He composed some music for the theatre, and, in conjunction with Godfrey Finger, published a small collection of these pieces. He was also a contributor to Henry Playford's 'Division Violin,' 1685, the first printed book for the violin put forth in England. He resided for many years in Brownlow Street, Drury Lane, where he died in 1735. There is a fine mezzotint engraving of him by Smith. [E. F. R.; additions and corrections from J. F. R. Stainer, Esq., *Dict. of Nat. Biog.*, and Eitner's *Quellen-Lexikon.*]

BANJO (American). An instrument of the guitar kind, played with the fingers, but without the aid of frets to guide the stopping in tune of the strings. The banjo has a long neck, and a body like a drumhead, of parchment, strained

upon a hoop to the required writhe or degree of stiffness for resonance. There is no back to it. Banjos have five, six, seven, or nine catgut strings, the lowest in pitch being often covered with wire. The chanterelle or melody-string is called from its position and use the thumbstring, and is placed not, as in other fingerboard instruments, highest in series, but on the bass side of the lowest-tuned string, the tuning-peg for it being inserted halfway up the neck instead of in the head. The length of the thumbstring is given as sixteen inches from the nut to the bridge, and that of the others twenty-four inches. The five-stringed banjo is tuned either



the last note being the thumbstring, or in G, a note lower. The six-stringed is tuned . The seven-stringed introduces the middle C in the lowest octave, and the nine has three thumbstrings , but is rarely used. The pitch of the banjo, like that of the guitar, is an octave lower than the notation. 'Barre' designates the false nut made by placing the first finger of the left hand across the whole of the strings at certain lengths from the bridge to effect transposition. [See CAPO TASTO.]

As to the origin of the banjo, the existence of instruments of the lute or guitar-kind implies a certain grade of knowledge and culture among the people who know how to stretch strings over soundboards, and to determine the required intervals by varying the vibrating lengths of the strings. Such instruments found in use by savage or very uncivilised peoples suggest their introduction through political or religious conquest by a superior race. The Arabs may thus, or by trade, have bestowed a guitar instrument upon the negroes of Western Africa, and the Senegambian 'bania' be, as Mr. Carl Engel suggests (*Musical Instruments*, 1874, p. 151), the parent of the American negro's banjo. Others derive the name from Bandore. A. J. H.

BANKS. See VIOLIN-MAKERS.

BANTI, BRIGITTA GIORGI, said to have been the daughter of a Venetian gondolier, was born at Crema, Lombardy, 1759. She began life as a 'cantante di piazza,' or street-singer; and received some little instruction at the expense of a rich amateur. At the age of 19 she set out for Paris, to seek her fortune, supporting herself by singing at inns and cafés by the way. De Vismes, Director of the Académie, happening to hear a splendid voice on the Boulevard at Paris one evening, stopped at the café where the girl was singing, and slipping a louis into her hand desired her to come to him at the Opéra the next day. Here, upon hearing an air of Sacchini twice or thrice, she astonished the Director by singing it perfectly from beginning to end. He engaged her for the Opéra, where she made a triumphant début in a song between the second and third acts of 'Iphigénie en Aulide.' While singing in Paris, though she never made the slightest mistake in concerted pieces, she sometimes executed her airs after a very strange fashion. For instance: in the allegro of a cavatina she would, in a fit of absence, recommence the air from the very beginning, go on with it to the turning-point at the end of the second part, again recommence, and continue this proceeding until warned by the conductor that she had better think of ending. In the meantime the public, delighted with her voice, is said to have been quite satisfied. Agujari having left London, the managers of the Pantheon gave the young singer—still called Giorgi—an engagement, on condition that £100 a year should be deducted from her salary for the cultivation of her voice. Sacchini was her first master, but he soon gave her up in despair. Piozzi followed, with no better success. Abel was the last. She was at this time, without doubt, a very bad singer with a very beautiful voice; and of so indolent and careless a disposition that she never could be made to learn the first rudiments of music. In 1780 she left England, and sang to enthusiastic audiences at several foreign courts. Lord Mount-Edgcumbe heard her at Reggio in 1785, where, he says, her singing was delightful. In 1794 she returned to London, making her début in Bianchi's 'Semiramide,' in which she introduced an air from Guglielmi's 'Debora,' with violin obbligato, originally played by Cramer, afterwards by Viotti, Salomon, and Weichsell, the brother of Mrs. Billington. This song, though long and very fatiguing, was always encored, and Banti never failed to repeat it. Genius in her seemed to supply the want of science; and the most correct ear, with the most exquisite taste, enabled her to sing with more effect, expression, and apparent knowledge of her art, than many a better singer. She never was a good musician, nor could sing at sight with ease; but having once learnt a song and mastered its character, she threw into it deeper pathos and truer feeling than any of her rivals. Her voice was of most extensive compass, rich and even, and without a fault in its whole range,—a true *voce di petto* throughout. In her youth it extended to the highest pitch, and was so agile that she excelled most singers in the bravura style; but, losing a few of her upper notes, she modified her manner by practising the cantabile, to which she devoted herself, and in which she had no equal. Her acting and recitative were excellent. Her most favourite pieces were the 'Alceste' of Gluck, in which she very greatly excelled, three of her songs in it having to be repeated every night; his 'Iphigénie en Tauride'; Paisiello's 'Elfrida' and 'Nina'; 'Mitridate,' by Nasolini; 'Alzira,' 'Merope,' 'Cinna,' and others composed ex-

pressly for her by Bianchi. She also acted in comic operas, and was particularly successful in Paisiello's 'Serva Padrona.' Her spirits never flagged; nor did her admirers ever grow weary of her. They never wished for another singer; but Mrs. Billington had now returned, and astonished the public with her marvellous execution. The manager engaged her for the next season, and allowed Banti, whose health was now failing, to depart. Before the close of her last season (1802), however, an interesting performance took place. Banti prevailed on Mrs. Billington to sing with her on the night of her benefit, leaving her the choice of opera and character. Portogallo's 'Merope' was chosen, Mrs. Billington acting the part of the heroine, and Banti that of Polifonte, though written for a tenor. Banti died at Bologna, Feb. 18, 1806, bequeathing her larynx (of extraordinary size) to the town, the municipality of which caused it to be preserved in spirits. Her husband was the dancer Zaccaria Banti, who was dancing in London as early as 1777 in Sacchini's 'Creso.' She left a daughter, married to Dr. Barbieri, who raised to her memory a monument in the cemetery outside the walls of Bologna, which was afterwards repaired and adorned by her husband, and from which we learn the places and dates of her birth and death (*Harmonicon*, viii.). J. M.

BANTOCK, GRANVILLE, born in London, August 7, 1868; was at first intended for the Indian Civil Service, but, finding his musical proclivities too powerful, after a few lessons in harmony and counterpoint from Dr. G. Saunders at Trinity College, London, entered the Royal Academy of Music in 1889 as a pupil of Mr. F. Corder; he won the Macfarren Scholarship after his first term, being the first holder of the prize. During the period of his studentship the following works were given at the Academy concerts: Overture, 'The Fire-Worshippers,' Egyptian suite de ballet from 'Rameses II.,' 'Wulstan,' scena for baritone and orchestra, and 'Caedmar,' one-act opera (in concert-form). This last, with extracts from other works, was given at an invitation concert in 1892, and in October of the same year the opera was presented at the Crystal Palace, being produced in London by Signor Lago during his unfortunate tenure of the Olympic Theatre, Oct. 25. His strong bent towards oriental subjects, indicated in the names of two of the works given at the Academy, has remained with him throughout his career, and the performance of the overture to 'The Fire-Worshippers' under Mr. Manns at the Crystal Palace was Mr. Bantock's real introduction to the musical world. It was some three years before his name came prominently forward as a composer; from May 1893 till Feb. 1896 he was editor and proprietor of an excellent little magazine, *The New Quarterly Musical Review*, and during the same period acted as conductor of musical comedies, and light music generally, in the provinces, and with one of Mr. George Edwardes's companies which made the tour of the world in 1894 and 1895. The drudgery of this work gave him useful experience, and led to his engagement as conductor of the provincial tour of Stanford's 'Shamus O'Brien' in 1895. In the winter of 1896, he formed the bold project of giving a concert consisting entirely of compositions by the younger generation of English musicians, all performed for the first time, and all in MS. The writers represented were the late Erskine Allon, Stanley Hawley, Arthur Hinton, Reginald Steggall, William Wallace, and Bantock himself. Although the concert, given Dec. 15, was a financial failure, it served the good purpose of giving six young composers an opportunity which the older institutions would doubtless have continued to deny them; the task of getting a hearing for the younger school was continued in a chamber concert in the following May, with the same result. After a short engagement as conductor for a series of French plays at the Royal Theatre (revival of 'L'Enfant Prodigue,' etc.) he was appointed in 1897 musical director of the Tower, New Brighton, a post in which he did a great work for English music during the four years of his tenure. Like Manns at the beginning of the Crystal Palace concerts, Bantock had, for the first year, only a military band, but when he succeeded in establishing a concert-orchestra, he organised concerts of British music, many of which were conducted by the composers themselves. Among those whose works were thus represented were Mackenzie, Parry, Stanford, Corder, German, Elgar, and Cowen. In 1898 Bantock founded the New Brighton Choral Society, and was appointed conductor of the Runcorn Philharmonic Society. In Feb. 1900 he conducted a concert of British music at Antwerp, including first performances of some of his own compositions. Foremost among these was a symphonic poem, 'Jaga-Naut' (played at the Philharmonic Concerts in the following March), which was intended to form part of a series of 24 symphonic poems on subjects taken from Southey's *Curse of Kehama*. Even the framing of such a scheme shows an unusual degree of mental vigour and ambition, and several of the projected cycle of works were actually completed and published; ultimately, with the increase of other work, Mr. Bantock decided to abandon the idea, which never could have been a very practical one, for the whole 24 works could not have been given consecutively at a single concert. In September 1900 he was appointed Principal of the Birmingham and Midland Institute School of Music; in February 1901 he conducted a second concert of British music at Antwerp; and in October 1902 was appointed conductor of the Wolverhampton Festival Choral Society in succession to Mr. H. J. Wood, and con-

ductor of the Birmingham Amateur Orchestral Society.

The choice of subjects, and the forms in which Mr. Bantock's compositions are cast, are enough to show that he belongs to that class of modern composers who regard abstract music more or less unfavourably, preferring it in its illustrative functions. As is usually the case with these composers, Bantock's chief power lies in the direction of colour rather than of form. His adaptations of oriental and other characteristics mark him as one of the most successful musical colourists of the day; his music is always admirably scored, and always sounds well. So many of his works have been publicly performed without being published, that it is best to include in the catalogue of his compositions a great number of things which are still in MS.

CHORAL AND VOCAL WORKS WITH ORCHESTRA

Christus, festival symphony in 10 parts (one, 'The Wilderness,' performed Hereford Festival, 1903), 1901.
The Fire-Worshippers, dramatic cantata in 8 scenes, 1892.
Caedmar, opera in one act, 1892.
The Pearl of Iran, one-act opera, 1896.
Wulstan, scena for baritone, 1892. MS.
The Time-Spirit, rhapsody for chorus and orchestra, 1902. MS.
Thorvenda's Dream, for recitation with orchestra, 1892.
Songs of the East, 6 song-albums (Arabia, Japan, Egypt, Persia, India, China), 1896-7.

ORCHESTRAL WORKS

Tone-poem, No. 1. Thalaba the Destroyer (perf. London Mus. Festival, 1900). MS.
„ „ 2. Dante (perf. New Brighton), 1902. MS.
„ „ 3. Fifine at the Fair, 1902. MS.
„ „ 4. Hudibras, 1902. MS.
„ „ 5. The Witch of Atlas (perf. Worcester Festival, 1902). MS.
„ „ 6. Lalla Rookh (perf. Birmingham, 1903). MS.
„ „ 7. The Great God Pan, 1903. MS.
Symphonic Overtures, No. 1. Saul, 1896 (perf. Chester Festival, 1897).
„ „ 2. Cain, 1896. MS.
„ „ 3. Belshazzar, 1902. MS.
Variations, Helena, 1899 (perf. Antwerp, 1900).
Suites, No. 1. Russian Scenes, 1899 (perf. Antwerp, 1900).
„ „ 2. English Scenes, 1900. MS.
Two Oriental Scenes (all that is to remain of the cycle from *The Curse of Kehama*).
No. 1. Processional } 1894-7. MS.
„ 2. Jaga-Naut }
Overture, Eugene Aram, to an unfinished opera, 1895. MS.

INSTRUMENTAL WORKS

Quartet in C minor for strings, 1898. MS.
Serenade in F for four horns, 1903. MS.
Elegiac Poem for Violoncello and orchestra, 1895.
Twelve pianoforte pieces, 1893.
Two pianoforte pieces.
Aegypt, ballet in 3 acts, 1892. MS.

VOCAL WORKS

Rameses II., a five-act drama with incidental music, 1891. (The drama as well as the music by Bantock.)
Mass in B flat for male voices, 1903. MS.
Six Song albums. MS.
Anthem, Psalm 82 (Milton), 1897.
Cavalier Tunes (Browning) for male choir, 1898.
Part-songs, and pianoforte pieces. M.

BAPTIE, David, born at Edinburgh, Nov. 30, 1822. Author of a useful *Handbook of Musical Biography*, 1883 (2nd ed. 1887). A similar work, *Musicians of All Times*, appeared in 1889. He has published many glees, and has many more in MS. He has edited many hymn-books, and compiled a 'descriptive catalogue,' or index, of vocal part music, the MS. of which is now deposited in the reading-room of the British Museum. G.

BAPTISTE, a violin-player, who flourished at the beginning of the 18th century; his real name was Baptiste Anet; he was a pupil of Corelli, and apparently one of the first to introduce the works and style of his great master at Paris, thereby materially influencing the development of violin-playing in France. When French writers of the period speak of him as an extraordinary phenomenon, and as the first of all violinists, we must remember that at that time instrumental music, and especially the art of violin-playing, was still in its infancy in France. Baptiste did not settle in Paris, in spite of his great success, owing probably to the circumstance of Louis XIV.'s exclusive liking for old French music and for Lully. From Paris he went to Poland, where he spent the rest of his life as conductor of the private band of a nobleman. [Eitner (*Quellen-Lexikon*) quotes from Jacquot's *La Musique en Lorraine* a statement that he was in the service of the King of Poland, and accompanied him to Lunéville, dying there about 1755.] He published two sets of sonatas for the violin, 1724 and 1729; two suites de pièces pour deux musettes, op. 2, 1726; and six duos pour deux musettes, op. 3. P. D.

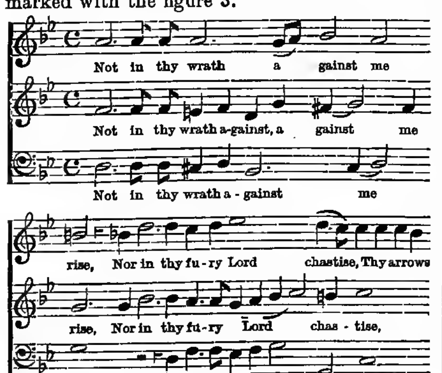
BAPTISTIN, Jean, a violoncellist whose real name was Johann Baptist Struck; of German parentage, born at Florence about 1690, He came to Paris, and he and Labbé were the earliest players of the violoncello in the orchestra of the Opéra. He had two pensions from the King, fixing him—the first to France, and the second to Paris. He produced 3 operas and 15 ballets, and published 4 books of cantatas. He died 1755.

BAR. A vertical line drawn across the stave to divide a musical composition into portions of equal duration, and to indicate the periodical recurrence of the accent. The word bar is also commonly, though incorrectly, applied to the portion contained between any two such vertical lines, such portion being termed a 'measure.' In the ancient 'measured music' (*musica mensuralis*—that is, music consisting of notes of various and determined length, and so called to distinguish it from the still older *musica choralis* or *plana*, in which all the notes were of the same length) there were no bars, the rhythm being shown by the values of the notes. But as this value was not constant, being affected by the order in which the longer or shorter notes followed each other, doubtful cases occasionally arose, for the better understanding of which a sign called *punctum divisionis* was introduced, written . or √, which had the effect of separating the rhythmic periods without affecting the value of the notes, and thus corresponded precisely to the modern bar, of which it was the earliest precursor. [See also ALTERATIO, and POINT.]

The employment of the bar dates from the beginning of the 16th century, and its object appears to have been in the first place to facilitate the reading of compositions written in score, by keeping the different parts properly under each other, rather than to mark the rhythmic divisions. One of the earliest instances of the use of the bar is found in Agricola's

Musica Instrumentalis (1529), in which the examples are written on a single stave of ten lines, the various parts being placed above each other on the same stave (the usual arrangement in the earliest scores), with bars drawn across the whole stave. Morley also in his *Practical Musick* (1597) makes a similar use of bars in all examples which are given in score; but the introduction of the bar into the separate voice parts used for actual performance is of much later date. The works of Tallis (1575), Byrd (1610), and Gibbons (1612), were all published without bars, while in Ravenscroft's Psalter (1621) the end of each line of the verse is marked by a single bar. This single bar is termed by Butler (*Principles of Musick*, 1636) an imperfect close, which he says is introduced 'at the end of a strain, or any place in a song where all the parts meet and close before the end,' while the perfect close (the end of the whole composition) is to be marked with 'two bars athwart all the Rules.'

Henry Lawes appears to have been the first English musician who regularly employed bars in his compositions. His 'Ayres and Dialogues,' published in 1653, are barred throughout, though the 'Choice Psalmes put into Musick for Three Voices' by Henry and William Lawes, published only five years previously, is still without bars. The part-writing of the 'Choice Psalmes' is in many cases varied and even elaborate, and there must have been considerable difficulty in performing them, or indeed any of the compositions of that date, without the assistance of any signs of rhythmic division, especially as they were not printed in score, but only in separate parts. Their general character may be judged from the following example, which has been translated into modern notation and placed in score for greater convenience of reading. It may be observed that although without bars, the 'Choice Psalmes' are intended to be sung in common time, and that all have the sign C at the commencement; some of the 'Ayres and Dialogues,' on the other hand, are in triple time, and are marked with the figure 3.



In modern music the use of bars is almost universal. Nevertheless there are some cases in which for a short time the designed irregularity of the rhythm requires that they should be dispensed with. An example of this is found in certain more or less extended passages termed cadenzas (not to be confounded with the harmonic cadence or close), which usually occur near the end of a composition, and serve the purpose of affording variety and displaying the powers of execution of the performer. (See the close of the Largo of Beethoven's Concerto in C minor, op. 37.) Also occasionally in passages in the style of fantasia, which are devoid of any definite rhythm, examples of which may be found in the Prelude of Handel's first Suite in A, in Emanuel Bach's Fantasia in C minor, at the beginning of the last movement of Beethoven's Sonata in B flat, op. 106, and in the third movement of Mendelssohn's Sonata, op. 6.

But even in this kind of unbarred music the relative value of the notes must be approximately if not absolutely preserved, and on this account it is often expedient during the study of such music to divide the passage into imaginary bars, not always necessarily of the same length, by the help of which its musical meaning becomes more readily intelligible. This has indeed been done by Von Bülow in regard to the passage in the Sonata above alluded to, and it is so published in the 'Instructive Edition of Beethoven's Works' (Stuttgart, Cotta, 1871), the result being a considerable gain in point of perspicuity. Similar instances will occur to every student of pianoforte music.

A double bar, consisting of two parallel

vertical lines, is always placed at the end of a composition, and sometimes at the close of a section or strain, especially if the strain has to be repeated, in which case the dots indicating repetition are placed on one or both sides of the double bar, according as they may be required. Unlike the single bar, the double bar does not indicate a rhythmic period, as it may occur in the middle or at any part of a measure, but merely signifies the *rhetorical* close of a portion of the composition complete in itself, or of the whole work. F. T.

BARBAJA, DOMENICO, born 1778 at Milan, of poor parentage; was successively waiter at a coffee-house on the Piazza, manager of an English riding-circus, lessee of the Cucagna playhouse at Naples, and director of the San Carlo theatre. While at Naples he made the acquaintance of Count Gallenberg, the Austrian ambassador, followed him to Vienna in 1821, and obtained the direction of both the 'Kärnthner-thor' theatre and that 'auf der Wien,' which he held till 1828. He was the first to introduce a subscription into the Vienna theatres. During his management the company embraced the best talent of the day, including Mesdames Colbran-Rossini, Sontag, Esther Mombelli, Giuditta Grisi, Mainvielle-Fodor, Feron, Canticelli; Signori Donzelli, Cicimarra, Bassi, Tamburini, Rubini, David, Nozzari, Lablache, Ambrogi, Benedetti, and Botticelli. The ballet was sustained by Duport, Salvatore, and Taglioni. Though Barbaja introduced Rossini into Vienna, he by no means neglected German opera, and under his management Weber's 'Euryanthe' was produced Oct. 25, 1823. He was at the same time manager of the two most celebrated opera-houses in Italy, La Scala at Milan, and San Carlo at Naples; not to mention some smaller operatic establishments also under his direction. Bellini's first opera, 'Bianca e Ferdinando,' was written for Barbaja and produced at Naples. His second opera, 'Il Pirata,' was also composed for Barbaja, and brought out at Milan. Several of Donizetti's works, and all Rossini's later works for the Italian stage, were first presented to the public by the famous impresario, who was destined one day himself to figure in an opera. Barbaja is at least introduced by name in 'La Sirène,' by Scribe and Auber. From his retirement till his death, Oct. 16, 1841, he resided on his property at Posilipo. He was very popular, and was followed to his grave by an immense concourse of people. C. F. P.

BARBELLA, EMANUELE, violinist. Born at Naples in the earlier part of the 18th century. The following short account of his musical education was written by himself at the request of Dr. Burney, who gives it in his *History* (iii. 570):—'Emanuele Barbella had the violin placed in his hand when he was only six and a half years old, by his father Francesco Barbella. After his father's decease he took lessons of Angelo Zaga, till the arrival of Pasqualino Bini, a scholar of Tartini, in Naples, under whom he studied for a considerable time, and then worked by himself. His first instructor in counterpoint was Michele Gabbalone; but his master dying, he studied composition under the instructions of Leo, till the time of his death.' He adds, 'Non per questo, Barbella e un vero asino che non sa niente'—'Yet, notwithstanding these advantages, Barbella is a mere ass, who knows nothing.' He wrote nine trios for two violins and violoncello, six duets for violin and violoncello, several books of easy duets for two violins, six sonatas for violin, and six duos for violin and bass, adhering closely to the principles of Tartini. Burney gives an example of his composition, and says that his tone and manner were 'marvellously sweet and pleasing, even without any other accompaniment than the drone-bass of an open string.' In 1753 an opera, 'Elmira generosa,' written in collaboration with Logroscino, was brought out at Naples, where Barbella died in 1773. E. H. D.

BARBER OF BAGDAD, THE (Der Barbier von Bagdad); comic opera in two acts, words and music by Peter Cornelius; produced at Weimar under Liszt, Dec. 16,[1] 1858, but so unfavourably received that only one performance was given, and this failure was the cause of Liszt's retirement from his post. Revived at Munich, Oct. 15, 1885. It was given in English, by the pupils of the Royal College of Music, at the Savoy Theatre, Dec. 9, 1891.

BARBER OF SEVILLE, THE. Operas of this name, founded on the celebrated play of Beaumarchais (1775), have been often produced. Two only can be noticed here: (1) that of Paisiello, first performed at St. Petersburg in 1780, and at Paris in 1789—at the 'Théâtre de Monsieur,' in the Tuileries, July 12, and at the Théâtre Feydeau, July 22; (2) that of Rossini—libretto by Sterbini—produced at Rome, Feb. 5, 1816; in London, at the King's Theatre, Jan. 27, 1818; and at Paris, in the Salle Louvois, Oct. 26, 1819. Rossini hesitated to undertake the subject previously treated by Paisiello, and before doing so obtained his permission. He is said to have completed the opera in 15 days. On its appearance in Paris an attempt was made to crush it by reviving Paisiello's opera, but the attempt proved an entire failure; Paisiello's day was gone for ever. G.

BARBERS OF BASSORA, THE. A comic opera in 2 acts; words by Madison Morton; music by John Hullah. Produced at Covent Garden, Nov. 11, 1837.

BARBI, ALICE, vocalist, is distinguished as one of the few Italians who have revived an art long lost to Italy, that, namely, of lyrical or concert singing.

Born at Bologna about 1860, Alice Barbi

[1] This date is given in the Leipzig *Signale* for Jan. 1859, but in Lina Ramann's *Life of Liszt* the day is given as the 15th.

inherited no small degree of musical talent. But although her early proficiency on the violin seemed to mark her as a musical prodigy, she underwent a course of training, not only in violin-playing under Verardi of Bologna, and afterwards Buzzoni, but also in general knowledge, music, and languages; travelling abroad at times with her father, and encouraged at home by princely friends and patrons. Barbi's voice, under instruction from Zamboni and Busi, and later, Vannuccini, developed into a mezzo-soprano of fine quality, extending to high B flat, and perfectly equal throughout the register.

Barbi's début as a vocalist took place at Milan on April 2, 1882. Shortly afterwards she was associated with Sgambati in a concert at Rome, and her success was assured. The matinées Barbi then ventured to give in many Italian towns were crowded, and critics were agreed in welcoming a singer of high rank in her art who yet was not an operatic singer. Melodies by the old Italian masters were now brought to light and interpreted 'with truth and sobriety of feeling' by this original and gifted artist. The agility of her voice, the beauty of her shake, and the perfection of her ornamental passages were praised by Sgambati in an article translated by Mr. Sutherland Edwards for *The Musical World*, 1885, p. 452.

Her successes were repeated in England, Germany, Russia, etc. She first appeared in London in 1884, singing at Signor de Lara's concert of June 24, and at the Popular Concerts of Nov. 1 and 15. Barbi sang again in London in January, June, and July, 1885. In the following year she gave recitals at the Princes Hall, July 11 and 18, 1886. There followed universal acknowledgment of the young artist's charm of voice and technical skill; above all, of her grasp of poetic intention and rendering of every shade of expression in songs by Caldara, Astorga, Jommelli, Mozart, Rossini, Schubert, Bizet, and Brahms, among others. These were given from memory in their respective languages.

Before and after her retirement from the concert platform Alice Barbi wrote poems, some of which have been set to music by Bazzini. An Italian appreciation of Barbi by G. B. Nappi, with a portrait, is in *La Gazzetta Musicale* of 1887, p. 122. L. M. M.

BARBIERI, Francisco Asenjo, born at Madrid, August 3, 1823, studied in the conservatorium there, and after a varied career as member of a military band, a theatre orchestra, and an Italian opera troupe, became secretary and chief promoter of an association for instituting a Spanish national opera and the distinctively Spanish type of operetta (zarzuela), in opposition to the Italian. 'Gloria y peluca' (1850), 'Jugar con fuero' (1851), were the first of his series of these operettas, of which he wrote seventy-five in all. Apart from the stage, he held a high position as teacher and critic; in 1859 he established a series of 'Concerts spirituels,' and was connected with various other institutions for the encouragement of good music. He died in Madrid, Feb. 19, 1894. M.

BARBIREAU,[1] Maître Jacques, a celebrated musician of the 15th century, choirmaster and teacher of the boys in the cathedral of Antwerp from 1448 till his death, August 8, 1491. Many of the great musicians of the 15th and 16th centuries were his pupils; he maintained a correspondence with Rudolph Agricola, and is constantly quoted by his contemporary Tinctor as one of the greatest authorities on music of his time. Of his compositions, a mass for five voices, 'Virgo parens Christi,' another for four voices, 'Faulx perverse,' and a Kyrie for the same, are in the imperial library at Vienna, and some songs for three and four voices in that of Dijon. Kiesewetter has scored the Kyrie from the first-named mass and a song for three voices, 'Lome (l'homme) bany de sa plaisance.' M. C. C.

BARCAROLE (Fr.)—Ital. *Barcaruola*—a 'boat-song.' Pieces of music written in imitation or recollection of the songs of Venetian *barcaruoli* as they row their gondolas. Barcaroles have been often adopted by modern composers; as by Hérold in 'Zampa'; by Auber in 'Masaniello' and 'Fra Diavolo'; by Donizetti in 'Marino Faliero'; by Schubert, 'Auf dem Wasser zu singen' (Op. 72); by Chopin for Piano solo (Op. 60); and by Sterndale Bennett for Piano and Orchestra in his 4th Concerto. Mendelssohn has left several examples. The first 'Song without words' that he composed—published as Op. 19, No. 6—is the 'Venetianisches Gondellied' in G minor, which the autograph shows to have been written at Venice Oct. 16, 1830. Others are Op. 30, No. 6; Op. 62, No. 5; and the beautiful song, Op. 57, No. 5, 'Wenn durch die Piazzetta.' One essential characteristic in all these is the alternation of a strong and a light beat in the movement of 6–8 time—Chopin's alone being in 12–8—with a triplet figure pervading the entire composition, the object being perhaps to convey the idea of the rise and fall of the boat, or the regular monotonous strokes of the oars. The autograph of Bennett's barcarole is actually marked 'In rowing time.' The *tempo* of the barcaroles quoted above differs somewhat, but is mostly of a tranquil kind. The 'Gondoletta' entitled 'La Biondina,' harmonised by Beethoven, and given in his '12 verschiedene Volkslieder' (Nottebohm's Catalogue, p. 176), though of the same character as the boatmen's songs, is by Pistrucci, an Italian composer. W. H. C.

BARCROFTE, Thomas, a composer of whose biography nothing is known. A Te Deum and Benedictus (in F), and two anthems are ascribed to him in Tudway's MS. Collection. The former, an early copy of which is in the Cathedral

[1] Called also Barbiriau, Barbicola, Barbyriauus, Barbarian, Barwyrianus, and Barbingant.

library at Ely (where he is said to have been organist in 1535), are dated 1532, a date much too early for an English setting of these hymns. It seems much more probable that the author of these compositions was George Barcrofte [who matriculated as a sizar of Trinity College, Cambridge, on Dec. 12, 1574, and took the degree of B.A. in 1577-78. He was a minor canon and] organist of Ely Cathedral in 1579, and is supposed to have died in 1610. The service above mentioned, and one of the anthems, 'O Almighty God,' were printed by the Motett Society. E. F. R.

BARD. The following definition is given in Murray's *Oxford Dictionary*: — 'An ancient Celtic order of minstrel-poets, whose primary function appears to have been to compose and sing (usually to the harp) verses celebrating the achievements of chiefs and warriors, and who committed to verse historical and traditional facts, religious principles, laws, genealogies, etc. . . . In Welsh specifically, a poet or versifier who has been recognised at the Eisteddfod.' The functions of bards, which were at least as much political as musical, descended in many cases from father to son, and they were naturally very important in the early periods of national history. The attempted extermination of the Welsh bards by Edward I. in 1284 implies that they were far from being the merely pacific, picturesque old minstrels with which fiction has generally been concerned; but their political importance seems to have been greater in Wales than in any other country. Both in Wales and Ireland they were supposed to be able to read the future; in Scotland their ancient dignity was so far lost in the 15th century that laws were enacted against them, and they were classified with beggars and other vagabonds. No doubt, in all three countries, they did more than any other class of persons to preserve the traditional music, just as was done in England by the gleemen, and in Scandinavia by the scalds. The composition of extempore rhymes in celebration of any patron or his friends formed part of the duties of bards in the later days of their existence; and this form of skill has been continued by the work of the modern or revived Eisteddfodau, where the singing of impromptu 'penillions' is still rewarded with prizes. Independently of this artificial support, the same practice continued down to the middle of the 19th century in such places as Evans's supper rooms, after the manner recorded in the first chapter of *The Newcomes*. The 'bardic' rites and customs which take place at the Eisteddfodau in various parts of England and Wales, or at the preliminary Gorsedd, a year and a day before each, are of rather doubtful authenticity. See EISTEDDFOD. M.

BARDELLA, ANTONIO NALDI, called 'Il Bardello,' chamber-musician to the Duke of Tuscany at the end of the 16th and beginning of the 17th centuries, and, according to Arteaga, inventor of the Theorbo. Caccini states that he was an admirable performer on that instrument.

BARDI, GIOVANNI, Count of Vernio, a Florentine noble, lived in the end of the 16th century, an accomplished scholar and mathematician, member of the Academy Della Crusca, and of the Alterati in Florence, maestro di camera to Pope Clement VIII. Doni attributes to him the first idea of the opera, and it is certain that the first performances of the kind were held in his house by his celebrated band of friends, Vicenzo Galilei, Caccini, Strozzi, Corsi, Peri, and Rinuccini, and that he himself composed the words for more than one such piece, *e.g.* 'L'amico fido,' and 'Il combattimento d'Apollino col serpente.' [A four-part composition, 'Miseri habitator,' by him appeared in Malvezzi's *Intermedii*, 1591, and a five-part madrigal is attributed to him by Vogel, *Biblioth. d. gedruckten weltl. Vocalmusik*, ii. 429, in a collection of 1582: Eitner (*Quellen-Lexikon*) considers that the name is only given as that of the person to whom the madrigal was dedicated.] M. C. C.

BARGAGLIA, SCIPIONE, a Neapolitan composer and contrapuntist, mentioned by Cerreto, lived in the second half of the 16th century. According to Burney the word 'Concerto' occurs for the first time in his work 'Trattenimenti . . . da suonare' (Venice, 1587).

BARGIEL, WOLDEMAR, son of a teacher of music at Berlin, and step-brother of Mme. Clara Schumann (his mother being the divorced wife of Friedrich Wieck), was born at Berlin, Oct. 3, 1828. He was made to play the piano, the violin, and organ at home, and was instructed in counterpoint by Dehn. As a youth of eighteen, and in accordance with the advice of his brother-in-law, Robert Schumann, he spent two years at the Conservatorium of Leipzig, which was then (1846) under Mendelssohn's supervision; and, before leaving it, he attracted general attention by an octet for strings, which was performed at one of the public examinations.

After his return to Berlin, in 1850, he commenced work as a teacher, and increased his reputation as a composer by the publication of various orchestral and chamber works, as well as pianoforte pieces. In 1859 he was called to a professorship at the Conservatorium of Cologne, which, in 1865, he exchanged for the post of capellmeister, and director of the institute of the Maatschappij tot bevordering van toonkunst at Rotterdam. In 1874 he was appointed professor at the Königliche Hochschule für Musik, which is now flourishing under the leadership of Joachim, at Berlin. He is a member of the senate of the Academy of Arts, and is at the head of one of the three 'Meisterschulen für musikalische Composition' connected with the Academy.

As a composer, Bargiel must be ranked among the foremost disciples of Schumann. He makes up for a certain lack of freshness and spontaneity

in his themes by most carefully elaborated treatment. Besides his pianoforte pieces, op. 1-5, and his trios for pianoforte and strings, three overtures for full orchestra, 'Prometheus,' op. 16, 'Zu einem Trauerspiel,' and 'Medea,' and the 23rd Psalm for female voices should be particularly mentioned [as well as a Symphony in C, op. 30; 13th Psalm, for chorus and orchestra, op. 25; for pianoforte the Suites, op. 7 and 13, and a Sonata, op. 34; an intermezzo for orchestra, 3 trios, 4 string quartets, and smaller choral works]. E. D.

BARITONE (Ital. *Baritono;* Fr. *Baryton, Basse-Taille, Concordant*). The male voice intermediate to the bass and the tenor. The compound βαρύστονος signifies 'of heavy *timbre,*'—in this instance, *in relation to the tenor.* It is therefore a misnomer; for, however close their approximation in compass, the quality of what is now understood by the baritone voice unmistakably marks it as a high bass, not a low tenor. The recognition of this important fact is manifest in the works of the majority of modern composers. One instance out of many will suffice. The principal part in Mendelssohn's oratorio 'Elijah' ranges from the C in the bass stave to the F above it, very rarely descending below the former note. Sung, as it might be with perfect —or too much—ease, by a low tenor, it would obviously lose all its dignity and breadth. Since the production of Mozart's 'Nozze di Figaro' and 'Don Giovanni' the baritone voice has found much favour with composers, and been cultivated with unprecedented success. Innumerable principal parts have been written for it; and not to speak of artists of this class still before the public, the names of Bartleman in England, of Ambrogetti in Italy, and of Martin in France, are historical. [BASS]. J. H.

BARITONE, the name usually applied to the althorn in B♭ or C. It stands in the same key as the euphonium, but the bore being on a considerably less scale, and the mouth-piece smaller, it gives higher notes and a less volume of tone. It is almost exclusively used in reed and brass bands, to the latter of which it is able to furnish a certain variety of quality. See SAXHORN. W.H.S.

BARKER, CHARLES SPACKMAN, was born at Bath, Oct. 10, 1806. Left an orphan at five years old, he was brought up by his godfather, who gave him such an education as would fit him for the medical profession. But Barker, accidentally witnessing the operations of an eminent London organ-builder, Bishop, who was erecting an organ in his neighbourhood, determined on following that occupation, and placed himself under the builder for instruction in the art. Two years afterwards he returned to Bath and established himself as an organ-builder there. About 1832 the newly-built large organ in York Minster attracted general attention, and Barker, impressed by the immense labour occasioned to the player by the extreme hardness of touch of the keys, turned his thoughts towards devising some means of overcoming the resistance offered by the keys to the fingers. The result was the invention of the pneumatic lever, by which ingenious contrivance the pressure of the wind which occasioned the resistance to the touch was skilfully applied to lessen it. Barker offered his invention to several English organ-builders, but finding them indisposed for financial reasons to adopt it, he went to Paris, where he arrived in 1837 about the time that Cavaillé-Col was building a large organ for the church of St. Denis. To that eminent builder he addressed himself, and Cavaillé, seeing the importance of the invention, immediately adopted it. The pneumatic lever was also applied to the organs of St. Roch and the Madeleine. Barker took out a patent for it in 1839. About 1840 he became director of the business of Daublaine and Callinet (afterwards Ducroquet, and later Merklin and Schütz), and built in 1845 a large organ for the church of St. Eustache, which was unfortunately destroyed by fire six months after its erection. He also repaired the fine organ of the church of St. Sulpice. At the Paris Exhibition of 1855 he received a first-class medal and the Cross of the Legion of Honour. Later the pneumatic lever came gradually into use in England, and his patent for electric organs was purchased by Bryceson of London. He remained with Merklin until 1860, when he set up a factory of his own under the firm of Barker and Verschneider, and built the organs of St. Augustin and of Montrouge in Paris, both electric. The war of 1870 caused him to leave Paris and return to England, when he built the organs for the Catholic cathedrals of Cork and Dublin. He died at Maidstone, Nov. 26, 1879.

W. H. H. and V. DE P.

BARLEY, WILLIAM. One of the early English music printers. He worked under an 'assignment' of the music printing patent conferred on Thomas Morley by Queen Elizabeth in 1598. Barley, as bookseller and printer, lived, in 1592, in Gracechurch Street, and worked until at least 1614. His printing was particularly bold and good, and though his bibliography is rather limited, yet it includes many important works. He printed *A Newe Booke of Tabliture,* 1596; *The Patheway to Musicke,* 1596; Anthony Holborne's 'Pavans, Galliards, Almains, and other short Æirs,' 1599; Alison's 'Psalms,' 1599; John Farmer's First Set of 'Madrigals,' 1599; John Bennet's 'Madrigalls to Foure Voyces,' 1599; Weelke's 'Ayeres or Phantasticke Spirites,' 1608; 'Pammelia,' 1609; and Robinson's 'New Citharen Lessons,' 1609. F. K.

BARNARD, CHARLOTTE ALINGTON, known by her pseudonym of 'Claribel,' was born Dec. 23, 1830, and married Mr. C. C. Barnard in 1854. She received some instruction in the elements of composition from W. H. Holmes, and between 1858 and 1869 published some

hundred ballads, most of which attained an extraordinary popularity of a transient kind. A volume of *Thoughts, Verses, and Songs* was published, and another volume of poems was printed for private circulation. She died at Dover, Jan. 30, 1869. (*Dict. of Nat. Biog.*) W. B. S.

BARNARD, REV. JOHN, a minor canon of St. Paul's Cathedral in the time of Charles I., was the first who published a collection of cathedral music. His work appeared in 1641 under the title of 'The First Book of Selected Church Musick, consisting of Services and Anthems, such as are now used in the Cathedrall and Collegiat Churches of this Kingdome. Never before printed. Whereby such Bookes as were heretofore with much difficulty and charges, transcribed for the use of the Quire, are now to the saving of much Labour and expence, publisht for the general good of all such as shall desire them either for publick or private exercise. Collected out of divers approved Authors.' The work was printed, without bars, in a bold type, with diamond headed notes, in ten separate parts—medius, first and second contratenors, tenor and bassus for each side of the choir, Decani and Cantoris. A part for the organ is absolutely necessary for some of the verse anthems in which intermediate symphonies occur, but it is extremely doubtful whether it was ever printed. From many causes—the wear and tear resulting from daily use in choirs, the destruction of service-books during the civil war, and others—it happened that a century ago no perfect copy of this work was known to exist, the least imperfect set being in Hereford Cathedral, where eight of the ten vocal parts (some of them mutilated) were to be found, the bassus decani and medius cantoris being wanting. It so remained until Jan. 1862, when the Sacred Harmonic Society acquired by purchase a set consisting also of eight vocal parts, including the two wanting in the Hereford set, and some also being mutilated. A duplicate of the bassus decani which had been with this set was purchased by the Dean and Chapter of Hereford, and a transcript of the imperfect medius cantoris was permitted by the Society to be taken for them, so that the Hereford set still retains its pre-eminence. The work does not include the compositions of any then living author, the compiler in his preface declaring his intention of giving such in a future publication.

Its contents are as follows :—

TALLIS. 1st Serv. 4 voices, D min.
N. STROGERS. 4 v. D min.
E. BEVIN. 4 and 5 v. D min.
W. BYRD. 4, 5 and 6 v. D min.
O. GIBBONS. 4 v. F.
W. MUNDY. 4, 5 and 8 v. D min.
R. PARSONS. 4, 5, 6 and 7 v. F.
T. MORLEY. 1, 2, 3, 4 and 5 v. D min.
Dr. GYLES. 1, 2, 3, 4, 6 and 8 v. C. [The above are Mg. and Ev. Services complete, and are each entitled '1st Service.']
Mr. WARD. Mag. and N. D. 1, 2, 3, 4 and 5 v. G min.
Mr. WOODSON. Te Deum, 4 v. D min.
BYRD. 2nd Serv. with verses, Mag. and N. D. G min.
BYRD. 3rd S., Mag. and N. D. 5 v. C.
MORLEY. 2nd S., Mag. and N. D. 5 v. G.
O. GIBBONS. 2nd S., Mg. and Ev. 1, 2, 3, 4 and 5 v. D minor.
TALLIS. 1st Preces.
Do. 1st Ps. to do. Wherewithall.
Do. 2nd Ps. O doe well.
Do. 3rd Ps. My soul cleaveth.
BYRD. 1st Preces.
Do. 1st Ps. to do. O clap.
Do. 2nd Ps. Save me, O God.
Do. 2nd Preces.
Do. 1st Ps. to do. When Israel.
BYRD. 2nd Ps. Hear my prayer.
Do. 3rd Ps. Teach me, O Lord.
O. GIBBONS. 1st Preces.
Do. Ps. to do. Thou openest.
TALLIS. Responses, Prayer, etc.
Do. Litany.

Full Anthems, 4 parts.

TALLIS. O Lord, give thy Holy Spirit.
E. HOOPER. Teach me.
FARRANT. Hide not Thou.
Do. Call to remembrance.
J. SHEPHEARD. Haste Thee.
Do. (2nd pt.) But let all.
W. MUNDY. O Lord, the Maker.
Do. O Lord, the world's Saviour.
O. GIBBONS. Deliver us.
Do. (2nd pt.) Blessed be.
O. GIBBONS. Almighty and everlasting.
BATTEN. O praise the Lord.
Do. Hide not Thou.
Do. Lord, we beseech Thee.
Do. Haste Thee, O God.
Do. (2nd pt.) But let all those.
Do. When the Lord.
Dr. TYE. I will exalt Thee.
Do. (2nd pt.) Sing unto the Lord.
Do. Deus misereatur. [Divided into 3 little anthems.]

Full Anthems of 5 parts.

TALLIS. With all our hearts.
Do. Blessed be Thy name.
E. HOOPER. O Thou God Almighty.
TALLIS. I call and cry.
MUNDY. O Lord, I bow.
BYRD. Prevent us.
E. HOOPER. Behold it is Christ.
ROBT. WHITE. The Lord bless us.
TALLIS. Wipe away.
BYRD. O God, whom our offences.
Do. O Lord, make thy servant Charles.
Dr. TYE. I lift my heart.
BYRD. O Lord, turn.
Do. (2nd pt.) Bow Thine ear.
Dr. GILES. O give thanks.

Full Anthems for 6, 7, 8 parts.

BYRD. Sing joyfully, 6 v.
R. PARSONS. Deliver me, 6 v.
O. GIBBONS. Hosanna, 8 v.
Do. Lift up your heads, 6 v.
WEELKES. O Lord, grant, 6 and 7 v.

Anthems with Verses.

BYRD. O Lord, rebuke me not.
Do. Hear my prayer.
W. MUNDY. Ah, helpless wretch.
MORLEY. Out of the deep.
O. GIBBONS. Behold Thou hast.
BATTEN. Out of the deep.
WARD. I will praise.
BYRD. Thou God.
Do. Christ rising.
Do. (2nd pt.) Christ is risen.
Dr. BULL. Deliver me.
WARD. Let God arise.

From the printed and manuscript parts, aided by other old manuscript organ and voice parts, Mr. John Bishop of Cheltenham made a score of the work, which, it is to be regretted, remains unpublished. It is now in the British Museum.

Seven separate parts of the MS. collections made by Barnard for this work, comprising upwards of 130 services and anthems besides those included in the published work, together with the set of parts which likewise belonged to the Sacred Harmonic Society, are now in the library of the Royal College of Music. W. H. H.

BARNBY, SIR JOSEPH, son of Thomas Barnby, an organist, was born at York, August 12, 1838. He entered the choir of the minster when seven years old, and was an organist and choirmaster at twelve. In 1854 he entered the Royal Academy of Music, and was, two years afterwards, narrowly defeated by Sir Arthur Sullivan in the competition for the first Mendelssohn Scholarship. He was organist successively at Mitcham, St. Michael's, Queenhithe, and St. James' the Less, Westminster, before he was appointed to St. Andrew's, Wells Street, where he remained from 1863 to 1871, establishing the musical reputation of the services. From 1871 to 1886 he was organist of St. Anne's, Soho, where he instituted the annual performances of Bach's Passion Music according to St. John, with orchestral accompaniment. In 1867 Messrs. Novello, to whom he had been musical adviser since 1861, established 'Barnby's Choir,' which gave 'oratorio concerts' from 1869 till 1872, when it was amalgamated with the choir formed and conducted by Gounod at the Albert Hall, under the title of the 'Royal Albert Hall Choral Society' (now the 'Royal Choral Society'). The same firm of publishers also gave daily concerts in the Albert Hall in 1874-75 which were conducted by Barnby. He had conducted the St. Matthew Passion in Westminster Abbey in 1871, and in 1878, when the

London Musical Society was formed, he became its conductor, and under his baton the Society produced Dvořák's 'Stabat Mater' for the first time in England, March 10, 1883. He gave up the post in 1886, being succeeded by Sir A. C. Mackenzie. He was appointed precentor of Eton in 1875—a post of the highest importance in the musical education of the upper classes—and retained it till 1892, when he succeeded Thomas Weist-Hill as principal of the Guildhall School of Music. In 1886-88 he was conductor of the rehearsals and concerts of the Royal Academy of Music, of which he was a fellow. On Nov. 10, 1884, he conducted the first performance in England of Wagner's 'Parsifal' as a concert in the Albert Hall. He was knighted on August 5, 1892, and later in the same year conducted the Cardiff Festival; he conducted the same festival in 1895, and a few months afterwards he died suddenly in London, on Jan. 28, 1896. He was buried in Norwood Cemetery, after a special service in St. Paul's Cathedral. Barnby's compositions include an oratorio, 'Rebekah' (1870), a psalm, 'The Lord is King' (Leeds Festival, 1883), an enormous number of services and anthems, part-songs, and vocal solos, trios, etc.; a series of 'Eton Songs' had a great popularity with the class for which they were intended; he wrote also 246 hymn-tunes, published in one vol. in 1897; and edited five hymn-books, the most important of which was 'The Hymnary' (1872). [*Dict. of Nat. Biog.*]

Having regard to the lack of genuine inspiration in much of Barnby's music, it would be easy to underrate his work altogether, but there can be no doubt that he did much to popularise music with a certain class, and it is only fair to remember that if he fostered the admiration for Gounod's less satisfactory compositions, he also stimulated the love of Bach. As a choir-master he had great gifts, and managed to secure a wonderful degree of accuracy; under him, choir-singing was a kind of drill, and the precision he obtained, though valuable in itself, was not equally suited to all kinds of music. M.

BARNETT, JOHN, born at Bedford, July 15, 1802. His mother was a Hungarian, and his father a Prussian, whose name was Bernhard Beer, which was changed to Barnett Barnett on his settlement in England as a jeweller. It is worthy of remark that he was a second cousin of Meyerbeer. In his infancy John showed a marked predilection for music, and as his childhood advanced proved to have a fine alto voice. At the age of eleven he was articled to S. J. Arnold, proprietor of the Lyceum, Arnold engaging to provide him with musical instruction in return for his services as a singer. The young vocalist accordingly appeared upon the stage at the Lyceum, July 22, 1813, in 'The Shipwreck,' and continued a successful career until the breaking of his voice. During this time he was receiving instruction in music, first from C. E. Horn, and afterwards from Price, the chorus-master of Drury Lane. He wrote, while yet a boy, a mass and many lighter pieces, some of which were published. At the expiration of his term with Arnold he took pianoforte lessons of Perez, organist of the Spanish embassy, and subsequently of Ferdinand Ries. From the latter he received his first real lessons in harmony.

His first essay for the stage was the musical farce of 'Before Breakfast' (Lyceum, 1825), the success of which induced him to continue the line he had commenced. Among the pieces he subsequently wrote may be enumerated 'Monsieur Mallet,' 'Robert the Devil,' 'Country Quarters,' 'Two Seconds,' 'The Soldier's Widow,' 'The Picturesque,' 'Married Lovers,' 'The Deuce is in her,' 'Charles the Twelfth' (which contained the popular Ballad 'Rise, gentle Moon), and 'The Carnival of Naples,' the latter performed at Covent Garden in 1830. Meantime he was not unmindful of the higher branches of his art, and in 1830 published his oratorio of 'The Omnipresence of the Deity,' which has never been performed in public. In 1831 he brought out at Sadler's Wells 'The Pet of the Petticoats,' subsequently transplanted to the greater theatres. This was his most important dramatic work up to this period. It was deservedly popular, and contained dramatic music then new to the English stage.

In 1832 Barnett was engaged by Madame Vestris as music-director of the Olympic Theatre, for which he wrote a number of popular musical pieces—'The Paphian Bower,' 'Olympic Revels,' 'The Court of Queen's Bench,' 'Blanche of Jersey,' etc. Also for Drury Lane a lyrical version of Mrs. Centlivre's 'Bold stroke for a Wife,' with Braham in the principal character. Under the title of 'Win her and Wear her' this piece was played for a few nights, but failed to obtain the success it merited, partly owing to the inappropriateness of the subject. The music contains many gems introduced by the composer into his later works.

In 1834 he published his 'Lyrical Illustrations of the Modern Poets,' a collection of songs of remarkable beauty and poetic feeling; and shortly afterwards 'Songs of the Minstrels,' and 'Amusement for Leisure Hours.' These productions, the first especially, raised him in the estimation of the musical world.

Barnett's great work, 'The Mountain Sylph,' was produced at the Lyceum on August 25, 1834, with remarkable success. It was originally designed as a musical drama for one of the minor theatres, and afterwards extended into complete operatic form. It met with some opposition on the first night, but soon became a standard favourite. 'Here then,' says Professor Macfarren, 'was the first English opera constructed in the acknowledged form of its age since Arne's time-honoured "Artaxerxes"; and it owes its importance as a work of art, not

more to the artistic mould in which it is cast than to the artistic, conscientious emulous feeling that pervades it. Its production opened a new period for music in this country, from which is to be dated the establishment of an English dramatic school, which, if not yet accomplished, has made many notable advances.' Barnett dedicated the work to his old master, Arnold, extolling him as the fosterer of the British Muse; but before the year was out he changed his tone, complaining in the public prints that this same manager had refused to pay him for the composition of a new opera.

He now spent some time in Paris, with the purpose of producing there his opera of 'Fair Rosamond,' but returned, on the invitation of Bunn, to bring out the work at Drury Lane. It was performed Feb. 28, 1837, with indifferent success, mainly owing to its ill-constructed libretto. It is full of charming music, and, wedded to a new poem, might command attention from an audience of the present day. In this year Barnett married the daughter of Lindley the violoncellist, with whom he went to Frankfort, with the view of studying Vogler's system of harmony and the principles of composition under Schneider von Wartensee. Here he wrote a symphony and two quartets, which are still unpublished. On his return to London in 1838, he produced his opera of 'Farinelli' at Drury Lane (Feb. 8, 1839), perhaps his best work. In this year, in conjunction with Morris Barnett, the actor, dramatist, and journalist, he opened the St. James's Theatre, with the intention of founding an English opera house; but (owing to unforeseen circumstances) the theatre prematurely closed at the end of the first week.

At the beginning of 1841 Barnett established himself as a singing master at Cheltenham, where he had an extensive practice. In later life, after a residence of some years in Germany and Italy, for the education of his children, he went to live in the district of the Cotswolds, and died there on the night of April 16-17, 1890. In 1842 he published a pamphlet of sixty pages, entitled 'Systems and Singing Masters: an analytic comment upon the Wilhem System as taught in England'—cleverly and caustically written, but unjustly severe upon Hullah; in 1844 appeared his 'School for the Voice.'

An unpublished opera, 'Kathleen,' to a libretto by Sheridan Knowles, is highly spoken of by those who have heard the music. His single songs are said to number nearly four thousand. (*Imp. Dict. of Univ. Biog.; Private sources.*) E. F. R.

BARNETT, John Francis, nephew of the preceding, son of Joseph Alfred Barnett, a professor of music, who died April 29, 1898, was born in London, Oct. 16, 1837. He began the study of the pianoforte when six years old under the guidance of his mother. When eleven he was placed under Dr. Wylde. The boy progressed rapidly in his studies, and a twelvemonth later became a candidate for the Queen's Scholarship at the Royal Academy of Music. This he gained, and at the expiration of two years, the duration of the scholarship, he competed again, and was again successful. During the first year of his scholarship he played Mendelssohn's Concerto in D minor at the New Philharmonic Society, under the direction of Spohr (July 4, 1853). The second scholarship coming to an end in 1857, he visited Germany, studied under Hauptmann and Rietz at the Conservatorium at Leipzig, and performed at the Gewandhaus (Mar. 22, 1860). At the expiration of three years he returned to London and played at the Philharmonic, June 10, 1861. The first composition that brought the young composer into notice was a symphony in A minor, produced at the Musical Society of London (June 15, 1864). He has since written several quartets and quintets for string instruments, pianoforte trios, as well as an 'Overture Symphonique' for the Philharmonic Society (May 11, 1868), a concerto in D minor, and other works. In 1867, at the request of the committee of the Birmingham Festival, he composed his cantata 'The Ancient Mariner,' on Coleridge's poem, which was an acknowledged success. In 1870 he received a second commission from the Birmingham Festival committee to write a cantata, and this time he chose 'Paradise and the Peri,' which was performed the same year with great success. Both these works have been given repeatedly in England and the Colonies. Mr. Barnett next wrote his overture to Shakespeare's 'Winter's Tale,' for the British Orchestral Society, which performed it Feb. 6, 1873. In the same year he produced his oratorio 'The Raising of Lazarus,' which may be regarded as his most important work. In 1874 he received a commission to compose an instrumental work for the Liverpool Festival, when he chose for his theme Scott's 'Lay of the Last Minstrel.' [The oratorio 'The Good Shepherd' was performed at the Brighton Festival of 1876, the successful cantata 'The Building of the Ship' at the Leeds Festival of 1880, an orchestral suite, 'The Harvest Festival,' at the Norwich Festival of 1881, 'The Triumph of Labour,' Crystal Palace, 1888, and 'The Wishing Bell,' a cantata for female voices, Norwich Festival, 1893. In 1883 he completed a symphony in E flat by Schubert, from autograph sketches in the possession of Sir G. Grove; it was performed at the Crystal Palace, where, in December of the same year, two orchestral sketches, 'The Ebbing Tide' and 'Elf Land,' were given. Two more, 'The Flowing Tide' and 'Fairy Land,' made their appearance in the same concert-room in 1891, and 'Liebeslied' and 'Im Alten Styl' in 1895. Yet another pair of pieces, this time for strings only, 'Pensée mélodique' and 'Gavotte,' were played in London in Jan. 1899. In addition to the above, mention should be made of an orchestral symphony

in A minor (1864), a 'Pastoral Suite' (1892), a Concerto Pastorale for flute and orchestra, a Sonata in E minor for flute and pianoforte, a Scena for contralto, 'The Golden Gate,' a number of pianoforte compositions (two sonatas, three impromptus, and shorter pieces), and vocal works, including a 'Tantum Ergo' in eight parts.] E. F. R.

BARON, Ernst Theophilus, a famous lute player, born at Breslau, Feb. 17, 1696. His first instruction was obtained from Kohatt, a Bohemian, in 1710, next in the Collegium Elizabethanum at Breslau; and he afterwards studied law and philosophy at Leipzig. After residing in Halle, Cöthen, Zeitz, Saalfeld, and Rudolstadt, he appeared in Jena in 1720, whence he made an artistic tour to Cassel, Fulda, Würzburg, Nuremberg, and Regensburg, meeting everywhere with brilliant success. In Nuremberg he made some stay, and there published his 'Historisch-theoretisch und practische Untersuchung des Instrumentes der Lauten' (J. F. Rüdiger, 1727), to which he afterwards added an appendix in Marpurg's *Historisch-kritische Beiträge*, etc. In 1727 Meusel, lutenist at the court of Gotha, died, and Baron obtained the post in 1728, which, however, he quitted in 1732, after the death of the duke, to join the court band at Eisenach; in 1735 he became theorbist to the Crown Prince, afterwards Frederick the Great, at Rheinsberg, and in 1737 he undertook a tour by Merseburg and Cöthen to Berlin, and was engaged by King Friedrich Wilhelm I. as theorbist. Weiss, the great theorbist, was at that time living in Dresden, and from him, Hofer, Kropfgans, and Belgratzky, a Circassian, Baron soon learnt the instrument. After this he remained in Berlin till his death, April 12, 1760; and published there a great number of short papers on his instrument and music in general. A few compositions for the lute are mentioned in the *Quellen-Lexikon*. F. G.

BARONESS, THE, an artist of German origin, as is supposed, who sang in the operas abroad and in London, and was known by no other name. She sang the part of Lavinia, in the opera of 'Camilla,' by Bononcini (Drury Lane, 1706), and that of Eurilla in 'Love's Triumph,' at the Haymarket, some time afterwards. She was a perfect mistress of the grandest method of singing, an art which was even then becoming rare, and she shared that proud pre-eminence with but a few such singers, as Cornelio Galli, Tosi, and Siface. She took a great part, with Sandoni, in the teaching and cultivation of Anastasia Robinson, so far as that singer would submit to receive any instruction at all; being herself, at the same time, engaged at the Opera, and 'greatly caressed,' as Hawkins informs us. Her name must not be confounded with that of Hortensia, the mistress of Stradella, as was done by Humfrey Wanley, the compiler of the Harleian Catalogue, relying on the information of his friend Berenclow; for that unfortunate lady was, according to the best accounts, assassinated at the same time with her lover. J. M.

BARRE, Antonio, was of French extraction, but the place and date of his birth are unknown. We find him as a composer of established repute at Rome in 1550, and in 1552 he was an alto in the choir of St. Peter's. A book of his own madrigals was published in Rome in 1552 [*Vogel, Bibl. d. ged. weltl. Musik*], and in 1555 he started in that capital a printing-press, which he afterwards removed to Milan, and from which he published a series of seven volumes containing pieces by himself and other writers. The titles of these are as follows:—(1) 'Primo Libro delle Muse a 5 voci, Madrigali di diversi Autori.' (2) 'Primo Libro delle Muse a 4 voci, Madrigali ariosi di Antonio Barre ed altri diversi autori.' Both of these volumes were dated 1555, and were dedicated, the first to Onofrio Virgili, the second to the Princess Felice Orsini. (3) 'Secondo Libro delle Muse, a 5 voci, Madrigali d'Orlando di Lasso,' 1557. (4) 'Secondo Libro delle Muse a quattro voci, Madrigali ariosi di diversi eccellentissimi Autori, con due Canzoni di Gianetto' (*i.e.* Palestrina), 'di nuovo raccolti e dati in luce. In Roma appresso Antonio Barre 1558.' (5) 'Madrigali a quattro voci di Francesco Menta novamente da lui composti e dati in luce; in Roma per Antonio Barre 1560.' (6) 'Il Primo Libro di Madrigali a quattro voci di Ollivier Brassart. In Roma per Antonio Barre 1564.' Of this last only the alto part is known to exist, having been actually seen by Fétis. (7) 'Liber Primus Musarum cum quatuor vocibus, seu sacræ cantiones quas vulgo Mottetta appellant. Milan, Antonio Barre, 1588.' Out of these seven works even the learned and indefatigable Baini had only thoroughly satisfied himself as to the existence of the first two, but copies of the third and fourth are at Bologna and elsewhere. [Eitner's *Quellen-Lexikon*.] The last is said to contain no less than twenty-nine pieces by Palestrina, besides specimens of the work of Orlando Lasso, Rore, Animuccia, and other rare masters. E. H. P.

BARRE, Leonard, a native of Limoges, and pupil of Willaert, a singer in the Papal Chapel from 1537 till 1552, and thus contemporary with Arcadelt. He was one of the musicians sent by the Pope to the Council of Trent in 1545 to give advice on church music. His claims as a composer rest on some motets and madrigals published in a collection at Venice in 1544, and on MS. compositions preserved in the Hofbibliothek at Munich, and the ducal library at Wolfenbüttel. J. R. S. B.

BARRET, Apollon Marie-Rose, a remarkable oboe player, born in the south of France in 1804, pupil of Vogt at the Conservatoire, solo player at the Odéon and Opéra Comique, and at last permanently attached to the Italian Opera in London till 1874. Barret was the author of the

'Complete Method for the Oboe, comprising all the new fingerings, new tables of shakes, scales, exercises,' etc. He died Mar. 8, 1879. F. G.

BARRETT, JOHN, born about 1674, died about 1735, was a pupil of Dr. Blow, and was music master at Christ's Hospital and organist of the church of St. Mary-at-Hill about 1710. Many songs by him are in the collections of the period, such as D'Urfey's 'Wit and Mirth,' in which is 'Ianthe the lovely,' which furnished the tune of 'When he holds up his hand' in 'The Beggar's Opera.' Barrett composed overtures and act tunes for 'Love's last Shift, or, The Fool in Fashion,' 1696, 'The Pilgrim,' 1700, 'The Generous Conqueror,' 1702, 'Tunbridge Walks,' 1703, and 'Mary, Queen of Scots,' 1703. W. H. H.

BARRETT, THOMAS. See VIOLIN-MAKERS.

BARRETT, WILLIAM ALEXANDER, English writer on music; born at Hackney, Oct. 15, 1834; was a chorister at St. Paul's, from 1846 to 1849, principal alto at St. Andrew's, Wells St., 1858-61, and in the latter year lay-vicar at Magdalen College, Oxford. He was organist of St. John's, Cowley, Oxford, from 1863 to 1866; assistant vicar-choral, St. Paul's, 1867, and vicar-choral, 1876 [*British Musical Biography*]. He was a Mus. Bac. of Oxford (1871). He published *English Glee and Madrigal Writers* (1877), *English Church Composers* (1882), *Balfe, his Life and Work* (1882), and other works; he was joint-editor with Stainer of the *Dictionary of Musical Terms* (1875). He was musical critic of the *Morning Post* from 1869 till his death; for some time edited the *Monthly Musical Record*, and the *Musical Times*. He died Oct. 17, 1891. G.

BARRINGTON, DAINES, The Hon., born in London, 1727, died there, March 14, 1800, Recorder of Bristol and puisne judge in Wales, is mentioned here as the author of an account of Mozart during his visit to London in 1764, at eight years of age, in the *Philosophical Transactions* for 1780 (vol. xi.). Barrington also published *Miscellanies* (London, 1781), in which the foregoing account is repeated, and a similar account is given of the early powers of four other children, William Crotch, Charles and Samuel Wesley, and Lord Mornington. He also wrote papers on the singing of birds, and on the ancient Welsh crwth and pib-corn. M. C. C.

BARRY, CHARLES AINSLIE, born in London June 10, 1830, was educated at Rugby School and Trinity College, Cambridge; was a pupil of T. A. Walmisley, and afterwards studied music at Cologne, Leipzig, and Dresden. He contributed for long to the *Guardian*, edited the *Monthly Musical Record*, 1875-79, and is well known as the 'C. A. B.' of the Richter Concert programmes, in which his admirable analyses of the compositions of the advanced school are of especial value and interest. He has published several songs and PF. pieces. A MS. Festival March of his was often played at the Crystal Palace in 1862-63, and he has a symphony and other orchestral pieces in MS. He was secretary to the Liszt Scholarship Fund 1886, and is an earnest champion of musical advance. G.

BARSANTI, FRANCESCO, born at Lucca about 1690. In 1714 he accompanied Geminiani to England, which country henceforth became his own. He played both the flute and oboe, the latter for many years in the opera band. He held a lucrative situation in Scotland, and while there made and published 'A Collection of Old Scots Tunes, with the Bass for Violoncello or Harpsichord,' etc. (Edinburgh, 1742). After his return to England about 1750, he played the viola at the opera in winter and Vauxhall in summer. At the close of his life he was dependent upon the exertions of his wife and his daughter, a singer and actress of considerable ability. His other publications include concerti grossi, overtures, sonatas for strings, and six 'Antifone' in the style of Palestrina. M. C. C.

BARTEI, GIROLAMO, a native of Arezzo, general of the Augustin order of monks at Rome in the beginning of the 17th century. In 1607 he was maestro di cappella in the cathedral of Volterra, and in the same year he published a set of 'Responsoria' for four equal voices; some masses for eight voices appeared in 1608, a book of motets for two voices in 1609, and some 'concerti' and 'ricercari' for two voices, both in 1618. [Eitner's *Quellen-Lexikon.*]

BARTH, KARL HEINRICH, born at Pillau, near Königsberg in Prussia, July 12, 1847, received his first instruction from his father, beginning the piano at four years old. From 1856 to 1862 he was studying with L. Steinmann, and for two years after the expiration of this term, with H. von Bülow. From 1864 onwards he was under Bronsart, and for a short time was a pupil of Tausig's. In 1868 he was appointed a teacher in the Stern Conservatorium, and in 1871 became a professor at the Hochschule at Berlin. Herr Barth is justly held in high estimation for his earnest and intelligent interpretation of classical works, and he is also an admirable player of concerted music. The trio-party which he formed with de Ahna and Hausmann was justly renowned. He has repeatedly undertaken successful concert tours in Germany and England, and has once appeared at a concert of Pasdeloup's in Paris. He held the position of pianist to the Emperor Frederick of Germany. M.

BARTH, RICHARD, born June 5, 1850, at Grosswanzleben in Saxony, was being educated for the career of a violinist when an accident to his left hand compelled him to exchange the functions of his two hands; he had his violin adapted so as to be fingered with the right hand and bowed with the left. He was a pupil of Beck of Magdeburg, and was from 1863 to 1867 with Joachim in Hanover; for some years he was 'concertmeister' at Münster and (from 1882) at Crefeld. He subsequently became

University Music-director at Marburg and in 1895 succeeded Vernuth as conductor of the Philharmonic Concerts at Hamburg and of the Singakademie at the same place. His style has much of Joachim's breadth and dignity; he appeared in London, with remarkable success, at a chamber concert given by Miss Margaret Wild, June 4, 1896. M.

BARTHEL, JOHANN CHRISTIAN, born at Plauen, April 19, 1776, a musician from a very early age, in 1789 played at the house of Doles before Mozart, who praised him highly, and soon after entered the Thomasschule at Leipzig as a pupil of J. A. Hiller. At sixteen, on Hiller's recommendation, he was appointed concert-conductor to the court of Schöneburg, and in 1797 occupied a similar post at Greitz. In 1804, on the death of J. G. Krebs, he was appointed organist to the court of Altenburg, where he remained till his death, June 10, 1831. Riemann states that Barthel wrote a large number of church compositions, but Eitner's *Quellen-Lexikon* mentions only two organ fugues and a song, all in MS. M. C. C.

BARTHÉLEMON, FRANÇOIS HIPPOLYTE, born at Bordeaux, July 27, 1741, was the son of a French government officer and an Irish lady. He commenced life as an officer in the Irish brigade, but being induced by the Earl of Kelly, a well-known amateur composer, to change his profession for that of music, he became one of the most distinguished violinists of his time. In 1765 he came to England, and was engaged as leader of the opera band. In 1766 he produced at the King's Theatre a serious opera called 'Pelopida,' and in the same year married Miss Mary Young, a niece of Mrs. Arne and Mrs. Lampe, and a favourite singer. In 1776 Garrick engaged him to compose the music for the burletta of 'Orpheus,' introduced in his farce, 'A Peep behind the Curtain,' the great success of which led to his composing the music for other pieces brought out at the same theatre. In 1768 he went to Paris, and produced there a pastoral opera called 'Le fleuve Scamandre.' In 1770 Barthélemon became leader at Marylebone Gardens. In 1776 he left England with his wife for a professional tour through Germany, Italy, and France. At Florence Barthélemon, at the request of the Grand Duke of Tuscany, set to music the Abate Semplici's oratorio 'Jefte in Masfa,' performed in Rome, 1776. He returned to England late in 1777. An acquaintance with the Rev. Jacob Duché, chaplain to the Female Orphan Asylum, led to his composing, about 1780, the well-known tune for Ken's morning hymn 'Awake, my soul.' In 1784 Barthélemon and his wife made a professional visit to Dublin. [Eitner's *Quellen-Lexikon* gives the names of three ballets produced about 1785.] In 1791-95 he contracted an intimacy with Haydn, then in London. On Sept. 20, 1799, Mrs. Barthélemon died. Besides the compositions above named Barthélemon wrote the music for the following dramatic pieces:—'The Enchanted Girdle'; 'The Judgment of Paris,' 1768; 'The Election,' 1774; 'The Maid of the Oaks,' 1774; 'Belphegor,' 1778; and several quartets for stringed instruments, concertos and duos for the violin, lessons for the pianoforte, and preludes for the organ. As a player he was distinguished by the firmness of his hand, the purity of his tone, and his admirable manner of executing an adagio. He died July 20, 1808. W. H. H.

BARTHOLOMEW, WILLIAM, born in London, 1793; died there August 18, 1867. A man of many accomplishments—chemist, violin-player, and excellent flower-painter; but to the English public familiar as the translator or adapter of the words of most of Mendelssohn's vocal works. The English text of 'St. Paul' was adapted by Mr. W. Ball, but those of 'Antigone' (rewarded with the gold medal of merit from the King of Prussia), 'Athalie,' 'Œdipus,' 'Lauda Sion,' the 'Walpurgisnight,' the Finale to 'Loreley,' 'Elijah,' and the fragments of 'Christus,' with most of Mendelssohn's songs, were Mr. Bartholomew's work—not, as any one familiar with Mendelssohn's habits will believe, without constant suggestion and supervision from the composer. 'Hear my Prayer' [the original MS. of which is in the South Kensington Museum, headed 'a paraphrastic version of Ps. lv.'] was composed at Mr. Bartholomew's request for the concerts of Miss Mounsey, a lady whom he married in 1853. Besides the above, Mr. Bartholomew wrote English words for Méhul's 'Joseph'; Spohr's 'Jessonda'; Costa's 'Eli,' 'Naaman,' and 'The Dream'; and Mrs. Bartholomew's 'The Nativity,' etc. For the last few years of his life he was confined to his room by paralysis of the lower limbs. G.

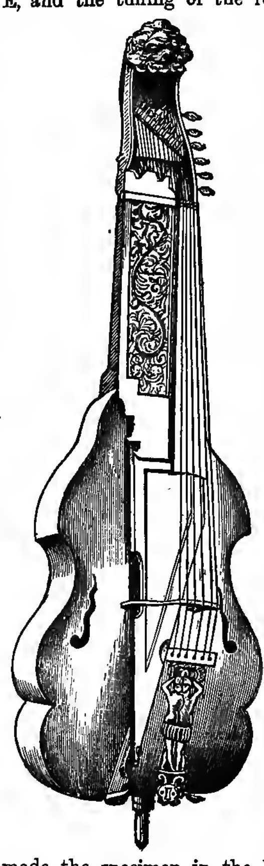
BARTLEMAN, JAMES, was born Sept. 19, 1769, probably at Westminster, and educated under Dr. Cooke in the choristers' school of Westminster Abbey. He soon showed voice and capacity far beyond his fellow-pupils, and became a great favourite with his master. His voice while it remained a soprano was remarkable for strength and fine quality of tone. He distinguished himself as a boy-singer by his refined and expressive rendering of Greene's solo anthem, 'Acquaint thyself with God.' He was greatly patronised by Sir John Hawkins, in whose family he was a frequent visitor (see Miss Hawkins's *Anecdotes*). In 1788 his name appears for the first time as a bass chorister, at the Concerts of Ancient Music, where he remained till 1791, when he quitted the institution to assume the post of first solo bass at the newly established Vocal Concerts. In 1795 he returned to the Ancient Concerts, and immediately took the station which, till compelled by ill-health, he never quitted, of principal bass singer in the first concert of the metropolis. [His voice was, strictly speaking, a baritone, and

his compass extended from E below the bass stave to g' above it.] In the course of one season he revived many of Purcell's great bass songs, and continued to sing them with unabated applause until he sang no more. Bartleman's execution was that of his time and school, and confined chiefly to written divisions; his own ornaments were few, simple, and chaste, and always in strict keeping with the feeling of the air in which they were introduced. The latter years of his life were embittered by disease, against which he vainly struggled. He died April 15, 1821, and was buried in the cloisters of Westminster Abbey. His epitaph is by Dean Ireland. He formed a large and valuable musical library, which was sold by auction by White of Storey's Gate, shortly after his death. (*Harmonicon*, 1830; *Books of Ancient Concerts; Private Sources.*) E. F. R.

BARTLETT, John, an English musician of the early part of the 17th century. He published a work entitled 'A Book of Ayres, with a Triplicitie of Musicke, whereof the First Part is for the Lute or Orpharion and Viole de Gamba, and 4 Parts to Sing: the Second Part is for 2 Trebles, to sing to the Lute and Viole: The Third Part is for the Lute and one Voyce, and the Viole di Gamba,' 1606. It is dedicated to the 'Right Honourable his singular good Lord and Maister, Sir Edward Seymore.' Bartlett took his degree as Mus.Bac. at Oxford in 1610. (Wood, *Athenæ Oxon.*; Rimbault, *Bib. Mad.*) E. F. R.

BARTOLINI, Vincenzio, a very good second soprano, appeared in London, 1782, in 'Il Convito,' a comic opera by Bertoni. In the next season he took part in 'L'Olimpiade,' a pasticcio; and in 1784 he sang in Anfossi's 'Issipile' and 'Due Gemelle,' and the 'Demofoonte' of Bertoni. He sang also in the Commemoration of Handel in Westminster Abbey that year, and in 1786 we find him still in London, performing in Tarchi's 'Virginia.' He was singing with success at Cassel in 1792. J. M.

BARYTON (Viola di Bordone, Viola Bastarda). A Viola da Gamba having sympathetic strings of metal passing under the finger-board. The Viola da Gamba is said to have been first fitted with such strings in the second half of the 17th century. The invention is attributed to English makers, but the instrument never came into common use in England, where the climate is unfavourable to the use of sympathetic strings; and no Baryton by an English maker is known to exist, although old English Viole da Gamba are extremely common. The instrument is almost peculiar to Germany, where the Hamburg maker Joachim Tielke made many fine specimens about 1680. The bridge, of peculiar shape, carries the six or seven ordinary strings of the Viola da Gamba, tuned in much the same way as on that instrument. Partly under the finger-board, and partly on the right-hand side of it, is a brass frame carrying a variable number of metal strings, seven being the smallest and forty-four the largest observed. The lowest of the sympathetic strings was commonly tuned to E, and the tuning of the rest depended very much on their number. The largest number of strings would allow a pair to each semitone throughout the two octaves which the compass of the instrument comprises. An instrument with only seven sympathetic strings would probably have had these tuned to some diatonic scale. The Baryton, essentially a chamber instrument, was a favourite with German amateurs in the 18th century. Leopold Mozart's account of it in the Introduction to his Violin-Schule is full of inaccuracies.



Besides the list given below, among the makers should be mentioned Norbert Bedler of Würzburg, 1723, who made the specimen in the Musée du Conservatoire at Paris. To the composers should be added the player Karl Franz, who published twelve concertos for the instrument in 1785. The name Baryton as applied to this instrument is of uncertain derivation, but is probably connected with the French *Bourdon*. [See Faux-Bourdon.]

C. F. Pohl, in his Biography of Haydn (Berlin, 1875), gives us the following notices concerning the Baryton.

1. Makers:—M. Feldlen (1656), H. Kramer (1714), D. A. Stadlmann (1732), J. Stadlmann (1750), all of Vienna; Joachim Tielke, Hamburg (1686), maker of the fine specimen in the S. Kensington Museum, from which our cut is taken; and Andreas Stainer, of Absam in the Tyrol (1660).

2. Performers:—M. A. Berti, Vienna (1721-1740); Signor Farrant, London (1744); Abell,

London (1759-87). Anton Kraft, Karl Franz, and Andreas Lidl, members of Prince Esterhazy's private band under Haydn (Lidl played in concerts in England in 1776); Friedel, member of the royal band at Berlin at the end of the 18th and beginning of the 19th century. Faunier (1794) and V. Hauschka (1795-1823) are named as accomplished amateur performers.

3. Composers:—Niemecz, L. Tomasini, and A. Kraft of Esterhaz, Wenzl Pichl, Ferd. Paër, Weigl, and Eybler, all of Vienna; and last, but not least, Haydn. Pohl enumerates no less than 175 compositions of Haydn's for the instrument; viz. 6 Duets for two barytons, 12 Sonatas for baryton and violoncello, 12 Divertimenti for two barytons and bass, 125 Divertimenti for baryton, viola, and violoncello; 17 so-called Cassations; 3 Concertos for baryton with accompaniment of two violins and bass. E. J. P.

BASEVI, Abramo, born at Leghorn, Dec. 29, 1818, a learned Florentine musician, founder and proprietor of the musical periodical *Armonia* and of its continuation *Boccherini*, and one of the originators of the 'Società del Quartetto,' which has done much to introduce German music into Italy. Basevi was the composer of two operas, 'Romilda ed Ezzelino,' produced at the Teatro Alfieri in March 1840, and 'Enrico Odoardo' at the Pergola in 1847; the author of theoretical works on music, of a treatise *Sulla divinazione*, a *Studio delle opere di G. Verdi*, 1859 [and an *Introduzione ad un nuovo sistema d'armonia* (1862). He died in Nov. 1885 at Florence]. F. G.

BASILI, or BASILY, Domenico Andrea, chapel-master at Loreto in the middle of the 18th century. He died in 1775. Santini's collection contained works by him; and a set of twenty-four studies of his for the clavier, entitled *Musica universale*, etc., was printed by Alessandri of Venice, and is not without merit. His son Francesco was born in February 1766, and on the death of his father the boy was sent to Rome and became a scholar of Jannaconi. While still young he was made chapel-master at Foligno. His first appearance in opera was at Milan, in 'Arianna e Teseo,' when he was twenty-two. For Rome he wrote 'La Locandiera' (1789); for Florence 'Achille nell' assedio di Troja' (1798) and the 'Ritorno d'Ulisse' (1799), and for Venice 'Antigono.' About 1799 he became chapel-master at Macerata, and wrote a large number of comic operas for Venice, not all equally successful. He then made a rich marriage, which enabled him to give up work, but the marriage turned out unhappy, and after a separation, in 1816, he returned to his former post at Loreto. For the San Carlo at Naples Basili composed an oratorio, 'Sansone,' in which Lablache sang the chief part. A requiem which he had written for Jannaconi was performed on March 23, 1816, at the Apostles' Church in Rome. In 1817 he wrote two operas, 'Ira d' Achille' and 'L' Orfana egiziana' for Venice. In 1827 he was appointed director of the Conservatorio at Milan, where it was his fortune to refuse admission to Verdi. In August 1837 he was called to Rome to take the place of chapel-master at St. Peter's, vacant by the death of Fioravanti, and remained there till his own death on March 25, 1850. While at Rome he was made very unhappy by his inability with the means at his disposal to perform the great masterpieces of old Italian church music. Several of his settings of the 'Miserere,' one at least for eight voices unaccompanied, were sung in St. Peter's. In addition to many operas, besides those already named, and much church music, Basili composed symphonies in the style of Haydn, one of which used often to be played at Brussels under Fétis' conducting, and always with great applause (see *Quellen-Lexikon* for list of works). F. G.

BASS (Ger. *Bass*; Fr. *Basse*; Ital. *Basso*). The lower or grave part of the musical system, as contradistinguished from the treble, which is the high or acute part. The limits of the two are generally rather vague, but middle C is the practical division between them. Attempts have been made to spell the word 'base'; but this proceeds from a mistake. 'Bass' derives its form from the French or Italian, though ultimately from the Greek βάσις in its sense of foundation or support, the bass being that which supports the harmony. In former times this was much more obvious than it is now, when a single bass line represented a whole piece, and an accompanist was satisfied with the addition of figures, from which he deciphered the rest of the harmony without having it written out in full. The importance of melody, which is a development of more modern styles, has somewhat obliterated this impression, and music seems to most people nowadays to depend more upon the upper part than to rest upon the lower. C. H. H. P.

BASS is also the lowest or deepest of male voices.

By the old masters those notes of the bass voice only were employed which could be placed on the bass stave, eleven in number. By the moderns this compass has been largely extended, chiefly upwards. For whereas even the employment of the lower E is now exceptional, and that of the D below it most rare, its double octave, and even the *f′* and *f′*♯ above it, are not unfrequently called into requisition, even in choral music. Examples dating even as far back as the end of the 17th century point to the existence of bass voices of extraordinary extent. The Services (intended for *choral* performance) of Blow and his contemporaries abound in deep notes; and in a solo Anthem, 'They that go down to the sea in ships,' composed no doubt for an exceptional performer, Mr. Gostling, of His Majesty's Chapel Royal, as well as

for a special occasion—the escape of King Charles II. and the Duke of York from shipwreck—Purcell has employed repeatedly both the lower D and the *e′* two octaves and a tone above it. Handel, however, has employed a still more extended compass. In a song for Polifemo, 'Nel Africano selve,' from his early 'Acis and Galatea,' is the following passage, quoted by Chrysander (*Händel*, i. 244):—

A contemporary singer, Boschi, might by all accounts have sung these passages—the groups of high notes in the third or falsetto register.

No theory resting on difference of pitch will account for such passages. If the church-pitch of the 17th century was lower than that of our own time, the lower notes employed in them become still more astonishing to us than they are already; if (as is probable if not certain) that pitch was higher than our own, the higher notes will stand in the same predicament. The unquestionably greater compass of the basses, and even tenors, of former times, is however explained by the fact, that judicious training, while it increases the intensity and flexibility, and improves the quality and equality of a voice, diminishes its compass. Voices of extensive range are rarely homogeneous; and their *timbre* or quality is generally found to be in inverse ratio to their extent. More than one passage in Milton, beyond doubt a competent judge, indicates the existence, at any rate in Italy, of considerable vocal skill even in the 17th century; and if half that has come down to us respecting the accomplishments of Balthazar Ferri be true, one singer at least flourished in the first half of that century of extraordinary skill. But prior to the end of it, when the first Italian schools were opened at Bologna under Pistocchi, singing, in the full sense of the word, was an art, skill in which was confined to a small number of persons, and instruction in which had not extended beyond the land of its origin. It is not extraordinary therefore that in the north of Europe very extensive—in other words, untrained—voices existed in the 17th century in greater number than now.

The intensity or power of the bass voice is due to the same causes as that of the tenor, the contralto, the soprano, or indeed of any other wind-instrument—the capacity and free action of the apparatus by which it collects and ejects air—in the human body, the lungs. Its 'volume' depends on the capacity of the pharynx, the cavity at the back of the mouth, between the root of the tongue and the veil of the palate, the part of the vocal mechanism most easily open to inspection. As with all well-endowed vocalists, the jaw of the bass is generally wide, the tongue large, the teeth small, and the mouth capable of easy expansion. The bass singer is generally above, as the tenor is generally below, the middle height.

The bass voice is of three kinds; the *Basso profondo*, the *Basso cantante*, and the *Baritone*. To these may be added the altogether exceptional *Contra-Basso*, standing in the same relation to the *Basso profondo* as the instrument so called does to the violoncello. This voice, found, or at least cultivated, only in Russia, is by special training made to descend to FF,.

The *Basso profondo* and the *Basso cantante* are distinguished rather by their quality than their compass; that of both extending occasionally from the E flat below the bass stave to the *f′* above it. This possible compass is frequently increased by a third register, or falsetto, of a quality wholly distinct from that of the first or second. The English male counter-tenor is in general a bass whose second and third registers have been cultivated exclusively, always to the deterioration, sometimes to the destruction, of the first.

The employment of basses and baritones in principal characters on the operatic stage, though frequent only since the latter part of the 18th century, dates from a much earlier epoch. Instances of it may be found in the operas of Lully and his imitators, native and foreign. Its subsequently increased frequency may still be attributed to the French, with whom dramatic propriety, in opera, has always taken precedence of musical effect. Gluck and his contemporary Piccinni, whose laurels were chiefly gathered on the French stage, both employ this class of voice largely; but it first assumed its still greater importance in the operas of Mozart, who would seem to have been the first composer to recognise the fact that the baritone or higher bass is the average, and therefore typical, voice of man. To the prominence given both to the bass and the baritone voice in his later operas he was doubtless urged by a variety of causes, not the least being a paucity of competent tenors in the companies for which he had to write. To this, however, must be added the decline, in number, excellence, and popularity, of the class of vocalists of which Farinelli may be regarded as the type; and (closely connected with this) to an increased craving for dramatic effect, only attainable by the employment of basses and baritones, among whom as a rule—liable, however, to splendid exceptions—singing *actors* have always been found in the greatest excellence and number. This change in the once established order of things has not been brought about without protest. A distinguished amateur, the Earl of Mount-Edgcumbe, whose *Musical Reminiscences* embody an account of the Italian Opera in England from 1773 to 1834, says, in reference to it:—'The generality of voices are (now)

basses, which, for want of better, are thrust up into serious operas where they used only to occupy the last place, to the manifest injury of melody, and total subversion of harmony, in which the lowest part is their peculiar province. These new singers are called by the novel appellation of *basso cantante* (which by-the-bye is a kind of apology, and an acknowledgment that they ought not to sing), and take the lead in operas with as much propriety as if the double-bass were to do so in the orchestra, and play the part of the first fiddle. A bass voice is too unbending and deficient in sweetness for single songs, and fit only for those of inferior character, or of the buffo style. In duettos it does not coalesce so well with a female voice, on account of the too great distance between them, and in fuller pieces the ear cannot be satisfied without some good intermediate voices to fill up the interval, and complete the harmony.' And he adds in a note, 'It has always surprised me that the principal characters in two of Mozart's operas should have been written for basses, namely, Count Almaviva and Don Giovanni, both of which seem particularly to want the more lively tones of a tenor; and I can account for it in no other wise than by supposing they were written for some particular singer who had a bass voice, for he has done so in no other instance.' In making this last assertion the venerable writer forgot or ignored Mozart's 'Così fan tutte,' 'Die Zauberflöte,' and 'Die Entführung aus dem Serail,' in all of which basses are employed for principal characters. His argument, however, though ingenious, is based on an assumption unjustified and unjustifiable by either theory or practice—that melody inevitably occupies, or is only effective in, an upper part. The example of Mozart, which he so severely denounces, has been followed largely by Rossini and all the operatic composers of later times. In the majority of their operas *bassi cantanti* appear in large numbers, without any 'kind of apology,' and persons who 'ought not to sing' do so, greatly to the enhancement of dramatic effect and the pleasure of their hearers. [BARITONE.] J. H.

BASS-BAR. An essential part of the fitting of viols and violins. The violin bass-bar is now made about 11 inches long, and $\frac{3}{16}$ of an inch thick, diminishing at either end, and is glued in a state of tension to the belly of the instrument under the bass or left-hand foot of the bridge. The function of the bass-bar is to spread over the belly the vibrations of the bridge produced by those of the strings, and to increase the resistance of the longitudinal arch formed by the fibres of the belly. The bass-bars used by the old makers are now too short and too light, in consequence of the increased vibration due to the elevation of the pitch, the greater height now given to the bridge, and the use of thicker strings, the tension of which now is nearly twice that attained in the time of Stradivari. Excepting their increased size, the bass-bars now in general use do not differ from those made three centuries ago; but it has long been felt that some change might be made for the better. A double-curved improved bass-bar, by which the vibrations of the bridge were more effectively transmitted to and more equably distributed over the belly, invented by Mr. Richard Meeson, was exhibited at the International Inventions Exhibition, 1885. The jury, of which the writer was chairman, awarded Mr. Meeson a gold medal for this invention; but when the awards were published it appeared that a silver medal had been substituted for the gold one awarded. But for this unfortunate occurrence Mr. Meeson's invention might possibly have received the attention which it deserves, but has not hitherto secured. E. J. P.

BASS CLARINET, an instrument of the same construction as the ordinary clarinet, but speaking an octave lower. The one most generally used is that in B♭, but Wagner writes for one in A, and a third in C has been employed. The clarinet quality is less marked than in the acuter forms of the instrument, insomuch that they more resemble an organ pipe of bourdon tone. Meyerbeer, from his friendship with Sax, who paid particular attention to this instrument, has introduced it in his operas and other works. In the fifth act of 'The Huguenots' there is a fine declamatory passage for it in B♭, exhibiting its extreme lower compass:—

In the Coronation March of the 'Prophète' it takes the melody, and in Auber's Exhibition March two such instruments are employed. In 'Tristan and Isolde,' in King Mark's expostulation, it acquires an individuality of its own, and is almost as definite a personage as the figure on the stage. It is written in the treble or tenor clef, the latter being better, as assimilating its part to that for the bassoon. W. H. S.

BASS CLEF. The well-known mark of the bass clef, is a modification of the letter *F*, which has in the course of centuries arrived at its present shape, in the same way that the *G* and *C* have altered their forms. [The steps of the transition are more easily traced if the spiral be turned the other way. The essential feature of the sign is the pair of dots on each side of the line on which F stands;

in very early times the letter ꝼ had become divided into three separate parts, the curve on the left being assimilated to one of the forms of the ancient long ꟷ ; the upright stroke of the letter remained between this sign and the dots, so that the whole clef stood thus .]

The early subdivision of the graver male voices is attested by the variety of positions on the stave occupied by the bass or F clef. Since the beginning of the 18th century this clef (for whatever variety of bass voice) has occupied the fourth line exclusively. Up to that period its occasional position on the *third* line indicated that the music following it was for the baritone voice; the stave so initiated being called the baritone stave. At a still earlier epoch the bass clef was sometimes placed on the *fifth* line, . This *basso profondo* stave, which makes room for two more notes below than can be placed on the bass stave proper, is used (among others) by L. Lossius in his 'Psalmodia' (Wittenbach, 1553), and subsequently by Prætorius in his 'Cantiones Sacræ' (Hamburg, 1622). It does not seem, however, at any time to have met with general favour. On the other hand, the baritone stave was much employed, not only for choral music, but for solos, up to the beginning of the 18th century. Some of Purcell's songs (*e.g.* 'Let the dreadful engines') in the 'Orpheus Britannicus' are written upon it, and with reason, for it takes in, with the aid of a single ledger-line, the entire compass employed, from the lower A to the upper F. [CLEF.] J. H.

BASS-DRUM. See DRUM, 3.

BASS-FLUTE. There were in former times four forms of the flute à bec or flageolet, the lowest being the bass-flute, and the others respectively tenor, alto, and descant flutes. These are now all but disused. [The very low bass-flute for which Purcell writes down to E below the bass stave, in his 'Ode for St. Cecilia's Day,' 1692, belongs to the class of Flûtes Douces (See FLUTE and FLAGEOLET) of which there is a fine example with a compass down to CC in the Musée du Steen, Antwerp.] A bass-flute still exists, though it is rarely heard, and is not written for by any composer of eminence. Its compass is from upwards. In older forms of the bass-flute to bring the mouthpiece within reach of the finger-holes the tube was bent, and returned upon itself, as in the bassoon; but as made by Boehm it resembles an ordinary flute of large size—32 inches long, and one inch diameter. The bass-flute requires a great deal of breath, and the tone is not strong, but it is of very fine quality. [The name is also given to a pedal organ-stop of 8-ft. pitch.] W. H. S.

BASS-HORN. About the end of the 18th century attempts to improve the serpent resulted in the introduction of this instrument, in which the tube is doubled upon itself, as in the bassoon. The bass-horn was played with a cup-shaped mouthpiece; it had six finger-holes, and three or more keys. It is the transitional instrument between the serpent and the ophicleide. D. J. B.

BASS TRUMPET. See TRUMPET.

BASS TUBA. A name sometimes given to the euphonium, but more correctly to an instrument of lower pitch, viz., the base saxhorn in F or E♭. [See BOMBARDON.]

BASSANI, GIOVANNI BATTISTA, an eminent violin-player and composer, was born at Padua about 1657. He was a pupil of Castrovillari at Venice, he was organist of the 'Accademia della Morte' at Ferrara as early as 1677, he lived for some years at Bologna as conductor of the cathedral-music, and from 1685 was again at Ferrara as cathedral organist. He was made a member, and in 1682 'principe' of the 'Accademia dei Filarmonici' of Bologna. From 1680 to 1710 he wrote three oratorios, 'Giona,' 'La Morte delusa,' and 'La Tromba della divina misericordia,' and published six operas and thirty-one vocal and instrumental works, viz., masses, cantatas for one, two, or three voices with instruments, and two sets of sonatas for two violins with bass—a complete list is given in Eitner's *Quellen-Lexikon*. These works, copies of which are now very rare, are written in a noble pathetic style, and are marked by good and correct workmanship. Two books called 'Harmonia festiva,' being the 8th and 13th of Bassani's published works, and consisting of motets for a single voice with accompaniment, were published by W. Pearson in London, some time between 1699 and 1735. Kent borrowed from Bassani largely. Amongst others the chorus 'Thy righteousness,' in his anthem 'Lord, what love,' is taken from Bassani's Magnificat in G minor with very slight alteration. The 'Hallelujahs' in 'Hearken unto this' are transcribed note for note from Bassani's 'Alma Mater.'

Bassani died at Ferrara in 1716. It is generally believed, though not absolutely proved, that Corelli was his pupil. P. D.

BASSE DANSE, a dance of a stately character for two persons, much practised in France in the 15th and early part of the 16th centuries. The name has reference to the gliding movement of the feet, in contrast to the 'danse par haut' or 'danse sautée,' such as the Galliard. The steps employed were four in number, Simple, Double, Reprise, and Branle. The dance is described at the end of Alexander Barcley's *Introductory to wryte and to pronounce frenche*, London, 1521: and in A. de Arena's Latin poem, *Ad suos compagnones, etc.* Paris, 1575. In both these books the names of many of the tunes

are given, such as 'Filles à marier' and 'Le petit rouen,' but without music. Attaignant published a collection of eighteen basse danse tunes in 1529, and nine more in the following year. Thoinot Arbeau, in his *Orchésographie* (1588), says that the Basse Danse has been obsolete for some forty or fifty years, but he gives a full description of it in the hope that it may be revived by 'sage and modest matrons,' and prints the tune entitled 'Jouyssance vous donneray.'

The later Basse Danse was always in triple measure, and Thoinot Arbeau warns his readers that many of the old tunes in duple time must be altered to suit the modern step. There is a 15th century 'Livre des basse-danses' in the Royal Library at Brussels. One of the tunes, which seems to have been known *par excellence* as 'La Basse Danse,' was used as the subject of a mass by Vincent La Fage. This 'Missa La basse danse' is still extant in manuscripts at Trent and in the Archives of the Sistine Chapel at Rome. J. F. R. S.

BASSET-HORN (Fr. *Cor de Bassette;* Ital. *Corno di Bassetto;* Germ. *Bassethorn*). A tenor clarinet standing in F, furnished with additional low keys and a prolonged bore, enabling it to reach the octave C, which is equivalent to F below the bass clef [music]. With the exception of the last four semitones thus added, the instrument is in all respects a clarinet, and the necessary transposition will be found under that heading. These four notes are obtained by means of long keys worked by the thumb of the right hand, which, in the ordinary clarinet, has no other function besides that of supporting the instrument. For convenience of handling, the instrument has been made in various curved shapes; with a bend either between the right and left hands, or in the upper part just below the mouthpiece. Occasionally it has been made with a bore abruptly bent on itself like that of the bassoon. Its compass is more extensive than even that of the clarinet, and its tone fuller and more reedy.

Mozart is the composer who has written most for this instrument. In the 'Requiem' it replaces the clarinet, there being independent parts for two players. Perhaps the finest instance of its use is in the opening of the 'Recordare.' In his opera 'Clemenza di Tito' it is also employed, and a fine obbligato is allotted to it in the song 'Non più di fiori.' In his chamber music there are often parts for two or even three basset-horns.

Mendelssohn has also written for it, especially two concert-pieces for clarinet and basset-horn, op. 113 and 114, intended to be played by the Bärmanns, father and son, with pianoforte accompaniment. Other composers have occasionally employed it, but it is to be regretted that it has never taken so prominent a place in orchestral music as its fine tone and facility of execution entitle it to hold. It is often confused with the COR ANGLAIS, or English horn, which is an oboe of similar pitch to the basset-horn, but which has [music] for its lowest note (actual pitch). W. H. S.

BASSEVI. See CERVETTO.

BASSI, LUIGI, born at Pesaro 1766, died at Dresden 1825. An eminent baritone singer, first appeared on the stage in women's parts at the age of thirteen; a pupil of Laschi at Florence. In 1784 he went to Prague, where he made a great reputation, especially in Paisiello's 'Re Teodoro,' and 'Barbiere di Siviglia,' and Martini's 'Cosa rara.' Mozart wrote the part of Don Juan for him.[1] He is said to have asked Mozart to write him another air in place of 'Fin ch'han dal vino' in 'Don Juan,' but Mozart replied, 'Wait till the performance: if the air is not applauded, I will then write you another.' A hearty encore settled the question. He is also said to have induced Mozart to rewrite 'La ci darem' five times to suit him. But these stories are probably mere legends of Mozart's good-humour. In 1806 Bassi left Prague in consequence of the war. For some years he was in the pay of Prince Lobkowitz, Beethoven's friend, appearing occasionally in public in Vienna; but in 1814 he returned to Prague, when Weber had the direction of the opera, and in 1815 was called to Dresden as a member of the Italian company there, but shortly afterwards became manager of the opera instead, and died there in 1825. Bassi was gifted with a fine voice, even throughout the register, a prepossessing appearance, and considerable dramatic ability. He is not to be confounded with Nicolo or Vincenzo Bassi. M. C. C.

BASSIRON, PHILIPPE, a native of the Netherlands, living in the 15th century, and contemporary with Josquin des Pres. Some of his masses were printed by Petrucci in 1505 and 1508. J. R. S. B.

BASSO CONTINUO, BASSE CONTINUE, or simply CONTINUO, is the same thing as our English term Thorough-Bass in its original and proper signification, as may be seen by comparison of English with foreign works where these terms occur. For instance, in the score of the 'Matthew' Passion of Bach the lowest line in the accompaniments of the choruses is for the violoncellos and basses and 'organo e continuo,' for the two latter of which figures are added; while in the recitative a single line and figures are given for the 'continuo' alone. The edition

[1] Bassi is usually said to have been also the original Almaviva in 'Figaro'; but this is incorrect, Mandini was the first. See Jahn's *Mozart* (2nd ed.), ii. 243.

of Purcell's 'Orpheus Britannicus,' published in 1698-1702, has the title 'A collection of choicest songs for 1, 2, and 3 voices, with symphonies for violin and flutes, and a *thorough-bass* to each song figured for the Organ, Harpsichord, or Theorbo-Lute.' The origin of the name is the same in both cases, as it is the bass which *continues* or goes *through* the whole piece, from which with the aid of figures the accompaniment used to be played. (For complete discussion of the subject see Thorough-Bass.) C. H. H. P.

BASSO DA CAMERA, Italian for a chamber-bass; that is a small double-bass, such as is generally used by double-bass players for solo performances.

BASSO OSTINATO is the same as the English Ground-Bass, which see. It means the continual repetition of a phrase in the bass part through the whole or a portion of a movement, upon which a variety of harmonies and figures are successively built. C. H. H. P.

BASSON RUSSE. A variety of the Bass-Horn (*q.v.*), having no similarity to, or connection with the Bassoon. D. J. B.

BASSOON (Fr. *Basson*, Ital. *Fagotto*, Ger. *Fagott*). A wooden double-reed instrument of eight-foot tone. The English and French names are derived from its pitch, which is the natural bass to the oboe and other similar reed instruments; the Italian and German names come from its resemblance to a faggot or bundle of sticks.

It is probably, in one form or another, of great antiquity, although there exists circumstantial evidence of its discovery by Afranio, a Canon of Ferrara. This occurs in a work by the inventor's nephew, entitled 'Introductio in Chaldaicam linguam, mystica et cabalistica, a Theseo Albonesio utriusque juris doctori,' etc. (Pavia, 1539). It is illustrated by two rough woodcuts, and is termed 'Descriptio ac simulacrum Phagoti Afranii,' from which it would appear that the author, although an Italian, did not realise the etymological origin of the name. A class of instruments named bombards, pommers, or brummers, which were made in many keys, seems to have been the immediate predecessor of the bassoon [but as these instruments were straight, with the tubs not doubled upon itself, they had not the characteristic which has given the bassoon its Italian and German names. It is the doubling of the tube which has made it possible for the fingers of the left hand to control holes or ventages in the upper portion, while the thumb of the same hand is conveniently placed for controlling keys on the lower extension of the instrument, by which means the downward relative compass has been much increased.] Some of the older forms are well described, with representations of their shape, in the 'Metodo completo di Fagotto' of Willent. They possess a contrivance which does not exist at the present day on any reed, though it somewhat anticipates the 'crooks' and 'transposing slides' of brass instruments. Besides the holes to be stopped by the fingers, there are other intermediate apertures stopped by pegs, and only to be opened in certain keys. No doubt in the older style of music this mechanism may have been useful; but it would hardly adapt itself to the rapid modulations of later composers.

The Bassoon is an instrument which has evidently originated in a fortuitous manner, developed by successive improvements rather of an empirical than of a theoretical nature; hence its general arrangement has not materially altered since the earliest examples. Various attempts have been made to give greater accuracy and completeness to its singularly capricious scale; but up to the present time all these seem either to have diminished the flexibility of the instrument in florid passages, or to have impaired its peculiar but telling and characteristic tone. Almenräder in Germany is credited with certain improvements, but one of the best of these efforts at reconstruction was shown in the Exhibition of 1851 by Cornelius Ward, and it has already fallen entirely into disuse. Hence bassoons by the older makers are generally preferred to newer specimens, and they therein alone resemble stringed among wind instruments. Those of Savary especially are in great request, and command high prices. The copies of these made by Samme in England are not far inferior to them, though they lack the particular sweetness and singing tone of the French maker.

The compass is from BB♭ to *a'*♭ in the treble . The upper limit has been greatly raised in modern instruments by additional mechanism, so that *c''*, and even *f''* can be reached. The natural scale is, however, that named, the notes above *a'*♭ being uncertain and somewhat different in quality from those below.

Like the oboe, of which it is the bass, the bassoon gives the consecutive harmonics of an open pipe, a fact which Helmholtz has shown mathematically to depend on its conical bore.

[As confusion sometimes arises as to the relative pitch of wood wind instruments, it may be stated here, that although the lowest note on

both the oboe and the bassoon is B♭ with an interval of two octaves, the bassoon cannot properly be regarded as two octaves below the oboe in pitch: the difference is really a twelfth, for the comparison should be based upon the results obtained from the use of the six finger-holes. Closing the three left-hand finger-holes, the oboe speaks g' and the bassoon c; closing all six finger-holes, the oboe speaks d', agreeing with the flute, and the bassoon speaks G; closing the open standing key for little finger right-hand, we have on the oboe c', and on the bassoon F, so that the bassoon is in its scheme a twelfth lower than the oboe, and an octave lower than the Cor Anglais. The extension of the compass downwards is further explained below.]

It consists of five pieces, named respectively the crook, wing, butt, long joints, and bell. These, when fitted together, form a hollow cone about eight feet long, tapering from $\frac{3}{16}$ of an inch at the reed to $1\frac{3}{4}$ inches at the bell end [but there is a constriction in the bell which modifies the open or blaring tone the bell-note would otherwise have in comparison with the notes from the side-holes.] In the butt joint this bore is bent abruptly back upon itself, both sections being pierced in the same block of wood, and united at the lower end; the prolongation of the double tube being in general stopped by means of a flattened oval cork [but the much better plan of a connecting U-shaped sliding tube has lately been adopted]. The whole length of the instrument [in the old Philharmonic, or high pitch] by internal measurement, being ninety-three inches, about twelve are in the crook, thirty-two in the downward branch, and the remaining forty-nine in the ascending joints. The height is thus reduced to a little over four feet, and the various holes are brought within reach of the fingers. They would still be situated too far apart for an ordinary hand if they were not pierced obliquely; the upper hole for each forefinger passing upwards in the substance of the wood, and those for the third or ring-fingers passing downwards in a similar way. There are three holes in the wing joint—so named from a projecting wing of wood intended to contain them; three others on the front of the butt joint—to be closed by the first three fingers of the left and right hands respectively; a single hole on the back of the butt joint, for the thumb of the right hand; and a series of interlocking keys on the long joint producing the lowest notes of the scale by the means of the left thumb. It will thus be seen that the instrument is held in the hollow of the two hands, with the left uppermost, at the level of the player's breast, the right hand being somewhat below and behind the right thigh. A strap round the neck supports the bulk of the weight. The little finger of the right hand touches two keys which produce A♭ and F. With this latter note the real fundamental scale ends, exactly as it does in the oboe; all the mechanism of the long joint and bell only strengthening the tone and producing the seven lowest semitones upwards from BB♭. In comparing the bassoon with its kindred treble instrument, the oboe, it must be remembered that it has this supplementary prolongation of its compass downwards, which the other lacks. The seven lowest holes and keys therefore produce only one sound apiece; but the case is totally different with those following next above them, from the little finger of the right hand to the forefinger of the left. These eight holes and keys can each be made to give two sounds at an interval of an octave by varying the pressure of the lip. After the double register thus obtained has been run through, there still remain a few notes to be got by cross-fingerings at the interval of a twelfth, namely the f'♯, g'♮, and a'♭, with which the natural scale has been stated to end. In modern instruments two or even three keys are added at the top of the wing-joint, to be worked by the thumb of the left hand stretched across from the other side. They open small harmonic holes close to the crook, and enable seven semitones to be added, from a'♮ to e''♭ inclusive. Even above this there are two outlying notes, e''♮ and f'', to be obtained by exceptional players without mechanism; and it is not improbable that still higher, although useless, harmonics might by assiduous study be exacted from this remarkable instrument.

It will thus be seen—what indeed was affirmed in the outset—that the scale of the bassoon is complicated and capricious. To this it must be added that it is variable in different patterns, and that even a fine player cannot play upon an unfamiliar instrument. Each has to be learned independently; and although the theoretical imperfection of such a course is obvious, it has a certain compensation in the fact that a bassoon-player must necessarily rely upon his ear alone for correct intonation, and that he thus more nearly approximates to the manipulation of stringed instruments than any member of the orchestra, except the trombones. In some of the most important and delicate notes there are two, three, or even four alternatives of fingering open to the performer; as these produce sounds slightly differing in pitch and quality, they may be employed by a judicious musician for obtaining accurate consonance and for facilitating difficult passages. But it must be admitted that the scale of the bassoon is a sort of compromise, for the construction of which no precise formula can be given.

Whatever its theoretical imperfections, it cannot be denied that the musical value of the bassoon is very great, and it has for about two

centuries been largely used by composers. Its position in the orchestra has somewhat changed in the course of time. Originally introduced—probably first in Cambert's 'Pomone' (Paris, 1671)—as a purely bass instrument, it has gradually risen to the position of tenor, or even alto, frequently doubling the high notes of the violoncello or the lower register of the viola. The cause of the change is evidently the greater use of bass instruments such as trombones and bass tubas in modern orchestral scores, on the one hand, and the improvements in the upper register of the bassoon itself on the other. There is a peculiar sweetness and telling quality in these extreme sounds which has led to their being named vox-humana notes. We have good evidence that even in Haydn's time they were appreciated, for in the graceful minuet of his 'Military Symphony' we find a melody reaching to *a′*. The passage affords an excellent specimen of good solo-writing for the instrument, though requiring a first-rate player to do it justice.

Indeed it is between the time of Handel and Haydn that the above-mentioned change seems to have taken place. Handel's scores contain few bassoon parts, and those—with one remarkable exception, the Witch music in the oratorio of 'Saul'—mostly of a ripieno character; Haydn on the other hand uses it as one of the most prominent voices of his orchestra. Boieldieu also, who dates a little later, has assigned to the bassoon the principal melody in the overture to the 'Dame Blanche,' repeating it afterwards with increased elaboration in the form of a variation.

Bach uses it frequently, sometimes merely to reinforce the basses, but often with an independent and characteristic part. The 'Quoniam' in the Mass in B minor has two bassoons obbligati throughout, and other instances of its use will be found in the cantatas 'Am Abend aber' (No. 42), and 'Ich hatte viel Bekümmerniss' (No. 21), in the volumes of the Bach-Gesellschaft. In the score of the 'Matthew' Passion the bassoon does not appear. Boyce, a writer who can hardly have known much of foreign music, gives it a fine part in the song 'Softly rise, thou southern breeze,' in his 'Solomon' (1743).

Cherubini has given it a fine solo in his opera of 'Médée,' which is remarkable for its difficulty, and also for its extraordinary compass, ending on the extreme high notes.

Mozart, besides a concerto with orchestra which is hardly[1] known, constantly employs the bassoon in his scores. It figures prominently in his symphonies, even when other wind parts are deficient; most of his masses contain fine phrases for it; in the 'Requiem,' of which the instrumentation is peculiar, it fills a leading place, contrasting with three trombones and two corni di bassetto. All his operas, moreover, assign it great prominence; he seems fully aware of its beauty as an accompaniment to the voice, which it supports and intensifies without the risk of overpowering the singer.

Beethoven never fails to employ it largely, reinforcing it in some works by the contrafagotto. The First Symphony is remarkable for the assignment of subject as well as counter-subject in the slow movement to first and second bassoons workingin dependently; both afterwards joining with the two clarinets in the curious dialogue of the trio between strings and reeds. The Second Symphony opens with a prominent passage in union with bass strings; in the Adagio of the Fourth is an effective figure exhibiting the great power of staccato playing possessed by the bassoon; in the first movement of the Eighth it is employed with exquisite humour, and in the minuet of the same symphony it is entrusted with a melody of considerable length. Perhaps the most remarkable passage in Beethoven's writing for this instrument, certainly the best known, occurs in the opening of the Finale of the Ninth or Choral Symphony, where the theme of the movement, played by violoncellos and violas in unison, is accompanied by the first bassoon in a long independent melody of the greatest ingenuity and interest.

Mendelssohn shows some peculiarity in dealing with the bassoon. He was evidently not only struck with the power of its lower register, a fact abundantly illustrated by his use of it in the opening of the Scotch Symphony and, with the trombones, in the grand chords of the overture to 'Ruy Blas'; but he felt, with Beethoven, the comic and rustic character of its tone. This is abundantly shown in the music to the 'Midsummer Night's Dream,' where the two bassoons lead the quaint clown's march in thirds; and still further on in the funeral march, which is obviously an imitation of a small country band consisting of clarinet and bassoon, the latter ending unexpectedly and humorously on a solitary low C. In the overture the same instrument also suggests the braying of Bottom. It is worth notice how the acute ear of the musician has caught the exact interval used by

[1] In B flat, composed 1774. Kochel, No. 191.

the animal without any violation of artistic propriety. As if in return for these vile uses, the same composer has compensated the instrument in numberless fine figures, of which it is unnecessary to specify more than the quartet of horns and bassoons in the trio of the Italian Symphony, the majestic opening phrases of the so-called 'Pilgrims' March,' and the flowing cantabile in octaves with the oboe which forms the second movement of the introductory symphony to the 'Hymn of Praise.'

Weber exhibits the same knowledge of its powers as his predecessors. Although the French horn, and after it the clarinet, are obviously his favourite instruments, the bassoon comes very little behind them. One of the loveliest phrases ever assigned to this instrument occurs in the 'Agnus Dei' of his Mass in G.

It is absolutely alone on the telling *g′*; the voice following in imitation and the bassoon then repeating the passage. In the Concertstück, for piano and orchestra, there is a difficult but beautiful point for bassoon alone, which leads into the march for the clarinets. His two symphonies are marked by the same character, especially the first, in which the bassoon leads throughout, with some effective organ points. The overtures, and indeed all his operas, are very fully scored for bassoons. His bassoon concerto in F and his Hungarian rondo are grand works, scored for full orchestra.

Meyerbeer has somewhat neglected the bassoon for the bass clarinet—in the 'Prophète' March for instance; but he has given it many passages of importance, and some of grotesque character, as in the incantation scene of 'Robert Le Diable.' He frequently employs four instead of two instruments.

The Italian writers use it freely. Donizetti assigns it an obbligato in the air 'Una furtiva lagrima.' Rossini opens the 'Stabat Mater' with the effective phrases—

for bassoons and violoncellos in unison, which again occur at the end of the work. In his latest composition, the 'Messe Solennelle' it is almost too heavily written for, and is at times comic and ineffective.

Auber writes but little for the bassoon, using it chiefly in sustaining high notes at the very top of its register. There is, however, a melodious passage for the two, with the horns, in the overture to the 'Sirène.'

The following list of music for bassoon, solo and concertante, may be found useful. The writer desires to acknowledge the valuable aid he has received in its compilation and elsewhere from Mr. Charles Evans of the British Museum.

Mozart, concerto in B♭; Ferdinand David, concertino in B♭, op. 12; Kalliwoda, var. and rondeau in B♭, op. 57; Weber, andante and rondo ongarese in C, op. 55; concerto in F, op. 75; Kummer, concerto in C, op. 25; Neukirchner, fantasia with orchestra; Jacobi, potpourri with orchestra; Dotzauer, quatuor, op. 36, with the violin, viola, and violoncello; twelve pieces for three bassoons, by G. H. Kummer, op. 11; twelve trios for three bassoons, by G. H. Kummer, op. 13; forty-two caprices for bassoon, by E. Ozi; six duos concertants for two bassoons, by E. Ozi; Lindpaintner, op. 24, rondeau in B♭.

Other works will be found under Clarinet, Oboe, etc.

[The name is also given to an organ stop, representing the reed bass of the clarinet; a pedal reed stop.] W. H. S., with additions, in square brackets, by D. J. B.

BASTARDELLA, or BASTARDINA. See Agujari.

BASTIEN ET BASTIENNE, a German operetta or pastoral in one act (15 Nos.), words by Schachtner from the French, the music by Mozart 'in his 12th year,' 1768; performed in a Garden-house at Vienna belonging to his friends the Messmers. (Köchel, No. 50; Jahn, 1st ed. i. 122.) The subject of the Intrade (in G) is by a curious coincidence all but identical with the principal theme of the first movement of Beethoven's 'Eroica' Symphony:—

BASTON, Josquin, a Flemish composer of the first half of the 16th century, and still living in 1566. Unlike most of his contemporaries, he does not seem to have visited Italy, as his published works, consisting of motets and chansons, form part of collections printed either at Louvain or Antwerp. J. R. S. B.

BATES, Joah, was born March 19, 1740-1, at Halifax, where he received his early education under Dr. Ogden, and learned music from Harley, organist of Rochdale. He subsequently removed to Manchester, where he studied organ-playing under Robert Wainwright, organist of the collegiate church, now the cathedral. He obtained a scholarship at Eton in 1756, and went in 1760 to Cambridge, where he became fellow and tutor of King's College. He took the degree of B.A. in 1764, and of M.A. in 1767. He then became private secretary to the Earl of Sandwich, First Lord of the Admiralty and a well-known musical amateur, who procured him a small post

in the Post Office. About that time he conceived the plan of the Concert of Ancient Music, which was established in 1776, Bates being appointed conductor. In the same year he was appointed a commissioner of the Victualling Office, and in 1780 married Miss Sarah Harrop, a pupil of Sacchini, and a favourite concert singer, who had studied under him the music of Handel and the elder masters. He next, in 1783, in conjunction with Viscount Fitzwilliam and Sir Watkin Williams Wynn, projected the Commemoration of Handel, which was carried into effect the following year, Bates officiating as conductor. He was afterwards appointed a commissioner of the Customs and a director of Greenwich Hospital. Having projected the Albion Mills, of the success of which he was so sanguine as to invest the whole of his own and his wife's fortunes in them, he was nearly ruined by their destruction by fire in 1791. In 1793 he resigned the conductorship of the Concert of Ancient Music. He died in London, June 8, 1799. A fine painting of Joah Bates and his wife, by F. Coates, R.A., is in the possession of Mr. Alfred H. Littleton. W. H. H.

BATES, WILLIAM, a composer of the 18th century, produced music for the following dramatic pieces:—'The Jovial Crew,' comic opera, 1760; 'Pharnaces,' opera, 1765; 'The Ladies' Frolick,' an alteration of 'The Jovial Crew' (jointly with Dr. Arne), 1770; 'The Theatrical Candidates,' musical prelude, 1775. He was also the composer of 'Songs sung at Marybon Gardens, 1768,' and of several glees, catches, and canons, eleven of which are published by Warren. Also 'Flora, or Hob in the Well,' ballad opera, 1768; 'Songs sung at the Grotto Gardens,' 1771. [See CATLEY, ANNE.] W. H. H.

BATESON, THOMAS. The exact dates of his birth and death are unknown. Rimbault states that he became organist of Chester Cathedral in 1599. This is probably correct, but cannot be verified, as the Cathedral Treasurer's accounts for the years before 1602 are missing. There is some reason to think that he was a Cheshireman and a native of the Wirral district, but he seems to have come to Chester as a complete stranger, and to have had no previous connection with the Cathedral. That he was a young man we may infer from the preface to his first book of madrigals. He was married, and the old Cathedral (St. Oswald's) Registers give three children, Thomas baptized 1603, Jane 1605, and Sarah 1607. Richard Betson, a foundationer of the King's School 1611-15, may have been an older son, as the spelling of the name admitted of several variants. [In the *Chapter Acts of Christ Church Cathedral*, vol. i. (1574-1634), the name is spelt Betson and Batson as well as in the more usual manner.] The Cathedral accounts show several payments to Bateson. '1601. Payd unto Mr. Bateson for ye new organ booke belonging to o'r Quier xl^s^. 1602, Nov. 17. For a little Deske for Mr. Bateson his organ book vi^s^. 1605, March. To Mr. Bateson for mending ye organs when they were removed iiij^s^ x^d^.' Two other payments in 1608 show that the Treasurer and Bateson were clearing up accounts between them preparatory to the latter leaving Chester for Ireland. On March 24, 1608-9, he appears as 'Vicar Choral of the Cathedral of the Holy and undivided Trinity, Dublin,' and on April 5 of the same year is described as 'Vicar and organist of this church.' He took advantage of his residence there to proceed to the degree of Bachelor of Music in 1615, in which year his son John, aged 20, was rector of Kiljarran, in the diocese of Ferns. Bateson is generally considered to have been the first musical graduate of the University now familiarly known as Trinity College, Dublin (*Chapter Acts, Christ Church Cathedral, Dublin*, vol. ii. p. 73). An anthem in seven parts, 'Holy Lord God Almighty,' reprinted by the Mus. Antiq. Soc. from a set of part books formerly in the possession of John Evelyn, was probably the exercise for his degree. No other sacred music of Bateson's is known, though a service by him was sung in Chester Cathedral up to the early part of the 19th century. His fame rests entirely on his Madrigals. In 1604 he published 'The first set of English Madrigales to 3, 4, 5 and 6 voices. Newly composed by Thomas Bateson, practicioner in the Art of Musicke, and Organist of the Cathedral Church of Christ in the Citie of Chester, 1604. 4to. *In London, Printed by Thomas Este.*' The contents consist of six songs for three voices, six for four voices, ten for five voices, and six for six voices. There were six parts dedicated 'To my honorable and most respected good friend Sir William Norres.' This patron was of the family of Norreys of Speke, Lancashire, but he had certain rights and duties connected with the Bridge Gate in the city of Chester, and lived for some time at Blacon Manor House on the outskirts of the city.

In the preface Bateson compares his compositions to 'young birds feared out of the nest before they be well feathered,' and hopes 'they wilbe so shrouded in the leaues of (his patron's) good liking,' that 'neither any rauenous Kite nor craftie fowler (any openmouthed *Momus* or more sly detractor,) may deuour or harm them that cannot succor nor shift for themselues.'

At the back of the dedication is a madrigal 'When Oriana walkt to take the ayre,' and the following note:—'This song was sent too late, and should have been printed in the set of Orianas; but being a work of this author, I have placed it before the set of his songs.' This refers to *The Triumphs of Oriana*, and the words of this madrigal were considered by Oliphant as 'the best poetry in the set.' Bateson's volume also contains a madrigal called 'Oriana's Farewell,' evidently written after the death of Queen

Elizabeth. This contains a most interesting double suspension (at bar 13 of the reprint) which has been often commented upon. His first book of madrigals was reprinted in score by the Mus. Ant. Soc.

In 1618 appeared 'The Second Set of Madrigals to 3, 4, 5 and 6 parts. Apt for Viols and Voyces. Newly composed by Thomas Bateson, Bachelor of Musicke, Organist and Master of the Children of the Cathedrall Church of the blessed Trinitie, Dublin, in the Realme of Ireland. 4to. *London: Printed by Thomas Snodham for Matthew Lownes and John Browne*, 1618, *cum Privilegio.*' There were six parts dedicated 'To the Right Honourable Arthure Lord Chichester, Baron of Belfast,' etc., and the arms of that nobleman are on the title-page. The book contains six 'Songs' for three voices, six for four voices, twelve for five voices, and six for six voices. This is a rare work, and few perfect copies are extant. It may be noted that the words of No. 13, 'Have I found her?' had previously been set in 1612 by Pilkington of Chester, with whom Bateson was, of course, well acquainted. This madrigal and 'Sister, Awake,' from the 1604 collection, have been reprinted by Breitkopf & Härtel. See AUSGEWÄHLTE MADRIGALE. Of the rest of Bateson's life and work nothing is known, but his madrigals alone have secured for him a high place among the English composers of the Elizabethan period. Some MS. compositions by Bateson are in the British Museum, Eg. MSS. 995, and Add. MSS. 31398, and six MS. copies of madrigals from the 1604 collection, in the handwriting of John Immyns, are in the Fitzwilliam Museum, Cambridge. Bateson died March or April 1630, as he made his will on March 2, 1629-30, and on April 30 of the same year the Chapter Acts above referred to mention the granting of a new lease of his house, and alludes to 'the widdow Batson.' In an entry under date May 1631, Bateson is said to have died just a fortnight before the rent was to be paid, so that it is possible that the date was in the early part of March.

Authorities.—Rimbault, ed. of the Madrigals, in Mus. Ant. Soc., *Dict. Nat. Biog.*, Cathedral and other Chester Records; information from Messrs. W. H. Grattan Flood and L. McC. L. Dix. J. C. B.

BATHE, WILLIAM, born in Ireland, April 2, 1564, the son of Judge John Bathe, and grandson of Chief Baron Bathe, studied at Oxford, and constructed a 'harp of a new device,' which he presented to Queen Elizabeth (in 1584), to whom he taught mnemonics. He published his *Brief Introduction to the true art of Musicke*, in 1584, being the first standard work in English on musical theory. It was printed by Abel Jeffes, in Sermon Lane, near Paules Chaine, oblong quarto, and was dedicated to his grand-uncle, Gerald FitzGerald, Earl of Kildare. On Jan. 20, 1585, Queen Elizabeth expressed approval of Bathe's diplomacy as the agent of Sir John Perrott, and on March 7, 1587, he got various lands in Ireland, including Drumcondra Castle. He returned to Ireland in 1590, having got livery of his estate on Sept. 24, 1590, and gave over his estates to his younger brother. In October 1591 he sailed for Spain, and became a Jesuit at Tournai, in Flanders, on August 6, 1596, entering the Novitiate on Sept. 21 of same year. He successively studied at St. Omer and Padua, where he was ordained priest in 1599. In 1600 he published, through Thomas Este, of London, a second musical work, in English, entitled: *A Brief Introduction to the Skill of Song*, a small octavo of 25 pages, of which two copies are in the British Museum. The following year he went to the court of Spain as *socius* to the Nuncio, and in 1604 was made Spiritual Director of the Irish College of Lisbon. Thence he proceeded to Salamanca in 1606, and was there professed in 1612. In 1611 his famous *Janua Linguarum* was printed at Salamanca, afterwards translated into twelve languages, and he died at Madrid on June 17, 1614. W. H. G. F.

BATISTE, ANTOINE EDOUARD, organist and professor of music, born in Paris, March 28, 1820, died suddenly there Nov. 9, 1876, was a son of the eminent comedian Batiste, whose memory is still fresh in the annals of the Comédie Française, and uncle of Léo Delibes. He was one of the pages in the chapel of Charles X., but after 1830 he was sent to the Conservatoire, where he went through a course of solfeggio, harmony, organ, counterpoint and fugue. As a student he was most successful, carrying off the first prizes in these studies, and in 1840, as a pupil of Halévy's, obtaining the second Prix de Rome. In 1836, before he had finished his course at the Conservatoire, he had been appointed deputy professor of the solfeggio class; after which he was successively appointed professor of the male choral class, of the joint singing class (suppressed in 1870), and of the solfeggio class for mixed voices. He also instituted an evening choral class at the Conservatoire. In Oct. 1872 he took a class for harmony and accompaniment for women. These professorial duties did not prevent him from pursuing his organ studies, and after having held from 1842 to 1854 the post of organist at St. Nicolas des Champs, he was given a similar post at St. Eustache, which he filled until his death, with so much ability that in consideration of his long tenure of office the curé was allowed to celebrate his funeral obsequies at St. Eustache, though Batiste did not reside in the parish. A musician of severe and unerring taste, Batiste was one of the most noted organists of his time, but his compositions for the organ were far from equalling his talents as professor and executant. He will be chiefly remembered by his educational

works, and particularly by his Petit Solfège Harmonique, an introduction to the Solfeggio and method of the Conservatoire, by his diagrams for reading music, and above all, by his accompaniments for organ or piano written on the figured basses of celebrated solfeggi by Cherubini, Catel, Gossec, and other masters of that date, entitled Solfèges du Conservatoire; in short, he was a hard worker, wholly devoted to his pupils and to his art. A. J.

BATON, CHARLES, called 'le jeune' to distinguish him from his elder brother Henri, who performed on the musette. Was a player on the vielle or hurdy-gurdy in Paris in the middle of the 18th century. He published an 'Examen de la lettre de M. Rousseau sur la musique française' (Paris, 1753), and a 'Memoire sur la Vielle' in the *Mercure* for 1757. He improved his instrument, and composed much for it—Suites for two vielles, musettes, etc. Baton died at Paris in 1758.

BATON (Fr. *Bâton*), the stick with which the conductor of an orchestra beats the time. Hence the expression 'under Mr. ——'s baton,' *i.e.* under his direction. The first baton employed in England was probably the 'Taktirstäbchen' used by Spohr at the Philharmonic in 1820 (*Selbstbiog.* ii. 87). Batons are usually turned out of maplewood for lightness, 21 or 22 inches long, and tapering from ¾ths to ⅜ths of an inch in diameter. They are occasionally given as 'testimonials,' in which case they are made of metal or of ivory ornamented with silver or gold.

When Berlioz and Mendelssohn met at Leipzig in 1841 they exchanged batons, and Berlioz accompanied his with the following letter, in the vein of Fenimore Cooper:—'Au chef Mendelssohn. Grand chef! nous nous sommes promis d'échanger nos tomahawcks; voici le mien! Il est grossier, le tien est simple; les squaws seules et les visages pâles aiment les armes ornées. Sois mon frère! et quand le Grand Esprit nous aura envoyés chasser dans les pays des âmes, que nos guerriers suspendent nos tomawcks à la porte du conseil.' Mendelssohn's reply is not extant, but no doubt it was quite àpropos. G.

The Baton in England.—The baton, as a conducting stick, did not come into general use in England until the years 1832-33. Up to that time the so-called conductor 'presided' at the pianoforte (or organ) and kept the piece 'going' by playing with the orchestra, while the principal violinist (the 'leader') occasionally beat time with his bow when not too busy with his instrument. 'It is the habit of some [conductors] when presiding at a pianoforte to keep the pedals down, and play throughout the piece, thus making the instrument far too prominent.' Thus said *The Quarterly Musical Magazine and Review* for 1829 (vol. x. p. 313, *note*). Spohr, in his *Autobiography* (English edition, vol. ii. p. 81), makes great fun of this dual control, or lack of control. His use of the baton at the Philharmonic concert of April 10, 1820, was regarded as a great innovation, but it made no change in the old order of things. Weber, too, wielded a baton in conducting an 'oratorio concert' at Covent Garden Theatre, March 8, 1826. Mendelssohn, when he conducted his C minor symphony at the Philharmonic concert of May 25, 1829 (his first appearance in England), used a baton which he had had made specially for the purpose. 'The maker took me for an alderman,' he says, 'and would insist on decorating it [at the point] with a crown' (*Mendelssohn Family*, English edition, i. 184). He adopted the same method at the Philharmonic in 1832. This year marked the new departure from the old order to that now in vogue. Herr Chelard, conductor of the German Opera Company which then performed in London (1832), conducted with a baton, and this method, quite familiar on the Continent, seems to have given so much satisfaction, that the practice spread to our concert-rooms. The *Athenæum*, in noticing the second and third concerts of the Philharmonic Society in 1833, said: 'Sir G. Smart, in the true capacity of a conductor, stood with a baton in his hand, and we never heard the band go better' (second concert). 'Bishop conducted with a baton—let us hope, therefore, that the leader's "occupation's gone"' (third concert).

It should be stated, however, that the baton had been used in England earlier. In the English translation of Raguenet, entitled *A Comparison between the French and Italian Musick and Opera's*, published in London in 1709, the translator has a footnote (p. 42), which deserves quotation.

> Some Years since the Master of the Musick in the Opera at *Paris* had an Elboe Chair and Desk plac'd on the Stage, where, with the Score in one Hand, and a Stick in the other, he beat Time on a Table put there for that purpose, so loud, that he made a greater Noise than the whole Band, on purpose to be heard by the Performer. By degrees they remov'd this Abuse from the Stage to the Musick Room, where the Composer beats the Time in the same manner, and as loud as ever. The same was observ'd in *London* six or seven years ago; but since the *Italian* Masters are come among us, and the Opera's have been introduced, they have put a stop to that ridiculous Custom, which was Founded more upon an ill Habit than any Necessity there was for it, as doing more harm than good; for the Opera's are better Performed now without it than any Piece of Musick was formerly; because the Eye was too much Distracted, being obliged to mind the beating of the Measure, and the Score at the same time; besides, it kept the Singer and the Player in too much Subjection, and Fear of Errors, by which means they were depriv'd of the Liberty so absolutely necessary to Musick, and which gives a Strength and Spirit to the Notes.

Samuel Wesley, in a lecture delivered in London in 1827, said: 'I remember that in the time of Dr. Boyce it was customary to mark the measure to the orchestra with a roll of parchment, or paper, in hand, and this usage is yet continued at St. Paul's Cathedral at the musical performances for the Sons of the Clergy.' These instances do not affect the statement that the baton first came into general use in England

in the years 1832-33. More detailed information on this subject will be found in an article contributed by the present writer to the *Musical Times* of June 1896, p. 372. F. G. E.

BATTAILLE, CHARLES AMABLE, distinguished bass singer, born at Nantes, Sept. 30, 1822, died in Paris, May 2, 1872. He was at first a doctor of medicine, but gave up his practice and joined the company of the Opéra Comique from 1848 to 1857, when he was compelled to retire owing to an affection of the larynx. Thenceforward he appeared only very seldom on the stage (in 1860 he sang at the Théâtre Lyrique and the Opéra Comique), but devoted his life to teaching singing; he had been appointed a professor in the Conservatoire in 1851, and in 1861 the first and most valuable portion of a voluminous treatise entitled 'De l'enseignement du Chant' appeared, under the title of 'Nouvelle recherches sur la phonation,' containing important results of physiological study. G. F.

BATTEMENT. See AGRÉMENS.

BATTEN, ADRIAN, the date of whose birth is not known, was brought up in the Cathedral Choir of Winchester, under John Holmes the organist, and in 1614 appointed vicar-choral of Westminster Abbey. In 1624 he removed to St. Paul's Cathedral, where he held the same office in addition to that of organist. Batten's name is well known in our cathedral choirs from his short full anthem, 'Deliver us, O Lord.' Burney says of him: 'He was a good harmonist of the old school, without adding anything to the common stock of ideas in melody or modulation with which the art was furnished long before he was born. Nor did he correct any of the errors in accent with which former times abounded.' This criticism is hardly just. Batten's anthem, 'Hear my prayer,' is, in point of construction and effect, equal to any composition of his time. He composed a Morning, Communion, and Evening Service in the Dorian Mode, and a large number of anthems; the words of thirty-four may be found in Clifford. Six are printed in Barnard, two more in Boyce, and eighteen others are comprised in Barnard's MS. collection in the library of the Sacred Harmonic Society; [single anthems are to be found in the British Museum, in the cathedral library at Ely, and in the Fitzwilliam Museum at Cambridge].

The date of Batten's death is uncertain. He was living in 1635, when he made a transcript of some anthem music, to which the following note is appended:—'All these songs of Mr. John Holmes was prickt from his own pricking in the year 1635, by Adrian Batten, one of the vickers of St. Paul's in London, who sometime was his scholar.' He probably died in 1637, as on July 22 in that year letters of administration of the estate of Adrian Batten, late of St. Sepulchre's, London, deceased, were granted by the Prerogative Court of Canterbury to John Gilbert, of the City of Salisbury, Clothier, with consent of Edward, John, and William Batten, brothers of the deceased. (Burney, *Hist.; MS. Accounts of Westminster and St. Paul's.*) E. F. R.

BATTERY, one of the agrémens used in harpsichord music. The sign for its performance is identical with the curved form of the modern indication of the arpeggio (see p. 110), which implied that the chord to which it was prefixed was to be played twice in rapid succession. M.

BATTISHILL, JONATHAN, the son of Jonathan Battishill, a solicitor, and grandson of the Rev. Jonathan Battishill, rector of Sheepwash, Devon, was born in London in May 1738. In 1747 he became a chorister of St. Paul's Cathedral under William Savage, and on the breaking of his voice his articled pupil. On the expiration of his articles he officiated for Dr. Boyce at the organ of the Chapel Royal, and composed some songs for Sadlers Wells Theatre. [He became a member of the Madrigal Society in 1758, and of the Royal Society of Musicians in 1761.] Soon afterwards he was engaged to play the harpsichord at Covent Garden Theatre, an early result of which engagement was his marriage in 1763 to Miss Davies, a singing-actress at that theatre, and the original performer of Madge in 'Love in a Village.' On her marriage Mrs. Battishill retired from the exercise of her profession. In 1764 Battishill composed, in conjunction with Michael Arne, the music for the opera of 'Almena.' The piece, owing to the poverty of the dialogue, was withdrawn after five performances; and in the same year Battishill composed the music for the pantomime 'The Rites of Hecate.' At a later period he abandoned the theatre and devoted his attention to the composition of church music, and produced several anthems (including the beautiful 'Call to remembrance'), in which melody and skilful treatment of the parts are admirably combined. About 1764 he was appointed organist of the united parishes of St. Clement, Eastcheap, and St. Martin Ongar, and in 1767 of Christ Church, Newgate Street (*British Mus. Biog.*). In 1771 he gained the Catch Club prize for his fine Anacreontic glee 'Come bind my brows.' In 1777 he lost his wife, and her death so affected him that he desisted from composition, and devoted much of his time to his books, of which he had collected between six and seven thousand volumes, chiefly classical works. He died at Islington, Dec. 10, 1801, aged sixty-three years, and was buried, pursuant to his dying wish, in St. Paul's Cathedral, near the grave of Dr. Boyce. Battishill published two collections of songs for three and four voices, and a collection of favourite songs sung at the public gardens and theatres. Several of his glees and catches are printed in Warren's and other collections. Four of his anthems are included in Page's

Harmonia Sacra. In 1804 Page edited *Six Anthems and Ten Chants,* with a finely engraved portrait of the composer prefixed. In the same year Page also inserted in a collection of hymns twelve psalm tunes and an ode composed by Battishill. The popular song 'Kate of Aberdeen' was composed by Battishill for Ranelagh Gardens. Battishill's compositions are distinguished by an uncommon combination of energy and vigour with grace and elegance. W. H. H.

BATTLE OF PRAGUE, THE. A piece of military programme-music describing the engagement between the Prussians and Austrians before Prague in 1757. It was composed by Kotzwara—a native of Prague—for Piano, with violin and violoncello *ad libitum,* and was published in London 1789, and at Hamburg and Berlin (according to Fétis) about 1792. The piece had an immense success at the time and for a quarter of a century after, and was the precursor of the 'Siege of Valenciennes,' and many others of the same kind—culminating in Beethoven's 'Battle of Vittoria.' The English editions contain 'God save the King,' as the hymn of triumph after the victory, and a drum-call 'Go to bed, Tom.' Now as 'Heil dir in Siegerkranz,' which has become a kind of Prussian national hymn, to the tune of 'God save the King,' was not produced till 1799, it seems probable that the tune and the name have been put into the English editions for the English market, and that if the German edition could be seen (which the writer has not been able to do) it would be found that some Prussian air and call were there instead of those named. G.

BATTLE SYMPHONY. The ordinary English name for Beethoven's 'Wellingtons Sieg, oder die Schlacht bei Vittoria,' op. 91. It was first performed in London, under the direction of Sir George Smart, at Drury Lane Theatre on Feb. 10, 1815.

BATTON, DÉSIRÉ ALEXANDRE, born in Paris, Jan. 2, 1797, died there Oct. 15, 1855; the son of an artificial flower maker. Was a pupil at the Conservatoire (learning counterpoint under Cherubini) from 1806 to 1816, in which year he won the 'Grand Prix' for his cantata 'La mort d'Adonis,' entitling him to travel for five years in Italy and Germany at Government expense, and he accordingly started in 1818, after the performance of his comic opera 'La Fenêtre secrète' at the Théâtre Feydeau. During his tour he composed several works, chiefly sacred music, in Rome, and a symphony performed in Munich. After his return to Paris in 1823 he brought out three operas, 'Ethelvina' (1827), 'Le Prisonnier d'état' (1828), and 'Le champ du drap d'or' (1828), the failure of which drove him to adopt his father's trade. 'La Marquise de Brinvilliers,' composed in 1831 in conjunction with Auber, Hérold, and Carafa, was however better received. Batton's failure as a dramatic composer may in great part be attributed to the poverty of his libretti. [In 1842 he was appointed inspector of the branch-schools of the Conservatoire, and teacher of a vocal class in 1849 (Baker's *Dict.*).] M. C. C.

BATTUTA (Ital., 'beat,' or 'measure'). 'A battuta,' like 'a tempo,' means a return to the strict beat. Beethoven uses the word in the Scherzo of the Choral Symphony—'Ritmo di tre battute,' 'Ritmo di quattro battute,' to signify that the rhythm in those places goes in groups of three bars or four bars respectively. In the Presto of his E flat Quartet (op. 74), where the time changes to 'Più presto, quasi prestissimo,' he adds the direction 'Si ha s'immaginar la battuta di 6–8'—the movement being written in 3–4.

BAULDUIN, or BAUDOUIN, NOEL, a native of the Netherlands, contemporary with Josquin des Prés, and from 1513 to 1518 chapel-master of the church of Notre Dame at Antwerp, where he died in 1529. Two of his motets were printed by Petrucci of Fossombrone in 1519, which suggests that he visited Italy, and proves in any case that his fame had reached that country during his lifetime. The rest of his works are preserved in the Papal Chapel, in the court libraries of Munich and Vienna, in the episcopal library at Regensburg, etc., and some are included in collections published some time after his death. J. R. S. B.

BAUMGARTEN, C. F., a native of Germany, and pupil of the famous organist J. P. Kunzen; came early to London and never left it; was organist at the Lutheran Chapel in the Savoy, and leader of the band of the English opera, Covent Garden, from 1780. He was also composer and leader of the Duke of Cumberland's private band, which contained Blake, Waterhouse, Shield, Parke, and the elder Cramer. Baumgarten wrote much for the 'Professional Concerts' of 1783, and later, various operas and pantomimes—amongst others, Robin Hood, 1786, and Blue Beard, 1792. As an organist he had great skill in modulation and a thorough knowledge of his instrument, but as a violin-player, both in concerted music and as a leader, he was languid and wanting in energy—'a sleepy orchestra,' says Haydn in his diary. His theoretical knowledge was acknowledged by Haydn and Gyrowetz. 'He was the man to mix learning with effect, and therefore to write captivations that are felt by all' (*The World,* 1787). When he made Haydn's acquaintance in 1792 he had almost forgotten his mother-tongue. In 1794 he lost his position at Covent Garden, and was succeeded by Mountain (*The Oracle,* Sept. 19). After this nothing is known of him. Baumgarten was a man of much ability and culture; his pupils were numerous and distinguished. He wrote an admirable treatise on music, and was a keen student of astronomy, mathematics,

FESTIVAL THEATRE, BAYREUTH

and history; but he does not seem to have possessed the art of making use of his advantages, and was quickly forgotten. A song of his, 'Her image ever rose to view,' from 'Netley Abbey,' is preserved in Ayrton's *Musical Library*. C. F. P.

BAYLY, REV. ANSELM, D.C.L., son of Anselm Bayly of Haresfield, Gloucestershire, was born in the year 1719. He matriculated at Exeter College, Oxford, Nov. 4, 1740. On Jan. 22, 1741, he was appointed lay-vicar of Westminster Abbey, and on the 29th of the same month was admitted a gentleman of the Chapel Royal, both places being vacant by the death of John Church. On March 13, 1744, having resigned his place as gentleman, he was admitted priest of the Chapel Royal. He graduated as B.C.L. June 12, 1749, and D.C.L. July 10, 1764. In the latter year, on the death of the Rev. Dr. Fifield Allen, Bayly was appointed his successor as sub-dean of the Chapel Royal. He died in 1794. He was author of *A Practical Treatise on Singing and Playing*, 1771, *The Alliance of Musick, Poetry, and Oratory*, 1789, and of several theological and grammatical works. [See list in the *Dict. of Nat. Biog.*] In 1769 he edited a collection of the words of Anthems, to which he contributed an interesting preface on cathedral music. W. H. H.

BAYREUTH. From the date when Wagner fixed upon the little Franconian town for the site of his ideal theatre, and for his own residence (from 1872), it has occupied a position of great importance in the musical world. The beginnings of what may be called the Bayreuth movement were at first very discouraging; it was intended to produce the Nibelungen trilogy in 1874, but lack of funds compelled the postponement of the opening till 1876. The foundation-stone of the festival theatre was laid on May 22, 1872, and a memorable performance of Beethoven's Choral Symphony was given in the quaint old theatre of the town. From the beginning, the banker, Friedrich Feustel, his son-in-law, Adolf von Gross, and the burgomaster, Dr. von Muncker, took the greatest interest in a scheme which was destined to have such prosperous results for their town. The difficulty in finding the necessary funds to set the work on foot was increased by Wagner's determination to admit none but the professed supporters of his music; the task of finding 1000 'patrons,' each willing to expend £45 on the project, was found to be hopeless, and the foundation of 'Wagner Societies' began in different cities of Germany and abroad. At last the theatre was completed, from the plans of the architect Gottfried Semper (with a good many modifications by Wagner himself), and the 'Ring des Nibelungen' was duly performed in August 1876, from the 13th to the 17th, and again from the 20th to the 23rd. The result was a deficit of £7500. Renewed exertions on the part of Wagner's supporters were made (among other things a memorable set of concerts was given in London at the Albert Hall, in May 1877, with Wagner and Richter as conductors), but the practical importance of Bayreuth was not fully realised until the year of the production of 'Parsifal,' in July and August 1882. There had been no special reason why the Nibelungen trilogy should not be presented on other operatic stages, and Wagner had been obliged to give his consent to its adoption elsewhere than at Bayreuth; but the construction of the theatre, the nature of the subject, and other things, make it in the highest degree undesirable that 'Parsifal' should ever be placed on another stage than that for which it was written. The ever-growing number of Wagnerians, and those individuals from the outer world who made their way to Bayreuth in these early days, felt that the existence of the place as a musical centre was amply justified, and from that year its success was assured. Since the composer's death the performances have been as follows: in 1883 and 1884 'Parsifal' was given in July and August, after which there was an interval until 1888, when 'Parsifal' and 'Meistersinger' were given. To these two in 1889 was added 'Tristan.' In 1891 the repertory consisted of 'Parsifal,' 'Tristan,' and 'Tannhäuser,' and in 1892 of these three, with 'Meistersinger.' In 1894 the first performance of 'Lohengrin' at Bayreuth took place, and two years afterwards, in 1896, the 'Ring' was revived, being repeated, together with 'Parsifal,' in 1897. In 1899 'Meistersinger' was once more given with the 'Ring' and 'Parsifal,' and in 1901 and 1902 the 'Ring,' 'Parsifal,' and 'Der Fliegende Holländer' were given.

Beside the theatre itself, Wagner's own house of Wahnfried is not without considerable artistic influence of a kind. Under Frau Cosima Wagner's direction the decisions of the trustees, as to giving performances in any particular year, and as to the programme, go forth to the world at large. There is also a large school for the study of the peculiar traditions of the Wagnerian stage, an institution from which have come some eminent dramatic singers. A whole literature, of course bearing on the subject of Wagner's music, has sprung up in Bayreuth, from the date of the *Bayreuther Blätter*, a monthly periodical started by Herr von Wolzogen in 1878, down to the various handbooks in various languages, intended for the use of the casual attendants at the summer performances. M.

BAZIN, FRANÇOIS EMANUEL JOSEPH, born at Marseilles, Sept. 4, 1816, studied at the Paris Conservatoire, where he afterwards became professor of harmony, under Auber. In 1840 his 'Loyse de Montfort' gained the Prix de Rome. In 1860, on the division of the Paris Orphéon into two sections, he was appointed conductor of them for the left bank of the Seine. He was professor successively of singing, harmony, and

composition at the Conservatoire, succeeding Amboise Thomas in the last capacity on the latter's promotion to be director of the institution in 1871. Bazin was made a member of the Académie in 1872. The following operas by him have been given at the Opéra Comique:—'Le Trompette de M. le Prince,' 1846; 'Le Malheur d'être jolie,' 1847; 'La Nuit de la Saint-Sylvestre,' 1849; 'Madelon,' 1852; 'Maître Pathelin,' 1856; 'Les Désespérés,' 1858; and 'Le Voyage en Chine,' 1865. Besides these, Bazin wrote several sacred compositions, a number of part-songs, and a 'Cours d'harmonie.' He died in Paris, July 2, 1878. M.

BAZZINI, Antonio, eminent violinist and composer, was born March 11, 1818, at Brescia; he was a pupil of Camisoni at Milan, and from 1840 to 1845 he played with great success in most of the principal towns of Italy, Germany, France, and Belgium. He visited Spain and France in 1848, and settled in Paris from 1852 to 1864, when he returned to Brescia to devote himself to composition. In January 1867 his opera, 'Turandot,' was given at the Scala without success. In 1873 he was appointed professor of composition at the Conservatorio of Milan, and became director of the institution in 1882. His advance in artistic earnestness as time went on, was most remarkable; in his maturer works, while the charm and spontaneity of his themes betray their Italian origin, the workmanship and the serious style of his chamber compositions (among which are six string quartets and a quintet) tell of German influence. He also wrote two sacred cantatas, 'La Resurrezione di Cristo' and 'Senacheribbo,' besides settings of various psalms, and symphonic overtures to Alfieri's 'Saul' and 'King Lear' (played at the Crystal Palace in 1877 and 1880 respectively). Bazzini's name is probably better known to the modern music public by his 'Ronde des Lutins' for violin than by any other of his works. He died at Milan, Feb. 10, 1897. M.

BEACH, Mrs. H. H. A. (Amy Marcy Cheney), an American pianist and composer. She was born in Henniker, N.H., September 5, 1867, and disclosed musical talent at a remarkably early age. Her mother gave her her first musical instruction; when the family removed to Boston in 1875, she became a pupil in pianoforte playing of Ernst Perabo, later of Carl Baermann, and in harmony of Junius W. Hill. Further theoretical studies in counterpoint, composition, and orchestration she carried on by herself. When she was seven years old she played in public a few times in her native state; her first professional appearance, however, was in Boston Music Hall on October 24, 1883. She played on this occasion Moscheles's G minor concerto, op. 60, with orchestra. In the following winter she gave several recitals, and the next season she played with the Boston Symphony Orchestra and with Theodore Thomas's. From that time till her marriage, in 1885, she appeared frequently in recitals and orchestral concerts. With the exception of two songs, all her compositions, which have now (1903) reached the opus number 53, have been published since her marriage. These include a symphony ('Gaelic'), op. 32, first played by the Boston Symphony Orchestra, 1896; a concerto for pianoforte and orchestra, op. 45, played for the first time by the composer with the Boston Symphony Orchestra in 1900; a sonata for pianoforte and violin, op. 34 (1897); a Mass in E flat for mixed voices, soli, chorus, and orchestra, op. 5 (1892); 'The Minstrel and the King,' for male chorus and orchestra, op. 16 (1902); 'Festival Jubilate,' op. 17, for mixed voices and orchestra (composed for the Chicago Exposition, 1893); several other cantatas and part-songs, many pianoforte pieces and songs. R. A.

BEALE, John, a pianist, born in London about 1796, was a pupil of John Baptist Cramer. In 1820 he was elected a member of the Philharmonic Society, and in 1821 was an active promoter of a concert given to celebrate the birthday of Mozart. On the establishment of the Royal Academy of Music he was named one of the professors of the pianoforte. W. H. H.

BEALE, William, was born at Landrake, Jan. 1, 1784, and brought up as a chorister of Westminster Abbey under Dr. Arnold and Robert Cooke. After the breaking of his voice he served as a midshipman on board the *Révolutionnaire*, a 44-gun frigate, which had been taken from the French. In 1813 he gained by his madrigal, 'Awake, sweet Muse,' the prize cup given by the Madrigal Society. From Jan. 30, 1816, to Dec. 13, 1820, he was one of the Gentlemen of the Chapel Royal. He published in 1820 a collection of his glees and madrigals. In November of the latter year he had been appointed organist of Trinity College, Cambridge. In Dec. 1821 he returned to London, and became successively organist of Wandsworth Parish Church and St. John's, Clapham Rise. (*Dict. of Nat. Biog.*) He gained a prize at the Adelphi Glee Club in 1840. His best-known compositions are the prize madrigal mentioned above, and 'Come let us join the roundelay.' He died in London on May 3, 1854.

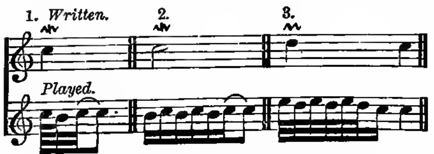
W. H. H. and W. B. S.

BEARD, John, one of the most eminent of English tenor singers, born about 1717, was in his boyhood a chorister of the Chapel Royal under Bernard Gates. He first appeared as a tenor singer in Handel's performances at Covent Garden Theatre in 1736, singing in 'Alexander's Feast,' 'Acis and Galatea,' and 'Atalanta.' On August 30, 1737, he appeared at Drury Lane Theatre as Sir John Loverule in Coffey's ballad opera 'The Devil to Pay,' and in the following season was regularly engaged there. In 1739 he married Lady Henrietta, the young widow of Lord Edward Herbert, and daughter

of the Earl of Waldegrave, on which he retired for a short time from professional life. After fourteen years of uninterrupted happiness, Lady Henrietta died in 1753, aged thirty-six. Beard performed at Drury Lane until 1743, after which he was engaged at Covent Garden until 1748; he then returned to Drury Lane, where he continued until 1759, in which year he married Charlotte, daughter of John Rich, proprietor of Covent Garden Theatre, and was again engaged at that house. During these years he appeared in various revivals of 'The Beggar's Opera,' in which Macheath was one of his most popular parts. Rich dying in 1761, Beard became, in right of his wife, proprietor and manager of the theatre, and so continued until an increasing deafness determined him to dispose of his interest in it and quit the stage. He took his leave of the public as Hawthorn in 'Love in a Village,' May 23, 1767. After his retirement he resided at Hampton, where he died, Feb. 5, 1791, in his seventy-fourth year. His wife survived him until August 26, 1818, when she died at Hampton at the great age of ninety-two. Beard throughout life bore the reputation of being a highly honourable and upright man. To form an estimate of his abilities as a singer it is only necessary to remember that Handel composed for him the great tenor parts in 'Israel in Egypt,' 'Messiah,' 'Samson,' 'Judas Maccabeus,' and 'Jephthah.' W. H. H.

BEAT. The name given in English to a melodic grace or ornament, but with considerable uncertainty as to which particular ornament it denotes, the word having been very variously applied by different writers.

With some authors it signifies the ACCIACCATURA, but it appears to be most generally understood to mean the MORDENT (Ger. *Beisser*) (Ex. 1), in which connection it seems not impossible that its English name may have been originally 'bite.' Dr. Callcott, however, in his Grammar of Music, speaks of the beat as a reversed shake, and derives its name from *Battement*, giving an example as in Ex. 2. *Battement* again, according to Rousseau (*Dictionnaire de Musique*), is a shake beginning on the upper instead of the principal note (Ex. 3). It is doubtless owing to this uncertainty that the word has now almost fallen into disuse. [See Dannreuther's *Primer of Ornamentation.*] F. T.



BEAT. The movement of the hand or baton by which the rhythm of a piece of music is indicated, and by which a conductor ensures perfect agreement in tempo and accent on the part of the orchestra or chorus; also, by analogy, the different divisions of a bar or measure with respect to their relative accent.

Among the ancients the ordinary method of beating time was by striking the foot upon the ground. The person who exercised this function, corresponding to our modern conductor, was called by the Greeks *Coryphæus* (principal), and by the Romans *Pedarius* or *Pedicularius*, from the custom of employing the foot to beat with, and it was usual for him to wear sandals of wood or metal, called *pedicula* or *scabella*, in order by their percussion to render the rhythm more evident. Sometimes the measure was marked by clapping the hands—in which case the time-beater was called *Manuductor;* and sometimes by the striking together of oyster-shells, bones, etc.

To our ears this incessant and noisy percussion would be unendurable, and a modern conductor would be severely criticised who could not keep his performers in time by the noiseless movements of his baton; nevertheless, the improvement is of comparatively recent date, for we find Rousseau in 1768 complaining that the listener at the Paris Opera should be 'shocked by the continual and disagreeable noise made by him who beats the measure.'

For the methods of beating time now in use, see CONDUCTING.

In theoretical works, the down-beat or accent, and the up-beat or non-accent, are usually spoken of by their Greek names of *thesis* and *arsis*. F. T.

BEATRICE DI TENDA. Italian opera, the libretto by F. Romani, the music by Bellini; produced at Venice in 1833, and at the Théâtre des Italiens, Paris, Feb. 8, 1841, and in London, at the King's Theatre, March 22, 1836.

BÉATRICE ET BÉNÉDICT. Opera in two acts, founded on Shakespeare's *Much Ado about Nothing*, words and music by Hector Berlioz. Performed for the inauguration of the theatre at Baden, August 9, 1862, given under Liszt at Weimar, Nov. 13, 1863, and revived with great success in 1887 and subsequent years under Felix Mottl at Carlsruhe, with the connecting dialogue set to music by the conductor. M.

BEATS are a wavy throbbing effect produced by the sounding together of certain notes, and most noticeable in unisons and consonances, when not perfectly tuned to one another.

To explain their origin reference must be made to elementary facts in the science of sound. Sound is conveyed to our ears by the waves into which the air, or other medium, is thrown by the vibration of what is called the sounding body. These waves are proportionally relative to the rapidity of the vibrations of the note sounding, and therefore also to its pitch; they consist of alternate condensation and rarefaction, each vibration being considered (in England and Germany) to comprise both the compression and distension of the particles of the air analogous

to the crest and trough of a wave of water. These are, as it were, opposite forces, and can be made to counteract each other if two waves be simultaneously produced which start at such a distance from each other that the condensation of one exactly corresponds to the rarefaction of the other. A very simple proof of this may be obtained by striking a large tuning-fork and holding it close to the ear, and turning it slowly round; when a particular point will be found on either side of the fork at which the sound ceases, although the fork continues to vibrate, because the two prongs are in such a position relative to the ear that their sound-waves in that direction mutually counterbalance one another.

Beats are produced by sound-waves which have such relations in size and rapidity, that at certain intervals they cross one another and, condensation and rarefaction being simultaneous for the moment, produce silence. For instance, if two notes which vibrate respectively 100 and 101 times in a second be sounded together, it is clear that the sound-waves of the latter will gain $\frac{1}{100}$ on the former at each vibration, and half-way through the second will have gained so much that its condensation will exactly correspond with the rarefaction of the other note (or *vice versâ*), and for the moment silence will result; and so for each second of time.

If the notes be further apart, as 100 to 102, the latter will gain twice as much in every vibration, and there will be two places where the waves counteract each other, and therefore two beats in each second. Hence the rule that the *number of beats per second is equal to the difference between the rates of vibration of the notes.*

It is found practically that it is not necessary for the waves to be exactly in opposition; for in the case of one note with 100 vibrations in a second and another with 103, though the three beats will be heard according to the rule above given, it is proved mathematically that there will be only one point at which the condensation and rarefaction are exactly simultaneous, and the other two extremes of opposition are not exact, though within $\frac{1}{10300}$ of a second of coincidence.

In point of fact the sound will be lessened to a minimum up to the extreme of opposition in the position of the waves, and increased to the full power of the two sounds up to the perfect coincidence of the vibrations.

It will have been observed that the beats increase in number as the notes become more wide apart. According to Helmholtz they are most disagreeable when they number about 33 in a second, which is nearly the number produced by the sounding together of treble C and D♭. From that point they become less and less harsh till with such an interval as treble C and E, which produces 128 beats in a second, there is no unpleasant sensation remaining.

Beats are of three kinds. The first and most commonly known is produced by the sounding together of two notes nearly in unison—to which the above description applies simply. They are associated with the name of the great violinist Tartini, for reasons concerning which a controversy has arisen, and which are too long to be here set down.

The second kind arises from the imperfect tuning of consonances—such as the third, fourth, fifth, sixth, or octave. Here the notes are too wide apart for the primary beats as described above to be noticeable. But the primary beats are in this case thrown into groups or cycles, which produce the effect of beats. These were first investigated by Dr. Robert Smith, Master of Trinity Coll., Cambridge (died 1768), and are called after him.

The third kind, also due to the imperfect tuning of consonances, is that which has been most carefully investigated by Helmholtz, and is called by him the *over-tone beat*. It is produced exactly in the manner first described between the harmonics of one note and another fundamental note which is not in tune with the first, or between the harmonics of two fundamentals which are out of tune.

For instance, if bass C be sounded with middle C, and the latter be slightly out of tune, middle C and the first harmonic of the lower C will be in the position of imperfectly tuned unisons, and beats will be produced. If C and G be sounded together, and the latter be out of tune, the second harmonic of the former and the first of the latter will clash in a similar manner, and beats will be produced between them. And so with other consonances.

The value of beats to organ-tuners is well known, as their disappearance when the notes are in tune is a much safer criterion of exactness than the musical sense unaided. Moreover it is possible to discover, by simple calculation of the number of beats in a second relative to the number of vibrations, the exact amount any note is out of tune with another.

For more complete discussion of this subject, see an article by William Pole, Mus.Doc., F.R.S., in *Nature* for 1876, Nos. 324, 325. See also ACOUSTICS. C. H. H. P.

BEAULIEU, MARIE DÉSIRÉ, whose family name was MARTIN, son of an artillery officer of Niort, born in Paris, April 11, 1791. He studied under Rodolph Kreutzer, Benincori, and Méhul, and obtained the 'Grand Prix' at the Conservatoire in 1810. He did not accept the five years' tour to which the prize entitled him, but settled at Niort. Here he founded quartet meetings, and in 1829 a Philharmonic Society, which was afterwards expanded into the 'Association musicale de l'Ouest' (1835). This Society was the first of its kind in provincial France, and through the untiring zeal of its founder has attained a high pitch of excellence.

Yearly festivals are held in turn at Niort, Poitiers, La Rochelle, Angoulême, Limoges, and Rochefort; and Mendelssohn's 'St. Paul' and 'Elijah' were performed at La Rochelle by this Society long before they were heard in Paris. Beaulieu wrote in all styles, but excelled in church music. [Two operas, 'Anacréon' and 'Philadelphie'; two lyric scenes, 'Jeanne d'Arc' and 'Psyché et l'Amour'; three oratorios, 'Hymne du Matin,' 'Hymne de la Nuit,' and 'L'immortalité de l'âme,' besides masses, orchestral works, songs, etc., are mentioned among his compositions.] His principal work was a requiem on the death of Méhul, composed 1819, performed 1840. [His literary works include *Du Rythme* (1852), *Mémoire sur ce qui reste de la musique de l'ancienne Grèce*, *Mémoire sur le caractère que doit avoir la musique d'Église* (1858), *Mémoire sur quelques airs nationaux* (1858), and *Mémoire sur l'origine de la musique* (1859). He died at Niort, in Dec. 1863.] M. C. C.

BEAUMAVIELLE, a baritone singer, brought from Toulouse by Perrin to sing in 'Pomone,' the first French opera by CAMBERT, produced in 1671. After Lulli had obtained the transference of Perrin's monopoly to himself, Beaumavielle was one of the best singers at his opera-house. He died in 1688, soon after Lulli, and was succeeded by Thévenard. M. C. C.

BEAUTY-STONE, THE: 'romantic musical drama' in three acts, words by Messrs. Comyns Carr and A. W. Pinero, music by Sir Arthur Sullivan. Produced at the Savoy Theatre, May 28, 1898. M.

BEBUNG (Ger., Fr. *Balancement*, Ital. *Tremolo*), a certain pulsation or trembling effect given to a sustained note in either vocal or instrumental music, for the sake of expression. On stringed instruments it is effected by giving an oscillating movement to the finger while pressing the string; on wind instruments and in singing by the management of the breath.

The word Bebung refers, however, more particularly to an effect peculiar to the old clavichord, but not possible on the modern pianoforte, in which the continuous and uninterrupted repetition of a note was produced not by a fresh blow, but by a movement of the tip of the finger without leaving the key. This effect was formerly held in high estimation as a means of expression, and Emanuel Bach in the introduction to his 'Versuch über die wahre Art das Clavier zu spielen,' says, comparing the then newly-invented pianoforte with the clavichord, 'I believe, nevertheless, that a good clavichord possesses—with the exception that its tone is weaker—all the beauties of the former (the pianoforte), and in addition the *Bebung* and the power of sustaining the tone, inasmuch as after striking each note I can give a fresh pressure.'

The Bebung was not often marked, except sometimes by the word *tremolo*. Marpurg, however ('Principes du Clavecin'), gives the following as the sign of its employment, using as many dots over the note as there were to be repetitions of the sound— [musical example]. F. T.

BECHER, ALFRED JULIUS, born of German parents at Manchester, April 27, 1803; educated at Heidelberg, Göttingen, and Berlin. His life was one of perpetual movement and adventure. Before he was forty he had lived in Elberfeld, Cologne, Düsseldorf, the Hague, and London, had practised as an advocate, edited a mercantile newspaper, and twice filled the post of Professor of Composition. But whatever else he did he was always faithful to music. In 1841 his wanderings came to an end in Vienna, and at the instance of Mendelssohn he took up musical criticism, in which he was very successful, associating himself with the *Wiener Musik-Zeitung* and the *Sontagsblätter*. He was equally enthusiastic for the old masters and for Berlioz. In 1848 he threw himself into politics as a violent democrat, became editor of the *Radikale*, was tried by court-martial and shot on Nov. 23, 1848, in the Stadtgraben of Vienna. Becher published songs, sonatas, and pianoforte pieces, many of which became favourites. He composed a symphony, a violoncello fantasia (performed at a concert at which he had the aid of Jenny Lind), and string quartets. But these, though full of ability and intelligence, never made any impression on the public. Becher's literary works were almost entirely fugitive, but he published a history of the *Niederrheinische Musikfest* in 1836, and a biography of Jenny Lind 1846, 2nd augmented edition, Vienna, 1847. C. F. P.

BECHSTEIN. The founder of this firm of piano-makers was Friedrich Wilhelm Carl Bechstein, born June 1, 1826, at Gotha. He worked in several factories in Berlin, London, and Paris, and began in 1856 the business in Berlin now so famous and influential. He opened a branch in London in 1879, which was removed to Wigmore Street in 1890. He died March 6, 1900, his sons succeeding to the inheritance of a business they had helped to develop. On June 1, 1901, they opened a Concert Hall in London, having already one in Berlin, suitable for piano recitals and chamber music. There is a branch in Paris, and an important agency of many years' standing in St. Petersburg. Mr. Edwin Bechstein is now the head of the firm. A. J. H.

BECK, FRANZ, born at Mannheim about 1731, died at Bordeaux, Dec. 31, 1809, violinist and composer, for a short time a pupil of Stamitz. When quite young he took refuge in Paris from the consequences of a duel, and thence removed to Bordeaux. Here he became director of a series of concerts (1780), and trained many eminent musicians; among others Blanchard and Bochsa. His compositions are excellent, though comparatively few in number. They comprise 24 Symphonies (six of them published as Opera IV.

in 1776); a 'Stabat Mater,' performed at the Concerts Spirituels in 1783; 'Pandore,' a melodrama (1789); a 'Gloria' and 'Credo'; MS. Sonatas for Pianoforte, and Quartets for Strings. M. C. C.

BECK, JOHANN NEPOMUK, born May 5, 1828, at Pesth, where he studied singing and first appeared on the stage as Richard in 'I Puritani,' having been advised by Erl and Formes to adopt a musical career. He afterwards sang at Vienna, Hamburg, Bremen, Cologne, Düsseldorf, Mayence, Würzburg, Wiesbaden, and Frankfort, 1851-53. From 1853 to 1888 he was at Vienna as principal baritone, where he was a great favourite, being alike excellent in singing, acting, and in classical and romantic opera. Among his best parts were Don Juan, Count Almaviva, Pizarro, Mikheli (Wasserträger), Hans Heiling, William Tell, Nelusco, Hamlet, Amonasro, Orestes, the baritone parts in Wagner's operas, etc. He also performed in the various cities of Germany and at Stockholm with great success. He died in Vienna in September 1893.—His son JOSEPH, born June 11, 1850, also a baritone of great promise, appeared at Laibach (1870), and has appeared with success, among other places, at Berlin and Frankfort, where he was regularly engaged from 1880 onward. A. C.

BECKEN. German for CYMBALS, which see.

BECKER. In Russia the pianoforte-makers have been Germans. The leading Russian house at the present time owes its origin to Jacob Becker, a native of the Bavarian Palatinate, who founded it in 1841. Although pianoforte-making was introduced into St. Petersburg early in the 19th century, until about 1850 pianists had imported their instruments for public performance. From that time, however, Becker succeeded in making concert instruments, and, aided by the patronage of Heuselt and the Rubinsteins, made an effectual stand against a disadvantageous foreign competition. It has become as much a matter of course to hear Russian pianofortes in the concerts of Petersburg and Moscow as it is to hear the Russian language in polite society. A. J. H.

BECKER, ALBERT ERNST ANTON, born at Quedlinburg, June 13, 1834, was at first a pupil of Bönicke there, and of Dehn at Berlin, from 1853 to 1856; became teacher of composition at Scharwenka's conservatorium in 1881, and in 1891 was appointed director of the Domchor. He died Jan. 10, 1899. His first great mark as a composer was made by his symphony in G minor, to which the prize of the Gesellschaft der Musikfreunde in Vienna was awarded in 1861; in 1877 some of his songs, notably opp. 13 and 14, to words from Wolff's 'Rattenfänger' and 'Wilder Jäger,' attracted much attention, and soon afterwards, in 1878, a mass in B flat minor was produced by the Riedelsche Verein. Other important works are a 'Reformationscantate,' 1883; the oratorio, 'Selig aus Gnade,' 1890; 'Geistlicher Dialog,' Ps. 147, for double choir unaccompanied (op. 32, No. 1); cantata, 'Herr, wie lange,' op. 73; Ps. 104, op. 85; motets, and other sacred vocal pieces, among which the set of 'Geistlicher Lieder,' op. 51, contain some songs that are extremely beautiful. In sacred music, in which Becker won his chief success, his style is broad and dignified, without losing sight of beauty and originality in his themes. In chamber music, a quintet for piano and strings, op. 49, is the most remarkable of his works; several pieces for violin and orch., such as op. 70 and op. 86, one very effective work for violin and organ, op. 66, a fantasia and fugue for organ, op. 52, and an opera, 'Loreley,' in MS., may be mentioned. M.

BECKER, CARL FERDINAND, organist and professor at the Conservatorium of Leipzig, born July 17, 1804, studied the piano, harmony, and composition, under Schicht and Schneider. Played the piano in public at fourteen years old, but afterwards paid more attention to the organ, and after being organist from 1825 in the church of St. Peter, was appointed in 1837 to be organist of the Nicolai-Kirche in Leipzig. On the foundation of the Conservatorium at Leipzig he was invited by Mendelssohn to join the new enterprise, and held the post of organ professor there from 1843 to 1856. The estimation which Becker enjoyed in Germany was due less to his compositions than to his productions in musical literature. Prominent amongst these are his *Systematisch-chronologische Darstellung der Musikliteratur*, etc. (1836), based on a work of Forkel's, with a supplement (1839), in which Becker is said to have been assisted by Anton Schmid, custos of the Hofbibliothek at Vienna. He also wrote *Hausmusik in Deutschland in 16ten, 17ten, 18ten Jahrh.* (1840); also *Die Tonwerke des 16ten und 17ten Jahrh.*—a catalogue of the music printed during that period (1847); and a catalogue of his own collection—*Alphabetisch und chronologisch geordnetes Verzeichniss*, etc. (Breitkopf, 1847). The collection itself, containing works of the greatest rarity, he bequeathed to the city of Leipzig at his death, Oct. 26, 1877. F. G.

BECKER, CONSTANTIN JULIUS, born at Freiberg, Feb. 3, 1811. Showed an early talent for music, which was well developed by his master ANACKER. In 1835 he came to Leipzig and assisted Schumann in editing the *Neue Zeitschrift für Musik*; but in 1843 removed to Dresden and occupied himself in teaching singing. In 1846 he returned to Oberlössnitz, and lived there in solitude till his death, Feb. 26, 1859. A symphony of his was performed with great applause at the Gewandhaus in 1843, and his opera 'Die Belagerung von Belgrad' was produced at Leipzig on May 21, 1848. But the work by which he will be remembered is his 'Männergesang-Schule,' 1845. He was the author of *Die Neuromantiker*, a novel

(1840), and of a translation of Berlioz's *Voyage Musicale*. F. G.

BECKER, DIETRICH, violinist and composer to the Hamburg senate towards the middle of the 17th century, was originally organist at Ahrensburg in Holstein, and came to Hamburg on his marriage in 1644. He was 'Rathsviolist' in 1668, when he published his 'Musikalische Frühlingsfrüchte,' consisting of pieces for instruments in four and five parts, with basso continuo and his sonatas or chorales for violin, viol da gamba, and bass. F. G.

BECKER, GEORGE, born at Frankenthal in the Palatinate, June 24, 1834, composer and writer on music; is the author of several books of some importance, such as, *La musique en Suisse, depuis les temps les plus reculés jusqu'à la fin du XVIIIème siècle* (Geneva, 1874), *Pygmalion de J. J. Rousseau*, *Eustorg de Beaulieu*, *Guillaume de Guéroult*, *Notice sur Claude Goudimel*, *Aperçu sur la Chanson française*. For some time, at irregular intervals, Becker has published a kind of periodical called *Questionnaire de l'association internationale des musiciens-écrivains*, and he has been a contributor to various periodicals, such as the *Revue et gazette musicale*, the *Guide musical* of Brussels, the *Monatshefte für Musikgeschichte*, the *Musical World*, and the *Gazzetta musicale*. G. F.

BECKER, HUGO, son of Jean Becker (see below), one of the foremost violoncellists of our time, was born at Strasburg, Feb. 13, 1864. Besides receiving some instruction from his father, he studied the violoncello under various eminent teachers, amongst them the elder Grützmacher, De Swert, and Piatti. His first appearance was made at the Gewandhaus in Leipzig, and he afterwards went on tour with his father. In 1883 he was appointed solo violoncellist of the opera orchestra in Frankfort, which became his place of residence. Here he teaches at certain times of the year in the Conservatoire, but his main career is that of a soloist and chamber-music player, in which capacities he has won laurels in almost every musical centre. He is the violoncellist of the 'Frankfort Quartet' led by Hugo Heermann, and in this country, which he frequently visits, he has been heard at the leading London and provincial concerts, his more recent appearances including trio-playing with Ysaye and Busoni. He plays on a Stradivarius violoncello, formerly the property of the Duke of Marlborough, and produces a tone of remarkable sonority and richness, but the feature which marks him out for distinction among connoisseurs is his left-hand technique. It is absolutely impeccable. Like so many modern artists, he plays with a very pronounced personal accent, and so is not accounted by all an ideal chamber-music player. W. W. C.

BECKER, JEAN, eminent violin-player, born at Mannheim, May 11, 1833. His first teachers were Kettenus, then leader of the Mannheim orchestra, and Vincenz Lachner, and he afterwards learned from Alard in Paris. He began to perform in public when only eleven, and he was still very young when he became the successor of Kettenus. In 1859 he played with great success in Paris, and thence went to London, where he appeared at the Monday Popular Concerts, and was for one season leader of the Philharmonic Concerts. After travelling for some years through most parts of Europe, he settled in 1866 at Florence, and associated himself with two Italian musicians, Enrico Masi (*d.* 1894) and L. Chiostri, and the German violoncellist, Fr. Hilpert. The last named was succeeded in 1875 by L. Spitzer-Hegyesi (1853-94). These artists, well known under the name of the 'Florentine Quartet,' have earned, by their careful and spirited performances of the classical masterpieces of quartet literature, a great and well-deserved reputation in most musical centres of the Continent. Becker's style as a solo-player was a compromise between the severe style of the German school and the lighter and more brilliant one of the French. He died at Mannheim Oct. 10, 1884. P. D.

BECKWITH, JOHN CHRISTMAS, Mus.Doc., was born at Norwich, Dec. 25, 1750, and studied music under Dr. William Hayes and Dr. Philip Hayes at Oxford. He became organist of St. Peter's Mancroft, Norwich, on Jan. 16, 1794, and of the cathedral, succeeding Thomas Garland, in 1808. On July 5, 1803, he took his degrees as Mus.Bac. and Mus.Doc. at Oxford. He composed many anthems—six of them published by Clementi—and a few vocal pieces, some of which became popular. He was considered a good singing-master, and was the instructor of Thomas Vaughan. In 1808 he published a set of chants under the following title:—'The First Verse of every Psalm of David, with an Ancient or Modern Chant, in Score, adapted as much as possible to the Sentiment of each Psalm.' The preface to this work contains 'a short history of chanting,' which displays learning and research, and contains the first suggestion of marked psalters. Dr. Buck, who was his pupil and successor at Norwich Cathedral, describes his master as being almost as proficient in painting as in music. He died in consequence of a paralytic stroke, June 3, 1809. E. F. R.

He never wrote or gave his Christian name officially otherwise than 'John,' and it is believed that the name 'Christmas' was merely a playful addition made by his friends by reason of his having been born on Christmas Day. He was succeeded in both his appointments by his son, JOHN CHARLES, born 1788, died Oct. 11, 1819, who in turn was succeeded by Dr. Buck. W. H. H.

BEDOS DE CELLES, DOM FRANÇOIS, a learned Benedictine, born at Caux in the diocese of Bezières in 1706, entered the order at Toulouse in 1726, and died at St. Maur on Nov. 25, 1779.

Author of *L'art du facteur d'orgues* (Paris, 1766-78), an admirable work for the time, written at the request of the Académie des Sciences; also of an account of the new organ at St. Martin of Tours, in the *Mercure de France* for Jan. 1762, of which a German translation by J. F. Agricola will be found in Adlung's *Musica mechanica organœdi.* De Celles was a member of the Académie des Sciences of Bordeaux, and corresponding member of that of Paris. F. G.

BEER, JACOB MEYER, the original name of GIACOMO MEYERBEER.

BEER, JOSEPH (sometimes written BOER), a remarkable clarinet-player; born May 18, 1744, at Grünwald in Bohemia, served as trumpeter first in the Austrian and then in the French army during the Seven Years' War. In 1771 he went to Paris, and there took up the clarinet, on which he rapidly became the first performer of his time. In 1782 he left Paris, and travelled through Holland, Italy, Russia, and Hungary, exciting everywhere the greatest possible enthusiasm. He died at Potsdam, where for some time he had been in the royal band, in 1811. As a performer Beer united a masterly execution to great power of expression, and indeed effected a complete revolution in the clarinet, which he greatly improved by the addition of a fifth key. Till nearly fifty years old he had heard only French players, and had insensibly acquired their loud harsh tone; but having heard in Brussels a German performer, Schwartz, he discovered what the instrument was capable of, and finally became as celebrated for the softness and purity of his tone; for the delicacy of his nuances, and especially his decrescendo, as he was for his execution. In fact he marks an epoch in the history of the instrument. His compositions comprise three concertos for two clarinets, variations, and duets. M. C. C.

BEETHOVEN, LUDWIG VAN,[1] born at Bonn, probably Dec. 16, 1770.[2] The earliest form of the name is that with which we are familiar, but it takes many other shapes in the uncertain spelling of the time, such as Biethoffen, Biethofen, Biethoven, Bethoven, Betthoven, and Bethof. He himself appears to have always spelt it as we know it.[3] The family belonged originally to a village near Louvain; thence in 1650 they moved to Antwerp, where in 1680 the name appears in the registers. His father Johann or Jean, and his grandfather Ludwig, were both musicians in the Court band of the Elector of Cologne, at Bonn—the latter a bass-singer, and afterwards capellmeister, appointed March 1733, the former a tenor singer, March 27, 1756. The grandfather lived till Dec. 24, 1773, when the little Ludwig had just completed his third year. He was a small lively person with extraordinarily bright eyes, much respected and esteemed as a musician, and he made an indelible impression on his grandson. His portrait was the only one which Beethoven had sent from Bonn to Vienna, and he often spoke of it to the end of his life. Beethoven's mother—daughter of the chief cook at Ehrenbreitstein—was married to Johann on Nov. 12, 1767. She was several years younger than her husband; her original name had been Keverich, but at the time of the marriage she was a widow—Maria Magdalena Leym or Laym. She died after a long illness on July 17, 1787, a woman of soft heart and easy ways, much beloved by her son. The father, on the other hand, was a severe, hard man of irregular habits, who evidently saw his son's ability, gave him the best instruction that his poverty would allow, and kept him to his music with a stern, strict, perhaps cruel, hand. It is perhaps fortunate he did so. The first house they occupied in Bonn, that in which the great composer was born, was 515 in the Bonngasse, designated by a tablet erected in 1870. In 1889 it was purchased by an association of amateurs, and dedicated for ever as a 'Geburtshaus Beethovens.' Dr. Joachim was its first president. Besides their eldest, Ludwig Maria, baptized April 2, 1769, who lived but six days, and Ludwig the second, the Beethovens had three sons—Caspar Anton Carl, baptized April 8, 1774; Nikolaus Johann, Oct. 2, 1776; and August Franz Georg, Jan. 17, 1781, who died August 16, 1783; a daughter, baptized Feb. 23, 1779, who lived only four days, and a second girl, Maria Margaretha Josepha, baptized May 5, 1786. The first of these was the father of the ill-fated youth who gave his uncle so much distress. He died at Vienna, Nov. 15, 1815. The second, Johann, was an apothecary, at Linz and Vienna, the 'Gutsbesitzer' of the well-known anecdote, his brother's *bête noire*, and the subject of many a complaint and many a nickname. He died at Vienna, Jan. 12, 1848. From the Bonngasse the family migrated to 7 or 8 on the Dreieck, and thence to the Rheingasse, No. 934.[4] To the latter they came in 1775 or 1776, and there they remained for a few years. Johann Beethoven's income from the Chapel was 300 florins a year—a miserable pittance, but that of most musicians of the chapel; and this appears to have been his sole means of subsistence, for his voice was nearly gone, and there is no sign of his having had other employment.[5]

According to Beethoven's own statement in the dedication to his earliest publication—the three

[1] *Van* in Dutch is not, like *von* or *de*, a sign of nobility. On the attempts to assign a Dutch origin to the composer see a *Lettre à M. le Bourgmestre de Bonn, contenant les prénoms de l'origine hollandaise de L. v. Beethoven*, Amsterdam, 1837.

[2] The baptism is registered on the 17th, and it was the custom to baptize on the day following birth. Beethoven's own belief was that he was born in 1772, which accounts for an occasional mistake in his estimate of the age at which he wrote his early works. Even when a copy of his certificate of baptism was sent to him in 1810, he wrote at back of it: 'This seems not correct as there was a Ludwig before me.' There was, in fact, a first child, Ludwig Maria, who lived only six days, but he was born in 1769.

[3] In his lettors; but in an advertisement of his, March 31, 1804, it is Bethofen (Nottebohm, *Beethoveniana*, p. 4).

Sonatas for Pianoforte (Bossler, 1783)—he began music in his fourth year. The few traits preserved of that early period show that, like other children, he did not acquire it without tears. His father was his first teacher, and from him he learned both violin and clavier; reading, writing, arithmetic, and a little Latin he obtained in one of the common public schools, and even this ceased when he was thirteen. At school he was shy and uncommunicative, and cared for none of the ordinary games of boys. On March 26, 1778, he played at a concert.[1] Before he was nine his music had advanced so far that his father had no longer anything to teach him, and in 1779 he was handed over to Pfeiffer, a tenor singer who had recently joined the opera in Bonn, and seems to have lodged with the Beethovens, and by whom he was taught, irregularly enough, but apparently with good and lasting effect, for a year. About the same time he fell in with a certain Zambona, who taught him Latin, French, and Italian, and otherwise assisted his neglected education.[2] The organ he learned from Van den Eeden, organist to the Court Chapel, and an old friend of his grandfather's. About this time, 1780-1781, there is reason to believe that the Beethovens found a friend in Mr. Cressener, the English *chargé d'affaires*, long time resident at Bonn, and that he assisted them with a sum of 400 florins. He died on Jan. 17, 1781, and Beethoven (then just past ten) is said to have written a Funeral Cantata to his memory, which was performed. The Cantata, if it ever existed,[3] has hitherto been lost sight of. One composition of this year we have in nine Variations on Dressler's March in C minor,[4] which though published in 1783, are stated on the title to be 'composées . . . par un jeune amateur Louis van Beethoven, agé de dix ans, 1780.' In Feb. 1781 Neefe succeeded Van den Eeden as Organist at the Court, and Beethoven became his scholar. This was a great step for the boy, since Neefe, though somewhat over conservative as a musician, was a sensible man, and became a real friend to his pupil.

There is ground for believing that during the winter of 1781 Ludwig and his mother made a journey in Holland, during which he played at private houses, and that the tour was a pecuniary success.[5] On June 19, 1782, old Van den Eeden was buried, and on the next day the band followed the Elector to Münster, where as Bishop he had a palace, Neefe leaving Ludwig, then eleven and a half years old, behind him as his regularly appointed deputy at the chapel organ, a post which, though unpaid, was no sinecure, and required both skill and judgment. This shows Neefe's confidence in his pupil, and agrees with his account of him, written a few months later, as 'playing with force and finish, reading well at sight, and, to sum up all, playing the greater part of Bach's Well-tempered Clavier, a feat which will be understood by the initiated.' 'This young genius,' continues he, 'deserves some assistance that he may travel. If he goes on as he has begun, he will certainly become a second Mozart.'[6]

On April 26, 1783, Neefe was promoted to the direction of both sacred and secular music, and at the same time Beethoven (then twelve years and four months old) was appointed 'Cembalist im Orchester,' with the duty of accompanying the rehearsals in the theatre; in other words of conducting the opera-band, with all the responsibilities and advantages of practice and experience which belong to such a position. No pay accompanied the appointment at first, but the duties ceased when the Elector was absent, so that there was leisure for composition. The pieces published in this year are a song, 'Schilderung eines Mädchens,'[7] and 3 Sonatas for Piano solo,[8] composed, according to the statement of the dedication, in 1781. On August 16, 1783, the youngest boy, August Franz, died, the father's voice began still further to fail, and things generally to go from bad to worse.

The work at the theatre was now rather on the increase. From Oct. 1783 to Oct. 1785, 2 operas of Gluck, 4 of Salieri, 2 of Sarti, 5 of Paisiello, with a dozen others, were studied and performed; but Ludwig had no pay. In Feb. 1784 he made an application for a salary, but the consideration was postponed, and it was probably as a set-off that he was shortly afterwards appointed second Court organist. Meantime, however, on April 15, 1784, the Elector Max Friedrich died, and this postponed still farther the prospect of emolument. The theatrical company was dismissed, and Neefe having only his organ to attend to, no longer required a deputy. The Beethovens were now living at No. 476 in the Wenzelgasse, whither they appear to have moved in 1783,[9] and Ludwig played the organ in the Minorite church at the six o'clock mass every morning.

The music of 1784 consists of a Rondo for the Piano in A,[10] published early in the year, and a song 'An einen Säugling'[11]; a Concerto for Piano,[12] and a piece in three-part harmony, probably belonging to this year.

One of the first acts of the new Elector Max Franz was to examine his establishment, and on June 27, 1784, he issued a list of names and salaries of his band,[13] among which Beethoven's father appears with a salary of 300 florins, and Beethoven himself, as second organist, with 150 florins. A memorandum of the same date[14]

shows that an idea was entertained of dismissing Neefe and putting Beethoven into his place as chief organist. In fact Neefe's pay was reduced from 400 to 200 florins, so that 50 florins a year was saved by the appointment of Beethoven. An economical Elector! In the Holy Week of 1785 the incident occurred (made too much of in the books) of Beethoven's throwing out the solo singer in Chapel by a modulation in the accompaniment, which is chiefly interesting as showing how early his love of a joke showed itself.[1] During this year he studied the violin with Franz Riss—father of Ferdinand. The music of 1785 consists of three Quartets for Piano and Strings,[2] a song 'Wenn jemand eine Reise thut' (op. 52, No. 1), and probably a Minuet for Piano in E♭.[3]

In 1786 nothing appears to have been either composed or published, and the only incident of this year that has survived, is the birth of a second girl to the Beethovens—Maria Margaretha Josepha, May 4.

In 1787 occurred the first real event in Beethoven's life — his first journey to Vienna. Concerning this there is an absolute want of dates and details. Some one must have been found to supply the means for so expensive a journey, but no name is preserved. As to date, his duties as organist would probably prevent his leaving Bonn before the work of Holy Week and Easter was over. The two persons who were indelibly impressed on his recollection by the visit[4] were Mozart and the Emperor Joseph. From the former he had a few lessons in composition,[5] and carried away a distinct—and not very appreciative[6]—recollection of his playing; but Mozart must have been so much occupied by the death of his father (May 28) and the approaching production of 'Don Giovanni' (Oct. 29) that it is probable they had not much intercourse. The well-known story of Beethoven's introduction to him, when divested of the ornaments[7] of Seyfried and others, stands as follows:—Mozart asked him to play, but thinking that his performance was a prepared piece, paid little attention to it. Beethoven seeing this entreated Mozart to give him a subject, which he did; and the boy, getting excited with the occasion, played so finely that Mozart, stepping softly into the next room, said to his friends there, 'Pay attention to him; he will make a noise in the world some day or other.' His visit seems not to have lasted more than three months, but, as we have said, all detailed information is wanting. He must, however, have left a certain fame behind him. Haydn in a letter to Artaria of Vienna (May 2, 1787) says, 'I should like to know who this Ludwig is.' This seems to refer to Beethoven, though it is of course possible that Ludwig may be a surname. He returned by Augsburg, where he had to borrow three Carolins (£3) from Dr. Schaden. His return was hastened by the illness of his mother, who died of consumption, July 17, 1787, and his account of himself in a letter[8] to Dr. Schaden, written seven weeks after that date, is not encouraging. A short time more, and the little Margaretha followed her mother, on Nov. 25, so that 1787 must have closed in very darkly. The only compositions known to belong to that year are a Trio in E♭,[9] and a Prelude in F minor for Piano solo.[10] However, matters began to mend; he made the acquaintance of the von Brenning family—his first permanent friends — a mother, three boys, and a girl. He gave lessons to the girl and the youngest boy, and soon became an inmate of the house, a far better one than he had before frequented, and on terms of close intimacy with them all. The family was a cultivated and intellectual one, the mother—the widow of a man of some distinction—a woman of remarkable sense and refinement; the children, more or less of his own age. Here he seems to have been first initiated into the literature of his country, and to have acquired the love of English authors which remained with him through life. The intimacy rapidly became strong. He often passed whole days and nights with his friends, and accompanied them on excursions of several weeks' duration to their uncle's house at Kerpen, and elsewhere. At the same time he made the acquaintance of Count Waldstein, a young nobleman eight years his senior, an amateur musician, whose acquaintance was peculiarly useful in encouraging and developing Beethoven's talent at a time when it naturally wanted support. On Waldstein Beethoven exercised the same charm that he did later on the proud aristocracy of Vienna. The Count used to visit him in his poor room, gave him a piano, got him pecuniary help under the guise of allowances from the Elector, and in other ways sympathised with him. Either now or shortly afterwards, Beethoven composed a set of variations for 4 hands on a theme of the Count's,[11] and in 1805 made him immortal by dedicating to him the grand sonata (op. 53), which is usually known by his name. Another acquaintance was the Countess of Hatzfeld, to whom he dedicated the 'Venni Amore' Variations, which were for long his show-piece.

In the summer of 1788, when Beethoven was seventeen and a half years old, the Elector altered the plan[12] of his music, and formed a national theatre on the model of that of his brother the Emperor Joseph. Reicha was made director, and Neefe pianist and stage-manager. The band was 31 strong, and contains names such as Ries, the two Rombergs, Simrock,

Stumpff—which often recur in Beethoven's life. He himself played second viola, both in the opera and the chapel, and was still assistant Hof-organist. In this position he remained for four years; the opera *répertoire* was large, good, and various, the singers were of the best, and the experience must have been of great practical use to him. Among the operas played in 1789 and 1790 were Mozart's 'Entführung,' 'Figaro,' and 'Don Giovanni'—the first two apparently often. Meantime Johann Beethoven was going from bad to worse. Stephen Breuning once saw Ludwig take his drunken father out of the hands of the police, and this could hardly have been the only occasion. At length, on Nov. 20, 1789, a decree was issued ordering a portion of the father's salary to be paid over to the son, who thus, before he was nineteen, became the head of the family.

The compositions of 1789 and 1790 include 2 Preludes for the Piano (op. 39), 24 Variations on Righini's 'Venni Amore,'[1] a Song 'Der freie Mann,'[2] and 2 Cantatas, one on the death of the Emperor Joseph II., the other on the accession of Leopold II.[3] The only extra-musical event of 1790 was the visit of Haydn and Salomon on their road to London. They arrived on Christmas Day. One of Haydn's Masses was performed; he was complimented by the Elector, and entertained the chief musicians at dinner at his lodgings.

1791 opened well for Beethoven with a 'Ritter-ballet,' a kind of masked ball, in antique style. Count Waldstein appears to have arranged the plan, and Beethoven composed the music; but his name does not seem to have been connected with it at the time, and it remained unpublished till 1872, when it appeared arranged for piano.[4] In the autumn the troupe accompanied the Elector to Mergentheim, near Aschaffenburg, to a conclave of the *Deutschen Orden*; the journey was by water along the Rhine and Main, the weather was splendid,—there was ample leisure, and the time long remained in Beethoven's recollection 'a fruitful source of charming images.' At Aschaffenburg he heard a fine player—the Abbé Sterkel, and showed his instant appreciation of the Abbé's graceful finished style by imitating it in extemporising. In Mergentheim the company remained for a month (Sept. 18–Oct. 20). An interesting account of the daily musical proceedings is given by Junker, the Chaplain at Kirchberg,[5] including an account of Beethoven's extempore playing. He compares it with that of Vogler, whom he knew well, and pronounces it to have displayed all Vogler's execution, with much more force, feeling, and expression, and to have been in the highest degree original.

The Beethovens were still living in the Wenzelgasse, Carl learning music, and Johann under the Court Apothecary. Ludwig took his meals at the Zehrgarten[6]—a great resort of the University professors, artists, and literary men of Bonn, and where the lovely Babette Koch, daughter of the proprietress, was doubtless an attraction to him.[7] His intimacy with the Breunings continued and increased; Frau von Breuning was one of the very few people who could manage him, and even she could not always make him go to his lessons in time: when he proved too obstinate she would give up the endeavour with the remark, 'he is again in his *raptus*,' an expression which Beethoven never forgot.[8] Music was their great bond, and Beethoven's improvisations were the delight of the family. His duties at the organ and in the orchestra at this time were not very great; the Elector's absences were frequent, and gave him much time to himself, which he spent partly in lessons, partly in the open air, of which he was already very fond, and partly in assiduous practice and composition. The sketch-books of that time are crammed with ideas, and confirm his statement, made many years later,[9] that he began thus early the method of working which so emphatically distinguishes him.

In July 1792 Haydn again passed through Bonn on his return from London. The Elector's Band gave him a dinner at Godesberg, and Beethoven submitted a cantata to him, 'which Haydn greatly praised, warmly encouraging the composer to proceed with his studies.'[10] What the cantata was is not known.

The compositions which may perhaps be fixed to the years 1791 and 1792 consist of Songs (portions of op. 52), the Octet, op. 103, and a Rondino[11] for Wind instruments, the Trio for Strings, op. 3, an Allegro and Minuet for 2 Flutes (August 23, MS.[12]), and a set of 14 Variations for Pianoforte, Violin, and Cello, in E♭, published in 1804 as op. 44; 12 Variations[13] for Piano and Violin on 'Se vuol ballare'; 13 ditto for Piano[14] on 'Es war einmal'; 8 ditto[15] for Piano, four hands, on an air of Count Waldstein's, and the above-mentioned Ritter-ballet and 'Venni Amore' Variations.

Hitherto the Elector seems to have taken no notice of the most remarkable member of his orchestra. But in the course of this year—whether prompted by Neefe or Waldstein or by his own observation, or possibly by Haydn's approbation—he determined that Beethoven should visit Vienna in a more permanent manner than before, for the purpose of studying at his expense. Haydn was communicated with, and in the very beginning of November

Beethoven left Bonn, as it proved, never to return to it again. His parting words to Neefe are preserved:[1]—'Thank you for the counsel you have so often given me on my progress in my divine art. Should I ever become a great man you will certainly have assisted in it, which will be all the more gratifying to you, since you may be convinced that,' etc. The Album[2] in which his friends—Waldstein, the Breunings, the Kochs, Degenhart, and others—inscribed their farewells is still existing, and the latest date is Nov. 1. E. Breuning's lines contain allusions to 'Albion,' as if Beethoven were preparing to visit England—possibly with Haydn? Waldstein's entry is as follows:—'Dear Beethoven, you are travelling to Vienna in fulfilment of your long-cherished wish. The genius of Mozart is still weeping and bewailing the death of her favourite. With the inexhaustible Haydn she found a refuge, but no occupation, and is now waiting to leave him and join herself to some one else. Labour assiduously, and receive Mozart's spirit from the hands of Haydn. Your true friend Waldstein. Bonn, Oct. 29, 1792.'

What provision the Elector made for him beyond his modest pay of 150 florins is not known.[3] An entry of 25 ducats (£12 : 10s.) is found in his notebook shortly after he reached Vienna, but there is nothing to show what length of time that moderate sum represented, or even that it came from the Elector at all.

Thus ended the first period of Beethoven's life. He was now virtually twenty-two. The list of his known compositions to this time has been given year by year. If we compare them with those of other composers of the first rank, such as Mozart, Schubert, or Mendelssohn, it must be admitted that they are singularly few and unimportant. For the orchestra the Ritter-ballet already referred to is the single composition known, while Mozart—to mention him only—had in the same period written 36 Symphonies, including so mature a masterpiece as the 'Parisian' in D. Against Mozart's 28 Operas, Cantatas, and Masses, for voices and full orchestra, composed before he was twenty-three, Beethoven has absolutely nothing to show. And the same in other departments. That he meditated great works, though they did not come to paper, is evident in at least one case. A resident in Bonn, writing to Schiller's sister Charlotte, on Jan. 26, 1793,[4] says:—'I enclose a setting of the *Feuerfarbe* on which I should like your opinion. It is by a young man of this place whose talent is widely esteemed, and whom the Elector has now sent to Vienna to Haydn. He intends to compose Schiller's *Freude*, and that verse by verse. I expect something perfect; for, as far as I know him, he is all for the grand and sublime. Haydn informs us that he shall set him to great operas, as he himself will shortly leave off composing. He does not usually occupy himself with such trifles as the enclosed, which indeed he composed only at the request of a lady.' This letter, which shows how early Schiller's 'Hymn to Joy' had taken possession of Beethoven—there to remain till it formed the finale to the Ninth Symphony thirty years later—is equally interesting for the light it throws on the impression which Beethoven had already made on those who knew him, and who credited him with the intention and the ability to produce great works, although he had not yet produced even small ones. This impression was doubtless due mainly to the force and originality of his extempore playing, which even at this early age was prodigious, and justified his friends in speaking of him as one of the finest pianoforte-players of the day.[5]

By the middle of Nov. 1792 Beethoven was settled at Vienna. His first lodging was a garret at a printer's in the 'Alservorstadt'[6] outside the walls, in the direction of the present Votive-Church; but this was soon exchanged for one 'on the ground floor,'[7] of which we have no nearer description. On the journey from Bonn we find him for the first time making notes of little occurrences and expenses—a habit which never left him. In the entries made during his first few weeks in Vienna we can trace the purchase of a wig, silk stockings, boots, shoes, overcoat, writing-desk, seal, and hire of piano. From the same source we can infer the beginning of his lessons. The first payment to Haydn is 8 groschen (say 9½d., we may surely presume for one hour) on Dec. 12. The lessons took place in Haydn's house[8] (Hamberger Haus, No. 992) now destroyed. They were lessons in 'strict counterpoint,' and the text-book was Fux's *Gradus ad Parnassum*. Of Beethoven's exercises 245 have been preserved,[9] of which Haydn has corrected 42. Haydn was naturally much occupied, and it is not surprising that Beethoven should have been dissatisfied with his slow progress, and with the cursory way in which his exercises were corrected, and have secretly accepted the offer of additional instruction from Schenk, a well-known Vienna composer. But no open rupture as yet took place. Beethoven accompanied Haydn to Eisenstadt some time in 1793,[10] and it was not until Haydn's departure for England on Jan. 19, 1794, that he openly transferred himself to another master. He then took lessons from Albrechtsberger in counterpoint, and from Schuppanzigh on the violin, three times a week each. In the former

10 [See, however, Th.-D. i. 332-334.]

the text-book was Albrechtsberger's own *Anweisung zur Composition*, and the subject was taken up where Haydn had left it, and pursued much farther. No fewer than 263 exercises are in existence under the following heads—Simple strict counterpoint; Free composition in simple counterpoint; Imitation; Simple fugue; Fugued chorale; Double fugue; Double counterpoint in the 8th, 10th, and 12th; Triple counterpoint and Triple fugue; Canon. Nottebohm has pointed out the accuracy and pains which Albrechtsberger bestowed on his pupil,[1] as well as the care with which Beethoven wrote his exercises, and the characteristic way in which he neglected them in practice. He also gives his reasons for believing that the lessons did not last longer than March 1795. The impression they left on Albrechtsberger was not flattering: 'Have nothing to do with him,' said the old contrapuntist to an inquiring lad, 'he has learnt nothing, and will never do anything in decent style.'[2] In fact what was a contrapuntist to do with a pupil who regarded everything in music—even consecutive fifths[3]—as an open question, and also thought it a good thing to 'learn occasionally what is according to rule, that one may hereafter come to what is contrary to rule?'[4] Besides the lessons with Haydn and Albrechtsberger, some exercises exist in Italian vocal composition, dating between 1793 and 1802, and showing that Beethoven availed himself of Salieri's well-known kindness to needy musicians, to submit his pieces to him. Salieri's corrections are chiefly in the division of the Italian syllables. Another musician whom he consulted, especially in his early attempts at quartet writing, was Aloys Förster, to whom he remained long and greatly attached.[5]

Meantime Beethoven kept up communication with Bonn. On Dec. 18, 1792, his poor father died, and the 100 thalers applied to the support of his brothers naturally stopped. On Beethoven's application, however, the grant was allowed to go on, in addition to his own pay. Ries drew and transmitted the money for him.[6] The Breunings still held their place in his heart; two[7] letters to Eleonore, full of affection, are preserved, and he mentions having also written twice to one resident of Bonn, and three times to another, in the course of the first twelvemonth. In Jan. 1794, the Elector visited Vienna, and with the March quarter-day Beethoven's allowance ceased. In the following October, Bonn was taken possession of by the French republican army, and the Elector fled.

Now that Beethoven is landed in Vienna—as it turns out, never again to leave it—and is left to his own resources, it may be convenient to pause in the narrative of his life, and sketch

his character and person as briefly as possible. He had already a large acquaintance among the aristocracy of Vienna. Among his kindest friends and most devoted admirers were the Prince and Princess Karl Lichnowsky. They devoured his music, gave him a quartet of valuable instruments[7] for the performance of it, put up with his caprices and eccentricities, gave him an annuity of 600 guldens, and made him an inmate of their house for years. He was also frequently at the houses of Baron van Swieten, Prince Lobkowitz, Count Fries, and other noblemen, at once leaders of fashion and devoted amateurs. At these houses he was in the constant habit of playing, and in many of them no doubt he taught, but as to the solid results of this no record remains—nor do we know the prices which he obtained for his published works, or anything of the value of the dedications, at this period of his career. Musical public, like that which supported the numerous concerts flourishing in London at this date,[8] and enabled Salomon to risk the expense of bringing Haydn to England, there was none; musicians were almost directly dependent on the appreciation of the wealthy.

That Beethoven should have been so much treasured by the aristocracy of Vienna notwithstanding his personal drawbacks, and notwithstanding the gap which separated the nobleman from the *roturier*, shows what an immense power there must have been in his genius, and in the absolute simplicity of his mind, to overcome the abruptness of his manners.[9] If we are to believe the anecdotes of his contemporaries[10] his sensitiveness was extreme, his temper ungovernable, and his mode of expression often quite unjustifiable. At the house of Count Browne, when playing a duet with Ries, a young nobleman at the other end of the room persisted in talking to a lady; several attempts to quiet him having failed, Beethoven suddenly lifted Ries's hands from the keys, saying in a loud voice, 'I play no longer for such hogs'; nor would he touch another note nor allow Ries to do so, though entreated by all.[11] On another occasion, when living in the house and on the bounty of the Lichnowskys, the prince, knowing how sensitive Beethoven was to neglect, ordered his servants whenever they heard Beethoven's bell and his at the same time to attend to Beethoven's first. No sooner, however, did Beethoven discover that such an order had been given than he engaged a servant of his own to answer his bell.[12] During one of the rehearsals of 'Leonora,' the third bassoon

[7] These were in his possession for more than twenty years, and are now in the Beethoven Haus, Bonn.

was absent, at which Beethoven was furious. Prince Lobkowitz, one of his best friends, tried to laugh off the matter, saying that as the first and second were there the absence of the third could not be of any great consequence. But so implacable was Beethoven that in crossing the Platz after the rehearsal he could not resist running to the great gate of the Lobkowitz Palace and shouting up the entrance, 'Lobkowitzscher Esel'—'ass of a Lobkowitz.'[1] Any attempt to deceive him, even in the most obvious pleasantry, he could never forgive. When he composed the well-known 'Andante in F' he played it to Ries and Krumpholz. It delighted them, and with difficulty they induced him to repeat it. From Beethoven's house Ries went to that of Prince Lichnowsky, and not being able to contain himself played what he could recollect of the new piece, and the Prince being equally delighted, it was repeated and repeated till he too could play a portion of it. The next day the Prince by way of a joke asked Beethoven to hear something which he had been composing, and thereupon played a large portion of his own 'Andante.' Beethoven was furious; and the result was that Ries was never again allowed to hear him play in private. In fact it led in the end to Beethoven's ceasing to play to the Prince's circle of friends.[2] And on the other hand, no length of friendship or depth of tried devotion prevented him from treating those whom he suspected, however unjustly, and on however insufficient grounds, in the most scornful manner. Ries has described one such painful occurrence in his own case àpropos of the Westphalian negotiations;[3] but all his friends suffered in turn. Even poor Schindler, whose devotion in spite of every drawback was so constant, and who has been taunted with having 'delivered himself body and soul to Beethoven,' had to suffer the most shameful reproaches behind his back, the injustice of which is most surely proved by the fact that they are dropped as suddenly as they were adopted.[4] When Moritz Lichnowsky, Schuppanzigh, and Schindler were doing their utmost to get over the difficulties of arranging a concert for the performance of the Choral Symphony and the Mass in D, he suddenly suspected them of some ulterior purpose, and dismissed them with the three following notes:[5]—'To Count Lichnowsky. Falsehoods I despise. Visit me no more. There will be no concert. Beethoven.' 'To Herr Schindler. Visit me no more till I send for you. No concert. Beethoven.' 'To Herr Schuppanzigh. Visit me (*besuche er mich*) no more. I give no concert. Beethoven.'

The style of the last of these three precious productions—the third person singular—in which the very lowest rank only is addressed, seems to open us a little door into Beethoven's feeling towards musicians. When Hummel died, two notes from Beethoven[6] were found among his papers, which tell the story of some sudden violent outbreak on Beethoven's part. 'Komme er (the same scornful style as before) nicht mehr zu mir! er ist ein falscher Hund, und falsche Hunde hole der Schinder. Beethoven.' And though this was followed by an apology couched in the most ultra-affectionate and coaxing terms —'Herzens Natzerl,' 'Dich küsst dein Beethoven,' and so on—yet the impression must have remained on Hummel's mind. There can be no doubt that he was on bad terms with most of the musicians of Vienna. With Haydn he seems never to have been really cordial. The old man's neglect of his lessons embittered him, and when after hearing his first three Trios, Haydn, no doubt in sincerity, advised him not to publish the third, which Beethoven knew to be the best, it was difficult to take the advice in any other light than as prompted by jealousy. True he dedicated his three Pianoforte Sonatas (op. 2) to Haydn, and they met in the concert-room, but there are no signs of cordial intercourse between them after Beethoven's first twelve months in Vienna. In fact they were thoroughly antagonistic. Haydn, though at the head of living composers, and as original a genius as Beethoven himself, had always been punctilious, submissive, subservient to etiquette. Beethoven was eminently independent and impatient of restraint. It was the old world and the new—De Brézé and Mirabeau[7]—and it was impossible for them to agree. They probably had no open quarrel, Haydn's tact would prevent that, but Haydn nicknamed him 'the Great Mogul,'[8] and Beethoven retorted by refusing to announce himself as 'Haydn's scholar,'[9] and when they met in the street their remarks were unfortunate, and the antagonism was but too evident.

For Salieri, Eybler, Gyrowetz, and Weigl, able men and respectable contrapuntists, he had a sincere esteem, though little more intimate feeling. Though he would not allow the term as regarded Haydn, he himself left his characteristic visiting-card on Salieri's table as his 'scholar'—'Der Schuler Beethoven war da.'[10] But with the other musicians of Vienna, and the players of his own standing, Beethoven felt no restraint on open war.[11] They laughed at his eccentricities, his looks and his Bonn dialect,[12] made game of his music, and even trampled[13] on it, and he retorted both with speech and hands. The pianoforte-players were Hummel, Woelfl, Lipawsky, Gelinek,

Steibelt. Steibelt had distinctly challenged him,[1] had been as thoroughly beaten as a man could wish, and from that day forward would never again meet him.' Gelinek, though equally vanquished, compensated himself by listening to Beethoven on all occasions, and stealing his phrases and harmonies,[2] while Beethoven retorted by engaging his next lodging where Gelinek could not possibly come within the sound of his piano. Woelfl and Hummel were openly pitted against him, and no doubt there were people to be found in Vienna in 1795, as there are in London in 1876, to stimulate such rivalry and thus divide artists whom a little care might have united. Hummel is said to have excelled him in clearness, elegance, and purity, and Woelfl's proficiency in counterpoint was great, and his huge hands gave him extraordinary command of the keys; but for fire, and imagination, and feeling, and wealth of ideas in extempore[3] playing, none of them can have approached Beethoven. 'His improvisation,' says Czerny,[4] 'was most brilliant and striking; in whatever company he might chance to be, he knew how to produce such an effect upon every hearer, that frequently not an eye remained dry, while many would break out into loud sobs; for there was something wonderful in his expression, in addition to the beauty and originality of his ideas, and his spirited style of rendering them.' He extemporised in regular 'form,' and his variations—when he treated a theme in that way—were not mere alterations of figure, but real developments and elaborations of the subject.[5] 'No artist,' says Ries,[6] 'that I ever heard came at all near the height which Beethoven attained in this branch of playing. The wealth of ideas which forced themselves on him, the caprices to which he surrendered himself, the variety of treatment, the difficulties, were inexhaustible.' Even the Abbé Vogler's admirers were compelled to admit as much.[7] He required much pressing, often actual force, to get him to the piano, and he would make a grimace or strike the keys with the palm of the hand[8] as he sat down; but when there he would extemporise for two hours and even more at a time, and after ending one of his great improvisations, he would burst into a roar of laughter, and banter his hearers on their emotions. 'We artists,' he would say, 'don't want tears, we want applause.'[9] At other times he would behave as if insulted by such indications of sympathy, and call his admirers fools, and spoiled children.

And yet no outbursts of this kind seem to have made any breach in the regard with which he was treated by the nobility—the only unprofessional musical society of Vienna. Certainly Beethoven was the first musician who had ever ventured on such independence,[10] and there was possibly something piquant in the mere novelty; but the real secret of his lasting influence must have been the charm of his personality—his entire simplicity, joined to his prodigious genius. This charm even counterbalanced his horribly bad manners. And he enjoyed good society. 'It is good,' said he, 'to be with the aristocracy; but one must be able to impress them.'[11]

This personal fascination acted most strongly on his immediate friends—on Krumpholz[12] (who seems to have played the part of Coleridge's humble follower John Chester[13]), on the somewhat cold and self-possessed Breuning, as well as on Ries, Zmeskall, Schindler, Holz, and others, who had not, like Haslinger or Streicher, anything to gain from him, but who suffered his roughest words and most scurvy treatment, and returned again and again to their worship with astonishing constancy. Excepting Breuning none of these seems really to have had his confidence, or to have known anything of the inner man which lay behind the rough husk of his exterior, and yet they all clung to him as if they had.

Of his *tours de force* in performance too much is perhaps made in the books. His transposing the Concerto in C into C♯ at rehearsal was exactly repeated by Woelfl[14]; while his playing the piano part of his Horn Sonata, his Kreutzer Sonata, or his C minor Concerto without book, or difficult pieces of Bach at first sight, is no more than has been done by Mozart, Mendelssohn, Sterndale Bennett, and many inferior artists. No, it was no quality of this kind that got him the name of the 'giant among players'; but the loftiness and elevation of his style, and his great power of expression in slow movements, which when exercised on his own noble music fixed his hearers and made them insensible to any faults of polish or mere mechanism.

It was not men alone who were attracted by him,[15] he was an equal favourite with the ladies of the Court. The Princess Lichnowsky watched over him—as Frau von Breuning had done—like a mother.[16] The Countesses Gallenberg

10 His radicalism was very pronounced. It was no mere fashion. 'That a man should humble himself to another distresses me,' says he, in a letter supposed to be written to Giulietta (Sch. ii. 52). He loved freedom, and when the debates against slavery were going on in Parliament in 1823, when he was writing No. 9 ('Alle Menschen werden Brüder'), used to take home the *Allg. Ztg.* to read Lord Brougham's speeches.

15 'I [Spohr] liked B. very much because tho' a man of no *aesthetischer Bildung* he was so good-natured; he used to walk with me from my lodgings to the theatre, and was so fond of playing with my children' (Joachim to G.) See also Spohr, *Selbstbiog.* i. 198.
16 'She would have put me under a glass case if she could,' said Beethoven.

and Erdödy, the Princess Odescalchi, the Baroness Ertmann, the sisters of the Count of Brunswick, and many more of the reigning beauties of Vienna adored him, and would bear any rudeness from him. These young ladies went to his lodgings or received him at their palaces as it suited him. He would storm at the least inattention during their lessons, and would tear up the music and throw it about.[1] He may have used the snuffers as a toothpick in Madame Ertmann's drawing-room; but when she lost her child he was admitted to console her; and when Mendelssohn saw her[2] fifteen years later she doted on his memory and recalled the smallest traits of his character and behaviour. He was constantly in love, and though his taste was very promiscuous,[3] yet it is probable that most of his attachments, returned or tolerated, were for women of rank.[4] Unlike poor Schubert, whose love for the Countess Caroline Esterhazy was so carefully concealed, Beethoven made no secret of his attachments. Many of them are perpetuated in the dedications of his sonatas. That in E♭ (op. 7), dedicated to the Countess Babette de Keglevics, was called in allusion to him and to her, 'die verliebte.' To other ladies he writes in the most intimate, nay affectionate style. He addresses the Baroness Ertmann by her Christian name as 'Liebe, werthe, Dorothea Cäcilia,' and the Countess Erdödy—whom he called his confessor—as 'Liebe, liebe, liebe, liebe, liebe, Gräfin.'[5] Thayer's investigations[6] have destroyed the romance of his impending marriage with Giulietta Guicciardi[7] (afterwards Countess Gallenberg); yet the fact that the story has been so long believed shows its abstract probability. One thing is certain, that his attachments were all honourable, and that he had no taste for immorality. 'O God! let me at last find her who is destined to be mine, *and who shall strengthen me in virtue.*' Those were his sentiments as to wedded love.

In a letter 'An das Bigot'sche Ehepaar' he says, 'It is one of my first principles never to stand in any relations but those of friendship to the wife of another man.'[8]

His dedications have been mentioned. The practice seems virtually to have begun with him,[9] to have sprung from the equal and intimate relation in which he—earliest among musicians—stood to his distinguished friends; and when one looks down the list,[10] from op. 1 to op. 135—unsurpassed even by any later composer—and remembers that the majority were inspired by private friendship,[11] and that only a minority speak of remuneration, it is impossible not to be astonished.

Formal religion he apparently had none; his religious observances were on a par with his manners. It is strange that the Bible does not appear to have been one of his favourite books. He once says to a friend,[12] 'It happens to be Sunday, and I will quote you something out of the Gospel—Love one another'; but such references are very rare. But that he was really and deeply religious, 'striving sacredly to fulfil all the duties imposed[13] on him by humanity, God, and nature,' and full of trust in God, love to man, and real humility, is shown by many and many a sentence in his letters. And that in moments of emotion his thoughts turned upwards is touchingly shown by a fragment of a hymn—'Gott allein ist unser Herr'—which Mr. Nottebohm[14] has unearthed from a sketch-book of the year 1818, and which Beethoven has himself noted to have been written, 'Auf dem Wege Abends zwischen den und auf den Bergen.' The following passages, which he copied out himself and kept constantly before him, served him as a kind of Creed, and sum up his theology:—

'I am that which is.

'I am all that is, that was, and that shall be. No mortal man hath lifted my veil.

'He is alone by Himself, and to Him alone do all things owe their being.'[15]

How he turned his theology into practice is well exemplified in his alteration of Moscheles' pious inscription. At the end of his arrangement of 'Fidelio,' Moscheles had written 'Fine. With God's help.' To this Beethoven added, 'O man, help thyself.'[16]

In his early Vienna days he attempted to dress in the fashion, wore silk stockings, perruque, long boots, and sword, carried a double eye-glass and a seal-ring. But dress must have been as unbearable to him[17] as etiquette, and it did not last; 'he was meanly dressed,' says one of his adorers, 'and very ugly to look at, but full of nobility and fine feeling, and highly cultivated.'[18] Czerny first saw him (about 1803) in his own room, and there his beard was nearly half an inch long, his pitch-black hair stood up in a thick shock, his ears were filled with wool which had apparently been soaked in some yellow substance, and his clothes were made of a loose hairy stuff, which gave him the look of Robinson Crusoe. But we know that he never

wore his good clothes at home;[1] at any rate the impression he usually made was not so questionable as this. When at Mödling in 1818 he wore a light-blue tailed coat (Frack) with yellow buttons, white waistcoat, and tie—all very untidy.[2] Those who saw him for the first time were often charmed by the eager cordiality of his address,[3] and by the absence of the bearishness and gloom[4] which were attributed to him by others. His face may have been ugly, but all admit that it was remarkably expressive. 'Every change of feeling,' says the painter Klober who took him in 1818, 'in his mind, showed itself at once unmistakably in his features.'[5] When lost in thought and abstracted his look would naturally be gloomy, and at such times it was useless to expect attention from him; but on recognising a friend his smile was peculiarly genial and winning.[6] He had the breadth of jaw which distinguishes so many men of great intellect; the mouth firm and determined, the lips protruded with a look almost of fierceness: but his eyes were the special feature of the face, and it was from them that the earnestness and sincerity of his character beamed forth. They were black ['bluish-grey'[7] or 'brown'[8]], not large but bright, and when under the influence of inspiration—the *raptus* of Frau von Breuning—they dilated in a peculiar way. His head was large, the forehead both high and broad, and the hair abundant. It was originally black,[9] but in the last years of his life, though as thick as ever, became quite white, and formed a strong contrast to the red colour[10] of his complexion. Beard or moustache he never wore. If he had done so his beard would have been a prodigious one, for, àpropos of an amusing anecdote of Beethoven's impulsiveness, Ries tells us (p. 116) that he had to shave up to his eyes. His teeth were very white and regular, and good up to his death; in laughing he showed them much.[11] When in pleasant frame of mind his voice was soft,[12] but on occasion he could raise it,[13] and in singing we read of him roaring.[14] The portraits and busts of Beethoven are with few exceptions more or less to blame; they either idealise him into a sort of Jupiter Olympus, or they rob him of all expression. It must have been a difficult face to take, because of the constant variety in its expression, as well as the impatience of the sitter. The most trustworthy[15] likenesses are (1) the miniature by Hornemann, taken in 1802, and photographed in Breuning's *Schwarzspanierhaus* (Vienna, 1874): (2) the head by Letronne, engraved by Höfel, and (badly) by Riedel for the *A.M.Z.*, 1817; (3) the little full-length sketch by Lyser, to the accuracy of which Breuning expressly testifies, except that the hat should be straight on the head, not at all on one side. He was below the middle height

—not more than 5 feet 5 inches,[16] but broad across the shoulders and very firmly built—'the image of strength.'[17] His hands were much covered with hair, the fingers strong and short (he could barely span a tenth), and the tips broad, as if pressed out with long practising from early youth. He was very particular as to the mode of holding the hands and placing the fingers, in which he was a follower of Emanuel Bach, whose *Method* he employed in his earlier days. In extempore playing he used the pedal far more than one would expect from his published sonatas, and this made his quick playing confused, but in *Adagios* he played with divine clearness and expression. His attitude at the piano was perfectly quiet[18] and dignified, with no approach to grimace, except to bend down a little towards the keys as his deafness increased. This is remarkable,

[15] I heartily wish it were in my power to give these two portraits, so full of character and so unlike the ordinary engravings. The first of the two has a special interest as having been sent by Beethoven to Breuning as a pledge of reconciliation. See the letter, *infra*. The second, difficult as it is to believe it, was allowed by contemporaries to exhibit the 'soul' of the great composer. How unfortunate for the world that Sir Thos. Lawrence did not paint B. during his visit to Vienna in 1817! With all Lawrence's weaknesses this portrait would have been far better than any we possess.

because as a conductor his motions were most extravagant.[1] At a *pianissimo* he would crouch down so as to be hidden by the desk, and then as the *crescendo* increased, would gradually rise, beating all the time, until at the *fortissimo* he would spring into the air with his arms extended as if wishing to float on the clouds. When, as was sometimes the case after he became deaf, he lost his place, and these motions did not coincide with the music, the effect was very unfortunate, though not so unfortunate as it would have been had he himself been aware of the mistake. In the orchestra, as at the piano, he was urgent in demanding expression, exact attention to *piano* and *forte*, to the slightest shades of *nuance*, and to *tempo rubato*. Generally speaking he was extremely courteous to the band, though to this rule there were now and then exceptions. Though so easily made angry, his pains as a teacher must have been great. 'Unnaturally patient,' says one pupil,[2] 'he would have a passage repeated a dozen times till it was to his mind'; 'infinitely strict in the smallest detail,' says another,[3] 'until the right rendering was obtained.' 'Comparatively careless[4] as to the right notes being played, but angry at once at any failure in expression or *nuance*, or in apprehension of the character of the piece; saying that the first might be an accident, but that the other showed want of knowledge, or feeling, or attention.' What his practice was as to remuneration does not appear, but it is certain that in some cases he would accept no pay from his pupils.

His simplicity and absence of mind were now and then oddly shown. He could not be brought to understand why his standing in his nightshirt at the open window should attract notice, and asked with perfect simplicity 'what those d—d boys were hooting at.'[5] At Penzing in 1823 he shaved at his window in full view, and when the people collected to see him, changed his lodging rather than forsake the practice.[6] Like Newton he was unconscious that he had not dined, and urged on the waiter payment for a meal which he had neither ordered nor eaten. He forgot that he was the owner of a horse until recalled to the fact by a long bill for its keep. In 1825 or 1826 he was found by two visitors with nothing on but his shirt, beating time and writing notes on the wall of his room in the Schwarzspanierhaus.[7] In fact he was not made for practical life; never could play at cards or dance, dropped everything that he took into his hands, and overthrew the ink into the piano. He cut himself horribly in shaving. 'A disorderly creature' (ein unordentlicher Mensch) was his own description, and 'ein konfuser Kerl' that of his doctor,[8] who wisely added the saving clause 'though he may still be the greatest genius in the world.' His ordinary handwriting was terrible, and supplied him with many a joke. 'Yesterday I took a letter myself to the post-office, and was asked where it was meant to go to. From which I see that my writing is as often misunderstood as I am myself.'[9] It was the same twenty years before—'this cursed writing that I cannot alter.'[10] Much of his difficulty probably arose from want of pens, which he often begs from Zmeskall and Breuning; for some of his MSS.[11] are as clear and flowing as those of Mozart, and there is a truly noble character in the writing of some of his letters, *e.g.* that to Mr. Broadwood (see p. 252), of which we give the signature.

Notwithstanding his illegible hand, Beethoven was a considerable letter-writer. The two collections published by Nohl contain 721, and these are probably not more than half of those he wrote.[12] Not a large number when compared with those of Mendelssohn or even Mozart—both of whom died so early,—but large under all the circumstances. 'Good letters' they cannot be called. They contain no descriptions or graces of style; they are often clumsy and incorrect. But they are also often eminently interesting from being so brimful of the writer's personality. They are all concerned with himself, his wants and wishes, his joys and sorrows; sometimes when they speak of his deafness or his ill-health, or confess his faults and appeal to the affection of his correspondent, they overflow with feeling and rise into an affecting eloquence, but always to the point. Of these, the letters to Wegeler and Eleonore von Breuning, and that to his brothers (called his 'Will'), are fine specimens. Many of those addressed to his nephew are inexpressibly

touching. But his letters are often very short. Partly perhaps from his deafness, and partly from some idiosyncrasy, he would often write a note where a verbal question would seem to have been more convenient. One constant characteristic is the fun they contain. Swift or Shakespeare himself never made worse puns with more pleasure, or devised queerer spelling[1] or more miserable rhymes, or bestowed more nicknames on his friends. He lived in a world of nicknames and jokes. His cook was 'Frau Schnapps, my fast-sailing noble frigate';[2] Krumpholz is 'my fool'; he himself is 'the Generalissimus,' Haslinger 'the Adjutant,' Schindler 'the Samothracian' and 'Papageno'; Schuppanzigh is 'Falstaff'; Bernard, 'Bernardus non Sanctus'; Linke is 'Liebe linke und rechte'; Leidesdorf is 'Dorf des Leides'; Hoffmánn is adjured to be 'kein Hófmann,' Kuhlau is 'Kühl nicht lau,' and so on. Nor are they always *comme il faut*, as when he addresses Holz as 'lieber Holz vom Kreuze Christi,' or apostrophises 'Monsieur Friederich, nommé Liederlich.' Sometimes such names bite deeply:—his brother Johann is the 'Braineater,' 'Pseudo-brother,' or 'Asinus,' and Caspar's widow the 'Queen of Night.' No one is spared. A canon to Count Moritz Lichnowsky runs 'Bester Herr Graf, du bist ein Schaf.' Fitzli Putzli was a name by which he spoke of Prince Lobkowitz.[3] The anecdote about his brother just mentioned is a case in point.[4] Johann, who lived on his own property, called on him on one *jour de fête*, and left his card 'Johann van Beethoven, Gutsbesitzer' (land proprietor), which Beethoven immediately returned after writing on the back 'L. van Beethoven, Hirnbesitzer' (brain proprietor). This fondness for joking pervaded his talk also; he liked a home-thrust, and delivered it with a loud roar of laughter.[5] To tell the truth he was fond of horse-play, and that not always in good taste. The stories—some of them told by himself—of his throwing books, plates, eggs, at the servants; of his pouring the dish of stew over the head of the waiter who had served him wrongly; of the wisp of goat's beard sent to the lady who asked him for a lock of his hair—are all instances of it.[6] No one had a sharper eye or ear for a joke when it told on another. He was never tired of retailing the delicious story of Simon the Bohemian tenor who in singing the sentence 'Auf was Art Elende' transformed it into 'Au! fwa! Sartellen Thee!'[7] But it must be confessed that his ear and his enjoyment were less keen when the joke was against himself. At Berlin in 1796 he interrupted Himmel in the middle of an improvisation to ask when he was going to begin in earnest. But when Himmel, months afterwards, wrote to him that the latest invention in Berlin was a lantern for the blind, Beethoven not only with characteristic simplicity did not see the joke, but when it was pointed out to him he was furious, and would have nothing more to do with his correspondent.

The simplicity which lay at the root of so many of his characteristic traits, while it gave an extraordinary force and freshness to much that he did and said, must often have been very inconvenient to those who had intercourse with him. One of his most serious quarrels arose from his divulging the name of a very old and intimate friend who had cautioned him privately against one of his brothers. He could see no reason for secrecy; but it is easy to imagine the embarrassment which such disregard of the ordinary rules of life must have caused. Rochlitz describes the impression he received from him as that of a very able man reared on a desert island, and suddenly brought fresh into the world. One little trait from Breuning's recollections exemplifies this—that after walking in the rain he would enter the living room of the house and at once shake the water from his hat all over the furniture, regardless, or rather quite unaware, of the damage he was doing. His ways of eating in his later years became quite unbearable.

One fruitful source of difficulty in practical life was his lodgings. His changes of residence were innumerable during the first year or two of his life in Vienna; it is impossible to disentangle them. Shortly after his arrival the Lichnowskys took him into their house, and there for some years he had nominally a *pied à terre;* but with all the indulgence of the Prince and Princess the restraint of being forced to dress for dinner, of attending to definite hours and definite rules, was too much for him, and he appears very soon to have taken a lodging of his own in the town, which lodging he was constantly changing. In 1803, when an opera was contemplated, he had free quarters at the theatre, which came to an end when the house changed hands early in 1804. A few months later and he was again lodged in the theatre free. At Baron Pasqualati's house on the ramparts he had rooms—with a beautiful look-out[8]—which were usually kept for him, where he would take refuge when composing, and be denied to every one. But even with this he had a separate and fresh quarter nearly every winter.[9] In summer he hated the city, and usually followed the Vienna custom of leaving the hot streets for the delicious wooded environs of Hetzendorf, Heiligenstadt, or Döbling, at that time little villages absolutely in the country, or for Mödling or Baden, farther off. To this he 'looked forward with the delight of a child. . . . No man on earth loves the country more than I do.' At Teplitz in 1812

daybreak finds him already walking in the woods still bathed in the night mists.[1] Neate never met any one who so delighted in Nature or so thoroughly enjoyed flowers or clouds or any other natural object.[2] 'Woods, trees, and rocks give the response which man requires.' 'Every tree seems to say Holy, Holy.'[3] Here, as already remarked, he was out of doors for hours together, wandering in the woods, or sitting in the fork of a favourite lime-tree in the Schönbrunn gardens[4] sketch-book in hand; here his inspiration flowed, and in such circumstances the 'Mount of Olives,' 'Fidelio,' the 'Eroica Symphony,' and the majority of his great works were sketched, and re-sketched, and erased and re-written, and by slow degrees brought far on to perfection.

His difficulties with his lodgings are not hard to understand; sometimes he quarrelled with them because the sun did not shine into the rooms, and he loved the light; sometimes the landlord interfered. Like other men of genius whose appearance would seem to belie the fact, Beethoven was extremely fond of washing.[5] He would pour water backwards and forwards over his hands for a long time together, and if at such times a musical thought struck him and he became absorbed, he would go on until the whole floor was swimming, and the water had found its way through the ceiling into the room beneath. On one occasion he abandoned a lodging for which he had paid heavily in advance, because his landlord, Baron Pronay, insisted on taking off his hat to him whenever they met. One of the most momentous of his changes was in 1804. After he was turned out of his lodgings at the theatre, Beethoven and Stephen Breuning inhabited two sets of rooms in a building called *Das Rothe Haus*. As each set was large enough for two, Beethoven soon moved into Breuning's rooms, but neglected to give the necessary notice to the landlord, and thus after a time found that he had both lodgings on his hands at once. The result was a violent quarrel, which drove Beethoven off to Baden, and estranged the two friends for a time. We have Beethoven's version of the affair in two letters to Ries—July,[6] and July 24, 1804—angry implacable letters, but throwing a strong light on his character and circumstances, showing that it was not the loss of the money that provoked him, but an imputation of meanness; showing further that here, as so often elsewhere, his brother was his evil genius; and containing other highly interesting personal traits.

Besides the difficulties of the apartments there were those with servants. A man whose principles were so severe as to make him say of a servant who had told a falsehood that she was not pure at heart, and therefore could not make good soup;[7] who punished his cook for the staleness of the eggs by throwing the whole batch at her one by one, and who distrusted the expenditure of every halfpenny—must have had much to contend with in his kitchen. The books give full details on this subject, which need not be repeated, and indeed are more unpleasant to contemplate than many other drawbacks and distresses of the life of this great man.

In the earlier part of his career money was no object to him, and he speaks as if his purse were always open to his friends.[8] But after the charge of his nephew was thrust upon his hands a great change in this, as in other respects, came over him. After 1813 complaints of want of money abound in his letters, and he resorted to all possible means of obtaining it. The sum which he had been enabled to invest after the congress he considered as put by for his nephew, and therefore not to be touched, and he succeeded in maintaining it till his death.

It is hard to arrive at any certain conclusion on the nature and progress of Beethoven's deafness, owing to the vagueness of the information. Difficulty of hearing appears first to have shown itself about 1798 in singing and buzzing in his ears, loss of power to distinguish words, though he could hear the tones of voice, and great dislike to sudden loud noise. It was even then a subject of the greatest pain to his sensitive nature;[9] like Byron with his club-foot he lived in morbid dread of his infirmity being observed, a temper which naturally often kept him silent; and when a few years later[10] he found himself unable to hear the pipe of a peasant playing at a short distance in the open air, it threw him into the deepest melancholy, and evoked the well-known letter to his brothers in 1802, which goes by the name of his Will. Still many of the anecdotes of his behaviour in society show that during the early years of the century his deafness was but partial; and Ries, intimate as he was with his master, admits that he did not know it till told[11] by S. Breuning. A few facts may be mentioned bearing on the progress of the malady. In 1805 he was able to judge severely of the *nuances* in the rehearsal of his opera. In 1807, 1809, 1813 he conducted performances of his own works. In 1814 he played his B flat trio—his last appearance in public in concerted music.[12] From 1816 to 1818 he used an ear trumpet.[13] At the opening of the Josephstadt Theatre in 1822, he conducted the performance—nearly to ruin it is true, but at the same time he was able to detect that the soprano was not singing in time, and to give her the necessary advice. A subsequent

attempt (in Nov. 1822) to conduct 'Fidelio' led to his having to quit the orchestra, when his mortification was so great that Schindler treats the occurrence as an epoch in his life.[1] At this time the hearing of the right ear was almost completely gone; what he did hear—amongst other things a musical box[2] playing the trio in 'Fidelio,' and Cherubini's overture to 'Medea'—was with the left ear only. After this he conducted no more, though he stood in the orchestra at the performance of the 'Choral Symphony,' and had to be turned round that he might see the applause which his music was evoking.[3] From this to the end all communication with him was mostly carried on by writing, for which purpose he always had a book of rough paper, with a stout pencil, at hand.

The connection between this cruel malady and the low tone of his general health was closer than is generally supposed. The *post-mortem* examination showed that the liver was shrunk to half its proper size, and was hard and tough like leather, with numerous nodules the size of a bean woven into its texture and appearing on its surface. There were also marks of ulceration of the pharynx, about the tonsils and Eustachian tubes. The arteries of the ears were atheromatous, and the auditory nerves—especially that of the right ear—were degenerated and to all appearance paralysed. The whole of these appearances are most probably the result of syphilitic affections at an early period of his life.[4] The pains in the head, indigestion, colic, and jaundice, of which he frequently complains, and the deep depression which gives the key to so many of his letters, would all follow naturally from the chronic inflammation and atrophy implied by the state of the liver, and the digestive derangements to which it would give rise, aggravated by the careless way in which he lived, and by the bad food, hastily devoured, at irregular intervals, in which he too often indulged. His splendid constitution and his extreme fondness for the open air must have been of great assistance to him. How thoroughly he enjoyed the country we have already seen, for, like Mendelssohn, he was a great walker, and in Vienna no day, however busy or however wet, passed without its 'constitutional'—a walk, or rather run, twice round the ramparts, a part of the city long since obliterated; or farther into the environs.

Beethoven was an early riser, and from the time he left his bed till dinner—which in those days was taken at, or shortly after, noon—the day was devoted to completing at the piano and writing down the compositions which he had previously conceived and elaborated in his sketch-books, or in his head. At such times the noise which he made playing and roaring was something tremendous. He hated interruption while at work,[5] and would do and say the most horribly rude things if disturbed. Dinner—when he remembered it—he took sometimes in his own room, sometimes at an eating-house, latterly at the house of his friends the Breunings; and no sooner was this over than he started on his walk. He was fond of making appointments to meet on the glacis. The evening was spent at the theatre or in society. He went nowhere without his sketch-books,[6] and indeed these seem to distinguish him from other composers almost as much as his music does. They are perhaps the most remarkable relic that any artist or literary man has left behind him. They afford us the most precious insight into Beethoven's method of composition. They not only show —what we know from his own admission—that he was in the habit of working at three, and even four, things at once,[7] but without them we should never realise how extremely slow and tentative he was in composing. He even sketched his most comical effusions.[8] Audacious and impassioned beyond every one in extemporising, the moment he takes his pen in hand he becomes the most cautious and hesitating of men.[9] It would almost seem as if this great genius never saw his work as a whole until it actually approached completion. It grew like a plant or tree, and one thing produced another.[10] There was nothing sudden or electric about it, all was gradual and organic, as slow as a work of nature and as permanent. One is prompted to believe, not that he had the idea first and then expressed it, but that it often came in the process of finding the expression. There is hardly a bar in his music of which it may not be said with confidence that it has been re-written a dozen times.[11] Of the air 'O Hoffnung' in 'Fidelio' the sketch-books show eighteen attempts, and of the concluding chorus ten. Of many of the brightest gems of the opera, says Thayer, the first ideas are so trivial that it would be impossible to admit that they were Beethoven's if they were not in his own handwriting. And so it is with all his works. It is quite astonishing to find the

[1] Schindler, ii. 11.
[2] *Ibid.* 9.
[3] In music he seemed to hear by a kind of feeling or instinct. During a rehearsal of one of the last quartets he made a movement showing that something was wrong, and on inquiry it turned out that Holz, playing 2nd violin, had bowed a passage wrongly. Th. *Krit. Beitrag*, 46.
[4] This diagnosis, which I owe to the kindness of my friend Dr. Lauder Brunton, is confirmed by the existence of two prescriptions, of which, since the passage in the text was written, I have been told by Mr. Thayer, who heard of them from Dr. Bartolini.

[5] 'Im Feuer der Eingebung ganz in meinem Werke.' Th. iii. 465.
[6] In allusion to his sketch-books he quoted Schiller, 'Nicht ohne meine Fahne darf ich kommen,' Seyfried, App. 20.
[7] Letter to Wegeler, June 1801. 'I cannot nail my mind to one subject of contemplation, and it is by nourishing two trains of ideas that I can bring one into order.' *Walter Scott's Life*, vii. 179.
[8] See Nohl, iii. 872.
[9] In keeping with this is the strange contrast already noticed between his frequent use of the pedal when extemporising and his economy of it in print.
[10] Thus the 3-bar rhythm of the Scherzo of the Ninth Symphony gradually came as he wrote and re-wrote a fugue subject apparently destined for a very different work. Nottebohm, *Z.B.* p. 158.
[11] Mendelssohn used to show a correction of a passage by Beethoven, in which the latter had pasted alteration after alteration, up to 13 in number. Mendelssohn had separated them, and in the 13th the composer had returned to the original version. [Described in a letter written to Sir George Grove by Mrs. Arthur Somervell.]

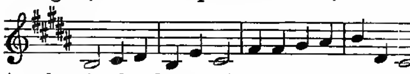
length of time during which some of his best-known instrumental melodies remained in his thoughts till they were finally used, or the crude vague commonplace shape in which they were first written down. And yet, this repeated elaboration does not injure the thoughts. Beethoven did not 'add and alter many times, till all was ripe or rotten.' On the contrary, the more they are elaborated the more fresh and spontaneous do they become.

To quote a few instances out of many. The theme of the *Andante* in the C minor Symphony, completed in 1808, is first found in a sketch-book of the year 1800, mixed with memoranda for the 6 Quartets, and in the following form:[1]—

Here are the first bars of the first sketch of the slow movement of the pianoforte concerto in E flat, op. 73,[2]

then

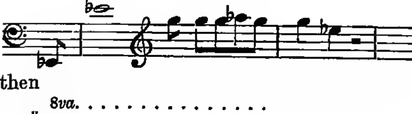
and again, before the printed version,



Another is the first subject of the Allegro in the Sonata op. 106. It first appears[3] thus—

then, with a slight advance,

next



then

8va. . . . .

and finally, after several pages more of writing and rewriting, it assumes its present incisive and spontaneous shape.

Once again here is the fresh, impulsive sketch of the finale of the 'Waldstein' sonata, op. 53, as first written down:

1 First given by Thayer, *Chron. Verzeichniss*, No. 140.
2 Nottebohm, *Z.B.* p. 256. 3 Nottebohm *Z.B.* pp. 123-24.

In these books every thought that occurred to him was written down at the moment;[4] he even kept one by his bedside for use in the night.[5] Abroad or at home it was all the same, only out of doors he made his notes in pencil, and inked them over on his return to the house. It is as if he had no reliance whatever on his memory. He began the practice as a boy and maintained it to the last. In the sale catalogue of his effects more than fifty of such books are included. Many of them have been parted and dispersed, but some remain intact. They are usually of large coarse music paper, oblong, 200 or even more pages, 16 staves to the page, and are covered from beginning to end, often over the margin as well, with close crowded writing.[6] There is something very affecting in the sight of these books,[7] and in being thus brought so close to this mighty genius and made to realise the incessant toil and pains which he bestowed on all his works, small and great.[8] In this he agreed with Goethe, who says, àpropos of his 'Ballad,' 'Whole years of reflection are comprised in it, and I made three or four trials before I could bring it to its present shape.'[9] The sketch-books also show how immense was the quantity of his ideas. 'Had he,' says Nottebohm,[10] 'carried out all the symphonies which are begun in these books we should have at least fifty.'

But when, after all this care and hesitation, the works were actually completed, nothing external made him change them.[11] No convenience of singers or players weighed for a moment against the integrity of his finished composition. When Sontag and Unger protested against the unsingable passages in the Ninth Symphony, and besought him to bring them within the compass of their voices, 'Nein, und immer nein,' was the dry answer.[12] When Kraft, the violoncellist in the Schuppanzigh Quartet, complained that a passage 'did not lie within his hand,' the answer was 'it must lie'—'muss liegen.'[13]

A man to whom his art was so emphatically the business of his life, and who was so insatiable in his standard of perfection, must have been always advancing. To him more than to any other musician may be applied Goethe's words on Schiller:—'Every week he altered

4 Though this habit of at once entering his ideas seems to have existed from a very early age (see letter to Archduke Rudolph, July 23, 1815), yet in one of the sketch-books of 1810 we find an injunction 'to accustom oneself at once to put the whole of the parts as they come into one's head.' 5 Breuning, p. 98.
6 Those he carried out of doors were half the size (Nottebohm, *Z.B.* p. 314).
7 There are some in the MS. department of the British Museum.
8 Jahn remarks (*Ges. Aufs.* 297) that for little occasional pieces like the 'Hochzeitslied' (1819), for Gian. Rio, the Italian Cantata for Malfatti (1818), and an Abschiedsgesang (1816) for a friend (Tuscher), there are many sketches, as many as for great works. These are Pope's 'patient touches of unwearied Art.'
9 *Conversations with Eckermann*, Oxenford's translation, ii. 112. Sometimes the most characteristic are put in, in the course of writing—the pauses and statement, for instance, of the subject in the C minor symphony. 10 *Z.B.* pp. 12, 13.
11 It is rare to find. See, however, Beethoven's letter to B. and H., March 4. 1809.
12 Schindler, 1st ed. p. 154. 13 Thayer, ii. 53.

and grew more complete, and every time I saw him he appeared to me to have advanced since the last in knowledge, learning, and judgment.'[1] It is no wonder then that he did not care for his early works, and would sometimes even have destroyed 'Adelaide,'[2] the Septet, and others of his youthful pieces, if he could. Towards the end of his life he heard a friend practising his thirty-two Variations[3] in C minor. After listening for some time he said 'Whose is that?' 'Yours,' was the answer. 'Mine? That piece of folly mine?' was his retort; 'Oh, Beethoven, what an ass you were in those days!' A good deal of this may have been momentary caprice; but making all allowance, one can imagine his feelings at the close of his life on receiving a commission from an English amateur for a 'Symphony in the style of his Second or of his Septet,' or on reading the contemporary effusions on the Eroica and C minor Symphonies, in which his honest and well-meaning though short-sighted critics[4] entreated him to turn to the clearness and conciseness of his early works.

Hardly less characteristic than the sketch-books are his diaries or journals, in which the most passionate and personal reflections, resolutions, prayers, aspirations, complaints, are mixed up with memoranda of expenses and household matters, notes about his music, rules for his conduct, quotations from books, and every other conceivable kind of entry. These books have been torn up and dispersed as autographs; but a copy of one extending from 1812 to 1818 fortunately exists, and has been edited with copious notes and elucidations by Herr Nohl, the whole throwing great light on that unfortunate period of his life. A ray of light is also occasionally to be gained from the conversation-books already mentioned, 136[5] of which have been preserved, though, as Beethoven's answers were usually spoken, this source is necessarily imperfect.

If now we ask what correspondence there is between the traits and characteristics thus imperfectly sketched and Beethoven's music, it must be confessed that the question is a difficult one to answer. In one point alone the parallel is obvious—namely, the humour, which is equally salient in both. In the finales of the Seventh and Eighth Symphonies there are passages which are the exact counterparts of the rough jokes and horse-play of which we have already seen some instances. In these we almost hear his loud laugh. The Scherzo of Symphony No. 2, where the F♯ chord is so suddenly taken and so forcibly held, might almost be a picture of the unfortunate *Kellner* forced to stand still while the dish of stew was poured over his head. The bassoons in the opening and closing movements of No. 8 are inimitably humorous; and so on in many other instances which will occur to every one. But when we leave humour and go to other points, where in the life shall we look for the grandeur and beauty which distinguish the music? Neither in letters nor anecdotes do we find anything answering to the serene beauty of the slow movements (No. 2, No. 4, No. 9), or the mystic tone of such passages as those of the horns at the end of the Trio of the Eroica, or of certain phrases in the finale of the Choral Fantasia and of the Choral Symphony, which lift one so strangely out of time into eternity. These must represent a state of mental absorption when all heaven[6] was before his eyes, and in which he retired within himself far beyond the reach of outward things, save his own divine power of expression.

Equally difficult is it to see anything in Beethoven's life answering to the sustained nobility and dignity of his first movements, or of such a piece as the 'Overture to Leonora, No. 3.' And then if we come to the most individual and characteristic part of all Beethoven's artistic self, the process by which his music was built up—the extraordinary caution which actuated him throughout, the hesitation, the delays, the incessant modification of his thoughts, the rejection of the first impressions—of the second—of the third—in favour of something only gradually attained to, the entire subordination of his own peculiarities to the constant thought of his audience, and of what would endure rather than what pleased him at first—to all this there is surely nothing at all corresponding in his life, where his habit was emphatically a word and a blow. The fact is that, like all musicians, only in a greater degree than any other, in speech Beethoven was dumb, and often had no words for his deepest and most characteristic feelings. The musician has less connection with the outside world than any other artist, and has to turn inward and seek his art in the deepest recesses of his being only.[7] This must naturally make him less disposed to communicate with others by the ordinary channels of speech and action, and will account for much of the irritability and uncertainty which often characterise his dealings with his fellow-men. But the feelings are there, and if we look closely enough into the life we shall be able to detect their existence often where we least expect it. In Beethoven, for example, what was his treatment of his nephew—the strong devotion which seized him directly after his brother's death, and drove him to sacrifice the habits of a lifetime; his inexhaustible forgiveness, his yearning tenderness—what are these, if properly interpreted, but a dumb way of expressing that noble temper

which, when uttered in his own natural musical language, helps to make the first movement of the Eroica so lofty, so dignified, and so impressive?

We must now return to the chronicle of the events of Beethoven's life.

His position at Bonn as organist and pianist to the Emperor's brother, his friendship with Count Waldstein, who was closely related to some of the best families in Vienna, his 'Van,' and his connection with Haydn, were all circumstances sure to secure him good introductions. The moment was a favourable one, as since Mozart's death, a twelvemonth before, there had been no player to take his place; and it was as a player that Beethoven was first known. It is pleasant to know that his show-piece, with which he took the Vienna connoisseurs by storm, was his Variations on 'Venni Amore,' which we have already mentioned as composed before he left Bonn. Public concerts in our sense of the word there were few, but a player had every opportunity at the musical parties of the nobility, who maintained large orchestras of the best quality, and whose music-meetings differed from public concerts chiefly in the fact that the audience were better educated, and were all invited guests. Prince Lichnowsky and Baron van Swieten appear to have been the first to secure Beethoven, the former for his regular Friday morning chamber performances, the latter for soirées, when he had either 'to bring his nightcap in his pocket' or else to stay after the other guests had gone, and send his host to bed with half-a-dozen of Bach's fugues as an *Abendsegen*. The acquaintance with the former probably began shortly after Beethoven's arrival; and after a twelvemonth of unpleasant experience in the Vienna lodgings, the Prince induced him to accept apartments in his house. His wife was a Princess of Thun, famous for her beauty and her goodness; he himself had been a pupil of Mozart; and both were known as the best amateur musicians of Vienna. Beethoven was poor enough to be tempted by such hospitality, but it was an absurd arrangement, and he very soon infringed it by disregarding the Prince's hours, often dining at the *Gasthof*, having a lodging of his own elsewhere, and by other acts of independence. Here, however, he was frequently heard, and thus became rapidly known in the most musical circles, and Riss's anecdotes show (after making allowance for the inaccuracy of a man who writes thirty years after the events) how widely he was invited, how completely at his ease he was, and how entirely his eccentricities were condoned for the sake of his playing and his great qualities. Not that we are to suppose that Beethoven gave undue time to society. He was too hard a worker for that. His lessons with Haydn and Albrechtsberger (from the latter he had three a week) were alone enough to occupy a great deal of time, and his own studies in counterpoint exist to show that he did not confine himself to the mere tasks that were set him. Moreover, his lessons with Albrechtsberger contain sketches for various compositions, such as 'Adelaide,' a part of one of the Trios (op. 1), and a Symphony in C,[1] all showing how eager he was to be something more than a mere player or even a splendid improviser. These sketches afford an early instance of his habit of working at several compositions at one and the same time. The date of one of them, about Feb. 1795, seems to imply either that the story—grounded on Ries's statement—that the Trios were in MS. for many months[2] before they were printed, is inaccurate, or, more probably, that Beethoven rewrote one of the movements very shortly before delivering the work to the publisher, which he did on May 19. In this case it would show the wisdom of the plan which he adopted with most of his early works,[3] of keeping them in MS. for some time and playing them frequently, so as to test their quality and their effect on the hearers, a practice very consistent with his habitual caution and fastidiousness in relation to his music. At any rate the Trios were presented first to the subscribers, by July 1795, and then, on Oct. 21, to the public. They were shortly followed by a work of equal importance, the first three Pianoforte Sonatas,[4] which were first played by their author at one of the Prince's Fridays in presence of Haydn, and published on the 9th of the following March as op. 2, dedicated to him. He had not then written a string quartet, and at this concert Count Appony[5] proposed to Beethoven to compose one, offering him his own terms, and refusing to make any conditions beyond the single one that the quartet should be written—a pleasant testimony to the enthusiasm excited by the new Sonatas, and to the generosity of an Austrian nobleman. In addition to the Trios and Sonatas, the publications of his three first years in Vienna include the 12 Variations on 'Se vuol ballare'[6] (July 1793); the 13 on 'Es war einmal' (early in 1794); the 8 for four hands on Count Waldstein's theme (1794); and 9 for Piano Solo on 'Quant' e più bello'[7] (Dec. 30, 1795). The compositions include a Trio for Oboes and Corno inglese (op. 87), which remained unpublished till 1806; a Rondo in G for Pianoforte and Violin,[8] which he sent to Eleonore von Breuning,

[1] See Nottebohm's *Z.B.* pp. 228-29.

[2] Haydn left Vienna for London on Jan. 19, 1794, and did not return till Sept. 1795, when the Trios had been printed and in the subscribers' hands for some weeks. If he therefore advised Beethoven not to publish the third it must have been before he left Vienna. Ries's statement is so explicit that the alternative suggested in the text seems the only escape from the difficulty. It appears to have been Haydn's intention to take Beethoven with him to London on his second journey (see Pohl's *Haydn in London*, p. 260), but nothing came of it.

[3] He maintained this plan till 1812, when he informs Varenna that he never publishes until a year after composition. Letter, Feb. 8, 1812.

[4] In the *Adagio* of No. 1 the corresponding movement in No. 3 of the early Piano Quartets is partially adopted—a rare thing with Beethoven.

and which remained unpublished till 1808; the Concerto in B flat (op. 19) for Piano and Orchestra, which is earlier than the one in C (op. 15); Songs, 'Adelaide,' and 'Opferlied,'[1] both to Matthisson's words, and 'Seufzer eines Ungeliebten,'[2] all probably composed in 1795; Canon 'Im Arm der Liebe,'[3] an exercise with Albrechtsberger; 12 Minuets and 12 'Deutsche Tänze' for Orchestra,[4] composed Nov. 1795.

On March 29, 1795, Beethoven made his first appearance before the outside public at the annual concert in the Burg Theatre, for the widows' fund of the Artists' Society. He played his Concerto in C major.[5] The piece had probably been suggested by Salieri, and with it Beethoven began a practice which he more than once followed when the work was bespoken—of only just finishing the composition in time; the Rondo was written on the afternoon of the last day but one, during a fit of colic. At the rehearsal, the piano being half a note too flat, Beethoven played in C♯.[6] Two days after he appeared again at the same theatre at a performance for the benefit of Mozart's widow, playing a Concerto of Mozart's between the acts of the 'Clemenza di Tito.'[7] Later in the year he assisted another benevolent object by writing the above-mentioned Minuets and Deutsche Tänze for orchestra for the ball of the 'Gesellschaft der bildenden Künstler' on Nov. 22. He was evidently a favourite with the artists, who advertise 'the master-hand of Herr Ludwig van Beethoven,' while they mention Süssmayer—who also contributed music—without an extra word. These dances, after publication, remained in favour for two more seasons, which is mentioned as a great exception to rule. On Dec. 18 he again appeared in public at a concert of Haydn's in the 'little Redoutensaal,' playing a Concerto of his own—but whether the same as before is not stated. The dedication of the Sonatas and his co-operation at Haydn's concert allow us to hope that any ill-feeling which may have arisen had vanished. So closed the year 1795. Bonn was at this time in the hands of the Republican army, and Beethoven's brother the Apotheker was serving as a 'pharmacien de 3ème classe.'

1796 was a year of wandering. Haydn and he appeared together at a second concert on Jan. 10.[8] In the interval Beethoven went perhaps to Prague, certainly to Nuremberg.[9] On Feb. 19 he was in Prague again, where he composed the Scena[10] 'Ah! perfido' for Madame Duschek, the friend of Mozart. From thence he travelled to Berlin, played at court, amongst other things the two violoncello sonatas op. 5, probably composed for the occasion, and received from the king a box of louis d'or, which he was proud of showing as 'no ordinary box, but one of the kind usually presented to ambassadors.' At Berlin his time was passed pleasantly enough with Himmel the composer and Prince Louis Ferdinand. He went two or three times to the Singakademie,[11] heard the choir sing music by Fasch, and extemporised to them on themes from those now forgotten compositions. In July the Court left Berlin, and Beethoven probably departed also; but we lose sight of him till Nov. 15, the date of a 'farewell-song'[12] addressed to the volunteers on their leaving Vienna to take part in the universal military movement provoked by Napoleon's campaigns in Italy. The war was driving all Germans home, and amongst others Beethoven's old colleagues the two Rombergs passed through Vienna from Italy, and he played for them at a concert.[13]

The publications of 1796 consist of the 3 Piano Sonatas, op. 2 (March 9); 12 Variations on a minuet *à la Vigano*[14] (Feb.), and 6 on 'Nel cor più non mi sento'[15] (March 23); 6 Minuets (also in March) for Piano, probably originally written for orchestra—perhaps the result of his success with the 'bildende Künstler.'[16] Of the compositions of the year, besides those already named, may be mentioned as probable the Piano Sonata in G,[17] the second of the two small ones (op. 49); and a fragment of an Easy Sonata in C[18] for Eleonore von Breuning; we may perhaps also ascribe to the latter part of this year the Duet Sonata (op. 6); 12 Variations on a Russian dance;[19] the String Quintet (op. 4), arranged from an Octet for wind instruments, very probably of his præ-Vienna time. The Russian Variations were written for the Countess Browne, wife of an officer in the Russian service, from whom Beethoven received the gift of the horse which we have already mentioned as affording an instance of Beethoven's absence of mind. But the winter months must have been occupied by a more serious work than variations—the Quintet for piano and wind (op. 16),[20] which Beethoven produced at a concert of Schuppanzigh's on April 6, 1797, and which is almost like a challenge to Mozart on his own ground, and the not less important and far more original Pianoforte Sonata in E♭ (op. 7). This great work, 'quite novel, and wholly peculiar to its author, the origin of which can be traced to no previous creation, and which proclaimed his originality so that it could never afterwards be disputed,' was published on Oct. 7, 1797, but must

10 'Une grande Scene mise en musique, par L. v. Beethoven, à Prague, 1796,' is Beethoven's own title (Nottebohm, *Beethoveniana*, p. 1, note). Writing about 1808 he says:—'The Aria is in the dramatic style and written for the theatre, and can't make any effect in the concert-room. All its meaning is lost without a curtain, or something of the kind—lost—lost—all to the devil . . . a curtain, or the air will be lost' (*B.B.* No. 50).

11 Fasch's Journal, Thayer, ii. 13. Strange that Zelter (*Corr. with Goethe*) should not refer to this visit. Mme. von Voss's Journal, too, is blank during these very months.

20 An unusual combination, which may explain why so fine a work remained in MS. till 1801.

have been often played before that date. The sketches for the three Sonatas, op. 10, are placed by Nottebohm in this period, with the Variations on the 'Une fièvre brûlante.' The three String Trios, op. 9, also probably occupied him during some part of the year. The Serenade Trio, op. 8, though published in 1797, more probably belongs with op. 3 to the Bonn date. The Variations on 'See the conquering hero' for Pianoforte and Violoncello, dedicated to the Princess Lichnowsky, were published during this year, and were probably written at the time.[1]

Vienna was full of patriotism in the spring of 1797. Haydn's 'Emperor's Hymn' had been sung in the theatre for the first time on Feb. 12,[2] and Beethoven wrote a second military Lied, 'Ein grosses deutsches Volk sind wir,'[3] to Friedelberg's words, which is dated April 14, but did not prove more successful than his former one. In May he writes to Wegeler in terms which show that with publications or lessons his pecuniary position is improving; but from that time till Oct. 1—the date of an affectionate entry in Lenz von Breuning's album—we hear nothing whatever of him. A severe illness has to be accounted for,[4] and this is probably the time at which it happened. In November occurred the annual ball of the 'Bildende Künstler,' and his dances were again played for the third time; the seven Ländler,[5] ascribed to this year, were not improbably written for the same ball. His only other publications of 1797 not yet mentioned are the Pianoforte Rondo in C major, which many years afterwards received the opus number 51, and last, but not least, 'Adelaide.' Some variations[6] for two Oboes and Corno Inglese on 'La ci darem' were played on Dec. 23 at a concert for the Widows' and Orphans' Fund, but are still in MS.

The chief event of 1798 is one which was to bear fruit later—Beethoven's introduction to Bernadotte the French ambassador, by whom the idea of the Eroica Symphony is said[7] to have been first suggested to him. Bernadotte was a person of culture, and having R. Kreutzer, the violin-player, as a member of his establishment, may be presumed to have cared for music. Beethoven, who professed himself an admirer of Bonaparte, frequented the ambassador's levees; and there is ground for believing that they were to a certain extent intimate. On April 2 Beethoven played his Piano Quintet (op. 16) at the concert for the Widows' and Orphans' Fund.[8] The publications of this year show that the connection with the von Brownes indicated by the dedication of the Russian Variations was kept up and even strengthened; the 3 String Trios, op. 9 (published July 21), are dedicated to the Count, and the 3 Sonatas, op. 10 (subscribed July 7, published Sept. 26), to the Countess. The third of these sonatas forms a landmark in Beethoven's progress of equal significance with op. 7. The letter[9] which he appended to the Trios speaks of 'munificence at once delicate and liberal,' and it is obvious that some extraordinary liberality must have occurred to draw forth such an expression as 'the first Mæcenas of his muse,' in reference to any one but Prince Lichnowsky. In other respects the letter is interesting. It makes music depend less on 'the inspiration of genius' than on 'the desire to do one's utmost,' and implies that the Trios were the best music he had yet composed. The Trio for Piano, Clarinet, and Violoncello (op. 11), dedicated to the mother of Princess Lichnowsky, was published on Oct. 3. This is the composition which brought Steibelt and Beethoven into collision, to the sad discomfiture of the former.[10] Steibelt had shown him studied neglect till they met at Count Fries's, at the first performance of this Trio, and he then treated him quite *de haut en bas*. A week later they met again, when Steibelt produced a new Quintet and extemporised on the theme of Beethoven's Finale—an air from Weigl's 'Amor marinaro.' Beethoven's blood was now fairly up; taking the violoncello part of Steibelt's quintet, he placed it upside down before him, and making a theme out of it, played with such effect as to drive Steibelt from the room. Possibly this fracas may account for Beethoven's known dissatisfaction with the Finale.[11] The other publications of 1798 are Variations: 12 for Piano and Violoncello on an air in the 'Zauberflöte,' afterwards numbered as op. 66; 6, easy,[12] for Piano or Harp, possibly written for some lady friend, and published by Simrock at Bonn; and 8 on 'Une fièvre brûlante.'[13]

This year he again visited Prague, and performed at two public concerts, making an immense impression.[14] After his return, on Oct. 27, he played one of his two concertos at the Theatre 'auf den Wieden.' Woelfl was in Vienna during this year, and in him Beethoven encountered for the first time a rival worthy of his steel. They seem to have met often at Count Wetzlar's (Woelfl's friend), and to have made a great deal of music together, and always in a pleasant way.[15] It must have been wonderful to hear them, each excited by the other, playing their finest, extemporising alternately and together (like Mendelssohn and Moscheles), and making all the fun that two such men at such an age and in capital company would be sure to make.[16] Woelfl com-

memorated their meeting by dedicating three sonatas[1] to Beethoven, but met with no response.

But Beethoven did not allow pleasure to interfere with business, as the publications of the following year fully show. The three Sonatas for Piano and Violin, dedicated to Salieri (op. 12), published on Jan. 12, 1799, though possibly composed earlier must at any rate have occupied him in correction during the winter. The little Sonata in G minor (op. 49, No. 1) is a child of this time, and is immediately followed in the sketch-books by the 'Grande Sonate pathétique'—Beethoven's own title—(op. 13), dedicated to Prince Lichnowsky, as if to make up for the little slight contained in the reference to Count Browne as his 'first Mæcenas.' The well-known Rondo to the Sonata appears to have been originally intended for the third of the String Trios.[2] Of the origin of the two Sonatas, op. 14 (published Dec. 21), little is known. The sketches for the first of the two are coincident in time with those for the Concerto in B♭, which was completed by 1795,[3] and there is ground for believing that it was originally conceived as a string quartet, into which indeed Beethoven converted it a few years after. The second is probably much later. Both are specially interesting from the fact that Beethoven stated that they had for subject 'a dialogue between a husband and wife, or a lover and his mistress,'[4] and explained the Allegro of the second. The Sonatas are dedicated to the Baroness Braun.

The other publications of 1799 are variations: 10 on Salieri's 'La stessa'; 7 on Winter's 'Kind, willst du'; and 8 on Süssmayer's 'Tändeln.'[5] A comparison of the dates of publication with those of the appearance of the operas from which the themes are taken, shows that two of these were composed shortly before publication.

Beethoven was now about to attack music of larger dimensions than before. His six String Quartets, the Septet, the First Symphony, and the 'Mount of Olives,' are fast approaching, and must all have occupied him more or less during the last year of the century.[6] In fact the sketches for the first three of the quartets (first in date of composition, Nos. 5, 1, 6),[7] are positively assigned to this year, though there is evidence that the earliest of the three had been begun as far back as 1794 or 1795. And though sketches of the Septet have not yet been made public,[8] yet it is contrary to all Beethoven's habits in the case of so important a piece, and one apparently quite spontaneously undertaken, that he should not have been at work at it for a long while before its production. The same with regard to the First Symphony. Both were produced on April 2, 1800. Traces of the Symphony, or of a previous one in the same key,[9] are found as early as the beginning of 1795, and there is no doubt that two such experiments in a new field must have occupied much time and caused much labour. Besides these he was working on a very important new Sonata in B♭ (op. 22). In fact this year was a very busy and a very prosperous one. Writing on June 29, 1801, he tells Wegeler that 'my compositions bring me in a great deal, and I can say that I have more orders than I can execute. I have six or seven publishers for each one of my works and could have more if I chose. No more bargaining; I name my terms and they pay.'

The few recorded events of 1800 are all closely connected with music. On Wednesday, April 2, Beethoven gave the first concert which he had attempted in Vienna for his own benefit. It took place at the Burg Theatre, which was given him for the occasion, at 6.30 P.M., and the programme was as follows:—1. Symphony, Mozart. 2. Air from the 'Creation.' 3. A grand Pianoforte Concerto, 'played and composed' by Beethoven. 4. The Septet. 5. Duet from the 'Creation.' 6. Improvisation by Beethoven on Haydn's 'Emperor's Hymn.' 7. Symphony, No. 1. The Concerto was doubtless one of the two already known—the Septet had been previously performed at Prince Schwarzenberg's,[10] had pleased immensely, and Beethoven was evidently proud of it. 'It is my Creation,' said he—let us hope not in Haydn's presence. He had not forgotten Bonn, and the theme of the variations is said by Czerny[10] to be a Rhine *Volkslied*. The work was dedicated in advance to the Empress, and though not published for some time, became rapidly popular. So much for the compositions, but the performance appears from the report in the Leipzig paper[11] to have been shameful; the band disliked Wranitzky the conductor, and vented their dislike on the music. In addition to this it appears that the rehearsal, if it took place at all, was a very imperfect one. A reference in one of Beethoven's letters (April 22, 1801) shows that it was his custom not to write in the piano part into his Concertos, and therefore to play them from memory.

On the 18th[12] of the same month Beethoven appeared again at the concert of Punto the horn-player, with a Sonata for Horn and Piano, composed for the occasion. This he had naturally not been able to touch while preparing for his own concert, and in fact it was written down on the day before the performance.[13] Here again there cannot have been much chance of rehearsal. But with two such players it was hardly needed;

[1] Article WOELFL in Dict. gives them as op. 6.

[12] [Thayer (ii. 100) says 28th.] [13] Ries, p. 82.

and so much did the Sonata delight the hearers, that in defiance of a rule forbidding applause in the Court Theatre the whole work was unanimously encored. On the 27th, the anniversary of the day on which he first entered Bonn, Beethoven's old master, the Elector, returned to the capital. In May Steibelt made his appearance in Vienna from Prague, where his *charlatanerie* and his real ability had gained him prodigious financial success. We have already alluded to his conflict with Beethoven. In Vienna he does not appear to have succeeded, and in August he was again in Paris.

The announcement of Beethoven's benefit concert names No. 241 'im tiefen Graben,' third story, as his residence. He had now left Prince Lichnowsky's, and he maintained this lodging for two years. In this year we hear for the first time of his going to the country for the autumn. He selected Unter-Döbling, a village two miles north of Vienna, and his lodging was part of the house occupied by the Grillparzer family. Frau Grillparzer long recollected his fury on discovering her listening to his playing outside the door, and the stern revenge he took.[1]

As regards publications 1800 is a blank, but composition went on with immense energy. If we throw back the Symphony and the Septet into 1797, we have still the Horn Sonata and the Piano Sonata in B♭ (op. 22)—a work of great moment—the six Quartets, the String Quintet in C, the Piano Concerto in C minor. Of most of these very important works we have Beethoven's own mention in a letter of Dec. 15, 1800, in addition to the evidence as to date afforded by the sketch-books. And besides these we are bound to believe that the Ballet of Prometheus, performed March 28, 1801, occupied him at least during the latter portion of the year.[2] An incident of this summer was Beethoven's letter to Matthisson (Aug. 4) sending him his 'Adelaide,' a letter interesting for its courteous and genial tone, for its request for another poem, and for its confession that his early works had already begun to dissatisfy him. After his return to town occurred Czerny's introduction to him. Czerny, then a lad of just upon ten, became Beethoven's pupil in pianoforte playing, and has left a delightful account of his first interview, and of much which occurred after it.[3] Among the letters of this winter and the spring of 1801 are some to Hoffmeister, formerly a composer, and then a music-publisher in Leipzig, which ended in his publishing the Septet, the Symphony in C, the Piano Concerto in B♭, and the Sonata (op. 22) in the same key. The price given for these works was 20 ducats each, except the Concerto, which was 10. The ducat was equal to 10s. English. The Concerto is priced so low because 'it is by no means one of my best, any more than that I am about to publish in C major, because I reserve the best for myself, for my journey'[4]—a confession which proves that the Concerto in C minor was already in existence. The letters show keen sympathy with projects for the publication of Bach's works, and of Mozart's sonatas arranged as quartets.[5] They speak of his having been ill during the winter, but the vigorous tone of the expression shows that the illness had not affected his spirits. On Jan. 30, 1801, he played his Horn Sonata a second time, with Punto, at a concert for the benefit of the soldiers wounded at Hohenlinden.

He was now immersed in all the worry of preparing for the production of his Ballet of Prometheus, which came out on March 28 at the Court (Burg) Theatre. Its great success is evident from the fact that it was immediately published in a popular form—Pianoforte Solo,[6] dedicated to Princess Lichnowsky—and that it had a run of sixteen nights during 1801, and thirteen during the following year. Apart from its individual merits the Prometheus music is historically interesting as containing a partial anticipation of the Storm in the Pastoral Symphony, and (in the Finale) an air which afterwards served for a Contretanz, for the theme of elaborate variations, and for the subject of the last movement of the Eroica Symphony. The Ballet gave occasion for an unfortunate little encounter between Beethoven and Haydn, evidently unintentional on Beethoven's part, but showing how naturally antagonistic the two men were. They met in the street the day after the first performance. 'I heard your new Ballet last night,' said Haydn, 'and it pleased me much.' '*O lieber Papa,*' was the reply, 'you are too good: but it is no *Creation* by a long way.' This unnecessary allusion seems to have startled the old man, and after an instant's pause he said, 'You are right: it is no *Creation*, and I hardly think it ever will be!'

The success of 'Prometheus' gave him time to breathe, and possibly also cash to spare: he changed his lodgings from the low-lying 'tiefen Graben' to the Sailer-Stätte, a higher situation, with an extensive prospect over the ramparts.[7] For the summer of 1801 he took a lodging at Hetzendorf, on the south-west side of the city, attracted by the glades and shrubberies of Schönbrunn, outside which the village lies, and perhaps by the fact that his old master the Elector was living in retirement there. It was his practice during these country visits to live as nearly as possible in entire seclusion, and to elaborate and reduce into ultimate form and

2 [*Z.B.* p. 246.]

3 Published by C. F. Pohl, *Jahres-Bericht des Conservatoriums der Gesellschaft der Musikfreunde in Wien*, 1870. The drawback to this, and to so much of the information regarding Beethoven, is that it was not written till many years after the events it describes. See also Thayer, ii. 108.

4 Letter of Dec. 15, 1800.

5 In curious contradiction to the strong expressions on the subject of arrangements in a subsequent letter, quoted by Thayer, ii. 183.

6 Originally numbered op. 24, but when the Overture was issued in Parts it was numbered op. 43, and op. 24 was given to the Violin Sonata in F.

7 Thayer, ii. 131.

completeness the ideas which had occurred to him during the early part of the year, and with which his sketch-books were crowded. His main occupation during this summer was 'The Mount of Olives,' which Ries found far advanced when he arrived in Vienna in 1801.[1] The words were by Huber,[2] and we have Beethoven's own testimony[3] that they were written, with his assistance, in fourteen days. He was doubtless engaged at the same time, after his manner, with other works, not inferior to that oratorio in their several classes, which are known on various grounds to have been composed during this year. These are two Violin Sonatas in A minor and F, dedicated to Count von Fries—originally published together (Oct. 28) as op. 23, but now separated under independent Nos.; the String Quintet in C (op. 29); and no fewer than four masterpieces for the Piano—the Grand Sonatas in A♭ (op. 26) and D (op. 28); the two Sonatas entitled 'Quasi Fantasia' in E♭ and in C♯ minor (op. 27); which, though not published till 1802, were all four completed during this year.[4] To each of them a word or two is due. The Sonata in A♭—dedicated, like those of op. 1 and 13, to his prime friend Prince Carl Lichnowsky—is said[5] to owe its noble Funeral March to pique at the praises on a march by no means worthy of them in Paer's 'Achille.' That opera—produced at Vienna on June 6 of this year—is the same about which Paer used to tell a good story of Beethoven, illustrating at once his sincerity and his terrible want of manners. He was listening to the opera with its composer, and after saying over and over again, 'O! que c'est beau,' 'O! que c'est intéressant,' at last could contain himself no longer, but burst out, 'Il faut que je compose cela.'[6] The Grand Sonata in D received its title of 'Pastorale' (more appropriate than such titles often are) from Cranz the publisher, of Hamburg. The Andante, by some thought inferior to the rest of the Sonata, was Beethoven's peculiar favourite, and very frequently played by him.[7] The flyleaf of the autograph of the work contains a humorous duet and chorus—'the praise of the fat one,' making fun of Schuppanzigh[8]—'Schuppanzigh ist ein Lump, ein Lump,' etc. The remaining two, qualified as 'Fantasia' by their author, have had very different fates. One, that in E♭, has always lived in the shadow of its sister, and is comparatively little known. The other, the so-called 'Moonlight Sonata,'[9] is as widely played and as passionately loved as any of Beethoven's pianoforte works. It is one of his most original productions. The dedication to the Countess Guicciardi, upon which so much romance has been built, has had a colder light thrown on it by the lady herself. 'Beethoven,' said she, 'gave me the Rondo in G, but wanting to dedicate something to the Princess Lichnowsky he took the Rondo away, and gave me the Sonata in C♯ minor instead.'[10]

Meantime his deafness, which began with violent noise in his ears, had gradually merged into something more serious. He consulted doctor after doctor—Dr. Frank, the hospital doctor, his friend Wegeler, and Vering—but the malady constantly increased. It gave him the keenest distress; but so great were his resolution and confidence that not even the prospect of this tremendous affliction could subdue him. 'I will as far as possible defy my fate, though there must be moments when I shall be the most miserable of God's creatures.' . . . 'I will grapple with fate; it shall never drag me down.' The letters to Wegeler of June 29[11] and Nov. 16, 1801, from which these words are taken, give an extraordinary picture of the mingled independence and sensibility which characterised this remarkable man, and of the entire mastery which music had in him over friendship, love, pain, deafness, or any other external circumstance. 'Every day I come nearer to the aim which I can feel, though I cannot describe it, and on which alone your Beethoven can exist. No more rest for him!' 'I live only in my music, and no sooner is one thing done than the next is begun. As I am now writing, I often work at three and four things at once.' How truly this describes the incessant manner in which his ideas flowed, may be seen from the sketch-book published by Nottebohm,[12] and which is the offspring of this very period—Oct. 1801 to May 1802. It contains sketches for the Finale of the Second Symphony, for the three Violin Sonatas (op. 30); for Piano Sonatas in G and D minor (op. 31); for the Variations in F (op. 34), and in E♭ (op. 35); and a large number of less important works, the themes of which are so mixed up and repeated as to show that they were all in his mind and his intention at once.

The spring of 1802 saw the publication of several very important pieces, the correction of which must have added to his occupations—the Serenade (op. 25); the Sonatas in B♭[13] (op. 22), A♭ (op. 26), E♭ and C♯ minor (op. 27, Nos. 1 and 2); the Variations for Piano and Violoncello on Mozart's 'Bei Männern,' and 6 Contretänze.[14] All the works just enumerated were out by April, and were followed in the later months by the Septet, issued in two portions; the Sonata in D (op. 28); 6 Ländler;[15] the Rondo in G (op. 51,

[1] Thayer (ii. 160) has shown that Ries has mistaken the year, and did not come to Vienna till 1801.

No. 2); and in December by the Quintet in C (op. 29). After finishing the Sonata in D (op. 28), he told Krumpholz, says Czerny, that he was not satisfied with his works, adding, 'From to-day I will strike out a new road.'[1] Soon after appeared the three sonatas (op. 31).

Beethoven had recently again changed his doctor. Vering did not satisfy him, and he consulted Schmidt, a person apparently of some eminence, and it was possibly on his recommendation that he selected the village of Heiligenstadt, at that time a most retired spot, lying beyond Unter-Döbling, among the lovely wooded valleys in the direction of the Kahlenberg and Leopoldsberg. Here he remained till October, labouring at the completion of the works mentioned above, which he had sketched early in the year, and which he probably completed before returning to Vienna. Here too he wrote the very affecting letter usually known as 'Beethoven's Will,' dated Oct. 6, and addressed to his brothers, to be opened after his death,[2] a letter full of depression and distress, but perhaps not more so than that written by many a man of sensibility under temporarily adverse circumstances; anyhow it does not give us a high idea of Dr. Schmidt's wisdom in condemning a dyspeptic patient to so long a course of solitude. At any rate, if we compare it with the genial, cheerful strains of the music which he was writing at the time—take the Symphony in D as one example only—and remember his own words: 'Letter-writing was never my *forte*, . . . I live only in my music'—it loses a good deal of its significance.[3] Once back in town his spirits returned; and some of his most facetious letters to Zmeskall are dated from this time. On returning he changed his residence from the Sailer-Stätte, where we last left him, to the Peters-Platz, in the very heart of the city, and at the top of the house. In the story above Beethoven lived his old friend Förster, who had won his affection by giving him hints on quartet writing on his first arrival in Vienna. Förster had a little son whom Beethoven undertook to instruct, and the boy, then just six, long[4] remembered having to get up in the dark in the winter mornings and descend the stairs for his lessons. This winter again there were many proofs to correct—the 2 Piano Sonatas (op. 31, 1 and 2), the 3 Violin ditto (op. 30), 2 sets of Variations (op. 34, 35), all which appeared early in 1803. The Piano Sonatas just mentioned he regarded as a change in his style—which they certainly are, the D minor especially. The Variations he mentions[5] as distinct in kind from his earlier ones, and therefore to be included in the series of his large works, and numbered accordingly. In addition there were published in 1803 2 Preludes (op. 39), dating from 1789; 7 Bagatelles, some of them as old as 1782, but one at least (No. 6) written within the last twelve months. Also the Romance in G for Violin and Orchestra (op. 40), and 6 Sacred Songs (op. 48), dedicated to his Russian friend Count von Browne. And proofs at that date appear to have been formidable things, and to have required an extraordinary amount of vigilance and labour. Not only had the engravers' mistakes to be guarded against, and the obscurities of Beethoven's writing, but the publishers were occasionally composers and took on themselves to correct his heresies and soften his abruptnesses as they passed through their hands. Thus in the Sonata in G (op. 31, No. 1), Nägeli of Zurich interpolated four bars.[6] Of course Beethoven discovered the addition on hearing Ries play from the proof, and his rage was naturally unbounded. The mistakes were corrected, and an amended proof was transmitted at once to Simrock of Bonn, who soon got out an 'Edition très correcte';—but Nägeli adhered to his own version of Beethoven's music, and editions are still issued[7] containing the four redundant bars. It is needless to say that after opus 31 he published no more for Beethoven. But even without such intentional errors, correcting in those days was hard work. 'My Quartets,' he complains, 'are again published full of mistakes and *errata* great and small; they swarm like fish in the sea—innumerable.'[8] The Quintet in C (op. 29), published by Breitkopf, was pirated by Artaria of Vienna, and being engraved from a very hasty copy was extraordinarily full of blunders.[9] Beethoven adopted a very characteristic mode of revenge; fifty copies had been struck off, which he offered Artaria to correct, but in doing so caused Ries to make the alterations with so strong a hand that the copies were quite unsaleable.[10] It was an evil that never abated. In sending off the copies of the A minor Quartet twenty years later, he says, 'I have passed the whole forenoon to-day and yesterday afternoon in correcting these two pieces, and am quite hoarse with stamping and swearing'—and no wonder, when the provocation was so great. The noble Sonatas, op. 31, to the first of which one of the above anecdotes refers, were unfortunate in more ways than one. They were promised to Nägeli, but Caspar Beethoven[11] by some blunder—whether for his own profit or his brother's does not appear—had sold them to a

Leipzig house.[1] The discovery enraged Beethoven, who hated any appearance of deceit in his dealings; he challenged his brother with the fact, and the quarrel actually proceeded to blows. Knowing how much Beethoven disliked his early works, it is difficult not to imagine that the appearance of the two boyish Preludes, op. 39, and, in the following year, of the Variations, op. 44 (composed 1792 or 1793), both published at Leipzig—was due to the interference of Caspar.

A great event in 1803 was the production of 'The Mount of Olives,' his first vocal composition on a larger scale than a scena. The concert took place in the Theatre 'an der Wien' on April 5, and the programme included three new works—the Oratorio, the Symphony in D, and the Pianoforte Concerto in C minor, played by Beethoven himself. Interesting accounts of the rehearsal (in which Prince Lichnowsky showed himself as friendly as ever) and of the performance will be found in Ries and Seyfried.[2] Difficult as it is to conceive of such a thing, the Symphony appears to have been found too laboured by the critics, and not equal to the former one.[3] The success of the Oratorio is shown by the fact that it was repeated three times (making four performances) by independent parties in the course of the next twelve months. The Sonata for Piano and Violin, now so well known as the 'Kreutzer Sonata,' was first played on May 17, at the Augarten, at 8 A.M. There was a curious bombastic half-caste English violin-player in Vienna at that time named Bridgetower. He had engaged Beethoven to write a sonata for their joint performance at his concert. Knowing Beethoven's reluctance to complete bespoken works, it is not surprising to find him behind time and Bridgetower clamouring loudly for his music. The Finale was easily attainable, having been written the year before for the Sonata in A (op. 30, No. 1), and the violin part of the first movement seems to have been ready a few days before the concert, though at the performance the pianoforte copy still remained almost a blank, with only an indication here and there. But the Variations were literally finished only at the last moment, and Bridgetower had to play them at sight from the blurred and blotted autograph of the composer. 'Beethoven's rendering of the Andante was so noble, pure, and chaste, as to cause a universal demand for an encore.'[4] A quarrel with Bridgetower caused the alteration of the dedication.

Before Beethoven left town this year he made an arrangement to write an opera for Schikaneder, Mozart's old comrade, the manager of the Theatre 'an der Wien.'[5] Beyond the bare fact nothing is known on the subject. It is possible that a MS. Trio[6] preserved in the library of the 'Gesellschaft der Musikfreunde' at Vienna, and afterwards worked up into the duet in 'Fidelio,' is a portion of the proposed work, but this is mere conjecture. The arrangement was announced on June 29, and Beethoven had before that date, perhaps as early as April, taken up his quarters at the theatre with his brother Caspar, who, with all his faults, was necessary to a person so inapt at business as Ludwig. His summer and autumn were again spent—after a few weeks' *Kur* at Baden[7]—at Ober-Döbling, and were occupied principally with his Third Symphony on 'Napoleon Bonaparte,' the idea of which, since its suggestion in 1798, appears to have ripened with the contemplation of the splendid career of the First Consul as soldier, lawgiver, statesman, and hero, until it became an actual fact.

Of the order in which the movements of this mighty work were composed we have not yet any information, but there is no doubt that when Beethoven returned to his lodgings in the theatre in the autumn of 1803 the Finale was complete enough, at least in its general outlines,[8] to be played through by its author. There are traces of Beethoven being a great deal in society this winter. Two young Rhinelanders—Gleichenstein, a friend and fellow official of Breuning's in the War Office, and Mähler, also a Government official and an amateur portrait-painter, were now added to his circle.[9] With another painter, Macco,[10] he appears to have been on terms of great intimacy. The Abbé Vogler was in Vienna this season with his pupil Carl Maria von Weber, and a record[11] survives of a soirée given by Sonnleithner, at which Vogler and Beethoven met, and each gave the other a subject to extemporise upon. The subject given by Beethoven to Vogler we merely know to have been 4½ bars long, while that on which he himself held forth was 'the scale of C major, three bars, *alla breve*.' Vogler was evidently the more expert contrapuntist, but Beethoven astonished even his rival's adherents by his extraordinary playing, and by a prodigious flow of the finest ideas. *Noctes cœnæque deorum.*—Clementi too was in Vienna about this time, or a little later, with his pupil Klengel. He and Beethoven often dined at the same restaurant, but neither would speak first, and there was no intercourse.[12] Not for want of respect on Beethoven's side, for he had a very high opinion of Clementi, and thought his *Method* one of the best. This winter saw the beginning of a correspondence[13] which was not destined to bear fruit till some years later—with Thomson the music-publisher of Edinburgh. Thomson had already published

arrangements of Scotch airs by Pleyel and Kozeluch, and, with the true eye of a man of business, was now anxious to obtain from a greater and more famous musician than either, six sonatas on Scotch themes. Beethoven replies on Oct. 5, offering to compose six sonatas for 300 ducats (£150). Thomson responded by offering half the sum named, and there for the present the correspondence dropped. The prospect of an opera from Beethoven was put an end to at the beginning of 1804 by the theatre passing out of Schikaneder's hands into those of Baron von Braun, and with this his lodging in the theatre naturally ceased.[1] He moved into the same house with Stephen Breuning—'Das Rothe Haus,' near the present Votive Church, and there the rupture already spoken of took place.

The early part of 1804 was taken up in passing through the press the Symphony No. 2 (dedicated to Prince Carl Lichnowsky), and the three four-hand Marches, both of which works were published in March—but the real absorbing occupation of the whole winter must have been the completion of the Bonaparte Symphony. At length the work was done, a fair copy was made, the outside page of which contained the words 'Napoleon Bonaparte[2] . . . Louis van Beethoven,' and it lay on the composer's table for the proper opportunity of official transmission to Paris. On May 3 the motion for making Napoleon emperor passed the Assembly, and on the 18th, after his election by plebiscite, he assumed the title. The news must have quickly reached Vienna, and was at once communicated to Beethoven by Ries. The story need not be given here in detail. In a fury of disappointment and with a torrent of reproaches he tore off the title-page and dashed it on the ground. At some future time it received the new name by which we know it, and under which it was published—'Sinfonia eroica per festeggiare il sovvenire d' un gran uomo'—but this was probably an afterthought, and the cover of the MS. now in the Bibliothek at Vienna, runs thus[3]—

Sinfonia grande
Napoleon Bonaparte
804 im August
del Sigr.
Louis van Beethoven

Sinfonie 3 Op. 55

The right to use the Symphony was purchased by Prince Lobkowitz, to whom it is dedicated. It was played at his house during the winter, and remained in MS. till October 1806.

The *fracas* at Breuning's rooms, already mentioned, ended by Beethoven's dashing off to Baden, and then returning to his old quarters at Döbling. There he composed the Grand Sonata in C, which he afterwards dedicated to Count Waldstein, and that in F, op. 54, which, though only in two movements and dedicated to no one, is not inferior in originality to its longer companion. It is to the Finale of this work, and not that of the 'Appassionata' as usually believed, that Ries's story applies.[4] Ries appears to have gone out, as he very often did, to Döbling—within an easy walk of Vienna—and to have remained with his master all the after part of the day. They went for an immense walk, and did not get home till eight in the evening. During the whole time Beethoven had been humming and growling to himself, but without anything like a tune. On Ries asking him what it was, he replied that it was a theme for the finale of the Sonata. The instant they reached the house he sat down to the piano without taking off his hat, and for more than an hour pounded away at his new idea. Ries sat in a corner listening.—The Sonata in C, just mentioned, contained when completed a long Andante in F—the subject of a very characteristic story, already alluded to (p. 222). This, however, at the advice of some judicious critic, he was induced to take out and replace[5] by the present short introductory Adagio, after which it was published separately, and became the well-known 'Andante favori.'[6] During this summer, on July 19 or 26, there was a concert at the Augarten, at which Beethoven conducted; the Symphony in D was performed, and Ries made his first public appearance as Beethoven's scholar in the C minor Concerto. Ries's story of his cadenza is too long for these pages, but should be read.[7] The Pianoforte part having to be written out for Ries, the Concerto was at last ready for publication, and in fact made its appearance in November, dedicated to Prince Louis Ferdinand of Prussia, an amateur of remarkable musical gifts, whose acquaintance Beethoven made when he visited his uncle's court in 1796, and who while in Vienna at this very time was one of the first to hear and appreciate the new Symphony.[8] When Beethoven came back it was to a new lodging, in a house of Baron Pasqualati's, on the Mölker-Bastion near Prince Lichnowsky's, and in some sense this was his last; for though he left it more than once, yet the Baron always forbade the rooms to be let, saying that Beethoven was sure to come back to them again. Breuning and he soon met, and a reconciliation took place which was not interrupted for many years—but they never again put their friendship so far to the proof as to live together.

[1] Thayer, ii. 248. [2] [Ries (p. 78) has merely Buonaparte.]

[3] [The description of the title on the autograph, according to Thayer (ii. 248), bought by J. Dessauer, at the sale of Beethoven's things in 1827, is similar to the one given above, excepting that under 'Sinfonia grande' are two words scratched through. As Thayer does not give those words, it would seem that they are illegible. Nottebohm, by the way, speaks of the score in the possession of J. Dessauer as a revised copy. See *Them. Verz.* p. 52.]

[4] [Ries himself (p. 99) says 'Sonata in F minor, op. 57'; Thayer, however (ii. 258) declares that Ries is in error.]

[5] [The autograph score clearly shows that the Adagio was inserted: the writing and ink differ; thus Ries's account (*Notiz.* p. 101) is confirmed.]

TROMBONE PARTS OF BEETHOVEN'S NINTH SYMPHONY

Breuning's attitude through the whole affair is in keeping with his solid sensible character, and does him infinite credit. His letter to Wegeler of Nov. 13 gives no hint of a quarrel, but is full of the deepest sympathy with Beethoven under the affliction of his deafness. In addition to the works already mentioned as published during 1804 must be named the great Sonata in E♭, which ultimately became the third of opus 31; 7 Variations on 'God save the King,' and 5 on 'Rule Britannia'[1]; a song, 'Der Wachtelschlag,'[2] and 'Ah! perfido.'[3] Why he selected these two English airs does not appear. At a later date he said, àpropos of its use in his Battle Symphony, 'I must show the English a little what a blessing they have in God save the King.'[4] It is satisfactory to find him so fond of it.—The first trial of the Eroica took place in December[5] at Prince Lobkowitz's. The opinions expressed concerning it are collected by Thayer, and should be read and digested by all who are tempted to regard music from the 'finality' point of view.

Beethoven's connection with the Theatre 'an der Wien,' though interrupted, was not at an end. Baron von Braun took Schikaneder into his service, and one of their first acts was to renew the offer. Bouilly's libretto, which had been already set by Gaveaux[6] and Paer,[7] was chosen, and Sonnleithner was employed to make the German translation. Beethoven went back to his rooms at the theatre, and set to work with energy. But, remembering his habit of doing several things at once, we need not suppose that, though at work on a text, he dropped other compositions. A letter to Artaria shows that on June 1, 1805, he was engaged on a new Quintet, the suggestion of Count Fries.[8] Though he had even proceeded so far as to mention it to the publisher, its ultimate fate is still a matter of complete uncertainty; it certainly never arrived at publication. He also completed the Sonata in F (op. 54), and probably entirely composed the Triple Concerto (op. 56). But the opera was his main and absorbing business. During the whole of the spring he was hard at work, and in June he betook himself to Hetzendorf, there to put his sketches into shape, and to get inspiration from his favourite woods and fields. To give an idea of the extraordinary amount of labour and pains which he bestowed on his work, and of the strangely tentative manner in which so great a genius proceeded, we may mention that in the sketch-book which contains the materials for the opera—a thick oblong volume of 346 pages, 16 staves to the page—there are no fewer than 18 distinct and different beginnings to Florestan's air 'In des Lebens Frühlingstagen,' and 10 to the chorus 'Wer ein holdes Weib.'[9] To reduce these chaotic materials to order, and to score the work, was the entire occupation of these summer months. Closely as he was occupied he could occasionally visit Vienna, and on one occasion in July[10] we find him at Sonnleithner's rooms with Cherubini and Vogler. Cherubini arrived in Vienna with his wife early in the month, and remained till the following April. His operas had long been favourites on the Vienna stage. The 'Deux Journées' was performed under his direction shortly after his arrival, and 'Faniska' was produced for the first time on Feb. 25, 1806. Beethoven knew them well, and has left on record[11] that he esteemed their author above all then living writers for the stage. He also thought so highly of Cherubini's Requiem as to say that he should borrow largely and literally from it in the event of his writing one.[12] But the influence of Cherubini on Beethoven's vocal music is now[13] acknowledged. The two artists were much together, and agreed as well as two men of such strong character and open speech were likely to agree. Cherubini presented the composer of 'Fidelio' with a copy of the *Méthode* of the Conservatoire, and the scores of 'Médée' and 'Faniska' are conspicuous in the sale catalogue of Beethoven's scanty library.[14]

One proof that 'Fidelio' was complete before his return to town is afforded by the fact that he allowed others to hear it. On one occasion he played it to a select set of friends,[15] when Ries (as already mentioned) was excluded; and thus—as he was shortly afterwards called to Bonn by the conscription—lost his chance of hearing the opera at all in its first shape. That Beethoven's voice in singing was 'detestable'[16] will not have diminished the interest of the trial. The work of rehearsing the music now began, and was evidently attended with enormous difficulties, especially in regard to the singers. They complained that their passages were unsingable, while Beethoven on his part was determined to make no alterations—and apparently none were then made.[17] With the band he fared little better. He even invokes his deafness as an assistance. Writing only two days before the first performance, he says,[18] 'Pray try to persuade Seyfried to conduct my opera to-day, as I wish to see and hear it from a

distance; in this way my patience will at least not be so severely tried by the rehearsal as when I am close enough to hear my music so bungled. I really do believe it is done on purpose. Of the wind I will say nothing, but——. All *pp. cresc.*, all *decresc.*, and all *f. ff.* may as well be struck out of my music, since not one of them is attended to. I lose all desire to write anything more if my music is to be so played.' And again,[1] 'the whole business of the opera is the most distressing thing in the world.'

The performance at the Theatre 'an der Wien'[2] was fixed for Wednesday, Nov. 20. External events could hardly have been more unpropitious. The occupation of Ulm and Salzburg had been followed on Nov. 13 by the entry of the French army into Vienna. Bonaparte took up his quarters at Schönbrunn; the Emperor of Austria, the chief nobility and other wealthy persons and patrons of music had deserted the town, and it was a conquered city tenanted by Frenchmen. It was in such circumstances that 'Fidelio, oder die eheliche Liebe' was produced. The opera was originally in 3 acts. It was performed on the 20th, 21st, and 22nd, and was then withdrawn by the composer.[3] The overture on these occasions was that known as 'Leonora No. 2.' It was felt by Beethoven's friends that, in addition to the drawbacks of the French occupation and of the advanced character of the music, the opera was too long; and a meeting was held at Prince Lichnowsky's house, when the whole work was gone through at the piano, and after a battle lasting from 7 till 1 in the morning, Beethoven was induced to sacrifice three entire numbers. It is characteristic of Beethoven that though furious and unpleasant to the very greatest degree while the struggle was going on, yet when once the decision was made he was in his most genial temper.[4] The libretto was at once put into the hands of Stephen Breuning, by whom it was reduced to two acts and generally improved, and in this shortened form, and with the revised Overture known as 'Leonora No. 3,' it was again performed on March 29, 1806, but, owing to Beethoven's delays over the alterations, with only one band rehearsal.[5] It was repeated on April 10, and after that each time to fuller and more appreciative houses, and then, owing to a quarrel between Beethoven and Baron Braun, the intendant of the theatre, suddenly and finally withdrawn.[6] Attempts were made to bring it out at Berlin, but they came to nothing, and this great work was then practically shelved for seven or eight years.

It is an astonishing proof of the vigour and fertility of the mind of this extraordinary man, that in the midst of all this work and worry he should have planned and partly carried out two of his greatest instrumental compositions. We have the assurance of Nottebohm[7] that the Piano Concerto in G and the Symphony in C minor were both begun about 1805. There are many indications in his letters that his health was at this time anything but good, and the demands of society on him must have been great. Against them he could arm himself by such reflections as the following pencil[8] note in the margin of a sketch-book of this very date. 'Struggling as you are in the vortex of society, it is yet possible, notwithstanding all social hindrances, to write operas. Let your deafness be no longer a secret—even in your Art!'

On May 25,[9] the marriage contract of Caspar Carl Beethoven with Johanna Reis was signed—harbinger of unexpected suffering for Ludwig—and on May 26 he seriously began the first of the three Quartets, which were afterwards dedicated to the Russian Ambassador, Count Rasoumowsky, as op. 59. So says his own writing at the head of the autograph.[10] These Quartets, the Russian airs in which it is natural to suppose were suggested by the Ambassador (a brother-in-law of Prince Lichnowsky), are another link in the chain of connection between the republican composer and the great Imperial court of Petersburg, which originated some of his noblest works.

His favourite summer villages had been defiled by the French, and perhaps for this reason Beethoven did not pass the summer of 1806 at the usual spots, but went to the country-house of his friend Count Brunswick—whose sisters[11] were also his great allies—at Martonvásár in Hungary. Here he wrote the magnificent Sonata in F minor, than which nothing more impetuous, more poetical, or more enduring ever came from his pen. His letters may have been full of depression[12]—but it vanished when he spoke in music, and all is force, elevation, and romance. In October he left Count Brunswick for the seat of Prince Lichnowsky, near Troppau, in Silesia, 40 miles N.E. of Olmütz. The war was in full progress (Jena was fought on Oct. 16), and the Prince had several French officers quartered upon him. They were naturally anxious to hear Beethoven, but he refused to play to them; and on being pressed by his host and playfully threatened with confinement to the house, a terrible scene took place—he made his escape, went off by night post to Vienna, and on his arrival at home was still so angry as to demolish a bust of the Prince in his possession. The Violin Concerto (op. 61) was first played by Clement—a well-known virtuoso, and at that time principal violin of the Theatre 'an der Wien'—at his concert on Dec. 23, and there is evidence to show, what

might have been assumed from Beethoven's habit of postponing bespoken works to the last, that it was written in a hurry, and Clement played his part without rehearsal, at sight. What chance can such great and difficult works, new in spirit and teeming with difficulties, have had of influencing the public when thus brought forward? No wonder that the Concerto was seldom heard till revived by Joachim in our own time. The MS. shows that the solo part was the object of much thought and alteration by the composer — evidently after the performance.

The publications of 1806 consist of the Sonata in F, op. 54 (April 9); a trio for two Violins and Viola (April 12), adapted from a trio [1] for two Oboes and Cor Anglais, and afterwards numbered op. 87; the Andante in F (May 10) already mentioned as having been originally intended for the Waldstein Sonata; and lastly, on Oct. 29, in time for the winter season, the Eroica Symphony, dedicated to Prince Lobkowitz. In addition to these an arrangement of the Second Symphony as a Pianoforte trio,[2] by Beethoven's own hand, was published at Vienna.

The first external musical event of 1807 was the performance of the new Symphony, No. 4, which took place before a very select audience in the middle or end of March.[3] The concert was organised for Beethoven's benefit, no doubt to compensate him for his disappointment with the Opera, and was largely subscribed to. No programme of equal length was probably ever put together; it contained the First and Second Symphonies, the Eroica—hardly known as yet, and in itself a programme—and the new work —2½ hours of solid orchestral music without relief! A second performance of the Symphony was given at a public concert on Nov. 15. The overture to 'Coriolan'—a tragedy by Collin—must have occupied him during the opening of the year, since it is included with the new Symphony, the new Concertos for Violin and Piano, and the three String Quartets, in a sale of copyrights for England,[4] which Beethoven effected on April 20 to Clementi, who had for some years been at the head of a musical business in London. For these and an arrangement of the Violin Concerto for Piano (dedicated to the wife of Stephen von Breuning), Clementi paid £200 down, Beethoven binding himself to compose three new Sonatas for the sum of £60 more—a part of the bargain which was not carried out. Beethoven's finances were thus for the time flourishing,[5] and he writes in high spirits on his prospects.[6]

Another overture belonging to this period is that in C, known as op. 138, and erroneously styled 'Leonora No. 1,' the fact being that it was written as 'a new Overture' for the proposed production of 'Fidelio' at Prague in the spring of this year.[7] Another great work approaching completion during the summer was the Mass in C, which was written for Prince Esterhazy, Haydn's patron, and after considerable delay was first sung in the Chapel at Eisenstadt on Sept. 13, to celebrate the name-day of the Princess Marie of Esterhazy (Sept. 8). Beethoven and his old rival Hummel—then the Prince's Chapel-master—were both present. After the Mass the Prince, perhaps puzzled at the style of the music, so different from that to which he was accustomed in his Chapel—hinted as much to Beethoven, in the strange question 'What have you been at now?' Hummel overheard the remark, and probably amused at the naïveté of the question (for Hummel can surely have found nothing to question in the music) unfortunately smiled. Beethoven saw the smile, misinterpreted it, and left the Palace in a fury. This occurrence possibly explains why the name of Esterhazy, to whom Beethoven first dedicated the Mass, is replaced by that of Prince Kinsky in the published copy (1812).

The date of the C minor Symphony has not yet been conclusively ascertained, but there is good ground for believing that it and the Pastoral Symphony were completed, or at any rate much advanced, during this year,[8] at Heiligenstadt and in the country between that and the Kahlenberg, as Beethoven pointed out to Schindler in 1823 [9]—the visit to Eisenstadt being probably undertaken for the sake of the Mass only. Of his activity in town during the winter there are more certain traces. A musical society of amateurs was formed, who held their concerts in the Hall of the Mehlgrube. At one of these, in December, the Eroica Symphony was performed, and the overture to Coriolan played for the first time. At another the B flat Symphony was performed for the second time, with immense appreciation. Beethoven himself conducted both of these concerts. December is also the date of a memorial to the directors of the Court Theatre, praying that he might be engaged at an annual salary of 2400 florins, with benefit performances, to compose one grand opera and an operetta yearly—a memorial evidently not favourably received.

The publications of 1807 are not numerous; they consist of the Sonata in F minor (op. 57), dedicated to Count Brunswick (Feb. 18)[10] and since designated 'Appassionata' by Cranz of Hamburg; the 32 Variations for Piano[11] (April);

and the Triple Concerto (op. 56), dedicated to Count Lobkowitz (July 1).[1]

1808 opened with the publication of the overture to 'Coriolan' (op. 62), dedicated to the author of the tragedy, and the three new String Quartets (op. 59). There is reason to believe[2] that Beethoven again passed the summer at Heiligenstadt, whence he returned to Vienna, bringing with him ready for performance the two Symphonies, C minor and Pastoral, the two Pianoforte Trios in D and E flat, and the Choral Fantasia, a work new not only in ideas and effects but also in form, and doubly important as the precursor of the Choral Symphony. It and the Symphonies[3] were produced at a Concert given by Beethoven in the Theatre 'an der Wien' on Dec. 22. It was announced to consist only of pieces of his own, all to be performed in public for the first time. In addition to the three just mentioned the programme contained the Piano Concerto in G, played by himself; two extracts from the Eisenstadt Mass; 'Ah! perfido';[4] and an extempore fantasia on the pianoforte. The result was unfortunate. In addition to the enormous length of the programme and the difficult character of the music the cold was intense and the theatre unwarmed. The performance appears to have been infamous, and in the Choral Fantasia there was actually a breakdown.[5]

The Concerto had been published in August, and was dedicated to Beethoven's new pupil and friend the Archduke Rudolph. It commemorates the acquisition of the most powerful and one of the best friends Beethoven ever possessed, for whom he showed to the end an unusual degree of regard and consideration, and is the first of a long series of great works which bear the Archduke's name. The publications of the year 1808 were:—the Pianoforte Concerto in G (op. 58), the 3 Quartets (op. 59), the pf. arrangement of the Violin Concerto (op. 61), the 'Coriolan' Overture (op. 62), and No. 1 of the four settings of Goethe's 'Sehnsucht.'

Hitherto Beethoven had no settled income beyond that produced by actual labour, except the small annuity granted him since 1800 by Prince Lichnowsky. His works were all the property of the publishers, and it is natural that as his life advanced (he was now thirty-nine) and his aims in art grew vaster, the necessity of writing music for sale should have become more and more irksome. Just at this time, however, he received an invitation from Jerome Bonaparte, King of Westphalia, to fill the post of maître de chapelle at Cassel, with a salary of 600 gold ducats (£300) per annum, and 150 ducats for travelling expenses, and with very easy duties. The first trace of this offer is found in a letter of his own, dated Nov. 1, 1808; but he never seems seriously to have entertained it except as a lever for obtaining an appointment under the Court of Austria. In fact the time was hardly one in which a German could accept service under a French prince. Napoleon was at the height of his career of ambition and conquest, and Austria was at this very time making immense exertions for the increase of her army with a view to the war which broke out when the Austrians crossed the Inn on April 9. With this state of things imminent it is difficult to imagine that King Jerome's offer can have been seriously made or entertained. But it is easy to understand the consternation into which the possibility of Beethoven's removal from Vienna must have thrown his friends and the lovers of music in general, and the immediate result appears to have been an undertaking on the part of the Archduke Rudolph, Prince Lobkowitz, and Prince Kinsky, dated March 1, 1809, guaranteeing him an annual income of 4000 (paper) florins, payable half-yearly, until he should obtain a post of equal value in the Austrian dominions.[6] He himself, however, naturally preferred the post of imperial capellmeister under the Austrian Government, and with that view had drawn up the memorial above mentioned,[7] which, however, appears to have met with no success, even if it were ever presented. At this time, owing to the excessive issue of bank notes, the cash value of the paper florin had sunk from 2s. to a little over 1s., so that the income secured to Beethoven, though nominally £400, did not really amount to more than £210, with the probability of still further rapid depreciation.

Meantime the work of publication went on apace, and in that respect 1809 is the most brilliant and astonishing year of Beethoven's life. The Fourth Symphony and the Violin Concerto were published by the Bureau des Arts et d'Industrie. He now for the first time entered into relations with the great firm of Breitkopf and Härtel. They published the Symphonies in C minor (op. 67) and Pastoral (op. 68), the Sonata for Violoncello and Piano in A (op. 69), and the two Pianoforte Trios (op. 70), dedicated to the Countess Erdödy, in whose house Beethoven had been living since his rupture with Lichnowsky.[8]

On May 12 the French again entered Vienna; on the 21st Aspern was fought, and Napoleon took possession of the island of Lobau, close to the city. Wagram took place on July 6, and the whole summer, till the peace was concluded on Oct. 14, must have been a very disturbed season for the inhabitants of Vienna. Beethoven's lodging being on the wall was much exposed to

the firing. The noise disturbed him greatly,[1] and at least on one occasion he took refuge in the cellar of his brother's house in order to escape it. He had his eyes open, however, to the proceedings of the French, and astonished a visitor many years afterwards with his recollections of the time.[2] It is remarkable how little external events interfered with his powers of production. As far as quality goes the Piano Concerto in E flat and the String Quartet in the same key—both of which bear the date 1809—are equal to any in the whole range of his works. The 6 Variations in D (op. 76)—the theme afterwards used for the March in the 'Ruins of Athens'—are not remarkable, but such is not the case with the Piano Sonata in F♯ written in October. Though not so serious as some, it is not surpassed for beauty and charm by any of the immortal 32. It seems to have been a special favourite of the author's. 'People are always talking of the C♯ minor Sonata,' said he once, 'but I have written better things than that. The F♯ Sonata is something very different.'[3] A more important Sonata had been begun on May 4 to commemorate the departure of the Archduke from Vienna on that day. It is dated and inscribed by Beethoven himself, and forms the first movement of that known as 'Les Adieux, l'Absence et le Retour.' Among the sketches for the Adieux is found a note[4] 'Der Abschied am 4ten Mai—gewidmet und aus dem Herzen geschrieben S. K. H.'—words which show that the parting really inspired Beethoven, and was not a mere accident for his genius to transmute, like the four knocks in the Violin Concerto, or the cook's question in the last Quartet. A March for a military band in F, composed for the Bohemian Landwehr under Archduke Anton, and 3 Songs—'L'amante impaziente' (op. 82, No. 4), 'Lied aus der Ferne,'[5] and probably 'Die laute Klage'[6]—complete the compositions of 1809. Haydn had gone to his rest on May 31, in the middle of the French occupation, but we find no allusion to him in any of Beethoven's journals or letters.

The correspondence with Thomson of Edinburgh, opened in 1806, was renewed this autumn. It began with a letter from Thomson, sending 43 airs, which was promptly answered by Beethoven, and it lasted until May 25, 1819, during which time Beethoven harmonised no fewer than 164 national melodies. For these he received in all a sum of some £200.[7]

1810 began with the return of the Archduke on Jan. 30, and the completion of the Sonata. The sketch-books[8] show that the next few months were occupied with the composition of the music to 'Egmont,' the String Quartet in F minor, Songs of Goethe's (including the Erl King,[9] which, though well advanced, was never completed), and with the preliminary ideas of the B flat Trio. The music to 'Egmont' was first performed on May 24, probably at some private house, as no record of it survives in the theatrical chronicles. It was in May that Beethoven had his first interview with Bettina Brentano, then twenty-five years old, which gave rise to the three well-known letters,[10] the authenticity of which has been so hotly disputed. Knowing Beethoven's extreme susceptibility it is not difficult to believe that the letters are in the main genuine, though some of the expressions have probably been tampered with. Beethoven's relation to the Archduke, and his increasing reputation, were beginning to produce their natural result. He complains[11] that his retirement is at an end, and that he is forced to go too much into society. He has taken up his summer quarters at Hetzendorf as before, but the old seclusion is no longer possible, he has to be in and out of Vienna at the season which he detested, and which hitherto he had always devoted entirely to composition. That he was also at Baden in August is evident from some MS. pieces of military music, all dated Baden, 1810, and one of them August.[12] He seems to have had some prospect of marriage at this time, though the only allusion to it is that it has been broken off.[13] Meantime this winter was a busy one for the publishers of his music. The pianoforte arrangement of 'Fidelio,' as revised for 1806 (without Overture or Finales), was published by Breitkopf in October, and is dedicated to the Archduke Rudolph. In December the same firm issued the Quartet in E♭ (op. 74), inscribed to Prince Lobkowitz, the Variations in D (op. 76), the Fantasia in G minor, the Sonata in F♯—dedicated respectively to Count Brunswick, and his sister Therese—and the Sonatina[14] in G (op. 79); also earlier in the year the Sestet for wind instruments (op. 71), and the setting of Matthisson's 'Andenken.' Another Sestet (op. 81*b*)—probably, like that just mentioned, an early work—was issued by Simrock, and four settings of Goethe's 'Sehnsucht,' with a few more songs by other publishers. The frequent appearance of Goethe's name in the music of this year is remarkable, and coupled with the allusion in his letter to Bettina of August 11, implies that the great poet was beginning to exercise that influence on him which Beethoven described in his conversation with Rochlitz in 1823.

The Trio in B flat was completed during the winter,[15] and was written down in its finished form between March 3 and 26, 1811, as the

autograph informs us with a particularity wanting in Beethoven's earlier works, but becoming more frequent in future. The Archduke (to whom it was ultimately inscribed) lost no time in making its acquaintance, and as no copyist was obtainable, seems to have played it first from the autograph.[1] The principal compositions of 1811 were the music to two dramatic pieces written by Kotzebue, for the opening of a new theatre at Pesth, and entitled 'Hungary's first hero,' or 'King Stephen,' and the 'Ruins of Athens.' The Introduction to the Choral Fantasia—which may be taken as a representation of Beethoven's improvisation, inasmuch as it was actually extemporised at the performance—was written down àpropos of the publication of the work in July, and a Song, 'An die Geliebte,'[2] is dated December in the composer's own hand.

The publications of the year are all by Breitkopf, and include the Overture to 'Egmont' in February; the Piano Concerto in E♭, and the Sonata in the same key (op. 81*a*), in May and July respectively, both dedicated to the Archduke;—the Choral Fantasia (op. 80), dedicated to the King of Bavaria (July), and the 'Mount of Olives' (Oct.). The preparation of the last-named work for the press so long after its composition must have involved much time and consideration. There is evidence that an additional chorus was proposed;[3] and it is known that Beethoven was dissatisfied with the treatment of the principal character. A note to Treitschke (June 6) seems to show that he was contemplating an opera. The first mention of a metronome[4] occurs in a letter of this autumn.

The depreciation in the value of paper money had gone on with fearful rapidity, and by the end of 1810 the bank notes had fallen to less than $\frac{1}{10}$th of their nominal value—*i.e.* a 5-florin note was only worth half a florin in silver. The *Finanz Patent* of Feb. 20, 1811, attempted to remedy this by a truly disastrous measure—the abolition of the bank notes (*Bancozettel*) as a legal tender, and the creation of a new paper currency called *Einlösungsscheine,* into which the bank notes were to be forcibly converted at $\frac{1}{5}$th of their ostensible value, *i.e.* a 100-florin note was exchangeable for a 20-florin *Einlösungsschein.* Beethoven's income might possibly have been thus reduced to 800 florins, or £80, but the subscribers continued to pay the annuity in full, regardless of the patent, and Rudolph gave the necessary instruction to his agents in writing. Prince Kinsky would have done the same as to his 1800 florins, if his residence at Prague and his sudden death (Nov. 3, 1812) had not prevented his giving the proper instructions. Beethoven sued the Kinsky estate for his claim, and succeeded after several years, many letters and much heart-burning, in obtaining (Jan. 18, 1815) a decree for 1200 florins *Einlösungsscheine* per annum with arrears; and the final result of the whole, according to Beethoven's own statement (in his letter to Ries of March 8, 1816), is that his pension at that time was 3400 florins in *Einlösungsscheine,* which were then worth 1360 in silver = £136, the *Einlösungsscheine* themselves having fallen to between a half and a third of their nominal value.

[The above paragraph on the effect of the Austrian finance-patent of 1811 upon Beethoven's annuity, and his suit against the Kinsky estate, accords perfectly with all the authorities known at the time it was written. But these authorities, from Schindler down, are in error. It is true that from and after March 1811, the bank notes (*Bancozettel*) then in circulation were reduced in value to the rate of five for one in silver; and notes of redemption (*Einlösungsscheine*), equal to silver, were issued in their place at that rate; but the payment of contracts previously made, Beethoven's annuity included, was regulated by the depreciation at the date of the contract. The date of the document conferring the annuity is March 1, 1809, when the depreciation (decimally) was 2·48 for one, and it follows that his income under the finance patent was reduced—not to one fifth, or 800 florins, as Schindler and his copyists unanimously state, but to 1612·90 florins. That is to say,

Kinsky,	instead of 1800,	paid	725·80 fl.
Rudolph,	„ „ 1500,	„	604·84 „
Lobkowitz,	„ „ 700,	„	282·26 „
			1612·90

When the subscribers continued to pay the annuity in full, regardless of the patent, Kinsky unfortunately neglected to do this, and thus, upon his untimely death, unwittingly deprived Beethoven of all *legal* claim to more than the above-named 725·80 florins; for the trustees of the estates had no power to add to that sum, being responsible to the Landrecht or high tribunal at Prague for their action. Beethoven, trusting to the equity of his claim, seems to have been so foolish as to instruct his advocate in Prague, Dr. Wolf, to enter a suit—which could have had no favourable issue. It was fortunate for him that the legal agent of the Kinsky estates (Verlassenschaftscurator), Dr. Johann Kanka, was a musician of considerable attainments, a great admirer of his music and on intimate terms with him during his first years in Vienna. On a visit to the capital, Kanka discussed the matter with him; the suit was abandoned, and a compromise at last effected—confirmed by the Landrecht, Jan. 18, 1815—by which 1200 florins a year were secured to him, and arrears to the amount of 2479 florins, paid in cash, on March 26, to his representative, Baron Joseph von Pasqualati.

[3] To follow the air; Nottebohm, *Z.B.* p. 504. This was as far back as 1809.
[4] Letter to Zmeskall, Sept. 10—under the name not of 'Metronome' but of 'Zeitmesser.'

Beethoven's letters to Kanka (Thayer's *Beethoven*, iii. App. viii.) and his dedication of op. 94, 'An die Hoffnung,' to the widowed Princess Kinsky, prove how well satisfied he was with the result. A. W. T.]

1812 opens with a correspondence with Varenna, an official in Graz, as to a concert for the poor, which puts Beethoven's benevolence in a strong light. He sends the 'Mount of Olives,' the 'Choral Fantasia,' and an Overture as a gift to the Institution for future use—promises other (MS.) compositions, and absolutely declines all offer of remuneration. The theatre at Pesth was opened on Feb. 9 with the music to the 'Ruins of Athens' and 'King Stephen,' but there is no record of Beethoven himself having been present. This again was to be a great year in composition, and he was destined to repeat the feat of 1808 by the production of a second pair of Symphonies. In fact from memoranda among the sketches for the new pair, it appears that he contemplated [1] writing three at the same time, and that the key of the third was already settled in his mind—'Sinfonia in D moll—3te Sinf.' However, this was postponed, and the other two occupied him the greater part of the year. The autograph score of the first of the two, that in A (No. 7), is dated May 13; so that it may be assumed that it was finished before he left Vienna. The second—in F, No. 8—was not completed till October. His journey this year was of unusual extent. His health was bad, and Staudenheim, his physician,[2] ordered him to try the baths of Bohemia—possibly after Baden or some other of his usual resorts had failed to recruit him, as we find him in Vienna on July 4, an unusually late date. Before his departure there was a farewell meal, at which Count Brunswick, Stephen Breuning, Maelzel, and others were present.[3] Maelzel's metronome was approaching perfection, and Beethoven said good-bye to the inventor in a droll canon, which was sung at the table—he himself singing soprano [4]—and afterwards worked up into the lovely Allegretto of the Eighth Symphony. He went by Prague to Töplitz,[5] and Carlsbad—where he notes the postilion's horn [6] among the sketches for the Eighth Symphony—Franzensbrunn, and then Töplitz again; [7] and lastly to his brother Johann's at Linz, where he remained through October and into November, as the inscriptions on the autographs of the Eighth Symphony and of three Trombone pieces written for All Souls' Day demonstrate. The Trombone pieces became his own requiem. At Töplitz he met Goethe, and the strange scene occurred in which he so unnecessarily showed his contempt for his friend the Archduke Rudolph and the other members of the Imperial family.[8] At Töplitz [9] he met Amalie Sebald, and a series of letters to her shows that the Symphony did not prevent him from making love with much ardour.[10] While in Carlsbad he [11] gave a concert for the benefit of the sufferers in a fire at Baden.[12] The fact of his extemporising at the concert, and hearing the postilion's call, as well as an entry among the sketches for the Eighth Symphony, to the effect that 'cotton in his ears when playing took off the unpleasant [13] noise'—perhaps imply that his deafness at this time was still only partial.

One of his first works after returning to Vienna was the fine Sonata for Piano and Violin, published as op. 96. It was completed by the close of the year, and was first played by the Archduke and Rode—whose style Beethoven kept in view in the violin[14] part—at the house of Prince Lobkowitz, on Dec. 29.[15] A comparative trifle is the 'Lied an die Geliebte,'[16] written during this winter in the album of Regina Lang. The only works published in 1812 were the 'Egmont' entr'actes and the Mass in C (op. 86), the latter dedicated—possibly as an acknowledgment of his share in the guarantee—to Prince Kinsky. The state of his finances about this time compelled him to borrow 2300 florins from the Brentanos of Frankfort, old friends who had known and loved him from the first.[17] A trace of the transaction is perhaps discernible in the Trio in B♭ in one movement,[18] written on June 2, 1812, 'for his little friend Maximiliana Brentano, to encourage her in playing.' The effect of the Bohemian baths soon passed away, the old ailments and depression returned, the disputes and worries with the servants increased, and his spirits became worse than they had been since the year 1803.

The only composition which can be attributed to the spring of 1813 is a Triumphal March, written for Kuffner's Tragedy [19] of 'Tarpeia,' which was produced—with the March advertised as 'newly composed'—on March 26. On April 20 the two new Symphonies appear to have been played through for the first time at the Archduke's.[20] On the advice of his medical men he went at the end of May to Baden, where [21] he was received with open arms by the Archduke. Hither he was followed by his friend Frau Streicher, who remained at Baden for the summer, and took charge of his lodgings and clothes, which appear to have been in a deplorable state. On his return to town he

reoccupied his old rooms in the house of Pasqualati, on the Mölk Bastion. The Streichers continued their friendly services; after some time procured him two good servants, and otherwise looked after his interests. These servants remained with him for a year or two, and this was probably the most comfortable time of the last half of Beethoven's life.[1]

As early as April we find him endeavouring to arrange a concert for the production of his two Symphonies; but without success.[2] The opportunity arrived in another way. The news of the great defeat of the French at Vittoria (fought June 21) reached Vienna on July 13, following on that of the disaster of Moscow and the battles of Lützen and Bautzen (May 2 and 21), and culminating in Leipzig Oct. 19. It is easy to understand how great the sensation was throughout the whole of Germany, and how keenly Beethoven must have felt such events,[3] though we may wonder that he expressed his emotion in the form of the orchestral programme-music, entitled 'Wellington's Victory, or the Battle of Vittoria,' a work conceived on almost as vulgar a plan as the 'Battle of Prague,' and containing few traces of his genius. This, however, is accounted for by the fact that the piece was suggested by Maelzel[4] the mechanician, a man of undoubted ability, who knew the public taste far better than Beethoven did. An occasion for its performance soon suggested itself in a concert for the benefit of the soldiers wounded at Hanau (Oct. 30), where the Austrians endeavoured to cut off the retreat of the French after Leipzig.[5] The concert took place on Dec. 8, in the large Hall of the University, and was organised by Maelzel. The programme, like the Battle Symphony itself, speaks of a man who knew his audience. It was of reasonable length and contained the Seventh Symphony—in MS. and produced for the first time—two Marches performed by Maelzel's mechanical trumpet, and the Battle Symphony. The orchestra was filled by the best professors of the day—Salieri, Spohr, Mayseder, Hummel,[6] Romberg, Moscheles, etc. Beethoven himself conducted, and we have Spohr's testimony that the performance of the Symphony was really a good one; the programme was repeated at a second concert on the 12th. The success of both concerts was immense, and Beethoven addressed a letter of thanks to the performers, which may be read at length in Schindler and elsewhere.

It was probably about this time that Beethoven forwarded a copy of the Battle Symphony to the Prince Regent.[7] The letter which accompanied it has not been preserved, but it was never acknowledged by the Prince, and Beethoven felt the neglect keenly. The work was produced at Drury Lane a year afterwards—Feb. 10, 1815, and had a great run,[8] but this was through the exertions of Sir George Smart, who himself procured the copy from Vienna.[9]

Early in Jan. 1814 a third concert was given in the great Redouten-Saal with the same programme and nearly the same performers as before, except that some numbers from the 'Ruins of Athens' were substituted for Maelzel's marches; and on Feb. 27 a fourth, with similar programme, and with the important addition of the Symphony in F—placed last but one in the list. The huge programme speaks of Beethoven himself as clearly as the two first did of the more practical Maelzel. The Seventh Symphony was throughout a success, its *Allegretto* being repeated three times out of the four. But the Eighth Symphony did not please, a fact which greatly discomposed Beethoven, and drew from him the words 'just because it is much better' (Th. iii. 273). On April 11 Beethoven played, for the first time, his B♭ Trio at a benefit concert, and in the evening a Chorus of his to the words 'Germania, Germania,' was sung as the finale to an operetta of Treitschke's, àpropos of the fall of Paris (March 31). Moscheles was present at the concert, and gives[10] an interesting account of the style of Beethoven's playing. Spohr heard[11] the same trio, but under less favourable circumstances. A month later Beethoven again played the B♭ Trio—his last public appearance in chamber music. The spring of 1814 was remarkable for the revival of 'Fidelio.' Treitschke had been employed to revise the libretto, and in March we find Beethoven writing to him—'I have read your revision of the opera with great satisfaction. It has decided me once more to rebuild the desolate ruins of an ancient fortress.' This decision involved the entire rewriting and rearrangement of considerable portions; others were slightly altered, and some pieces were reintroduced from the first score of all. The first performance took place at the Kärnthnerthor Theatre on May 23.[12] On the 26th the new Overture in E was first played, and other alterations were subsequently introduced. On July 18 the opera was played for Beethoven's benefit. A Pianoforte score, made by Moscheles under Beethoven's own direction,[13] carefully revised by him, and dedicated to the Archduke, was published by

[1] Schindler, i. 187.

[2] Letters to Zmeskall, April 19 and 26.

[3] See the note to Thayer, ii. 318. The idea noted in his diary is a far nobler one—a National Hymn, each Nation engaged to be represented by a march, and the whole to close with a Te Deum. Nohl, *Beethoven-feier*, pp. 71, 72.

[4] See Moscheles' note to his edition of Schindler, i. 153, 154.

[5] [Maelzel wanted to arrange concerts to raise money for Beethoven to be able to go with him to London (Th. iii. 258). But of course the receipts of above concert, after expenses paid, were handed over to the soldiers' fund (Th. iii. 260).]

[6] Beethoven's droll note to Hummel (Nohl, *Neue Briefe*, No. 96) shows that there was no quarrel between them.

[7] [Concerning the copy sent to the Prince see *Briefe*, Nos. 114, 119, 135, and Moscheles, ii. 235, 236.]

[8] The news of the successful production in London gratified him very much. He read it in the Vienna *Zeitung* of March 2 at the tavern, and made a mem. of it in the small note-book which he carried with him to such places, *Z.B.* p. 320.

[9] [See, however, Th. iii. 474.]

[10] Moscheles, *Leben*, i. 15.

[11] Spohr, *Selbstbiog.* i. 203. He says it was a new Trio in D, but the Trio in D had been out for five years. [He adds, however, that it was in $\frac{3}{4}$ time.]

[12] Treitsche says the overture played on this occasion was 'Prometheus.' See Th. iii. 283; also Nohl, *B. dep. by his Cont.* translation p. 106; see also p. 241.

Artaria in August. One friendly face must have been missed on all these occasions—that of the Prince Lichnowsky, who died on April 15.

During the winter of 1813-14 an unfortunate misunderstanding arose between Beethoven and Maelzel. The Battle Symphony was originally written at the latter's suggestion for a mechanical instrument of his called the Panharmonicon, and was afterwards orchestrated by its author for the concert, with the view to a projected tour of Maelzel in England.[1] Beethoven was at the time greatly in want of funds, and Maelzel advanced him £25, which he professed to regard as a mere loan [2] which he repaid, while the other alleged it was for the purchase of the work. Maelzel had also engaged to make ear-trumpets for Beethoven, which were delayed, and in the end proved failures.[3] The misunderstanding was aggravated by various statements of Maelzel, and by the interference of outsiders, and finally by Maelzel's departure through Germany to England, with an imperfect copy of the Battle Symphony clandestinely obtained. Such a complication was quite sufficient to worry and harass a sensitive, obstinate, and unbusinesslike man like Beethoven. He entered an action against Maelzel, and his deposition on the subject, and the document[4] which he afterwards addressed to the artists of England, show how serious was his view of the harm done him, and the motives of the doer. Maelzel's case, on the other hand, is stated with evident *animus* by Beethoven's adherents,[5] and it should not be overlooked that he and Beethoven appear to have continued friends after the immediate quarrel blew over. If to the opera and the Maelzel scandal we add the Kinsky lawsuit now in progress, and which Beethoven watched intently and wrote much about, we shall hardly wonder that he was not able to get out of town till long past his usual time. When at length he writes from Baden it is to announce the completion of the Sonata in E minor, which he dedicates to Count Moritz Lichnowsky. The letter[6] gives a charming statement of his ideas of the relation of a musician to his patron.

The triumphant success of the Symphony in A, and of the Battle-piece, and the equally successful revival of 'Fidelio,' render 1814 the culminating period of Beethoven's life. His activity during the autumn and winter was very great; no bad health or worries or anything else external could hinder the astonishing flow of his inward energy. The E minor Sonata is dated 'Vienna, August 16,' and was therefore probably completed—as far as any music of his was ever completed till it was actually printed—before he left town. He commemorated the death (August 23) of the wife of his kind friend Pasqualati in an 'Elegischer Gesang' (op. 118). On Oct. 4 he completed the Overture in C ('Namensfeier,' op. 115), a work on which he had been employed more or less for six years, and which has a double interest from the fact that its themes seem to have been originally intended[7] to form part of that composition of Schiller's 'Hymn to Joy' which he first contemplated when a boy at Bonn, and which keeps coming to the surface in different forms, until finally embodied in the Ninth Symphony in 1823. Earlier in the year he had made some progress with a sixth Piano Concerto—in D—of which not only are extensive sketches in existence, but sixty pages in complete score. It was composed at the same time with the Violoncello Sonatas (op. 102); and finally gave way to them.[8] But there was a less congenial work to do—Vienna had been selected as the scene of the Congress, and Beethoven was bound to seize the opportunity not only of performing his latest Symphonies, but of composing some new music appropriate to so great an occasion.[9] He selected in September[10] a Cantata by Weissenbach, entitled 'Der glorreiche Augenblick'—an unhappy choice, as it turned out—composed it more quickly[11] than was his wont, and included it with the Symphony in A, and the Battle of Vittoria, in a concert for his benefit on Nov. 29. The manner in which this concert was carried out gives a striking idea of the extraordinary position that Beethoven held in Vienna. The two Halls of the Redouten-Saal were placed at his disposal for two evenings by the Government, and he himself sent personal invitations in his own name to the various sovereigns and other notabilities collected in Vienna. The room was crowded with an audience of 6000 persons, and Beethoven describes[12] himself as 'quite exhausted with fatigue, worry, pleasure, and delight.' At a second performance on Dec. 2 the hall was less crowded. One of the fêtes provided during the Congress was a tournament in the Riding School on Nov. 23, and for this Beethoven would appear[13] to have composed music, though no trace of it has yet been found. During the continuance of the Congress he seems to have been much visited and noticed, and many droll scenes doubtless occurred between him and his exalted worshippers. The Archduke and Prince Rasoumowsky, the latter as Russian Ambassador, were conspicuous among the givers of fêtes, and it was at the house of the Archduke that Beethoven was presented to the Empress of Russia. This introduction resulted in a noble present from the Empress of 200 ducats (£100) towards the expenses of the two concerts, a generosity which Beethoven acknowledged by the dedica-

tion of the Polonaise (op. 89) and of the pianoforte arrangement of the Symphony in A, No. 7.[1]

In addition to the profit of the concerts Schindler implies that Beethoven received presents from the various foreign sovereigns in Vienna. The pecuniary result of the winter was therefore good. He was able for the first time to lay by money, which he invested in shares in the Bank of Austria.[2]

The news of Bonaparte's escape from Elba broke up the Congress, and threw Europe again into a state of perturbation. In Vienna the reaction after the recent extra gaiety must have been great. Beethoven was himself occupied during the year by the Kinsky lawsuit; his letters upon the subject to his advocate Kanka are many and long, and it is plain from such expressions as the following that it seriously interrupted his music. 'I am again very tired, having been forced to discuss many things with K., and such things exhaust me more than the greatest efforts in composition. It is a new field, the soil of which I ought not to be required to till, and which has cost me many tears and much sorrow,'[3] and in another letter, . . . 'Do not forget me, poor tormented creature that I am.'

Under the circumstances it is not surprising that he composed little during 1815. The two Sonatas for Piano and Violoncello (op. 102), dated 'July' and 'August'; the Chorus 'Es ist vollbracht,' as finale to a piece of Treitschke's, produced, July 15, to celebrate the entry into Paris; the 'Meeresstille und glückliche Fahrt,' and a couple of Songs, 'Sehnsucht' and 'Das Geheimniss'[4]—are all the original works that can with certainty be traced to this year. But the beautiful and passionate Sonata in A (op. 101), which was inspired by and dedicated to his dear friend Baroness Ertmann—'Liebe werthe Dorothea Cecilia'—was probably composed at the end of this year, since it was played in public on Feb. 18, 1816, though not published for a year after.[5] The national airs which he had in hand since 1810 for Thomson of Edinburgh were valuable at such a time, since he could turn to these when his thoughts were too much disturbed for original composition—a parcel of Scotch Songs is dated May 1815.

The publications of 1815 are still fewer than the compositions. The Polonaise in C (op. 89)—dedicated to the Empress of Russia, who had greatly distinguished Beethoven at one of Prince Rasoumowsky's receptions—appeared in March; the Sonata op. 90, and a Song, 'Kriegers Abschied,' in June. These are all. On June 1 he wrote to Salomon, then resident in London, offering his works from op. 92 to 97 inclusive[6] for sale, with 'Fidelio,' the Vienna Cantata, and the Battle Symphony. And this is followed in October and November by letters to Birchall, sending various pieces. Salomon died on Nov. 25.

The second quarrel with Stephen Breuning must have occurred in 1815.[7] Some one had urged him to warn Beethoven against pecuniary relations with his brother Caspar, whose character in money matters was not satisfactory. Breuning conveyed the hint to Beethoven, and he, with characteristic earnestness and simplicity, and with that strange fondness for his unworthy brothers which amounted almost to a passion, at once divulged to his brother not only the warning but the name of his informant. A serious quarrel naturally ensued between Breuning and Caspar, which soon spread to Beethoven himself, and the result was that he and Breuning were again separated—this time for several years. The letter in which Beethoven at last asks pardon of his old friend can hardly be omitted from this sketch. Though undated it was written in 1826.[8] It contained his miniature painted by Hornemann in 1802, and ran as follows (the original has *Du* and *dein* throughout):—

'Beneath this portrait, dear Stephen, may all that has for so long gone on between us be for ever hidden. I know how I have torn your heart. For this the emotion that you must certainly have noticed in me has been sufficient punishment. My feeling towards you was not malice. No—I should no longer be worthy of your friendship; it was passion both on your side and on mine; but I doubted you dreadfully, for people came between us who were unworthy of us both. My portrait has long been intended for you. You know I always intended it for some one. To whom could I give it with my warmest love so well as to you, true, good, noble Stephen? Forgive me for distressing you; I have suffered myself as much as you have. It was only when I had you no longer with me that I first really felt how dear you are and always will be to my heart. Come to my arms once more as you used to do.'

On Nov. 15 of this year Caspar Carl Beethoven died—a truly unfortunate event for Ludwig. Caspar had for long received pecuniary assistance from his brother, and at his death he charged him with the maintenance of his son Carl, a lad between eight and nine. This boy, whose charge Beethoven undertook with all the simplicity and fervour of his nature, though no doubt often with much want of judgment, was quite unworthy of his great uncle. The charge altered Beethoven's nature, weaned him from his music, embroiled him with his friends, embittered his existence with the worry of continued conten-

[5] [Th. iii. 382 and 384. See, however, *Z.B.* p. 344. Nohl, iii. p. 86, says Sonata was sent to Dorothea-Cäcilia, Feb. 23, 1817.]
[6] [Not including, however, the song 'An die Hoffnung,' op. 94.]

[7] Schindler (i. 228) says 1817; but it is obvious that it happened before Caspar's death (Breuning, p. 46).
[8] Schindler, i. 228; ii. 128. [See *re* date *Briefe*, No. 376, note.]

tions and reiterated disappointments, and at last, directly or indirectly, brought the life of the great composer to an end long before its natural term.

On Christmas Day, at a concert in the Redouten-Saal for the benefit of the Bürger Hospital, Beethoven produced his new Overture op. 115 and the Meeresstille, and the 'Mount of Olives' was performed. As an acknowledgment for many similar services the municipal council had recently (Nov. 16) conferred upon him the freedom of the city—*Ehrenbürgerthum.* It was the first public title that the great *roturier* had received. He was not even a capellmeister, as both Mozart[1] and Haydn had been, and his advocate was actually forced to invent that title for him, to procure the necessary respect for his memorials in the lawsuit which occupied so many of his years after this date.[2] It is a curious evidence of the singular position he held among musicians. He was afterwards made a member of the Philharmonic Societies of Stockholm and Amsterdam, and received Orders from some of the Courts in exchange for his Mass, but the one title he valued was that of *Tondichter*—'Poet in music.'[3]

The resuscitation of his Oratorio is perhaps connected with a desire in Beethoven's mind to compose a fresh one. At any rate he was at this time in communication both with the Tonkünstler Societät and the Gesellschaft der Musik-Freunde of Vienna on the subject. By the latter body the matter was taken up in earnest.[4] Subject and poet were left to himself, and a payment of 300 gold ducats was voted to him for the use of the oratorio for one year. The negotiation dragged on till 1824 and came to nothing,[4] for no good libretto was forthcoming, for the same ostensible reason that he never wrote a second opera.[5]

1816 was a great year for publication. The Battle Symphony in March; the Violin Sonata and the B♭ Trio (op. 96, 97)—both dedicated to the Archduke—in July; the Seventh Symphony[6] dedicated to Count Fries, with a pianoforte arrangement, to the Empress of Russia; the String Quartet in F minor (op. 95)—to Zmeskall; and the beautiful Liederkreis (op. 98) to Prince Lobkowitz; all three in December. These, with the Eighth Symphony and three detached Songs, form a list rivalling, if not surpassing, that of 1809. The only compositions of this year are the Liederkreis (April), a Military March in D, 'for the Grand Parade' (Wachtparade), June 4, 1816;[7] a couple of songs; and a trifle in the style of a birthday cantata for Prince Lobkowitz.[8] This is the date of a strange temporary fancy for German in preference to Italian which took possession of him. Some of his earlier pieces contain German terms, as the Six Songs, op. 75, and the Sonata 81*a*. They reappear in the Liederkreis (op. 98) and Merkenstein (op. 100) and come to a head in the Sonata op. 101, in which all the indications are given in German, and the word 'Hammerklavier' appears for 'Pianoforte' in the title. The change is the subject of two letters to Steiner.[9] He continued to use the name 'Hammerklavier'[10] in the sonatas op. 106, 109, and 110; and there apparently this vernacular fit ceased.[11]

Beethoven had a violent dislike to his brother's widow, whom he called the 'Queen of Night,' and believed, rightly or wrongly,[12] to be a person of bad conduct. He therefore lost no time in obtaining legal authority for taking his ward out of her hands and placing him with Giannatasio del Rio, the head of an educational institution in Vienna; allowing his mother to see him only once a month. This was done in Feb. 1816, and the arrangement existed till towards the end of the year, when the widow appears to have appealed with success against the first decree. The cause had been before the *Landrecht* court, on the assumption that the *van* in Beethoven's name indicated nobility. This the widow disputed, and on Beethoven's being examined on the point he confirmed her argument by pointing successively to his head and his heart saying—'My nobility is *here* and *here.*' The case was then sent down to a lower court, where the magistrate was notoriously inefficient, and the result was to take the child from his uncle on the ground that his deafness unfitted him for the duties of a guardian. Carl's affairs were then put into the hands of an official, and all that Beethoven had to do was to pay for his education. Against this decree he entered an appeal which was finally decided in his favour, but not till Jan. 7, 1820. Meantime his energies were taken up with the contest and the various worries and quarrels which arose out of it, involving the writing of a large number of long and serious letters. How he struggled and suffered the following entry in his diary of the early part of 1818 will show:—'Gott, Gott, mein Hort, mein Fels, o mein Alles,[13] du siehst mein Inneres und weisst, wie

1 'Was haben Sie da?' was the inquiry of the 'privilegirte Bettlerin' when the hearse drew up with Mozart's body at the gate of the Cemetery. 'Ein Capellmeister' was the answer.

9 *Briefe*, Nos. 167, 168.

10 Nottebohm, *Z.B.* p. 344.

11 The German comes out, however, when he is deeply moved, as in the 'Bitte für innern und äussern Frieden,' and the 'aengstlich' in the 'Dona' of the Mass, the 'beklemmt' in the Cavatina of the B♭ Quartet, etc. Schindler, ii. 328, gives a list of the curious words coined by B. and Holz:—Luftsang, Einsang=Aria; Grundsang=Bass; Kreisfluchtstück=Canon; and Launenspiel=Phantasie, etc. [See also Kalischer, p. 68.]

12 [From various details given by Nohl, there seems little doubt that Beethoven's opinion was a correct one.]

13 The biblical terms look as if Beethoven knew his Bible.

wehe mir es thut Jemanden leiden machen müssen bei meinem guten Werke für meinen theuren Karl!!! O höre stets Unaussprechlicher, höre mich—deinen unglücklichen unglücklichsten aller Sterblichen.' Between the dates just mentioned, of the beginning and ending of the lawsuits, he completed no orchestral music at all. Apart from sympathy for a great composer in distress, and annoyance at the painful and undignified figure which he so often presented, we have indeed no reason to complain of a period which produced the three gigantic Pianoforte Sonatas, op. 106,[1] op. 109,[2] and op. 110[3]—which were the net product of the period; but such works produce no adequate remuneration, and it is not difficult to understand that during the lawsuit he must have been in very straitened circumstances, cheap as education and living were in Vienna at that date. His frequent letters to Ries and Birchall in London at this time urging his works on them for the English market are enough to prove the truth of this. One result[4] of these negotiations was the purchase by the Philharmonic Society, through Mr. Neate, under minute of July 11, 1815, of the MS. overtures to the 'Ruins of Athens,' 'King Stephen' and op. 115, for 75 guineas. To make matters worse, Prince Lobkowitz died on Dec. 16, 1816, and with him—notwithstanding that here too Beethoven appealed to the law—all benefit from that quarter ceased. His pension was therefore from that date diminished to about £110.

Attributable to 1817 are the arrangement of his early C minor Trio (op. 1) as a String Quintet (op. 104, with a very droll preface) and the songs 'So oder so,' and the Hymn of the Monks in 'William Tell'[5] in memory of his old friend Krumpholz, who died May 2[6]—and others. None of these can have been remunerative; in fact some of them were certainly presented to the publishers.

[1817 saw the publication of Beethoven's own metronome marks for many of his works.[7] There is nothing of moment to record concerning this year; in addition to his law worries Beethoven was ill, and consequently in low spirits.[8]]

An incident of this date which gratified him much was the arrival of a piano from Broadwood's. Mr. Thomas Broadwood, the then head of the house, had recently made his acquaintance in Vienna, and the piano seems to have been the result of the impression produced on him by Beethoven. The Philharmonic Society is sometimes credited with the gift, but no resolution or minute to that effect exists in their records. The books of the firm, however, show that on Dec. 27, 1817, the grand piano No. 7362[9] was forwarded to Beethoven's address. A letter appears to have been written to him at the same time by Mr. Broadwood, which was answered by Beethoven immediately on its receipt. His letter has hitherto never been printed, and is here given exactly in his own strange French.[10]

'A Monsieur Monsieur Thomas Broadvood a Londres (en Angleterre).

Mon très cher Ami Broadvood!

jamais je n'eprouvais pas un plus grand Plaisir de ce que me causa votre Anoonce de l'arrivée de cette Piano, avec qui vous m'honorez de m'en faire présent; je regarderai coñe un Autel, ou je deposerai les plus belles offrandes de mon esprit au divine Apollon. Aussitôt coñe je recevrai votre Excellent instrument, je vous enverrai d'en abord les Fruits de l'inspiration des premiers moments, que j'y passerai, pour vous servir d'un souvenir de moi à vous mon très cher B., et je ne souhaits ce que, qu'ils soient dignes de votre instrument.

Mon cher Monsieur et ami recevéz ma plus grande consideration de votre ami et très humble serviteur Louis van Beethoven. Vienne le 3me du mois Février 1818.'

The instrument in course of time reached[11] its destination, was unpacked by Streicher, and first tried by Mr. Cipriani Potter, at that time studying in Vienna. What the result of Beethoven's own trial of it was is not known. At any rate no further communication from him reached the Broadwoods.[12]

A correspondence however took place through Ries with the Philharmonic Society on the subject of his visiting England. The proposal of the Society was that he should come to London for the spring of 1818, bringing two new MS. Symphonies to be their property and for which they were to give the sum of 300 guineas. He demanded 400,—150 to be in advance.[13] However, other causes put an end to the plan, and on the 5th of the following March he writes to say that health has prevented his coming. He was soon to be effectually nailed to Vienna. In the summer of 1818 the Archduke[14] had been appointed Archbishop of Olmütz. Beethoven was then in the middle of his great Sonata in B♭ (op. 106), and of another work more gigantic still; but he at once set to work with all his old energy on a grand Mass for the installation, which was fixed for March 20, 1820. The score was begun in the autumn of 1818, and the composition went on during the following year, uninterrupted by any other musical work, for the B♭ Sonata was completed for press by March 1819, and the only other pieces attributable to that year are op. 105 and op. 107.

1 Composed 1818-19, and published Sept. 1819.
2 Composed 1819-20, published Nov. 1821.
3 Dated Dec. 25, 1821, and published Aug. 1822.
4 [See, however, purchases of pf. arr. of op. 91, and op. 92, op. 96, and op. 97, by Birchall, Th. iii. 353, and Kalischer's *Neue Beethovenbriefe*, pp. 51-2.]

9 The compass of this instrument was 6 octaves, from C five lines below the Bass stave. A sister piano, No. 7252, of the same compass and quality, was made about the same time for the Princess Charlotte, and is now at Claremont.
10 This interesting autograph is in the possession of Mr. M. M. Holloway, to whom I am indebted for its presence here.
11 The note from Broadwood's agent in Vienna which accompanied this letter shows that all freight and charges were paid by the giver of the piano. [See Kal. *N. Beethovenbriefe*, pp. 26 and 27.]
12 [See Nohl, iii. 464.]
13 Letter to Ries July 9, 1817; and George Hogarth's *Philharmonic Society*, p. 18.
14 Schindler, i. 269.

The Sonata just referred to, the greatest work yet written for the piano, and not unjustly compared with the Ninth Symphony, belonged in a special sense to the Archduke. The first two movements were presented to him for[1] his name-day; the whole work when published was dedicated to him, and the sketch of a piece for solo and chorus[2] exists in which the subject of the first Allegro is set to the words 'Vivat Rudolphus.' In addition the Archduke is said to have been able to play the Sonata. Beethoven may have hated his 'Dienstschaft,' but there is reason to believe that he was sincerely attached[3] to his clever, sympathetic, imperial pupil.

The summer and autumn of both 1818 and 1819 were spent at Mödling. His health at this time was excellent, and his devotion to the Mass extraordinary. Never had he been known to be so entirely abstracted from external things, so immersed in the struggle of composition. Schindler[4] has well described a strange scene which occurred during the elaboration of the Credo—the house deserted by the servants, and denuded of every comfort; the master shut up in his room, singing, shouting, stamping, as if in actual conflict of life and death over the fugue 'Et vitam venturi'; his sudden appearance, wild, dishevelled, faint with toil and twenty-four hours' fast! These were indeed 'drangvollen Umständen'[5]—wretched conditions—but they are the conditions which accompany the production of great works.[6] During the whole of this time the letters[7] show that his nephew occupied much of his thoughts. While at work on this sublime portion of the Mass[8] just mentioned, he was inspired to write the beautiful Sonata in E major (op. 109), the first of that unequalled trio which terminate that class of his compositions.

It is hardly necessary to say that the Installation went by without Beethoven's Mass, which indeed was not completed till the beginning of 1823. He announces its termination on Feb. 27,[9] and the perfect copy of the score was delivered into his patron's hands on March 19, 1823, three years after the day for which it was projected. While the vast work was proceeding his thoughts reverted to his darling pianoforte, and the dates of Dec. 25, 1821, and Jan. 13, 1822, are affixed to the two immortal and most affecting Sonatas, which vie with each other in grandeur, beauty and pathos, as they close the roll of his large compositions for the instrument which he so dearly loved and so greatly ennobled.

But neither Mass nor Sonatas were sufficient to absorb the energy of this most energetic and painstaking of musicians. The climax of his orchestral compositions had yet to be reached. We have seen that when engaged on his last pair of Symphonies in 1812, Beethoven contemplated a third, for which he had then fixed the key of D minor. To this he returned before many years were over, and it was destined in the end to be the 'Ninth Symphony.' The very characteristic theme of the Scherzo actually occurs in the sketch-books as early as 1815,[10] as the subject of a 'fugued piece,' though without the rhythm which now characterises it. But the practical beginning of the Symphony was made in 1817, when large portions of the first movement—headed 'Zur Sinfonie in D,' and showing a considerable approach to the work as carried out—together with a further development of the subject of the Scherzo, are found in the sketch-books. There is also evidence[11] that the Finale was at that time intended to be orchestral, and that the idea of connecting the 'Hymn to Joy' with his Ninth Symphony had not at that time occurred to Beethoven. The sketches continue in 1818,[12] more or less mixed up with those for the Sonata in B♭; and, as if not satisfied with carrying on two such prodigious works together, Beethoven has left a note giving the scheme of a companion symphony which was to be choral in both the Adagio and Finale.[13] Still, however, there is no mention of the 'Ode to Joy,' and the text proposed in the last case is ecclesiastical.

We have seen how 1819, 1820, and 1821 were filled up. The summer and autumn of 1822 were spent at Baden, and were occupied with the Grand Overture in C (op. 124), for the opening of the Josephstadt Theatre at Vienna—whence it derives its title of 'Weihe des Hauses'—and the arrangement of some numbers from the 'Ruins of Athens' with a new chorus[14] for the same occasion, and there followed a revival of 'Fidelio' at the Kärnthnerthor[15] Theatre in November. That the two symphonies were then occupying his mind—'each different from the other and from any of his former ones'—is evident from his conversation with Rochlitz in July 1822, when that earnest critic submitted to him Breitkopf's proposition for music to Faust.[16] After the revival of 'Fidelio' he resumed the Symphony, and here for the first time Schiller's hymn appears in this connection. Through the summer of 1823 it occupied him incessantly, with the exception of a few extras—the 33 Variations (op. 120), which were taken up almost as a *jeu d'esprit*, and being published in June must have been completed some time previously, the 'Bagatelles' for the Piano (op. 126), which can be

fixed to the end of 1822 and beginning of 1823, and a short cantata for the birthday of Prince Lobkowitz (April 12) for soprano solo and chorus, the autograph of which is dated the evening previous to the birthday.[1] He began the summer at Hetzendorf, but a sudden dislike to the civilities of the landlord drove him to forfeit 400 florins which he had paid in advance, and make off to Baden. But wherever he was, while at work he was fully absorbed; insensible to sun and rain, to meals, to the discomforts of his house and the neglect of the servants, rushing in and out without his hat, and otherwise showing how completely his great symphony had taken possession of him.[2] Into the details of the composition we cannot here enter, farther than to say that the subject of the vocal portion, and its connection with the preceding instrumental movements were what gave him most trouble. The story may be read in Schindler and Nottebohm, and it is full of interest and instruction. At length, on Sept. 5, 1823, writing from Baden to Ries, he announces that 'the copyist has finished the score of the Symphony,' but that it is too bulky to forward by post. Ries was then in London, and it is necessary to go back a little to mention that on Nov. 10, 1822, the Philharmonic Society passed a resolution offering Beethoven £50 for a MS. symphony, to be delivered in the March following. This was communicated to Beethoven by Ries, and accepted by him on Dec. 20. The money was advanced, and the MS. copy of the Ninth Symphony in the Philharmonic library carries a statement in his autograph that it was 'written for the society.' How it came to pass notwithstanding this that the score was not received by the Philharmonic till after its performance in Vienna, and that when published it was dedicated to the King of Prussia, are facts difficult to reconcile with Beethoven's usual love of fairness and justice.

Notwithstanding the announcement to Ries the process of final polishing went on for some months longer. Shortly before he left Baden, on Oct. 5, he received a visit from Weber and his pupil, young Benedict, then in Vienna for the production of 'Euryanthe.'[3] The visit was in consequence of a kind wish for the success of the work expressed by Beethoven to Haslinger, and was in every way successful. In former times[4] he had spoken very depreciatingly of Weber, but since the perusal of 'Freischütz' had changed his mind.[5] No allusion was made to Weber's youthful censures on the Fourth and Seventh Symphonies; Beethoven was cordial and even confidential, made some interesting remarks on opera books, and they parted mutually impressed. He returned to town at the end of October to a lodging in the Ungergasse, near the Landstrasse gate, and by February 1824 began to appear in the streets again and enjoy his favourite occupation of peering with his double eyeglass into the shop windows,[6] and joking with his acquaintances.

The publications of 1823 consist of the Overture to the 'Ruins of Athens' (op. 114), and the 'Meeresstille' (op. 112), both in February; and the Sonata (op. 111) in April.

The revival of 'Fidelio' in the previous winter had inspired Beethoven with the idea of writing a new German opera, and after many propositions he accepted the 'Melusine' by Grillparzer,[7] a highly romantic piece, containing many effective situations, and a comic servant's part, which took his fancy extremely. Grillparzer had many conferences with him, and between the two the libretto was brought into practical shape. While thus engaged he received a commission from Count Brühl, intendant at the Berlin Theatre, for an opera on his own terms. Beethoven forwarded him the MS. of 'Melusine' for his opinion, but on hearing that a ballet of a somewhat similar character was then being played at Berlin,[8] he at once renounced all idea of a German opera, and broke out in abuse of the German singers for their inferiority to the Italians, who were then playing Rossini in Vienna. In fact this season of 1823 had brought the Rossini fever to its height; no operas but his were played. Beethoven had indeed heard the 'Barbiere' in 1822,[8] and had even promised to write an opera for the Italian company in the same style, a promise which it is unnecessary to say was never redeemed. Like Mendelssohn he was in earnest in pursuit of an opera-book, but, like Mendelssohn, he never succeeded in obtaining one to his mind. What he wanted, he told Breuning on his death-bed, was something to interest and absorb him, but of a moral and elevating tendency, of the nature of 'Les Deux Journées' or 'Die Vestalin,' which he thoroughly approved; dissolute stories like those of Mozart's operas had no attraction for him, and he could never be brought to set them. He even went farther, for we read in Mme. d'Abrantès' *Mémoires sur la Restauration*, vii. pp. 29, 30: 'Il prétendait que Mozart ne devait pas prostituer son talent (c'est son mot) sur un sujet si scandaleux.' After his death a whole bundle of libretti was found which he had read and rejected.[9]

But opera or no, it was quite a different thing to find the public so taken up with Rossini that no one cared for either the Mass or the new Symphony.[10] He had written early in 1823 to Prussia, France, Saxony, Russia, proposing a subscription for the Mass of 50 ducats from the

[1] Printed by Nohl, *Neue Briefe*, No. 255.

[2] It did not, however, prevent his attention to passing topics of real interest, and we find him taking the numbers of the *Allg. Zeitung* which contained Lord Brougham's speeches against the Slave-trade from the coffee-house to his lodgings to read (Sch. and Nohl, iii. 903).

sovereigns of each of those countries—but the answers were slow and the subscriptions did not arrive, and he therefore made use of the opportunity afforded him by Count Brühl to propose the two works to him for production at Berlin. The answer was favourable, and there appeared good prospect of success. But the disgrace of driving their great composer to the northern capital for the production of his last and greatest works was too much for the music-loving aristocracy of Vienna—and an earnest memorial was drawn up, dated February 1824, signed by the Lichnowskys,[1] Fries, Dietrichstein, Palfy, and twenty-five other persons principally concerned with music in that city, beseeching him to produce the Mass and Symphony, and to write a second opera, which should vindicate the claim of classical music, and show that Germany could successfully compete with Italy. Such an address, so strongly signed, naturally gratified him extremely. The Theatre 'an der Wien' was chosen, and after an amount of bargaining and delay and vacillation which is quite incredible—partly arising from the cupidity of the manager, partly from the extraordinary obstinacy and suspiciousness of Beethoven, from the regulation of the censorship, and from the difficulties of the music—but which was all in time surmounted by the tact and devotion of Lichnowsky, Schindler, and Schuppanzigh, the concert took place in the Kärnthuerthor Theatre on May 7.[2] The programme consisted of the Overture in C—'Weihe des Hauses'—the Kyrie, Credo, Agnus and Dona, of the Mass in D, in the form of three hymns,[3] and the Ninth Symphony. The house was crowded, and the music, especially the Symphony, excited the greatest enthusiasm. It was on this occasion that the affecting incident occurred of the deaf composer being turned round by Frl. Unger that he might *see* the applause he and his music were evoking. But financially the concert was a failure. The use of the theatre, including band and chorus, cost 1000 florins, and the copying 800 more, but the prices remained as usual, and the sum Beethoven received only amounted to about 420 florins.[4] Well might he say that 'after six weeks of such discussion he was boiled, stewed, and roasted.' He was profoundly upset by the result, would eat nothing, and passed the night in his clothes. The concert, however, was repeated on the 23rd at noon, the theatre guaranteeing Beethoven 500 florins. On the second occasion all the Mass was suppressed but the Kyrie; the trio 'Tremate' and some Italian solos were introduced; the Overture and Symphony remained. The result of this was a loss to the management, and furnishes a curious trait of Beethoven's character. He could not without difficulty be induced to accept the guaranteed sum, but he invited Schindler, Schuppanzigh, and Umlauf to dinner, and then accused them in the most furious manner of having combined to cheat him over the whole transaction! This broke up the party; the three faithful friends went off elsewhere, and Beethoven was left to devour the dinner with his nephew. The immediate effect of the outbreak was to put an end to a promising negotiation which he was carrying on with Neate, who in a letter of Dec. 20, 1823, had, on the part of the Philharmonic Society, offered him 300 guineas and a benefit guaranteed at £500 for a visit to London with a Symphony and a Concerto. The terms had been accepted, and the arrangements for the journey were in a forward state; and although it is probably true that Beethoven's attachment to his nephew was too strong to allow of his leaving him when it came to the point, yet it is equally true that the event just related was the ostensible cause. Four days after he was at his beloved Baden, and craving for music paper.[5]

The subscriptions to the Mass had come in slowly, and in nine months amounted only to 350 ducats (£175) for seven copies.[6] This was too slow to satisfy the wishes of the composer. Indeed he had for some time past been negotiating in a much more mercantile style than before for the sale of Mass, Symphony, and Overture. He offered them to various publishers.[7] It is an unexpected trait in his character, and one for which we may thank his devotion to his nephew, to whom he was now sacrificing everything, that he might leave him well provided for. It resulted in his dealing for the first time with Schott, of Mayence, who purchased the Mass and the Symphony for 1000 and 600 florins respectively on July 19, 1824.[8] He appears at this time to have taken generally a more commercial view of his position than usual, to have been occupied with plans[9] for new collected editions of his works (which however came to nothing), and generally to have shown an anxiety to make money very unlike anything before observable in him. In such calculations he was much assisted by a young man named Carl Holz, a Government employé, a good player on the violin and violoncello, a clever caricaturist, a bon vivant,[10] and generally a lively agreeable fellow. Holz obtained an extraordinary influence over Beethoven. He drew him into society, induced him to be godfather to his child, to appoint him his biographer,[11] and amongst other things to forsake his usual sobriety, and to do that which has been absurdly exaggerated into a devotion to drink. That these commercial aims—too absurd if one

reflects on the simple unbusinesslike character of Beethoven—and the occasional indulgence to which we have alluded, did not impair his invention or his imagination is evident from the fact that at this time he composed his last Quartets, works which, though misunderstood and naturally unappreciated at the time, are now by common consent of those who are able to judge placed at the head of Beethoven's compositions for individuality, depth of feeling, and expression. The relations with Russia, which Beethoven had originally cultivated through the Count von Browne, and the works dedicated to the Emperor of Russia and the Prince Rasoumowsky, and which had been deepened by the personal attention shown him in 1814 by the Empress were now to bear their full fruit. Early in 1824 he received a letter from Prince Galitzin, a Russian nobleman living at Petersburg, and subsequently others, requesting him to compose three String Quartets to be dedicated to the Prince and handsomely paid for. The first of these, that in E♭, sketched at Baden in the autumn of 1824, was sold to Schott[1] in advance for the sum of 50 ducats, and was completed after his return to Vienna early in October. It was first played on March 6, 1825, and published in the following March. With the Quartet Schott received the Overture op. 124, the 'Opferlied' (op. 121), and 'Bundeslied' (op. 122), an air 'Der Kuss' (op. 128), and 11 Bagatelles (op. 126), for which he paid the sum of 130 ducats. The Quartet was played by Schuppanzigh, Weiss, Linke, and Holz, and it was a humorous idea of the Master's to make each player, after so long an interval, sign a compact 'pledging his honour to do his best, and vie with his comrades in zeal.'[2] The Quartet was published as op. 127.

The second Quartet was that which now stands fourth—in A minor, op. 132. It was first played on Nov. 6, 1825, and was published in Sept. 1827 by Schlesinger. For this he seems to have obtained 80 ducats.[3] In a letter to Peters it is mentioned as 'a Quartet, and a grand one too.' The finale was originally sketched for the 'finale instrumentale' of the Ninth Symphony.[4]

The third, in B flat (op. 130), which now stands second, originally ended with a fugue of immense length and still greater obscurity, which was afterwards published separately as op. 133. It was completed in 1825, and was played in its first form on March 21, 1826. The new finale—so gay and full of spirit—was written (at Artaria's instance)[5] in great discomfort at his brother's house at Gneixendorf in November, before leaving on the journey which cost him his life. It is his last completed composition. The Quartet was published by Artaria, May 7, 1827. The relations between Beethoven and Prince Galitzin have been the subject of much controversy. It will be sufficient here to say that Beethoven is not known to have received the promised payment, and that the Quartets[6] were sold by him to the publishers already named.

Beethoven remained at Baden till October 1824. On his return to Vienna his nephew entered the University as a student in philology. The career of this worthy may be summed up in a few lines. He went in for his degree and was plucked, abandoned literature for trade, stood for the necessary examination in the Polytechnic School, and was plucked again; in despair attempted to shoot himself, and failed even to do that. He was then, as a suicide, taken charge of by the police, and after a time ordered out of Vienna at a day's notice, and at last joined the army.[7] And through it all his old uncle clung to him with truly touching affection. He, most simple-minded of men, could not believe that any one should really not desire to do his best; and so on the least appearance of contrition or amendment he forgives and embraces him, he bathes him in tenderness and confidence, only each time to find himself again deceived. The letters which this more than father wrote to his unworthy prodigal son are most affecting—injudicious no doubt, but full of tenderness and simplicity.

The first few weeks of the winter of 1824 were occupied in scoring the E flat Quartet, the composition of which had been the work of the summer, but it was hardly complete before Beethoven was taken with a severe illness in the lower part of the stomach.[8] For this he called in Staudenheim, a surgeon of eminence, who however was soon cashiered as too brusque, and replaced by Braunhofer. The malady hung about him till his next visit to the country; and its disappearance is commemorated in the *canzona di ringraziamento in modo lidico offerta alla divinità da un guarito*, which forms so noble a feature in the A minor Quartet. His stay at Baden in 1825 was of unusual length, lasting from May 3 till Oct. 15,[9] by which date that Quartet was completely finished. It had already been tried, strictly in private, as early as August at the desire of the publisher, Beethoven sitting close to the players, and perhaps profiting by the rehearsal to make many alterations; and on Nov. 6 was played, still in private but to a densely crowded room,[10] by Schuppanzigh and Linke's quartet party. Sir G. Smart visited him at Baden, Sept. 16, 1825, and dined with him. Beethoven gave him a canon. Smart is said to have asked specially about the recitatives in the Ninth Symphony.

The B♭ Quartet was his next work, and when

1 Letter of Sept. 17. Here again we are puzzled by the fact that the Quartet was sold to Schott before Prince Galitzin had either paid, or declined to pay, the sum he promised.

performed by the party just mentioned in 1826, the *Presto* and *danza tedesca*[1] were encored, but the Cavatina seems to have made no impression, and the fugue, which then served as finale, was universally condemned. In the case of the fugue his judgment agreed with that of his critics; it was published separately (op. 133) and the finale already mentioned was written; but he did not often give way to the judgments of his contemporaries. 'Your new quartet did not please,' was one of the bits of news brought to him on his death-bed by some officious friend. 'It will please them some day,' was the answer.[2]

Between the date last mentioned and October 1826 occurred the series of disasters with young Carl already alluded to; and the latter month[3] found both uncle and nephew at Johann Beethoven's residence at Gneixendorf.[4] It is a village near Krems, on the Danube, about 50 miles west of Vienna, and here his brother had settled on the property (*Gut*) which gave occasion to Ludwig's famous joke (see p. 227). The party must have been a curiously ill-assorted one. The somewhat pompous money-loving *Gutsbesitzer*; his wife, a common frivolous woman of questionable character,[5] to whose marriage Beethoven had given all the opposition in his power in 1812; the ne'er-do-weel nephew, intensely selfish and ready to make game of his uncle or make love to his aunt; and in the midst of them all the great composer—deaf, untidy, unpresentable, setting every household rule and household propriety at defiance, by turns entirely absorbed and pertinaciously boisterous, exploding in rough jokes and horse-laughter, or bursting into sudden fury at some absolute misconception;—such a group had few elements of permanence in it. But nothing could stop the wonderful flow of Beethoven's thoughts. In fact, music being to him the language of his emotions, the more agitated he was the more he composed, and his very deafness, which fortunately must have made him insensible to much that went on around him, drove him more completely into himself and compelled him to listen to the workings of his own heart unalloyed by anything external. To his deafness we no doubt mainly owe the very individual and original style of the later Quartets. Thanks to Michael Krenn,[6] who was engaged by Frau Johann to wait on him, we can see him with our own eyes. 'At half-past 5 he was up and at his table, beating time with hands and feet, singing, humming, and writing. At half-past 7 was the family breakfast, and directly after it he hurried out of doors, and would saunter about the fields, calling out, waving his hands, going now very slowly, then very fast, and then suddenly standing still and writing in a kind of pocket-book. At half-past 12 he came into the house to dinner, and after dinner he went to his own room till 3 or so; then again in the fields till about sunset, for later than that he might not go out. At half-past 7 was supper, and then he went to his room, wrote till 10, and so to bed.'

During the last three years he had been composing incessantly, and yet all that he had done seemed to him as nothing—as a mere prelude to what he was yet to do. As Newton before his death spoke of himself as 'a child picking up a few shells on the shore while the great ocean of truth lay undiscovered before him,' so does Beethoven in somewhat similar strain express himself at the close of his life:—'I feel as if I had written scarcely more than a few notes.'[7] And again—'*Nulla dies sine lineâ* . . . I hope still to bring a few great works into the world, and then, like an old child, to end my earthly course somewhere amongst good people.'[8] His wish, however, was not fulfilled; he was to die in harness. Either before leaving Vienna or immediately after it he had completed the C♯ minor Quartet, and before the end of October had finished another, that in F, which is dated with his own hand 'Gneixendorf[9] am Oktober 26.'[10] This is the work the finale of which embodies the strange dialogue between Beethoven and his cook, 'Muss es sein?—Es muss sein,' and shows how he could rise from the particular to the universal. A week or two later and he had written a fresh finale to replace the enormously long fugue which originally terminated the B♭ Quartet, and dated it 'Nov. 1826.' And this was his last work. The book which contains the last sketches for it contains fragments of a Quintet in C, and of a four-hand Sonata which had been proposed by Diabelli. By that time the fine weather, of which he speaks shortly after his arrival,[11] had departed. The economical *Gutsbesitzer* had forbidden his infirm brother a fire in his room, the food was not to his taste, and he was informed that for both food and lodging a charge would be made; so that he determined to brave the police and return with his nephew to Vienna on Dec. 2. The journey from Gneixendorf to Krems, the post town, is two German miles, but the close carriage could not be had, and Beethoven was obliged to perform it in an open chaise[12]—the weather was cold and damp, and the result was a violent cold in the stomach, which was the beginning of the end. He took to his bed on reaching the Schwarzspanierhaus. His former

physicians, Braunhofer and Staudenheim, refused to attend him, and he was in the hands of a Dr. Wawruch, who had been casually called to him by a billiard-marker at the rooms frequented by young Carl Beethoven. The cold had developed into an inflammation of the lungs, and on this dropsy supervened. Wawruch, who appears to have been a poor practitioner and a pompous pedant,[1] drenched his patient with herb decoctions, but the malady would probably have ended fatally whatever treatment had been adopted. What the poor patient most required was good nursing and comfort, and this he could not obtain till after the departure of his nephew for his regiment in the latter half of December. Then Schindler and Stephen Breuning came to his bedside, and from this time to the end Gerhard Breuning, the son of Stephen, a boy of eleven, was his constant attendant. He was first tapped on Dec. 18, then again on Jan. 8, and a third time on Jan. 28. It was during one of these operations that on seeing the water he made the characteristic remark, 'Better from my belly than from my pen.' The confidence both of Beethoven and his friends in Wawruch now became much shaken, and an application was made to Malfatti,[2] who had attended him years before, but like so many others had parted from him in anger. It was long before Malfatti would answer the appeal, and even then he would only act in conjunction with Wawruch. The treatment was now changed, and iced punch administered in large quantities as a restorative. Beethoven's faith in Malfatti was only equalled by his disgust at Wawruch. He would watch for the arrival of the former with eagerness, and welcome him as if he were an angel—whereas when Wawruch appeared he would immediately stop talking, turn his face to the wall with the exclamation 'Ach, der Esel!' and only answer his inquiries in the most grumpy manner.[3] Under the change Beethoven's spirits greatly improved, and if permitted he would at once have begun to work. This, however, was forbidden, and reading only allowed. Walter Scott was recommended him, and he began *Kenilworth*,[4] but soon threw it down with the exclamation, 'the man writes only for money.' He now made acquaintance with some of Schubert's songs[5] for the first time, and was delighted with them—'Truly Schubert has the divine fire,' were his words. Handel's works, in 40 volumes,[6] a present from Stumpff, arrived at this date, and were an unfailing source of interest to him[7] as he lay in bed. Artaria's print of an engraving of Haydn's birthplace gave him the liveliest satisfaction; his delight at receiving it, his wrath at the misspelling of the name, and his curious care in paying for it, may be read in Breuning's narrative (pp. 98-100). During the four months of his last illness he wrote and dictated many letters—twenty-four are published, some of them of considerable length, and others no doubt remain in MS.

His nephew still retained his hold on his affections. A note to Dr. Bach, his old advocate, of Jan. 3,[8] declares the lad his sole heir, and commits him to Bach's special care. He was continually tormented with anxiety as to their future maintenance. Notwithstanding Prince Galitzin's promise, dated Nov. 10/22, 1826, no portion of the money due from him on the three Quartets had yet been received. The seven bank shares he would not allow to be touched, regarding them as the property of his nephew. He therefore wrote to his friends[9] in London, urging the Philharmonic Society to carry out their old intention of giving a concert for his benefit. The reply to this was a letter from Moscheles,[10] dated March 1, sending £100 from the Philharmonic Society on account of the proceeds of a concert shortly to be given. His delight at this response was great, and his answer, dated March 18 (forwarding also the metronome marks of the Ninth Symphony), is full of warmth and enthusiasm. In this answer, dated eight days before his death, there occur the words, 'A Symphony completely sketched is lying in my desk, as well as a new Overture and other things.' This therefore was the 'Tenth Symphony.' It should, however, be remarked that a large part of the letter containing the words quoted is struck through with the pen. Three days afterwards, says Schindler (ii. 142), 'he was greatly excited, desired to have the sketches for the Tenth Symphony again brought to him, and said much to me on the plan of the work. He intended it absolutely for the Philharmonic Society.' Some sketches—whether those alluded to or not—were printed in the 1st No. of Hirschbach's *Musikalisch-kritisches Repertorium*, for Jan. 1844, with an introduction which we translate:—

'From Beethoven's sketch-books. Herr Schindler on his return from Berlin to Aix la Chapelle, not only showed many very remarkable relics of Beethoven to his friends at Leipzig, but has been good enough to allow us to publish some of them in this periodical. The following are some of the existing sketches of the Tenth Symphony and of an Overture on the name of Bach,[11] all belonging to the summer months of the year 1824, and in the order in which they were noted down.'

From the sketches for the Tenth Symphony:—[12]

1 Breuning, p. 90.
2 Malfatti was Chopin's doctor, and apparently a very good one. See Willeby's *Chopin*.
3 Breuning, pp. 92, 90.
4 Schindler, ii. 135; but see his letter in Moscheles' *Leben*, i. 144.
5 The 'Junge Nonne,' 'Die Burgschaft,' 'Der Taucher,' 'Elysium,' and the Ossian Songs are mentioned by Schindler. But of these the only one published before Beethoven's death was the first.
6 See the Sale Catalogue.
7 Breuning, p. 94.
8 Nohl. iii. 754.
9 Feb. 6 to Stumpff; Feb. 22 to Moscheles and to Smart; March 6 to Smart; and March 14 to Moscheles.
10 See the account in Moscheles' *Leben*, i. 138-75.
11 Possibly for the Overture mentioned above. These are omitted in the present reprint.
12 We have no clue as to which of the words attached to the sketches are Beethoven's, and which Schindler's.

Some further scraps of information have been kindly furnished by Mr. Thayer. 'Carl Holz told Otto Jahn that there was an Introduction to the Tenth Symphony in E♭ major, a soft piece; then a powerful Allegro in C minor. These were complete in Beethoven's head, and had been played to Holz on the piano.' Considering that the date of Beethoven's death was 1827, nearly three years after the summer of 1824, and considering also Beethoven's habit of copious sketching at works which were in his head, it is almost impossible but that more sketches than the trifles quoted above exist in some of the sketch-books. And though Nottebohm is unhappily no more, some successor to him will doubtless be found to decipher and place these before us.[1] Meantime a fourth tapping had taken place on Feb. 27, and a great discharge was caused by his emotion at the receipt of Moscheles' letter on March 17. Rau, writing to Moscheles this very day, found him more like a skeleton than a living being.[2]

During his illness he had a few visitors besides Schindler and the two Breunings, who were his daily attendants, and Holz, who came frequently. Breuning mentions Johann Beethoven and the nephew (in the early part of the time only), Tobias and Carl Haslinger, Diabelli, worrying about his four-hand Sonata,[3] Baron Eskeles, Rauch, Dolezalek, Clement. Strangers occasionally arrived, amongst whom Hummel with his pupil Ferdinand Hiller, then a boy of fifteen, who saw[4] him on March 8, are worthy of note. But the friends of his earlier days—Fries, Erdödy, Ertmann, Brunswick, Gleichenstein, Zmeskall, Seyfried, the Streichers, Czerny, Schuppanzigh, Linke—those who had been honoured by his dedications, or had reaped the glory of producing his compositions—were either dead or otherwise occupied; at any rate none appeared. The absence of all trace of the Archduke Rudolph at this time, or of any reference to him in the correspondence of the last few years, is very remarkable.

Neither Beethoven himself nor any of his friends seem to have been aware that death was near. His letter to Moscheles of March 18 is full of projects, and a conversation reported by Breuning[5] shows that he contemplated, in addition to a Tenth Symphony, a Requiem, Music to 'Faust,' and an instruction book for the Piano—'to be something quite different from that of any one else.' To Moscheles he speaks of the Symphony as lying 'in his desk fully sketched,'—much as Coleridge used to talk of works as complete of which the title-pages only had been put on paper; for nothing which can be identified with the description has been found. Indeed, the time of both projects and fulfilment was over—the night was come in which no man can work. The accumulation of water increased alarmingly, the wounds inflamed, lying became painful, and it was evident that the end was near. On the 10th he wrote to Schott desiring the dedication of the C♯ minor Quartet to be altered in favour of Baron von Stutterheim, in token of his obligation to him as colonel of his nephew's regiment. [On the 17th were written his 'letzte Zeilen au Schindler.'[6]] On the 18th, after dictating his letter to Moscheles, he settled the dedication of his last Quartet (in F, op. 135) to Johann Wolfmayer,[7] a Vienna merchant for whom he had much respect. On the following day he spoke of writing to Stumpff and Smart, but was compelled to relinquish the task to Schindler. '*Plaudite amici, comoedia finita est*,' said he to his two faithful friends, with a touch of his old good-humour—the play was over, the lifelong symphony ended, and it was time to draw the

curtain.[1] On the 23rd, with the help of Breuning, he added with his own hand a codicil to his will, appointing his nephew Carl his sole heir, but without power over the capital of the property bequeathed. Thus two of his latest acts were inspired by his nephew. Several people appear to have come in and out during the last few days to look once more at the departing composer. Amongst these Schubert is said to have remained a long time, and to have been recognised by Beethoven, though he failed to understand the signs made by the dying man. [He left the room at length deeply moved. Beethoven spoke of the Philharmonic and the whole English nation, adding, 'God bless them.' An hour or so afterwards some wine came from Mainz. Schindler put two bottles before the bed:—'A pity, a pity, too late,' said he, and these were his very last words.[2]] On the 24th Beethoven received the Sacraments of the Roman Church, and at about one in the afternoon of the same day he sank into apparent unconsciousness, and a distressing conflict with death began which lasted the rest of that day, the whole of the next, and until a quarter to six on the evening of the 26th, the constant convulsive struggle and the hard rattle in the throat testifying at once too painfully to the strength of his constitution and the fact that he was still alive. Stephen Breuning and Schindler had gone to the Währinger Cemetery to choose the spot for the grave; the little Breuning was away at his lessons; Johann Beethoven's wife and Anselm Hüttenbrenner (the friend of Schubert) alone[3] were in the sick room. As the evening closed in, at a quarter to six, there came a sudden storm of hail and snow, covering the ground and roofs of the Schwarzspanierplatz, and followed by a flash of lightning and an instant clap of thunder. So great was the crash as to rouse even the dying man. He opened his eyes, clenched his fist, and shook it in the air above him. This lasted a few seconds while the hail rushed down outside, and then the hand fell, and the great composer was no more.[4]

Beethoven died on Monday, March 26, 1827. He was fifty-six years old on the 16th of the previous December.

The seven bank shares (for 1000 florins each) were discovered the next day, after long search, in a secret drawer in the writing-desk, together with the two passionate and mysterious letters so often supposed—though to all appearance inaccurately—to be addressed to the Countess Giulietta Guicciardi.[5]

The post-mortem examination was made on the evening of the 27th by Dr. Wagner in the presence of Wawruch. During the 28th the body lay in one of the rooms, and a sketch[6] of the face was made by Danhauser.

The funeral took place on the 29th at 3 P.M., and was attended by an immense mass of people, including all the musicians of the city. From the house[7] to the Church of the Minorites, in the Alsergasse on the glacis, a procession[8] was formed, in which Breuning, Johann van Beethoven, and Mosel, were chief mourners; the coffin was borne by eight members of the Opera, namely Eybler, Hummel, Seyfried, Kreutzer, Weigl, Gyrowetz, Gänsbacher, and Würfel, and 36 torch bearers—including Czerny, Lablache, Grillparzer, Wolfmayer, and Schubert—round it. A choir of 16 men singers and 4 trombones alternately sang and played two *Equali* of Beethoven's, originally written for trombones for All Souls' Day during his stay in Linz, and arranged to the words of the 'Miserere' and 'Amplius' by Seyfried. The crowd was enormous,[9] soldiers had to be called in to force the way, and it took an hour and a half to pass the short distance from the house to the church. From the church the body was taken in a hearse drawn by four horses, and without music, to the Währinger cemetery, followed by a long string of carriages and many people.

At the gate of the cemetery an address by Grillparzer was recited by Anschütz—who being an actor was not permitted to speak on consecrated ground—and two poems by Castelli and Schlechta were read and distributed. Before the earth was filled in three laurel wreaths were placed on the coffin by Hummel. The grave was against the south wall of the cemetery, near the middle. Schubert was three places off, and Clement and Seyfried lie nearly opposite.

On April 3, the furniture and clothes, with the pianos by Graf and Broadwood, were sold by auction[10] at the lodgings. The same day a solemn mass was performed in the Hofpfarrkirche of the Augustines; Mozart's Requiem was sung, Lablache not only taking the bass part but paying Barbaja a sum of 200 gulden for the cost of the singers. Two days later Cherubini's Requiem was sung at the Karlskirche.

On Nov. 5 and following days[11] the sale of his musical effects took place by auction. Thayer has reprinted the catalogue in his *Verzeichniss*, pp. 173-182. There were 50 lots of sketch- and note-books; 19 sketches, fragments, etc., and 73 autographs of published pieces; 5 MS. copies of published pieces; 40 copies of unpublished works; 10 sets of MS. parts; 17 MS. copies of music by various authors—including scores of Cherubini's 'Faniska' and Mozart's 'Zauberflöte'; 26 lots of printed

1 Rabelais dying said, 'Je m'en vais chercher un grand Peut-être . . . tirez le rideau, *la farce est jouée.*' Two great humourists: but the meanings of the two were quite different.

4 Within a few hours his hair was entirely cut off by visitors (Breuning, p. 113).

5 [See, however, Kalischer's *Die Unsterbliche Geliebte.*]

6 Breuning, p. 113. Afterwards lithographed, but now rare owing to the stone having broken.

7 At the back of the Schwarzspanierhaus lies the Alsergrund. It is a curious fact that his last lodging should have been close to his supposed first one (Th. ii. 103).

8 As it rounded the Red House the Funeral March from op. 26 was played (Breuning, p. 115). 9 20,000, says Breuning.

10 [Only the Broadwood, see Breuning, p. 124.]

11 *Ibid.* 125. The catalogue and valuation are dated Aug. 16.

music; 6 of works on music; 1 autograph symphony of Haydn's; a pianoforte; a medal; and two violins. The produce of the sale was 1193 florins, curiously little[1] when compared with the prices which such treasures would fetch now. This sum, added to the value of the bank shares and the Philharmonic £100, made in all, according to Schindler,[2] a total of 10,232 florins (in silver), or a little over £1000.

In course of time the grave fell into neglect, and in 1863 the Gesellschaft der Musikfreunde undertook to exhume and re-bury[3] the remains of both Beethoven and Schubert. This was done on Oct. 13, and Beethoven's monument now consists of a large flat stone covering the grave, surrounded by an iron railing, and headed by an obelisk in stone bearing a lyre, the usual emblem of eternity, and the simple name BEETHOVEN.[4]

Beethoven's music has been divided by Herr von Lenz[5] into three styles, and the division has evidently some justice in it, or it would not have been so widely accepted as it is even by those who differ about its details. That the division is not chronological is evident from the fact that Lenz includes the Second Symphony (op. 36), written in 1802, in the first period, while he places the Sonatas op. 26 and 27, which were completed a year earlier, and the 3 Sonatas op. 31, which were written in company with the Second Symphony, in the second period. As far as the Sonatas are concerned he ends the first period with op. 22.

But we may go further than that. The first movement of the Sonata in E♭ (op. 7) and the Finale of the Quartet in F, op. 18, No. 1, contain examples of the episodes which form one of Beethoven's main characteristics, such as even the first movement of the Eroica can hardly surpass for independence and originality. The Scherzo of Symphony No. 1 and the Scherzo and Finale of Symphony No. 2 contain passages which would be found original and characteristic if met with in the compositions of many years later. Some will find it hard to place the Quartet in F minor, which Mendelssohn thought the most *Beethovenish* of all Beethoven's works, in anything but the third style; while the overture in C, op. 124, written in 1822, might be classed with the works of an earlier period. And yet on the whole the division is just, as an expression of the fact that Beethoven was always in progress; and that, to an extent greater than any other musician, his style matured and altered as he grew in life. He began, as it was natural and inevitable he should, with the best style of his day—the style of Mozart and Haydn; with melodies and passages that might be almost mistaken for theirs, with compositions apparently moulded in intention[6] on them. And yet even during this Mozartian epoch we meet with works or single movements which are not Mozart, which Mozart perhaps could not have written, and which very fully reveal the future Beethoven. Such are the first two movements of the Sonata in A (op. 2), the Sonatas in E♭ (op. 7) and D (op. 10, No. 3) and B♭ (op. 22), the Scherzos of the First and Second Symphonies already mentioned, and the Coda of the Finale to the Second Symphony. From this youthful period he passes by the three Sonatas op. 31—which we have seen him speaking of as a change in his style—by the Kreutzer Sonata (March 1803), by the Pianoforte Concerto in C minor,[7] and by the Eroica (1804), to his mature period, a time of extraordinary greatness, full of individuality, character, and humour, but still more full of power and mastery and pregnant strong sense.

This splendid and truly astonishing period contains the opera of 'Leonora-Fidelio,' with its four overtures; the Mass in C; six Symphonies, from the Eroica to No. 8 inclusive; the overture to 'Coriolan'; the 'Egmont' music; the Pianoforte Concertos in G and E flat; the Violin Concerto; the Rasoumowsky Quartets, and those in E♭ (op. 74) and F minor (op. 95); the three later PF. Trios; the Liederkreis; and last, not least, a dozen Sonatas for Piano solo, of which the chief are the D minor and the 'Appassionata,' though the others are closely akin and hardly inferior.

From this period of extraordinary force and mastery—though abounding also in beauty and sentiment—he passes by a second transition to his third and final style. This transition is perhaps more obvious than the former. The difference between the Ninth Symphony and its predecessors—not only in dimensions and in the use of the chorus, but in elevation and sentiment, and in the total impression produced—is unmistakable. The five Pianoforte Sonatas, op. 101 to 111, are perfectly distinct from any of the earlier ones, not only in individuality—for all Beethoven's works are distinct—but in a certain wistful yearning, a sort of sense of the invisible and vision of the infinite, mingled with their power. The last Quartets, op. 127 to op. 135, have the same characteristics as the Sonatas; but they are also longer, full of changes of time, less observant than before of the traditional forms of expression, less careful to make obvious the links of connection, and

[1] Autographs of Symphonies fetched 5 florins each; Overtures, 2½; Sonatas, 2; the Mass in D, 7; and so on.

[6] Sonata, op. 10, No. 1; melody in working out of 1st movement of Septet; Adagio of op. 31, No. 1; Quintet, op. 16.

[7] In the Finale of this work we almost surprise the change of style in the act of being made.

still more full of intense personality and of a wild unimprisoned spirit. All the sentiment and earnestness of Schumann, all the grace and individuality of Schubert, are there, with an intensity, breadth, and completeness which those masters might perhaps have attained if they had bestowed the time and pains on their work which Beethoven did. In this period he passes from being the greatest musician to be a great teacher, and in a manner which no one ever did before, and possibly no one will ever do again, conveys lessons which by their intense suggestiveness have almost the force of moral teaching. The cause of this is not far to seek. As we have seen in the preceding portion of this sketch, the year 1814 was the culminating period of Beethoven's prosperity. He had produced his latest and then greatest works under such favourable circumstances as no musician had before enjoyed. He had been fêted and caressed by emperors and empresses, and others of the greatest of this world's great; he had for the first time in his life been able to put by money, and feel at all independent of daily labour. Immediately on this came an equally great and sudden reverse—and that not a material reverse so much as a blow to his spirit, and a series of misfortunes to mind and heart such as left all his former sufferings far behind. His brother's death; the charge of the nephew; the collision with the widow and with his other relatives and friends; the lawsuits; the attempts to form a home of his own, and the domestic worries and wretchedness consequent thereon; the last stages of his deafness; the appearance of chronic bad health; the actual want of money—all these things, which lasted for many years, formed a Valley of the Shadow of Death such as few men have been called to traverse, and which must inevitably have exercised a great influence on a nature so sensitive and in some respects so morbid. That this fiery trial did not injure his power of production is evident from the list of the great works which form the third period—from op. 101 inclusive. That it altered the tone and colour of his utterance is equally evident from the works themselves. 'He passes,' as Mr. Dannreuther has finely[1] said, 'beyond the horizon of a mere singer and poet, and touches upon the domain of the seer and the prophet; where, in unison with all genuine mystics and ethical teachers, he delivers a message of religious love and resignation, identification with the sufferings of all living creatures, deprecation of self, negation of personality, release from the world.'

Beyond the individual and peculiar character which distinguishes his works and makes them Beethovenish, as Haydn's are Haydnish and Mozart's Mozartish, though in a greater degree because of the stronger character of the man—there are definite peculiarities in Beethoven's way of working which should be specified as far as possible. That he was no wild radical, altering for the mere pleasure of alteration, or in the mere search for originality, is evident from the length of time during which he abstained from publishing or even composing works of pretension, and from the likeness which his early works possess to those of his predecessors. He began naturally with the forms which were in use in his days, and his alteration of them grew very gradually with the necessities of his expression. The form of the sonata is 'the transparent veil through which Beethoven seems to have looked at all music.'[2] And the good points of that form he retained to the last—the 'triune[3] symmetry of exposition, illustration, and repetition,' which that admirable method allowed and enforced—but he permitted himself a much greater liberty than his predecessors had done in the relationship of the keys of the different movements and parts of movements, and in the proportion of the clauses and sections with which he built them up. In other words, he was less bound by the forms and musical rules, and more swayed by the thought which he had to express, and the directions which that thought took in his mind.

1. The range of keys within which the composers of sonatas and symphonies before Beethoven confined themselves was very narrow. Taking the first movement as an example of the practice, the first theme was of course given out in the tonic, and this, if major, was almost invariably answered in due course by a second theme in the 'dominant' or fifth above; for instance, if the sonata was in C the second subject would be in G, if in D it would be in A. If the movement were in minor, the answer was in the relative major—C minor would be answered by E♭, A minor by C♮, and so on. This is the case 19 times out of 20 in the sonatas and symphonies of Haydn and Mozart. A similar restriction governed the key of the second movement. It was usually in the 'subdominant' or fifth below—in F if the key of the piece were C, in B♭ if the key were F, and so on. If the piece were in a minor key the second movement was in the third below. A little more latitude was allowed here than in the former case; the subdominant now and then became the dominant, or, very rarely, the 'mediant' or third above; and the relative major was occasionally exchanged for the tonic major.

Beethoven, as already remarked, adopted very different relations in respect of the change of key from one movement to another. Out of 81 works in sonata form he makes the transition to the dominant only 3 times; to the subdominant 19 times; to the mediant or third above 4 times;

[1] *Macmillan's Magazine*, July 1876. [In these and the following quotations, Sir George Grove paraphrased Mr. Dannreuther's words, instead of quoting them *verbatim*.]

[2] Wagner.

[3] *Macmillan's Magazine*, July 1876.

and to the submediant or third below 30 times. From tonic major to tonic minor he changes 12, and from minor to major 8 times. His favourite change was evidently to the submediant or third below—that is to say, to a key less closely related to the tonic and more remote than the usual key. He makes it in his first work (op. 1, No. 2). In his B♭ Trio (op. 97) he has it twice, and in his Variations on an original theme (op. 34), each of the first 5 variations is a third below the preceding.

In the relation of his first and second subjects he is more orthodox. Out of 26 of the Pianoforte Sonatas the usual change to the dominant occurs 17 times, to the mediant 3, and to the submediant 3.

2. Another of his innovations had respect to the connection of the different subjects or clauses. His predecessors were in the habit rather of separating their clauses than of connecting them; and this they did by conventional passages of entirely different character from the melodious themes themselves, stuffed in between the themes like so much hay or paper for mere packing. Any symphony of Mozart or Haydn will give examples of this, which Wagner[1] compares to the 'rattling of the dishes at a royal feast.' Mozart also has a way of drawing up and presenting arms before the appearance of the second subject, which tends to cut the movement up into very definite portions. Of these tiresome and provoking intermediate periods Beethoven got rid by the use of phrases which are either parts of the main theme or closely related to it; and he thus gives his movements a unity and consistency as if it were an organic growth, and not a piece of work cunningly put together by art or man's device. How he effects this, and the very tentative and gradual way in which he does it, may be seen in Symphonies 1 and 2 and the Eroica, in which last all trace of the old plan has almost entirely disappeared.

3. The first movement of the Eroica supplies instances of other innovations on the established forms. Not only in the 'exposition' (before the double bar) are other themes brought in besides the two main subjects, but in the 'illustration,' or, to use the more common term, the 'working out,' there is an unanticipated explosion which, to say the least, is entirely without precedent, followed by an entirely fresh episode as important as anything that has occurred before, and that again by a new feature (the staccato bass) which, while it accompanies and reinforces the main subject, adds materially to the interest of the music. Again, in the 'repetition' we have not only a great departure from regular rule in the keys which the music goes through, but we have a coda of no fewer than 140 bars long, proclaiming itself by its opening as an independent member of the movement, and

[1] *Music of the Future*, translated by Dannreuther, 1873, p. 44.

though made almost entirely out of previous material, yet quite differently expressed from anything before, and full of fresh meaning. Now none of these alterations and additions to the usual forms were made by Beethoven for their own sake. They were made because he had something to say on his subject which the rules did not give him time and space to say, and which he could not leave unsaid. His work is a poem in which the thoughts and emotions are the first things, and the forms of expression second and subordinate. Still, even in his innovations, how careful he is to keep as near the rules as possible! His chief episodes occur in the working out, where a certain license was always lawful; and codas were recognised, and had even, as in Mozart's 'Jupiter,' been turned to noble account. The same characteristics are found in the Ninth Symphony as in the Third, only the mode of mind being entirely different, the mode of expression is different too, but the principle of the perfect subordination of the expression to the thought, while adhering as closely to the 'form' as was consistent with perfect expression, is the same. One or two pieces of his second period may however be named, in which both thought and mode of expression are so entirely different from anything before them, that they stand quite by themselves. Such movements as the opening Adagio of the Sonata in C♯ minor, or the Andante con moto of the Pianoforte Concerto in G—in which Schumann used to see a picture of Orpheus taming brute-nature—have no prototypes; they are pure creations, founded on nothing previous, but absolutely new in style, idea, and form.

In the later Quartets it must be admitted that he wandered further away from the old paths; the thought there seems everything and the form almost nothing. And this fact, as much as the obscurity and individuality of the thoughts themselves and their apparent want of connection until they have become familiar, is perhaps the cause that these noble works are so difficult to understand. The forms, depend upon it, were founded in reason and nature. They grew through long periods to be what Haydn fixed them at; and as long as the thoughts of composers did not burst their limits they were perfect. Beethoven came, and he first enlarged and modified them, adhering however to their fundamental principle of recurrence and recapitulation, till in the end, withdrawn more and more into himself by his deafness, he wrote down what he felt, often without thinking of the exigencies of those who were to hear him. This however only applies to the later Quartets. The Ninth Symphony and the last Pianoforte Sonatas are as strictly in form, and as coherent and intelligible, as could be desired.

4. A striking instance of this loyalty is found in Beethoven's treatment of the 'Introduction.'

This—a movement in slow time, preceding the first *Allegro*—forms part of the original design of the overture by Lully, and is found in nine out of ten of Handel's overtures. Haydn often has one in his symphonies, usually 8 to 12 bars long, occasionally as much as 20. Mozart has prefixed similar prefaces to some of his works, such as the Symphony in E flat, the Quintet for Piano and Wind instruments, and the famous Quartet in C, dedicated to Haydn. Beethoven, besides placing one before his Quintet for Piano and Wind (op. 16), which, as already remarked, is like a challenge to Mozart, has one to the Sonata Pathétique and to the First Symphony. In the last of these cases it is 12 bars long. In the Second Symphony it expands to 33 bars long, and increases largely in development. But even this is a mere preface when compared with the noble and impressive movements which usher in the *Allegros* of the Fourth and Seventh Symphonies—long and independent movements, the latter no less than 80 bars in length, full of important and independent ideas, and of the grandest effect.

In all the instances mentioned—the Succession of Keys, the Episodes, the Coda, the Introduction—Beethoven's modifications seem to have sprung from the fact of his regarding his music less as a piece of technical performance than his predecessors had perhaps done, and more as the expression of the ideas with which his mind was charged. The ideas were too wide and too various to be contained in the usual limits, and therefore the limits had to be enlarged. He regards first what he has to say—his thought—and how he shall convey and enforce and reiterate that thought, so as to express it to his hearer exactly as he thinks it, without being careful to find an old formula in which to couch it. Even consecutive fifths were no hindrance to him—they gave the exact sound in which he wished to convey his idea of the moment; and therefore he used them as naturally as a speaker might employ at a particular juncture, with the best effect, an expression usually quite inadmissible. No doubt other musicians had taken similar liberties; but not to the same extent, because no one before had been gifted with so independent and original a nature. But in Beethoven the fact was connected with the peculiar position he had taken in society, and with the new ideas which the general movement of freedom at the end of the 18th century, and the French Revolution in particular, had forced even into such strongholds as the Austrian courts. People who were the servants of archbishops and princes, and moved about with the rest of the establishment in the train of their master, who wore powder and pigtail and red-heeled shoes, and were forced to wait in ante-rooms and regulate their conduct strictly by etiquette, and habitually keep down their passions under decorous rules and forms, could not give their thoughts and emotions the free and natural vent which they would have had without the perpetual curb of such restraints and the habits they must have engendered. But Beethoven, like Mirabeau, had 'swallowed the formulas' of the day; he had thrown over etiquette, and, *roturier* as he was, lived on absolute equality with the best aristocracy of Vienna. What he felt he said, both in society and in his music, and the result is before us. The great difference is, as we have already remarked, that whereas in his ordinary intercourse he was extremely abrupt and careless of effect, in his music he was exactly the reverse: painstaking, laborious, and never satisfied till he had conveyed his ideas in unmistakable language.

5. The Scherzo stands perhaps in a different category from the three features already mentioned. It is less of a modification and more of a distinct new creation. The word is met with in Haydn and Mozart, but in a different sense from that in which Beethoven uses it, and apparently neither of those masters has it in a symphony. To both of them the third movement of a symphony was a minuet. All that a minuet could be made they made of it, but it was never given them to go beyond. The minuet remained a dance tune to the end of its days, and is so even in Beethoven's No. 8 Symphony. In fact Haydn actually lamented that he could not make more of it than he had. When discussing a rule of Albrechtsberger's by which fourths were prohibited in strict composition, he said,[1] 'Such trifling is absurd; I wish, instead, that some one would try to compose a really new minuet.' This Beethoven did. The third movement of his First Symphony is what Haydn wished to see.[2] Though labelled 'menuetto,' it is quite unlike a minuet. It is in fact a scherzo, and in its little dimensions is the pattern and model of those gigantic movements which in the Eroica, the C minor, the No. 7, and especially the No. 9 of the Symphonies; in the B flat Trio; in the Sonata, op. 106; and the first of the Rasoumowsky Quartets, are so truly astonishing, and so characteristic of their great author.

6. An innovation of great importance in the Finale, for which no precedent can be found, was the introduction of the Chorus. In the Eroica Symphony Beethoven showed how a set of orchestral variations could be employed in a finale. In the Choral Fantasia again he showed with what effect a chorus could be employed in the same part of the work. But in the Ninth Symphony he combined the two, by using the chorus in a succession of variations. Mendelssohn has followed his example in the 'Lobgesang,' the vocal portion of which is the last

[1] *Griesinger*, p. 114.

[2] One would like to know if Haydn ever heard the First or any other of Beethoven's Symphonies, and whet his real feelings were about them. He lived on till 1809, and might thus have heard the Eroica and even the C minor.

movement of a Symphony; but he has not adopted the Variation-form.

7. One of the most striking characteristics of Beethoven's music is the individual variety of each piece and each movement. In the Symphonies every one of the nine first movements is entirely distinct from the other eight, and the same of the andantes, scherzos, and finales. Each is based on a distinct idea, and each leaves a separate image and impression on the mind. And the same may be said of the majority of the smaller works, of the concertos and quartets and pianoforte trios—certainly of the sonatas, all but perhaps a very few. The themes and passages have no family likeness, and have not the air of having been taken out of a stock ready made, but are born for the occasion. He thus very rarely repeats himself. The theme of the slow movement of the Sonata in F minor and the second theme in the first movement of the Sonata in C (op. 2, Nos. 1 and 3) are adapted from his early pianoforte quartets. The minuet in the Septet is developed from that in the little Sonata in G (op. 49, No. 2). The Turkish March[1] in the 'Ruins of Athens' had already appeared as a theme for Variations in D (op. 76). The theme of the Variations in the Choral Fantasia is a song of his own, 'Seufzer eines Ungeliebten' (B. & H. 253), composed many years before. The melodies of two Contretänze (No. 17*a*) are employed in the Prometheus music, and one of them is also used in a set of Variations (op. 35) and in the Finale to the Eroica. In the Finale to the Choral Fantasia there are some slight anticipations of the Finale to the Choral Symphony; the Prometheus music contains an anticipation of the storm in the Pastoral Symphony, and the subject of the Allegretto to the Eighth Symphony is found in a humorous Canon —such are all the repetitions that have been detected. How far he employed *Volkslieder* and other tunes not invented by himself is not yet known. [The Russian themes in the 'Rasoumowsky' quartets are the most prominent instances. See RASOUMOWSKY.] Certain melodies in the Eroica, Pastoral, and No. 7 Symphonies, and in the Sonata, op. 109, are said to have been thus adopted, but at present it is mere assertion.

This is perhaps the most convenient place for noticing a prominent fact about his own melodies, viz. that they often consist wholly or mainly of consecutive notes. This is the case with some of the very finest themes he has written, witness the Scherzo and Finale to the Choral Symphony; and that to the Choral Fantasia; the slow movements of the B♭ Trio and the Symphony in the same key; the Adagio to the Quartet op. 127, and many others.[2]

8. In the former part of this sketch we have mentioned the extraordinary manner in which Beethoven wrote and rewrote until he had arrived at the exact and most apt expression of his thought. The same extraordinary care not to be mistaken is found in the *nuances*, or marks of expression, with which his works are crowded, and which he was the first to introduce in such abundance.[3] For instance, to compare the 'Jupiter' Symphony—Mozart's last—with Beethoven's first, we shall find that the violin part of the first half of the opening *Allegro* has in the former (120 bars long) 14 marks of expression, in the latter (95 bars) 42 marks. The Andante to Mozart's Symphony in G minor has 38 marks to 131 bars, while that to Beethoven's No. 2 has 155 marks to 276 bars. In the later works this attention to *nuance* increases. The Allegro agitato of the Quartet in F minor, 125 bars long, contains 95 marks; the Cavatina in the Quartet in B♭, 66 bars long, contains 58 marks. It is part of the system of unwearied care and attention by which this great man, whose genius was only equalled by his assiduity, brought his works to their actual perfection, and to the certainty that they would produce what he himself calls *il suo proprio proposto effetto*[4]—their own special and intended effect. How original and splendid the effect of such *nuances* can be may be seen in the *Vivace* of the No. 7 Symphony, where the sudden change from *ff* to *pp*, accompanying an equally sudden plunge in the melody and abrupt change in the harmony, produces a wild romantic effect which once to hear is never to forget.

In addition, Beethoven here and there gives indications such as the 'Bitte um innern und äussern Frieden' at the 'Dona' in the Mass in D, the 'beklemmt' in the Cavatina of the B♭ Quartet, the 'Arioso dolente' of Sonata op. 110, which throw a very personal colour over the piece. The word 'Cantabile' has a special meaning when he employs it.

9. Beethoven used Variations to a very great extent. For the Pianoforte, alone and in conjunction with other solo instruments, he has left 29 sets, some on original themes, some on airs by other composers. But besides these, several movements in his Sonatas, Quartets, and Trios are variations, so entitled by him. Every one will remember those in the Septet, in the 'Harp' Quartet, in the Kreutzer Sonata, in the Solo Sonata in A flat (op. 26), and in the two late Sonatas in E and C minor (op. 109 and 111). Many other movements in the same branches of composition are variations, although not so named. The slow movements in the Sonata 'appassionata' and the op. 106 are splendid instances. In the Symphonies the slow movements of the C minor, the Pastoral and the Ninth, are magnificent examples, the last the most splendid of all—while the colossal Finales

1 [Said to be a Russian theme.]

2 The practice began early. See the second subject of the Finale of the Trio in C minor, op. 1, No. 3.

3 This care is found very early in his life. Mention is made in the Suppl. Vol. of the B. and H. edition of the 'careful exactness in the marks of expression which characterises the autograph of the Flute Trio (1786).'

4 Preface to the Eroica.

of the Eroica and the Ninth Symphony are also variations, though of a very different order from the rest and from each other. Of the lowest and most obvious type of variation, in which the tune remains *in statu quo* all through the piece, with mere changes of accompaniment above, below, and around it—the Herz-Thalberg type—the nearest approach to be found in Beethoven's works is the fifth variation in op. 26. His favourite plan is to preserve the harmonic basis of the theme and to modify and embellish the melody. Of this type he makes use with astonishing ease and truly inexhaustible originality. It is to be found in some shape or other in nearly every work of his second and third periods. It is not his own invention, for fine instances of it exist in Mozart and Haydn, but no one practised it with such beauty and nobility as he did, unless it be Schubert, who at any rate approaches very near him in its use. Perhaps the finest instance of it is in the Adagio of the Ninth Symphony, in which the melody is varied first in common time and then in 12–8, with a grace, beauty, and strength which are quite unparalleled. There is, however, a third [1] kind of variation which is all Beethoven's own, in which everything undergoes a change—rhythm, melody, and harmony—and yet the individual theme remains clearly present. 'Perhaps one melodious step only of the subject is taken (op. 109; var. 1 and 5); perhaps the fundamental progressions of the harmony alone are retained; perhaps some thorough rhythmical alteration is made, with an entire change of key, as in the *Poco Andante*, Finale of Eroica; in the B♭ variation *alla marcia*, of the Ninth Symphony; and in many of the thirty-three Variations. This is no mere change of dress and decoration, but an actual creation of something new out of the old germ—we see the chrysalis change into the butterfly, and we know it to be the same creature despite the change.' 'In no other form than that of the Variation,' continues Mr. Dannreuther, 'does Beethoven's creative power appear more wonderful, and its effect on the art more difficult to measure.'

10. Of Fugues Beethoven wrote but few, and those near the end of his career, but he always knew how to introduce a *fugato* or bit of contrapuntal work with the happiest effect. Witness a passage in the working out of the first movement of the Eroica Symphony, and another in the Finale of the same work; or in the middle portion of the Allegretto of No. 7; or the lovely counterpoint for the Bassoon in the opening of the Finale of No. 9. Of complete fugues the only instrumental ones are the finale to the 3rd of the Rasoumowsky Quartets; the finales to the Cello Sonata op. 102, No. 2, and the Solo Sonatas op. 101, 106, and 110; and the enormous movement in B flat which originally formed the termination to the great String Quartet in the same key. Of the last-named fugue one has no opportunity of judging, as it is never played; [2] but of the others, especially those in the Solo Sonatas, it may be safely said that nothing in the whole of Beethoven's music is associated with a more distinct dramatic intention, whether it be, as has been suggested, [3] a resolution to throw off an affection which was enthralling him, or some other great mental effort.

11. Beethoven did not originate 'programme music,' for Bach left a capriccio describing the departure of his brother; and two symphonies are in existence by Knecht—a countryman of Beethoven's, and a few years his senior—entitled 'Tableau musical de la nature,' and 'La joie des Bergers interrompue par l'orage,' which are not only founded on the same idea with his Pastoral Symphony, but are said [4] to contain somewhat similar themes and passages. But, though he did not invent it, he raised it at once to a higher level than before, and his programme pieces have exercised a great effect on the art. 'When Beethoven had once opened the road,' said Mendelssohn, 'every one was bound to follow'; and it is probable that without his example we should not have had Mendelssohn's overtures to 'The Hebrides' or to the 'Meeresstille und glückliche Fahrt.' His works in this line, omitting all which did not receive their titles from himself, are:—the 'Sonata pathétique'; 'La Malinconia,' an adagio in the String Quartet, No. 6; the 'Eroica' Symphony; the 'Pastoral' ditto; the 'Battle of Vittoria'; the Sonata 'Les Adieux, l'Absence et le Retour'; the movements in the A minor quartet (op. 132), entitled 'Canzona di ringraziamento in modo lidico offerta alla divinità da un guarito,' and 'Sentendo nuova forza'; the movement in the F major Quartet (op. 135), entitled 'Der schwergefasste Entschluss: Muss es sein?—Es muss sein'; and a Rondo a capriccio for Piano (op. 129), the MS. of which is entitled by the composer 'Die Wuth über den verlornen Groschen ausgetobt in einer Caprice.' Beyond these Beethoven made no acknowledged attempts to depict definite scenes or moods of mind in instrumental music. We have already (p. 235) quoted Schindler's statement that Beethoven intended the Sonatas in op. 14 to be a dialogue between two lovers, and to represent the 'entreating and resisting principle'; and the Sonata in E minor (op. 90) is said to have had direct reference to the difficulties attending Moritz Lichnowsky's passion for the actress whom he ultimately married. The first movement was to have been called 'Kampf zwischen Kopf und Herz,' and the second, 'Conversation mit der Geliebten.' But none of these titles were directly sanctioned by Beethoven himself. In the programme of the concert of Dec. 22, 1808, at which the Pastoral

[1] Mr. Dannreuther in *Macmillan*.

[2] [It was however played by the Heckmann Quartet, in Dec. 1887 at Prince's Hall.]

[3] Mr. Davison's Analysis of the Sonata op. 106.

[4] Fétis, *Biographie*, s.v. Knecht.

Symphony was produced, he prefixed the following words to the description of the Symphony:—'Pastoral Symphonie: mehr Ausdruck der Empfindung als Malerei'—'more expression of emotions than portraiture,' a canon which should surely be taken as the guide in interpreting all similar works of his.

We have now endeavoured to give the main external characteristics of Beethoven's music; but the music itself, though it resides in them, is beyond and above them all. 'While listening,' says Mr. Dannreuther, 'to such works as the Overture to Leonora, the Sinfonia Eroica, or the Ninth Symphony, we feel that we are in the presence of something far wider and higher than the mere development of musical themes. The execution in detail of each movement and each succeeding work is modified more and more by the prevailing poetic sentiment. A religious passion and elevation are present in the utterances. The mental and moral horizon of the music grows upon us with each renewed hearing. The different movements—like the different particles of each movement—have as close a connection with one another as the acts of a tragedy, and a characteristic significance to be understood only in relation to the whole; each work is in the full sense of the word a revelation. Beethoven speaks a language no one has spoken before, and treats of things no one has dreamt of before: yet it seems as though he were speaking of matters long familiar, in one's mother tongue; as though he touched upon emotions one had lived through in some former existence. . . . The warmth and depth of his ethical sentiment is now felt all the world over, and it will ere long be universally recognised that he has leavened and widened the sphere of men's emotions in a manner akin to that in which the conceptions of great philosophers and poets have widened the sphere of men's intellectual activity.' [1]

The Beethoven literature is very large. I shall confine myself to mentioning those portions of it which appear to have real value for the investigator.

I. His own letters. Of these there are several collections. (1) *Briefe Beethovens* (Stuttgart, 1865), edited by Dr. Nohl: contains 411. (2) 83 . . *Originale Briefe L. v. B.'s an den Erzherzog Rudolph*, edited by Köchel (Vienna, 1865). (3) *Briefe von B. an Gräfin Erdödy und Max Brauchle*, edited by Schöne (Leipzig, 1867). The last two were included with many others in a further collection of 322 'Neue Briefe Beethovens,' edited by Nohl (Stuttgart, 1867). (4) Nohl's first collection and 66 of the letters to the Archduke were translated (I wish I could say carefully translated) by Lady Wallace, and published by Longmans (2 vols. 8vo. 1866). [(5) *Neue Beethovenbriefe*, edited by Dr. A. C. Kalischer (Berlin and Leipzig, 1902).]

Other letters are given by Thayer in his *Beethovens Leben*, and by Pohl in *Die Gesellschaft der Musikfreunde* (Vienna, 1871), and many others exist in MS. in collections of autographs. [Some were translated by May Herbert in *Musical World* for 1890, March 15, *et seq.*]

II. Notices of him by friends and contemporaries. Many of these must be taken with reserve, as written long after the event, and with strong bias.

(1) By Seyfried, as appendix to his edition of Beethoven's 'Studien' in Thorough-bass (Vienna, March 26, 1832)—144 pages, containing biographical sketch, anecdotes and traits, letters (included in Nohl), three conversations, the sale catalogue, the music sung at the funeral, poems and addresses, a catalogue of Beethoven's works, a facsimile (Adelaide), etc.

(2) Wegeler and Ries, *Biographische Notizen*, etc. (Coblenz, 1838), with *Nachtrag* by Wegeler alone (Coblenz, 1845). Contains biography, letters, and a host of anecdotes.

(3) Schindler, *Biographie* (Münster, 1840). This is the first edition of Schindler's work, which was translated into English by Moscheles, and published with many additions and modifications, and with no mention of Schindler on the title-page, in 2 vols. 8vo. (Colburn, 1841). It was followed by *Beethoven in Paris* (Münster, 1842), an account of the performance of some of the symphonies by the 'Société des Concerts,' with various documents of interest; by a second edition of the *Biographie* including the *Beethoven in Paris* (Münster, 1845); and finally by a third edition in two volumes (Münster, 1860). This last has been very inaccurately translated into French by Sowinski (Paris, Garnier, 1865).

(4) Gerhard von Breuning, *Aus dem Schwarzspanierhaus* (Vienna, 1874)—the recollections of Stephen von Breuning's son, who was eleven years old when Beethoven died, and was much with him during the last years of his life.

III. Smaller and more fragmentary notices are given of him—in 1798 or 1799 by Czerny, in Pohl's *Jahresbericht des Konservatorium . . . in Wien* (Vienna, 1870); and in later years by the same in Cocks's *Musical Miscellany* (London, July and August 1852, Jan. 1853); in 1809 by Reichardt in *Vertraute Briefe* (Amsterdam, 1810); in 1814 by Spohr in his *Selbstbiographie* (Cassel, 1860), and by Tomaschek in *Libussa* for 1846; in 1822 by Rochlitz in the *A.M.Z.*, 1828, p. 10, printed in *Für Freunde der Tonkunst*, vol. iv. p. 348 (Leipzig, 1832); in 1824 [by Mr. Edward Schulz] in the *Harmonicon*, Jan. 1824; and [by Mrs. Payne, Dr. Burney's niece] in the *Harmonicon*, Dec. 1825; in 1825 by Rellstab in *Aus meinem Leben*, ii. 224.

Of later biographies must be mentioned that

[1] I have been much indebted in this part of my work to an admirable paper by Mr. Dannreuther in *Macmillan's Magazine* for July 1876. See p. 266, note.

of Fétis in his *Biographie universelle des musiciens;* of Wilhelm von Lenz, *Beethoven, eine Kunst-Studie*, a Life, with an extended critical and historical catalogue of the works; and of Ludwig Nohl, *Beethovens Leben*, of which the third and last volume was published in Sept. 1876. Nohl is said to be inaccurate, and he is certainly diffuse, but I for one owe him a debt of gratitude for his various publications, the information in which can be found nowhere else. The notes to the biography contain a mass of materials of the greatest interest. Last and best is the *Ludwig van Beethovens Leben* of A. W. Thayer (Berlin, 1866, 1872, and 1879), which, through the caution, wide research, and unflagging industry of its author has taken a place far higher than any of its predecessors. [Unfortunately, vol. iii., the last completed by the author before his death, only carries the biography as far as 1816 inclusive. Dr. H. Deiters, the translator into German of Thayer's manuscript, has however undertaken to revise and complete the work, and the revised vol. i. appeared in 1901.] Amongst other sources of information Thayer inherited the memoranda collected by the late Otto Jahn, who had himself made some progress in a biography of Beethoven. The corrections which this able investigator has made in many most material points, and the light thrown by him on passages hitherto more than obscure, can only be appreciated by those who read his work. There remain to be mentioned Dr. Theodor Frimmel's *Neue Beethoveniana* (Vienna, 1888; 2nd ed. 1890) and his *Ludwig van Beethoven* in the series of 'Berühmte Musiker.' Also W. J. v. Wasielewski's *Ludwig van Beethoven*, two vols. (Leipzig, 1895).

IV. Of more miscellaneous works the following must be named:—W. von Lenz, *Beethoven et ses Trois Styles* (St. Petersburg, 1852; also Paris, Lavinée, 1855)—a book which, if full of rhapsody, is also full of knowledge, insight, and enthusiasm; Oulibicheff, *Beethoven, ses critiques et ses glossateurs*, in direct antagonism to the foregoing (Paris, 1857); Berlioz, 'Étude analytique des symphonies de Beethoven' in his *Voyage Musical*, vol. i. (Paris, 1844); Otto Jahn, three papers in his *Gesammelte Aufsätze* (Leipzig, 1866), viz. 'Leonore oder Fidelio,' 'B. im Malkasten,' and 'B. und die Ausgaben seiner Werke'; R. Wagner, *Beethoven* (Leipzig, 1870); Marx, *B.'s Leben und Schaffen*, 2 pts. (1859; fifth edition, Berlin, 1901); *Actenmässige Darstellung der Ausgrabung und Wiederbeisetzung der irdischen Reste von Beethoven und Schubert* (Vienna, 1863); Nohl, *Beethovens Brevier* (Leipzig, 1870), a collection of passages in his favourite authors extracted or marked by Beethoven; *Die Beethoven Feier* (Vienna, 1871), containing amongst other things Beethoven's diary from 1812 to 1818. The analytical programmes of Beethoven's sonatas by Mr. J. W. Davison, prepared to accompany Charles Hallé's performance in 1861, are full of interest.

V. We now arrive at another class of works of more importance than any yet mentioned, except perhaps the letters, and absolutely indispensable to those who wish to investigate Beethoven's music chronologically, viz. the catalogues, and reprints of the sketch-books.

Catalogues of Beethoven's works were attempted by Artaria, Hofmeister, and Cranz, but the first one worthy of the subject was issued by Breitkopf and Härtel in 1851—*Thematisches Verzeichniss*, etc., large 8vo., 167 pp. The second edition of this, edited and enriched with copious notes, remarks, appendices, indexes, etc., by G. Nottebohm (Leipzig, 1868, 220 pp.), leaves little to be desired. It is arranged in the order of the opus numbers of the pieces—where they are numbered—that is to say, in the order of publication. A catalogue from a different point of view—in the order of the production of the works, and embracing those unpublished as well as published—was issued by Thayer, as a precursor, or *mémoire pour servir*, to his *Biography*, viz. *Chronologisches Verzeichniss*, etc. (Berlin, 1865). It is difficult to overestimate the value of this unpretending list, which contains a vast amount of information not only before inaccessible, but unknown to students. It was followed by a work of equal interest—*Ein Skizzenbuch von B.*, etc. (1865), the reprint of one of Beethoven's sketch-books, with such commentary as is necessary fully to elucidate it. This was edited by Nottebohm, and the amount of new and important information on Beethoven's music furnished by his *Beethoveniana* (published in 1872), no one can tell who has not studied it. A further series, including *Neue Beethoveniana*, which originally appeared as articles in the *Musikalisches Wochenblatt* and other papers, together with other articles of the highest interest also from his pen, were completed and edited by E. Mandyczewski, as *Zweite Beethoveniana* (Rieter-Biedermann, 1887, 590 pp.). Before his death Nottebohm issued a second *Skizzenbuch* (B. & H. 1880), containing sketches for the Eroica. He also published a new edition of *Beethoven's Studien* (1873), in which many mistakes in Seyfried's edition are corrected and much additional information given, such as no one who has not the peculiar knowledge which Nottebohm possessed would be competent to impart. [Articles on *Beethoven's Sketch-Books* by J. S. Shedlock also appeared in *The Musical Times*, 1892, 1893, and 1894. The *Monatshefte für Musik-Geschichte* for 1895 and 1896 contain a series of valuable articles by Dr. A. C. Kalischer, entitled *Die Beethoven-Autographe der Königl. Bibliothek zu Berlin.* Last, though not least, must be mentioned Sir G. Grove's *Beethoven and his Nine Symphonies* (Novello, third edition, 1898).]

Catalogue of Beethoven's printed works, compiled from Nottebohm's Catalogue (B. & H. 1868), the Letters, the Works themselves, and other sources.

[Breitkopf und Härtel's complete edition, brought out between 1862 and 1865, was not actually completed till 1904, with the publication of a second supplementary volume, the first having appeared in 1887.]

PF. = Pianoforte. V. = Violin. Va. = Viola. Vo. = Violoncello. Cbass = Contrabass. Clav. = Clavecin. Clar. = Clarinet. Ob. = Oboe. Fl. = Flute. Orch. = Orchestra. *Aut.* = Autograph. ann. = announced. arrt. = arrangement.

I. WORKS WITH OPUS NUMBERS.

Op.	*Description.*	*Composed.*	*Original Publisher.*	*Dedicated to*
1	Three Trios, PF. V. Vo. (E♭, G, C minor). (For No. 3 compare Op. 104.)	....	Artaria, Vienna, Oct. 21, 1795.	Pr. Carl von Lichnowsky.
2	Three Sonatas, Clavecin or PF. (F minor, A, C). (For No. 1 see No. 152.)	....	Artaria, Vienna, Mar. 9, 1796.	Joseph Haydn.
3	Grand Trio, V. Va. Vo. (E♭) possibly the result of an attempt at a string quartet.	1792 (?).—*Aut.* S. Thalberg.	Artaria, Vienna, Feb. 8, 1797.	
4	Grand Quintet, V. V. Va. Va. Vo. (E♭). An arrt. of the original Op. 103.	....	Artaria, Vienna, Feb. 8, 1797.	Count von Fries.
5	Two Grand Sonatas, PF. Vo. (F, G minor).	....	Artaria, Vienna, Feb. 8, 1797.	Frederick William II. King of Prussia.
6	Sonata, 4 hands, Clav. or PF. (D).	....	Artaria, Vienna, 1797.	
7	Grand Sonata, Clav. or PF. (E♭).	....	Artaria, Vienna, Oct. 7, 1797.	Countess Babette von Keglevics.
8	Serenade, V. Va. Vo. (D). See Op. 42.	....	Artaria, Vienna, ann. Oct. 7, 1797.	
9	Three Trios, V. Va. Vo. (G, D, C minor)	....	Traeg, Vienna, ann. July 21, 1798.	Count von Browne (with dedication).
10	Three Sonatas, Clav. or PF. (C minor, F, D).	Before July 7, 1798.	Eder, Vienna, ann. Sept. 28, 1798.	Countess von Browne.
11	Grand Trio, PF. Clar. (or V.) Vo. (B♭).	....	Mollo, Vienna, ann. Oct. 3, 1798.	Countess von Thun.
12	Three Sonatas, Clav. or PF. V. (D, A, E♭).	....	Artaria, Vienna, ann. Jan. 12, 1799.	A. Salieri.
13	Grand Sonata pathétique, Clav. or PF. (C minor).	....	Eder, Vienna, 1799.	Pr. Carl von Lichnowsky.
14	Two Sonatas, PF. (E, G).	....	Mollo, Vienna, ann. Dec. 21, 1799.	Baroness von Braun.
15	Grand Concerto, PF. and Orch. (C). (Really the second.)	*Aut.* Berlin Library.	Mollo, Vienna, Mar. 1801.	Princess Odescalchi, *née* Keglevics.
16	Grand Quintet, PF. Ob. Clar. Bassoon, Horn, or V. Va. Vo. (E♭). Arrd., according to Ries, by Beethoven as a Quartet for PF. V. Va. Vo. Also arrd. as String Quartet and marked Op. 75.	Before April 6, 1797.	Mollo, Vienna, Mar. 1801.	Pr. von Schwarzenberg.
17	Sonata, PF. Horn, or Vo. (F).	Before April 18, 1800.	Mollo, Vienna, Mar. 1801.	Baroness von Braun.
18	Six Quartets, V. V. Va. Vo. (F, G, D, C minor, A, B♭).	Nos. 1 and 6 in 1800.	Mollo, Vienna, Pt. I (1-3), Summer, 1801; Pt. II (4-6), Oct. 1801.	Pr. von Lobkowitz.
19	Concerto, PF. and Orch. (B♭). (Really the first.) See No. 151.	Before March 1795.—*Aut.* Berlin Library.	Hoffmeister & Kühnel, Leipzig, 1801.	Charles Nikl, Edler von Niklsberg.
20	Septet, V. Va. Horn, Clar. Bassoon, Vo. Cbass. (E♭).	Before April 2, 1800.—*Aut.* Mendelssohns, Berlin.	Hoffmeister & Kühnel, Leipzig. In 2 parts in 1802.	Empress Maria Theresa.
21	Grand Symphony (C). (The first.)	Before April 2, 1800.	Hoffmeister & Kühnel, Leipzig, end of 1801.	Baron van Swieten.
22	Grand Sonata, PF. (B♭).	Before end of 1800.—*Revised copy*, Peters, Leipzig.—*Aut.* Berlin Library.	Hoffmeister & Kühnel, Leipzig, 1802.	Count von Browne.
23	Sonata, PF. V. (A minor).	First two movements composed in 1800.	Mollo, Vienna, ann. Oct. 28, 1801.	Count M. von Fries.
24	Sonata in F, PF. V. (Op. 23). Op. 24 was originally PF. score of Prometheus, now Op. 43.	*Aut.* (first three movements) Imperial Lib. Vienna.	Originally published as Op. 23, No. 2, but made Op. 24 before 1803.	Idem.
25	Serenade, Fl. V. Va. (D). See Op. 41.	....	Cappi, Vienna. Early in 1802.	
26	Grand Sonata, Clav. or PF. (A♭).	*Aut.* Berlin Library.	Cappi, Vienna, ann. Mar. 3, 1802.	Pr. C. von Lichnowsky.
27	No. 1. Sonata quasi una Fantasia, Clav. or PF. (E♭).	....	Cappi, Vienna, both ann. Mar. 3, 1802.	Princess J. Liechtenstein.
	No. 2. Sonata quasi una Fantasia, Clav. or PF. (C♯ minor).	*Aut.* Beethovenhaus, Bonn.	....	Countess Giulietta Giucciardi.
28	Grand Sonata, PF. (D). ['Pastoral'].	1801. — *Aut.* Dr. Steger, Vienna.	Bureau des Arts et d'Industrie, Vienna, announced Aug. 14, 1802.	Joseph Edler von Sonnenfels.
29	Quintet, V. V. Va. Va. Vo. (C).	1801. — *Aut.* Joachim, Berlin.	Breitkopf & Härtel, Leipzig, Dec. 1802.	Count M. von Fries.
30	Three Sonatas, PF. V. (A, C minor, G).	1802.—*Aut.* of No. 1, Berlin Library.	Bureau des Arts et d'Industrie, Vienna, ann. May 28, 1803.	Alexander I. Emperor of Russia.
31	Three Sonatas, Clav. or PF. (G, D minor, E♭).	Nos. 1 and 2, 1802.	Nos. 1 and 2 in 'Répertoire des Clavecinistes,' 1803. Then (with B.'s corrections) 'Deux Sonates . . . op. 31 . . . Edition très correcte,' N. Simrock, Bonn; and then as 'Deux Sonates pour le Clavecin ou Pianoforte,' op. 29, Cappi, Vienna. No. 3 in Nägeli's 'Répertoire,' without opus-number, 1804. About 1805 all three as 'Trois Sonates pour Clavecin ou Pianoforte' . . . Œuvre 29, Cappi, Vienna.	
32	Song, 'An die Hoffnung,' from Tiedge's 'Urania' (E♭).	....	Kunst- und Industrie-Comptoir, Vienna, ann. Sept. 18, 1805.	
33	Seven Bagatelles, PF. (E♭, C, F, A, C, D, A♭).	1782—1802.—*Aut.* J. Kafka, Vienna.	Bureau des Arts et d'Industrie, Vienna, ann. May 28, 1803.	
34	Six Variations on an original theme, PF. (F).	Close of 1802.	Breitkopf & Härtel, Leipzig, 1803.	Princess Odeschalchi, *née* Keglevics.
35	[15] Variations with a fugue, on theme from Prometheus, PF. (E♭).	1802. — *Aut.* Breitkopf & Härtel, Leipzig.	Breitkopf & Härtel, Leipzig, 1803.	Count M. Lichnowsky.
36	Symphony No. 2, Orch. (D).	Close of 1802. First performance, April 5, 1803.	Bureau des Arts et d'Industrie, Vienna, Mar. 1804 (Parts).	Prince Carl von Lichnowsky.
37	Grand Concerto, PF. and Orch. (C minor).	1800.—*Aut.* Berlin Library.	Bureau des Arts et d'Industrie, Vienna, Nov. 1804.	Prince Louis Ferdinand.
38	Trio, PF. Clar. or V. and Vo. (E♭), arranged by author from Septet, Op. 20.	*Aut.* of V. part, Simrock.	Bureau des Arts et d'Industrie, Vienna, Jan. 1805.	Prof. J. A. Schmidt, with dedication.
39	Two Preludes, through all 12 major keys, PF. or Organ.	1789. — *Revised copy*, Artaria, Vienna.	Hoffmeister & Kühnel, Leipzig, close of 1803.	

Op.	Description.	Composed.	Original Publisher.	Dedicated to
40	Romance, V. and Orch. (G).	1803.—*Aut.* Dresden Royal Library.	Hoffmeister & Kühnel, Leipzig, 1803.	
41	Serenade, PF. Fl. or V. (D), from the Serenade, Op. 25; revised by composer.	....	Hoffmeister & Kühnel, 1803.	
42	Notturno, PF. Va. (D), arranged from the Serenade, Op. 8.	....	Hoffmeister & Kühnel, Leipzig, 1804.	
43	The men of Prometheus, Ballet, Nos. 1-18.	Produced March 28, 1801.	Artaria, Vienna, June 1801 (PF. arrangement only). Hoffmeister & Kühnel, score of Ov., 1804.	
44	Fourteen Variations, PF. V. Vo. (E♭).	...	Hoffmeister & Kühnel, Leipzig, 1804.	
45	Three Grand Marches, PF. 4 hands (C, E♭, D).	....	Bureau des Arts et d'Industrie, Vienna, Mar. 1804.	Princess Esterhazy, *née* Liechtenstein.
46	Adelaide, by Matthisson, Cantata, for Soprano with PF. (B♭).	1795 (?).	Artaria, Vienna, Feb. 1797.	Matthisson.
47	Sonata ['Kreutzer'], PF. V. (A). 'Per il Pianoforte ed un Violino obbligato, scritta in uno stilo molto concertante quasi come d' un Concerto.'		N. Simrock, Bonn, 1805.	R. Kreutzer.
48	Six Songs by Gellert, for Soprano:—Bitten; Die Liebe des Nächsten; Vom Tode; Die Ehre Gottes; Gottes Macht; Busslied.	....	Artaria, Vienna, 1803.	Count von Browne.
49	Two Easy Sonatas, PF. (G minor, G major).	Not later than 1802.	Bureau des Arts et d'Industrie, Vienna, ann. Jan. 19, 1805.	
50	Romance, V. and Orch. (F).	*Aut.* Joachim, Berlin.	Bureau des Arts et d'Industrie, Vienna, May 1805.	
51	Two Rondos, PF. (C, G).	....	Artaria, Vienna, No. 1, 1797, No. 2, Sept. 1802.	Countess Henriette von Lichnowsky (No. 2).
52	Eight Songs:—Urian's Reise (Claudius); Feuerfarb, (Mereau); Das Liedchen v. d. Ruhe (Ueltzen); Mailied (Goethe); Molly's Abschied (Bürger); Die Liebe (Lessing); Marmotte (Goethe); Das Blümchen Wunderhold (Bürger).	Most, possibly all, very early.	Kunst- und Industrie-Comptoir, Vienna, June 1805.	
53	Grand Sonata ['Waldstein'], PF. (C). See No. 170.	1804 (?).—*Aut.* Dr. Steger, Vienna.	Bureau des Arts et d'Industrie, Vienna, May 1805.	Count von Waldstein.
54	['LIst'] Sonata, PF. (F).	....	Bureau des Arts et d'Industrie, Vienna, April 1806.	
55	Sinfonia [eroica], No. 3 (E♭).	Aug. 1804,—*Revised copy*, J. Dessauer, Vienna.	Comtor delle Arti e d'Industria, Vienna, in Parts.	Prince von Lobkowitz.
56	Grand Concerto [Triple], PF. V. Vo. and Orch. (C).	About 1804.	Bureau des Arts et d'Industrie, Vienna, ann. July 1, 1807.	Prince von Lobkowitz.
57	[LIVth'] Sonata, PF. (F minor), so-called 'Appassionata.'	About 1804.—*Aut.* Conservatoire, Paris.	Bureau des Arts et d'Industrie, Vienna, ann. Feb. 18, 1807.	Count Franz v. Brunswick.
58	Fourth Concerto, PF. and Orch. (G).	About 1805.	Kunst- und Industrie-Comptoir, Vienna, Aug. 1808.	Archduke Rudolph.
59	Three Quartets ['Rasoumowsky'], V. V. Va. Vo. (F, E minor, C). (7th, 8th, & 9th.)	Before Feb. 1807.—*Aut.* No. 1. Mendelssohns, Berlin. 'Begun May 26, 1806.' No. 2. Royal Library, Berlin. No. 3. Dr. Steger.	Bureau des Arts et d'Industrie of Schreyvogel & Co., Pesth, 1808.	Count von Rasoumowsky.
60	Fourth Symphony (B♭).	1806.—*Aut.* Mendelssohns, Berlin.	Bureau des Arts et d'Industrie, Pesth and Vienna, Mar. 1809.	Count Oppersdorf
61	Concerto, V. and Orch. (D).	1806. First played Dec. 23, 1806. — *Aut.* Imperial Library, Vienna.	Bureau des Arts et d'Industrie, Vienna and Pesth, Mar. 1809.	Stephan von Breuning.
	Concerto, PF. and Orch., arranged by author from the Violin Concerto.	April 1807.	Bureau des Arts et d'Industrie, Vienna and Pesth, Aug. 1808.	Frau von Breuning.
62	Overture to Coriolan.	April 1807. — *Aut.* Dr. Steger, Vienna.	Bureau des Arts, et d'Industrie, Vienna, Jan. 1808.	H. J. v. Collin.
63	Arrt. of Op. 4, as Trio for PF. & Str.	....	Artaria.	
64	Arrt. of Op. 3 for PF. & Vo.	....	Artaria.	
65	Scena, 'Ah, perfido!' Sopr. and Orch.	Prague, 1796.	Hoffmeister & Kühnel, Leipzig, 1805.	Countess von Clary
66	Twelve Variations on 'Ein Mädchen' (Zauberflöte), PF. Vo. (F).	....	J. Traeg, Vienna, Sept. 1798.

1st year, No. 12, an Adagio, possibly for a musical clock.
2nd year, No. 8, a Bolero, a solo for Voice, PF., V., and Vo.]

[The above article is substantially the same as that which appeared in the original edition of the Dictionary; but a large amount of material which came into Sir George Grove's hands after the publication of the original article, and which was intended by him to be incorporated in any subsequent edition, has been added by Mr. J. S. Shedlock, who has undertaken the revision of the whole article, and to whom the additions in square brackets are due.]

BEFFARA, Louis François, born at Nonancourt, August 23, 1751; from 1792 to 1816 Commissaire de Police in Paris, where he died Feb. 2, 1838. Renowned for his collection of documents on the Paris operas, which were unfortunately consumed at the burning of the Hôtel de Ville during the Commune in 1871. For completeness and genuineness the collection could not be surpassed, and its loss is irreparable. F. G.

BEGGAR'S OPERA, THE. A celebrated piece, written in 1727 by John Gay, who was said to have been instigated to its production by a feeling of annoyance at having been offered a court appointment which he regarded as beneath him. It is also said to have had its origin in an observation of Swift's to its author, that 'a Newgate Pastoral might make an odd pretty sort of thing.' Under the thin veil of exposing the vices of highwaymen, pickpockets, gaolers, receivers of stolen goods, and their confederates and associates, it bristles with keen, well-pointed satire on the corrupt and venal politicians and courtiers of the day, and of the prevailing fashionable entertainment—the Italian opera. It has been denied that there is any reference to the latter, because the style of the music of Italian operas is not burlesqued, but the fact is apparent from the introductory dialogue between the Beggar (the assumed author of the piece) and the Player, in which the former is made to say, 'I have introduc'd the similes that are in all your celebrated operas; the Swallow, the Moth, the Bee, the Ship, the Flower, etc. Besides, I have a prison scene, which the ladies always reckon charmingly pathetick. As to the parts I have observed such a nice impartiality to our two ladies, that it is impossible for either of them to take offence.' The allusion in the last sentence to the deadly feud between Cuzzoni and Faustina, which in 1727 divided the fashionable world into two violently hostile factions, is so palpable as to cause surprise at its having been overlooked. 'The Beggar's Opera' was first offered to Colley Cibber for Drury Lane Theatre, but being rejected by him was accepted by John Rich, and brought out at Lincoln's Inn Fields Theatre, Jan. 29, 1727-28. Its success was decisive: it was performed sixty-two nights (not consecutive) during the season, and immediately afterwards played all over England, in Ireland, Scotland, and even in Minorca. By the time it had reached its thirty-sixth representation Rich had netted nearly £4000, whilst Gay's four 'author's nights' had produced him £693 : 13 : 6; whence it was said that it had made Gay rich, and Rich gay. The songs were all written either to ballad tunes (English, Scotch, and Irish, some of considerable antiquity), or the tunes of the most popular songs of the day. These tunes, sixty-nine in number, were arranged and scored by Dr. Pepusch, who also composed an overture for the piece. They were chosen with great judgment, and to them its remarkable success was in a great degree attributable. The rage for 'The Beggar's Opera' showed itself in its scenes and songs appearing on fans and screens, in the attire of Lavinia Fenton (the performer of Polly) becoming the pattern for that of ladies of fashion, and in the temporary desertion of the Italian Opera. Hogarth published an engraving representing a scene in Act II. Some of the songs were said to have received finishing touches from the hand of Pope. The success of 'The Beggar's Opera' led to the production of a host of other pieces with songs written to ballad tunes, and thence denominated Ballad Operas. [English Opera.] W. H. H.

BEGNIS, Giuseppe de, born at Lugo, in the Papal States, 1793, sang soprano in the chapel at Lugo till he was nearly fifteen, when his voice broke. Thinking it would never return, and having a strong taste for comedy, he took lessons of Mandini, a celebrated Italian actor; but, his father being opposed to this course, he began to study music again under Saraceni the composer, the brother of Madame Morandi. He made his first operatic appearance in the carnival

of 1813 as *primo buffo* in Pavesi's 'Marco Antonio' at Modena, and was most successful. He next went to Forli and Rimini, and returned to Modena. In the following carnival he sang at Siena, at the opening of the new Teatro degli Academici Rozzi, as Pazzo in Paer's 'Agnese,' and as Selim in the 'Turco in Italia' of Rossini, and was enthusiastically applauded in both. He next appeared at Ferrara, Badia, and Trieste. In the carnival of 1815 he was at Cesena, and particularly brilliant in Fioravanti's 'Bello piace a tutti,' in which he imitated with his falsetto the celebrated Pacchierotti. He now sang at various theatres until the carnival of 1816, at Milan, where he was laid up for three months, and unable to sing. On his recovery he proceeded to Parma, where his success was more brilliant than ever; then to Modena and Bologna. Here he played successfully in Paer's 'Agnese,' which had been tried twice before there without success. The piece was chosen for the benefit of Signora Ronzi, who was engaged there. Shortly after, she was married to De Begnis, who was admitted to the Philharmonic Academy of Bologna at the same time. They were, however, separated for a time, De Begnis being engaged to sing at Rome, and Ronzi at Genoa. They met again at Florence, 1817, and performed together at Vicenza and Verona. Rossini engaged them for the opening of the new theatre at Pesaro. In 1819 they made their débuts at Paris with great success; and in 1822 appeared in London in the 'Turco in Italia,' where he was considered an excellent comic actor and singer. In 1823 he had the direction, with his wife, of the operas at Bath; and he was again engaged for the operatic season of 1824. He died August 1849. J. M.

BEGNIS, SIGNORA RONZI DE, the wife of the above, was possibly the young girl, Claudina Ronzi, born at Paris, Jan. 11, 1800, of whom there is still a record at the Conservatoire in that city, that she was admitted to a singing class March 9, 1809. However this may be, nothing more is known of her until her marriage with De Begnis at Bologna, 1816. In 1819 she made her first appearance at Paris, having sung at most of the principal Italian operas, and for Rossini at the opening of the new theatre at Pesaro in 1818. The Parisians thought her weak, especially as Rosina; but they admit that Donna Anna was never so well sung there by any one else before Sontag undertook it in 1828. It must be said that she received some instruction in the part from Garat, and that she profited by his lessons. In 1822 she came with her husband to London, where her voice and style steadily improved. 'She made her first appearance,' says Lord Mount-Edgcumbe, 'in the "Turco in Italia," and acted in it delightfully. With a pretty face and pleasing countenance, she had a voice of great sweetness and flexibility, which she managed with considerable skill and taste. She decidedly excelled in comic parts: indeed, I have rarely seen a better buffa.' In 1824 she was eclipsed by the arrival of Pasta. In 1825 she shared with Madame Vestris the principal parts in the comic operas at the Haymarket Theatre, the temporary retreat of the company; but, soon after the return of Pasta, she fell ill and totally lost her voice, was obliged to throw up her engagement, and returned to Italy. She died at Florence, June 7, 1853. J. M.

BEGREZ, PIERRE IGNACE, born at Namur, Dec. 23, 1783. At the age of six he sang in the choir of the cathedral of St. Aubin. After some years he went to Paris, and was received in a violin-class at the Conservatoire, the 17th Floréal, An xii. (1804). He was at the same time engaged in the orchestra of the Opéra, then under the direction of Grasset. Finding, however, that he possessed a fine tenor voice, he soon threw aside the violin, and studied singing under Garat, from October 1806. In 1814 he carried off the first prize at the Conservatoire, and in 1815 he made his first appearance at the opera in Gluck's 'Armide,' which he followed with the principal parts of 'Les Bayadères' and 'Anacréon.' About the end of the same year he was engaged for the London Opera House, where he remained a permanent member of the company at the King's Theatre till 1822, when he retired from the boards, and devoted himself to teaching and singing in concerts. He had a beautiful voice, and good French style. He died Dec. 1863. J. M.

BEKLEMMT, *i.e.* 'heavy at the heart,' 'oppressed.' A word which Beethoven has attached to the middle section of the Cavatina in his Quartet in B flat (op. 130), where he modulates into C flat; and where the choked and broken accents of the first violin fully bear out the expression. None of the old copies of the quartet give this interesting personal note of the composer's. It first appeared in Breitkopf & Härtel's complete edition. Correctly the word would be *beklommen*. G.

BELAIEV, MITROPHANE PETROVICH, born at St. Petersburg, Feb. 10, 1836. Soon after leaving school he succeeded to the business of his father, a wealthy timber-merchant in the district of Olonetz. As a boy he learnt the violin and piano, and, in spite of business, found time to occupy himself with chamber-music. About 1880 he became intimately acquainted with the chief representatives of Balakirev's school, and soon showed himself an ardent supporter of Russian music. As a practical means of forwarding the national cause he founded, in 1885, a publishing house in Leipzig, and has brought out about 2000 compositions by members of the New School, including operatic and symphonic works by Borodin, Moussorgsky, Rimsky-Korsakov, Glazounov, and others. With the same object in view he instituted, in 1885, the 'Russian Symphony Concerts,' the programmes of which are drawn

exclusively from the works of native musicians. From three to six concerts are given each season in St. Petersburg. Belaiev organised similar concerts at the Paris Exhibition of 1889, and also initiated the 'Quartet Evenings,' started in St. Petersburg in 1891. In honour of this Russian Mæcenas, Borodin, Rimsky-Korsakov, Glazounov, and Liadov composed a string quartet on the notes B-la-f. (Died Jan. 10, 1904.) R. N.

BELCKE, FRIEDRICH AUGUST, a celebrated trombone-player, son of the town musician at Lucka in Saxony, and born May 27, 1795. The boy at an early age showed a fondness for brass instruments, and was a good horn-player before he took up the trombone, on which he soon reached a pitch of excellence before unknown. He first joined the Gewandhaus orchestra in Leipzig, and then obtained a permanent post in the royal band at Berlin, where he remained from 1816 to 1858. Frequent tours made him widely known. In 1838 he left the Berlin band of his own accord and retired to his native place, where he died Dec. 10, 1874. By trombone-players his compositions are well known and highly valued. He it is of whom Schumann pleasantly says, in his essay on 'The Comic in Music' (*Ges. Schriften*, i. 185), 'There is a phrase in the finale of Beethoven's Eighth Symphony which always makes the members of a well-known orchestra laugh, because they insist upon it that in this figure they hear the name of Belcke, one of the best of their number.' A. M.

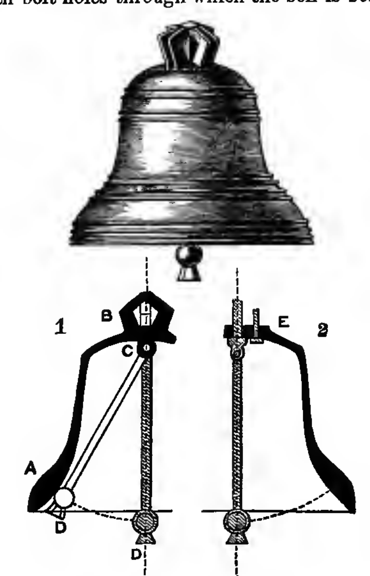
BELICZAY, JULIUS VON, born August 10, 1835, at Komorn in Hungary; was at first an engineer, but transferred his affections to music, and became a pupil of J. Hoffmann, and F. Krenn in Vienna. After some years spent between Pressburg and Vienna, he was appointed professor of theory in the National Music Academy in Pesth. His compositions, many of which are highly meritorious, belong to the general stream of music, and are independent of the national style which most Hungarian composers affect. They include: three string quartets, a trio, op. 30, and andante for stringed orchestra; a serenade for strings, two symphonies, an 'Ave Maria' for soprano solo, choir, and orchestra, op. 9, pianoforte pieces and songs, besides a mass in F, frequently performed. In 1891 Beliczay published the first part of a method of composition, in the Hungarian language. [Riemann's *Lexikon.*]

BELISARIO. Italian opera in three acts, libretto and music by Donizetti. Produced at Venice, Feb. 7, 1836; in London, at the King's Theatre, April 1, 1837; and at Paris, Théâtre des Italiens, Oct. 24, 1843.

BELL. A musical instrument of metal, sounded by percussion, and consisting of a cup or bowl, caused to vibrate by the blow of a 'clapper' or hammer on the inner or outer surface of the bell. The external stroke, however, is only applied in special cases, as when a large bell is connected with a clock, and the hours are struck upon it with an external hammer worked by mechanical means; or when a series of bells are arranged so that set compositions can be played upon them by a series of such hammers, and with musical precision. [See CARILLONS.] A fixed bell can also be played by an internal hammer pulled or struck against the inside. But the essential and typical form of the bell is that in which the stroke is given by a movable clapper hung within the bell, and caused to strike by swinging the latter, either by hand (in the case of small bells) or by a wheel and pulley system in the case of large ones. Bells have also been extensively used as personal ornaments and decorations, from those on the hem of the garment of the Jewish high-priest to those which formed the appendages of the head-dress of the mediæval jester. This decorative use of bells has also been applied to domestic animals; and the bells of the English waggoner's team were formerly as common an appendage as the sheep-bells and goat-bells in Switzerland and elsewhere, and the cow-bells in the New Forest, still are. In these cases the sound of the bell is excited by the movements of the body. But in all these forms or applications of the bell the principle is the same; it is an instrument with a hammer hung loose inside it, and caused to sound by the agitation, regular or irregular, communicated to it, and by which the hammer is made to strike against the inside. It is important to note this as the essential characteristic of bells, and that which distinguishes their special place among musical instruments. Of music, in the artistic sense of the word, bells in their true form are hardly capable. They may be tuned to a regular scale, and sounded in various successions, but the method of obtaining the sound by swinging the bell till the clapper hits it (by which method alone the full sound can be elicited) necessarily precludes anything like the exactitude in time or the variation in intensity by which form and expression are given to music. All the contrivances for performing music on bells with mechanical precision involve a greater or less departure from the true principle of the bell, and an impairing of its characteristic sound by fixing it instead of letting it swing freely. It will be seen, therefore, that bells form a kind of connecting link between the music of art and the music of nature; their fixed tone and synchronous vibrations connecting them with the art, while the irregular and formless character of the music produced from them even by the best peal-ringers, partakes of the wildness and vague character of natural sounds. It is this wildness of character which is one of the great charms of bell-music on a large scale, and which has caused it to be so much interwoven with the associations of men, both in real life and in imaginative literature.

Like the harp, the bell is prehistoric in its origin; nor would it serve much purpose here to speculate upon the probable origin or earliest form of the bell, of which in fact we know nothing; or even to dwell on the very uncertain archæology of the instrument. The records of almost all nations of whose early history we know anything imply the use of bells in one shape or another; generally, it would seem, as a sign or proclamation, just as the railway bell, the church bell, and 'that tocsin of the soul, the dinner-bell,' are still used. But there can be no question that the real development of bells and bell-ringing into their highest form is due to the art and the ecclesiastical fervour combined of the Middle Ages. The influences which led to the development of bell-ringing and bell-founding were not dissimilar to those which led to the great development of architecture in the cathedral form. Not that either architecture or bells were necessarily connected with ecclesiastical predominance; but that the church being the great power and central influence of mediæval Europe, the art of the time was all drawn into its service, and thus it came to pass that bells having been, at a comparatively early period of the Christian era, introduced as an appendage to places of worship, their development, with all the art and science which the mediæval workmen had at command, became almost inseparably connected with that of church architecture, and their sounds associated in an especial degree with church celebrations. The form of bell which may be said to have been perfected by mediæval bell-founders (for it has been accepted as a type upon which no essential or radical improvement can be made) is that shown in the following diagram, in which also the principal component parts of the bell are distinguished.

The elevation of the exterior of the bell explains itself; the section shows the relative thickness and shape of the metal; the thickest portion, the 'sound-bow,' A, against which the clapper strikes, is usually $\frac{1}{13}$th of the total diameter of the bell at the lip. The half-section marked No. 1 shows the old method of providing for the hanging of the bell and the attachment of the clapper; the loops called 'canons,' B, being cast on solid to receive the iron straps by which the bell is fixed to the stock, and the bolt, C, for attaching the clapper also cast solid on the inside of the bell. It is necessary that C should be well below the line of axis on which the bell swings, so as to describe an appreciable circle around the axis, otherwise there will be no leverage to drive the clapper, and it will not fly properly. The swing of the clapper is further ensured and accelerated by the small piece, D, called the 'flight,' cast on to the striking part to increase the impetus of the blow. Half-section No. 2 shows a method of hanging the bell and clapper recommended by Lord Grimthorpe, and adopted in a good many instances by Mr. Taylor of Loughborough, in which canons are dispensed with, and a thick crown, E, is used with bolt holes through which the bell is bolted



to the stock, and a larger hole in the centre through which the clapper-bolt is also fixed to the stock, instead of being cast on to the bell. The advantage of this plan is that the bell can easily be turned on the stock, the clapper-bolt (which is circular where it passes through the bell) remaining stationary, and thus the blow of the clapper can be directed against a new portion of the sound-bow, should the original striking place have become worn or show any tendency to crack.

The material of which bells are composed is a mixture of copper and tin, which in the old bells appear to have been used in the proportion of about 3 to 1. Modern experiment has given rise to the conclusion that, while this combination gave the best sound, and the proportion of tin might even be increased with advantage to the sound, this proportion represents the extreme amount of tin which can be used without the danger of rendering the metal brittle and liable to crack, and that in regard to this consideration a margin within that proportion of tin is safer. 22 of copper to 7 of tin was used for the Westminster bells in the Victoria Tower. Any considerably larger proportion of copper than this, on the other hand, has a tendency to render the metal too soft, and impair the brilliancy of its tone.

The conclusion that the special shape figured above, or something near it, is the best for a bell, has no basis that any one seems to know of except experience. It has been theoretically maintained that plain hemispherical bells ought to give the

best and purest tone, but except on a small scale it is not found to be so; the result being either that the tone is very heavy and dead, or that when forced by hard striking it is unmusical and disagreeable to the ear. Sets of hemispherical bells have lately been made of larger size, and with more success than before; they require, however, to be fixed and struck, and not swung; their tone when not struck too heavily is not unpleasing, but quite inferior in power and brightness to that of a swung bell of the usual form. It is also to be noted, though this fact again is equally inexplicable, or at least unexplained, that large and small bells require somewhat differing shape and proportions to realise the best sound. That the proportionate thickness or weight of metal for producing the best results should be different for large and small bells, it is more easy to understand. For a large bell, such as 6-feet diameter, experience seems to give a thickness of $\frac{1}{12}$th of the diameter as the best proportion. Smaller bells will bear a somewhat greater proportionate thickness, and the proportionate thickness,—that is to say, the proportionate weight of metal to the note produced —is always increased in a large peal, from the lower to the upper notes of the scale. The thinner the bell is in proportion to the weight of metal, it should be observed, the deeper is the pitch; so that if the same proportionate thickness were preserved in the treble as in the tenor of a peal, the former would have to be made of too small size and too little weight of metal to compete successfully with the tenor. By adding to the proportionate thickness of the treble, we are enabled to make it of larger size and heavier metal while preserving the high pitch. This effect of thickness on pitch is a thing to be borne in mind in ordering a peal of bells, and deciding what scale or pitch is to be adopted. The cost of the bells is in proportion to the weight of metal, and the question therefore is, given so much metal, in what form to cast it so as to get the best effect from it. This will often be best realised by not endeavouring to get too deep a tone from the peal; a peal tuned in the scale of E or of F may be equally cast with the same amount of metal, but will not be equally good, as either the E peal in that case must be too thin, or the F peal too thick. Where the amount of metal is limited, therefore, the higher pitch will give the best result, and enable the metal to be used to the best advantage.

The precise note which a bell of a certain shape, size, and weight will produce is almost a matter of experience; but the proportion between size and relative dimensions and pitch is capable of being approximately tabulated. The average *modulus* of the finest of the large bells of Europe, as between size and weight, is given by Lord Grimthorpe (to whose work on Clocks and Bells the reader is referred for more detailed information on some of the points touched upon here), as 10 cwt. of metal for a bell 3 feet in diameter, and as the weight of metal varies as the cube of the diameter, a bell of 4 feet diameter would consume nearly 25 cwt., and one of 6 feet diameter 4 tons of metal. A bell of this last-named weight would, with the best and most effective disposition of the metal, give the note tenor C; and the pitch for other sizes may be deduced from this, on the rule that the number of vibrations per second in bells varies as $\frac{(\text{thickness})^2}{\text{diameter}}$.

Where a set of bells are in precisely similar proportions throughout, their dimensions would be simply in an inverse ratio to the number of vibrations per second of the notes they were intended to sound. But as in practice the higher pitched bells are always made thicker in proportion to the diameter than the lower ones, for the reasons mentioned above, the problem cannot for practical purposes be stated in the simple form of inverse ratio. Bells, it may be observed, are tuned by turning out a small portion from the inner side of the thickest part or sound-bow, when they are too sharp, so as to reduce the thickness and thereby flatten them, or by similarly turning off a small portion from the edge of the rim, so as to reduce the diameter, when it is desired to sharpen them. This latter process, however, impairs the shape, and is apt also to injure the tone of the bell; and if the casting cannot be so accurately regulated as to give hope of ensuring correctness at first, it is better to let any excess be on the side of sharpness, which can be corrected without damaging the bell. In the case of large peals the plan has sometimes been followed of casting all the smaller bells a trifle thick, so that if the whole peal is not precisely in tune, the tuning may all fall on the smaller bells, which will be reduced in thickness till they are brought down to the pitch to range correctly with the larger ones. Bells are however now cast with considerable accuracy, and the turning out of a nearly perfect, or, as it is called, a 'maiden' peal, is not an uncommon occurrence; though it must be said that peals are not infrequently so called which are not as perfectly in tune as they ought to be, but which are left untouched in order to claim the credit of being a 'maiden' set. This ought never to be allowed; in fact a much more rigorous standard ought to be maintained in tuning bells than is usual: the number of bells not properly in tune with each other which we hear is a constant annoyance to those whose ears can detect the falsity, and perhaps does something towards confirming other listeners in their deficiency of what is called 'ear.'

The casting of a large bell is an operation requiring considerable preparation and a great deal of nicety of workmanship. The first process is to form the model of the inside surface of the bell, or the core, which is done on a conical-

shaped base of iron or brickwork; the clay, after being approximately modelled by hand, is brought to the correct mould by means of what is called a 'sweep,' which is a flat piece of hard wood with one of its edges cut to the section of the inside of the bell, and which is attached to a pivot fixed in the centre of the core, and then 'swept' round the clay until the model of the inside of the bell is correctly formed. The core is then thoroughly dried by heat, either by a fire lighted under it (if it is on a brick base), or by being placed bodily in an oven (if it is on an iron base). The next point is to obtain the outer shape of the bell, and its thickness. There are two ways of doing this. The method which used to be universally adopted was to make upon the core, after it was dried, a model of the thickness of the bell in clay, the outer shape of the bell being obtained by another sweep operating in the same way, and turning on the same centre as that which formed the inside shape; then upon this, when dry, to build a cover or cope, the inner side of which closely followed the outer shape of the bell. This cope, going like an extinguisher over the whole, was strengthened with haybands, or, in the case of large models, with pieces of iron worked into it, so that when made it could be bodily lifted off, the clay bell previously made on the core broken away, and the cope replaced, leaving between it and the core the precise shape and thickness of the bell. The difficulty, however, of getting a good external finish in this way must have been considerable. The method now usually employed is to dispense with the operation of making the clay 'thickness' altogether, and to have a metal cope larger than the size of the bell, and lined with clay, in which the external model of the bell is then formed by an inverted sweep, acting on the inside surface; the cope is then turned over the core, and the exact model of the bell is represented, of course, by the space between them. The direct action of the sweep secures a more finished exterior surface than with the old hand-made cope; and another advantage is that the iron cope can be bolted down to a plate below the core, so as to render the whole thing perfectly steady for the casting, and greatly facilitate the process of getting it into the sand. The mould which gives the shape of the top of the bell, with the clapper-ring and the ears or 'canons' for fixing the bell to the stock, is added to the model by a separate process, and the whole is then imbedded in the sand of the casting-room with the mouth downward, and the metal run in and left to cool.

Bells have occasionally been used in the orchestra, though hardly in any sense which can justify their being included among orchestral instruments; since when used singly and sounded by swinging in the ordinary way, they are invariably intended to give what may be called 'local colour' to a dramatic scene; to suggest something beyond or apart from the orchestra, as the prison-bell in the 'Trovatore,' the goat-bell in 'Dinorah,' or the vesper-bell in Sterndale Bennett's 'Paradise and the Peri' overture. Mozart has, however, used a frame of bells played by a keyboard like that of a pianoforte ('Glockenspiel') in the score of 'Die Zauberflöte,' to represent the effect of Papageno's bells which are visibly present in his head-dress, though actually played in the band. The same instrument has been used in a somewhat similar manner by one or two other operatic composers, but always for stage effect rather than for directly musical purposes. A recent idea of some English organ-builders has been the attachment of a scale of bells to an organ, which are sounded either alone or in combination with the ordinary stops on drawing a stop-head which brings them under the control of the keys; but the addition is completely out of keeping with the genius of the organ, and is available rather for 'sensational' effects than as a real addition to the proper range of the instrument. All these experiments only serve to confirm the opinion that bell-music does not belong to the region of musical art properly so called; and attempts to drag the bell from its proper sphere, and force from it an expression foreign to its nature, have never permanently succeeded. [The use of bell effects in the orchestra has very largely increased in late years, and to obviate the difficulty of getting a real peal of bells into the concert-rooms, a valuable substitute has been invented, in the shape of metal tubes, hung in a frame, and far more easily and certainly tuned than real bells. They were used at the Leeds Festival of 1886, for the peal of four bells in the 'Golden Legend'; and in London performances of extracts from 'Parsifal' they have been used with excellent effect. The sound of bells was originally produced at Bayreuth itself in various ways, at first by a combination of very deep-toned pianoforte strings with some kind of gong; but in recent performances the tubes above mentioned have been employed.] H. H. S.

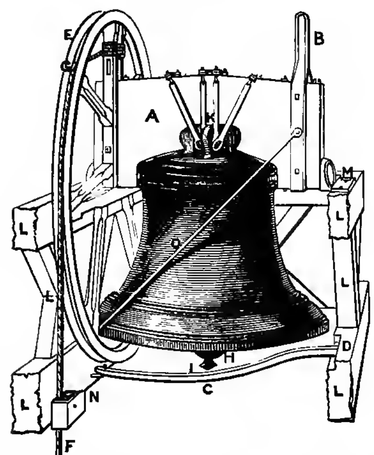
Bells are rung in peal in the British Islands only, with the exception of one or two rings of bells in America and the Colonies. On the Continent they are simply clashed, being swung with a lever—the notes of the bells not being arranged in any special order. In our islands it is usual to tune bells in the diatonic scale, and they are then rung in order, from the highest to the lowest.

To enable the ringers to do this with accuracy, and also to enable them to change the order in which the bells strike by proper methods (see Change-Ringing), bells are hung as shown in the accompanying illustrations.

They are first carefully secured by iron bolts and braces through the ears or 'canons,' K, to the stock A (Fig. 1) which is fitted with axles or gudgeons of iron, M, working in brass or gunmetal bearings. The stock is fitted with a

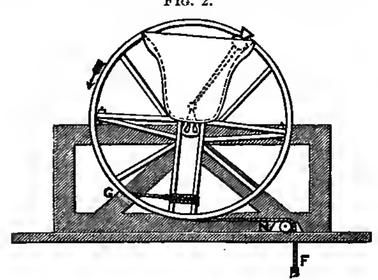
wheel, E, and a stay, B; and a ground pulley, N, is fixed to the floor of the belfry. By pulling

Fig. 1.



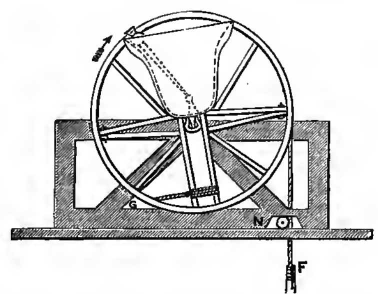
the rope F, the bell is gradually swung till she stands mouth upwards, as shown in Figs. 2 and

Fig. 2.



3, when she is maintained in this position by the stay B, and slider C, which prevent her from falling over (or turning clean round). It will be seen that when the rope, F, has been pulled enough to bring the fillet or 'sallie pin,' G, down to the nearest point to the ground pulley, N, that it can reach, it would in swinging past that point raise the rope; this gives the ringer a second pull, as will be seen by reference to Fig. 2, and this is called the 'hand-stroke' pull. Now by following with the eye the motion of the bell as indicated by the arrow in No. 2, she will be seen to turn over, bringing the fillet G past N; then, winding the rope round the wheel as she moves, she will arrive at the position of the bell in Fig. 3—this is called the 'back-stroke' blow. The operation of swinging the bell from the position shown in Fig. 2 and that in Fig. 3 is called 'falling a bell.' The first thing a ringer has to learn is so to swing his bell by the use of the rope, that he can be quite certain to bring her from one stroke to another, pulling her with proper judgment, so as just to throw her over the balance as shown in Figs. 2 and 3. If however too much force is used, there is a danger of

Fig. 3.



breaking the stay or some other part of the machinery, and the ringer himself may be seriously injured.

An alteration in the method of hanging the bell to the stock has been invented by Lord Grimthorpe, though only occasionally carried out. By the ordinary make the 'canons' for hanging are so arranged as to serve only for one position of the bell in regard to the stock, so that turning the bell in order to get the stroke of the clapper in a new position, after it has worn the bell, is impossible. Lord Grimthorpe's plan consists in having only four instead of six canons, at right angles to one another and forming a cross, on plan, on the crown of the bell. By this means the position of the bell can be altered by merely unstrapping it and turning it on the stock. As the clapper must always fly in the same plane, it is in this plan bolted to the stock, the bolt passing through a hole in the centre of the crown of the bell. C. A. W. T.

It is interesting to note the weight of metal and the dimensions of prominent bells in our own and other countries. The following list, for the most part taken from Denison's *Clocks*, etc., will show the leading particulars of some of the most celebrated :—

BELL (Fr. *pavillon*). The curved spreading mouth in which most wind instruments terminate; especially those of brass. The gradual conical expansion of a brass instrument makes possible the resonance to the even-numbered partials which in the tone from a stopped cylindrical tube are absent. The conical form also admits of a larger mass of air being put in vibration, hence increase of power. The extent of flanging of the bell-mouth affects the tone-quality; when this is small, as on the trumpet and bugle, the crisp brilliancy due to the strength of the high partials is not damped. A wide flange as on the French Horn, on the other hand, damps the high partials, and causes the tone to be more mellow (see HORN). D. J. B.

BELL GAMBA. An organ stop of 8 foot pitch and strong tone, having a bell or inverted cone at the top of the pipe.

BELLAIGUE, CAMILLE, eminent French critic, born at Paris, May 24, 1858, at first studied for the law, but worked at music at the same time with Paladilhe. He was afterwards in the Conservatoire, in the classe Marmontel, where he won a first prize for piano in 1878. His first essays in musical criticism were made in the *Correspondant* in 1884; from 1885 he was a contributor to the *Revue des deux mondes,* and the Académie bestowed on him the Vitet prize in 1894. Bellaigue's admirable criticisms have been collected in the following: *L'Année Musicale* (1886-93), *Un siècle de musique française, Psychologie musicale, Portraits et silhouettes de musiciens, Études musicales et nouvelle silhouettes de musiciens.* G. F.

BELLAMY, RICHARD, Mus.Bac. Cantab., a bass singer, was on March 28, 1771, appointed a gentleman of the Chapel Royal, and on Jan. 1, 1773, a lay-vicar of Westminster Abbey. He was vicar choral of St. Paul's Cathedral [in 1777, and from 1793 to 1800 was almoner] and master of the choristers. [In 1784 he sang in the Handel Commemoration in Westminster Abbey, and] in 1788 he published a volume containing a Te Deum for a full orchestra (performed at the installation of Knights of the Bath in May of that year), and a set of anthems. He [gave up his appointment in 1801, and] died Sept. 11, 1813. His son, THOMAS LUDFORD BELLAMY, was born in Westminster in 1770. He was educated in the choir of Westminster Abbey under Dr. Cooke, and after the change of his voice to a bass studied under Tasca, the celebrated bass singer. [He sang in the Handel Commemoration of 1784, as a treble, and] sang in London in the cathedral choirs and at concerts until 1794, when he went to Ireland as agent on a nobleman's estate [or more probably to look after some property bequeathed him by his maternal grandfather]; he afterwards went to Dublin, where in 1797 he became stage manager at the theatre. In 1800 he became part proprietor of the Manchester, Chester, Shrewsbury, and Lichfield theatres. In 1803 he sold his share and became sole proprietor of the Belfast, Londonderry, and Newry theatres. This speculation proving unsuccessful, he returned to London, and sang at Covent Garden Theatre for five years. In 1812 he was engaged for five years at Drury Lane. During all this period he also appeared as a concert singer. In 1819 he was appointed choirmaster at the chapel of the Spanish Embassy, a post which he retained for many years. In 1821, on the death of Bartleman, he was engaged as principal bass singer at the Concert of Ancient Music, and so continued until, a few years later, he was superseded by Henry Phillips. In 1840 he edited a volume of the poetry of glees, madrigals, catches, rounds, canons, and duets. He died in Judd Street, Brunswick Square, Jan. 3, 1843, in his seventy-third year. [Additions in square brackets from *Dict. of Nat. Biog.*] W. H. H.

BELLE HÉLÈNE, LA, opéra-bouffe in three acts, words by Meilhac and Halévy, the music

by Offenbach; produced at Paris, Théâtre des Variétés, Dec. 17, 1864; at the Adelphi Theatre, London, in a version by F. C. Burnand, under the name of 'Helen; or, Taken from the Greek,' Oct. 1, 1866.

BELLERMANN, Constantin, born at Erfurt, 1696, rector of Münden from 1742, a composer of operas and oratorios, and an extraordinary performer on the lute. His most important work is 'Programma in quo Parnassus Musarum voce, fidibus, tibiisque resonans, sive musices divinæ artis laudes diversæ species singulares effectus atque primarii autores succincte enarrantur' (Erfurt, 1743), an analysis of which is given by Mizler in his *Bibliothek*, vol. iii. He died at Münden, April 1, 1758. F. G.

BELLERMANN, Johann Joachim, born at Erfurt, Sept. 23, 1754, visited Russia, and returned to become Director of the Gymnasium of his native town from 1804 to 1828. He published very interesting 'Bemerkungen über Russland in Rücksicht auf Wissenschaft, Kunst, Religion,' etc. (Erfurt, 1788). He died at Berlin, Oct. 26, 1842. His son, Johann Friedrich, born at Erfurt, March 8, 1795, served in the war of independence (1813-15), studied at Berlin and Jena, and in 1819 became Professor, and from 1847 to 1868 Director of the Gymnasium 'zum grauen Kloster' at Berlin. He was a great authority on ancient Greek music, and was especially known for his edition of the 'De anonymis scriptis de Musicâ' (1841), and a work on the scales and notes of the Greeks (1847). He died Feb. 4, 1874. His son, J. Gottfried Heinrich, born March 10, 1832, became professor in the Berlin University in 1866, and a member of the Academy of Art in 1875. [He wrote a great deal of vocal music (motets, choral works, a cantata, and music to three Greek plays). His work on *Die Mensuralnoten* (1858) was the first modern treatise in which the system of mensural music was made clear. His treatise on Counterpoint (1862) and shorter but not less valuable theoretical works, published 1867 and 1873, brought him well-deserved renown, and a biography of Ed. Grell appeared in 1899. He died at Potsdam, April 10, 1903.] F. G.

BELLETTI, Giovanni, a great baritone, was born in 1813 at Sarzana, a town in the Lunigiana, of respectable parents engaged in trade. While still a child, he showed a very strong inclination to music. Having an exceedingly delicate ear and a wonderful agility of voice, he soon began to repeat with his child's treble every operatic air that he heard. His father, being advised to cultivate his son's talent, placed him in the hands of a master in the neighbourhood, upon whose advice he soon after transferred him, at no small personal sacrifice, to the famous school at Bologna, over which the celebrated Pilotti presided. The latter took the greatest interest in the boy, and taught him counterpoint as well as singing. After five years of study, Belletti received his diploma. His voice was now settled as a baritone of the most beautiful quality and evenness, with marvellous facility of execution. Advised to try the stage, he hesitated for some time, until he met at Carrara a Swedish sculptor named Byström, who proposed to take him to Stockholm, free from all risk or expense, to lodge in his house, and make his début; and, if unsuccessful, to send him back on the same terms to Italy. This generous offer he accepted, and arrived at Stockholm in 1837; Early the next year he appeared in the 'Barbiere,' and achieved his first success about a month earlier than Jenny Lind, with whose brilliant career he was so closely connected afterwards. With her he sang in 'Lucia,' in 'Robert,' and others of Donizetti's and Meyerbeer's operas, translated into Swedish. To the influence of Jenny Lind, and to the critical taste of his first audience, as well as to the fine old school of singing in which he had been brought up, he owed the pure style and freedom from vulgarity which, more even than his noble voice, made him the greatest baritone of the century. When Jenny Lind left Stockholm for Paris, young Belletti returned to his native land: but when she came to London, Lumley, upon her urgent advice, soon persuaded him to come to sing with her again. In the meantime he had sung with great success at Florence and Leghorn, in operas of Rossini and Donizetti. In 1848 he made his first appearance at Her Majesty's Theatre in 'Ernani,' with Mlle. Cruvelli, and during that season sang at both the opera-houses. After singing with no less success at Paris, he was engaged, with Lind and Benedict, by Barnum, for a tour in the United States; during which he maintained his reputation, and contributed to the enthusiastic reception which the company obtained in America. Returned once more to London, Belletti remained there till the end of 1862, singing not only at the Opera, but in classical concerts and oratorios, with undiminished success. He retired, in the midst of the most brilliant career, without a sign of faded powers, to Sarzana, his native place, where he lived a life of seclusion, universally respected, and surrounded by his family and relations, with whom he shared the earnings of the years he spent in his profession. BELLEVILLE-OURY. See Oury.

BELL'HAVER, Vincenzo, became second organist of St. Mark's in Venice, in 1586, succeeding his master Andrea Gabrieli, and being followed two years later, on Oct. 30, 1588, by Gioseffo Guami. It is therefore likely that he died in the year last mentioned. His second book of madrigals was published by Scotto of Venice in 1575, and his name appears in many of the madrigal collections of the period. Three of his madrigals, and a toccata for organ, are given in Torchi's *L'Arte Musicale in Italia*. M.

BELLI, Girolamo, born at Argenta near Ferrara, pupil of Luzzasco Luzzaschi, was in

the band of the Duke of Mantua, and in 1582 in Rome. His first book of six-part madrigals was published at Ferrara in 1583, a first book of five-part madrigals at Venice in 1584, a second book of six-part madrigals, called 'I furti,' Venice, 1584, reprinted as 'I furti amorosi' in 1587, a second book of five-part madrigals in 1586, a third book for six voices in 1593, a book of 'canzonette a 4' at Ferrara 1596, and a *ninth* book of five-part madrigals, in Venice, 1617. In addition to these, for the contents of which see Vogel's *Bibl. der gedr. weltl. Vokalmusik*, Belli wrote published masses, (1585), sacræ cantiones (1585, 1586, 1589, and 1594), and five-part psalms (1610) (Eitner, *Quellen-Lexikon*). M.

BELLI, GIULIO, born about 1560 at Longiano, was director of the music in the cathedral of Imola in 1582, entered the Franciscan order in 1590 (S. Maria in Carpi), was in Venice at the church of the Frari in 1595 as master of the music, was successively in similar posts at Montagnana, Osimo, Forli, and again at the Frari. In 1607 he went to Padua, and finally returned in 1611 to Imola, where the last trace of him is found in 1613. A memoir by Adamo Brigidi appeared in 1865. He was the most prolific of the many composers of his name; what appears to be his first work, the first book of 'canzonette a 4,' was published by Gardano of Venice in 1584, and was often reprinted; the second book appeared in 1593. Books of madrigals appeared in 1589 and 1595, but after that date there seem to be no new secular works; his first book of masses, for five voices, was printed at Venice in 1586, his first for eight voices in 1595, his first for four voices 1599, a book of masses for four to eight voices in 1608, and all these went through more than one edition. Psalms for eight voices (1596), for five voices (1598), and for six voices (1604), cantiones sacræ for four to twelve voices (1600), and various collections of 'Compieta, falsi bordoni, litanie, e motetti' appeared in 1605 (*a* 8) and 1607 (three books, for four, five, and six voices respectively). A set of 'concerti ecclesiastici' for two and three voices with organ, appeared in 1613 and 1621, and among them is a canzona for two cornetti or violins and trombone. It is not impossible that it was this Giulio Belli who, as Giulio Cesare Belli, held a position as lutenist at the court of Mantua about 1587 (Eitner's *Quellen-Lexikon*, etc.). M.

BELLI, DOMENICO, who may not impossibly have been related to one or other of the above, was, according to Fétis, in the service of the Duke of Parma. From 1610 to 1613 he was teacher of the younger clergy in church music at San Lorenzo in Florence, and was still living there in 1616, when his two extant works were printed in Venice by Amadino. They are a book of airs for one and two voices with chitarrone accompaniment (contents in Vogel, *Bibl. der gedr. weltl. Vokalmusik*), and 'Orfeo dolente,' 5 intermedii to Tasso's *Aminta* (*Quellen-Lexikon*). M.

BELLINI, VINCENZO, born at Catania, the capital of Sicily, Nov. 1, 1801, was, like so many distinguished musicians, the son of an organist. From his father he received his first lessons in music; but a Sicilian nobleman, struck by the child's talent, persuaded old Bellini to allow him to send his son to Naples, where he offered to pay the child's expenses at the famous Conservatorio, directed at that time by Zingarelli. Here Donizetti had preceded his short-lived contemporary by only a few years. Another of Bellini's fellow-pupils at the Conservatorio of Naples was Mercadante. It is probable enough that Mercadante (who in after years became director of the celebrated musical institution in which he received his early education) may have written better exercises and passed better examinations than his less instructed young friend Bellini. The latter, however, began at an earlier age to compose. Bellini's first work for the stage was produced while he was still at the academy. His 'Adelson e Salvina' (1825) had the good fortune to be played in presence of the celebrated Barbaja, manager at that time of La Scala at Milan, of the San Carlo at Naples, and of numerous minor opera-houses. The great impresario, with the keen-sightedness which always distinguished him, gave the promising student a commission to write an opera for Naples; and in 1826 Bellini's 'Bianca e Fernando' was brought out at the San Carlo without being so successful as to attract European attention. 'Bianca e Fernando,' however, pleased the Neapolitan public, while its general merit encouraged Barbaja to entrust the young musician with the composition of another work, which this time was to be brought out at La Scala. The tenor part in Bellini's first opera for Milan was to be written specially for Rubini, who retired with the juvenile maestro into the country, and remained with him until the new opera, or at least the tenor part in it, was finished. The florid music of Rossini was at that time alone in fashion; and, by way of novelty, Bellini composed for Rubini, with his direct approbation, if not at his express suggestion, the simple expressive melodies which the illustrious tenor sang with so much effect when 'Il Pirata' was at length produced in 1827. Owing in a great measure to Rubini's admirable delivery of the tenor airs, 'Il Pirata'—the earliest of those works by Bellini which are still remembered—obtained a success not merely of esteem or even of enthusiasm, but of furore. It was represented soon afterwards in Paris, and in due time was heard in all the capitals of Europe where Italian opera was at that time cultivated. Bellini's next work was 'La Straniera,' first performed at Milan in 1829 with an admirable cast, including in the chief parts

VINCENZO BELLINI

Madame Tosi, Donzelli, and Tamburini. 'La Straniera' was less successful than its predecessor, and it scarcely can be said to have met with general favour in Europe. Like 'Il Pirata' it was produced in London, where, however, it made but little impression. 'Zaira' (Parma, 1829) may be said to have failed. This at least is the only work of Bellini since the production of 'Il Pirata' which was never performed out of Italy. 'I Capuletti ed i Montecchi,' composed for Venice and represented for the first time at La Fenice in 1830, was brilliantly successful throughout Italy; though in London and Paris the new musical version of 'Romeo and Juliet' seems to have owed such favour as it received to Madame Pasta's performance in the character of Romeo. This part, it may be noted, was the one selected by Wagner's niece, Mlle. Johanna Wagner, for her début in London when, immediately after the so-called 'Jenny Lind mania,' that artist, so much admired in Germany, appeared without success at Her Majesty's Theatre. In 1831 Bellini, now twenty-nine years of age, composed for La Scala the work generally regarded as his masterpiece. Romani, the first of modern Italian librettists, had prepared for him, on the basis of a vaudeville and ballet by Scribe, the 'book' of 'La Sonnambula'; and the subject, so perfectly suited to Bellini's idyllic and elegiac genius, found at his hands the most appropriate and most felicitous musical treatment. 'La Sonnambula,' originally represented at La Scala in 1831, could not but make the tour of Europe; and, warmly received wherever it was performed, it hit the public taste nowhere so much as in England. No Italian opera before 'La Sonnambula' was so often played in London as that charming work, the popularity of which is due partly to the interest of its simple, natural, thoroughly intelligible story, chiefly to the beauty of the melodies in which it abounds. Thanks to Malibran, who appeared in an English version of the work, 'La Sonnambula' soon became as popular in our own as in its native Italian language; and even to that large portion of the public which never enters an Italian opera-house the airs 'Vi ravviso,' 'Tutto è sciolto,' 'Ah non giunge,' were as familiar as any of our national melodies. It may be noted, once for all, that the genius of Bellini was exclusively lyrical and tuneful. He was no harmonist, he had no power of contrivance; and in his most dramatic scenes he produces his effect simply by the presentation of appropriate and expressive melodies. The beauties of 'La Sonnambula,' says an English critic, 'so full of pure melody and of emotional music of the most simple and touching kind, can be appreciated by every one; by the most learned musician and the most untutored amateur—or rather, let us say, by any playgoer who not having been born deaf to the voice of music hears an opera for the first time in his life.' The part of Amina, the heroine of 'La Sonnambula,' was for many years a favourite one with débutantes; and it was in this character that both Patti and Albani made their first appearance before an English public. Less than a year after the production of 'La Sonnambula' Bellini delighted the world of music with 'Norma,' Dec. 26, 1831, which, very different in character from its immediate predecessor, is equally in its way a work of genius. Bellini has written no melody more beautiful than that of Norma's prayer 'Casta Diva,' in which, however, it is impossible to deny that the second movement is unworthy of the first. In the duet of the final scene the reproaches addressed by Norma to the faithless Pollio have, apart from their abstract musical beauty, the true accent of pathos. The first and most celebrated representative of the Druid priestess was Pasta. It afterwards became one of Giulia Grisi's greatest parts, and a later generation had an admirable Norma in Titiens. Mme. Lilli Lehmann may be mentioned among the few singers of the present day who have attempted it with success. Bellini's most important serious opera, like almost all operas of real dramatic merit, is founded on a French play. Romani's libretto of 'Norma' was based on Soumet's tragedy of the same name, produced at the Théâtre Français about a year before the opera of 'Norma' was brought out at the Scala Theatre of Milan. The successful opera has killed the drama from which its subject was derived—a result which under similar circumstances has happened more than once in the history of the modern stage. 'Norma' was succeeded by an opera performed only in private, called 'Il fù ed il sarà,' and this by 'Beatrice di Tenda,' which did but little to keep up the composer's reputation. Represented for the first time at Venice in 1833, it was performed three years afterwards, without much success, in London. In 1833 Bellini lived for some time in London (see Lady Morgan's *Memoirs*, August 15, 1833, etc.). Later in the same year he went to Paris, where, by the advice of Rossini, he was engaged to write an opera for the Théâtre Italien. Rossini is said to have recommended his young friend (Bellini was then twenty-seven years of age) to devote special attention to his orchestration, and generally to cultivate dramatic effect. In 'I Puritani' (1835)—which, according to the almost invariable rule, owed its dramatic materials and its stage form to a Frenchman—Bellini was not well served by his librettist. On the other hand, the score is full of the most engaging melodies of the true Bellinian type. The part of Elvira, dramatically considered, may be uninteresting; but no prima donna who is mistress of the Italian style will willingly miss an opportunity of making herself heard in the beautiful 'Qui la voce,' and in the joyful sparkling polacca.

The chief part, however, in the opera, in a musical if not in a dramatic sense, belongs to the tenor. Few tenors since the time of Rubini, for whom it was written, have had voices sufficiently high to be able to sing it from beginning to end in the original keys. Otherwise the charming romance in the first act, 'A te o cara,' and the melody of the final concerted piece—so refined and so elevated in character—could not but tempt our modern tenors. Both Mario and Giuglini were frequently heard in the character of Arturo. The company for which 'I Puritani' was written comprised as leading vocalists, Grisi, Rubini, Tamburini, and Lablache; and the distribution of characters when this work was first performed was the same, for a few years at least, in London as in Paris. 'I Puritani' was produced in London for the benefit of Madame Grisi in 1835; and the 'Puritani season' was remembered for years afterwards, and was cited by experienced habitués, as one of the most brilliant ever known. We have spoken of the prima donna's cavatina and of her polonaise 'Son vergin vezzosa,' of the tenor's romance, and of his leading motive in the concerted piece of the last act; nor must we forget the duet in three movements for the baritone and bass—as fully developed and destined to be quite as popular as the duet for the two soprani in 'Norma.' As regards the spirited concluding movement in the military style, with its vigorous accompaniment of brass instruments, Rossini, writing of the opera from Paris to a friend at Milan, observed: 'It is unnecessary for me to describe the duet for the two basses; you must have heard it where you are.' 'I Puritani' was Bellini's last opera. Soon after its production he went on a visit to an English friend, Mr. Lewis, at Puteaux, at whose house he was attacked with an illness from which he never recovered. 'From his youth upwards,' says Mr. J. W. Mould in his *Memoir of Bellini*, 'Vincenzo's eagerness in his art was such as to keep him at the piano day and night, till he was obliged forcibly to leave it. The ruling passion accompanied him through his short life, and by the assiduity with which he pursued it, brought on the dysentery which closed his brilliant career, peopling his last hours with the figures of those to whom his works were so largely indebted for their success. During the moments of delirium which preceded his death he was constantly speaking of Lablache, Tamburini, and Grisi; and one of his last recognisable impressions was that he was present at a brilliant representation of his last opera at the Salle Favart.' Bellini died on Sept. 24, 1835, in the thirty-fourth year of his age—not the greatest, but by far the youngest, of many admirable composers (as Purcell, Mozart, Schubert, Mendelssohn, Hérold) who scarcely lived to accomplish half the allotted years of man. It has been said that Donizetti, Bellini's contemporary and fellow-labourer, born four years before him, outlived him by thirteen years; yet Donizetti was not fifty-one when he died. Judge Bellini on the other hand by what another of his contemporaries did during the first twenty-eight years of his career, and his youthful energy dwindles away before that of Rossini, who was but twenty-six when he produced 'Mosè in Egitto,' and who had previously composed, among works of less fame, 'Tancredi,' 'Il Barbiere,' 'Otello,' 'La Gazza Ladra,' and 'La Cenerentola.' Directly after Bellini's death, and on the very eve of his funeral, the Théâtre Italien opened for the season with 'I Puritani.' The performance must have been a sad one; and not many hours after its conclusion the artists who had taken part in it were repeating Bellini's last melodies, not to the words of the Italian libretto, but to those of the Catholic service for the dead. The general direction of the ceremony had been undertaken by Rossini, Cherubini, Paër, and Carafa; the musical department being specially entrusted to Habeneck, the distinguished conductor of the French Opera. In the Requiem Service a deep impression was produced by a 'Lacrymosa' for four voices [arranged by Panseron, and reprinted in the *Rivista Musicale* vol. ix. p. 72] of which the beautiful tenor melody in the third act of 'I Puritani' formed the fitting theme. The movement was sung without accompaniment by Rubini, Ivanoff, Tamburini, and Lablache. The mass was celebrated in the Church of the Invalides, and Bellini lies buried in the cemetery of Père la Chaise. Rossini, who had done so much for his young compatriot during his lifetime, undertook the duty of conveying to the father the news of his death. 'You always encouraged the object of my eternal regret in his labours,' wrote the old Bellini in reply; '. . . I shall never cease to remember how much you did for my son. I shall make known everywhere, in the midst of my tears, what an affectionate heart belongs to the great Rossini; and how kind, hospitable, and full of feeling are the artists of France.' [In 1901, the centenary of Bellini's birth was celebrated at Catania. See *Musical Times*, 1901, pp. 604 and 729.] H. S. E.

BELLMAN, CARL MICHAEL, born Feb. 4, 1740, died at Stockholm, Feb. 11, 1795, was a very remarkable and original lyrical genius. It is true that he was more of a poet than a musician, for he himself wrote most of his wonderful 'Fredmans Epistlar' and 'Sånger' (among which the splendid humorous pictures from the life of the people in Stockholm are especially noticeable); but he set them chiefly to popular French melodies, which were at that time greatly in vogue. His original melodies are inferior to those he borrowed from foreign sources. A. H. W.

BELLOC, TERESA GIORGI, was born at S. Benigno, Cavanese, Aug. 13, 1784, of French parents, and made her first appearance in 1804 at the theatre of La Scala at Milan. One of

her first rôles was Paisiello's 'Nina,' in which she was so successful as to obtain an engagement at the same theatre for the following year. She sang next at Paris in the same opera, in Martini's 'Cosa Rara,' and other pieces. Thence she visited Venice, Genoa, and Milan, where she appeared in the carnival of 1807, and remained for the rest of the year. At Venice in 1812 Rossini wrote for her, Raffanelli, and F. Galli, 'L'Inganno felice,' and at Milan, in 1817, 'La Gazza Ladra.' In the latter year she appeared for the first time in London, under the name of Bellocchi, and succeeded Mme. Fodor. Though a good singer and actress in comic operas, she did not please much here, owing to the coarseness of her voice and the plainness of her person. She was something like Storace, with most of her defects, but not all her excellences. She, however, surprised the public, towards the close of her engagement, by a capital performance of 'Tancredi,' for which nothing could be less fitted than her figure; but the music suited her voice, and her singing of it was really so good as to atone for her personal appearance. She sang here during that and the two following seasons; and in 1821 she returned to Milan, singing there throughout that year and the next spring. She remained there the whole of 1823 and during the spring of 1824. In 1828 she quitted the stage [and died May 13, 1855. A memoir by C. Boggio was published in Milan in 1895.] J. M.

BELLOWS. The apparatus by which the air is collected, compressed, and propelled through the several wind trunks or channels of an organ for ultimate redistribution among the pipes.

One of the matters of greatest importance in an organ is that the supply of wind shall be copious, unvarying, and continuous,—that it shall possess 'good lungs,' as Sebastian Bach used to say. Yet it is curious to note how singularly far from being in such condition were the early organs; and it is interesting to trace the steps by which, through centuries, the desired consummation was gradually, and only gradually, achieved. In the 4th century organs were blown by bellows formed like the ordinary household bellows, about five feet in length, which were 'weighted' by two men standing on the top; and as the men who performed the office of dead weight one day might be fifty pounds heavier than those who did so on the next, it is clear that the tone, speech, and power of the organ must have been subject to constant variation. In the 11th century the bellows—still of the household kind—were blown by hand, and although a nearer approach to an equal wind might then with care have been to some extent secured, yet it must still have varied with the muscular power of successive blowers. The sides or folds of these primitive contrivances were made of leather—'white horse's hides,' or 'shepis skyn,' as the old accounts inform us—and were consequently subject to frequent injury from strain and friction; hence the constant appearance in old parish accounts of such entries as 'Paid for mending of the gret organ bellowis, and the small organ bellowis, v^d^.' These ever-recurring failures at length suggested the use of some more durable material, and wooden *ribs* were substituted for the leather folds. This improvement was effected as long ago as 1419, in which year, as we learn from the Fabric Rolls of York Minster, John Couper, a *carpenter*, received 'For constructing the *ribs* of the bellows, xii^d^.'

These bellows, however formed, could of course give only an intermittent supply of wind, being wholly inoperative while being drawn open; consequently two at the least were always required, one to supply wind while the other was replenishing. A more 'continuous' supply, though by no means of an 'unvarying' strength, was secured by the use of a contrivance like the ordinary smith's forge bellows, consisting of a *feeder* below and a *diagonal* reservoir above. When this form of bellows was first used, or finally abandoned, are matters not quite clear; but some disused specimens were lying in a lumber-room attached to Tong Church, Shropshire, as late as the year 1789. Father Smith (died 1708) occasionally put something of the kind into his small cabinet organs; but attention was more particularly directed to the correction of the defects which continued to exist in the diagonal bellows.

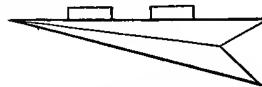
A diagonal bellows was formed of two pairs of triangular-shaped ribs for the sides, a pair of parallel ribs for the spreading end, a bottom-board, a top-board—all attached together by leathern hinges—and the superincumbent weights. For a long time the bellows were placed with the bottom-board in a horizontal position, the top-board rising, and the whole taking the following outline when inflated:—

This did not, however, produce a uniform current of air, but a somewhat lighter one at the commencement of the descent, and a gradually increasing one during the closing. This arose from two causes. The first was connected with the weights. A weight exercises its greatest influence on a horizontal surface, and loses some of that influence on an inclined plane. The second was due to the varying position of the wooden ribs. These would present an obtuse angle to the wind in the bellows when inflated, thus—

and, therefore, by virtue of their position and the pressure of wind on the ribs from within,

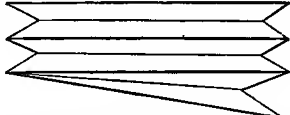
would assist in sustaining the top-board and the weight thereon, reducing the pressure of wind. As the bellows closed, the angle became more acute.

The top weights acquiring greater influence as the top-board approached a horizontal position, and the ribs closing and losing some of their sustaining power, the density of wind gradually increased. Various ingenious means were devised for correcting this inequality—as accumulative springs; a counterpoise acting in opposition to the descent of the bellows; a string of leaden weights which were left in suspension as the bellows descended, etc. . but the simplest and perhaps most effectual of all was that adopted by some of the German organ-builders, which consisted in placing the bellows so that the top-board took the horizontal position on the bellows being inflated—

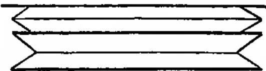


In this case the top weights exercised their greatest pressure at the starting, at which time the ribs exercised their least, and *vice versâ.*

A bellows nevertheless still gave but an intermittent supply, and it was not until the year 1762 that an approach towards a successful combination of a feeder and a reservoir was made, by a clockmaker of the name of Cumming. This bellows had something of the form shown in the following outline:—



It was, however, considered to be a mistake to have both sets of ribs folding the same way, and this led to the upper set being inverted, thus—

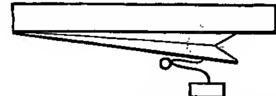


the effect of which was to balance the action of the pressure of wind on the ribs from within, which now tended to expand one set of ribs and collapse the other. Thus the desired 'copious, unvarying, and continuous' supply of wind was at length secured.

There are certain disturbances which arise from the manner of the consumption of the wind.

It is essential that the bellows of an organ should yield a *steady* as well as an ample supply. The improved bellows being capable of the latter, the even flow was nevertheless apt to be disturbed from one of many causes. A prolific source of unsteadiness was unskilfulness on the part of the blower. At the commencement of the stroke the wind, in passing into the reservoir, has to overcome the pressure of the surface weights and raise the top-board, and at its termination the surface weights have gently to resume their compressing force on the wind. But if the stroke be begun or concluded too suddenly there will be a momentary over-compression or a jerk in the wind, resulting in either case in a disturbance of the smooth sounding of the pipes.

Again, if several large pipes are sounded together, by many bass keys being put down simultaneously, there will be a great demand upon the wind-supply, and a consequent possibility of the small pipes in the treble not being properly 'fed,' the result in that case being a momentary weakness or tremulousness in their speech. On letting the several bass keys suddenly rise, the consumption of wind would as suddenly be checked, and by thus causing for a moment a slight over-compression, the sensitive small pipes would sound too sharp and strong. These tendencies suggested the application of a small self-acting reservoir in the immediate neighbourhood of the pipes, which should add to or subtract from the ordinary wind-supply as occasion might require: and such an apparatus was successfully devised by the late Mr. Bishop, which consisted of side and end ribs, and a board, not unlike a small 'feeder,' with strong springs behind placed horizontally or vertically over a hole cut in the wind chest or wind trunk, the whole being called a 'concussion bellows.'



When at rest the concussion bellows stands about half-way open, and charged to that extent with air. If a sudden and great demand is made upon the wind it immediately closes, adding its contents to the average supply; and if there is likely to be a redundance it expands, and so reduces it to the average. E. J. H.

The reservoirs of modern organ bellows are fitted with iron regulators or counter-balances to assist the floating frame and middle ribs, to rise and preserve their relative positions, as inflation proceeds. Safety-valves are also provided, which automatically discharge surplus wind when the reservoir is full. For hot climates reservoirs may be constructed on the principle of a gasometer. In calculating the size of the bellows, organ-builders allow an area of about two square feet to each speaking stop.

A French feeder is one having a parallel

motion, sometimes made in a double form, and placed vertically; the middle board moving backwards and forwards, and blowing in both directions. In order to avoid the disturbing and unsteadying effect on the wind arising from the operation of one large single feeder, and to equalise the expenditure of power in blowing, double, and sometimes triple feeders are used, as at Beddington Church, Surrey. By giving these alternate motion a steady and regular supply of wind to the reservoir is secured. But double feeders, when operated by the ordinary blowing lever, involve a reversal of the direction of the thrust exerted by the power in blowing, which tends to cause a blow or knock at each reversal. Manufacturers of organ-blowing machinery of recent date seek to modify or eliminate this defect by so arranging the blowing levers, cranks, or motions, as to keep the thrust, weight, and contact, constant in one direction, causing the bearings to 'take up their own wear.' Rotary blowers and double or triple feeders blown by cranks, shaft, and fly-wheel, are free from reversal of thrust or contact with the bearings, nor would such reversal exist in reciprocal blowing if the levers were sufficiently heavy to keep the contact constant.

We are now confronted with other disturbing influences on the wind, namely, those which are due to the laws of inertia and momentum, inseparable from the employment of heavy weights upon the bellows, which, as stated in the preceding article, momentarily fail to respond to any sudden demand, or cessation of demand, made upon the wind. To minimise or neutralise these effects, concussion bellows are used (see above), and, in large organs, auxiliary reservoirs of comparatively small capacity and great activity are employed.

Mr. Robertson suggests that if springs were interposed between the weights and the bellows the response would be instantaneous.

In the Austin system of organ-building, V-shaped springs of flat steel, riveted at the angle and compensated by a single folding rib in conjunction with a light and active pressure-board, are used to give pressure instead of weights. Mr. Hope-Jones uses long spiral springs attached to a pressure-board in connection with a single pair of inward folding ribs, which, as previously stated, cause a variation of pressure by virtue of their position, and the pressure of wind on the ribs from within. As the ribs expand and the pressure is reduced, the springs, being attached to the floor, exert their greatest power, equalising the pressure throughout the travel of the pressure-board. This arrangement is virtually a huge square-rising concussion feeder or bellows.

When bellows are blown by hydraulic power, French, square, square-drop, or square-rising feeders take the place of the ordinary hinged, diagonal, or wedge-shaped feeders, and being provided with ribs at both ends, as in the case of the reservoir, they have a parallel motion and throw double the amount of wind at each stroke. In modern organ-building several pressures of wind are employed in the same instrument, ranging in large organs from about three inches for flue stops of delicate tone, to twenty-five inches for Tubas. The pressure of wind is gauged or weighed by means of an anemometer or wind-gauge, a tube of glass having two bends in the form of a syphon, into one of which water is poured. One end of the tube being inserted in a pipe hole, with the key held down and the wind on, the pressure exerted by the wind upon the water upsets its natural level, forcing the water down one portion of the tube and up another. The distance from one level to the other is then measured in inches, denoting the pressure.

The feeders of large organs of the older type are arranged and blown in tiers or series; or the wind is generated at the heaviest pressure, and automatically let down, or fed off into auxiliary reservoirs of lower pressure by means of valves, traps, or pallets, controlled by the position of the top-boards of the lighter pressure reservoirs, which are the first to fill and the last to empty.

For blowing by hydraulic power, a water-pressure of at least 30 lbs. to the square inch is desirable. The lower the water-pressure is, the larger the engine requires to be, and it is necessary to ascertain the pressure of wind, the kind, number, size, and dip of the feeders, and the number of strokes required in a given time, to supply the full organ, before the power requisite for the engine can be determined. In London, Liverpool, and Glasgow, a water service exists having a pressure of 700 lbs. to the square inch, and in Manchester it is as high as 1000 lbs. to the square inch.

Hydraulic engines blow fast or slow according to the demand made on the wind, the supply of water to the engine being automatically controlled by the rising and falling of the top board of the reservoir. They can be started from the keyboard, and usually cause some noise in the action of the pallets in starting, if the full supply of water is turned on too rapidly; but they blow very steadily, and are considered to be economical of power.

In the Swanton Economiser the position of the top board of the reservoir does not control the supply of water to the engine, but affects the amount of leverage obtained by the connections in such a way as to vary the length of the stroke of the engine according to the demand; but without affecting the dip of the feeder, which always remains the same.

An air compressor is practically an air-pump, and consists of a cast-iron cylinder (usually lined with brass), having a solid piston actuated by a crank, shaft, and fly-wheel. The movement of the piston draws the air through valves

placed at the ends of the cylinder, and forces it through an ordinary pallet valve into the wind trunk and reservoir. Its general appearance is very similar to that of an horizontal steam engine. (Examples may be found at St. Paul's, Salisbury, and Winchester Cathedrals.)

A rotary fan, driven at a rapid speed by a gas engine or electric motor, creates a continuous blast of air which is conducted by a wind trunk to the reservoir.

Fans have the advantage of occupying but little space, but the high rate of speed necessary is possibly conducive to waste of power, and is likely to cause a hum in the wind trunk, which, however, is capable of treatment by means of a 'silencer'—a large leathern bag filled with horsehair, through which the wind is made to pass. Objection is sometimes taken to the fact that the temperature of the air is appreciably raised by the rapid action of the blades of the fan.

A rotary blower—rotary feeder system (driven likewise by a gas or an oil engine, or by electric motor)—consists of four weighted V-shaped feeders attached at the hinge end to a common, hollow, horizontal centre or shaft, which receives the wind from the feeders as they fall over in succession in rotating, delivering it in turn to a wind trunk at the side, and thence into the reservoir. Opposite feeders are coupled. The top board of the reservoir controls a valve in the wind trunk, admitting or cutting off the wind according to the demand or supply. When the reservoir is full and the delivery of the wind is cut off, back pressure is created, and the feeders remain open throughout the period of their revolution, no wind being generated. As demand is made upon the wind the reservoir subsides, and opens the valve in the wind trunk; the back pressure is relieved, and the feeders resume their efficient action. (Example at Stepney Parish Church.)

An improved form of blower, known as the compound centrifugal organ-blower, consists of two or more blowers of this description coupled in series, the first generating, for example, four-inch wind, and delivering it to the second, which raises it to, say, eight-inch wind, and so on, step by step, to any required pressure. This method of obtaining the highest pressure by raising it from the lower, is scientifically correct in principle and economical in practice, and the wind can be drawn off or tapped at any of the pressures raised.

The kinetic organ-blower consists of a number of fans arranged in chambers side by side, in series. Like the system just described, each succeeding fan is fed with air already raised to a pressure by the fan below, and the pressure is increased, step by step, throughout a series. With the ordinary fan the air is driven in the same direction as the blades of the fan, but in the kinetic blower it is propelled at right angles thereto. These fans can be run at a comparatively slow speed, but the slower the speed, the larger the number of fans required. It is stated that at 600 revolutions per minute they are absolutely silent, and may be placed inside the organ. The maximum speed is 1000 revolutions per minute. The wind may be tapped at any chamber next above the pressure required. In the latest form half the number of fans deliver the wind in one direction, and the other half in the opposite direction, by this means 'end thrust' is eliminated. (Example at Warwick Castle.)

For the Sturtevant silent organ-blowing fans it is claimed that 'they are automatic in regard to air-supply, for when run at a constant speed they will maintain a constant pressure in the reservoir, irrespective of the volume withdrawn; the power absorbed by the fan being roughly in proportion to the volume handled, providing always that the volume withdrawn does not exceed that for which the fan is rated.' This is also true of other fans. There is no necessity for relief valves, as the pressure cannot rise higher than that for which the fan is speeded. (Examples at Westminster Abbey, and Christ Church, Newgate Street, London.)

In almost every kind of rotary blower the motion is continuous, fast and loose pulleys being employed to control the efficient action of the driving belt or strap, as in many other kinds of machinery; but although the engine or motor may be running light, *i.e.* with no load, continuous running is not considered to be so economical as well-controlled hydraulic power.

Gas engines always make some noise, which, however, can be modified by providing for the exhaust a concrete pit filled with rubble, covered by flagstones laid loosely, and disjointed to give vent.

It may be well to state that when the bellows are situate at a distance from the organ it is highly desirable, in order to secure an even temperature, that the air supplying the feeders should be drawn from the chamber or building in which the organ is placed.

The names of Bamford, Joy, Speight, Blennerhasset, Kirby, Melvin, Watkins and Watson, Ross, Vincent Willis, Swanton, and others will be familiar to those who have traced or followed the history of organ-blowing by hydraulic power.

T. E.

BELLY. The upper or anterior part of the resonant box in stringed instruments. It is made out of a block of pine, cut straight across the grain, and forms a plate consisting of many ribbons of hard fibre parallel to each other, by their united hardness capable of affording considerable resistance to the tension of the strings, the interstices being filled up with cellular matter of softer texture. The flat bellies of the lute, mandolin, cittern, and guitar require

no special notice. The hollowed belly of the viol and violin should be of nearly uniform grain, and quite free from shakes or knots. A moderately wide grain, say of sixteen spaces from fibre to fibre, to the inch, or thereabouts, is to be preferred; but instruments having closer or wider grain are often found to have a fine tone. The wood should be well seasoned —*i.e.* have been kept in a dry place, cut into suitable blocks, for twenty or thirty years; but it is fatal to tone to use, as some recent makers have done, very old wood which has lost its elasticity. The blocks are usually so cut that the hard ribbons of the belly are vertical to the flat section of the instrument. Occasionally the old makers sawed their blocks in such a way as to leave the ribbons obliquely inclined to the plane of the belly, and instruments made from such blocks have been found to possess an exceptional evenness, facility, and brilliancy of sound: the fact being that in proportion as the grain is inclined from the vertical standard greater breadth is left in the hard vibrating ribbons, and the volume of tone is proportionately increased. The latest instance of this practice known to the writer is an English tenor dated 1807. Since violin-making has become for the most part a mere manufacture, experiments of this kind have been abandoned.

The belly is left thickest in the middle under the bridge, and is thinned out to the edges of the instrument. If the thickness in the centre be too little the tone will be dull; and modern copyists often leave it too thin in order to simulate the tone of an old instrument. If it be too thin towards the edges the tone will be weak. Repairers sometimes tell the owner of an instrument that 'the thicknesses want altering'; and it may be that some restoration by way of replacing wood which has been lost, whether by the pressure of the sound-post, or by previous tampering, may be advisable. But owners of instruments made by makers of decent reputation cannot be too strongly cautioned against sanctioning any thinning of the belly on any pretence whatever.

Among the fixed as distinguished from the movable parts of the instrument (the bridge and sound-post), the belly is the only one acting in the production of tone; the blocks serving only to give strength and resonance to the resonant box, the bass-bar distributing the vibrations, and the back and sides chiefly acting as reverberators. That parallelogram of the belly which lies between the upper curve of the sound-holes on each side and the blocks at the top and bottom produces most of the tone. An instrument in which the width of this parallelogram is unusually small should be avoided as likely to have a weak tone. In the case of some high-class makers this apparent fault seems to have no bad result, having probably been compensated for in some other way; and if the instrument is otherwise a good one, the expedient, adopted by some repairers, of inserting additional strips of wood in the middle of the belly and back, should not be resorted to. For other aspects of the subject, see BRIDGE, SOUND-HOLES, SOUND-POST, and VIOLIN. E. J. P.

BELLY or SOUNDBOARD of pianoforte. (Fr. *La Table d'harmonie;* Ital. *Tavola armonica;* Ger. *Resonanzboden, Resonanztafel*). The broad flat of wood, of deal or spruce fir, *Abies Excelsa* —in America, *Abies Alba*—extended under the strings of a pianoforte, and connected with them by a bridge of hard wood over which they are stretched, is technically called the belly, but is also called the sound- or sounding-board. The strings when set in vibration, owing to their small surface in contact with the air, would be scarcely audible, were it not for the belly, an auxiliary vibrating body of large surface, to reinforce them. Thus the tone of a pianoforte essentially depends upon the movement and variable pressure of the strings at the point of contact with the bridge, by which their vibrations are conveyed to the belly to be intensified by the vibrations of the fibres of this elastic support. There is no sonorous body for which we may calculate movement under varied conditions, and then verify the calculation by trial, to compare with a stretched string. The problem is far more complicated of a resonant surface, as the belly, and appears to have offered less attraction to research. We are mainly indebted to Chladni for what we know of the forms of vibration of resounding substances. His determination of the nodal lines by means of fine sand placed upon vibrating surfaces has been of great importance to theory, and has been the foundation upon which the law of the practice of ribbing the belly diagonally to the direction of the grain with slender bars of pine has been finally established by Dr. Schafhaeutl, who has proved that this contrivance creates nodal lines of rest, and prevents the transversal vibration of the belly as a whole which would be inimical to the production of tone. But up to this time, in the construction of bellies, experiment alone has effected what has been achieved. The difference in the value of a soundboard depends very much upon variations in the proportions, direction of the grain and barring, chosen by different makers to reinforce the initial strain of the vibrating wires coercing the response of the wood. The proper vibration of a soundboard counts but little in the analysis of tone; it is responsive, not creative. A. J. H.

BELSHAZZAR. An oratorio of Handel's, occurring in the series between 'Joseph' and 'Hercules'; words by Jennens, much reduced by Handel. Dates on autograph (in Buckingham Palace)—at beginning, Aug. 23, 1744; at end of first part, Scored Sept. 5, ditto; end of second part, Sept. 10, ditto. First performance

at the King's Theatre on Wednesday March 27, 1745, announced as Belteshazzar. The oratorio was revived by the Sacred Harmonic Society on March 19, 1847. [See Macfarren's preface to Novello's octavo edition.] G.

BEMBERG, HERMAN, was born at Buenos Ayres, of French parents, March 29, 1861. He was educated at the Paris Conservatoire under Théodore Dubois and Jules Massenet. His principal works are 'La Mort de Jeanne d'Arc,' a short cantata for soprano solo, chorus, and orchestra (1886); 'Le Baiser de Suzon,' a comic opera in one act which was produced at the Opéra Comique, Paris, in 1888, and 'Elaine,' an opera in four acts and six tableaux, which was produced at Covent Garden in 1892 and in New York in 1894. He has also written numerous songs, of which the most popular are 'Nymphes et Silvains,' 'Aime-moi' and 'Chant Hindou.' 'La Ballade du Désespéré,' a poem for recitation with musical accompaniment has also won considerable favour. M. Bemberg's music is strongly affected by the influences that have moulded modern French music. His style is formed in the school of Gounod and Massenet, and his melodies often recall those of the composers whose methods he has absorbed. At the same time, his music has unfailing elegance and refinement of style, and the orchestration of 'Elaine' showed much of the accomplishment with which French composers are usually credited. The latter work owed a good deal of the success which it won in London to a remarkably strong cast, which included Mme. Melba, Mme. Deschamps, MM. Jean and Edouard de Reszké and M. Plançon, but it had the merit of tunefulness if not that of dramatic power. R. A. S.

BEMETZRIEDER, born in Alsace in 1743 according to Fétis, but in 1748 according to Quérard, came to Paris, and was engaged as teacher of music to the daughter of Diderot, whose patronage was of great service to him. In 1782 he left Paris for London, and there he died in 1817. He published both in London and Paris several didactic works on music, one of which, *Leçons de clavecin* (Paris, 1771), was often republished in France, Spain, and England. A full list of his books is given in the *Quellen-Lexikon.* In the contest between the Gluckists and Piccinnists he wrote on the side of toleration. Diderot rewrote his contribution to the discussion—a questionable benefit, except as far as style is concerned.

BÉMOL, the French term for FLAT. For the origin of the name see the article ACCIDENTALS.

BENDA, HANS GEORG, a weaver, and wandering performer on several instruments, belonged to the village of Alt-Benatky in Bohemia, and was the head of a celebrated family of artists. His four sons, Franz, Johann, Georg, and Joseph, all devoted themselves to music.

(1) FRANZ BENDA. Born at Alt-Benatky, Nov. 25, 1709, remarkable as the founder of a special violin school. He was a chorister at Prague in 1718, and then became a good violinist and established himself in Dresden; here Quantz heard him, and he obtained a place in the service of the Crown Prince of Prussia in 1732; on the death of J. G. Graun in 1771 he became concertmeister to his former master, now Frederick the Great, whose flute concertos he thereafter accompanied. In his manner of playing he especially affected the cantabile. His published works include trios, concertos, solos for the violin (Paris), 'Études de Violin, ou Caprices,' 2 books (posthumous), and Exercices progr. pour le Violon,' 1 book (Leipzig, Kühnel). [See list in the *Quellen-Lexikon.*] He died at Potsdam, March 7, 1786. His second daughter, Maria Caroline, married Capellmeister Wolf, and his fourth, Juliane, Capellmeister Reichardt. His eldest son, Friedrich Wilhelm Heinrich, born at Potsdam, July 15, 1745, was esteemed as an excellent player on the violin and clavier; he was second violin in the court band of Berlin from 1782, and his compositions found much acceptance. Among them were three operas, 'Das Blumenmädchen,' 'L'Isola disabitata,' and 'Orpheus'; the cantatas, 'Pygmalion,' and 'Die Grazien'; oratorios, 'Lob des Höchsten,' and 'Die Jünger am Grabe des Auferstandenen'; various works for orchestra, clavier, and violin. He died at Potsdam, July 19, 1814. His brother Carl Hermann Heinrich, born 1748 (May 2, according to Gerber and Riemann, May 21 according to Eitner's *Quellen-Lexikon*), approached nearest to his father in the style of his violin-playing. He was teacher of music to Wilhelm III., and left a sonata for violin, and six adagios for pianoforte, with remarks on the mode of executing an adagio.

(2) JOHANN, the second son of Hans Georg, and the least eminent of the brothers, was born 1713, was a pupil of his brother Franz, was in the royal band from 1740, and died as kammermusikus in Berlin 1752.

(3) GEORG, born June 30, 1722 (Riemann), was the most distinguished of the four, renowned as an able clavier-player and oboist. In 1740 he came to Berlin for the sake of receiving instruction from his brother Franz; he was in the royal band as second violin from 1742; in 1748 he was appointed capellmeister to the Duke of Gotha, who sent him to study in Italy; on his return he wrote his first duodrama, 'Ariadne auf Naxos' (1774), a work which excited much attention for its novelty and ability, became widely known, and entitled him, notwithstanding the claims of Rousseau's 'Pygmalion,' to be called the inventor of the melodrama. Full and compressed scores of the work, with German and French words, quickly appeared, and a second melodrama, 'Medea,' had an equal success with the first. He retired in 1778 from the post of capellmeister, to which he had been reappointed

on his return from Italy, and took up his abode at Hamburg; he visited Paris and Vienna for the performance of his works, and at length settled himself in the hamlet of Köstritz in Thuringia, where he died Nov. 6, 1795. Besides the compositions already mentioned, he wrote masses, church cantatas, many instrumental works (concertos, symphonies, sonatas for violin and harpsichord, etc.), thirteen pieces for the stage, among them the operettas, 'Der Dorfjahrmarkt' (1776), 'Der Holzhauer' (1777), 'Romeo und Julie' (1778), 'Lucas und Bärbchen,' 'Philon und Theone' (1779), and 'Pygmalion,' a monodrama. His son Friedrich Ludwig, born at Gotha, 1746, lived in Hamburg, 1780 to 1782, where he married a singer named Felicita Agnesia Rietz, with whom he visited Berlin and Vienna, but from whom he very shortly separated. He wrote an oratorio, five church cantatas, and an opera, 'Der Barbier von Sevilla' (1779), two other comic operas, three violin concertos, and a sonata for violin. He was appointed director of the concerts at Königsberg in 1789, and died there, March 27, 1792.

(4) JOSEPH, the last of the four, a clever violin-player, born March 7, 1724, held the post of concertmeister to Friedrich Wilhelm II. at Berlin, where he died in 1804. His son Ernst Friedrich, born at Berlin 1747, was one of the founders of the Berlin amateur concerts, and died there in 1785.

(5) ANNA FRANZISKA, the only sister of the above four brothers, born 1726, was one of the best singers of her time. She married a musician of Gotha named Hattasch, and died there in 1780.

Of this family of artists, which thus lasted through three generations, the most remarkable on the whole were Franz and Georg, the latter of whom, by his melodrama and operettas, has obtained a lasting position in musical history.

C. F. P. [With corrections and additions from Riemann and Eitner, *op. cit.*]

BENDELER, JOHANN PHILIPP, born about 1660 at Riethnordhausen near Erfurt, was cantor at Quedlinburg about 1697. Riemann (*Lex.*) gives the names of two theoretical works, *Melopœia practica* (1686) and *Ærarium melopœticum* (1688), not mentioned by Eitner, who gives the titles of *Organopœia* (about 1690, reprinted in 1739), and *Directorium musicum* (1706). A MS. treatise, *Collegium musicum de compositione*, is cited by Mattheson in his *Ehrenpforte*. Bendeler died in 1708.

BENDL, KAREL (or KARL), one of the most important of Bohemian composers, born at Prague, April 16, 1838, began to study music very early under, first, his grandfather; next, Pietsch, the head of the local Organ-School, from which Bendl 'graduated' in 1858. Already he had composed a number of small choral works—a form for which he showed special aptitude, which he was encouraged to cultivate by the springing into life of a large number of choral societies. In 1861 his 'Poletuje holubice' won an important prize, and the song immediately passed into the repertory of the majority of these societies, and Bendl became more or less famous. Wisely enough, however, he determined for himself that the confines of Bohemia were too narrow for his proper development, and in 1864 he set out for Brussels, where for a short time he was second conductor of the Opéra; but after a brief stay there, and at Amsterdam and Paris, he returned to Prague where, in 1865, he was appointed conductor of the famous Choral Society Hlahol, a post he held until 1879, when he became conductor of the private band of the Baron Dervies in Milan, Lugano, and Nice. While still director of the Hlahol he spent much time in composition. His first opera, 'Lejla' (libretto by Krasnohorska), was produced on Jan. 4, 1868, with success, yet the pianoforte score subsequently published differs very widely from the original version of the opera, whole parts having been rewritten and new added. After 'Lejla' followed in fairly quick succession 'Bretislav a Jitka' (1870) and 'Stary zenich,' a comic opera on the lines of Smetana's 'Prodena nevesta,' in 1883; the operetta 'Indicka princezna,' the prize opera 'Cernohorci,' to which was allotted a prize at the opening of the Interims-Theater in 1881; 'Carovny Kvet,' and 'Gina,' which remained unperformed during their composer's lifetime; 'Karel Skreta' (1883); the prize opera, 'Dite Tabora' (1892); and 'Matki Mila' (1891).

Meanwhile Bendl had not been idle in the other forms, for his ballad 'Svanda dudak' and a number of orchestral works had already become known; and his D minor Mass for male voices, another for mixed choir, two 'Ave's' and a host of songs and choruses, many of which are absorbed into the permanent currency of the country, appeared, with some thirty entr'actes, a violin sonata, a string quartet in F, op. 119, which is much played by the Bohemian Quartet. Bendl's 'Ciganske Melodie' is published in London.

Bendl, who died at Prague Sept. 20, 1897, was a conservative musician—yet a curious mixture of the old and the new romanticists. R. H. L.

BENDLER, or BENDELER, SALOMON, was born at Quedlinburg, 1683. His father Joh. Philipp Bendeler (see above) gave him his first instruction in music. Gifted with artistic feeling and a magnificent bass voice, young Bendler was soon a most remarkable singer. In 1712 he came to London, and sang the part of the King in 'Ambleto' by Gasparini, and of Argante in Handel's 'Rinaldo.' However, he preferred an engagement at the opera in Hamburg, where he obtained a most brilliant success, as also at Leipzig and Brunswick. 'During a visit at Dantzig, he played the organ in the principal

church ; and, after a short prelude, gave forth the full force of his stupendous voice in a solo. A sudden noise in the church interrupted both the singer and the service: the wife of one of the chief magistrates, terrified by the tremendous tones, was safely delivered of a son. Her husband, a martyr to the gout, was no sooner informed of the event, than he found himself instantly cured. Hearing the name of the artist to whom he owed this double debt and happiness, he invited Bendler to meet a distinguished company at the christening feast, when he placed on his plate a sum of 300 ducats, thanking him at the same time for the service he had rendered him, both as physician and accoucheur.' This extraordinary singer died in 1724. J. M.

BENEDETTI, an Italian singer at the Opera in London, 1720. He is mentioned in a witty letter by Sir John Edgar in Steele's journal, *The Theatre*, from Tuesday March 8 to Saturday March 12, 1720, as an instance of the touchiness of some artists. 'He set forth in the recitative tone, the nearest approach to ordinary speech, that he had never acted anything in any other opera below the character of a sovereign, and now he was to be appointed to be captain of a guard.' His portrait was engraved by Vertue, and is mentioned by Walpole, *Catalogue of Engravers*, p. 221. There is a proof impression in the British Museum. It was painted by Beluzzi. Benedetti is represented in a cloak, turned to the right, oval in a frame, 8vo. It is rare. J. M.

BENEDICITE, or the 'Song of the Three Children,' is the canticle which is used in the Anglican service after the first lesson in the morning, alternatively with the Te Deum, at the option of the minister. It is taken from the Greek continuation of Daniel, chap. iii., and is of very ancient use in the Church service, being mentioned in St. Benedict's *Regula*, and by Amalarius as used at matins. It was also prescribed by Athanasius. The ancient Spanish and Gallican churches appointed it to come between the lessons, and in the ancient English offices it was one of several psalms with which Lauds began. It was retained by Cranmer in his *English Liturgy* of 1549, and appointed to be used instead of the Te Deum in Lent; but this injunction was afterwards removed, and it became optional to use it at any time of the year.

In 'The Book of Common Prayer Noted' which was published in 1550, the chant given for it by Marbeck is the same as that in the Sarum Breviary, but simplified, in accordance with Cranmer's wish that 'the note that shall be made thereunto, would not be full of notes, but as near as may be for every syllable a note, so that it may be sung distinctly and devoutly.'

This canticle is more fitted for a chant than any other musical form, because the second half of each verse is the same throughout. Purcell set it in his double service in B flat (MS. in the Bodleian Library, Oxford) but garbled the words by making the burden 'Praise Him,' etc. only recur occasionally. C. H. H. P.

BENEDICT, Sir Julius, born at Stuttgart, Nov. 27, 1804, one of the most eminent of the numerous foreign musicians who have settled in England since Handel's time. As composer, performer, and teacher of music, he held an exceptionally high position in this country for upwards of forty years. After studying with J. C. L. Abeille in early life, and subsequently under Hummel, at Weimar, he was, in his 17th year, presented by the illustrious pianist to Weber, who received him into his house, and from the beginning of 1821 until the end of 1824, treated him, in Benedict's own words, 'not only as a pupil, but as a son.' During Weber's visit to Vienna for the production of 'Euryanthe,' he introduced Benedict to Beethoven, on Oct. 5, 1823. At the age of nineteen young Benedict was, on Weber's recommendation, appointed conductor of the Kärnthnerthor Theatre in Vienna, a post he held from 1823 to 1825. In the latter year he went with Barbaja to Italy, and obtained the appointment of chef d'orchestre at the San Carlo at Naples, where he produced his first opera, 'Giacinta ed Ernesto' (1829)—a work which seems to have been too German for the Neapolitan taste. On the other hand, 'I Portoghesi in Goa,' which Benedict composed in 1830 for Stuttgart, may have been found too Italian for the Germans ; since, unsuccessful in the city for which it was specially written, it was warmly received by the operatic public of Naples. The youthful maestro, who showed himself a German among the Italians, and an Italian among the Germans, went in 1834 to Paris, at that time the headquarters of Rossini and Meyerbeer, where Benedict made the acquaintance of Malibran, who suggested his visiting London ; and from 1835 until his death, England was his home. In 1836 Benedict was appointed to the musical direction of the Opera Buffa, started by the late John Mitchell at the Lyceum Theatre. Here he brought out with success a little work called 'Un Anno ed un Giorno,' originally given in 1836 at Naples. In 1838 he produced his first English opera, 'The Gypsy's Warning'—remembered in the present day by the very dramatic bass air 'Rage, thou angry Storm.' Benedict was engaged at Drury Lane Theatre as orchestral conductor throughout that period of Mr. Bunn's management, during which Balfe's most successful operas were brought out. To this period, too, belong Benedict's finest operas, 'The Brides of Venice' (1843) and 'The Crusaders' (1846), both produced at Drury Lane under the composer's immediate direction. In 1848 he conducted 'Elijah' in Exeter Hall (Jenny Lind's first appearance in oratorio), and in 1850 he accompanied Jenny Lind to the United States, and directed most of

her concerts. On his return to England in 1852 he accepted an engagement as musical conductor at Her Majesty's Theatre, and afterwards at Drury Lane, whither Mr. Mapleson's establishment was for a time transferred. In 1852 he was appointed conductor of the HARMONIC UNION. When in 1860 Mr. Mapleson was about to produce (at Her Majesty's Theatre) an Italian versiou of 'Oberon,' he naturally turned to the composer who, above all others, possessed the secret of Weber's style, and requested him to supply the recitatives wanting in the 'Oberon' composed for the English stage, but then considered necessary for the work in Italianised form. In 1860 Benedict's beautiful cantata on the subject of 'Undine' was produced at the Norwich Festival, in which Clara Novello made her last public appearance. In 1862, soon after the remarkable success of Dion Boucicault's 'Colleen Bawn,' Benedict brought out 'The Lily of Killarney,' on the same subject, to a libretto by Oxenford. In 1863 he composed the cantata of 'Richard Cœur de Lion,' for the Norwich Festival of that year. His operetta the 'Bride of Song' was given at Covent Garden in 1864; his oratorio of 'St. Cecilia,' at the Norwich Festival of 1866; that of 'St. Peter,' at the Birmingham Festival of 1870. [A cantata 'Graziella,' was produced at the Birmingham Festival of 1882 (originally intended for the Norwich Festival of 1881, but not completed in time), and in Aug. 1883 was performed as an opera at the Crystal Palace. Benedict conducted every Norwich Festival from 1845 to 1878 inclusive, the meeting properly due in 1851 being postponed till the following year and so allowing of his return from America. He conducted the Liverpool Philharmonic Society from 1876 to 1880.] As 'conductor' at chamber-concerts, where the duties of the musician so entitled consist in accompanying singers on the pianoforte, Benedict came at least as often before the public as in his character of orchestral chief. With rare interruptions he officiated for many years as conductor at the Monday Popular Concerts since they first started. His own annual concert, a Gargantuan feast of music, was looked upon for some forty years as one of the great festivals of the musical season. Though more prolific masters may have lived, it would be difficult to name one who has laboured with success in so many different styles. In 1873 a symphony by the now veteran composer was performed for the first time at the Crystal Palace; and a second in the following year; so that a complete edition of Benedict's works would include, besides ballads and pianoforte fantasias, operas, oratorios, cantatas, and compositions in the highest form of orchestral music. Benedict, who had previously been naturalised, received the honour of knighthood in 1871. On the occasion of his seventieth birthday he was named Knight Commander of the orders of Franz Joseph (Austria), and of Frederic (Würtemberg). In the same year his numerous English friends gave a testimonial 'in appreciation of his labours during forty years for the advancement of art, and as a token of their esteem.' The presentation of a service of silver took place in the following summer, at Dudley House. Benedict was also decorated by the Sovereigns of Prussia, Italy, Belgium, Sweden, Portugal, and Hanover. He died at 2 Manchester Square, on June 5, 1885, and was buried on the 11th in Kensal Green Cemetery. H. S. E.

BENEDICTINE ORDER. See SOLESMES.

BENEDICTUS, the song of Zacharias, the father of John the Baptist, taken from Luke i., is the canticle appointed, alternately with the Jubilate, to follow the lessons in the Morning Service of the Anglican Church. It has occupied that position from ancient times, being mentioned by Amalarius († 837) as following the lessons at Lauds. It followed the lessons in the ancient English offices, and was retained by Cranmer in his English Liturgy in 1549, at first without the Jubilate, which was added in 1582 to obviate repetition when the Benedictus occurred in the gospel or second lesson. Two chants are given for it by Marbeck in 'The Book of Common Prayer Noted,' of 1550, viz. the 5th tone with 1st ending, and the 8th tone with 1st ending. It is admirably adapted to more elaborate forms of composition, and there are two well-known ancient settings by Tallis and Gibbons.

The same canticle is also used by the Roman Church, and is mentioned by Mendelssohn in his letter to Zelter describing the music of Holy Week. But a different 'Benedictus,' which is better known to musicians, is that which occurs in the service of the Mass, after the Sanctus, which has been the occasion for much famous and beautiful music by the greatest masters; the whole words of which are only 'Blessed is he that cometh in the name of the Lord.' C. H. H. P.

BENELLI, ANTONIO PEREGRINO, born Sept. 5, 1771, at Forli. It is doubtful whether, as is said, he received instruction in counterpoint from Padre Martini, who died when Benelli was little more than twelve, and was unable, for above two years before his death, to bestow much care upon his scholars. Benelli had, however, the instruction of Padre Mattei, the successor of Martini. In 1790 he made his first appearance at the San Carlo, at Naples, as first tenor. His voice was of moderate quality; but his method was admirable, and obtained for him a *succès d'estime.* Benelli accepted an engagement at London in 1798, where he was received with favour. In 1801 he repaired to Dresden, and remained until the year 1822, at which time, when fifty-one, and after singing in public for thirty-two years, his voice failed, and he retired with a pension.

Benelli had also made himself known as a clever composer, particularly in the Church style;

but his best works are his excellent 'Method,' and his 'Solfeggi' which ran through several editions. He was a successful contributor to the *Allgemeine Musikalische Zeitung* of Leipzig. Upon his retirement, he obtained from Spontini the post of professor of singing at the Berlin Opera, which he filled till 1829. He might have remained much longer, had he not attacked Spontini with violence, in 1828, in the *Allgemeine Zeitung*, àpropos of his opera of 'Olimpia.' Unfortunately he had previously written a very favourable review of the same work: Spontini printed the two accounts side by side. Benelli had nothing to reply; he soon received his *congé* and departed, first to Dresden, where he still had his pension, then to Börnichen, in the Hartz, where he died in poverty Aug. 16, 1830. Benelli's real title to estimation is founded on his 'Gesanglehre' (1819), which appeared first in Italian, as 'Regole per il canto figurato' (1814), and on his 'Bemerkungen über die Stimme' in the *A.M.Z.*, Leipzig (1824). [Several masses, church music, and vocal pieces, are mentioned in Eitner's *Quellen-Lexikon.*] J. M.

BENEVOLI, ORAZIO, a celebrated contrapuntist, born at Rome in 1602, was reputed to be a natural son of Duke Albert of Lorraine. He studied under Vincenzo Ugolini,[1] and was maestro di cappella in the Church of S. Luigi de' Francesi. After a brief tenure of this post he was called into the service of the Austrian Court, and during his residence at Vienna, in the years 1643-45, he published several collections of motets and offertories, but his best works were produced after his return to Rome. Here he resumed his former office in S. Luigi de' Francesi, but held it only for a few weeks. On Feb. 23, 1646, he was transferred to S. Maria Maggiore, and on Nov. 7 of the same year he became maestro di cappella at the Vatican. This appointment he retained, in high repute both as a teacher and a composer, until his death on June 17, 1672. He was buried in the Church del Santo Spirito in Sassia.

Benevoli's chief merit as a composer was the skill with which he handled a large number of separate parts. Masses, psalms, motets, and anthems of his for 12, 16, 24, and 48 voices, in 4, 5, 6, 8, and even 12 distinct choirs, are quoted by Baini, Santini, Burney, Fétis, and others. Burney (*Hist.*, ii. 474) specially praises a mass *a sei cori* in his own possession; and Fétis cites a mass for 48 voices in 12 choirs[2] as a feat never excelled, and only twice equalled, viz. by J. B. Giansetti and G. Ballabene. A festival mass and a hymn in 56 parts (vocal and instrumental) are printed as vol. X. i. of the *Denkmäler der Tonkunst in Oesterreich*, 1903. Specimens of Benevoli's works will also be found in the contrapuntal treatises of Padre Martini, Padre Paolucci, and Fétis, who are of one mind in regarding him as an admirable model to study in writing for a large number of voices. But, excepting this particular kind of skill and ingenuity, Benevoli's music has no real artistic value. His fugues are rarely developed, for after a few bars they break off, and though his harmony obviously imitates Palestrina's, it falls far short of the same level of excellence in respect of simplicity and grandeur. Many of Benevoli's works are extant, printed in the collections of Poggioli, Bianchi, Sileari, Florido, and in MSS. in the Vatican, the Lateran, Bologna, Dresden, Vienna, the Royal Library at Berlin, the Royal College of Music, the Casa Corsini alla Lungara, in Sir Frederick Ouseley's library, and in the British Museum. Some will be found also in the collections published by Teschner, Wüllner, Rochlitz, and Prince de la Moskowa. See the list in the *Quellen-Lexikon.* A. H. W.

BENINCORI, ANGELO MARIA, born at Brescia, March 28, 1779, died at Paris, Dec. 30, 1821; pupil of Ghiretti, Rolla, and Cimarosa. His opera of 'Nitteti' was produced in Italy, and well received also in Vienna about 1800. At Vienna he formed the acquaintance of Haydn, with whose quartets he was so delighted as to abandon dramatic composition for the time and write nothing but quartets. In 1803 he went to Paris and wrote two operas, which were accepted but never performed, and it was with difficulty that this excellent musician obtained sufficient pupils to secure him a subsistence. In 1815, 1818, 1819, he brought out three operas without success. The end of his life was brightened by a hope he did not live to see realised. Isouard had died leaving his opera 'Aladin' unfinished, and this Benincori was commissioned to complete. A march for the first act, and the three last acts completed the work, which was enthusiastically received on Feb. 6, 1822, just six weeks after Benincori's death. Perhaps, however, the fact that the theatre was on this occasion for the first time lighted with gas may have had some share in the success of the opera. He left much music in MS., but his best compositions are probably his quartets. M. C. C.

BENINI, SIGNORA, an Italian prima donna, singing at Naples with her husband in 1784. They came to London in 1787, and sustained the first parts in comic opera. Benini had a voice of exquisite sweetness, and finished taste and neatness, but too little power for a large theatre. Though generally confined to opera buffa, yet her appearance and style seemed much more adapted to the opera seria, for which she had sufficient feeling and expression, as she showed in her excellent performance of Jephtha's daughter. During an illness of Mara, she filled with great sweetness, and much more appro-

[1] Martini, Burney, Bertini, Orloff, and others, speak of Benevoli as the pupil of Bernardino Nanini; but Liberati, doubtless writing with accurate knowledge, says in his *Lettera ad Ottav. Persapegi*, pp. 58, 59, 'the other renowned pupil and favourite of B. Nanini was Vincenzo Ugolini, a great master in the art of teaching . . . as many of his pupils have shown, especially Benevoli . . . who excelled his master and all others living in writing for four or even six choirs in four parts each . . .'

[2] This Mass was sung at Rome, in S. Maria sopra Minerva, by 150 professors, on Aug. 4, 1650; and the expense of the performance was borne by a notary, Dominique Fonthia by name.

priate figure and manner, her part in Tarchi's 'Virginia.' She had not indeed the gaiety of countenance nor the vivacity requisite for a *prima buffa*, and though a singer of considerable merit, had to give way when Storace appeared. Of her subsequent life nothing is known. J. M.

BENNET, JOHN (1599-1614). One of the best of the English madrigalists, as to whose biography we possess next to no details. In 1599 he published a set of 'Madrigalls to Foure Voyces,' printed by William Barley. The title-page terms them 'his first works,' and in the dedication to Ralph Asheton he says that they are 'the first fruits of my simple skill.' Ralph Asheton (of Lever) was a prominent magistrate and Receiver for the Duchy of Lancaster under Elizabeth and James I., and as Bennet acknowledges him as in 'many waies a principal patron of my good' it is not unlikely that the composer may have been a native of Lancashire, especially as no trace of him can be found in London records. An anthem, 'O God of Gods and King of Kings,' for five voices and instruments, seems to have been written for the Coronation of James I., and he contributed five hymn tunes to Barley's Psalter (published between 1604 and 1614), three of which were reprinted in Ravenscroft's Psalter (1621). He also contributed a madrigal 'All creatures now are merry minded' to 'The Triumphs of Oriana' (1601), and five short madrigals to Ravenscroft's 'Briefe Discourse' (1614). In the preface to the last-mentioned work he is spoken of as follows: 'Maister *Iohn Bennet*, a Gentleman admirable for all kindes of *Composures*, either in *Art*, or *Ayre, Simple or Mixt*, of what Nature soeuer. I can easily belieue he had somwhat more then *Art*, euen some *Naturall instinct* or *Better Inspiration*, by which, in all his workes, the very *life* of that *Passion*, which the *Ditty* sounded, is so truely exprest, as if he had measured it alone by his owne Soule, and inuented no other *Harmony*, then his owne sensible feeling in that *Affection* did affoord him.' Ravenscroft's judgment of his merits has been endorsed by posterity, for scarcely any other composer of his school has maintained such steady popularity. His works are as follows:—

I. 'Madrigalls to foure Voyces,' 1599. (Reprinted in score by the Musical Antiquarian Society, 1845. Edited by E. J. Hopkins.)
  1. I wander up and down. (J. Gwilt, 'A Collection of Madrigals,' etc., 1815, No. 3.)
  2. Weep, silly soul. (R. Webb, 'A Collection of Madrigals,' etc., 1808, p. 22, Novello; 'Glee-Hive,' 1852, No. 78.)
  3. So gracious is thy sweet self. (R. Webb, *op. cit.* p. 15, 'Glee-Hive,' No. 80. Both as 'So lovely is thy dear self.')
  4. Let go, why do you stay me? ('Arion,' 1903, No. 69.)
  5. Come, shepherds, follow me. (R. Webb, *op. cit.* p. 28; Hawes, 'A Series of Madrigals,' etc., No. 25; W. Horsley, 'Vocal Harmony,' 1832, iii. 112; 'Glee-Hive,' No. 8; Novello's Tonic Sol-fa Series, 1898, No. 1007.)
  6. I languish to complain me. ('Arion,' 1903, vol. v.)
  7. Sing out, ye Nimphes. (Gwilt, *op. cit.* No. 17.)
  8. Thirsis, sleepest thou? (Gwilt, *op. cit.* No. 22; Hawes, *op. cit.* No. 27; 'Glee-Hive,' No. 72.)
  9. Ye restless thoughts. (Hawkins, *History of Music*, 1776, iii. p. 395.)
  10. When as I glance. (Warren, 'A Collection of Catches,' etc., 1763-94, No. 1; J. Sibbald and Co.'s Collection of Catches, 1780, vol. iii.; T. Oliphant (Calkin and Budd), 1844; J. Foster, 'Choral Harmonist,' 1872, No. 2. Reprinted as 'When as I look'd.')
  11. Cruel unkind. (Gwilt, *op. cit.* No. 19.)
  12. O sleep, fond fancie. (Oliphant (Addison and Hollier), 1847.)
  13. Weep, O mine eyes. (Warren, 'Vocal Harmony,' (1765?) p. 78; J. Sibbald and Co.'s Collection of Catches, 1780, vol. iii.; Oliphant (Addison and Hollier), 1847; J. J. Maier, 'Auswahl Englischer Madrigale,' 1863, i. 11; H. Leslie, 'Cassell's Choral Music,' 1867, No. 14; J. Foster, *op. cit.* No. 6; *Musical Times*, 1876, No. 400; Novello's Tonic Sol-fa Series, 1895, No. 886. Reprinted as 'Flow, O my tears.' 'Hör' auf mein Fleh'n' in J. C. Weeber's 'Kirchliche Chorgesänge,' 1857, iii. 8, is an adaptation.)
  14. Since neither times of joy.
  15. O grief, where shall poor grief?
  16. O sweet grief.
  17. Rest now, Amphion.

II. 'All creatures now are merry minded' ('The Triumphs of Oriana,' 1601. Reprinted with the complete work, and also by Hawes, *op. cit.* No. 5; 'Glee-Hive,' No. 2; Leslie, *op. cit.* No. 13; Boosey, 'Standard Madrigals,' 1889, No. 6).

III. Five Madrigals in Ravenscroft's 'Briefe Discourse' (1614).
  1. The Hunt is up.
  2. Lure, falkners, lure.
  3. Round about in a fair ring-a.
  4. What seekes thou fool?
  5. My mistress is as fair as fine. (Oliphant, 'The Lover to his Mistress' (Cramer), 1844; *Musical Times*, 1877, No. 416.)
  6. A borgen's a borgen.

IV. Five Hymn Tunes in Barley's Psalter (1604?-1614?); three reprinted in Ravenscroft's Psalter (1621).

V. 'O God of Gods and King of Kings.' Anthem for voices and instruments. (British Museum, Ad. MS. 29,372-6); Royal College of Music (Sacred Harmonic Catalogue, 1642); Christ Church, Oxford; Peterhouse Collection (imperfect).

VI. 'Eliza, her name gives honour.' Alto solo with accompaniment for five instruments. (British Museum, Ad. MS. 17,786-91.)

VII. 'Venus' Birds.' For five instruments, probably a transcription of a Madrigal. (British Museum, Ad. MS. 17,786-91.)

A fugue in D, for organ, printed by A. W. Marchant in *Transcriptions for the Organ* (1895), as Bennet's, is the composition of an 18th century organist of the same name. W. B. S.

BENNET, SAUNDERS, was organist at Woodstock, and composer of anthems, pieces for pianoforte and several songs and glees. He died of consumption May 25, 1809, at an early age. W. H. H.

BENNETT, ALFRED WILLIAM, Mus.Bac., Oxon., born 1805, was the eldest son of Thomas Bennett, organist of Chichester. In 1825 he succeeded William Woodcock, Mus.Bac., as organist of New College, Oxford, and organist to the University. He published a volume containing a service and some anthems of his composition, and in 1829, in conjunction with William Marshall, a collection of chants. He died Sept. 12, 1830, from the effect of a fall from a coach, aged twenty-five. W. H. H.

BENNETT, GEORGE JOHN. Born May 5, 1863, at Andover, Hampshire, he was a chorister in Winchester College Choir from 1872 till the end of 1878. He then gained the Balfe Scholarship at the Royal Academy of Music, where he studied under G. A. Macfarren and other masters until 1884. Upon leaving the Academy he studied in Germany for three years, for a short time at the Berlin Hochschule der Musik, under Kiel and Heinrich Barth (pianoforte), and afterwards for two years at Munich, his masters being Joseph Rheinberger for composition and organ, and Hans Bussmeyer for pianoforte.

He returned to London in 1887, and was elected a Fellow of the Royal Academy of Music, and appointed to a professorship of harmony and composition at that Institution in the following year. From 1890 to 1895 he held several organ appointments, including that of St. John's Church, Wilton Road, Pimlico. In 1895, on the

retirement of J. M. W. Young (who had held the post for forty-five years), he was appointed organist of Lincoln Cathedral, an office he still (1903) holds. In this official capacity he ably conducted the Lincoln Musical Festivals of 1896, 1899, and 1902. He is conductor of the Lincoln Musical Society (founded in 1896) and of the Lincoln Orchestral Society.

He qualified for the Fellowship of the Royal College of Organists in 1882; he graduated at Cambridge Mus.B. 1888, and Mus.D. 1893. He has examined for musical degrees at the Universities of Cambridge and Durham, at the Royal College of Organists, and the Associated Board of the Royal Academy of Music and the Royal College of Music.

Dr. Bennett's compositions, which show refined musicianship and a gift of melody, include: Serenade for orchestra and 'Jugendträume' overture (both played at the Crystal Palace in 1887); Festival Evening Service in A, with orchestral accompaniment (composed for the Dedication Service, St. Paul's Cathedral, 1890); Trio in E for pf. vln. and v'cello (London, 1893); Easter Hymn, for soli, chorus, and orchestra (composed for the Festival of the Sons of the Clergy, St. Paul's Cathedral, 1895); Cymbeline overture (Philharmonic Society, 1895); Suite in D minor, for orchestra (Lincoln Festival, 1902); in addition to a Festival Te Deum for soli, chorus, and orchestra; Mass in B flat minor for soli, chorus, and orchestra; church music, songs, part-songs, pianoforte pieces, etc. F. G. E.

BENNETT, JOSEPH, critic and *littérateur;* born at Berkeley, Gloucestershire, Nov. 29, 1831. After holding various musical positions, such as precentor at Weigh House Chapel, and organist at Westminster Chapel, he adopted the profession of musical critic, and was a regular contributor to the *Sunday Times*, the *Pall Mall Gazette*, and the *Graphic.* He is the author of the librettos of the 'Good Shepherd' (J. F. Barnett), the 'Rose of Sharon,' the 'Dream of Jubal,' 'Story of Sayid,' and 'Bethlehem' (Mackenzie), the 'Golden Legend' (Sullivan), 'Ruth' (Cowen), and 'The Garden of Olivet' (Bottesini) and many others. Mr. Bennett furnished the analyses for the programme-books of the Philharmonic Society and the Monday and Saturday Popular Concerts from 1885 until the cessation of the original scheme in 1903. His account of the origin of the latter, *A Story of Ten Hundred Concerts*, 1859-87, was published àpropos of the thousandth concert, April 4, 1887. Mr. Bennett has published *Letters from Bayreuth* (1877), originally contributed to the *Daily Telegraph;* his articles on 'The Great Composers, sketched by themselves' began in the *Musical Times*, Sept. 1877, and were continued till Dec. 1891, while some of them are republished as *Primers of Musical Biography* (Novello). An important *History of the Leeds Festival* (with F. R. Spark) appeared in 1892. Mr. Bennett edited *Concordia* during its too short existence (May 1875 to April 1876), and among his valuable contributions is a 'Comparison of the original and revised Scores of Elijah,' which, after the death of *Concordia*, was completed in the *Musical Times.* It is however as the musical critic of the *Daily Telegraph* that Mr. Bennett exercises the greatest influence. G.

BENNETT, THOMAS, born at Fonthill, probably in 1784 (if the inscription on his tombstone may be trusted), was a chorister of Salisbury Cathedral under Joseph Corfe, organist and master of the choristers there. He became organist of St. John's Chapel, Chichester, and in 1803 organist at Chichester Cathedral. He published 'An Introduction to the Art of Singing,' 'Sacred Melodies' (selected), and 'Cathedral Selections.' He died March 21, 1848, aged sixty-nine. W. H. H.

BENNETT, WILLIAM, was born about the year 1767 at Coombeinteignhead, near Teignmouth. He received his early musical education at Exeter under Hugh Bond and William Jackson. He then came to London, and studied under John Christian Bach, and afterwards under Schroeter. In 1793 he was appointed organist of St. Andrew's Church, Plymouth. His compositions comprise anthems, glees, songs, a pianoforte concerto, op. 4, and pianoforte and organ music. He died about 1830. W. H. H.

BENNETT, SIR WILLIAM STERNDALE, Mus.D., M.A., D.C.L., was born at Sheffield, April 13, 1816. Like almost all composers of eminence he inherited the musical temperament, his grandfather, John Bennett, having been lay clerk at King's, St. John's, and Trinity Colleges, and his father, Robert Bennett, an organist at Sheffield, and a composer of songs; and doubtless he thus received some of that early familiarity with things musical in the daily life of his home which has had so much influence in determining the bent and the career of many eminent composers. The death of his father when he was but three years old cut him off from this influence of home tuition or habituation in music, but his education in the art seems to have been well cared for by his grandfather, to whose home at Cambridge he was then transferred. In February 1824 he entered the choir of King's College Chapel, but his exceptional musical ability became so evident, that two years afterwards he was removed from Cambridge and placed as a student in the Royal Academy of Music, with which institution his name was to be closely connected throughout his later life. He received instruction from Lucas and Dr. Crotch in composition, and from W. H. Holmes in pianoforte-playing, from whom he subsequently passed to the veteran Cipriani Potter; and it may be assumed that to the influence of this teacher, well known to have been the enthusiastic votary of Mozart, we may trace in part that admiration for the pure style and clear form of the art of Mozart, which Bennett

retained to the end of his life, in the midst of all the vicissitudes of modern musical fashion, and the influence of which is so distinctly traceable in his own music. [It is worth mentioning that he played a concerto by Dussek at an Academy concert in 1828, and that he undertook the part of Cherubino in a performance of 'Figaro' given by the pupils of the institution in the King's Theatre on Dec. 11, 1830.] Among the unpublished compositions of his Academy student days are some productions of great merit; but the first on which his reputation as composer depends (and which stands as Opus 1 in the list of his published compositions), is the Concerto in D minor, written in 1832, and performed by the composer, then in his seventeenth year, at the public concert of the Academy March 30, 1833; the committee of the Academy gave a practical proof of their appreciation by publishing the work at their own expense. His next published work, the 'Capriccio in D minor,' op. 2 (dedicated to Cipriani Potter), clearly shows in its opening theme the influence of his admiration for Mendelssohn, then the central figure of the musical world, though there are touches of complete originality suggesting the pianoforte style which the composer subsequently made his own. The Overture to Parisina,' a most impassioned work, was composed in 1834 [in which year he was elected organist of St. Anne's Chapel (now Church), Wandsworth, at a salary of thirty guineas per annum], as also the Concerto in C minor, played at a concert of the Society of British Musicians in the same year; a work in the highest and purest style of the Mozart model, and evincing in some portions a constructive power worthy of the composer's great predecessor. In 1836 the impression produced by his unpublished F minor Concerto and the beautiful 'Naiades' overture, led to an offer from the firm of Broadwood to defray the expenses of his residence in Leipzig for a year, in order that he might have the opportunity of extending his circle of musical sympathy and experience, as well as of profiting by the neighbourhood and influence of Mendelssohn. That he did profit in his art by this visit is scarcely to be doubted, but it may be said that he gave to Leipzig at least as much as he carried away; and by the compositions produced there, as well as by the evidence afforded of his genius as a musician and pianoforte-player, he established for himself a reputation in that city of music higher than has perhaps been generally conceded to him in his native country, and won the friendship and enthusiastic eulogies of Robert Schumann. [Bennett played at a Gewandhaus concert on Jan. 19, 1837, and conducted his 'Naiades' overture there on Feb. 13.] It is to this visit probably that is to be traced the idea still current in England that Bennett was a pupil and a mere imitator of Mendelssohn; an idea which can only be entertained by those who are either ignorant of his works or totally destitute of any perception of musical style, but which has been repeated by incapable or prejudiced critics till it has come to be regarded by many as an admitted fact. After his return to England, Bennett composed in 1840 his other F minor Concerto, the published one, which is among the best known of his works, and one of the finest of modern compositions of its class. During a second visit to Leipzig in 1840-1841 he composed his 'Caprice in E' for pianoforte and Orchestra, and his Overture 'The Wood Nymphs,' both among the most finished and artistic of his compositions. From 1843 to 1856 he was brought periodically before the English public by his chamber concerts, at which his individual and exceptional style and ability as a pianoforte-player were fully recognised. [In 1843 he competed unsuccessfully for the Edinburgh Professorship of Music.] It may here be mentioned that in 1844 he married Mary Anne, daughter of Captain James Wood, R.N.; [she had been a pupil at the Royal Academy of Music in 1838, and the engagement was formed in 1841]. In 1849 he founded the Bach Society for the study and practice of Bach's music, his enthusiasm for which was very likely, in the first instance, kindled by Mendelssohn, who did so much to open the eyes of his contemporaries to the grandeur of Bach's genius. One result of this was a performance of the 'Matthew' Passion—the first in England—on April 6, 1854. In 1853 the director of the Gewandhaus Concerts offered him the conductorship of those concerts. In 1856 Bennett was engaged as permanent conductor of the Philharmonic Society, a post which he held till 1866, when he resigned it, and became Principal of the Royal Academy of Music. In 1856 he was elected, by a great majority, to fill the chair of Musical Professor at the University of Cambridge, where he also made special efforts to promote the knowledge and study of Bach's music, and shortly after his election received from the University the degree of Doctor of Music. (In 1867 the University further conferred on him the degree of M.A., and at the same time a salary of £100 a year was attached to his Professorship.) The year 1858 saw the production of his cantata the 'May Queen,' at the Leeds Musical Festival, a work full of beauty in the chorus writing, the solos, and the instrumentation, though heavily weighted by an absurd and ill-written libretto. No such drawback is attached to his other important choral work, 'The Woman of Samaria,' first produced with great success at the Birmingham Festival of 1867, and which, though it does not contain the elements of popularity for general audiences, has elicited the high admiration of all who can appreciate the more delicate and recondite forms of musical expression. For the Jubilee of the Philharmonic Society, in 1862,

he wrote one of his most beautiful works, the 'Paradise and the Peri' overture, in which the 'programme' style of music is treated with a delicate and poetic suggestiveness which charms alike the educated and the uneducated listener. [In the same year he set Tennyson's Ode for the opening of the International Exhibition.] In 1870 he received the honorary degree of D.C.L. from the University of Oxford. In 1871 Bennett received the distinction of knighthood. In 1872 a public testimonial was presented to him at St. James's Hall in presence of a large and enthusiastic audience, and a scholarship at the Royal Academy of Music was founded out of the subscriptions.

Bennett died after a short illness, almost 'in harness,' as it might be said [at his house in St. John's Wood], on Feb. 1, 1875. So quiet and unobtrusive had been his later life, that the spectacle of the crowd of distinguished persons who assembled at Westminster Abbey on the 6th to pay their last tribute of respect at his funeral, conveyed to many, even among those who had been in the habit of meeting him in society, the first intimation of the true intellectual rank of their departed countryman.

In estimating the position in his art of Sterndale Bennett (by this double name he has always been best known among writers and discoursers on music), it must be admitted that his genius had not that irresistible sweep and sway which compels the admiration even of the crowd, and utters things which sink deep into the souls of men. He can hardly be reckoned among the great musical poets of the world, and it would be both unwise and uncritical to claim that place for him. But what he wanted in power is almost made up, in regard to the artistic enjoyment to be derived from his works, in individuality and in finish. He is in a special degree a musician's composer. His excellences, in addition to the real and genuine feeling for beauty and expression which pervades his music, belong to that interesting and delicate type of art which illustrates in a special degree the fitness of means to an end, the relation between the feeling expressed and the manner and medium of expressing it; a class of artistic production which always has a peculiar interest for artists and for those who study critically the details of the art illustrated. His compositions do not so much carry us away in an enthusiasm of feeling, as they compel our deliberate and considerate admiration by their finish and balance of form, while touching our fancy by their grace and suggestiveness. But these qualities are not those which compel the suffrages of a general audience to whom in fact many of the more subtle graces of Bennett's style are not obvious, demanding as they do some knowledge of the resources of the art, as well as critical and discriminating attention, for their full appreciation. On the other hand, the enjoyment which his works do convey, the language which they speak, to those who rightly apprehend it, is of a very rare and subtle description, and one to which there is no precise parallel in the art of any other composer.

If we try to define the nature of Bennett's genius more in detail, we should describe him in the first place as being almost, one might say, a born pianist. His complete sympathy with this instrument, his perfect comprehension of its peculiar power and limitations are evident in almost everything he wrote for it; and his pianoforte compositions form, numerically, by far the larger section of his writings. His love for the instrument, indeed, might be said to have developed into favouritism in some instances, for in the Sestet for piano and stringed instruments the lion's share of the labours and honours of the performance is so completely given to the former that the work becomes almost a pianoforte concerto with accompaniments for strings only. In his pianoforte concertos, written as such, however, the composer gives its full share of importance to the band part, which is treated always with great beauty and piquancy, and an equally unerring perception of the special æsthetic qualities of the various instruments. In his treatment of the pianoforte, Bennett depends little upon cantabile passages, which are only by convention a part of the function of the piano, and in his writings are mostly[1] episodical; his sources of effect lie more in the use of glittering staccato passages and arpeggio figures, which latter peculiarly characteristic pianoforte effect he used, however, in a manner of his own, often alternating single with double notes in extended passages, as in this—

from the short 'Capriccio in A minor,' a very typical specimen on a small scale of his style of workmanship; at other times doubling them in close passages for both hands, as in the following from the finale of the 'Maid of Orleans' Sonata—

Passages of this class, which abound in these compositions, and the adequate and precise

[1] A curious and charming exception is the well-known 'Serenade' from the 'Trio' for pianoforte and strings, in which the piano has the singing melody with a pizzicato accompaniment for the violin; the composer, with his characteristic ear for subtleties of timbre, having evidently conceived the idea of giving a cantabile effect to the percussion sounds of the piano by opposing to it the still shorter and sharper sounds of the pizzicato.

execution of which is by no means easy, illustrate the peculiarly hard bright glitter of effect which characterises Bennett's bravura passages for the piano, and which brings out in such high relief the qualities which are special to the instrument. Speaking more generally, his pianoforte works are characterised by an entire disdain of the more commonplace sources of effect; they are never noisy or showy, and there is not a careless note in them; the strict and fixed attention of both player and listener is demanded in order to realise the intention of music addressed mainly to the intellect and the critical faculty, never to the mere sense of hearing. As a whole, Bennett's pianoforte music is remarkably difficult in proportion to the number of notes used, from that delicate exactitude of writing which demands that every note should have its full value, as well as from the peculiar way in which his passages often lie for the hand, and which demands the greatest evenness of finger-power. Hence his works are not popular in the present day with amateurs, who prefer what will enable them to produce more thrilling effects with less trouble; but their value as studies and models for a pure style is hardly to be surpassed. Compared with the writings of Beethoven, or even of lesser composers who, following in his steps, have transferred the symphonic style to the piano, such works as those of Bennett have of course a very limited range, nor have they the glow and intensity which Chopin, for example, was able to infuse into what is equally a pure pianoforte style; but as specimens of absolutely finished productions entirely within the special range of the piano, they will always have the highest artistic interest and value; an appreciation of their real merit being almost a test of true critical perception.

Looking at the works of Bennett more generally, it may be observed that they show remarkable evidence of his apparently intuitive insight into problems and theories in regard to musical construction which have only been definitely recognised and tabulated by theorists since he began to write. When the school of composers who tumble notes into our ears in heaps have had their day, and it is again recognised that musical composition is a most subtle and recondite art, and not a mere method of jumbling sounds together to signify this or that arbitrarily chosen idea, it is probable that Bennett will receive much higher credit than has yet been accorded to him as an advanced thinker in music. The theory which connects every sound in the scale of a key with that key, making them all essential to its tonality, and the harmonic relations which are thereby shown to be logically consistent though little practised hitherto, received continual practical illustration in the works of Bennett, whose peculiar intellectually constructed harmonies and progressions are among the causes alike of his interest for musicians and his disfavour with the less instructed amateur population, whom they not unnaturally puzzle. A great English musical critic has pointed out, in a note on the 'Wood Nymphs' Overture (in the Philharmonic programme of March 22, 1871), the passage where 'the so-called chord of the diminished 7th from F sharp, with intervening silences, is heard on the unaccented second and fourth beats of the bar, and then an unaccompanied D, thrice sounded, asserts itself as the root of the chord,' thus presenting, adds Macfarren, 'a harmonic fact in an aspect as unquestionable as, at the time of writing, it was new.' But Bennett's music is full of such suggestions of the more extended modern view of the statics of harmony, the rather noteworthy as it does not appear that he made it the subject of any definite or deliberate theorising, or was indebted for his suggestions of this kind to anything more than his own intuitive insight into the more subtle harmonic relations. It is the frequent use of what may be termed perhaps (borrowing an expression from colour) the 'secondary' rather than the 'primary' relations of harmony—the constant appeal to the logic rather than the mere sensuous hearing of the ear—which gives to his music that rather cold intellectual cast which is repelling to the average listener. In such a passage as this—

the ear of the uninitiated listener is almost startled by the closing E, like the sharp blow of a hammer, at the foot of an arpeggio passage which seems to presage a modulation to C through the dominant ninth on G. Equally significant passages might be quoted, such as this from the 'Rondeau à la polonaise'—

and many others that might be adduced, in which evidence is given that the composer had before his mind conceptions of harmonic relation new or unusual at the time, which have since been accepted and formulated into theory.

Bennett's larger works for orchestra, and his secular and sacred Cantatas already mentioned, are characterised, like his piano music, by great finish and perfection of form and detail, and by a peculiarly refined perception of the relation of special instruments and special combinations to the end in view. His one published Symphony, that in G minor, may be thought slight

and fragile in effect in comparison with the now prevalent 'stormy' school of writing; but those who are alive to the fact that power of sound is not power of conception, who look to thought and feeling rather than to mere effect in music, will find no deficiency of passion and impulse in parts of this beautiful work, while the grace and refinement both of composition and instrumentation are universally admitted. His cantata, the 'May Queen,' displays the most refined and artistic writing, both in regard to the effectiveness and spontaneous character of the choruses, the melodic beauty of the solos, the strongly-marked individuality imparted to the music of the different personages, and the charming and piquant effects of the orchestral accompaniments. Indeed, the work has very much the character of an operetta off the stage, and one cannot but regret that a composer who showed in this work so much power of dramatic characterisation in music should not have enriched the English lyric stage with an opera. 'The Woman of Samaria' is less spontaneous in character, and in its style and treatment does not appeal to the popular mind; but it will always be delightful to musicians, and to those who hear considerately and critically. It is in general construction very much modelled on the style of Bach, whose peculiar power Bennett has successfully emulated in the introductory movement, with the Chorale sung simultaneously with, but in a different *tempo* from, the independent orchestral movement. Bennett's separate songs (two sets published during his life, and one in course of publication when he died) are small compositions of almost Greek elegance and finish, both in the melodious and expressive character of the voice part, and the delicate suggestiveness of the accompaniments. They illustrate in the most perfect degree the character which belongs more or less to all his art; that of high finish of form and grace of expression, not without deep feeling at times, but marked in general rather by a calm and placid beauty, and appealing to the fancy, the sentiment, and the intellect, rather than to the more passionate emotions.

The most puzzling fact in connection with the artistic career of Sterndale Bennett is the comparative fewness of his compositions, at a time when his mind and genius were still young, notwithstanding the power of his earlier works, and the promise which those who then knew him saw of a still higher development. In all probability the explanation of this is to be found partly in the desire to secure a more comfortable subsistence from the regular exercise of professional business, and partly in what those who knew him best described as the 'shy and reticent' character of his genius, which led him to distrust his capability of accomplishing great works, and of taking his stand in the world on the strength of his genius alone. 'He was not, in his later years at least,' says one who knew him, 'quick to publish his works; he always had individuality without a rapid execution, and took more time a great deal to finish than to sketch.' Whatever be the true explanation, it is matter for deep regret for all lovers of what is best and purest in musical art, that one so well fitted to add to its stores should have condemned himself, for many of the best years of his life, mainly to the exercise of a teacher's vocation. Of the brilliant gifts as a player, and the *tours de force* of memory, by which the composer astonished and delighted the Leipzig circle in his younger days, there are accounts extant which remind us of what used to be told of Mozart. When he sold his 'Capriccio in E' to a Leipzig publishing firm, they were surprised at receiving only the MS. of the orchestral score, and on their inquiring for the pianoforte part, it turned out that this had never been written down, though the composer had played the work both in London and Leipzig, and had apparently entirely forgotten the omission in handing over the MS. to the publishers.

By those who knew Sterndale Bennett he is described as having been a man of most kindly nature, and exceedingly modest and unassuming in manner and character. The feeling of loyal and affectionate attachment which he created among the pupils of the Royal Academy of Music, by some of whom his death was lamented almost like that of a kind parent, is a strong testimony to the amiability of his character—an amiability which was exercised without the slightest derogation from his strict principles as an instructor. A significant instance is related of his determination to keep up a strict adherence to the purest style of music in the Academy. On entering the building one morning he fancied he detected from one of the practising rooms the sounds of the overture to 'Zampa,' and opened door after door till he found the culprits, two young ladies, who in answer to his grave inquiry 'how they came to be playing such music?' explained that they were only practising sight-reading of piano duets —to which the Professor replied by carrying away the offending volume, returning presently from the library with a duet of Mozart's which he placed before them in lieu of it. What he preached to his pupils he practised himself. In his whole career he never condescended to write a single note for popular effect, nor can a bar of his music be quoted which in style and aim does not belong to what is highest in musical art. Neither this quality nor his amiability of character preserved him, however, from attacks and detraction of the most ungenerous kind during his lifetime, from those who had their own motives in endeavouring to obscure his fame.

The following is a list of Sterndale Bennett's published works:—

Op. 1. First Pf. Concerto, in D minor.
" 2. Capriccio for pianoforte, in D minor.
Op. 3. Overture, 'Parisina.'
" 4. Second Pf. Concerto, in E flat.
" 5

Op. 6.
,, 7.
,, 8. Sestet for pianoforte and strings.
,, 9. Third Pf. Concerto, in C minor.
,, 10. Three Musical Sketches—'Lake,' 'Millstream,' and 'Fountain.'
,, 11. Six Studies, in Capriccio form.
,, 12. Three Impromptus.
,, 13. Pianoforte Sonata, F minor, dedicated to Mendelssohn.
,, 14. Three Romances for piano.
,, 15. Overture, 'The Naiades.'
,, 16. Fantasia for pianoforte, dedicated to Schumann.
,, 17. 'Three Diversions,' pianoforte for four hands.
,, 18. Allegro Grazioso for piano.
,, 19. Fourth Pf. Concerto, in F minor.
,, 20. Overture 'The Wood-nymphs.'
,, 21.
,, 22. Caprice, in E major, piano and orchestra.
,, 23. Six Songs (first set).
,, 24. Suite de Pièces, for piano.
,, 25. Rondo piacevole for pianoforte.
,, 26. Chamber Trio in A.
,, 27. Scherzo, for pianoforte.
,, 28. Introduzione e Pastorale, Rondino; Capriccio, in A minor—for piano.
,, 29. Two Studies—L'Amabile e L'Appassionata.
,, 30. Four Sacred Duets, for two trebles.
,, 31. Tema e Variazioni, for piano.
,, 32. Sonata-duo, pianoforte and violoncello.
,, 33. Preludes and Lessons—60 pieces in all the keys, composed for Queen's College, London.
,, 34. Rondeau—'Pas triste pas gai.'
,, 35. Six Songs (second set).
,, 36. 'Flowers of the Months,' of which January and February were completed and published, 1876.
Op. 37. Rondeau à la Polonaise, for piano.
,, 38. Toccata, for ditto.
,, 39. 'The May Queen'—a Pastoral.
,, 40. Ode for the Opening of the International Exhibition, 1862. Words by Tennyson.
,, 41. Cambridge Installation Ode, 1862. Words by Kingsley.
,, 42. Fantasie-Overture, 'Paradise and the Peri.' 1862.
,, 43. Symphony in G minor.
,, 44. Oratorio, 'Woman of Samaria.'
,, 45. Music to Sophocles' 'Ajax.'
,, 46. Pianoforte Sonata, 'The Maid of Orleans.'

The Major, Minor, and Chromatic Scales, with Remarks on Practice, Fingering, etc.
Sonatina in C.
Romance, 'Geneviève.'
Minuetto espressivo.
Præludium.
Three Songs—'The Better Land'; 'In radiant loveliness'; 'The Young Highland Rover.'
The Chorale Book, 1862; and Supplement to ditto, 1864; edited in conjunction with Mr. Otto Goldschmidt.
Anthems—'Now, my God, let, I beseech Thee'; 'Remember now thy Creator'; 'O that I knew'; 'The fool hath said in his heart'; 'Great is our Lord'; 'In Thee, O Lord'; 'Lord, who shall dwell'; 'Lord, to Thee our song we raise,' for four female voices.
Ten hymn tunes.
Four-part Songs—'Sweet stream that winds'; 'Of all the Arts'; 'Come live with me.'
Vocal Trio—'To a Nightingale,' female voices.
Four Songs in course of publication when he died.

[An interesting paper on Sterndale Bennett was read before the Musical Association, by Mr. Arthur O'Leary, April 3, 1882. See also *Musical Times*, May to August 1903.] H. H. S.

BENOIST, François, born Sept. 10, 1794, at Nantes, entered the Paris Conservatoire in 1811, under Adam and Catel, and gained the Prix de Rome in 1815 for his 'Œnone.' On his return from Italy in 1819 he was appointed first organist at the Court, and soon afterwards professor of the organ in the Conservatoire. In 1840 he became Chef du Chant at the Opera. He died in April 1878. His works include a three-part Mass, the operas 'Léonore et Félix' (1821), 'L'Apparition' (1848), and several ballets, as well as a collection of organ pieces. M.

BENOIT, Camille, French author and composer, has been *conservateur* at the Louvre since 1895, and was a pupil of César Franck. His first composition, an overture (about 1880), attracted much attention, and has been frequently performed; a symphonic poem 'Merlin l'Enchanteur,' a lyric drama, 'Cléopâtre,' an important score set to the 'Noces Corinthiennes' of Anatole France, are his most important works. As a writer, Benoit is known by his *Souvenirs*, 1884; and *Musiciens, poètes et philosophes*, 1887, as well as by translations of extracts from Wagner, and a Latin translation of Beethoven's *Elegische Gesang*. G. F.

BENOÎT, Pierre Léopold Léonard, Belgian composer, and the chief promoter of the Flemish musical movement, was born in Harlebeke (West Flanders), Aug. 17, 1834. Having first studied music with his father and with Peter Carlier, organist of the village of Desselghem, he entered, at seventeen, the Conservatoire of Brussels, where Fétis took the greatest interest in him, and taught him counterpoint, fugue, and composition. While still studying, he became conductor at a Flemish theatre in Brussels, where he wrote the music to several plays, and also an opera, 'Le Village dans les Montagnes' (1857), which attained success. In this year he carried off the first prize for composition with 'Le Meurtre d'Abel,' and by means of a grant from Government he was able to make a tour in Germany. He visited Leipzig, Dresden, Prague, Berlin, and Munich, composing songs, piano pieces, motets, etc., and sending to the Académie at Brussels an essay, 'L'École Flamande de Musique et son Avenir,' and a 'Petite Cantate de Noël.' On his return to Belgium he brought out in Brussels and Ghent a Messe Solennelle which was much praised by Fétis. He then went to Paris (1861) in the hope of producing an opera ('Le Roi des Aulnes') at the Théâtre Lyrique, and here he was for some time conductor at the Bouffes Parisiens. Returning to his own country, he at once took up a position by producing in Antwerp (April 1864) a Quadrilogie Religieuse, consisting of four previous compositions, his 'Cantate de Noël' (1860), 'Messe Solennelle' (1862), a 'Te Deum' (1863), and a 'Requiem' (1863). He was then seized with the desire of stirring up a musical movement in Flanders, distinct alike from the French and German schools. By dint of activity and perseverance and of exciting the *amour propre* of his countrymen, he gathered round him a certain number of adepts, and created the semblance of a party of which he was the acknowledged head. This agitation was so cleverly conducted that it ended in the foundation of the Flemish School of Music in Antwerp in 1867, under the auspices of the town and the Government. Benoît was appointed director, and retained the post until his death in Antwerp, March 8, 1901. From his appointment he unceasingly promulgated the theory of a national Flemish art by means both of pamphlets and musical compositions. But on what does this theory rest? Almost all the Belgian composers, whether they possess the genius of Grétry, the talent of Gossec, or merely the science and erudition of Limnander or Gevaert, form part of the French school. Musically speaking, Belgium serves as an intermediary between France and Germany. On account of the proximity of the two countries and the affinity of their languages, the musical creations of modern Germany are more rapidly known and more appreciated in Belgium than in France,—Richard Wagner, for instance, has long been justly admired by the

whole of Belgium,—but what special elements are there out of which to form a Flemish school of music? If, as is said, it consists simply in setting Flemish words to music, the thing is a mere quibble, unworthy of a musician with any self-respect, for in the question of musical style the language used signifies absolutely nothing.

The only result of this crusade is to isolate those composers who make use of a language so circumscribed as Flemish, since works written in this language would have to be translated before they could gain any reputation out of their own country. And this explains why the head of the school, who is at the same time its sole musical representative, Benoît himself, is quite unknown to the public outside Flanders. But he has deserved the gratitude of his country for the impetus he has given to music, especially in Antwerp, which, from a musical point of view, has become quite transformed by his ardour. But he has taken advantage of a mere figure of speech to create for himself a particular position; for his enormous compositions—'Lucifer,' 'L'Escaut,' 'La Guerre,' etc.—have in them no Flemish characteristics but the text; the music belongs to all schools, particularly to that French school against which Benoît pretended such a reaction.

On poems of little clearness or variety the composer has built up scores which are certainly heavy, solid, and massive enough, but which are wanting in charm and grace. Benoît's musical ideas have no originality; he gets all his effects by great instrumental and choral masses, and is therefore obliged to write very simply in order to prevent inextricable confusion. Whatever plan he adopts he prolongs indefinitely; he repeats his words, and the meagre phrases which form his melodies, to satiety. By his regular rhythms and solid harmonies, generally productive of heaviness, his music has here and there something in common with the choruses of Gluck and Rameau, but these passages are unfortunately rare. His style is derived sometimes from Gounod, sometimes from Schumann, and yet he firmly believes himself to be following the traditions of the Flemish school. When Benoît does not chance upon any reminiscences of this kind, he exhausts himself in interminable repetitions, which never reach the interesting development we should expect from a musician of his calibre.

The list of Benoît's compositions would be very considerable were all his productions for voice and piano to be included, especially the sacred works, which date from before the conception of his theory, and upon which he set no value in his later life. The most important works of the second part of his career, written, it is needless to say, to Flemish words, and most of them to the poems of Emmanuel Hiel, are the following:—'Lucifer,' oratorio, performed in Brussels, 1866, in Paris, 1883, and at the Albert Hall, April 3, 1889; Flemish operas, 'Het dorp in't gebergte,' 'Ita' (1867), and 'Pompeja' (1896); 'De Schelde,' oratorio, 1869; 'Drama Christi,' Antwerp, 1871; 'La Lys,' cantata performed before the king at Courtrai, 1871; 'De Oorlog' (War), cantata, Antwerp and Brussels, 1873; a 'Children's Oratorio'; a choral symphony, 'De Maaiers' (The Mowers); 'Charlotte Corday' and 'Willem de Zwijger,' music to two Flemish dramas represented at Antwerp and Ghent in 1875 and 1876 respectively; 'Rubens-cantata,' Antwerp, 1877; 'Antwerpen,' Antwerp, 1877; 'Joncfrou Kathelijne,' scena for alto, 1879; 'Hucbald,' cantata, and 'Triomfmarsch' for the inauguration of the Brussels Exhibition in 1880; 'Muse der Geschiedenis,' chorus and orch., Antwerp, 1880; 'Hymne à la Beauté,' 1882; 'Van Ryswick,' cantata, Antwerp, 1884; and 'Juich met ons,' cantata in honour of the Burgomaster Buls, Brussels, 1886; grand cantata, 'De Rhyn,' 1889. [For a list of Benoît's propagandist writings, see Riemann's *Lexikon.*] A. J.

BENUCCI, an Italian basso engaged at Vienna in 1783, appeared in London in 1788 as first buffo; but, notwithstanding his fine voice and acting, was not so much admired as he deserved to be. He sang one more season here, appearing as Bartolo in Paisiello's 'Barbiere,' and as Zefiro in Gazzaniga's 'Vendemmia.' J. M.

BENVENUTO CELLINI. Opera in two acts, the words by Wailly and Barbier, the music by Berlioz, produced at the Académie Royale de Musique, Sept. 3, 1838, and withdrawn after three representations, and what its author calls 'une chute éclatante.' It was performed at Covent Garden ('grand semi-seria,' in three acts) June 25, 1853. See the *Musical Times* for Feb. 1882, p. 61, and the *Monthly Musical Record* for Feb. and March 1882. The opera was revived with great success under Mottl at Carlsruhe, where it now takes its place in the periodical Berlioz-cycles.

BERBIGUIER, BENOIT TRANQUILLE, famous flute-player, born Dec. 21, 1782, at Caderousse in the Vaucluse; intended for the law, but the love of music being too strong for him, ran away from home and entered himself at the Conservatoire in Paris. From 1813 to 1815 he served in the army, and after that resided in Paris. As an adherent of the Bourbons he was driven thence by the Revolution of 1830 to take refuge at Pont le Voyé, where he died Jan. 20, 1838. As a player he stood in the first rank. His contemporaries praise the softness and peculiar sweetness of his tone and the astonishing perfection of his technique. As a composer he was very fertile in music for his instrument, both solo and accompanied—11 concertos, many fantasias and variations, 140 duos, 32 trios, with quartets and symphonies. But they are very unequal in excellence, generally more brilliant and showy than really good, the work of the virtuoso rather than of the musician. A. M.

BERCEUSE, a cradle song. A piece for piano or other instrument consisting of a melody with a lulling rocking accompaniment. Chopin's op. 57 is a well-known example. Schumann has a 'Wiegenliedchen' and a 'Schlummerlied' in the Albumblätter (op. 124).

BERCHEM, JACHET, an eminent Flemish contrapuntist of the 16th century, formerly identified with Giachetto da Mantova, but according to the latest researches to be distinguished from that composer. As the compositions of the time were often merely inscribed with the single name 'Jachet,' it is impossible to be quite sure whether many of them should be ascribed to this Jachet or to Jachet of Mantua, Jachet de Buus, or Jachet de Wert; but there is ground for the statement that Jachet Berchem was organist to the Duke of Ferrara in 1555, and his three books of capriccios are dedicated to the Duke. A very important acticle appeared on him in the *Monatshefte für Musikgeschichte*, 1889, pp. 129 ff., with a bibliography of those compositions which can safely be assigned to him. These include madrigals, 1546, 1556; capriccios for four voices, 1561; a mass, and many single madrigals in collections of the period; and a number of French chansons in MS. in the Court Library at Munich. [Eitner's *Quellen-Lexikon*, etc.]

BERENSTADT, GAETAN. The name of this singer, of whom we have elsewhere no record, appears for the first time in the bass part of Argante in Handel's 'Rinaldo,' as revived in 1717, in which he took the place of the celebrated Boschi. After this we do not find him again in London till 1723, in which year he sang in Bononcini's 'Farnace' and Attilio's 'Coriolano,' as well as in the 'Flavio' and 'Ottone' of Handel. In the next year he performed in the 'Vespasiano' of Attilio, Bononcini's 'Calfurnia,' and Handel's 'Giulio Cesare.' His name does not occur again. J. M.

BERG, ADAM, a renowned music printer of Munich, whose publications extend from 1540 to about 1599. His great work was the *Patrocinium Musices*, published under the patronage of the Dukes of Bavaria, the first volume of which appeared in 1573. After the death of Duke Albrecht V., in 1579, the publication was interrupted, and not resumed till 1589, when the second series appeared. The following is a list of the contents of the entire work:—

VOL. I. 1573.

O. de Lasso. Cautiones.

4 voices.

1. Pater noster.
2. Salve Regina misericordiæ.
3. Gaudent in cœlis.
4. Nos qui sumus.
5. Pulvis et umbra.
6. Lauda anima mea.
7. Pauper sum ego.

5 voices.

8. Exurgat Deus.
9. Misericordiam Domini.
10. Oculi omnium (2 parts).
11. Domine clamavi (3 do.).
12. Quis mihi det lacrimis.
13. Martini festum (2 pts.).
14. Exaudi Domine.

8 voices.

1. Media in vita (2 pts.).
2. Ante me non est.
3. Confitemini (2 pts.).
4. O Gloriosa Domina.
5. In Deo salutare (2 pts.).
6. Regnum mundi.
7. Agimus tibi gratias.

VOL. II. 1574.

O. de Lasso. Masses.

1. Super 'Ita rime dolenti.'
2. ,, Motetam 'Credidi propter.'
3. Super Motetam 'Sydus ex claro.'
4. ,, do. 'Credidi propter.'
5. ,, 'Le Berger et la Bergère.'

VOL. III. 1574.

O. de Lasso. Officia.

Vidi aquam.
Asperges me.
Officium Natalis Christi.
Do. Resurrectionis.
Officium Pentecostes.
Do. Corporis Christi.

VOL. IV. 1575.

O. de Lasso.

Passio. 5 vocum.
Vigiliæ mortuorum. 4 voc.
Lectionis matutinæ.
De Nativitate Christi. 4 voc.

VOL. V. 1576.

O. de Lasso.

Ten Magnificats, 4 to 8 voices.

[VOL. VI.] 1578.

Ludwig Daser's Passion, 4 voices.

[VOL. VII.] 1587.

O. de Lasso.

Thirteen Magnificats, 4 to 8 voices.

[VOL. VIII.] 1589.

O. de Lasso. Masses.

1. Super 'Dittes Maitresse.'
2. ,, 'Amar Donne.'
3. ,, 'Qual donna attende.'
4. ,, 'In die tribulationis.'
6. ,, 'Io son ferito Hailasso.'
6. Pro defunctis.

[VOL. IX.] 1589.

Francesco di Sale. Officia. 5 et 6 vocum.

1. S. Andreæ Apostoli.
2. Nicolai Episcopi.
3. Conceptionis Mariæ.
4. Thomæ Apostoli.
5. Nativitetis Christi, in 1mâ missa.
6. In summâ missâ. 6 voc.
7. Stephani Proto Mart.
8. Johannis Evang.
9. Circumcisionis. 6 voc.
10. Epiphaniæ. 8 voc.
11. Conversionis Pauli.
12. Purificationis Mariæ.
13. Matthiæ Apostoli.
14. Annuntiationis Mariæ.
15. De Communi S. Mariæ, Conceptione, Nativitate, Visitatione et Presentatione eiusdem Mariæ.

[VOL. X.] 1591.

Blasius Amon. Masses. 4 voc.

1. Super Ut, re, mi, fa, sol, la, La, sol, fa, mi, re, ut.
2. Super 'Pour ung plaisir.'
3. ,, 'Surge propera.'
4. ,, 'Dixit Dominus mulieri Chananeæ.'
5. Pro Defunctis.

[VOL. XI.] 1594.

Cæsar de Zacchariis. Intonationes.

1. Vespertina.
Alia intonatio.
1. Primus tonus.
2. Secondus do.
3. Tertius do.
4. Quartus do.
5. Quintus do.
8. Sextus do.
7. Septimus do.
8. Octavus do.
9. Mixtus do.

Hymni.

Conditor alme.
Veni redemptor.
Verbum superbum.
Christe Redemptor.
A solus ortus.
Deus tuorum.
Stephano primo mart.
Exultet cœlum.
Solennis dies advenit.
Salvete flores.
Ibid.
Hostis Herodes.
O lux beata.
Deus Creator.
Corde natus.
Lucis creator.
Dies absoluti.
Audi benigne.
Te lucis ante.
Ad preces nostras.
Ex more docti.
Christe qui lux es,
Jam ter quaternis.
Jesu quadragenariæ.
Vexilla regie.
Salve festa dies.
Clarum decus jejunii.
Ad cœnam agni.
Vita sanctorum.
Jesu nostra redemptio.
Festum nunc.
Veni creator.
O lux beata.
Pauge lingua.
Sacris solenniis.
Conditor alme siderum.

[VOL. XII.] 1598.

Francesco di Sale.

Missa, Super 'Exultandi tempus est.' 5 voc.

F. G.

BERG, GEORGE, a German by birth, was a pupil of Dr. Pepusch. In 1763 he gained the first prize medal awarded by the Catch Club for his glee 'On softest beds at leisure laid,' and obtained two other prizes in subsequent years. He published some books of songs sung at Marylebone Gardens, at which place in April 1765 he produced an ode called 'The Invitation.' Thirty-one of his glees and catches are included in Warren's collections. In 1771 he was organist of the church of St. Mary at Hill, near Billingsgate. He published several works for the organ, harpsichord, flute, horn, etc., besides those above mentioned. W. H. H.

BERG, JOHANN, a music printer, born in Ghent, who set up a printing office in Nuremberg about 1531 (the date of their first book), in conjunction with Ulrich Neuber. After the death of Berg in 1563, the office was carried on by Neuber (who died 1571) and Gerlach. After 1582 traces of the firm disappear. [Eitner's *Quellen-Lexikon*.] F. G.

BERGAMASCA—in the 'Midsummer Night's

Dream,' a 'Bergomask.' An Italian dance, deriving its name from Bergamo, the well-known city of Tasso, Donizetti, and other eminent Italians. Two specimens of the dance, with words, are found in some of the 16th century collections, such as the third book of Filippo Azzaiolo's *Villotte* (1569). The first instrumental bergamasca, according to Riemann's *Lexikon*, is to be found in Uccellini's sonatas, 1642, in a long 'aria sopra la Bergamasca,' from which it appears that the bergamasca was a very simple succession of four bass notes (tonic, subdominant, dominant, and tonic) used as a 'ground.'

According to the late Signor Piatti, himself a native of Bergamo, the characteristic dance of that district is of the following measure, like a country-dance, but quicker, with a strong accent on the second half of the bar:—

Signor Piatti himself published a Bergamasca for violoncello and pianoforte (op. 14) which partakes of this character. Mendelssohn, however, in setting Shakespeare's 'Bergomask dance between two of our company,' has given the measure an entirely different turn.

BERGER, Ludwig, a remarkable pianoforte-player and gifted composer, born at Berlin, April 18, 1777, and died there, Feb. 16, 1839. His talent showed itself early (he studied under J. A. Gürrlich), but received its great impulse from the notice taken of him at Berlin in 1804 by Clementi, who undertook his tuition, and took him to St. Petersburg. Here he met Steibelt and Field, who had much influence on his playing. In 1812 he visited Stockholm and London, and became widely known as a player and teacher. In 1815 he returned to Berlin, where he resided till his death, one of the most esteemed teachers of his time. Mendelssohn was his greatest pupil, but amongst others may be mentioned Taubert, von Herzberg, Henselt, and Fanny Hensel, Mendelssohn's sister. He latterly withdrew almost entirely from active life, owing to an over-fastidious hypochondriacal temper, which interfered much with his intercourse with society, and hindered the display of his remarkable ability as a composer. He left behind him a mass of good, nay even remarkable, music—pianoforte pieces, songs, cantatas, and unfinished operas. Amongst his published works his twenty-seven études are especially important; they were republished by Breitkopf, with a preface by C. Reinecke. A. M.

BERGER, Wilhelm, born of German parents in Boston, U.S.A., Aug. 9, 1861, was taken to Germany when but a year old; studied in the Hochschule of Berlin under Kiel from 1878 to 1882, and since that time has had a successful career as a composer and piano teacher. His choral works include a setting of the 'Gesang der Geister über den Wassern,' op. 55, 'Meine Göttin,' for male choir and orchestra, op. 72, a work which obtained a prize in 1898; in the same year his string quintets were similarly honoured by the society of the Beethoven-house, and his symphony in B flat, op. 71, was played at Mainz. A choral work, 'Euphorion,' may also be mentioned, as well as a great number of pianoforte pieces, several concerted chamber compositions, and many vocal solos and part-songs. Some chamber works were played at the Popular Concert in Jan. 1904, when the composer visited England.

BERGGREEN, Andreas Peter, born at Copenhagen, March 2, 1801, studied harmony and began to compose from the age of fourteen. Though destined by his parents for the law, he was led by his strong predilection for music to devote himself professionally to that art. His opera 'Billidet og Busten' (The Picture and the Bust), first performed April 9, 1832, and other works on a large scale, such as music to dramas and a cantata by Öhlenschläger, are less valued than his songs, especially his National Songs in 11 vols., his Songs for school use, 13 vols., and above all, his church music and his collection of Psalm Tunes, published in 1853, and since adopted in the churches throughout the country. His success in this direction may be owing to his position as organist to the church of the Trinity, Copenhagen, from 1838. He was a professor of singing at the Metropolitan School from 1843, and in the same year he established the first of those musical associations for the working classes now so popular in Denmark. He was appointed inspector of the public singing schools in 1859. Berggreen wrote occasional articles in the leading Danish papers, and for a short time edited a musical publication no longer existing. One of his most distinguished pupils in harmony and thoroughbass was Gade. Berggreen died at Copenhagen, aged seventy-nine, Nov. 9, 1880. For details of his early life and lists of his works, see Erslew's *Almindeligt Forfatter Lexicon*, Copenhagen 1843, and its supplements. L. M. M.

BERGMANN, Carl, a German conductor who was largely instrumental in promoting orchestral music in the United States. He was born in Ebersbach, Saxony, in 1821; studied under Zimmermann in Zittau and Hesse in Breslau, and emigrated to America in 1850, joining the Germania Orchestra as violoncellist. The Germania Orchestra was an organisation of German musicians, many of them former members of Josef Gungl's band, that was giving concerts of high-class music in New York, Boston, Philadelphia, and other large cities in the Eastern States. A few months after Bergmann joined the orchestra he became its leader, and such he remained until its dissolution in 1854. He conducted the concerts of the Handel and Haydn

Society of Boston (see BOSTON) from 1852 to 1854, and then went to New York, where he became conductor of the Männergesangverein Arion. In 1855 he began conducting concerts for the Philharmonic Society of New York, alternating for ten years with associates. From 1866 to 1876 he was sole conductor. He died on Aug. 16, 1876. Bergmann was the pioneer in America of the new school of conductors as distinguished from the old class of mere timebeaters. He was strongly individual and assertive in his interpretations, a radical, and an enthusiastic and devoted champion of Liszt and Wagner. Half the numbers in one of his concerts in 1853 were of Wagner's music. Theodore Thomas's tastes and talents were largely developed under Bergmann's influence. H. E. K.

BERGONZI, CARLO, a celebrated violinmaker of Cremona. Born towards the end of the 17th century, he worked from about 1716 to 1755. He was a pupil of Antonio Stradivari, whom he imitated very closely in his early efforts, while his later instruments show much originality and character. Their form and tone are equally beautiful, and they may justly be ranked immediately after those of Stradivari and Joseph Guarneri. He made not only violins, but also violas and violoncellos, which, however, are now very rare. His son, Michel Angelo, was but an indifferent violin-maker. P. D.

BERINGER, OSCAR, a distinguished pianist, was born at Furtwangen (Baden), July 14, 1844. In 1849 his father was compelled to fly to England as a political refugee, where he lived in straitened circumstances. Owing to this reason the only musical education Mr. Oscar Beringer received, up to his nineteenth year, was from an elder sister. During the years 1859 and 1860 he gave several series of Pianoforte Recitals at the Crystal Palace, and in 1861 made his first appearance at the Saturday Concerts. Recognising the necessity of going through a course of systematic training, he studied at Leipzig under Moscheles, Richter, Reinecke, Plaidy, etc., from 1864 to 1866, and continued his studies at Berlin under Tausig, Ehlert, Weitzmann, etc. In 1869 he was appointed a professor at Tausig's 'Schule des Höheren Clavierspiels' at Berlin, but in 1871 he returned to England, where he has repeatedly played with great success at the Crystal Palace Saturday Concerts, Musical Union, etc. In Jan. 1872 he played at the Gewandhaus Concerts at Leipzig, and on his return to England in the following year he founded in London an 'Academy for the Higher Development of Pianoforte Playing,' an institution which fully bore out the promise of its name until its close in 1897. On Oct. 14, 1882, he played the pianoforte part in Brahms's second Concerto on its first performance in England. In 1885 Mr. Beringer was appointed a professor in the Royal Academy of Music, and joined the committee of management in 1898. He was made a member of the committee of management of the Associated Board of the R.A.M. and the R.C.M. in 1900. His compositions include an Andante and Allegro for pianoforte and orchestra (performed, 1880, at the Crystal Palace and at Mr. Cowen's Orchestral Concerts), Sonatinas for the piano, a number of small instructive pieces, and several songs. W. B. S.

BÉRIOT, CHARLES AUGUSTE DE, celebrated violinist. Born of a noble Belgian family, Feb. 20, 1802, at Louvain. He had his first instruction in the violin from a local teacher, named Tiby, who was his guardian after the death of his parents; and made such rapid progress, that, when only nine years of age, he successfully performed in public a concerto of Viotti. He himself ascribed great influence on the formation of his character and the development of his talent to the well-known scholar and philosopher Jacotot, who, though himself no musician, imbued his young friend with principles of perseverance and self-reliance, which he never lost sight of throughout life, and which, more than anything else, contributed to make him attain that proficiency in his art on which his fame rests.

When nineteen years of age he went to Paris and pursued his studies there for some time under the advice of Viotti and Baillot, without actually being the pupil of either. After a short time he made his appearance in public with great success. From Paris he repeatedly visited England, where he met with a most brilliant reception. His first appearance at the Philharmonic Society took place on May 1, 1826, when he was announced as 'Violon de la chambre de sa Majesté le Roi de France.' On his return to Belgium he was nominated Solo-Violinist to the King of the Netherlands, which appointment he lost by the Revolution of 1830. For the next five years he travelled and gave concerts in England, France, Belgium, and Italy, together with the famous singer Maria Malibran, whom he married in 1836, ten days after the annulling of her former marriage in the French courts. At this time De Bériot was universally recognised as one of the most eminent of living violinists. After the sudden death of his wife he retired to Brussels in 1836, and appeared only occasionally in public till 1840, when he undertook a tour through Germany, and married Marie Huber, the daughter of a Viennese magistrate. [In 1842, on the death of Baillot, Auber offered de Bériot his place in the Paris Conservatoire; but Brussels suited him better, and] in 1843 he was appointed Professor of violin-playing at Brussels Conservatoire, and remained there till 1852, when the failure of his eyesight caused him to retire. He became totally blind in 1858, and died at Louvain, April 8, 1870.

De Bériot may justly be considered the founder of the modern Franco-Belgian school of violin-playing, as distinguished from the classical Paris

school, represented by Viotti, Kreutzer, Rode, and Baillot. He was the first after Paganini to adopt a great variety of brilliant effects in the way of harmonics, arpeggios, pizzicatos, etc., sacrificing to a certain extent the severity of style and breadth of tone, in which the old French school excelled. His playing was distinguished by unfailing accuracy of intonation, great neatness and facility of bowing, grace, elegance, and piquancy. His compositions, which for a considerable time enjoyed general popularity, although not of much value as works of art, abound in pleasing melodies, have a certain easy, natural flow, and are such as to bring out the characteristic effects of the instrument in the most brilliant manner. The influence of Donizetti and Bellini on the one hand, and Auber on the other, are clearly visible.

De Bériot published seven concertos, eleven airs variés, several books of studies, four trios for piano, violin and violoncello, and, together with Osborne, Thalberg and other pianists, a number of *duos brillants* for piano and violin. He also wrote a rather diffuse book of instruction, *École transcendentale de Violon*, and a *Grande Méthode*, published in 1858. Henri Vieuxtemps was the most distinguished of his numerous pupils. His son, Charles de Bériot, born Feb. 12, 1833, is a good pianist. P. D.

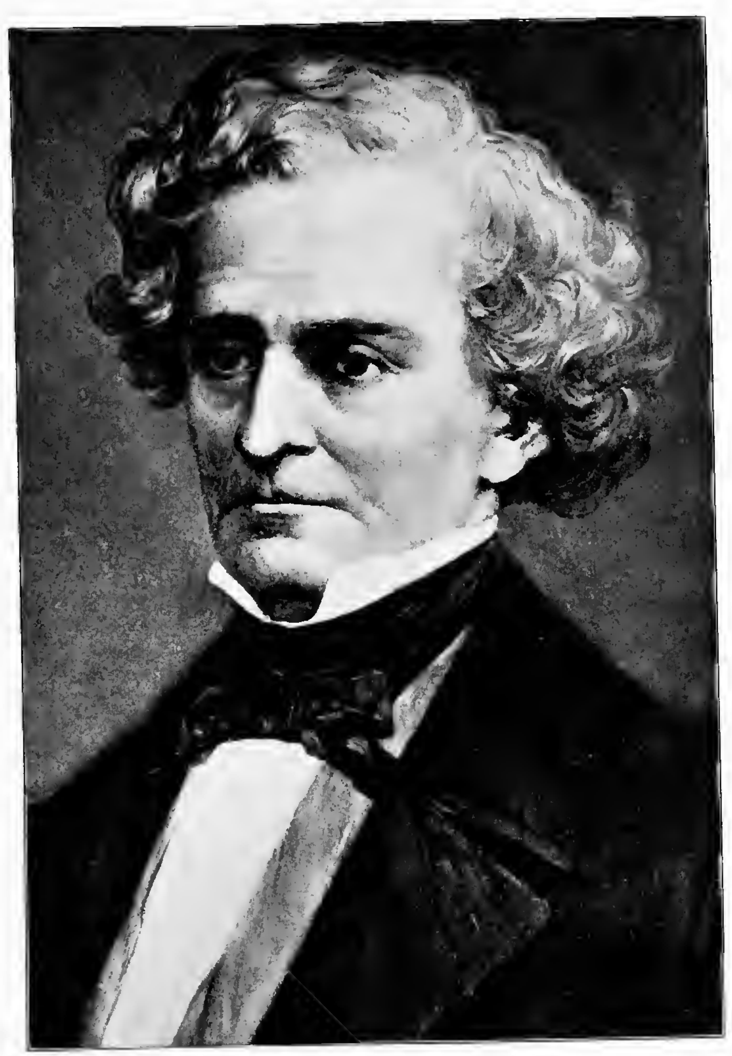
[With corrections from 'A Contribution towards an accurate biography of De Bériot and Malibran' by Edward Heron-Allen (*De Fidiculis Opuscula, opusc.* vi.), 1894.]

BERLIOZ, Hector, was born at La Côte St. André, near Grenoble, on Dec. 11, 1803. The son of a country doctor, he was at first educated for the practice of medicine; and, though allowed to play with music as a pastime, was prohibited from any thought of music as a career. The most plastic years of his life were thus almost entirely wasted. For his father's profession he felt nothing better than 'a cold disgust'; for the profession which he was afterwards to choose he received, during his boyhood, no training worth the mention; at an age when Mozart and Mendelssohn were finished masters, his whole musical attainment consisted in a rudimentary acquaintance with Catel's *Harmony*, a few boyish compositions, and a very moderate proficiency on the flageolet. It is true that his poetic genius was early stimulated by the study of Virgil, and by the discovery, in a neglected corner, of a few fragments from Gluck's 'Orfeo'; but these ill replaced the technical exercises which his ardent and mercurial temper especially needed. The remarkable inequality of his composition may be explained, at any rate in part, as the work of a vivid imagination, striving to explain itself in a tongue which he never perfectly understood.

In the year 1822 he was sent to follow his course at the Medical School of Paris. But the dissecting-room was too much for him, the doors of the Conservatoire Library stood open; after a short struggle, the conclusion of which was foregone from the outset, he announced his determination to devote himself entirely to music. His parents argued, expostulated, and finally cut off supplies, but it was all to no purpose; Berlioz had burned his ships and there was no longer any question of retreating. He applied to Lesueur for lessons, with which he made such rapid progress that in a few months' time he was able to compose a Mass for the Church of St. Roch; and in 1823 he was admitted, as a regular pupil, to the Conservatoire.

The next seven years were spent in continuous and truceless conflict. Lesueur was the only one among the professors whom he could tolerate; for Cherubini, the Director, he seems to have felt a positive detestation; he was impatient of academic methods, and wholly contemptuous of academic taste. His mind moved in a larger world than that of his teachers; his poet at the time was Shakespeare, his composer Beethoven, while they were still preoccupied with smooth counterpoint and the trim correctness of the classical drama. On the other hand, it is clear that he lost much through sheer intractability. Like many pioneers of the Romantic movement he indulged too much in disdain, and concluded too readily that because an accurate style may sometimes cover poverty of thought it is therefore useless to a thinker. Even had he been indisputably right in regarding current methods as enemies to progress, he would still have done well to apply the maxim, 'Fas est et ab hoste doceri.'

At the same time his life during this period showed a courage and a determination that were little short of heroic. He was in disgrace with his parents, in disgrace with his teachers, in such extreme poverty that he was forced to maintain himself as a chorus-singer at one of the minor theatres, baffled at every turn by constant opposition and by repeated failure. Yet he never faltered or lost heart; he maintained his purpose with the most uncompromising fidelity; and if he sometimes delivered his message in too strident a tone, at any rate he stood to it loyally and recked nothing of consequences. At last, in 1830, the tide of his fortune turned. His cantata 'La Mort de Sardanapale,' appropriately finished amid the rifle-shots of the July Revolution, won him the Prix de Rome, and opened the prospect of a successful career. He was still almost unknown, except as a rebel. Since the St. Roch Mass he had written a few compositions, 'Eight Scenes from Faust,' the overtures 'Les Francs-Juges' and 'Waverley,' the 'Symphonie Fantastique,' the 'Fantasia on Shakespeare's Tempest,' but they had made no mark and attained no reputation; the episodes of his own artistic life may be said to date from the year which, by an odd



HECTOR BERLIOZ

coincidence, saw Chopin's arrival in Paris and Schumann's emancipation from the study of the law.

The terms of the Prix de Rome imposed three years of travel, the first two to be spent in Italy. But after eighteen months Berlioz could bear expatriation no longer; he petitioned the ministry for leave to return, and by the middle of 1832 was once more established in Paris. He brought with him a revision of the 'Symphonie Fantastique,' a monologue 'Lélio' (intended as its sequel) which was mainly a pasticcio of earlier compositions, drafts of overtures to 'King Lear' and the 'Corsair,'[1] and a few songs, of which one, 'La Captive,' is worthy of a place among the great lyrics of the world. It is not a little significant that, of the scanty fruits which he gathered on his Italian journey, the finest should be the lamentation of a prisoner in a foreign land.

In 1833 he married Henrietta Smithson, an Irish actress, who had been playing Shakespeare at the Odéon, and forthwith set himself in good earnest to work for a livelihood. At first it was an uphill task. Pupils were few, publishers unenterprising; concerts only showed how easily receipts could be swallowed up in expenses; the populace maintained that indifference which it usually exhibits towards any artist who cannot introduce himself as a virtuoso. He applied for the directorship of the Gymnase Musicale; it was refused him by Thiers. He applied for the Professorship of Harmony at the Conservatoire; it was refused him by Cherubini. An accident had closed the public career of his wife; the birth of his son Louis brought a new mouth to feed; from sheer necessity he became a journalist, and supported his household by writing criticisms and feuilletons which, as he complains to his friend Humbert Ferrand, left him almost no time for composition. Yet, in spite of all difficulties and distractions, the seven years which followed his marriage were the most active of his whole life. He was a true improvisatore, and, his interest once engaged, could cover pages of complex orchestration with an almost miraculous rapidity; indeed, he tells us that he had to invent a system of shorthand in order to keep pace with the unceasing flow of his ideas. Between 1833 and 1840[2] he produced the cantata on the death of Napoleon, the three symphonies 'Harold en Italie,' 'Symphonie Funèbre et Triomphale,' and 'Roméo et Juliette,' the opera of 'Benvenuto Cellini,' the Requiem, first performed in 1837 for the disaster at Constantine, several songs, including 'Les Nuits d'Été,' the 'Rêverie et Caprice' for violin, and the ballad 'Sara la Baigneuse,' originally written for male quartet, and afterwards enlarged for chorus and orchestra. Toward the end of this period he began to reap a material reward which relieved him from further drudgery. The Requiem, commissioned by the French Government, was repaid with a fee of 4000 francs; in 1838, Paganini sent him 20,000 for 'Harold en Italie,' and in 1840, he received another 10,000 for the 'Symphonie Funèbre et Triomphale.' This enabled him not only to throw off the burden of journalism but to indulge a long-cherished project of a tour through Germany where, thanks to Liszt and Schumann, his name was already well known. Unfortunately, at the last moment, Madame Berlioz refused to consent to his departure, and the quarrel became so acute that it ended in a separation. There is no need to revive here the miserable story of broken nerves and of a jealousy not altogether unmerited. It is enough to say that Berlioz continued to maintain his wife until her death in 1854; but that, although they sometimes met on friendly terms, there was never any real reconciliation between them.

[1] Rewritten in 1855.

[2] The overture to 'Rob Roy,' first performed in 1834, was written in 1832.

The loss of his domestic happiness was partly compensated by the success of his visit to Germany. He travelled over the country from Cologne to Berlin, from Stuttgart to Hamburg, giving concerts at all the principal cities, and despite some academic opposition, received everywhere with crowded audiences and enthusiastic applause. Schumann offered him a cordial welcome: Mendelssohn, who disliked his music, showed him every courtesy, and gave him every facility for performance; the King of Prussia postponed a journey in order to hear 'Roméo' at Potsdam; the whole campaign was one long triumphal procession, and the burden of every bulletin is 'another victory: let them know it in Paris.' But Paris was too much occupied in crushing Richard Wagner to have any leisure for the work of a compatriot. In 1843, Berlioz returned, covered with laurels; he was set, for a livelihood, to conduct the music of other composers. In 1845 he made an equally successful tour in Austria, brought back a new composition 'La Damnation de Faust,' and produced it in 1846 before a scanty and apathetic audience. Next year he won fresh triumphs in Russia, returned once more to find an official post vacant at the Opera-house, and lost it through the machinations of Roqueplan. And all this time it is clear from his letters that he regarded his travels as a soldier regards foreign service, and that his whole affection was lavished on the brilliant, disdainful city that was using him so ill.

Between 1848 and 1855 he paid four visits to England. The first was undertaken, at Jullien's request, for a season of opera at Covent Garden; but it began with insufficient preparation, and it ended in sheer disaster. The other three were of better omen. In 1851 he came over as a member of the Jury at the Great Exhibition, and wrote an admirably fair and lucid report on the merits of the competing

instruments; in 1852 and 1855 he was engaged as conductor of the New Philharmonic, and produced at Exeter Hall his 'Roméo' symphony and some selections from his 'Faust.' On June 25, 1853, he conducted his 'Benvenuto Cellini' at Covent Garden. It is interesting to remember that in 1855 Wagner was also in London, conducting the concerts of the rival society. Between them the two revolutionaries kept the public alert, and the newspapers fully occupied.

His writings at this time show an allegiance curiously divided between literary and musical composition. On his return from Germany in 1843 he published his *Voyage Musical*, with some valuable essays on Weber, Gluck, and Beethoven; in 1844 he wrote the 'Hymne à la France' for an industrial exhibition in Paris; next year came 'Faust,' and then, after his Russian visit, the 'Traité d'Instrumentation' (numbered in his catalogue of compositions as op. 10), and the 'Fuite en Égypte,' which he afterwards enlarged into his sole attempt at oratorio, the 'Enfance du Christ.' In 1850 he printed two volumes of songs—'Fleurs des Landes' and 'Feuillets d'Album'—and revised his choral ballad of 'Sara la Baigneuse'; after which follow in steady succession 'La Menace des Francs' (1851), 'Les Soirées d'Orchestre' (1853), a most entertaining collection of sketches and criticisms, three choruses printed in 1854 under the title of 'Tristia,'[1] and at the beginning of 1855 his revised version of the overture to the 'Corsair.' Between 1835 and 1863 he wrote occasionally for the *Débats*, and in more than one field carried on a vigorous warfare against Scudo, Fétis, and the other Parisian critics. He did well to be angry. We have but to read the attacks upon him to understand how far they were animated by a mere spirit of partisanship; we have but to recall the story of Pierre Ducré to realise the extreme incompetence of his antagonists.

In 1855 came the Paris Exhibition, and Berlioz was commissioned to write a Te Deum for its opening, and a cantata, 'L'Impériale,' for its close. The latter, though printed among his works as op. 26, has long disappeared from the concert-room; the former, occasionally given at our larger festivals, may claim to rank beside the Requiem, than which it is even more gigantic in scale, and more exacting in requirement. It was published at the end of the year, together with 'Lélio' and the 'Enfance du Christ,' and at last roused Paris to some tardy recognition of her most distinguished composer. Hitherto he had received no decoration except the Cross of the Legion of Honour; in 1856 he succeeded to a *fauteuil* in the Academy, and three years later was elected to the only public appointment which he ever held—the Librarianship of the Conservatoire. It was fitting that he should end his days as authorised guardian of the scores which had first encouraged him to embark on his career.

[1] Of these the 'Méditation Religieuse' was written in 1831, and the other two in 1848.

On the death of his first wife he married Mlle. Martin Recio, a singer of small capacity and high ambition, who frequently imperilled the success of her husband's work by insisting on the leading part in its performance. Yet through seven years of ill-assorted union he treated her with the utmost patience and tenderness, and her sudden death in 1862 left him in a prostration of grief. 'I have no words to express my desolation,' he says in the few lines which carry the news to Ferrand. Indeed life had become very lonely for him. His son Louis was serving abroad in the French navy, his most intimate friend lived away from Paris, in his own immediate circle hardly any one remained to whom he could look for companionship. His public career, too, though lightened by a few moments of success, closed with a heavy and unmerited disappointment. Early in 1862 he made an enduring mark on French criticism with his volume entitled *À travers Chants.* Later in the same year his little opera of 'Béatrice et Bénédict' was brought out at Baden, and well received; but in 1863 'Les Troyens,' the work which he intended as his masterpiece, was driven, after a short run, from the boards of the new Paris opera-house. Berlioz never recovered the shock of its failure. He was worn out with labour and warfare, with public conflict and private sorrow, and he had no longer any heart to continue the struggle. At one of the performances his friends tried to cheer him by pointing to the audience, and saying, 'Eh bien! les voilà qui viennent.' 'Oui, ils viennent,' answered the composer sadly, 'mais, moi je m'en vais.'

After 'Les Troyens' Berlioz wrote no more, and the history of his remaining years is little better than a chronicle of encroaching sickness. In 1867 he was well enough to accept a second invitation to Russia; but in 1868 his health entirely broke down, and on March 8, 1869, he died at Paris in the sixty-third year of his age. He was honoured with a stately and ceremonious funeral, and ten years later, on March 8, 1879, a commemorative concert of his works filled the Hippodrome from floor to roof. 'Le génie,' says an author who well knew the Parisian temperament, 'c'est le talent des hommes morts.' In March 1903 a bust of Berlioz, by M. Léopold Bernstamm, was erected in front of the theatre at Monte Carlo, in commemoration of the transference of 'La Damnation de Faust' to the stage of that place. On Aug. 15 of the same year, a statue by M. Urbain was unveiled at Grenoble, and on the two following days musical performances of 'La Damnation de Faust,' etc., were given. The actual centenary of Berlioz's birth was duly celebrated in Paris by performances of the same work at two of the Lamoureux

Concerts, by a series of performances at the Colonne Concerts, and by a performance of 'Roméo et Juliette' at the Conservatoire, in December 1903.

That he possessed genius is beyond all question or controversy. No composer has ever been more original, in the true sense of the term; none has ever written with more spontaneous force or with more vehement and volcanic energy. His imagination seems always at white heat; his eloquence pours forth in a turbid, impetuous torrent which levels all obstacles and overpowers all restraint. It is the fashion to compare him with Victor Hugo, and on one side at any rate the comparison is just. Both were artists of immense creative power, both were endowed with an exceptional gift of oratory, both ranged at will over the entire gamut of human passion. But here resemblance ends. Beside the extravagance of Berlioz, Hugo is reticent; beside the technical errors of the musician the verse of the poet is as faultless as a Greek statue.

There is, indeed, a singular perversity in Berlioz's music, due partly to a twist in his disposition, partly to deficiency of early training. He had, for example, a spring of pure and beautiful melody, and in 'La Captive,' in the love-scene from 'Roméo,' in the great septet from 'Les Troyens,' he showed that he could employ it to noble purpose. Yet time after time he ruins his cause by subordinating beauty to emphasis, and is so anxious to impress that he forgets how to charm. The Evening Song in 'Faust' is spoiled by the very cadences that were intended to make it effective. The beginning of the Pilgrim's March in 'Harold' is delightful, the last strain offends like a misplaced epigram. No doubt there are other artists who have yielded to a similar temptation. Chopin used often to end his dreamiest improvisations with an unexpected discord. Heine often closes with a freakish jest a song full of pathos or romance. But these men did it out of sheer mischief, Berlioz because it seemed to him the natural outcome of his thought. On the other hand, it should be said that he has, in this matter, the qualities of his defects. His phrase, often beautiful, is almost always telling and incisive, and his command of rhythm was, at the time when he lived, without parallel in the history of music.

It is in the general fabric of his composition that his technical deficiencies are most apparent. His harmony is usually rich in colour, but in progression it is too frequently awkward or commonplace, either securing its point of colour by an ugly line, or giving a false appearance of movement by a mere rhythmic arrangement of scales or arpeggios. This comes not from want of harmonic perception but from want of proper education in counterpoint, with which, as with all forms of purely musical design, Berlioz was very imperfectly acquainted. Nor does he seem to have been aware of his own limitations. He draws public attention to the correctness of the Amen fugue in his 'Faust,' but ignores the fact that it could have been written by any forward pupil in a musical college. He regards the structure of the 'Symphonie Fantastique' as the legitimate outcome of Beethoven's principles, and does not see how often he violates the laws which he is professing to develop. On neither of these issues, therefore, has he any claim to be regarded as a true reformer. When he keeps the rules he can only apply them to some elementary problem; when he tries to extend their province he loses himself in the wilderness.

It is a pleasanter task to consider the one department of pure musical art in which his genius found its amplest scope and its fullest expression. As a master of the orchestra his claim to the first rank is incontestable. He knew the capacities of the different instruments better than the virtuosi who played them. He could foresee by intuition the effect of every possible combination or arrangement. He had inexhaustible invention, boundless audacity, an unerring sense of colour, and that highest economy of resource which knows when to spare and when to lavish. In the 'Invitation,' in the first movement of the 'Tempest Fantaisie,' in the opening of the 'Racóczy March,' he can move with perfect ease through a scheme of low tones and delicate values; in the 'Requiem,' in the 'Te Deum,' in the 'Damnation de Faust' he can make his canvas glow and blaze with the hues of Mont Pelée or Krakatoa. His work, in short, marks a new era in Instrumentation, and has been directly or indirectly the guide of every composer since his day.

No doubt his larger effects require conditions that are not very readily available. Towards the end of the famous treatise he sketches the construction of an ideal orchestra, which should faithfully and precisely carry out his intentions:—242 strings, four of which are tuned an octave below the double basses, 30 grand pianos, 30 harps, legions of wind-players and percussion-players; an army of sound equipped for the most overpowering conquests. And though, like many of his ideals, this remained for him unattainable, he usually approached as near to it as circumstances would allow. In his 'Tuba Mirum' and his 'Lachrymosa' the forces employed are of enormous magnitude: an immense number of bowed instruments, the wood-wind doubled, trebled, quadrupled, a tempest of rolling drums and clashing cymbals; and, at each corner of the stage, a blare of brazen instruments which carry, as from the four winds of heaven, their ringing, shattering trumpet-calls. Well might Heine say that such music reminded him of primeval monsters and fabulous empires. It is

out of scale with our civilised restrictions and reticences: for good and for ill it echoes over a wider expanse. But at the same time it is compelled to face the blunt practical issue of performance; to be fully understood it must be heard frequently, and it defeats its own end if it insists upon requirements which can rarely be satisfied. 'I understand,' said the king of Prussia, 'that you are the composer who writes for five hundred musicians.' 'Your Majesty has been misinformed,' answered Berlioz, 'I sometimes write for four hundred and fifty.'

From the technical side, then, Berlioz's chief claim to immortality is that of a brilliant and audacious colourist. It remains to consider the purpose for which he employed his medium. On this point he is entirely explicit: music was to him a language capable of conveying definite impressions, of arousing definite emotions, even of narrating a definite series of events. In every one of his vocal works, from the 'Élégie' to 'Les Troyens,' the main office of his music was to illustrate and reinforce the words. In every one of his instrumental works, from 'Harold' and the 'Symphonie Fantastique' to the little violin-piece which he wrote for Artôt, he was principally occupied in telling a story or in painting a picture. His weakness in pure design was partly the cause, but still more the effect, of his preoccupation with the dramatic or descriptive aspect of his art. With him, more than with any other great composer for the concert-room, it is possible to abstract form from content and to balance neglect of the one against enthusiastic devotion to the other.

Now there can be no doubt that music possesses a very intimate power of stirring man's emotional nature, and that it can strongly reinforce appeals made by the other arts—by articulate words, for instance, or by determinate action and scenery. But the attempt to make music self-articulate, in the manner which Berlioz intended, is for two reasons foredoomed to failure. It violates the essential character of the art; it offers almost irresistible temptations to ugliness. For, in the first place, the nature of musical expression and of its effect on the human organism is far too vague and nebulous to be tied down to any very precise significance. It is as idle to inquire the meaning of a composition as to inquire the meaning of a sunset. We may call the sunset 'angry' without passing the legitimate bounds of metaphor; but we should have little patience with the fancy that seriously enlarged upon the degree or cause of its anger. In exactly the same way we may call a musical composition 'agitated' or 'gay,' but we cannot give concrete shape to its gaiety or its agitation. Indeed, we are commonly irritated by any attempt to explain the poetic significance of a musical work. We may sometimes forgive it—in the 'Florentinische Nächte' of Heine, for example, or in Henry Kingsley's 'Ravenshoe'—but even there we feel that it needs forgiveness, that it is forcing our attention into a wrong channel, that it is unduly particularising those broad emotional types which supply the forms of music with their only real content. And if any man doubt this he may bring the matter to a clear issue: let him hear the 'Symphonie Fantastique,' and endeavour from the music alone to reconstruct the romance.

Secondly, when music rises to its highest, even these broad types of emotion are merged into one. The slow movement of the choral symphony fills us with the same overpowering sense of rapture and worship as a sight of the Alps; it is not this or that kind of feeling that is stirred in us but our entire soul. Only when the art descends to lower slopes can we begin to discriminate, to distinguish, to set boundary-lines; and the further the descent the easier and more convincing is the demarcation. Music which inflicts actual pain may well call up painful associations, and may so help imaginative hearers to call up some vague nightmare-pictures of savagery or horror. It is not for nothing that the instrumental work of Berlioz grows most nearly articulate in the 'Ronde du Sabbat,' in the 'Brigands' Orgy,' and in the orchestral setting of the 'Ride to the Abyss.'

However, like all great artists, Berlioz was better than his own theory. He often allowed it to lead him into extravagant aberration; he even narrates with pride that at the performance of his Requiem one of the audience was frightened into a syncope—an interesting commentary upon Schiller's view of the function of Art. But though his theory of the programme is impracticable, and though it is only by lowering his art that he can even approximate to its realisation, yet the fact remains that he has written a great deal of vigorous and stirring music, and that he often rises to a level of pure beauty which only genius can attain. After all, his *parti pris* was as much inherited as assumed. French music has always been closely connected with literary movements and ideals; it has always somewhat tended to subordinate form to expression. Even the exquisite style of Couperin was never satisfied without a 'poetic content,' and from him the line of ancestry runs directly enough through Rameau, Gossec and Lesueur, until it reaches the greatest and most gifted of Lesueur's pupils.

As might naturally be expected his best sustained work is to be found in his vocal compositions, both, because here his deficiencies of pure design are covered, and because here he has the collaboration of a text to give body and substance to his fancies. 'Les Troyens' is probably the finest extant specimen of spectacular opera, full of pageantry and movement, vividly conceived and vividly pourtrayed. The whole of the final tableau, with

the great prophetic utterance of Dido, based upon themes which recall happy hours to her memory, is strangely anticipatory of the end of 'Die Götterdämmerung.' 'Béatrice et Bénédict' is a charming comedy, wonderfully supple and light-handed; and 'Benvenuto,' though far less dextrous, yet contains a good many scenes of real dramatic power. His two great ritual works, the Requiem and the Te Deum, stand like colossal statues at the gates of a barbarian temple. They are absolutely unchristian in feeling, they suggest human sacrifices and blood-curdling rites, they grip emotion by the throat and leave it gasping for breath. But for sheer savage force and strength they are, in their kind, unsurpassed, and amid these terrors are many passages of a strange, inhuman beauty. Among his cantatas, 'La Damnation de Faust' holds the pre-eminent place; indeed, it is Berlioz in quintessence. All his merits are here, all his defects; a fabric now clumsily woven, now of the closest texture, cruel modulations and phrases of a haunting sweetness, the most exquisite tenderness alternating with the wildest violence, all clothed with his vivid colour and with his consummate mastery of orchestral resource.

His criticisms exhibit the same curious alternation of extremes. It was long before he could see any beauty in Palestrina; of Bach and Handel he spoke in disdainful ignorance. He cared little for Chopin, little for Schumann, and he passed over the Paris edition of Schubert's songs with a few casual words about 'Erlkönig.' On the other hand he was the first musician in Europe who really appreciated Beethoven, and his papers on Gluck and Weber are masterpieces of sound insight and clear expression. He counts, too, among the very small number of writers on music who deserve to be read for their literary style. 'The *Mémoires*,' says W. E. Henley, 'is one of the few essays in artistic biography which may claim equal honours with Benvenuto's story of himself and his own doings; the two volumes of correspondence rank with the most interesting epistolary matter of their time; in the *Grotesques*, the *A travers Chants*, the *Soirées de l'Orchestre* there is enough of fun and earnest, of fine criticism and diabolical humour, of wit and fancy and invention, to furnish forth a dozen ordinary critics and leave a rich remainder when all's done.' He has not Schumann's range or sympathy. Here, as in his art, he could see only from his own standpoint: but in art, in criticism, in life he looked through keen eyes, and spoke out with a fearless and undaunted eloquence.

The following is a list of his works:—

(The numbers in small Roman type refer to the volumes of the complete edition now in course of publication by Messrs. Breitkopf and Härtel.)

Op.
1. Eight scenes from 'Faust.' (1828-29.) [x.]
1 bis. Overture to 'Waverley.' (1827-28.) [iv.]
2. 'Irlande'; nine mélodies pour une et deux voix sur des traductions de Thomas Moore. (1829.) [xiv., xv., xvi., xvii.]
3. Overture to 'Les Francs Juges.' (1827-28.) [iv.]
4. Overture to 'King Lear.' (1831.) [iv.]
5. 'Grande Messe des Morts.' (Requiem, 1837.) [vii.]
6. 'La 5 Mai'; cantata on the death of Napoleon. (1834.) [xiii.]
7. 'Les Nuits d'Été'; six songs to words by Théophile Gautier. (1833-34; rewritten in 1841 and 1856.) [With orchestral acct. in vol. xv., piano acct. in vol. xvii.]
8. Rêverie et Caprice, vln. and orch. (1839.) [vi.]
9. Overture 'Le Carnaval Romain.' (1843.) [v.]
10. Grande Traité de l'Instrumentation et d'Orchestration modernes. Avec supplément 'Le chef d'orchestre.'
11. 'Sara la Baigneuse'; choral ballad. (1834-50.) [xiv.]
12. 'La Captive'; song for mezzo-sopr. and orch. (1832-48.) [xv.] Also with acct. for pf. and vcello. and pf. alone. [xvii.]
13. 'Fleurs de Landes,' five songs, for one or more voices. (1831-34, pubd. 1850.) [xvi. and xvii.] One, 'Le jeune Pâtre Breton,' with orch. [xv.]
14. Symphonie Fantastique; 'Episode de la vie d'un Artiste.' (1830-31.) [i.]
14 bis. 'Lélio; ou le Retour à la Vie.' Monodrama.[1] (1827-32.) [xiii.]
15. Symphonie Funèbre et Triomphale. (1834-40.) [i.]
16. 'Harold en Italie': symphony with viola obbligato. (1834.) [ii.]
17. 'Roméo et Juliette': dramatic symphony. (1838.) [iii.]
18. 'Tristia'; two works for chorus and orch.: 'Méditation religieuse' (1831); 'Ballade sur la Mort d'Ophélie' (1848) [xiv.]; and a 'Marche Funèbre pour la dernière Scène d'Hamlet' (1848) for orch. [vi.]; the three published together in 1850.
19. 'Feuillets d'Album'; six songs (two for chorus). (1845-55.) [xiv., xv., xvi., xvii.]
20. 'Vox Populi'; two works for chorus and orch. 1. 'La Menace des Francs' (1851); 'Hymne à la France' (1844). Published together in 1851. [xiv., xvi.]
21. Overture to 'The Corsair.' (1831, rewritten in 1844 and 1855.) [v.]
22. 'Te Deum.' (1849-54.) [viii.]
23. 'Benvenuto Cellini,' opera in three acts. (1835-37.)
24. 'La Damnation de Faust.' (1846.) [xi., xii.]
25. 'L'Enfance du Christ'; oratorio in three parts. (1850-54.) [ix.]
26. 'L'Impériale'; cantata for the Paris Exhibition. (1855.) [xiii.]
27. *Deest.*
28. 'L'Etoile de la Liberté' (Le Temple Universel); Chorus. (1860.) [xvi.]

WORKS WITHOUT OPUS NUMBERS

'Resurrexit' from the St. Roch Mass. (1622, rewritten 1825 and 1832.) [vii.]
Ten Songs. (Written between 1825 and 1834.) [xvi., xvii.]
Three cantatas: 'La Révolution Grecque.' (1826.) [x.]
'Herminie.' (1828.) [xv.]
'La Mort de Cléopâtre.' 1829.) [xv.]
Chorus of Magi. (1828, rewritten in 1832.) [vii.]
Two fugues for chorus and orch. (1829-28.) [vi.]
Overture to 'Rob Roy.' (1832.) [iv.]
Two Motets: 'Veni Creator' and 'Tantum ergo.' [vii.]
Three pieces for harmonium: 'Toccata,' 'Sérénade agreste à la Madone,' and 'Hymne pour l'Elévation.' (1845.) [vi.]
'L'Apothéose' for chorus. (1848.) [xvi.]
'Hymne pour la Consécration du nouveau Tabernacle.' (1859.) [xvi.]
'Béatrice et Bénédict,' comic opera, two acts. (1860-62.)
'Les Troyens'; grand opera in two parts: (1) 'La Prise de Troie' (first and second acts); (2) 'Les Troyens à Carthage' (third, fourth, and fifth acts).
'March from Les Troyens' arranged for concert use.

ARRANGEMENTS, ETC.

Recitatives for 'Der Freischütz.' (1841.)
'L'Invitation à la Valse,' by Weber, for orch. (1841.)
'Pater Noster' and 'Adoremus,' by Bortniansky. (1843.)
Marche Marocaine, by L. von Meyer. (1845.)
'Plaisir d'Amour,' by Martini. (1859.)
'Erlkönig,' by Schubert. (1860.)

LITERARY AND CRITICAL WORKS

'Voyage Musical,' études sur Beethoven, Gluck, et Weber. (1843.)
'Les Soirées de l'Orchestre.' (1853.)
'Les Grotesques de la Musique.' (1859.)
'A travers Chants.' (1862.)
Mémoires de Berlioz. Two vols. (1870.)
Correspondance inédite. (1879.)
Lettres Intimes. (1882.)
'Les Musiciens et la Musique' (a collection of articles, mainly on the work of Berlioz's contemporaries, from the *Journal des Débats*, with an introduction by André Halleys. 1903).
A volume of 'Briefe von Hector Berlioz an die Fürstin Carolyne Sayn-Wittgenstein,' edited by La Mara, was issued by Breitkopf and Härtel in 1903.

Many of the autobiographical details in these works are untrustworthy. Until the publication of Adolphe Jullien's admirable biography in 1888, students of Berlioz's life were more or less at a loss. W. H. H[w].

BERMUDO, JUAN, born near Astorga in Spain about 1510, a Franciscan monk, author of *Libro de la declaracion de instrumentos.* Volume I. was printed at Ossuna, 1549, and

[1] The 'Chœur des Ombres' in this work is taken from the 'méditation' in the cantata 'La Mort de Cléopâtre' (performed for the first time under Weingartner at the Queen's Hall, London, Nov. 12, 1903), and the last number from the 'Fantasia on Shakespeare's Tempest.'

the whole at the same place in 1555. Soriano-Fuertes (*Historia de la Musica española*) states that the original in four volumes is among the MSS. in the National Library at Madrid.

BERNABEI, Giuseppe Ercole, born at Caprarola about 1620, was a pupil of Benevoli, and was successively maestro di cappella at the Lateran in Rome, from 1662, and at San Luigi de' Francesi from 1667; he seems to have entered the Cappella Giulia, St. Peter's, on June 20, 1672, but not to have been maestro di cappella there, as he is only called 'musico' in the letter of recommendation which Cardinal Barberini sent to the Elector of Bavaria in 1674, and in consequence of which Bernabei obtained the post of maestro di cappella to the court of Munich. He died at the end of 1687 or the beginning of 1688, as his son (see below) succeeded him to his post on January 16, 1688. Ercole Bernabei's compositions include a set of three-part madrigals, called 'Concerto madrigalesco,' published at Rome, 1669; 'Sacræ Modulationes,' Munich, 1691, and various motets etc. in MS. at Munich, Modena, Dresden, and Vienna. The text-books of two operas given in Munich, 1680 and 1686, are preserved there. His son Gioseffo Antonio, born about 1659 in Rome, was sent for to Munich in 1677 and appointed assistant to his father, whom he succeeded in January 1688. He died March 9, 1732. His compositions include a book of seven masses for four voices and strings, printed 1710; masses and motets in MS. at Munich, Berlin, Bologna, Dresden, and a large collection of church music in the court library of Vienna. Between 1678 and 1691 he wrote sixteen operas, many of them only preserved in the form of text-books. (Eitner's *Quellen-Lexikon*.)

BERNACCHI, Antonio, born at Bologna about 1690, is equally celebrated as a singer and as a master. During several years he received the instruction of Pistocchi, then the first singing-master in Italy, where there were at that time not a few; and to his care and skill, as well as to his own application, genius, and splendid soprano voice, the young Bernacchi owed his early superiority over all the other singers of his day, and the title which he gained of 'Il Rè dei cantatori.' Fétis says that he made his first appearance in 1722; but it is much more likely that he did this ten years earlier, for he was singing in London in 1716 in the opera 'Clearte,' and in Handel's 'Rinaldo' in 1717, when he sang the part of Goffredo, which had previously been sung by Vanini Boschi and Galerati, two female contralti. While in England, his voice was thought to be weak and defective; but he covered these faults with so much skill that his singing was always much more admired by musicians than by the public. He remained here at first only for one season, after which he returned to Italy. In 1726 he entered the service of the Elector of Bavaria, and subsequently that of the Emperor. Bernacchi now altered his style, making use of an embroidery of roulades,—a great innovation upon the old simple method of singing. This novelty had an immense success; and was immediately adopted by all the other singers, in spite of the outcry raised by the purists of the old school. Martinelli and Algarotti agree in blaming him for sacrificing expression to execution, and for 'opening the door to all the innovations which have debased the art.' Rousseau relates that Pistocchi, on hearing his former pupil, exclaimed, 'Ah! woe is me! I taught thee to sing, and now thou wilt "play"!' The *Daily Courant* of July 2, 1729, announced that 'Mr. Handel, who is just returned from Italy, has contracted with the following persons to perform in the Italian Opera: Sig. Bernacchi, who is esteemed the best singer in Italy'; etc. The Opera, which had been closed for eighteen months, reopened December 2 with 'Lotario,' and a revival of 'Tolomeo,' in both of which Bernacchi played the principal character, formerly sustained by Senesino. In the season of 1730 he sang in Handel's 'Partenope,' after which he returned once more to Italy, with the desire of founding there a school for teaching his own method. Raff, Amadori, Mancini, Guarducci, and many more, were his scholars. The objection of the purists to Bernacchi's fioriture as new, has no foundation; for these embellishments were as old as the 16th century, and were only developed by him and employed more after the manner of instrumental music. He was also a good composer, having learnt composition from G. A. Bernabei; the Conservatoire at Paris possesses some songs and duets of his. He was admitted as a member of the Società Filarm. of Bologna in 1722, of which he became Princeps in 1748 and 1749. The libraries of the Accademia and Liceo of Bologna contain MSS. of vocal compositions in four and five parts, with and without accompaniments. He died March 1756. J. M.

BERNARD, Émile, born at Marseilles, August 6, 1845, a distinguished pupil of the Paris Conservatoire, where he won prizes for piano, counterpoint, and organ, being pupil of Marmontel, Reber, and Benoist. He became organist of Notre-Dame des Champs, retiring from the post in 1895. Bernard's serious and reflective disposition is shown in most of his compositions, from an organ fantasia and fugue, which obtained the prize offered by the Société des Compositeurs de Paris in 1877, to the violin concerto dedicated to Sarasate, and played by him at one of the Conservatoire concerts in 1895. A suite for violin and piano, often played by the same artist, has become familiar to London audiences, and among Bernard's other works may be mentioned, a divertissement for wind instruments, a fantaisie, and a concertstück for piano and orchestra, and andante and rondo for

violoncello and orchestra; many remarkable works for organ and piano, a cantata 'Guillaume le Conquérant' for baritone solo, chorus, and orchestra; a sonata for piano and violoncello, an overture for orchestra, a string quartet, and a trio, as well as songs and slighter pieces. He died in Paris, Sept. 11, 1902. G. F.

BERNARDI. See SENESINO.

BERNASCONI, ANTONIA, was the daughter of a valet-de-chambre of the Prince of Würtemburg, whose widow married Andrea Bernasconi, a music-master and composer, [who was born 1712 at Verona, and died at Munich, 1784, having been maestro di cappella there from 1755, and written twenty-one operas and various sacred compositions.] From him Antonia received such instruction as sufficed to develop her remarkable talents. She made her first appearance at Vienna, 1764, in 'Alceste,' which Gluck had written expressly for her. She afterwards sang at various Italian theatres, and in 1778 she appeared with Pacchierotti in 'Demofoonte,' a pasticcio, at the Opera in London. She was then a good musician, and a correct and skilful singer; but her voice was not powerful, and she was past her prime. She was a good actress, with but an indifferent figure. In the next season she remained, condescending, as it was then esteemed, to take the part of 'first woman' in the comic opera, which she performed admirably. In 1770-71 she had sung at Milan the part of Aspasia in Mozart's early opera 'Mitridate.' She distrusted the powers of the boy to compose the airs for her, and requested to see what she was to sing, to which he instantly acceded. She made trial of a piece, and was charmed with it. Mozart then, piqued at her want of confidence, gave her another, and a third, leaving Bernasconi quite confounded with so rare a talent and so rich an imagination at years so tender. Shortly afterwards an enemy (Gasparini of Turin) called on her with the words of the libretto set to different music, and endeavoured to persuade her not to sing the music of the young Mozart. 'She absolutely refused this wicked person, being quite overjoyed at the airs the young *maestro* had written for her, in which he consulted her inclination.'[1] The opera had a prodigious success.

In 1783 Bernasconi was at Vienna, where she had settled, though not engaged at the Opera; but she gave a few performances of the 'Alceste' and 'Ifigenia in Tauride' of Gluck, and of a comic opera 'La Contadina in Corte,' which she had sung with success in London. J. M.

BERNER, FRIEDRICH WILHELM, born at Breslau, May 16, 1780; pupil of his father the organist of the Elisabeth Church there, under whose tuition he made such rapid progress as to be appointed his assistant at thirteen years of age. Counterpoint and composition he learnt from Gehirnie, director of the choir at the Matthäuskirche, and at the same time from Reichardt the violoncello, horn, bassoon, and clarinet, which last instrument he played in the orchestra of the theatre. The arrival of C. M. von Weber in Breslau to take the post of capellmeister roused Berner to fresh exertions. Weber valued him as an excellent pianoforte and clarinet player. In 1811 he and Schnabel were summoned to Berlin by Zelter to master the system of the Singakademie, with the view of establishing similar institutions in Breslau and the rest of Silesia, such being the wish of the Prussian Government. Berner was also entrusted with the task of cataloguing the musical treasures of the suppressed monasteries. In the middle of all this activity he was seized with a long and serious illness which removed him on May 9, 1827. More details of his life will be found in the *Hausfreund* for 1827, No. 15. Among his numerous pupils, Adolph Hesse was one of the most remarkable. He left many compositions both for voices and instruments, but his didactic writings are more valuable—*Grundregeln des Gesanges* (1815), *Theorie der Choral-zwischenspiel* (1819), *Lehre von den musikalischen Interpunktion* (1821). Some of his songs were very popular, *e.g.* 'Deutsches Herz verzage nicht.' F. G.

BERNHARD, CHRISTOPH, capellmeister at Dresden; son of a poor sailor; born at Danzig, in 1627, or 1628 (according to Fürstenau's statement that he was in his 65th year when he died). He was so poor as to sing from door to door to keep himself from starving. By a Dr. Strauch he was placed in the Gymnasium, where he studied music under BALTHAZAR ERBEN, and the organ under Paul Syfert. By the aid of the same benevolent individual he was enabled to visit Dresden with letters of recommendation to H. SCHÜTZ the capellmeister. There his fine voice, at first an alto, but afterwards a tenor, so far attracted the notice of the Kurfürst as to induce him to take him into his service in 1649, and to send him to Italy with the view of perfecting his singing. In Rome he became intimate with Carissimi, and excited the enthusiasm of the Italians by his compositions, amongst others a mass for ten voices. After returning with a party of young Italians to Dresden, he was enabled by the Kurfürst to make a second journey to Italy about 1651; on his return in 1655 he became vice-capellmeister. The Italians who had returned with him, however, intrigued against their benefactor, and at length compelled Bernhard to resign his post and take a cantorship at Hamburg, which he held from 1664 to 1674, when he was recalled by the Kurfürst Johann George III., and remained in Dresden as capellmeister till his death, Nov. 14, 1692. His facility in counterpoint was very remarkable, and some extraordinary instances of his ability in this direction may be found in his setting of the Latin hymn 'Prudentia

[1] Leopold Mozart's Letter.

Prudentiana' (Hamburg, 1669) in triple counterpoint, as well as in other of his works, a list of which is given in the *Quellen-Lexikon*. F. G.

BERNSDORF, EDUARD, born at Dessau, March 25, 1825, a pupil of F. Schneider at Dessau and of A. B. Marx at Berlin; has lived for many years at Leipzig. He has published various songs and pieces for the piano, but is chiefly known as editor of the *Universal Lexikon der Tonkunst* (3 vols., with supplement, 1856-65, begun by von Schladebach) and also as a critic in the well-known musical periodical, the *Signale*. Bernsdorf is a thorough conservative, with a strong antipathy to all modern efforts in music. Within his own predilections, however, he is a keen and intelligent critic, though his severity of expression in reports of the Leipzig concerts has made him unpopular. A. M.

BERSELLI, MATTEO, a celebrated Italian tenor, who came to England with Senesino; and with him made his first appearance in London in Bononcini's 'Astarto,' Nov. 19, 1720. He sang next in December of the same year, with Senesino again, in the 'Radamisto' (revival) of Handel; and in 1721 he appeared in 'Muzio Scevola,' joint work of Attilio, Bononcini, and Handel; in the 'Arsace' of Orlandini and Amadei; and in the anonymous 'L'Odio e L'Amore.' After that we lose sight of him. J. M.

BERTIN, LOUISE ANGÉLIQUE, born at Roche near Bièrre, Feb. 15, 1805, contralto singer, pianist, and composer; 'Le Loup Garou' (Paris, 1827) and 'Faust' (1831) were her most successful operas, though Victor Hugo himself adapted the libretto for her 'La Esmeralda' (1836). Mlle. Bertin's imperfect studies account for the crudities and irregularities to be found in her writings among many evidences of genius. She died April 26, 1877.

BERTINI, GIUSEPPE, son of Salvatore Bertini, a musician at Palermo (1721-94), born there about 1756; was director of the music in the Cappella Palatina, a composer of church music, and author of *Dizionaro storico-critico degli scrittori di musica* (Palermo, 1814) which, although largely borrowed from Choron and Fayolles, contains interesting original articles on Italian musicians. He was living in 1847.

BERTINI, HENRI, born in London, Oct. 28, 1798, a pianist, the last member of a musical family, which included the father, born at Tours 1750, and an elder brother, BENOÎT AUGUSTE, born 1780, who was a pupil of Clementi, and trained Henri after that master's method. At the age of twelve his father took him for a successful concert-tour in Holland, the Netherlands, and Germany. He was for some time in England and Scotland, but in 1821 settled in Paris until 1859, when he retired to Meylan. As a performer he excelled alike in phrasing and execution. His compositions (of which Fétis gives a complete list) were excellent for their time, but his chief work is an admirable course of studies. A useful modern edition of 50 selected studies has been edited by Giuseppe Buonamici. He died at Meylan, Oct. 1, 1876.

BERTINOTTI, TERESA, born at Savigliano, Piedmont, in 1776. When she was only two years old her parents went to live at Naples. Here, at the age of four, she began the study of music, under the instruction of La Barbiera, a very original artist, of a type that is now nearly lost, even at Naples. At twelve the little Teresa made her first appearance, with other children, at the San Carlino theatre, with great éclat. As she grew older, she showed the promise of great beauty, and developed a fine style of singing. Obtaining engagements only too easily she sang at Florence, Venice, Milan, and Turin with prodigious success. In the latter town she married Felice Radicati, a violinist and composer of instrumental music; but she still kept to her maiden name on the stage. In 1805 she sang with brilliant success at Vienna for six months; but she then left that city, on account of political events. In 1807 she went to Munich, and sang before the court; and then visited Vienna a second time, where she found the same welcome as before. She accepted an engagement from Louis Buonaparte, king of Holland, and went to the Hague. She came to London about 1810-11. Here she was thought to have a pleasing voice and a good manner; but after giving satisfaction in one serious opera, 'Zaira,' in which her songs were written for her by her husband, she was less successful in a second; upon which she took to comic opera, and performed extremely well in Mozart's 'Così fan tutte,' with Collini, Cauvini, Tramezzani, and Naldi. She also sang in the 'Flauto Magico,' and a revival of Guglielmi's beautiful 'Sidagero.' Catalani, however, could not endure to be surrounded by so many good performers; and the situation consequently became so unpleasant that half the company, including Bertinotti, seceded to the Pantheon, taking with them, as 'best woman,' the celebrated Miss Stephens, who there made her début. The licence being only for intermezzos, operas of one act, and dancing without *ballets d'action*, the performances were not very attractive, and soon ceased. The house then closed, and most of the troupe, among whom was Bertinotti, left this country. She now returned to Italy, visited Genoa, and was next engaged at the end of 1812 for the opera at Lisbon. In 1814 she returned to Bologna, being called thither on family matters, and while there received an offer from the Italian opera at Paris, which she accepted but was prevented from fulfilling by the return of Napoleon from Elba. She therefore settled at Bologna, where her husband, who had obtained a place as first violin and professor, was killed in 1823 by an accident, being thrown from a carriage. She now retired from the stage, but

continued to teach singing, and formed several admirable pupils. She died at Bologna, Feb. 12, 1854. J. M.

BERTOLLI, FRANCESCA, who arrived in England about the end of September 1729, was a splendid contralto, and 'also a very genteel actress, both in men and women's parts.' She was one of the new company with which Handel opened the season of 1729-30, and appeared in 'Lotario' and the revival of 'Tolomeo,' and in 'Partenope,' Feb. 24, 1730. She sang again in 'Poro,' Feb. 2, 1731, with Senesino: this opera had a run of fifteen nights, at that time a great success. Bertolli took in it the part formerly sung by Merighi. She took part in the revivals of 'Rodelinda' and 'Rinaldo' in the same season, and in the new operas, 'Ezio' and 'Sosarme,' at the beginning of 1732. In this season she sang, in English, the contralto music of 'Esther,' then performed first in public (April 20), and repeated six times during May; and she appeared in 'Acis and Galatea,' sung partly in English and partly in Italian. In this same year she also performed in 'Flavio' and 'Alessandro' by Handel, and in Attilio's 'Coriolano.' In 1733 she played in 'Ottone,' 'Tolomeo,' and 'Orlando,' and in 'Deborah,' Handel's second English oratorio. She followed Senesino, however, when that singer left Handel, and joined the opposition at the Lincoln's Inn Theatre: she sang in 'Onorio' in 1734, and in Veracini's 'Adriano in Siria' in 1735, as well as in other pieces. In 1737 she returned to Handel, and sang in his 'Arminio,' Jan. 12, at Covent Garden; 'Giustino,' Feb. 16; 'Berenice,' May 12; and a revival of 'Partenope.' Her name never occurs again in the libretti of the time, and her after-history is unknown. J. M.

BERTON, HENRI MONTAN, one of those not infrequent instances in the history of art where a distinguished father is succeeded by a more distinguished son. Pierre Montan Berton (1727-1780), the father, composed and adapted several operas, and was known as an excellent conductor. He held the position of *chef d'orchestre* at the opera in Paris from 1759, and at the time when the feud of the Gluckists and Piccinnists began to rage, and is said to have acted as peacemaker between the hostile parties. His son HENRI was born at Paris, Sept. 17, 1767. His talent seems to have been precocious; at six he could read music at sight, and became a violinist in the orchestra of the opera as early as 1782. His teachers of composition were Rey, a firm believer in Rameau's theoretical principles, and Sacchini, a prolific composer of Italian operas. But this instruction was never systematic, a defect but too distinctly visible even in the maturest scores of our composer. His musical knowledge, and particularly his experience of dramatic effect, he mainly derived from the performances he witnessed. Hence the want of independent features in his style, which makes it sometimes difficult to distinguish his workmanship from that of other masters of the French school. In 1782 he became deeply enamoured of Mlle. Maillard, a celebrated singer, by whom he had an illegitimate son FRANÇOIS BERTON, also a composer of some note, who was born in 1784 and died in 1832. This passionate attachment seems to have awakened his latent creativeness. His first work was a comic opera, 'La Dame invisible,' written about the time referred to, but not performed till four years later (December 1787). It is said that the young composer being too shy to produce his work it was shown by Mlle. Maillard to Sacchini, who at once recognised Berton's talent. This led to the connection between the two musicians already alluded to. Berton made his public début as a composer at the Concerts Spirituels, for which he wrote several oratorios. One of these, 'Absalon,' was first performed with considerable success in 1786. But he soon abandoned sacred music for the more congenial sphere of comic opera. In 1787 two dramatic works—'Les promesses de mariage' and the above-named 'Dame invisible'—saw the light of the stage, and were favourably received.

The excitement of the revolutionary period did not fail to leave its traces on Berton's works. His opera 'Les rigueurs du cloître' (1790) owes its existence to this period. In it the individual merits and demerits of his style become noticeable for the first time—easy and natural melody, great simplicity and clearness of harmonic combinations, and skilful handling of stage effects; but a want of grandeur and true dramatic depth, and frequently slipshod structure of the *ensembles*. Amongst the masters of French comic opera Berton holds a respectable but not pre-eminent position. His power was not sufficient to inspire a whole organism with the breath of dramatic life. Hence his works have disappeared from the stage, although separate pieces retain their popularity.

During the Reign of Terror Berton had a hard struggle for existence. He even found difficulty in procuring a libretto from one of the ordinary manufacturers of that article, and to supply the want had to turn poet himself, although his literary culture was of the slightest order. The result was the opera 'Ponce de Leon,' first performed with great success in 1797. A year later (April 27, 1798) he produced his *chef d'œuvre*, 'Montano et Stéphanie,' a romantic opera, with words by Dejaure, the librettist of Kreutzer's 'Lodoiska' and many other pieces. It is by far the most ambitious piece of its composer, and the numerous ensembles were at first considered so formidable as to make the possibility of execution doubtful. Some of the songs—for instance, the beautiful air of Stéphanie, 'Oui, c'est demain que l'hymenée'—are still heard with delight. Edouard Monnais, in his sketch entitled *Histoire d'un chef d'œuvre*, has given a full account of the history of the

work, founded partly on autobiographical fragments by the composer. Its success greatly advanced Berton's reputation, and freed him from the difficulties of the moment. It must suffice to add the titles of a few of the most celebrated of his numerous compositions :—'Le Délire' (1799), 'Aline, ou la Reine de Golconde' (1803), 'Ninon chez Madame de Sévigné' (1808), and 'Françoise de Foix' (1809). Many more are enumerated by Pougin in the supplement to Fétis ; and Berton also wrote numerous operas in co-operation with Méhul, Spontini, Kreutzer, Boieldieu, and other contemporary composers, besides several ballets.

Berton was from 1795 Professor of Harmony at the Conservatoire ; in 1807 he became conductor at the Italian opera in Paris, and in 1815 was made a member of the Institut, becoming, in the following year, Professor of Composition at the Conservatoire. French and foreign decorations were not wanting ; but he survived his fame, and the evening of his life was darkened. In 1828 he suffered by the bankruptcy of the Opéra Comique, to which he had sold the right of performing his works for an annuity of 3000 francs. Moreover he could not reconcile himself to the new currents of public taste. Rossini's success filled him with anger—a feeling which he vented in two pamphlets, 'De la Musique mécanique et de la Musique philosophique' (1826), and 'Epître à un célèbre compositeur Français, précédée de quelques observations sur la Musique mécanique et la Musique philosophique' (1829). The celebrated composer is Boieldieu, who was by no means pleased with the dedication of a book so little in accordance with his own views. Berton survived all his children, and died April 22, 1844. F. H.

BERTONI, Ferdinando Giuseppe, born at Salo near Venice, August 15, 1725, died at Desenzano near Brescia, Dec. 1, 1813, pupil of Padre Martini, and a celebrated composer in his time. In 1747 he produced an opera, 'Cajetto,' and in 1752 was appointed organist of St. Mark's, Venice ; in 1757 he was choirmaster at the Conservatorio 'dei Mendicanti,' which post he held till the suppression of the Conservatori on the fall of the Republic in 1797. His opera, 'Orazio e Curazio,' appeared in Venice (1746), but it was not till the production of 'Orfeo' (1776) that he attracted attention. He composed it to the libretto which Gluck had set, and the same singer, Guadagni, took the part of Orfeo in both operas. [The florid air inserted at the end of the first act of Gluck's 'Orphée,' 'Amour, viens rendre à mon âme,' was for many years attributed to Bertoni, who claimed that it was identical with one occurring in his own 'Tancredi' (performed in 1767 at Turin) ; it had appeared, in a form far more nearly like its present shape, in Gluck's 'Parnaso confuso,' 1765, and in his 'Aristeo,' 1769. In the definitive edition begun by Mlle. Pelletan, Saint-Saëns in the preface to 'Orphée' proves that the air is certainly by Gluck.] In 1778 Bertoni was summoned to London with his friend Pacchierotti, and brought out his 'Quinto Fabio,' which had been successfully produced at Padua in the same year, and was equally well received here, owing in great part to Pacchierotti's performance of the part of Fabio. Bertoni visited London again with Pacchierotti, but the rage for Sacchini made it difficult for any one else to gain a hearing, and he returned finally to Venice in 1784. In the following year, on the death of Galuppi, he succeeded him as conductor at St. Mark's, the most honourable and lucrative post then open to a musician in Italy. Burney (*Hist.* iv. 514, 541) describes him as a man of ability and taste, but no genius. His works (of which the *Quellen-Lexikon* contains a list) comprise thirty-three operas and oratorios, besides instrumental compositions. Little of his music has been published. M. C. C.

BERTRAND, Jean Gustave, born at Vaugirard near Paris, Dec. 24, 1834, educated at the École des Chartes, where he devoted himself to the study of ancient music and history of the organ. This learned and clever writer has contributed to Didot's *Complément de l'Encyclopédie*, and has published many articles on music in *Les Débats*, *La Revue moderne*, *Le Nord*, *Le Ménestrel*, etc. His chief works are a *Histoire ecclésiastique de l'orgue* (1859), a pamphlet on Ancient Music (Didot, 1862) ; *Les origines de l'harmonie* (1866), *Les Nationalités musicales, étudiées dans le drame lyrique* (1872) ; and *De la réforme des Études du Chant au Conservatoire* (1871). M. Bertrand has original views as a critic, and fills the department of musical archæology in the *Commissions des Travaux historiques*. G. C.

BERWALD, Johann Friedrich, a violinist, son of one of the chamber musicians of the King of Sweden, born at Stockholm, Dec. 4, 1787, travelled as an infant prodigy, composed a symphony, and was famous in Russia, Poland, Austria, and Germany before he was ten years old. His second symphony was finished in Leipzig in 1799. In 1817 he again travelled, but in 1819 returned to Stockholm, and remained there as capellmeister from 1834 till his death, June 28, 1861. His three daughters were singers of some repute, [and his nephew, Franz Berwald, born July 23, 1796, was director of the Conservatorium in Stockholm, where he died April 30, 1868. He wrote symphonies and chamber-music, as well as an opera, 'Estrella de Soria,' performed at Stockholm, 1862.] F. G.

BESEKIRSKY, Vasil Vasilievich, born in 1836 at Moscow, a pupil of Léonard, is one of the best-known violinists of pure Russian blood. Has formed some excellent pupils, among them Gregorowitsch. W. W. C.

BESLER, Samuel, born at Brieg in Silesia,

Dec. 15, 1574; was in 1605 rector of the Gymnasium 'zum heiligen Geist' at Breslau, and died there, during an epidemic, July 19, 1625. The library of St. Bernhardinus at Breslau, where he was cantor from 1602, contains a vast collection of his compositions for the church, in which he was very prolific (see list in the *Quellen-Lexikon*). Amongst them is a Passion according to St. John, printed by Baumann at Breslau, 1621. F. G.

BESOZZI, an Italian family of distinguished wind-instrument players. (1) ALESSANDRO, a very remarkable oboist; born at Parma in 1700, and died in the service of the King of Sardinia, at Turin, 1775. He published numerous sets of sonatas for violin, flute (as well as a few in which oboe is employed). (2) His brother, ANTONIO, also a celebrated oboist; born at Parma 1707, and afterwards resided at Dresden. On the death of Alessandro he took his post at Turin, and died there in 1781. (3) Antonio's son CARLO, born at Dresden about 1738, was also a renowned oboist. It is he, according to Fétis, whom Burney heard at Dresden (where he was in the court band from 1755 to 1792) and of whom (*Present State*, Germany, ii. 27, 45) he gives so detailed and favourable an account, comparing him with Fischer. (4) A third brother, HIERONIMO, a famous bassoon player, born at Parma 1713, was the special associate of Alessandro. Burney's account of the two brothers, and his criticism and their remarkable duet performances, will always be read with interest (*Present State*, France and Italy, 69). He died at Turin shortly after the death of Antonio. (5) GAETANO, the youngest of the four brothers, born at Parma 1727, also an oboist, first at the Neapolitan and then at the French court, and lastly in London in 1793, where, notwithstanding his age, he was much admired for the certainty of his playing and its exquisite finish. (6) His son, HIERONIMO, played the same instrument as his father; Burney (*Present State*, France and Italy, 24) heard him at the Concert Spirituel at Paris in 1770. He died in Paris as early as 1785, leaving, however, (7) a son HENRI, who was flautist at the Opéra Comique. (8) His son, LOUIS DÉSIRÉ, born at Versailles April 3, 1814, carried off many prizes of the Conservatoire, and in 1837 the Grand Prix de Rome. He died Nov. 11, 1879. F. G.

BESSEL, VASSILY VASSILIEVICH, founder of the music-publishing house on the Nevsky Prospect, was born in St. Petersburg, 1843. He was a fellow-student of Tchaikovsky's at the Conservatoire, and was afterwards engaged as second violin in the ballet-orchestra of the Opera. In 1869 he set up in business, but did not begin to publish until 1871. From 1872 to 1877 he brought out the weekly *Musical Leaflet*, and from 1885 to 1889 the Russian *Musical Review*. He has also written his reminiscences of Tchaikovsky. The firm of Bessel & Co. have published many important works by contemporary Russian composers, including the music dramas of Moussorgsky. R. N.

BESSEMS, ANTOINE, violinist, born April 6, 1809, at Antwerp; in his sixteenth year composed motets and church music, and in 1826 was a scholar of Baillot's at the Conservatoire, Paris; in 1829 one of the first violins at the Théâtre Italien. After this he travelled, returned to Antwerp in 1852 for a time, and after settling in Paris as a teacher, died at Antwerp, Oct. 19, 1868. He composed much for the voice (both solo and chorus) and for the violin. F. G.

BESSON, GUSTAVE AUGUSTE, a celebrated manufacturer of musical instruments, born in Paris, 1820, died 1875. His father was a colonel in the French army, and but for his love of music and for mechanics, there is no doubt young Besson would have adopted the same profession. In 1838, when scarcely eighteen years of age, he produced a new model cornet, which met with the greatest success, and is to this day known as the 'Besson Model.' It was recognised at the time as a decided improvement on all previous instruments of the same kind. In 1841 he invented an entirely new system of rotary action, with six valves, the right hand being applied to the top valves, the left to those at the bottom. But he was not satisfied with this advance, as, owing to its internal proportions, it did not allow of a full bore when the valves were down. In 1854 he elaborated an improved system of full bore, by means of which the notes of the first and third valves separately, and those of the first and third together, were perfectly in tune—a result which had never before been obtained. The year following he was successful in turning out an instrument with a full bore, the valve and open notes being in all respects perfect. In 1858 were manufactured a series of instruments known to the profession as the 'Besson Girardin,' the feature of which was that the player was enabled to change from one key to another, without changing mouthpiece, slide, or crook. In the same year he introduced the circular system. By this method of manufacture the tubing was coiled in a circle round the pistons, the result being that, by doing away with all angles, the instruments obtained a greater volume of tone. This system was found to be remarkably effective with trombones and French horns. His invention of 1859 consisted of instruments having eight independent positions, and giving the entire scale, a note to each valve. But the best and most successful of his inventions is what is known as the 'Prototype System,' which consists

1st valve.

3rd valve.

1st and 3rd valves.

in having conical steel mandrils of exact mathematical proportions representing the different parts of the instrument. By this means an unbroken column of air is assured, and the player is enabled to obtain the utmost volume of tone, so that by the inert mechanism of the valves perfect tune is secured throughout the whole register. There is this further advantage in the Prototype System; it dispenses with anything like guesswork in the manufacture of musical instruments, and by its aid any number of instruments exactly alike in every respect and in perfect tune can be turned out. These important inventions, together with others of minor importance, yet in their way useful and deservedly appreciated by acousticians, have placed Besson in the foremost rank of wind-instrument makers. J. SD.

Mention is also to be made of the 'clarinette-pédale,' a double-bass clarinet with a compass descending to the D below the lowest note of the double-basses, and with an apparatus for lowering it still further by the interval of a fourth; and of the 'cor-tuba' and the whole family of cornophones intended to reinforce the horns of the orchestra and to supersede the 'alto,' the 'baryton,' and instruments of that class. G. F.

BEST, WILLIAM THOMAS, was born at Carlisle (where his father was a solicitor), August 13, 1826. He received his first instruction in music from John Norman, deputy organist of Carlisle Cathedral. He intended to follow the profession of a civil engineer and architect, but that pursuit proving distasteful he (when in Liverpool in 1840) determined to renew his musical studies, and devoted his attention to organ and pianoforte playing. The study of the organ was at that time greatly hindered by its defective construction, the unsuitable pedal compass, and the mode of tuning then in vogue, which rendered the performance of the works of the great organ composers almost an impossibility, whilst the number of professors practically acquainted with the works of Bach was then extremely small. Having determined on a rigid course of self-study, and fortunately obtaining the use of an organ of ameliorated construction, Best spent many years in perfecting himself in the art of organ-playing in all its branches. His first organ appointment was at Pembroke Road Chapel, Liverpool, in 1840; in 1847 he became organist of the church for the blind in that town, and in the following year organist to the Liverpool Philharmonic Society. In 1854 he came to London as organist of the Panopticon of Science and Art in Leicester Square, and was appointed organist of the church of St. Martin-in-the-Fields, and for a few months in 1855 of Lincoln's Inn Chapel. He returned to Liverpool in 1855 on receiving the appointment of organist to St. George's Hall [at a salary of £300 a year, afterwards increased to £400. In 1859 he occasionally played organ solos at the Monday Popular Concerts]. In 1860 he became organist of the parish church of Wallasey, Birkenhead, and in 1863 organist of Holy Trinity Church near Liverpool. In 1871 he opened the organ of the Albert Hall and in the same year began his connection with the Handel Festivals, at which he played organ concertos until 1891 inclusive. In 1868 he was appointed organist of the Musical Society of Liverpool, and in 1872 was reappointed organist to the Liverpool Philharmonic Society. [In 1880 he was granted a Civil-List pension of £100 a year; in 1890 he went to Australia to give recitals in the Town Hall, Sydney; in 1894 he retired with a pension from his Liverpool appointment, and died at Liverpool, May 10, 1897.] Best composed several church services, anthems, and hymns, many fugues, sonatas, and other pieces for the organ; ten pianoforte pieces, two overtures, and a march for orchestra. He was also the author of *The Modern School for the Organ*, 1853, all the examples and studies in which are original, and *The Art of Organ Playing* (begun 1869). Best's arrangements for the organ and editions of the organ classics are exceedingly numerous. W. H. H.

BETZ, FRANZ, born March 19, 1835, at Mayence, was educated at the Polytechnic, Carlsruhe, made his début on the stage in 1856 at Hanover, afterwards sang in smaller towns, and in May 1859 played at Berlin as Don Carlos in 'Ernani,' with such success that he was promptly engaged, and was a member of the royal opera company until his retirement in 1897. Among his best parts were Don Juan, Orestes, William Tell, Lysiart, Hans Heiling, and the baritone parts of Wagner. At the production of 'Die Meistersinger' at Munich, June 21, 1868, he sang the part of Hans Sachs, and in 1876 he sang the part of Wotan at Bayreuth. He sang the part of Falstaff on the production of Verdi's opera in Berlin. He also, on leave of absence, played at Vienna and other cities of Germany and Austria. In 1882 he visited England, and sang with great success at the Crystal Palace, May 6 and 27, and at the Richter concert of May 8. He died at Berlin, August 11, 1900. A. C.

BEVIN, ELWAY, an eminent theoretical and practical musician, the date of whose birth is unknown. He was of Welsh extraction, and received his musical education under Tallis. According to Wood (*Fasti. Oxon.* (Bliss), ii. 265), he was organist of Bristol Cathedral in 1589. Hawkins says it was upon Tallis's recommendation that he was admitted a gentleman extraordinary of the Chapel Royal, June 3, 1589. But this is an error—he was not admitted until June 3, 1605, at which period Tallis had been dead just upon twenty years. It has been stated that in 1637, on the discovery that Bevin was of the Romish persuasion, he was expelled the chapel, but no evidence of the

expulsion can be found. About the same time he ceased to be organist at Bristol. Wood, who states this,[1] refers to the chapter books of Bristol as his authority. Bevin's Service in D minor is printed in Barnard's 'Selected Church Musick,' and in Boyce's 'Cathedral Music,' and several anthems of his are extant in MS. [An 'In Nomine' is in the Music School collection at Oxford, and at Christ Church there are, in a set of part-books, two parts of a 'Browninge, 3 parts,' whatever this name may imply. A song in twenty parts, 'Hark, jolly shepherds,' is among the MSS. in the British Museum, which contains his compositions (Harl., 7339 ; Add., 11,587, 29,289, 29,430, 29,996, 31,403), *Dict. of Nat. Biog.*] But the work by which he is best known is his *Brief and Short Introduction to the Art of Musicke*, London, 1631, 4to. This treatise is dedicated to Dr. Goodman, Bishop of Gloucester, to whom the author says he is 'bound for many favours.' What became of Bevin after his expulsion from his situations we have not ascertained (*Cheque Book of Chapel Royal*, Camd. Soc.). E. F. R.

BEVINGTON & SONS are organ-builders in London. Henry Bevington, the founder of the house about the beginning of the 19th century, had been an apprentice to Ohrmann & Nutt, who were the successors of Snetzler. The business is now carried on by Henry and Martin Bevington, sons of the founder, in Rose Street, Soho, in the same premises as were occupied by Ohrmann. The organ of St. Martin's in the Fields and of the Foundling Hospital in London, and that of St. Patrick's Cathedral, Dublin, were built by this firm. V. DE P.

BEXFIELD, WILLIAM RICHARD, Mus.Doc., was born at Norwich, April 27, 1824, and became a chorister of the cathedral under Dr. Buck. After leaving the choir he applied himself to the study of music, in which, although almost self-taught, he attained to considerable skill. He obtained the situation of organist at Boston, Lincolnshire, and in 1846 graduated as Bachelor of Music at Oxford. He lectured on music, and on the death of Dr. Crotch in 1847 became a candidate, but without success, for the professorship of music at Oxford. In February 1848 he left Boston for London on being appointed organist of St. Helen's, Bishopsgate Street. He proceeded Doctor of Music at Cambridge in 1849.

On Sept. 22, 1852, his oratorio, 'Israel Restored,' which had been produced by the Norwich Choral Society in October 1851, was performed at the Norwich Musical Festival. Dr. Bexfield died in London, Oct. 28, 1853, at the early age of twenty-nine, and was buried in Paddington Churchyard. A set of organ fugues and a collection of anthems by him were published in 1849, besides his Oratorio. W. H. H.

[[1] The authority, 'Ashmole MS. 8568, 106,' quoted in the original edition of this article is an incorrect reference, so that trace of the statement cannot now be found.]

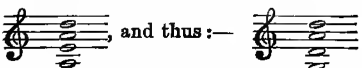
BEYER, FERDINAND, born 1803 at Querfurt. A fair pianist and tolerable musician, whose reputation rests upon an enormous number of easy arrangements, transcriptions, potpourris, fantasias, divertissements, and the like, such as second-rate dilettanti and music-masters at ladies' schools are pleased to call amusing and instructive. Like publishers of books, music publishers too keep their 'hacks,' and in such capacity Beyer was for many years attached to the firm of Schott & Co. at Mayence, where he died on May 14, 1863. E. D.

BIANCA, OR THE BRAVO'S BRIDE, a 'grand legendary opera' in 4 acts ; words by Palgrave Simpson ; music by Balfe. Produced at Covent Garden, Thursday, Dec. 6, 1860.

BIANCHI, FRANCESCO, born at Cremona about 1752. In 1775 he was appointed maestro al cembalo to the Italian Opera in Paris under Piccinni, and there composed his first operas, 'La Réduction de Paris' and 'Le mort marié.' In 1780 he produced 'Castore e Polluce' at Florence, with the English Storace as the prima donna. This successful opera was rapidly followed by many others (see list in *Quellen-Lexikon*). In 1783 he was made vice-conductor at S. Ambrogio in Milan, and held an important post at the Scala. From 1785 to 1791 he was second organist at St. Mark's in Venice, in which city his 'Disertore Francese' was given. The hero (Pacchierotti) appeared in the uniform of a French soldier, which so scandalised the classic Venetians that they hissed the opera off the stage. Fortunately, however, the Duchess of Courland passing through Venice expressed a desire to hear it, and courtesy having compelled the audience to keep silence, the music so enchanted them that the objectionable costume was forgotten, and the opera obtained an exceptional success. Joseph II. offered to take Bianchi into his service, but died (1790) before the latter could reach Vienna. In 1793 Bianchi came to London, having been offered an engagement at the King's Theatre on account of the success of his 'Semiramide,' in which the famous Banti was prima donna. This engagement lasted for seven years. In the intervals of the London season he made short tours abroad, and in one of these composed his 'Inez de Castro' at Naples (1794) for Mrs. Billington's first appearance on the Italian stage. Haydn's diary contains a favourable account of Bianchi's 'Acige e Galatea,' which he heard in London in 1794, but he considered the accompaniments too powerful for the voices. Haydn is also said to have kept one page in Bianchi's compositions turned down for reference when anything had ruffled his temper. 'Antigone' was given at the King's Theatre, May 24, 1796, 'Merope' in 1799, and 'Alzira' Feb. 28, 1801. In 1800 he married Miss Jackson, a singer, best known as Mrs. Bianchi Lacy—her name by her second marriage. From this time he was chiefly occupied in teach-

ing till his death, by his own hand, at his house in Hammersmith [on Nov. 27, 1810. (See the *Morning Chronicle* of Nov. 29, and other papers of the same time, as well as the *Gentleman's Magazine* for Dec. 1810.) The date of these publications makes it impossible to accept the statements in Riemann's *Lexikon* and the *Quellen-Lexikon*, that Bianchi died at Bologna on Sept. 24, 1811]. Bianchi composed about twenty operas and oratorios, besides instrumental music. He was also the author of a work on the theory of music, portions of which are printed in the *Musical Quarterly Review* (ii. 22). Enough has been said to show the estimation of Bianchi by his contemporaries. His chief value to us resides in the fact that he was the master of Sir Henry Bishop. Bianchi has been sometimes confounded with Bertoni, perhaps because of the connection of both with Pacchierotti. M. C. C.

BIBER, Heinrich Johann Franz von, a celebrated German violin-player and composer, born at Wartenberg in Bohemia, August 12, 1644, and died May 3, 1704, at Salzburg, where he occupied the double post of high steward and conductor of music at the court of the Prince-Archbishop. His reputation as a performer and composer was very great, and the Emperor Leopold was so delighted with him that he not only presented him with a gold chain and a considerable sum of money, but also ennobled him by the prefix 'von' in 1681. We, who have to form our estimate of Biber's merits and of his place in the history of violin-playing from those of his compositions which have come down to us, may well contend that his is the first German violin music of any artistic worth at all. At that period the art of violin-playing and the style of composing for the instrument in Germany were entirely under the influence of Italy. Unfortunately the earliest German violinists appear to be more connected with Farina and his school than with Vitali, Torelli, and Veracini. Thus we find that the works of J. J. Walther (see that name), a contemporary of Biber, who enjoyed a great reputation in Germany, chiefly consist, like those of Farina, of unconnected phrases, equally void of musical ideas and form, apparently invented to show off the performer's skill in execution, and often only devoted to crude and childish imitation of natural sounds. Although Biber cannot be pronounced free from the faults of his German contemporaries—since his forms are often vague and his ideas somewhat aphoristic—still his sonatas contain some pieces which not only exhibit a well-defined form, but also contain fine and deeply-felt ideas, and a style which, though nearly related to that of the best Italians of his time, has something characteristically German in its grave and pathetic severity. Altogether Biber represents an immense progress in the art of violin-playing in Germany. That his powers of execution were very considerable we must conclude from his mode of writing for the violin, which presupposes great proficiency in the playing of double stops as well as dexterity in bowing. It is also worth notice that he appears to have been the first occasionally to modify the usual way of tuning the instrument (see Scordatura). In two of his sonatas the violin must be tuned thus:—



The following compositions of his have been published: (1) 'Sonatæ tam aris quam aulis servientes,' Salzburg, 1676. (2) Six sonatas for violin with figured bass; Salzburg, 1681. (The sixth of these was edited by F. David in his 'Hohe Schule des Violinspiels.') (3) 'Fidicinium sacro-profanum,' a set of twelve sonatas in four and five parts; Nürnberg, no date. (4) 'Harmonia artificiosa-ariosa,' a collection of seven partitas or suites for three instruments; Nürnberg, no date. (5) 'Vesperæ longiores ac breviores' for 4 voices, 3 violins, 2 violas, and 3 trombones ad libitum; Salzburg, 1693. (6) 'Trattenimento musicale,' Salzburg, 1699. There is also a 'Dramma Musicale,' 'Chi la dura la vince,' of his in MS., and much church music at Salzburg. An engraved portrait of him at the age of thirty-six is extant. P. D.

BIBL, Andreas, born at Vienna, April 8, 1797; and from 1818 organist at S. Stephen's. He came to the cathedral in Albrechtsberger's time as a singing boy, and learned organ-playing and composition from Josef Preindl. His style of playing was noble, and his compositions are clear and thoroughly church-like in character. He published preludes and fugues for the organ (Diabelli and Haslinger), and died in 1878. His son Rudolph, born Jan. 6, 1832, studied under Sechter, and became organist at the cathedral 1859, at the imperial chapel 1863 [and Hof-capellmeister in 1897]. His playing was that of a sound musician, and his compositions for organ, church, and chamber, many of them still in MS., show that he has succeeded in adapting himself to modern ideas. C. F. P.

BICINIUM (Lat. *bis* and *canere*), described by Walther as 'a two-part song,' is an obsolete name formerly used in Germany for any short two-part composition. In the preface to Rhau's *Secundus Tomus Biciniorum* (1545), he uses as an equivalent the Greek *δίφωνα*: 'Nec video quomodo Tyrones cauendo melius exerceri possint, quam si hæc *δίφωνα* illis proponantur, Sunt præterea ad omnia instrumenta valde accommoda.' The title-page of Lindner's *Bicinia Sacra* (1591) is in both Latin and German, the latter translating 'Bicinia' by 'Zweystimmige Gesänglein,' though the above extract from Rhau's preface proves sufficiently that the term was not confined to vocal music only. 'Tricinium,' which is more rarely found, is an obsolete

term for a short three-part composition. The following are the chief collections of Bicinia and Tricinia mentioned by Eitner and other editors :—

Tricinia . . . Latina, Germanica, Brabantica, et Gallica . . G. Rhaw. Wittemberg, 1542.

Bicinia, Gallica, Latina, Germanica . . . Tomus Primus. G. Rhaw. Wittemberg, 1545.

Secundus Tomus Biciniorum . . . G. Rhaw. Wittemberg, 1545.[1]

Diphona Amœna et florida . . . J. Montanus et A. Neuber. Nürnberg, 1549.

Selectissimorum Triciniorum [Bassus etc.] Discantus . . . J. Montanus et A. Neuber. Nürnberg, 1559.

Variarum Linguarum Tricinia . . . Tenor[2] [Discantus] Tomi Secundi. J. Montanus et A. Neuber. Nürnberg, 1560 (1559?).[1]

Bicinia . . . P. Phalesius et J. Bellerus, Antwerp, 1590. (A later edition appeared in 1609.)

Bicinia Sacra, ex variis autoribus . . . edita etc. C. Gerlach. Nürnberg, 1591.[1]

W. B. S.

BICKHAM, George (junior). An engraver, principally famous for his two illustrated folio volumes, *The Musical Entertainer*, which was issued in parts (each containing four plates), covering a period from 1736 to 1739. The plates, two hundred in number, are songs with music, headed and surrounded with pictorial embellishments illustrative of the song. This work was the first of its type published in England, and led the way to many other similar issues. There are two editions of it, his own, and a rather later one bearing the imprint of Charles Corbett.

F. K.

BIEREY, Gottlob Benedict, born at Dresden, July 25, 1772, and instructed in music by Weinlig. His opera 'Wladimir' was produced at Vienna in 1807 with much applause. This success procured him the post of capellmeister in Breslau, vacated by C. M. von Weber, and in 1824 the direction of the theatre itself. He retired in 1828, and on May 5, 1840, he died of a chest complaint at his country house near Breslau. Comic opera, or rather the 'Singspiel,' was the sphere in which he mostly distinguished himself. Forty of his operas, great and small, are extant, and of these the following are printed with pianoforte arrangement :—'Das Blumenmädchen' (1802); 'Wladimir' (1807); 'Der Betrogene Betrüger'; 'Die Schweizer Schäferin'; 'Der Zufall,' 'Elias Ripsraps' (Breslau, 1810, much success); 'Die Pantoffeln' (Vienna, 1810); 'Der Zank.' F. G.

BIGOT,[3] Marie (*née* Kiene), born at Colmar, Alsace, March 3, 1786; in 1804 married Mr. Bigot, librarian to Count Rasoumowsky, and accompanied him to Vienna. Here she made the acquaintance of Haydn, Salieri, and Beethoven. The first time she played to Haydn (then seventy-two or seventy-three) the old man was so delighted as to embrace her, and to say 'My dear child, that music is not mine; it is yours!' and on the book from which she had been playing he wrote 'Feb. 20, 1805: this day has Joseph Haydn been happy.' Beethoven also, after she had played to him a sonata of his own, is reported to have said, 'That is not exactly the reading I should have given; but go on, if it is not quite myself, it is something better.' These anecdotes are given by Fétis, who may be presumed to have heard them from Madame Bigot herself. On May 1, 1805, she played at the opening concert of the Augarten, and the report of the *Allg. musik. Zeitung* characterises her playing as pleasing and often delicate and refined—a verdict which hardly bears out the expressions attributed to Haydn and Beethoven. A letter of Beethoven's, however, first published by Otto Jahn and reprinted by Thayer (*Beethoven*, ii. 337), puts his relations to her family beyond doubt; and there is no reason to disbelieve the picturesque anecdote related by Nohl (*Beethoven*, ii. 246) of her having played the 'Sonata appassionata' at sight from the autograph.

In 1809 the Bigots went to Paris. Here she became intimate with Baillot, Lamarre, Cherubini, and many other prominent musicians. She played the music of Beethoven and Mozart with the two former both in public and private, and was highly valued by Cramer, Dussek, and Clementi. The war of 1812, however, put a rude stop to this happiness; Bigot was taken prisoner at Milan, lost his post at Count Rasoumowsky's, and his wife was thrown on her own resources. She accordingly began to give lessons, but the exertion interfered with her health. She died at Paris Sept. 16, 1820. Before her death, however, she gave lessons to Felix Mendelssohn during a short visit to Paris in 1816 (his 7th year). He refers to her in a letter of Dec. 20, 1831, and the warmth of his attachment to her family may be seen from another letter of Feb. 24, 1838, to Madame Kiene (*Goethe and Mendelssohn*, 2nd ed. p. 136), which shows that Mr. Bigot was still alive, and that the relations between Madame Bigot's family and the great French musicians were still maintained. F. G.

BILHON, Jean de, a French composer, contemporary with Josquin des Prés. Some of his masses, founded, as usual at the time, upon the themes of old French chansons, are preserved in the Pontifical Chapel, where (according to Fétis) he was a singer. This is denied by Haberl. Other compositions of his are to be found in various collections of church music published between the years 1534 and 1544 at Paris and Leyden. J. R. S. B.

BILLINGTON, Mrs. Elizabeth, was the daughter of Carl Weichsel, a native of Freiberg in Saxony, and principal oboist at the King's Theatre. Her mother was for several years a favourite singer at Vauxhall Gardens and elsewhere. The date of Mrs. Billington's birth is variously stated, but it was most probably 1768. She and her brother Carl were from the earliest possible moment trained to music, and on March 10, 1774, performed on the pianoforte and violin at their mother's benefit concert at the Haymarket Theatre. Such was Miss Weichsel's progress that before she had completed her eleventh year two sets of pianoforte sonatas

[1] A copy is in the British Museum.

[2] The bass has a different title.

[3] According to the *Allg. musik. Zeitung*, Bigot de Morognes.

from her pen had been given to the world. At fourteen years old she appeared as a singer at Oxford, and on Oct. 13, 1783, became the wife of James Billington, a double-bass player. Immediately after their marriage they went to Dublin, where Mrs. Billington commenced her career as a stage singer in the opera of 'Orpheus and Eurydice.' On her return to London she obtained a trial engagement of twelve nights at Covent Garden, where she appeared, Feb. 13, 1786, as Rosetta in 'Love in a Village.' Her success was such that the managers immediately engaged her for the remainder of the season at a large salary. She speedily attained a position at the Concert of Ancient Music, where she disputed with Mara for supremacy. With the exception of a visit to Paris at the end of her first season, where she went to study with Sacchini, Mrs. Billington remained in England until 1794, when she went with her husband and brother to Italy. Their intention was to travel solely for amusement, but at Naples Sir William Hamilton, the English ambassador, induced Mrs. Billington and her brother to perform in private before the king, who immediately prevailed on Mrs. Billington to sing in public at the San Carlo Theatre. Accordingly in May 1794, she made her appearance there in Francesco Bianchi's opera, 'Inez di Castro,' written expressly for her. Her success was complete, but her triumph was suddenly interrupted by the melancholy death of her husband, who, as they were about to set out for the theatre for her second performance, was stricken by apoplexy, and almost immediately expired. An eruption of Mount Vesuvius occurring about the same time was by the superstitious Neapolitans attributed to permission having been given to a heretic to perform at the San Carlo, and fears were entertained for Mrs. Billington's safety. However, on renewing her performances she experienced the most favourable reception, and sang successively in operas composed for her by Paisiello, Paer, and Himmel. In 1796 she went to Venice, where, being attacked by illness, she performed only once. She and her brother next visited Rome, and all the principal places in Italy. In 1799 she married a M. Felissent, from whom, however, she soon separated. In 1801 she returned to England, and the managers of Drury Lane and Covent Garden competing for her services it was arranged that she should perform at each house alternately, and she accordingly appeared at Covent Garden Theatre on Oct. 3, 1801, as Mandane in Arne's 'Artaxerxes,' still retaining the name of Billington. From this time her services were in constant request at the Italian Opera, the theatres, the Concert of Ancient Music, the Vocal Concerts, the provincial festivals, etc., until 1811, when she retired from public life. During this part of her career two memorable events took place, viz. her singing with Banti in Nasolini's opera 'Merope,' and her performance in a duet with Mara on the latter's last appearance. Once afterwards Mrs. Billington quitted her retirement to perform at a concert given in Whitehall Chapel on June 28, 1814, in aid of the sufferers by the war in Germany. In 1817 she was reconciled to her husband, and quitted England with him for her estate of St. Artien near Venice, where she died after a week's illness August 25, 1818. Mrs. Billington's compass was extensive (three octaves from *a* to *a'''*), the upper notes being exquisitely beautiful. She excelled in passages of execution, but her powers of expression were limited. Sir Joshua Reynolds painted a fine portrait of her as St. Cecilia, and a miniature by Cosway is in the Victoria and Albert Museum, South Kensington. W. H. H.

BILLINGTON, THOMAS (born at Exeter about 1754, brother-in-law of Elizabeth Billington), was a harpist, pianist, and composer. He published a church service for three voices 1784; Pope's 'Elegy to the Memory of an Unfortunate Lady'; Pope's 'Eloisa to Abelard' (partly compiled); twenty-four ballads to Shenstone's Pastorals; Prior's 'Garland'; Petrarch's 'Laura'; and 'Laura's Wedding-day'; Pope's 'Messiah,' op. 13, 'Celadon and Amelia,' from Thomson's *Seasons*, Gray's 'Elegy,' op. 8; and many canzonets and harpsichord sonatas. He died at Tunis, 1832. W. H. H.

BINCHOIS, EGIDIUS, or GILLES DE BINCH, one of the most famous musicians of the first half of the 15th century, was a native of Binche, near Mons. He began life as a soldier, but soon left the army for the Church, and became a chaplain to Philip, Duke of Burgundy, probably before 1425. In 1438 he was appointed to a canonry in the Church of St. Waldetrude at Mons, and his name appears with that of Dufay in the list of non-resident canons who were summoned from Brussels to Mons in 1449. In 1452 he had risen to the position of second chaplain at the Court of Burgundy, and he remained in the service of the Duke till his death, which occurred at Lille in the autumn of 1460.

He was regarded as one of the first composers of his day, and his name is coupled with those of Dunstable and Dufay by theoretical writers of the 15th century: see Tinctor, Prologue to the *Liber de Arte Contrapuncti*, in Coussemaker's Scriptores, iv. 77, and Franchinus, *Musica utriusque cantus practica*, iii. 4.

His reputation seems to have been greatest as a writer of secular songs. This may be inferred from the opening lines of an elegy on his death preserved in a manuscript at Dijon:—

> Mort, tu as navré de ton dart
> *Le père de joyeuseté*
> En déployant ton étendart
> Sur Binchois, patron de bonté.

As many as twenty-seven of these songs are included in MS. Canonici. Misc. 213 in the

Bodleian Library. They are all in three parts to French words. Seven of them are transcribed in Stainer's *Dufay and his Contemporaries*, but to modern ears they are by no means equal to similar compositions by Dunstable and Dufay, though they have occasional expressive touches. Six other French songs of his were printed in 1892 by Dr. Riemann from Cod. Mus. 3192 in the Library at Munich. Another song, 'Ce mois de may,' ascribed to Binchois in a Paris MS., and printed under his name by Kiesewetter in the Appendix to his *History of Music*, appears under the name of Dufay in the Canonici MS. Unlike Dunstable and Dufay, Binchois appears never to have set Italian words,[1] and there is no evidence that he was ever in Italy. Of his sacred compositions the largest collection is in the Trent manuscripts now in course of publication by Dr. Adler. A Gloria and Credo from one of his Masses seem to have been very widely appreciated. They are the only sacred compositions by Binchois included in the Canonici MS., where they occupy the first place in the book, and they are found in the Trent Codex 92, in Cod. Mus. 37 of the Liceo Musicale of Bologna and in MSS. 6 and 7 (formerly 11) of the Library of Cambrai. Fétis found a complete Mass by Binchois with a Kyrie *farci* in the Royal Library at Brussels, but his promise of early publication was never fulfilled.

All the extant compositions by Binchois are in three parts, with the exception of a Gloria and Credo in the Trent Codex 87 which has a 'pars concordans' or optional fourth part.

J. F. R. S.

BIND (Ger. *Bindebogen*; Fr. *Liaison*; Ital. *Legatura*). A curved line (also called *tie*) placed between two notes of the same degree, to denote the continuance of the sound during the value of both, instead of the repercussion of the second note. The employment of the bind is a necessity whenever a sound is required to be of a duration which cannot be expressed by any single note, as for example five or seven quavers (Ex. 1), and it is also convenient, and in modern music invariably adopted, when the duration of a note extends beyond the limits of the bar (Ex. 2). This is, however, an improvement of comparatively recent date, such passages having been formerly written in the inconvenient form shown in Ex. 3. [This use of the dot was occasionally revived by Brahms to the bewilderment of inexperienced performers. See his sonata in G, op. 78, first movement, bar 13, violin part.]

[1] Some Italian songs in MS. 2216 of the University Library of Bologna have been erroneously attributed to Binchois owing to their immediately following a Magnificat which bears his name.

It is difficult to ascertain with anything like certainty the precise date of the invention of the bind, but it appears probable that it had its origin in the endeavours which were continually made by the earlier composers (before the 15th century) to give rhythmic variety to their counterpoint. Morley (*Practical Music*, 1597) describes two kinds of counterpoint, which he calls 'long and short' and 'short and long,' in each of which a single note alternates with two notes bound together, the sign of the bind being formed thus ⁀, as in Ex. 4; and the fourth of the five orders of counterpoint established by Fux (1725), and adopted by all his successors, consists of syncopation—that is, of a non-accented note bound to the accented note of the next bar (Ex. 5).

4. *Short and Long.*

Long and Short.

5.

A curved line similar to the bind, but placed between two notes of different names, denotes the slur or *legato*, and the possibility of confusion resulting from this resemblance induced Sterndale Bennett to introduce a new sign for the bind, consisting of a rectilinear bracket, thus ⌐¬; he appears, however, to have thought the innovation not worth preserving, as he only employed it for a time in his op. 33 to 37, recurring afterwards to the usual curved line.

F. T.

BINI, Pasqualino, violinist. Born at Pesaro about 1720. He was a favourite pupil of Tartini, to whom he was recommended at the age of fifteen by Cardinal Olivieri. Under Tartini he practised with such diligence that in three or four years' time he overcame the chief difficulties of his master's music, and played it with greater force than the composer himself. On returning to Rome, under the protection of Cardinal Olivieri, he astonished the violinists by his performance, especially Montanari, the chief violin-player of the time at Rome, who was generally believed to have died of mortification at the superiority of Bini's talents. Hearing that Tartini had changed his style of playing, he returned to

Padua and placed himself for another year under his old master, at the end of which time he is said to have played with wonderful certainty and expression. After his return to Rome Tartini recommended Mr. Wiseman, his English friend, to Bini in the following words, which speak as highly for master as for scholar :—'Io lo mando a un mio scolare che suona più di me, e me ne glorio per essere un angelo di costume e religioso' —'I recommend him to a scholar who plays better than myself, and I am proud of it, as he is an angel in religion and morals.' [He was leader of the court band at Stuttgart in 1754 ; a violin sonata by him is in the Royal Library of Berlin, and a concerto in the collection of the Gesellschaft der Musikfreunde at Vienna.] E. H. D.

BIONI, ANTONIO, born in Venice about 1698, a dramatic composer, pupil of Giovanni Porta, produced his first opera, 'Climène,' in 1721, his next, 'Udine,' 1722, and during the next nine years twenty-four more, of which 'Endimione' (1727) had the highest reputation. In 1726 he was conductor, and in 1730 director, of the Italian theatre at Breslau, in 1731 the Elector of Mayence appointed him his chamber-composer, and in 1733 he probably returned to Italy. He conducted the performance of his 'Girita' at Vienna in 1738 [and signed a dedication of a serenata for five voices from Vienna in 1739. A mass for four voices is at Dresden, an opera, 'Issipile,' and the serenata above mentioned at Vienna, and smaller works at Schwerin and Berlin (*Quellen-Lexikon*).] M. C. C.

BIRCH, CHARLOTTE ANN, soprano singer, born about 1815, was musically educated at the Royal Academy of Music from 1831 to 1834, and by Sir George Smart. She appeared in public about 1834, confining herself at first to minor concerts. In 1836 she was engaged by the Sacred Harmonic Society, and soon took a good position as a concert singer. In 1838 she made her first appearance at the Three Choirs Festivals at Gloucester, and sang subsequently at Hereford in 1840 and 1846, at Gloucester in 1841, and at Worcester in 1842, and was engaged at the Birmingham Festival of 1840. In 1844 she visited Germany, and sang at Leipzig and other places. She returned to England in 1845, but quitted it again at the end of the season for Italy, where she essayed operatic singing. She reappeared in England early in 1846. On Dec. 20, 1847, she appeared on the English stage at Drury Lane in Balfe's 'Maid of Honour,' but did not succeed in establishing herself as an operatic singer. About 1856 increasing deafness compelled her to abandon the public exercise of her profession. Miss Birch possessed a beautiful soprano voice, rich, clear, and mellow, and was a good musician, but her extremely cold and inanimate manner and want of dramatic feeling greatly marred the effect of her singing. She died in London, Jan. 26, 1901. Her younger sister, ELIZA ANN, born about 1830, also a soprano singer and pupil of Sir George Smart, first appeared about 1844, and died March 26, 1857. W. H. H.

BIRCHALL, ROBERT, music-publisher, etc., said to have been apprenticed to Randall, the successor of Walsh, established a musical circulating library about 1784, prior to which [in 1783] he had been associated in business with Beardmore and also with Andrews, successively at 129, 133, and 140 New Bond Street [being alone in the business at the latter addresses]. He managed the celebrated series of Antient Concerts and most of the Benefit Concerts of those days. [One of Birchall's earliest schemes was for a complete re-issue of Handel's works in 80 folio volumes (see proposals for printing these, dated 1783, and Burney's account of the Handel Commemoration, 1785). F. K.] Birchall published many of Beethoven's works, including the original English editions of 'The Battle Symphony,' dedicated to the Prince Regent, in 1816, the Sonata op. 96, the Trio op. 97, an adaptation for the pianoforte of Symphony No. 7—the copyrights of which he purchased from the composer. Beethoven's letters arranging for these, in queer English, and still queerer French, will be found in Nohl's two collections, *Briefe*, and *Neue Briefe*. After amassing a large fortune, Birchall died in 1819, and was succeeded by the firm named Birchall, Lonsdale, & Mills. [Christopher Lonsdale set up a separate business shortly before 1838 at 26 New Bond Street; Richard Mills, a nephew of Birchall, remained at the old address, the house which is now occupied by Messrs. W. E. Hill and Sons, the eminent violin dealers and experts. F. K.] Mr. Samuel Chappell, the founder of the well-known firm at 50 New Bond Street, was originally at Birchall's. The catalogue of the house contains the celebrated collections formed by Latrobe, Mozart's operas, and an immense collection of standard works by the greatest composers and performers of the day. R. E. L.

BIRD, ARTHUR, an American composer and pianist, long resident in Germany; born at Cambridge, Mass., July 23, 1856. In his nineteenth year he went to Berlin to study theory and the pianoforte with Haupt, Loeschhorn, and Rohde. There he remained for two years. Upon his return to America in 1877, he became organist in the Kirk in Halifax, N.S., and also was active in spreading the knowledge of music as a teacher, and by founding the first male chorus in the province. In 1881 he returned to Berlin for further study, pursuing composition and orchestration with Heinrich Urban; he came also into close personal relations with Liszt in the last years of that master's life. In 1886 Mr. Bird gave his first concert in Berlin, where his talent and originality were at once cordially recognised. In that year he returned to America

for a short visit, but ever since he has lived and worked in Berlin, and has entered largely into the musical life of that capital. Most of his compositions, which are numerous and varied in character, have been produced there, and their publication in Germany has given him recognised standing as an American composer whose work has been influenced wholly by German ideals. In 1901 the Paderewski prize, founded in New York by the pianist Ignace Jan Paderewski for the encouragement of American composers, was awarded to Mr. Bird for a serenade for wind instruments. He has composed in addition to this work a symphony in A, and three suites for orchestra; for pianoforte, 'Puppentänze,' four pieces, op. 10; three characteristic marches, op. 11; three waltzes, op. 12; 'Zwei Poesien,' for four hands; introduction and fugue; variations and fugue; three suites; sketches; ballet music; two pieces for violin and pianoforte; a comic opera, 'Daphne,' and a ballet, 'Rübezahl.' R. A.

BIRD, HENRY RICHARD, born Nov. 14, 1842, is the third son of George Bird, organist of Walthamstow Parish Church. He was appointed in Feb. 1851, when little more than eight years old, organist of St. John's Church, Walthamstow, where the incumbent was an ardent musical amateur, and arranged for Henry Bird to study with Turle of Westminster. This eminent organist stopped Bird's organ practice, and turned his attention to piano, harmony, and reading vocal and orchestral scores. In 1859 Bird came to London, and occupied successively the posts of organist at St. Mark's, Pentonville, Holy Trinity, Chelsea, and St. Gabriel's, Pimlico. While in Chelsea he conducted a large choral and orchestral society at the Town Hall, and he accompanied at several good private societies which were popular some years ago, and held that position for many years at the Civil Service Musical Society, when it was conducted by Sullivan and John Foster. In 1872 Bird was appointed organist of St. Mary Abbotts, Kensington, a post he has filled with much distinction ever since. He gave many classical concerts in Kensington, at one of which Mr. Plunket Greene made his first appearance; this led to Bird's engagement as regular accompanist for Mr. Greene, and eventually procured him the appointment of permanent accompanist at the Popular Concerts in 1891, a post which had not been filled by one regular and official accompanist since the days of Benedict. In the recent reorganisation of the scheme, following the abandonment of the Monday concerts, various accompanists have been engaged. Since 1896 he has been a member of the teaching staff of the Royal College of Music. It is as an accompanist of rare accomplishment that Bird has gained the distinguished position he holds in the musical world of London; in all schools of music he is equally at home, and he is apparently in complete sympathy with all classes of singers. M.

BIRMINGHAM FESTIVAL. This Triennial Festival, which is now acknowledged to be the most important 'music meeting' in the provinces, was commenced in 1768 with a series of performances in St. Philip's Church and in the theatre in King Street, in aid of the funds of the General Hospital. The first programme was exclusively Handelian, with a band of twenty-five and a chorus of forty, conducted by Mr. Capel Bond of Coventry, but since 1802 the programmes have been drawn from all sources. In 1778 a second festival was held, and in 1784 Lord Dudley and Ward was the president of the third festival, at which, for the first time, a body of noblemen and gentlemen assisted as stewards. In 1787 and 1790 the band was drawn from the King's Theatre in London, and with the chorus numbered 100 performers. In 1793 no festival was held, owing to the burning of the theatre, but from 1796 to 1829 there was a triennial festival. The next festival was in 1834, the first held in the New Town Hall, where the concerts have since taken place every third year. At the earlier festivals the male singers were members of the Worcester and Lichfield Cathedral choirs, the sopranos being selected from several Lancashire choral societies, famed then as now for the excellence of their voices. The members of a local Gentlemen's Musical Association also assisted in the chorus, which now consists of a large choral society, formed specially for each festival. In 1805 the number of performers was increased to 120, in 1808 to 188, in 1811 to 204, in 1820 to 231, in 1834 (in the Town Hall) to 386, and at the Festival of 1903 the band numbered 125 and the chorus 353. At first the duties of organist and conductor were combined, but in 1832 they were divided. The conductors included Capel Bond (1768), Dr. Crotch (1808), S. Wesley (1811), T. Greatorex (1820), W. Knyvett (1834-43), Mendelssohn and Moscheles (1846), Costa (1849-1882), Richter (1885 to the present time). The band included the most eminent orchestral players of the time. The solo instrumentalists and principal singers include almost every artist of note, many of whom have here made their first appearances.

The scheme of the first festival (1768) included the Dettingen 'Te Deum,' the Utrecht 'Jubilate,' the 'Coronation Anthem,' and the 'Messiah' (sung in the church), and 'L'Allegro' and 'Alexander's Feast' in the theatre. In 1778 an organ concerto was introduced at the church performance. In 1784 Purcell's 'Te Deum' was sung, and a new oratorio, 'Goliath,' by Atterbury, produced. Year by year Handel's music, although still forming the major part of the programmes, was more and more varied by the music of other masters.

Among the most noteworthy events in the

history of the festival may be mentioned: the introduction of Haydn's 'Creation' in the place of one of Handel's oratorios in 1802; the engagement of Mr. Greatorex, organist of Westminster Abbey, in 1805, previous to which year the organists had been local performers; the use of Mozart's accompaniments to the 'Messiah' for the first time in 1808; the withdrawal of the orchestral accompaniment at the church service, and the use of additional wind parts for the 'Messiah,' by Greatorex, in 1820; the introduction of nine trombones in addition to the organ at the church service in 1823; the last performance in church in 1829, the year in which operatic performances in character were introduced, and in which Signor Costa was compelled to appear as a vocalist as a condition of the payment of his expenses by the committee, who refused to allow him to conduct Zingarelli's cantata; the appearance of Mendelssohn as the conductor of 'St. Paul,' and as solo organist in 1837; the production of 'Elijah' in 1846; the appointment of Signor Costa as conductor, and the rearrangement of the plan of the orchestra, in 1849; and the formation of the Birmingham Amateur Harmonic Association, to form the local contingent of the chorus, in 1855. Sir Michael Costa wrote his 'Eli' and 'Naaman' for performance at the festivals of 1855 and 1864. [1882 is remembered as the year of production, for the first time, of Gounod's 'Redemption.' In 1885 Richter inaugurated his direction by producing the 'Messiah' as far as possible in the manner intended by Handel. Important new works were Gounod's 'Mors et Vita,' Stanford's 'Three Holy Children,' Dvořák's 'Spectre's Bride,' and Cowen's 'Sleeping Beauty.' In 1888 Parry's 'Judith' was the most important new work, and interesting revivals took place of Bach's 'Magnificat,' Handel's 'Saul,' and Berlioz's 'Messe des Morts.' In 1891 Stanford's 'Eden' and Dvořák's 'Requiem' were given; in 1894 Parry's 'King Saul,' Goring Thomas's 'Swan and the Skylark,' and Henschel's 'Stabat Mater'; in 1897 Stanford's 'Requiem,' Somervell's 'Ode to the Sea,' and Purcell's 'King Arthur'; and in 1900 Elgar's 'Dream of Gerontius' was the chief novelty, Byrd's five-part mass being revived. Elgar's 'Apostles' was the only new oratorio brought forward in 1903, Liszt's Psalm xiii. being among the quasi-novelties. The receipts at the festivals gradually rose for many years, and the actual profit, which is handed over to the treasurer of the General Hospital, stood at upwards of £7500 in 1873, as compared with £299 in 1768. In 1900 a sum of £6000 was handed to the hospital, but in 1903 the profits were less, owing to increased expenses. Since their foundation, the festivals have yielded a grand total of upwards of £100,000 to the hospital funds. C. M.

BIS (Fr.), that is, 'twice,' a cry more in use abroad than in England, and equivalent to ENCORE. The French even have a verb, *bisser*, to repeat.

When written, as it sometimes is in MS. music, over a phrase or passage, it signifies that the notes are to be repeated; the same thing would be effected by dots of repetition at the beginning and end of the phrase.

BISCHOFF, DR. LUDWIG FRIEDRICH CHRISTIAN, born at Dessau, Nov. 27, 1794. His father was a violoncello-player in the Duke's band, and the boy was early initiated into music, though (like so many musicians) intended for science. In 1812 he entered the university of Berlin, and attended the philological lectures of Boeckh. But the war of freedom put a stop to study; Bischoff volunteered, and was taken prisoner by the French. After the treaty of Paris he resumed his studies and took his degree. He filled various posts in Switzerland, was professor at Berlin, and director of the gymnasium at Wesel from 1823 to 1849. Here he was remarkably active in musical matters, founding societies, assisting performances, and making his house in every sense a home for music. After twenty-five years he took his leave, and settled first in Bonn and then in Cologne. There he founded the *Rheinische Musikzeitung* (1850) and its successor, the *Nieder-Rheinische Musikzeitung* (1853), and edited the latter to the day of his death (Feb. 24, 1867), acting also as reporter to the *Kölnische Zeitung*, and acquiring great influence throughout the Lower Rhine districts. In 1859 he published a translation of Oulibichev's *Beethoven*. The tendency of his papers was dead against that of the *Neue Zeitschrift* of Schumann and Brendel, in regard to Wagner and Liszt. Bischoff's worship for Haydn, Mozart, and Beethoven, with whom he afterwards associated Mendelssohn, was so exclusive as to preclude his appreciating even Schumann, essential as he is in the development of modern music. On the other hand, his influence on music in the Lower Rhine was both good and great. He was the musical centre of the energy and devotion which kept up the festivals of Cologne, Aix-la-Chapelle, and Düsseldorf, and through them acted so beneficially on the whole of Germany. With Bischoff's death his papers came to an end, nor have they been yet replaced. A. M.

BISHOP, ANN, better known as Mme. Anna Bishop, was the daughter of a singing-master named Rivière, and was born in London in 1814. She studied the pianoforte under Moscheles, and in 1824 became a student at the Royal Academy of Music. Here she remained until her marriage with SIR HENRY BISHOP in 1831. In this year she appeared as a singer at the Philharmonic and other concerts. (See ALSAGER.) In 1839 she went on a tour in the provinces with Bochsa the harpist, and shortly after their return to London eloped with him to the continent. Almost all the remainder of her

life was spent in travelling. Before her return to England in 1846 she had been singing for more than two years at the San Carlo in Naples. In 1847 she went to America, and remained there for some years. In 1855, while on a tour in Australia, Bochsa died, and Mme. Bishop returned by way of South America to New York, where she married a certain Schulz. Shortly afterwards she visited England, singing at the Crystal Palace in 1858, and giving a farewell concert on August 17, 1859. Another considerable period was now passed in various parts of America. In 1865 she sailed from California for the Sandwich Islands, and in the following year suffered considerable loss in a wreck between Honolulu and China. India and Australia were next visited, and after a final visit to London she settled down in New York, where she died of apoplexy, March 18, 1884. Her voice was a high soprano of brilliant but unsympathetic quality (*Dict. of Nat. Biog.*). M.

BISHOP, Sir Henry Rowley, was born in London, Nov. 18, 1786, and learned music under Francesco Bianchi. His bias for dramatic composition soon developed itself in a remarkable degree. In 1804 he wrote the music to a little piece entitled 'Angelina,' performed at Margate, and followed it by the music to a ballet, 'Tamerlan et Bajazet,' produced at the King's Theatre in 1806. This led to his writing, in the same year, other pieces, performed at the Opera and Drury Lane Theatre. In 1809 his music to the 'Circassian Bride' was received with enthusiasm. It was performed at Drury Lane on Feb. 23, and on the following night the theatre was burnt to the ground, and the composer's score consumed in the flames. The merits of the young musician were so apparent that the proprietors of Covent Garden Theatre engaged him for three years to compose and direct the music. He entered on this important office in the season 1810-11.

The Philharmonic Society was established in 1813, and Bishop was one of its original members, and took his turn as conductor. In the following year he produced portions of the opera of 'The Farmer's Wife,' the melodrama of 'The Forest of Bondy,' a cantata for Braham, called 'Hanover,' and other musical pieces. In this year he adapted the first of a series of foreign operas—Boieldieu's 'Jean de Paris'—which was followed in successive years by 'Don Giovanni,' 'Figaro,' 'Il Barbiere,' and 'Guillaume Tell.' A number of operatic pieces were produced in 1815, including additional music for Dr. Arne's 'Comus,' and for Michael Arne's 'Cymon.' Two of his well-known works, 'Guy Mannering' (of which Whittaker wrote a portion) and 'The Slave,' gave interest to the following year, in which also he wrote the musical interpolations in 'A Midsummer Night's Dream,' the first of a series of Shakespearian spoliations which, as Mr. Macfarren remarks, 'even the beauty of some of his introduced pieces has happily not preserved upon the stage.' It is impossible in our space to go in detail through all Bishop's productions for Covent Garden; in 1816 and 1817 he filled in addition the post of director of the music at the King's Theatre, Haymarket. Suffice it to say, that among them were 'The Law of Java,' with its universally popular 'Mynheer van Dunck'; 'Clari,' May 8, 1823, with its household melody of 'Home, Sweet Home'; and 'Maid Marian,' full of charming English music. In 1825 Bishop accepted an engagement under Elliston, at Drury Lane, and the opera of 'The Fall of Algiers' was the first fruit of his new appointment. The engagement of Weber to write 'Oberon' for Covent Garden induced the rival management to set Bishop to work upon an opera that should oppose it; and, impressed with the magnitude of the competition, he occupied more than a year in the extremely careful composition of 'Aladdin,' which was produced in 1826, some weeks after Weber's opera. It had the misfortune of being allied to an even worse constructed drama than 'Oberon'; and lacking the individuality of Bishop, without having the merit of Weber, it met with no success. In 1830 Bishop was appointed musical director at Vauxhall. In this capacity he wrote several operettas, and many songs, some of which acquired great popularity, 'My pretty Jane' being perhaps the best known at the present day. In the season of 1840-41 he was engaged by Madame Vestris as musical director of Covent Garden, where he produced 'The Fortunate Isles,' to celebrate Queen Victoria's wedding. This was his last dramatic composition.

We must now notice a few other events of Bishop's life. In 1819, in partnership with the proprietor of Covent Garden, he commenced the direction of the extraordinary performances, then miscalled Oratorios; and in the following season undertook the speculation on his own account, which he relinquished, however, before the commencement of another year. In the autumn of 1820 he visited Dublin, and received the freedom of that city by cordial and unanimous suffrage. In 1832 the Philharmonic Society commissioned him to write a work for their concerts, and the sacred cantata of 'The Seventh Day,' performed in 1833, was the result. It is a clever and masterly work, but made no lasting impression, belonging as it did to a class of music entirely different from that in which he had achieved his fame. In 1839 he received his degree as Bachelor in Music at Oxford, and his exercise was performed at a festival conducted by him. In November 1841 he was elected to the musical professorship at Edinburgh, which he resigned in December 1843. The distinction of knighthood was conferred upon him in 1842; and on the death of Dr. Crotch he was appointed in 1848 to the musical chair at Oxford. On the retirement of W. Knyvett in 1840, he was for three

years occasionally, and in 1843 permanently, appointed conductor of the Antient Concerts, which office he held until the discontinuance of the performances in 1848. His last composition of importance was the ode for the installation of the Earl of Derby as Chancellor of Oxford, in 1853. On this occasion he received the degree of Doctor in Music, the ode being considered as his probational exercise. He was twice married —first to a Miss Lyon, a singer who appeared in his 'Circassian Bride,' and, second, to Ann Rivière. [See BISHOP, ANN.]

Besides his dramatic productions, and the 'Seventh Day,' Bishop composed an oratorio, 'The Fallen Angel,' which has never been performed; music for three tragedies, 'The Apostate,' 'Retribution,' and 'Mirandola'; and a 'Triumphal Ode,' performed at the Oratorios. He also arranged the first volume of 'Melodies of Various Nations'; three volumes of 'National Melodies,' to which Moore wrote the poetry; and a number of English melodies with Dr. Mackay's verses. He edited the 'Messiah,' a large collection of Handel's songs, and many other works of importance.

He died April 30, 1855, and was buried in the Marylebone Cemetery, Finchley Road, where a monument to his memory has been erected by subscription.

The following chronological list of his productions for the stage includes the works which he altered or adapted:—

Angelina, 1804; Tamerlan et Bajazet, Armide et Renaud, Narcisse et les Grâces, Love in a Tub, 1808; Caractacus, The Wife of Two Husbands, The Mysterious Bride, The Siege of St. Quentin, The Corsair, or the Italian Nuptials, The Travellers at Spa, 1808; The Circassian Bride, Mora's Love, The Vintagers, 1809; The Maniac, 1810; The Knight of Snowdon, 1811; The Virgin of the Sun, The Æthiop, The Lord of the Manor, The Renegade, 1812; Haroun al Raschid (altered from The Æthiop), Poor Vulcan, The Brazen Bust, Harry le Roy, The Miller and his Men, and For England, Ho! 1813; The Farmer's Wife, The Wandering Boys, Sadak and Kalastrade, Lionel and Clarissa, The Grand Alliance, Aurora, Doctor Sangrado, Artaxerxes (curtailed from Arne), The Forest of Bondy, The Maid of the Mill (additions), and a compilation from Boieldieu's John of Paris, 1814; Brother and Sister, The Noble Outlaw, Telemachus, The Magpie or the Maid, John du Bart, Cymon (additions), Comus (additions), 1815; Midsummer Night's Dream, Guy Mannering (in which occurs the famous glee 'The Chough and Crow'), Who wants a Wife? Exit by Mistake, The Slave, Royal Nuptials, 1816; The Humorous Lieutenant, The Heir of Vironi, The Apostate, The Libertine (adapted from Don Giovanni), Teasing made Easy, The Duke of Savoy, The Father and his Children, 1817; The Illustrious Traveller, Fazio, Zuma (with Braham), The Devil's Bridge, X Y Z, The Burgomaster of Saardam, December and May, The Barber of Seville (adapted from Rossini), 1818; The Marriage of Figaro (adapted from Mozart), Fortunatus and his Sons, The Heart of Midlothian, A Roland for an Oliver, Swedish Patriotism, The Gnome King, The Comedy of Errors, 1819; The Antiquary, Henri Quatre, Montoni, Bothwell Brigg, Twelfth Night, 1820; Don John, Henry IV., pt. ii., Two Gentlemen of Verona, 1821; Montrose, The Law of Java (with the well-known 'Mynheer van Dunck'), Maid Marian, 1822; The Vision of the Sun, Clari (with 'Home, Sweet Home'), The Beacon of Liberty, Cortez, The Vespers of Palermo, 1823; Native Land, Charles II., As You Like It, 1824; The Fall of Algiers, Masaniello (from Auber), Tell (from Rossini), Angelina (re-written), Faustus, Coronation of Charles X., 1825; Aladdin, The Knights of the Cross, 1826; Velva, 1827; The Englishman in India, Edward the Black Prince, Don Pedro, The Rencontre, 1828; Home, Sweet Home, The Night before the Wedding (from Boieldieu), 1829; Ninetta, Hofer (from Rossini), Under the Oak, Adelaide, and music to Hamlet, 1830; The Romance of a Day, 1831; The Tyrolese Peasant, The Election, The Magic Fan, The Sedan Chair, The Bottle of Champagne, The Demon (from Meyerbeer), music to Kenilworth, and Waverley, 1832; Manfred, 1834; The Captain and the Colonel, 1835; The Doom Kiss, 1836; Rural Felicity, additions to the Beggar's Opera, music to Love's Labour's Lost, 1839; The Fortunate Isles, 1840.

[*Dict. of Nat. Biog.* An interesting article on Bishop's Glees, by G. A. Macfarren, is in the *Musical Times*, 1864, April, *et seq.*]

(*Imp. Dict. of Biog.*; *Gentleman's Mag.*; *Private Sources.*) E. F. R.

BISHOP, JOHN, born in 1665, and educated (according to Hawkins) under Daniel Roseingrave. Between Michaelmas and Christmas, 1687, he was a lay clerk of King's College, Cambridge, and in the following year was appointed to teach the choristers. In 1695 he succeeded Jeremiah Clarke as organist of Winchester College; he was afterwards appointed a lay-vicar of the Cathedral in place of T. Corfe, and in 1729 succeeded Vaughan Richardson as Cathedral organist. (Hawkins is wrong in calling him organist of Salisbury Cathedral.) He died Dec. 19, 1737, and was buried in the cloisters of the college chapel. MSS. by him are contained in the collections of the British Museum, Royal College of Music, and Christ Church, Oxford. Philip Hayes's 'Harmonia Wiccamica' includes some of his compositions (*Dict. of Nat. Biog.*). M.

BISHOP, JOHN, was born at Cheltenham July 31, 1817. When about six years of age he was placed at a boarding-school at Oxford, where he remained two years and a half, and learned music from Daniel Feldon, organist of St. Peter's-in-the-East in that city. His next master was Arnold Merrick, organist of the parish church of Cirencester, and translator of the theoretical works of Albrechtsberger, and several other valuable treatises. Returning to Cheltenham, Bishop became a pupil of Thomas Woodward, organist of the parish church there, under whom he studied for about five or six years. On the opening of the new church of St. Paul, Cheltenham, in 1831, Bishop, then fourteen years of age, was appointed its organist. He subsequently completed his musical education under Migliorucci, a favourite pupil of Zingarelli. In 1838 he became organist at Blackburn, Lancashire, but in the following year returned to Cheltenham, where he filled successively the post of organist at St. James's Church, the Roman Catholic Chapel, and St. John's Church, from the last of which he withdrew at the end of 1852. Bishop directed his attention much to the study of the theory and history of music, and translated and edited many valuable theoretical and other works, besides arranging and editing a large number of the masterpieces of the great classical composers. One of his most useful works was the score he made of Barnard's Church Music, which is now in the British Museum. He died at Cheltenham, Feb. 3, 1890. W. H. H.

BISHOP & SON, organ-builders in London. This factory was established about the end of the 18th century by James C. Bishop, and was known successively as Bishop, Son & Starr, Bishop, Starr & Richardson, Bishop & Starr, and now Bishop & Son. At different times they have built the organs of St. George's (Catholic) Cathedral, Southwark; St. James's, Piccadilly, and the Oratory, Brompton, all in London;

also those of the Cathedral and of the Town Hall, Bombay. They are the inventors of the Clarabella stop, the Anti-concussion Valves, and the Composition Pedals. V. DE P.

BISPHAM, DAVID SCULL, born Jan. 5, 1857, at Philadelphia, U.S.A., was at first intended for a business career, but his musical inclinations were too strong; for some years he sang as an amateur in oratorio and other concerts, and held a regular position in one of the first churches of his native place. His dramatic powers were increased by frequent participation in private theatricals. In 1886 he went to Milan, where he studied under Vannuccini and Lamperti until 1889, when, coming to London, he became a pupil of Shakespeare, and studied elocution under Herman Vezin. His voice is a baritone of strongly individual quality and extensive range, and at his début in the part of Longueville in Messager's 'Basoche,' on the production of that work at the Royal English Opera House, Nov. 3, 1891, he won immediate favour by his humorous acting and artistic singing. He was not long in establishing himself as a singer of high accomplishment, and a fine interpreter of the best lyrics; on June 25, 1892, he made a first appearance in serious opera at Drury Lane (where German operas were being given simultaneously with the regular opera performances at Covent Garden, both under Harris's direction), in the part of Kurwenal in 'Tristan,' a part of which he is one of the most sympathetic and successful of living exponents. He has at one time or another appeared in all the leading baritone parts in Wagner's dramas, including the Dutchman, Wolfram, Telramund, Wotan (in an English version of 'Die Walküre'), Alberich (throughout the 'Ring'), and Beckmesser, the last being one of his most careful and finished performances. Among his other parts are Masetto in 'Don Giovanni,' Pizarro in 'Fidelio,' Vulcan in 'Philémon et Baucis,' Escamillo in 'Carmen,' Alfio in 'Cavalleria,' Peter in 'Hänsel und Gretel,' and Iago in 'Otello.' He was an admirable Falstaff when Verdi's latest opera was given in English at Blackpool with Harris's company. In 1893 he sang the part of Fiorenzo in Mascagni's 'Rantzau'; he took the part of Johannes on the production of Kienzl's 'Evangelimann,' July 2, 1897; and he was a very impressive Urok in Paderewski's 'Manru,' when that work was first given in America. He created the parts of William the Conqueror in Cowen's 'Harold,' Covent Garden, June 8, 1895; Benedick in Stanford's 'Much Ado about Nothing' (*ibid.* May 30, 1901); and Rudolph in Miss Smyth's 'Der Wald' (*ibid.* July 10, 1902). On the production of Walter Damrosch's 'Scarlet Letter' in America, he was the original Chillingworth.

Bispham is one of the few singers who have enjoyed equal success on the stage and on the concert-platform. It has fallen to his lot to interpret many important works, and in his own undertakings, such as the series of recitals which for some years he gave each season in London, he had a great influence on musical education; on one occasion he gave, with the help of another singer, the whole of Brahms's 'Magelone-Lieder,' reciting portions of the romance between the songs. He sang the part of Christ in the 'St. Matthew' Passion at the Bach Festival of 1895; and in the oratorios of Lorenzo Perosi he sang various prominent parts. His delivery of the famous 'Frost Scene' was a special feature of the revival of Purcell's 'King Arthur' at the Birmingham Festival of 1897; and he was the first to sing the four 'Serious Songs' of Brahms in England and America. He recited 'Enoch Arden' with Richard Strauss's incidental music for the first time in English, June 16, 1902 (it had been given a short time previously in German by Herr von Possart); and in America he got up a recitation of *A Midsummer Night's Dream* with the whole of Mendelssohn's music. He appeared at St. George's Hall on June 20, 1898, in an adaptation of Hugo Müller's 'Adelaide,' in which he played the part of Beethoven with considerable success. Since 1897 he has divided his time between England and America, being a member of the Grand Opera Company both in London and New York. M.

BITTER, KARL HERMANN, was born Feb. 27, 1813, at Schwedt on the Oder, and died Sept. 12, 1885, at Berlin. Having studied law and finance at the universities of Berlin and Bonn, he entered upon his legal career in the former city in 1833. After holding various high official positions from 1846 onwards, at Frankfort, Minden, Posen, Schleswig, and Düsseldorf, he was appointed in 1877 Under Secretary of State for the Interior; and in July 1879 was made Minister of Finance, which post he held until June 1882. During the war with France he had been Prefect of the department of the Vosges, and subsequently Civil Commissioner at Nancy. His activity in affairs of State found ample recognition. His lively interest in music had many practical results—among other things the Schleswig-Holstein Festival of 1875 owed its existence chiefly to him; and his contributions to musical literature are of no small importance. The most valuable of these are the biographies of the Bachs—(1) *Johann Sebastian Bach*, in 2 vols. (1865)—2nd ed., revised, in 4 vols. (1881); (2) *Carl Philipp Emanuel Bach und Wilhelm Friedemann Bach und deren Brüder*, in 2 vols. (1868). The latter is the most exhaustive and trustworthy work yet published on the subject of Bach's sons; the former has been superseded by Spitta's great *Life of Bach*, with which it cannot compare for thoroughness or penetration. Although it is by no means free from errors and

superficiality, it obtained a wide success soon after its appearance on account of the enthusiastic homage displayed in the presentment of its subject. It was especially successful among those who knew little or nothing about Bach, and it contributed in no small degree to the general appreciation of the master. Bitter's other literary works are: *Mozart's 'Don Juan' und Gluck's 'Iphigenia in Tauris,'* with new translations of the words of both operas (1866); *Ueber Gervinus' Händel und Shakespeare* (1869); *Beiträge zur Geschichte des Oratoriums* (1872); *Eine Studie zum Stabat Mater* (1883); *Die Reform der Oper durch Gluck und R. Wagner's Kunstwerk der Zukunft* (1884). To these must be added various contributions to periodical literature, the most recent of which (in the *Deutsche Revue* for Oct. 1885), 'Gedanken über die Bildung eines Ministeriums der schönen Künste für Preussen' is remarkable. In 1870 Bitter edited Löwe's autobiography. His *Gesammelte Schriften* appeared in 1885. A. D.

BIZET, GEORGES (properly ALEXANDRE CÉSAR LÉOPOLD), one of the most distinguished of modern French composers, was born in Paris, Oct. 25, 1838, and was a highly successful pupil of the Conservatoire from 1848 to 1857, studying the piano with Marmontel, the organ with Benoist, harmony with Zimmermann, and composition with Halévy, whose daughter Geneviève he married in 1869. In 1857 he divided with Lecocq the prize for an operetta, 'Docteur Miracle,' given at the Bouffes Parisiens in April, and won the 'prix de Rome' in the same year. Among the works he sent from Rome were an opera, 'Don Procopio,' which remained among some papers of Auber's until 1895, two symphonic movements, an overture, 'La Chasse d'Ossian,' and an opéra comique, 'La guzla de l'Emir.' After his return to Paris, it was a long time before his music gained general recognition, although opportunities were given for their performance; 'Vasco di Gama' (1863) seems not to have been performed, but 'Les Pêcheurs de Perles' (3 acts) and 'La jolie Fille de Perth' (4 acts) were given at the Théâtre-Lyrique, the former Sept. 29, 1863, and the latter Dec. 26, 1867. Neither of these, nor 'Djamileh' (1 act) (May 22, 1872) was thoroughly successful, and it was only after the whole world had been conquered by 'Carmen' that they enjoyed a certain amount of favour. 'Les Pêcheurs de Perles' was given at Covent Garden, as 'Leila,' April 22, 1887, and 'Djamileh' was given at Leipzig on Feb. 3, 1893, and at Covent Garden June 13, 1893; part of the ballet music in 'La jolie Fille de Perth' was used when 'Carmen' was turned into a grand opera, and it is now permanently associated with that work. Bizet took part with Jonas, Legouix, and Delibes, in the composition of the operetta, 'Malbrough s'en va-t-en guerre,' produced at the Athénée, Dec. 13, 1867; but Bizet's first real success was with the overture to Sardou's 'Patrie,' played at one of Pasdeloup's concerts. His incidental music to Daudet's play, 'L'Arlésienne' (Oct. 1, 1872) was very successful in itself (it was given in an English version, with Bizet's music, at the Prince of Wales's Theatre, in June 1887) and it has been still more so in the form of two orchestral suites. A third suite, 'Roma,' was given under Pasdeloup's direction Feb. 28, 1869 (Crystal Palace Oct. 23, 1880), and a fourth, 'Jeux d'enfants,' has long been popular wherever it is heard. Bizet also finished his father-in-law's opera, 'Noé,' and published various books of charming songs, which have only in comparatively recent times attained the popularity they deserve. Foremost among these is the wonderfully characteristic 'Les Adieux de l'hôtesse Arabe.'

It remains to speak of Bizet's masterpiece, the four-act opera, 'Carmen,' produced at the Opéra Comique, March 3, 1875; Prosper Mérimée's well-known story, even in the modified version of Meilhac and Halévy, was a little over-bold for the polite tastes of the French public at that time, and the *brutalité* of the character was most prominently brought out by the original representative of the title-part, Mme. Galli-Marié. The opera only became a great success gradually, and it was after its introduction to England (in Italian, at Her Majesty's, June 22, 1878, with Mme. Minnie Hauck) that its real vogue began. There is good reason to suppose that Bizet's intention was to soften down the animalism of the original, and that the treatment of the part preferred by Mme. Marie Roze, who sang it in English for the first time at Her Majesty's (Carl Rosa Company) on Feb. 5, 1879, was in agreement with the idea of the composer. This modified interpretation was presented also by Mme. Trebelli, and later on by Mme. Patti, Mlle. Zélie de Lussan, and many others; the coarser and more sensual type of gipsy was to be seen in the representations of Mme. Pauline Lucca, Mlle. Belincioni in more recent days, and perhaps the greatest of all, Mme. Calvé. The music has often been reproached with not having enough of the gipsy characteristics, just as it was at first decried, with other works of Bizet's, as following the Wagner theories too closely. Some of it may not be particularly Spanish or gipsy in style, but the feeling of the whole is so faithfully reflected in the music, and there is so unmistakable an 'atmosphere' of the south about it that its success is no matter of wonder. To what heights of dramatic power Bizet might have risen can only be guessed, for exactly three months after its production, he died at Bougival, near Paris, June 3, 1875.

Bizet's chief characteristic was his love of what is known as 'local colour.' In the Oriental surroundings of two of his early operas he is

GEORGES BIZET

at his happiest, and there it seems that as soon as he has finished such things as the invocation in 'Les Pêcheurs de Perles,' the 'Ghazel' or the 'danse de l'almée' in 'Djamileh,' with their imitation of the rhythms and intervals of eastern music, he is somewhat at a loss for inspiration, and his music is that of the conventional French operatic school of his time. It is not so either in 'Carmen' or the 'Arlésienne' music, for both are suffused in the warm tones of the south, and these tones are not just confined to special numbers, such as the brilliant 'farandole' of the latter or the 'seguidilla' of the former. In orchestration Bizet was fond of trying experiments; some of these give 'Carmen' much of its distinction, for example, the use of the lowest notes of the harp, his treatment of the flute, and many other things, may be studied; and in one number of 'Djamileh' he introduced a pianoforte into his score, without much success. It is by 'Carmen' that he will live, and it is impossible not to be grateful for the amount of pleasure he has given by this fine and truly dramatic work to thousands of people in all parts of the world. M.

BLACK, ANDREW, born in Glasgow, Jan. 15, 1859, was in early days an organist, at the Anderston United Presbyterian Church; after discovering that he possessed a fine baritone voice, he came to London, where he studied with Randegger and J. B. Welch, subsequently going to Milan to study with Domenico Scafati. He was not long in winning fame as a singer in Scotland, and at his London début, at the Crystal Palace on July 30, 1887, he was at once recognised as a most promising and accomplished artist. Among his early appearances there must be recorded his singing of the part of Lord Cranston in MacCunn's 'Lay of the Last Minstrel,' in the following February. He travelled in America, and made occasional appearances in opera there with success. It was at the Leeds Festival of 1892 that he definitely took the place he has since occupied in the first rank of concert-baritones; his principal performance was in the baritone part of Dvořák's 'Spectre's Bride.' The fame of his very dramatic interpretation of 'Elijah' had reached musicians before his appearance in that part at the Birmingham Festival of 1894; since that year he has been more closely identified with it than any of the successors of Santley. In 1893 he became professor of singing at the Royal College of Music, Manchester. His beautiful voice, energetic style, and dramatic intelligence show that in a country where opera stood on a proper footing he would have made a great success in Wagnerian and other operatic music; and he never sacrifices beauty of vocal tone to considerations of dramatic realism. (*Brit. Mus. Biog.*) M.

BLAES, ARNOLD JOSEPH, a great clarinet-player, born at Brussels, Dec. 1, 1814; pupil of Bachmann in the Conservatoire there, where he obtained the second prize in 1829 and the first in 1834. He visited Holland, Germany, and Russia, and in 1839 was awarded a medal for his performance before the Société des Concerts in Paris: was solo clarinet to the King of the Belgians; and in 1842 succeeded Bachmann as Professor in the Brussels Conservatoire. He died at Brussels, Jan. 11, 1892.

BLAES, MME. ELISA, whose maiden name was MEERTI, born in Antwerp about 1820, a distinguished singer, and wife of the foregoing. She was engaged by Mendelssohn to sing at the Gewandhaus concerts at Leipzig (Oct. 6, 1839), where her cultivated style, sympathetic voice, and great personal gifts, were long and highly appreciated. She was heard in most of the European capitals, and subsequently settled as a teacher in Brussels. M. C. C.

BLAGROVE, HENRY GAMBLE, was the son of a professor of music at Nottingham, where he was born Oct. 20, 1811. At four years old he was taught by his father to play on a small violin which he had made for him, and at five years old he performed in public. His father bringing him to London he played in 1817 at Drury Lane Theatre in a performance called 'The Liliputians,' and subsequently played in public daily at the Exhibition Rooms in Spring Gardens. In 1821 he was placed under the tuition of Spagnoletti, and on the opening of the Royal Academy of Music in 1823 he became one of its first pupils, Crotch and F. Cramer being his instructors. In 1824 he was awarded a silver prize medal for his proficiency. On the formation of Queen Adelaide's private band in 1830 Blagrove was appointed solo violinist, and continued so until 1837. In 1832 he went to Germany for the purpose of studying his instrument under Spohr, and remained there until Nov. 1834. [After his return, he formed a permanent quartet party with H. Gattie, J. B. Dando, and C. Lucas, and gave concerts in the Hanover Square Rooms, from 1836 onwards. He was leader of the State band at the coronation of Queen Victoria, and was also violin teacher to the Duke of Cambridge. In 1858 he again visited Germany, and a few years later played at the Lower Rhine Festival at Düsseldorf. *Dict. of Nat. Biog.*] Blagrove was one of the most distinguished of English violinists, and for upwards of thirty years occupied the position of concerto player and leader in all the best orchestras. He died in London, after a lingering illness, Dec. 15, 1872, and was buried at Kensal Green. W. H. H.

His brother, RICHARD, born at Nottingham, was for many years a viola player in great request in orchestral and chamber music; he was an ardent partisan of the concertina, and got from it effects that were unexpectedly artistic. He died Oct. 21, 1895. M.

BLAHETKA, MARIE LEOPOLDINE, born Nov.

15, 1811, at Guntramsdorf, Baden, Austria; an able performer on the piano and physharmonika; daughter of J. L. Blahetka and Babette Traeg. At five years of age she was so good a player that by Beethoven's advice she was placed under Jos. Czerny for education as a musician. She afterwards had instruction from Kalkbrenner and Moscheles, and in composition from Sechter. Her progress was so rapid that she was able to undertake concert tours in company with her mother, from which she obtained much reputation, though they exposed her to many calumnious attacks. In 1832 she published as op. 25 a concert-piece for piano and orchestra which deserves notice. In 1830 a romantic piece of hers, 'Die Räuber und die Sänger,' was produced at the Kärnthnerthor Theatre, Vienna, with applause. A few years later she made another tour in France, and in 1840 settled in Boulogne, where she died Jan. 12, 1887. A few words in Schumann's *Gesammelte Schriften*, ii. 45, testify to her excellence as a player. F. G.

BLAKE, Rev. Edward, D.D., was born at Salisbury, 1808, and educated at Balliol College, Oxford, taking the degrees of B.A. Oct. 13, 1733; M.A. July 6, 1737; B.D. 1744; and D.D. 1755. He was elected Fellow of Oriel in 1736; became curate of St. Thomas's, Salisbury, 1740; vicar of St. Mary's, Oxford, in 1754; prebendary of Salisbury and rector of Tortworth, Gloucestershire, in 1757. He was the composer of the anthem 'I have set God always before me,' and of some duets for violin and viola. He died June 11, 1765. [*Musical Times*, 1878, p. 288.]

BLAMONT, François Collin de, born at Versailles, Nov. 22, 1690, was taught music by his father, a member of the royal band; his early cantata, 'Circé,' pleased Lalande so much that he consented to teach him, with the result that in 1719 he was made surintendant of the royal music, and subsequently ennobled. He died in Paris, Feb. 14, 1760. His 'Les festes grecques et romaines,' a ballet, was produced in 1723; his opera, 'Le Retour des Dieux sur la terre,' in 1727; 'Le Caprice d'Erato,' ballet-opera, in 1730; 'Endymion,' a pastorale-héroique, in 1731; 'Les caractères de l'amour,' a ballet-héroique, in 1736 (with an additional act, 'Les Amours de printemps,' in 1739); as well as three books of 'cantates françaises à voix seule' (1723, 1729, 1732), and a set of motets with orchestral accompaniment, in the style of Lalande, 1732. Among these is a Te Deum which represents Blamont at his best. In his *Essai sur les goûts anciens et modernes de la musique française* (Paris, 1754), he upholds the traditional style of operatic writing, especially as regards the libretti, against the innovations of the more advanced school (Eitner's *Quellen-Lexikon*, etc.). M.

BLANCHARD, Henri Louis, born at Bordeaux, Feb. 7, 1778, died in Paris, Dec. 18, 1858, studied the violin under Rodolphe Kreutzer, and composition under Beck, Méhul, and Reicha. From 1818 to 1829 he was musical director at the Variétés, and composed a number of vaudeville airs which attained popularity, and also trios and quartets for strings. These more solid works exhibit considerable talent. In 1830 he became director of the Théâtre Molière, where two of his plays were produced. A third had a great run at the Théâtre Français in 1831. His opera of 'Diane de Vernon' was produced at the Nouveautés on April 4 in the same year. As a musical critic Blanchard was able and impartial. He contributed articles to *L'Europe littéraire et musicale* (1833), *Le Foyer*, *Le Monde Dramatique*, and *La Revue et Gazette.* His biographies of Beck, Berton, Cherubini, Garat, and others, which originally appeared in these journals, have been published separately. M. C. C.

BLANCHE, *i.e.* 'white,' is the ordinary French word for the note 𝅗𝅥 which we call a minim. In the same manner the French call a crotchet, 𝅘𝅥, *noire.*

BLANCHE DE NEVERS, an opera in five acts, founded on the 'Duke's Motto.' Libretto by John Brougham; music by Balfe. Produced at Covent Garden by Pyne and Harrison, Nov. 21, 1863.

BLANCKENBURGH. See Blankenburg.

BLANCKS, Edward, whom Francis Meres, in his *Palladis Tamia, Wits Treasury*, 1598, classes among the 'famous English musicians' of the time, was one of the ten composers who harmonised the tunes for 'The Whole Booke of Psalmes, with their wonted Tunes as they are song in Churches, composed into foure parts,' published by Thomas Este in 1592, and reprinted by the Musical Antiquarian Society. Nothing more is known of him. W. H. H.

BLAND, John, a music-seller and publisher, established in or before 1779 at 45 High Holborn, where he remained until 1794, dying, or retiring, in that year. He was in 1787 commissioned to go to Vienna for the purpose of inducing Haydn to visit England. In this mission he succeeded, and while in Vienna is said to have been the hero of the Razor quartet incident (see Haydn). When Haydn arrived in London, Jan. 1, 1791, he was for a short period a guest with Bland at his house in Holborn. Bland published many collections of catches and glees, and republished in volume and in sheet form most of Handel's compositions. Operas in the usual oblong shape and vast quantities of sheet music were also among Bland's publications. The historic place of business (which was at the corner of New Oxford Street, and is now cleared away by street improvements) came, after Bland, into the hands of Lewis Houston and Hyde who, in 1796, were followed by Francis Linley, he in turn giving place,

before 1800, to William Hodsoll, who kept on the business for more than thirty years. In 1840, and for many years afterwards, the premises were occupied by Zenas T. Purday, a great publisher of sheet songs.

BLAND & WELLER. This firm, which carried on business at 23 Oxford Street, must not be confounded with the above. It was founded by Anne Bland before 1790, who in 1793 went into partnership with Weller. About 1818-19 owing to the death or retirement of Bland a sale of plates and copyrights took place, and the business was carried on for a few years as Weller & Co. F. K.

BLAND, MARIA THERESA, born of Italian Jewish parents named Romanzini in 1769, made her first appearance in public in 1773 at Hughes's Riding School, and at a more advanced age appeared as a singer on the opening of the Royal Circus (afterwards Surrey Theatre), Nov. 7, 1782, in a pantomime called 'Mandarina, or, The Refusal of Harlequin.' She was very favourably received, and was next engaged at the Dublin Theatre, where she became an established favourite. On Oct. 24, 1786, she appeared at Drury Lane as Antonio in General Burgoyne's version of Grétry's 'Richard,' with complete success. She remained attached to the Drury Lane company for nearly forty years. In the summer of 1789 she visited Liverpool, where she performed both at the theatre and at concerts. On Oct. 21, 1790, she was married to Bland, the brother of Mrs. Jordan, the celebrated actress. She sang at the Haymarket in 1791 in Arnold's 'Inkle and Yarico.' She sang for many years at Vauxhall, where her popularity was unbounded. In 1812 she received a salary of £250 for the summer season ; a considerable sum at that period. She excelled as a ballad singer, for which the beauty of her voice, simplicity of manner, and neatness of execution eminently qualified her. Having begun to show symptoms of mental weakness, she retired from public life in 1824, taking a benefit at Drury Lane, July 5, when a list of donations was printed in the play-bill. [Her last public appearance took place at White Conduit House in July 1826. See W. Wroth's *Pleasure Garden.*] She was attacked by apoplexy at the house of a friend, and died Jan. 15, 1838. [She was buried at St. Margaret's Westminster.] Mrs. Bland had two sons, both singers. CHARLES, a tenor, appeared at Covent Garden as Oberon in Weber's opera of that name, on its production, April 12, 1826. His success, however, was but moderate, and he was not engaged after that season. He subsequently appeared in the provinces, and in 1831 was singing at the Manchester Theatre. He then returned to London, and in 1831-32 appeared at the Olympic, and in 1833 and 1834 at Astley's. No traces of his subsequent career have been found. His brother JAMES, a bass, born 1798, appeared in 1826 at the English Opera House (Lyceum) in Winter's 'Oracle.' He was afterwards engaged at Drury Lane. In 1831 he appeared at the Olympic as an actor and singer in burlesque with such success that he gradually abandoned serious singing and became the acknowledged representative of the kings and fathers in the extravaganzas of Planché and others. He died suddenly as he was about to enter upon the performance of his duties at the Strand Theatre, July 17, 1861. W. H. H.

BLANGINI, GIUSEPPE MARCO MARIA FELICE, celebrated tenor-singer, teacher of singing, and composer, was born at Turin, Nov. 18, 1781. At the age of nine he was admitted into the choristers' school of Turin Cathedral. He made rapid progress in music under the Abbate Ottani, a pupil of Padre Martini. By the time he was twelve he composed a motet and a Kyrie. His favourite instrument was the violoncello. His singing was so exquisite that it is said to have revived Baron Stackelberg the Russian ambassador at Turin after he had been given up by the physicians. When the war broke out in 1797 his family took refuge in France, but it was not till 1799 that Blangini went to Paris, where he soon became fashionable as a composer of songs and teacher of singing. In 1802 he was commissioned to complete Della Maria's unfinished opera 'La fausse Duègne,' which was followed in 1803 by 'Chimère et Réalité,' both for the Théâtre Feydeau, and in 1806 by 'Nephtali ou les Ammonites,' for the Grand Opéra. In 1805 he was called to Munich, where he produced 'Encore un tour de Caliphe,' and composed 'Inez de Castro,' and 'Les Fêtes Lacédémoniennes,' which were not performed. In 1806 Napoleon's sister, Princess Borghese, appointed him her chapel-master, and in 1809 King Jerome made him his 'General Musik-director' at Cassel. In 1811 Blangini produced at Cassel 'Le Sacrifice d'Abraham,' and 'L'Amour philosophe,' and at the Feydeau in Paris, 'Les Femmes vengées.' In 1814 he returned to Paris, and was appointed 'Surintendant de la musique du Roi.' The whole fashionable world, particularly the Faubourg St. Germain, thronged to him for lessons. He drew up a list of his pupils which reads like Leporello's catalogue in Don Giovanni, as it includes 3 Queens, 12 Princesses, 25 Countesses, etc. Blangini was an indefatigable composer of operas, though none of much interest were performed in Paris before 'La Marquise de Brinvilliers' (1831), in which Cherubini and Carafa worked with him. One of the songs from 'Nephtali' is still occasionally heard at a concert. His 174 'Romances,' in 34 numbers, continued in favour long after his death, which took place Dec. 18, 1841. His friend Maxime de Villemarest published his autobiography under the title *Souvenirs de Blangini, maître de chapelle du Roi de Bavière*, etc. (Paris, 1834). The book is interesting, and gives an excellent

picture of an artist's footing in society at that period. F. G.

BLANKENBURG, or BLANCKENBURGH, VAN. There is good reason to suppose that Gerbrandt and Gideon van Blanckenburgh, and Quirijn van Blankenburg, are all the same person; and that he was born in 1654 at Gouda, studied mathematics at Leyden from 1680, was organist at Gouda in 1684, at the Hague in 1687, and at the New Church there in 1731. He was the author of a work of historical importance, 'Onderwyzinge hoemen alle de Toonen en halve Toonen, die meest gebruyckelyck zyn, op de Handt-Fluyt zal konnen t'eenemal zuyverblaezen' (Amsterdam, P. Matthysz, 1684, a reprint of which was published at Amsterdam in 1871; and of a 'Clavecimbel en Orgelboek der Psalmen en Kerkzangen' (1732; 3rd ed. 1772). The inscription on his portrait compares him to Orpheus. In honour of the betrothal of the Prince of Orange he composed a collection of pieces in two parts ('De verdubbelde harmony,' 1733), which might be performed either upright or upside down, forwards or backwards. His 'Elementa Musica' (1739), has some value as a theoretical work. Blankenburg died after 1739, but the precise date is not known. [See the *Quellen-Lexikon.*] F. G.

BLARAMBERG, PAUL IVANOVICH, born at Orenburg, Sept. 26, 1841. He was educated at the Alexandrovsky School in St. Petersburg, and entered the Government service. He retired in 1870 and edited, for a time, the Russian *Times.* In his early days Blaramberg wrote incidental music to Ostrovsky's play 'The Voyevoda,' and a cantata on Lermontov's poem, 'The Demon,' from which the Tatar Dances were very popular. The decisive moment of his musical career was his meeting with Balakirev. After studying with him for a short period, he made a more ambitious effort: the opera, 'Mary of Burgundy,' to a libretto taken from a play by Victor Hugo. Completed in 1878, it was not performed until ten years later at Moscow. In 1881 Blaramberg wrote a national comic opera, 'The Mummers'; in 1887 a one-act opera, 'The Roussalka Maiden,' and in 1891 another national opera, the subject taken from Ostrovsky's play, 'Tushino.' Blaramberg's style was first influenced by Meyerbeer and later by Wagner. His melody is pleasing but somewhat vapid; his technique, especially as regards harmony, is decidedly weak. The last act of 'Mary of Burgundy' proves him to possess considerable dramatic instinct. His facile, cosmopolitan style is not well adapted to the realistic national subjects he has drawn from the works of Ostrovsky. Besides these operas, Blaramberg has composed a Fantasia for solo, female chorus, and orchestra, 'The Dragon-Flies' (1879); a musical sketch, 'On the Volga,' for male chorus and orchestra; a symphonic poem, 'The Dying Gladiator'; a Scherzo for orchestra; a symphony in B minor (1886); several folk-songs arranged for chorus *a cappella*, and a number of songs. R. N.

BLASINSTRUMENTE (Germ.). See WIND INSTRUMENTS.

BLAUVELT, LILLIAN EVANS, born at Brooklyn, New York, March 16, 1873; her father and mother were of Dutch and Welsh origin respectively, and she lost no time in beginning her musical career, for she appeared as a violinist at the age of eight, at Steinway Hall, New York. Until the age of fifteen she played the violin in public, while being educated in the public schools of her native city, and there can be no doubt that many of the beautiful qualities of her singing are due to this early devotion to instrumental music. At fifteen years old she entered the Conservatory of Music in New York as a pupil of Jacques Bouhy, who was in the United States in 1885-89. After his return to Paris Miss Blauvelt repaired thither for further instruction, and obtained experience of miscellaneous concert-singing in France and Belgium. For some months she sang with great success in Russia, notably with the Moscow Philharmonic Society; her début in opera took place in Brussels, in 'Mireille' (Sept. 12, 1891), and she afterwards sang the parts of Juliette, Marguérite, Mignon, etc. Owing to ill-health she cancelled her engagement at the Théâtre de la Monnaie, and went back to America for rest. She subsequently sang in the principal concerts throughout the United States, and Canada, under Anton Seidl, Theodore Thomas, and other eminent conductors; and she went on a tour with the Damrosch Symphony Orchestra in 1893. Three years later she had arranged to appear in opera in New York, but the death of Mr. Abbey, the manager, prevented this. In 1898 she went to Italy to study the language, and appeared in Rome in Verdi's 'Requiem,' taking the place of the soprano soloist who was suddenly taken ill, and acquitting herself excellently. She was commanded to sing before Queen Margherita at the Quirinal, during that visit, and in the following autumn, after singing at Munich, she appeared in London at the Queen's Hall, on Oct. 29. She won universal favour at once, and her career since then has been one continued success. In the following February she again visited Italy, and was married in Rome, to Mr. William F. Pendleton, an American. In June 1899 she sang before Queen Victoria; her appearances for the next few months were almost exclusively at the Queen's Hall, where she sang in the so-called London Musical Festival in the autumn. On Dec. 7, 1899, she sang in 'The Golden Legend' at the Albert Hall with remarkable success, and on March 22, 1900, sang the soprano part of Coleridge-Taylor's 'Scenes from Hiawatha' in the same building, for the first time in London. In June of the same year she sang at the Handel Festival, and in 1901 undertook a long tour

through America, to which she had paid annual visits since her London début. On June 2, 1903, she appeared for the first time in opera in England, as Marguérite in 'Faust' at Covent Garden, with much success. Her voice is a pure soprano of exquisite quality, pure, clear, and brilliant, but with fine warmth and intelligence; her interpretative powers are very considerable, and although she does not very often sing songs difficult of interpretation, her performance of lyrics of Brahms and other modern writers has been conspicuously successful. M.

BLAUWAERT, Emil, a famous basso cantante, was born at St. Nikolaas, Belgium, June 13, 1845, and was a pupil of the Brussels Conservatoire under Goossens and Warnots. His début took place in 1865 in the principal part of Benoit's 'Lucifer,' with which he was identified for many years, singing it in Paris in 1883, and in London, April 3, 1889. From 1874 onwards he was a successful teacher in the music-schools of Bruges, Antwerp, and Mons; and in 1889 he attained the height of his reputation by his fine impersonation of Gurnemanz at Bayreuth, a performance which from the merely vocal point of view surpassed all other interpretations. He appeared at the Philharmonic Concerts of March 13 and 27, 1890, and died at Brussels, Feb. 2, 1891. M.

BLAZE, François Henri Joseph, calling himself Castil-Blaze, one of the most prolific writers on music and the drama whom France has produced, was born at Cavaillon, Dec. 1, 1784. His father (1763-1833), a lawyer by profession, was a good musician, friend of Grétry and Méhul, and composer of masses, operas, and chamber music. Blaze was sent to Paris in 1799 to study the law, but the love of music soon began to show itself. He became a pupil at the Conservatoire, and took private lessons in harmony. In the meantime his professional career promised to be a prosperous one. He obtained the position of sous-préfet in the Department of Vaucluse, and other appointments. But to one used to the excitement of Parisian society, and longing for literary and artistic distinction, official life in southern France could not but be tedious and uninteresting. In 1820 he threw up his post and set out with his family for the metropolis, chiefly with a view to publishing a book compiled during his leisure hours. It appeared in 1820, in two volumes, with the title *De l'opéra en France*, and is the work on which his claims to remembrance are chiefly founded. The subjects treated comprise a much wider circle of observation than the title would imply. The first volume contains an elaborate though popular treatment of the various elements of music, including hints as to the choice of libretti, and the peculiarities of verse and diction best adapted for musical treatment. The second volume is devoted to the opera proper, describing at considerable length its various component parts, the overture, recitative, aria, ensemble, etc.

He attacks the various uses and abuses of theatrical managers, the arrogance of ignorant critics, and the miserable translations supplied by literary hacks for the masterpieces of foreign composers. On the latter point he was entitled to speak, having himself reproduced more or less felicitously the libretti of numerous Italian and German operas. Amongst these we may mention 'Figaro,' 'Don Juan,' and 'Zauberflöte'; 'Il Barbiere,' 'Gazza Ladra,' 'Otello,' 'Anna Bolena'; 'Der Freischütz,' 'Oberon,' 'Euryanthe'; and many others. These reproductions were chiefly for the use of provincial theatres where Italian opera was unattainable, and may have contributed much to popularise good music in France. Unfortunately Blaze frequently made bold to meddle with the scores, and even to introduce surreptitiously pieces of his own composition into the works of great masters. He used to tell with delight how one of his choral pieces fathered upon Weber was frequently played and applauded by unsuspecting audiences at the concerts of the Paris Conservatoire. His own compositions do not call for notice. They are of an ephemeral nature, and are justly forgotten. Amongst his romances 'King René' is pretty, and was deservedly popular. He wrote several pieces of sacred and chamber music, one serious and two comic operas, none of which was successful to any considerable extent. More valuable is a collection of songs of southern France called 'Chants de Provence.'

The merits of Blaze's literary work having been discussed above, it will suffice to mention the titles of some of his works, mostly compilations, similar in character, although hardly equal to *De l'opéra en France*. We name *Dictionnaire de Musique moderne* (1821); *Biographie vlämischer Musiker* (1828); *Chapelle musique des Rois de France* (1832); *La Danse et les Ballets depuis Bacchus jusqu'à Mademoiselle Taglioni* (1832); *Molière musicien* (1852); and a work in three volumes on the *Théâtres lyriques de Paris* (1847-56).

For ten years previously to 1832 Blaze was musical critic of the *Journal des Débats*, an important literary position afterwards held by Berlioz. He also wrote numerous articles for the *Constitutionnel*, the *Revue et Gazette Musicale*, *Le Ménestrel*, etc., partly republished in book form.

Castil-Blaze died Dec. 11, 1857, after a few days' illness. F. H.

BLAZE DE BURY, Baron Henri, born in May 1813, at Avignon, the son of the foregoing, is too much like him in all essential points to require detailed notice. He was first intended for the diplomatic service, and, while an attaché, was ennobled. In literary skill he surpassed his father; in musical knowledge he was decidedly his inferior. Blaze de Bury was indeed

the prototype of the accomplished *littérateur* of the second empire, able to write well on most topics, and excellently on many. Amongst his works on music, which alone concern us here, the most remarkable are *La Vie de Rossini* (1854); *Musiciens contemporains*—short essays on leading musicians, such as Weber, Mendelssohn, Verdi, and many others (1856); and *Meyerbeer et son temps* (1865). All these are reprints of articles contributed to the *Revue des deux Mondes* and other periodicals. Another connection of Blaze de Bury with the history of music may be seen in the following circumstance. He wrote a comedy called 'La jeunesse de Goethe,' for which Meyerbeer supplied the incidental music. The score was unpublished when the master died, and will remain so, along with other MSS., till thirty years after his decease, in accordance with his own arrangement. In 1868 Blaze de Bury attempted to set aside the portion of the will referring to the MS. in question, but the action brought against the family was unsuccessful. He died March 15, 1888. F. H.

BLECHINSTRUMENTE (Germ.); Brass Instruments. See WIND INSTRUMENTS.

BLEWITT, JONAS, a celebrated organist in the latter half of the 18th century, author of *A Complete Treatise on the Organ, with Explanatory Voluntaries*; 'Ten Voluntaries, or Pieces for the Organ,' etc.; 'Twelve Easy and Familiar Movements for the Organ,' etc. About 1795 he was organist of the united parishes of St. Margaret Pattens and St. Gabriel Fenchurch, also of St. Catherine Coleman, Fenchurch Street. He died in London in 1805. His son, JONATHAN BLEWITT, was born in London about 1780, received the rudiments of his musical education from his father, and was afterwards placed under his godfather, Jonathan Battishill. At eleven years old he was appointed deputy organist to his father. After holding several appointments as organist, he left London for Haverhill, Suffolk; and subsequently became organist of Brecon, where he remained three years. On the death of his father he returned to London, with the intention of bringing out an opera he had composed for Drury Lane, but the burning of that theatre destroyed his hopes. He next went to Sheffield as organist. In 1811 he took up his abode in Ireland, as private organist to Lord Cahir. He was appointed organist of St. Andrew's Church, Dublin, and composer and director of the music to the Theatre Royal in that city, succeeding Tom Cooke in the latter post in February 1813. In the same year the Duke of Leinster appointed him grand organist to the Masonic body of Ireland, and he became the conductor of the principal concerts in Dublin. When Logier commenced his system of musical instruction in Ireland, Blewitt was the first who joined him; and being an able lecturer, and possessing sound musical knowledge, he soon procured the great majority of teaching in Dublin. In 1825 Blewitt was again in London, and wrote the music for a pantomime, 'The Man in the Moon; or, Harlequin Dog Star,' produced at Drury Lane with great success. In 1828 and 1829 he was director of the music at Sadler's Wells, and wrote several clever works—'The Talisman of the Elements,' 'Auld Robin Gray,' 'My Old Woman' (adapted from Fétis), etc. He was also the composer of the operas of 'The Corsair,' 'The Magician,' 'The Island of Saints,' 'Rory O'More,' 'Mischief Making,' etc., and of a number of ballads, particularly in the Irish style, which enjoyed considerable popularity. Blewitt was a good singer, and possessed a fund of humour, qualifications which sometimes led him into questionable company. In his latter years he was connected with the Tivoli Gardens, Margate. In 1849 he revisited Ireland, as a pianist, with Templeton. He died in London, Sept. 4, 1853. [*Dict. of Nat. Biog.* Corrections and additions from Mr. W. H. Grattan Flood.] E. F. R.

BLITHEMAN, WILLIAM, was in 1564 a member of the choir and master of the choristers of Christ Church, Oxford, and also a gentleman and one of the organists of the Chapel Royal. [He took the degree of Mus.B. at Cambridge in 1586.] He died on Whitsunday 1591, and was buried in the church of St. Nicholas Olave, Queenhithe, where a brass plate was placed with a quaint metrical epitaph (preserved in Stow's *Survey Book*, iii. 211), recording not only his skill as an organist and musician, but also that he was the instructor of John Bull. [An 'In Nomine' by him is printed in the Fitzwilliam Virginal Book (i. 181), a 'Meane' for organ is given in the appendix to Hawkins's History, ed. 1853, and fourteen MS. pieces by him are in Thomas Mulliner's Virginal Book (Add. MS. 30,513). Other specimens in the British Museum are in Add. MSS. 29,384, 31,403, and 17,801-5. *Dict. of Nat. Biog.*] W. H. H.

BLOCKX, JAN, a very distinguished Belgian composer, was born at Antwerp, Jan. 25, 1851, was at first a choir boy, and a pupil of the Antwerp school of music, gaining great popularity as a composer in his native city at a very early age, with his numerous Flemish *lieder*, various pieces of chamber music, and the cantatas for soli, choir and orchestra, 'Het Droom van't Paradies' and 'De Klokke Roelandt'; two more cantatas, 'Vredesang' and 'Op den Stroom,' are among his more prominent works, and a one-act opera, 'Iets vergeten,' was given at Antwerp in 1877. After completing his education at the Leipzig Conservatorium, he settled in Antwerp, where in 1886 he became a teacher at the Conservatorium, and director of the 'Cercle Artistique,' being appointed in 1902 to succeed Benoit, the pioneer of the 'Flemish' national movement in Belgium, as director of the Antwerp Conservatorium. Blockx's fame dates from the production of his ballet 'Milenka' at

the Théâtre de la Monnaie at Brussels in 1886, repeated at Antwerp; this was followed by 'Maître Martin' (opéra comique, Brussels, 1892); and 'Princesse d'Auberge' ('Herbergprinses') (lyric drama in three acts, Antwerp, 1896, in Flemish, and in French at Brussels, Ghent, Bordeaux, etc.). The great success of this was confirmed in 'Thiel Uylenspiegel' (Brussels, 1900), and still more in 'La Fiancée de la Mer' (Antwerp and Brussels, 1902; Rouen, Lille, 1903). A cantata 'Die Scheldezang,' was performed at Antwerp in August 1903, in the open air. Another opera 'Kapel,' was accepted in the same year at the Antwerp opera. In his various compositions Blockx manifests a very interesting personality, which, while carrying out the newer tendencies in harmony and orchestration, succeeds in avoiding all imitation of Wagner. M. K.

BLOOMFIELD - ZEISLER, FANNIE, an American pianist, born in Bielitz, Austria, July 16, 1866. She was taken to the United States in 1868 by her parents, who settled in Chicago, where she has since lived. Her musical talent showed itself in early childhood, and her musical education was intrusted first to Bernhard Ziehn, and then to Carl Wolfsohn of Chicago. She had played in public by the time she was ten years old. In 1877 when Mme. Essipoff was in America, she heard the young girl play, and upon her recommendation the little Fannie Bloomfield was sent to Leschetizky in Vienna in 1878. She studied with that master for five years, and in 1883 played in Vienna several times. She then returned to the United States and began her career as a public pianist, which she has continued ever since. In 1893 she set out upon a concert tour in Europe, and appeared in Berlin, Vienna, Leipzig, Dresden, and other German cities; the success of this tour led to its continuance in the following season. In the spring of 1895 she returned to the United States, where she has played every season since, appearing with all the leading orchestras in the country and giving concerts as far west as the Pacific Coast. Mrs. Bloomfield-Zeisler went to London in the spring of 1898, and gave a series of concerts there in the course of the season that won her substantial praise. While she was there she was invited to take part in the annual Lower Rhine Music Festival at Cologne, May 29 to 31; she also played at a number of concerts in France. These performances deepened and confirmed the impression, made by her previous European appearances, of her remarkable power as an artist. She has since that time made other visits to Europe and has played frequently in many parts of the United States. She married Sigmund Zeisler, a lawyer of Chicago, in 1885.

Mrs. Bloomfield-Zeisler's style is one of individuality, fiery intensity, and incisiveness; that of a nervously high-strung artist. Her physique is frail and slender, but her strength and impetuosity are almost masculine in their effect, united at times with a feminine delicacy and beauty of touch. Her technique is highly developed in the most modern school, and rarely fails in accuracy. Her greatest success has been made in music of the modern composers. R. A.

BLOW, JOHN (1648-1708), is generally believed to have been born at North Collingham, Notts. The parish registers contain no entries relating to him or his family, but it has been recently discovered (*Athenæum*, Dec. 7, 1901) that in 1646 a Henry Blow was married at Newark to a widow named Katherine Langworth, and that three of their children were baptized at the same place, viz., Henry in 1647; John, Feb. 23, 1648-49, and Katherine. Since three of John Blow's children bore these Christian names, and as North Collingham is situated within six miles of Newark, it seems almost certain that the entries in the Newark registers refer to the parents of the composer and their family, and that Anthony à Wood's MS. note in the Bodleian Library (Wood, 19 D (4), No. 106) to the effect that 'Dr. Rogers tells me that John Blow was borne in London' cannot be relied on. Blow was one of the first set of the children of the Chapel Royal on its re-establishment in 1660 under Captain Cooke. Clifford's 'Divine Services and Anthems' (1663) contain the words of three anthems, 'I will magnifie,' 'Lord, thou hast been our refuge,' and 'Lord, rebuke me not,' which had been set by him at that date; and to the same early period in his career belongs his share of the so-called 'Club Anthem' 'I will always give thanks,' which was written in conjunction with Pelham Humphrey and William Turner: according to Tudway, to celebrate a naval victory over the Dutch in 1665; but on the authority of Boyce, as a record of the friendship of the three choristers. As Humphrey left the choir in 1664 it is more probable that Boyce's account of the origin of the work is correct. At about the same period Blow produced a two-part setting of Herrick's 'Goe, perjur'd man,' written at Charles II.'s request in imitation of Carissimi's 'Dite, o cieli.' It was probably during the time he was a chorister that Blow studied under John Hingeston and Christopher Gibbons. On August 21, 1667, Pepys wrote in his diary (ed. Wheatley, vii. 75): 'This morning came two of Captain Cooke's boys, whose voices are broke, and are gone from the Chapel, but have extraordinary skill; and they and my boy, with his broken voice, did sing three parts; their names were Blaew and Loggings; but, notwithstanding their skill, yet to hear them sing with their broken voices, which they could not command to keep in time, would make a man mad—so bad it was.' It has generally been assumed that Pepys's 'Blaew' was John Blow, but the editor of the diary remarks that this could hardly have been the case, as the composer at

this time would have been nineteen years of age. In 1669 Blow succeeded Albertus Bryne as organist of Westminster Abbey; on March 16, 1673-74, he was sworn in as a Gentleman of the Chapel Royal, and on July 21 following he succeeded Pelham Humphrey as Master of the Children. In September of the same year he was married at St. Paul's, Covent Garden, to Elizabeth, daughter of Edward Braddock, a member of the Abbey Choir and Clerk of the Cheque to the Chapel Royal. Within a few years from the date of his marriage Blow received the degree of Mus. Doc. It is generally believed that this was a Lambeth degree, conferred upon him by Archbishop Sancroft, but it is just possible that he may have obtained it at Oxford, the Catalogue of the Music School Collection showing that on at least three occasions—one so early as in 1671—act songs by him were performed in that university, though the list of graduates does not contain his name—no uncommon omission in the case of recipients of musical honours. That he was a Doctor of Music in 1678 is proved by an entry in the Act-Book of Westminster Abbey, which records that on Nov. 23 it was 'ordered that two leases be made to Dr. Blow of tenements in Atkins Alley in ye Sanctuary for ye Residue of a terme therein to come of a lease lately made to Mr. Rashleigh.' By a subsequent entry (April 30, 1687) it seems that he was granted a lease 'of tenements in ye Sanctuary' for forty years. About this time, *i.e.* between Dec. 10, 1680, and August 1687, he wrote the remarkable 'Masque for the Entertainment of the King,' 'Venus and Adonis,' in which the part of Venus was taken by Mary Davies, and that of Cupid by her daughter by Charles II., Lady Mary Tudor. This work, his only recorded composition for the stage, exists in contemporary manuscripts in the British Museum, Christ Church, Oxford, and Westminster Chapter Libraries; it was first printed in 1902 by Mr. G. E. P. Arkwright as vol. xxv. of his Old English edition (London, J. Williams).

In October 1676 the death of Dr. Christopher Gibbons created a vacancy of one of the three organists' posts in the Chapel Royal. It is generally believed that Blow was appointed, but the Cheque Book has no record of this, merely stating that 'Dr. Christopher Gibbons, organist, . . . departed this life the 20th day of October 1676, in whose place was sworne Mr. John Chrissostome Dusharoll the 26 day of the same month 1676.' Dusharoll (otherwise Sharole or Sharold) was in orders, and his name occurs among those of the 'ministers' at the Coronation of James II. in 1685. He died in 1687, in which year Chamberlayne (*Angliæ Notitia*) gives Blow's name as one of the three organists, the other two being Child and Purcell. The first mention in the Cheque Book of Blow as organist occurs in the list of the Gentlemen of the Chapel present at the Coronation of William and Mary (1689): at that of James II. Dr. Child heads the list of lay members of the chapel; his name is followed by those of the Clerk of the Cheque and of Blow, who is styled 'Master of the Children,' but no names of organists are given.

The various appointments held by Blow, and the dates when he occupied them, are rather obscure, mainly owing to the silence of contemporary records. In 1680 he is said either to have resigned or to have been dismissed from Westminster Abbey to make room for Purcell, on whose death in 1695 he was reappointed organist, remaining at the Abbey for the rest of his life. In 1687 he succeeded Wise as Almoner and Master of the Choristers at St. Paul's, which offices he resigned in 1693 to his pupil, Jeremiah Clarke. If Chamberlayne (*Angliæ Notitia*, 1692) is to be relied upon, in 1691 or 1692 he must also have resigned the Mastership of the Children of the Chapel Royal to Purcell, though the Cheque Book records that he held this post at his death. On the accession of James II. he was appointed a member of the royal band and composer in ordinary; in 1695 he shared with Father Smith the post of 'tuner of the regals, organ, virginals, flutes and recorders, and all other kind of wind instruments in ordinary to His Majesty' (Warrant, printed in *Musical Times*, Feb. 1, 1902); according to Chamberlayne (*Angliæ Notitia*), in 1692 he was master of the royal vocal music (Staggins being master of the band) at a salary of £100 per annum, and in 1699, 'upon a new establishment of a composer's place for the Chapell Royal' (*Cheque Book*, ed. Rimbault, Camden Soc. 1872, p. 23), Blow was appointed with an annual salary of £40, afterwards raised to £73. In 1684 he took part in the organ competition between Smith and Harris at the Temple Church, the latter engaging Draghi to play upon his instrument and the former Blow and Purcell, with the result that Smith was victorious.

In addition to the work which his numerous appointments entailed, Blow was a voluminous composer. For New Year's day 1681-2, he wrote an ode, 'Great sir, the joy of all our hearts,' which was followed by similar compositions for 1683, 1686, 1687, 1688, 1689, 1693 (?), 1694, and 1700; for 1684, 1691, 1695, and 1700, odes, etc., for the celebration of St. Cecilia's day, the first of which was printed in score, the year of its production. For the coronation of James II. he wrote two anthems, 'Behold, O God, our Defender' and 'God spake sometimes in visions.' In 1689 he contributed some harpsichord pieces to the second part of Playford's 'Musick's Handmaid' (reprinted in 1705 as 'A Choice Collection of Lessons . . . by Dr. John Blow and the late Mr. Henry Purcell,' etc.). In 1695 he published an Epicedium for Queen Mary; in 1696 an ode on the death of Purcell. In 1697 he wrote an

anthem ('I was glad when they said') for the opening of St. Paul's Cathedral, and in the same year another ('Praise the Lord, O my soul') to celebrate the peace of Ryswick. In 1700 there was issued a 'Choice Collection of Ayres for the Harpsichord or Spinett,' by Blow, Piggott, Clarke, Barrett, and Croft; another collection, containing four 'Setts,' or suites, entirely by Blow, was issued by Walsh without date (probably in 1704), besides a set of 'Psalms set full for the Organ or Harpsichord' (no date). In 1700 he published 'Amphion Anglicus,' a selection of songs, etc., dedicated to Princess (afterwards Queen) Anne, which he intended to follow by a collection of his church music. Most of this, however, still remains in manuscript. Boyce printed three services and eleven anthems, but the late librarian of the Sacred Harmonic Society, Mr. W. H. Husk, who spent much time in collecting and copying Blow's church music, enumerates fourteen services and upwards of one hundred anthems as being extant. Sacred songs and duets by Blow appeared in Playford's 'Harmonia Sacra,' and many secular songs and catches in the 'Pleasant Musical Companion,' the 'Catch Club,' the *Gentleman's Journal*, and other collections of the period. About 1697 Blow was living at an estate he had bought at Hampton, but his death took place at his house in Broad Sanctuary, Westminster, on Oct. 1, 1708. He was buried in the north aisle of the Abbey, and above his grave there is a monument to his memory, on which appears an open book, containing the 'Gloria' in Canon from his service in C.

His will (dated Jan. 3, 1707) has been printed by Mr. F. G. Edwards in the *Musical Times* (Feb. 1, 1902). It shows him to have possessed considerable property, which was mainly divided between his three daughters; 'my sister Cage' and 'my niece Elizabeth Blow' are also mentioned. His wife had died in childbed on Oct. 29, 1683, aged thirty. By her he had five children: (1) Henry (buried in Westminster Abbey, Sept. 1, 1676); (2) John (died June 2, 1693, aged 15); (3) Katherine (died unmarried, May 19, 1730); (4) Elizabeth (m. April 30, 1719, to Capt. William Edgeworth, and died Sept. 2, 1719); and (5) Mary (died unmarried, Nov. 19, 1738). In person Blow is said by Sir John Hawkins to have been a very handsome man 'and remarkable for a gravity and decency in his deportment suited to his station.' Three paintings of him are in existence: (1) a half-length in the possession of Mr. Algernon Ashton; (2) an oval head and shoulders, belonging to Dr. W. H. Cummings; and (3) a small head, at St. Michael's College, Tenbury. A fine print, drawn and engraved by R. White, is prefixed to 'Amphion Anglicus,' which also gives Blow's arms, argent, a saltire sable between 4 torteaux: the same coat appears on the tablet in Westminster Abbey.

Blow's considerable merits as a composer have always been overshadowed by those of his great pupil, Henry Purcell, and so little of his music has been printed that even now it is difficult to estimate his position properly. Dr. Burney, judging from the point of view of the late 18th century, devoted some pages of his history to an unusually bitter attack on the 'crudities' to be found in Blow's music. The particular instances quoted by Burney have been pronounced by Sir Hubert Parry (*Oxford History of Music*, iii. p. 276) to 'do Dr. Blow for the most part great credit, for they show that he adventured beyond the range of the mere conventional, and often with the success which betokens genuine musical insight.' The whole question has been excellently dealt with by Mr. G. E. P. Arkwright in his introduction to 'Six Songs by Dr. John Blow' (Old English edition, No. xxiii. 1900). W. B. S.

BLUETHNER. The great Saxon representative of modern piano-making is Julius Ferdinand Bluethner, born March 11, 1824, at Falkenhain near Merseburg. He opened his piano manufactory at Leipzig, Nov. 7, 1853. In 1873 he took out a patent for his Aliquot system, which, through the vibration by influence of an additional unused string to each note, increases the value in combination of the octave upper partial. Herr Bluethner has branch establishments in Hamburg, Berlin, and London. A. J. H.

BLUMENTHAL, Jacob, born at Hamburg, Oct. 4, 1829, pupil of F. W. Grund there, and of C. M. von Bocklet and Sechter in Vienna. His proficiency in pianoforte-playing was attained under Herz at the Conservatoire in Paris, which he entered in 1846. In 1848 he took up his residence in London, where he became pianist to Queen Victoria, and a very fashionable teacher. As a composer he is known for a large number of brilliant, effective, and pretty pianoforte pieces, and for many songs, some of which, such as 'The Message,' have become widely and justly popular. [Numerous song-albums, representing the work of his later life, are sincere in expression and artistic in style.] A. M.

BOB is a term used by change-ringers to denote certain changes in the working of the methods by which long peals of changes are produced. [See Change II.] C. A. W. T.

BOCCABADATI, Luigia, was born at Parma, where she received her musical education in a convent, and made a brilliant début in 1817. After singing at several theatres in Italy, she visited Munich, where her fine voice and good method were fully appreciated. She appeared at Venice in 1823, at Rome in 1824, at Milan in 1826, and again at Rome in 1827; and she met everywhere with the same success, especially in opera buffa, for which style of piece she was much in request. On this account she was persuaded to sing at Naples during the years 1829, 1830, and 1831. Despréaux, the composer, writing from Naples, Feb. 17, 1830 (*Revue Musicale*, vol. vii. p. 172), describes her

as 'a little dry, dark woman, who is neither young nor old. She executes difficult passages well; but she has no elegance, grace, or charm about her. Her voice, although extensive, is harsh at the top, but otherwise she sings in tune.' Berlioz says in the same *Revue* (xii. 75) in 1832, 'she is a *fort beau talent*, who deserves, perhaps, more than her reputation.' She appeared in London on Feb. 18, 1833, at the King's Theatre, in 'Cenerentola.' She was not successful here, and did not return another year. She sang at Turin for three seasons, and at Lisbon in 1840, 1841, and 1842. She returned to Turin in 1843, and sang at Genoa in 1844, and in the next year at Palermo. She was married to a M. Gazzuoli, by whom she had a son, and a daughter, Augustine, who was also a singer. Luigia Boccabadati died at Turin, Oct. 12, 1850. J. M.

BOCCHERINI, Luigi, a highly gifted composer, born at Lucca, Feb. 19, 1743. The first rudiments of music and the violoncello were taught him by his father, an ablé bass-player, and the Abbé Vannucci, Chapel-master to the Archbishop. The boy's ability was so great as to induce them to send him (1757) to Rome, where he rapidly made himself famous both as composer and player. Returning to Lucca he [entered the theatre orchestra, and was in the town band from 1764 to 1779. Two oratorios, 'Giuseppe riconosciuto' and 'Gioas,' were given at Lucca during this period, as well as an opera, probably 'La Clementina,' in 1765. He] joined Filippo Manfredi, a scholar of Tartini's, in a tour through Lombardy, Piedmont, and the south of France, and even as far as Paris, which they reached in 1768. Here they found a brilliant reception from Gossec, Capon, and Dupont, sen., and their appearance at the Concerts Spirituels confirmed the favourable judgment of their friends. Boccherini became the rage; Venier and La Chevardière, the publishers, contended for his first trios and quartets, the eminent Mme. Brillon de Jouy (to whom Boccherini dedicated six sonatas) attached herself to the two artists, and the Spanish ambassador, a keen amateur, pressed them to visit Madrid, promising them the warmest reception from the Prince of Asturias, afterwards Charles IV. Accordingly, in the end of 1768 or beginning of 1769 they started for Madrid, but their reception was disappointing. Brunetti the violinist was then in favour,[1] and neither King nor Prince offered the strangers any civility. They were, however, patronised by the Infante Don Luis, brother of the King, whom Boccherini has commemorated on the title-page of his six quartets (op. 6), calling himself 'Compositore e virtuoso di camera di S. A. R. Don Luigi infante d'Ispagnia,' a title which he retained until the death of the Infante in 1785. [He seems to have travelled in Germany between 1782 and 1787, and in the latter year] he dedicated a composition to Friedrich Wilhelm II., King of Prussia, which procured him a valuable present, and the post of Chamber-composer to the King, with an annual salary, but burdened with the condition that he should compose for the King alone. With the death of Friedrich in 1797 the salary ceased, and Boccherini found himself unknown except to a small circle of friends. He returned to Spain and found a patron in the Marquis Benavente, in whose palace he was able to hear his music performed by his former comrades of the Villa Arenas—whither his old protector Don Luis had retired after his *mésalliance*—and to become once again known. Meantime ill-health obliged him to drop the violoncello; he was often in want, and suffered severe domestic calamities. With the advent of Lucien Buonaparte, however, an ambassador of the French Republic at Madrid, better times arrived. Lucien appreciated Boccherini, and his productive talent revived. In 1799 he wrote six pianoforte quintets, and dedicated them to the French nation and Republic, but they were not published till after his death, and then appeared with the name of the Duchesse de Berri on the title-page. In 1801 and 1802 he dedicated twelve string quintets (op. 60 and 62) 'per il Cittadino Luciano Bonaparte,' and in 1801 a 'Stabat Mater' for three voices, presented to the same, and published by Sieber of Paris. After this Boccherini's star sank rapidly, and his poverty was so great that he was glad to make arrangements of his works for the guitar for the use of the Marquis Benavente and other wealthy amateurs, till at length death released him from his troubles on May 28, 1805. The last of his sons, Don José, died in Dec. 1847, as librarian to the Marquis Seralbo, leaving a son Fernando, professor at the Academy of Fine Arts in Madrid (1851), the last representative of the name of Boccherini.

The ability in Boccherini's chamber music, which is generally contemporary with Haydn's, is obvious and unquestionable. He is certainly wanting to some extent in force and contrast, but pleasant method, expressive melody, good treatment of ideas, and dignified style are never absent in his music. His originality was great, and had its influence on the progress of the art. To our practised ears his pieces may seem flat, tedious, wanting in variety of key, and too simple in execution, and doubtless these qualities have contributed to make them forgotten in Germany, though in England, Italy, and France his best works are still played and enjoyed. His quintets and violoncello sonatas (especially one of the latter in A) were formerly often given at the Monday Popular Concerts. [Six sonatas for violoncello were edited by Grützmacher and Piatti, one quintet for strings is in Payne's miniature edition, and four violoncello concertos were published in Paris in 1898.]

Boccherini and Haydn are often named

[1] [But see Brunetti, and Eitner's *Quellen-Lexikon*, s.v. Brunetti.]

together in respect of chamber music. It would be difficult to characterise the relation between them better than in the saying of Puppo the violinist, that 'Boccherini is the wife of Haydn.' It is usually assumed that these two great composers knew and esteemed each other's works, and that they even corresponded. No evidence of this is brought forward by Picquot, the earnest and accurate biographer of Boccherini, but it is nevertheless a fact. In a letter to Artaria ('Arenas, Feb. 1781') Boccherini sends his respects to Haydn, and begs him to understand that he is an enthusiastic admirer of his genius. Haydn, on his side, in two letters to Artaria, mentions his intention of writing to Boccherini, and in the meantime returns a complimentary message. Artaria at that time had published several string trios and quartets of Boccherini's, and had for long been in business relations with him.

Boccherini's facility was so great that he has been described as a fountain, of which it was only necessary to turn the cock to produce or suspend the stream of music. That he was remarkably industrious is evident from the detailed catalogue of his works made by Picquot. His first 6 trios date from 1760, and were followed in the next year by 6 quartets, published in Paris in 1768. The total number of his instrumental works amounts to 467, of which 74 are unpublished. The printed ones are as follows:—21 sonatas for pf. and vln.; 6 ditto for vln. and bass; 6 duets for two vlns.; 48 trios for two vlns. and vcl.; 12 ditto for vln. vla. vcl.; 102 string quartets; 18 quintets for flute or oboe, two vlns. vla. vcl.; 12 ditto for pf., two vlns. vla. vcl.; 113 ditto for two vlns. vla. and two vcelli.; 12 ditto for two vlns., two vlas. and vcl., 16 sextets for various instruments; 2 octets for ditto; 1 suite for full orchestra; 20 symphonies, including 8 concertante; 4 vcl. concertos. In addition to the above his vocal works are—A Stabat Mater for three voices, with quintet string accompaniment; a Mass for four voices and instruments; a Christmas Cantata for four solo voices, chorus, and orchestra; Villancicos or Motets for Christmas-time for four voices and orchestra; an Opera or Melodrama, 'La Clementina'; 14 Concert Airs and Duets, with orchestra. Of the vocal works the Stabat Mater alone is published (Paris, Sieber, op. 61). [The system of numeration, by which a new series of opus-numbers begins with each branch of his compositions, is very confusing: even from Eitner's catalogue, in the *Quellen-Lexikon*, it is difficult to get an exact idea of the extent of Boccherini's works.]

There are also many other pieces which are either spurious or mere arrangements by Boccherini of his own works. See *Notice sur la vie et les ouvrages de Luigi Boccherini, suivie du catalogue raisonné de toutes ses œuvres, tant publiées qu'inédites,* par L. Picquot, Paris, Philipp, 1851, with two portraits; and the biography by D. A. Cerù (1864). C. F. P.

BOCHSA, Robert Nicolas Charles, composer and eminent harpist, born at Montmédy, August 9, 1789, was the son of Karl Bochsa (d. 1821), a flute and clarinet player. He played the piano and flute in public at an early age, and composed airs de ballet for the theatre while yet a child. Before he was sixteen his opera 'Trajan' was produced at Lyons in honour of the Emperor's visit. His family having removed to Bordeaux, he became a pupil of Franz Beck, under whom he wrote a ballet, and an oratorio, 'Le Déluge Universel.' In 1806 he entered the Conservatoire at Paris as a pupil first of Catel and then of Méhul. He studied the harp under Nadermann and Marin, but soon formed a style of his own. He was continually discovering new effects, even to the close of his life, and may fairly be said to have revolutionised harp-playing. In 1813 he was appointed harpist to the Emperor Napoleon, and three years later to Louis XVIII. and the Duc de Berri. Eight operas from his pen were performed at the Opéra Comiquo between 1813 and 1816. He composed a requiem to the memory of Louis XVI., which was performed with great solemnity in Jan. 1816; but a year later he was detected in extensive forgeries, and fled from France, never to return. He was tried in his absence, and condemned to twelve years' imprisonment, with a fine of 4000 francs. He took refuge in London, where his fine playing was universally admired, and so popular did the harp become that he was unable to satisfy all the applicants for lessons. Parish-Alvars and J. B. Chatterton were both pupils of Bochsa. In 1822 he undertook the joint management, with Sir George Smart, of the Lent oratorios, and in 1823 the entire direction of them. Here he produced Stadler's 'Jerusalem,' oratorios by Wade and Sir John Stevenson, and his own 'Déluge Universel.' On the institution of the Royal Academy of Music, Bochsa was appointed professor of the harp and general secretary, but in 1827 was dismissed on account of public attacks upon his character which he was unable to deny. In 1826 he succeeded Coccia as conductor at the King's Theatre, and six years later was himself succeeded by Costa. Rossini's 'Comte Ory' was produced under his management. Bochsa gave annual concerts, the programme of which always contained some striking novelty, though not always in the best taste. For instance, at one of them, Jan. 22, 1829, Beethoven's 'Pastoral Symphony' was accompanied by acted illustrations. In 1839 he ran away with the wife of Sir Henry Bishop and undertook a concert tour, visiting every country of Europe (except France), America and Australia, where he died of dropsy at Sydney, Jan. 6, 1856. Immediately before his death he composed a requiem, which was performed at his funeral.

As a composer Bochsa was too prolific for his own fame. Some of his many compositions for the harp, including a 'Method' for that instrument, are still known to harp-players. As a man he was irregular and dissipated to the last degree. M. C. C.

BOCKLET, Carl Maria von, pianoforte-player, born at Prague, 1801; learned the pianoforte from Zawora, the violin from Pixis, and composition from D. Weber. In 1820 he settled in Vienna as first violin in the Theatre 'an der Wien,' but shortly after resigned the violin and gave his whole attention to the piano. Beethoven took much interest in him, and at different times wrote him three letters of recommendation (Nohl, *Beethovens Briefe*, Nos. 175, 176, 324). He was very intimate with Franz Schubert, whose piano compositions he was the first to bring into public notice, and for whom he had a romantic attachment. His great object in performance was to catch the spirit of the composition. Meeting with great success as a teacher he gradually withdrew himself from all public appearance; but in 1866, after a long interval, appeared once more to introduce his son Heinrich to notice. He died July 15, 1881. F. G.

BOCKSHORN, Samuel, born 1629, was originally pupil and afterwards director of the music at the Gymnasium in Pressburg, about 1655 was director of the music at the church of the Trinity, Nuremberg, and in 1657 capellmeister to the Duke of Würtemberg. He died at Stuttgart, Nov. 12, 1665. Amongst his compositions, many of which were published under his Latinised name, Capricornus, may be named 'Opus Musicum,' for 1-8 voices, with instrument (1655); 'Geistliche Concerten' (1658); 'Geistliche Harmonien' (1659, 1660, and 1664); 'Theatrum Musicum' (1659, 1669); the latter contains the 'Judicium Salomonis' (see Carissimi); 'Jubilus Bernhardi' (1660); 3 Pt. sonatas (1660); a dramatic cantata, 'Raptus Proserpinæ' (1662). Two 'Lieder von dem Leyden und Tode Jesu' were published in 1660, and a volume of *Neue-angestimmte . . . Tafel-Music* in 1670-1. A number of motets and other sacred compositions are in the Royal Library at Berlin and elsewhere. (See list in the *Quellen-Lexikon.*) His works were largely published, and even as late as 1708 a new edition of his Sonatas, Cappricci, Allemandes, etc., was published in Vienna. F. G.

BODE, Johann Joachim Christoph, born at Barum in Brunswick, Jan. 16, 1730. He had a strange and varied life as bassoon and oboe-player, composer, newspaper editor (*Hamburger Correspondent*), printer (Lessing's *Hamburgische Dramaturgie*), and translator (Burney's *Present State of Music in Germany*, 1773). He died at Weimar, Dec. 13, 1793. M. C. C.

BODENSCHATZ, Erhard, born at Lichtenberg in the Harz Mountains about 1570, studied theology and music at Leipzig, in 1600 became Cantor at Schulpforta, in 1603 Pastor at Rehausen, and in 1608 Pastor at Gross-Osterhausen, near Querfurt, where he died in 1638. Bodenschatz's Magnificat (1599) and his 'General-bass' show him to have been an able contrapuntist; but his real value arises from the collections of music which he brought out—'Psalterium Davidis,' 4 voc. (Leipzig, 1605); 'Florilegium hymnorum,' 4 voc. (Leipzig, 1606); 'Harmonia angelica,' a collection of Luther's hymns (1608); 'Bicinia XC' (1615); and especially 'Florilegium Portense,' in 2 parts. Of Part 1 the first edition was printed by Lamberg of Leipzig in 1603, and contains 89 motets—increased in the second edition (1618) to 120. Part 2 appeared in 1621, and contained 150 motets. There is no score of the work. It was published, like our own 'Barnard,' in separate parts, small 4to—8 of the first Part, and 9 of the second, including in the latter case a Basso continuo part. A copy of the work is in the British Museum. Its contents are as follows:—

PART I (1618).

1. Pater noster. L. Hasler. 8 voices.
2. Exultet cor meum. Anon. 8 v.
3. Benedicam. A. Gabriel. 8 v.
4. Deus meus. Erbach. 8 v.
5. Man wird zu Zion. Hausman. 8 v.
6. Quaerite. Calvisius. 8 v.
7. Audi hymnum. Bodenschatz. 8 v.
8. Laudate pueri. Orlandus. 7 v.
9. Laudate Dominum. Hasler. 8 v.
10. Repleatur os meum. Gallus. 5 v.
11. Confitebor. Orlandus. 8 v.
12. Nisi Dominus. Anon. 8 v.
13. Beatus vir. Gallus. 8 v.
14. Deus adiutor. Eremita. 8 v.
15. Exultate. Gabriel. 8 v.
16. Laudate Dominum. Anon. 8 v.
17. Deus canticum. Fabricius. 6 v.
18. Cantate Domino. Ammonis. 8 v.
19. Exultate. Dulichius. 8 v.
20. Sacerdotes stebant. Anon. 8 v.
21. Cantate Domino. Anon. 8 v.
22. Exaudiat te Dominus. Fabricius. 8 v.
23. Sis praesens Deus. Fabricius. 6 v.
24. Ego sum panis. Gallus. 6 v.
25. Domine quid. Orlandus. 6 v.
26. Cor mundum. Anon. 6 v.
27. Media vita. Gallus. 8 v.
28. Cibavit nos. Bassanus. 8 v.
29. O quam metuendus. Gallus. 8 v.
30. Jubilata. Giovanelli. 8 v.
31. Domine Dominus noster. Erbach. 8 v.
32. Jubilate. Marentius. 8 v.
33. Cantate. Horologius. 8 v.
34. Laudate Dominum. Cantoni. 8 v.
35. Laudata Dominum. Venturus. 8 v.
36. Veniet tempus. Gallus. 8 v.
37. Audi tellus Gallus. 8 v.
38. Non vos relinquam. Fabricius. 8 v.
39. Hymnum cantate. Massainus. 8 v.
40. In convertendo. Orlandus. 8 v.
41. O Domine Jesu Christe. A. Gabriel. 8 v.
42. Levavi oculos. Orlandus. 8 v.
43. Deus misereatur. Bischoff. 8 v.
44. Confitemini. Orlandus. 5 v.
45. Domine quis habitebit. Erbach. 6 v.
46. Deus in adiutor. Orlandus. 6 v.
47. Domine, quando veneris. Gallus. 8 v.
48. Jubilata. F. Weissensee. 8 v.
49. Cantate Domino. Gallus. 8 v.
50. Angelus ad pastores. Orlandus. 5 v.
51. Nesciens mater. Erbach. 5 v.
52. Angelus ad pastorea. H. Praetorius. 8 v.
53. Quem vidistis pastorea. A. Gabriel. 8 v.
54. Das altz Jahr. Calvisius. 8 v.
55. Surge illuminare. H. Praetorius. 8 v.
56. Nunc dimittis. Anon. 5 v.
57. A Domino factum. Hasler. 8 v.
58. Surge propere. H. Praetorius. 8 v.
59. Quam pulchra es. Bodenschatz. 5 v.
60. Tristis est anima. Orlandus. 5 v.
61. Adoramus te. Gallus. 6 v.
62. Filiae Jerusalem. Gallus. 8 v.
63. Dominus Jesus. Gallus. 8 v.
64. Ecce quomodo. Gallus. 4 v.
65. Alleluia. Gallus. 8 v.
66. Tulerunt Dominum. Massainus. 8 v.
67. Tulerunt Dominum. H. Praetorius. 8 v.
68. Angelus Domini. C. Erbach. 8 v.
69. O viri, O Galilaei. Boschettus. 8 v.
70. Veni Sancte. Gallus. 8 v.
71. Hodie completi. A. Gabriel. 7 v.
72. Hodie completi. Gallus. 8 v.
73. Adesto unus Deus. Neander. 8 v.
74. Duo seraphim. Ingignerus. 8 v.
75. Te Deum patrem. H. Praetorius. 8 v.
76. Te Deum patrem. Erbach. 8 v.
77. Factum est. H. Praetorius. 8 v.
78. Jam non dicam. Gallus. 6 v.
79. Gaudent in coelis. Fabricius. 8 v.
80. Jam non dicam. Phinot. 8 v.
81. Ingredienta Domino. Zalamella. 5 v.
82. Hierusalem gande. Gallus. 8 v.
83. Non auferetur. Meiland. 8 v.
84. Veni Domini. Gallus. 8 v.
85. Praeter rerum. Calvisius. 8 v.
86. Von Himel hoch. Calvisius. 8 v.
87. Freut euch. Calvisius. 6 v.
88. Gloria in excelsis. Calvisius.
89. Joseph, lieber Joseph. Calvisius. 8 v.[1]
85. Gloria tibi. H. Praetorius. 7 v.
86. Non auferetis. Rothius. 7 v.
87. Hoslanna. Mauritius Landgr. Hassiae. 8 v.
88. Hierusalem gaude. Zangius. 8 v.
89. Cum natus esset Jesus. Walliser. 8 v.
90. Hodie Christus. Anon. 8 v.

[1] The first edition ends here: in the second the numbers of the last five motets of the first edition are repeated.

91. Das alte Jahr. M. Praetorius. 8 v.
92. Herre nun lestu. Demantius. 6 v.
93. Ave gratia plena. Blanciardi. 6 v.
94. Surrexit Christus. Zangius. 8 v.
95. Apparuerunt Apostolis. Vincentius. 8 v.
96. Cantate. H. Praetorius. 8 v.
97. Venite exultemus. H. Praetorius. 8 v.
98. Jubilate. A. Berger. 8 v.
99. Cantate. A. Berger. 8 v.
100. Laudate Dominum. A. Berger. 8 v.
101. Super flumina. Vulpius. 8 v.
102. Domine Jesus. Walliser. 8 v.
103. Gaudent in coelis. Walliser. 8 v.
104. Omnes gentes. Stenccius. 8 v.
105. Benedicam. M. Praetorius. 6 v.
106. Benedicam. Francus. 8 v.
107. Ist nicht Ephraim. Hartmann. 8 v.
108. Lobet den Herrn. J. Gross. 8 v.
109. Ich habe den Gottlosen. Anon. 8 v.
110. Benedicta sit sancta. Oumpelzheim. 8 v.
111. Hodie nobis. L. Viadana. 8 v.
112. Hodie Christus. O. Gabriel. 8 v.
113. Magnum haerededitatis. Merulus. 8 v.
114. Corde natus. Vulpius. 8 v.
115. Deus spes nostra. Vulpius. 8 v.

PART II (1621).

1. Allein zu dir Herr. M. Roth. 8 v.
2. Anima mea exspectat. F. Weissensee. 8 v.
3. An Wasserflüssen Babylons. C. F. Walliser. 8 v.
4. Benedicat et Deus. M. Roth. 8 v.
5. Beati omnes. Anon. 8 v.
6. Benedictus es Dom. F. C. Gabutius. 8 v.
7. Congregati sunt. M. Roth. 8 v.
8. Confitemini. C. Vincentius (vel Capilupus). 8 v.
9. Confitebor tibi in Organis. M. Vulpius. 8 v.
10. Cantate Domino. A. Pacellus. 8 v.
11. Dominus regnavit. M. Roth. 8 v.
12. Der Herr wird dich. Do. 8 v.
13. Domine quis habitabit. Gabutius. 7 v.
14. Domine Jesu. Layton. 6 v.
15. Deus misereatur nostri. Pallavicinus. 8 v.
16. Domine quis habitabit. Anon. 8 v.
17. De profundis clamavi. T. Riccius. 8 v.
18. Deus meus ad te. Hasler. 6 v.

G.

BOEHM, Elizabeth, singer, born at Riga, 1756 ; made her first appearance, 1783 ; afterwards married the tenor Cartellieri at Strelitz, from whom she separated, and married again Boehm the actor, under whose name she became one of the most favourite actresses of the Berlin national theatre. She was the first to play Donna Elvira in Berlin (1790). She died 1797. F. G.

BÖHM, Georg, born at Goldbach near Gotha in 1661, was organist in Hamburg before 1698, when he became organist at the Johanniskirche of Lüneburg at the time when Bach was a member of the choir of the Michaeliskirche. It seems likely that it was his account of the music at Hamburg that suggested to Bach his famous journey to that city to hear Buxtehude. (See Spitta, *J. S. Bach* (Eng. trans.), i. 194-6.) Böhm seems to have retired in 1734, but to have been still living when Mattheson's *Vollk. Capellmeister* was published in 1739. He wrote music for Elmenhorst's hymns, a setting of the Passion, and many chorale-preludes and arrangements in the Royal and Hochschule libraries, Berlin, at Königsberg, Leipzig, etc. Some of his chorales, his suites, and a prelude and fugue for clavier, are minutely analysed by Spitta, *J. S. Bach* (Eng. trans.), i. 203-210. M.

BOEHM, Heinrich, born 1836 at Blasria in Bohemia, where his father was leader of the choir and composer of the opera of 'Krathonos' (Rübezahl). Heinrich himself composed 35 operas and operettas in Bohemian, and his name is well known on the stage of that country. F. G.

BOEHM, Joseph, a violinist of repute, born at Pesth, March 4, 1795. He was a pupil first of his father, and then of Rode, who took a lively interest in his talent. After having played with much success at Vienna in 1815 he travelled for several years in Italy, giving concerts in most of the principal towns. On his return to Vienna in 1819 he was appointed professor of the violin at the Conservatorium, which post he occupied till 1848. In 1821 he became a member of the imperial band, and retired in 1868. From 1823 to 1825 he travelled in Germany and France, earning applause everywhere for the soundness of his tone, his irreproachable technique, and his healthy musical style. But it is as a teacher that Boehm's name has won a permanent place in the history of modern violin-playing. For fifty years he resided at Vienna—(where he died, March 28, 1876)—devoting his powers to the instruction of his numerous pupils, among whom it will suffice to name Ernst, Joachim, L. Straus, Hellmesberger, and Singer. In fact, all the excellent violinists who during the last half-century have come from Vienna were pupils either of Boehm or Mayseder, or both. These two masters appear to have supplemented each other by the different bent of their talents: Mayseder excelling chiefly by brilliant technique, while breadth of tone and thorough musical style were the prominent features of Boehm's playing.

He has published a number of compositions for the violin, polonaises, variations, a concertino, also a string-quartet, which, however, are of no importance. P. D.

BOEHM, Theobald, a flute-player of distinction, and Hof-musicus at Munich, born there April 9, 1794. [But see Welch's *Hist. of the Boehm Flute*, p. 3, note, from which it appears that Boehm himself occasionally implied that he was born in 1793.] He died Nov. 25, 1881. Besides composing many brilliant works for his instrument, he introduced several notable improvements in its mechanism; especially a new fingering which bears his name, and was introduced in London about the year 1834. It has been found applicable also to the oboe and bassoon, and has been adapted by Klosé to the clarinet, though with less success than in the other cases, owing to the foundation of the latter scale on the interval of a twelfth.

Its principal peculiarity is the avoidance of what are termed 'cross-fingered' notes, viz. those which are produced by closing a hole below that through which the instrument is speaking. For this purpose the semitone is obtained by pressing down the middle finger of either hand, and the corresponding whole tone, by doing the same with the forefinger. A large number of duplicate fingerings is also introduced, which facilitate passages previously impracticable. On the flute the system has the advantage of keeping different keys more on a level as regards difficulty: E major, for instance, which on the old eight-keyed instrument was false, uneven in tone, and mechanically difficult, is materially simplified. On the other hand, it alters to a certain extent the quality of the tone, making it coarser and less characteristic. It also complicates the mechanism, rendering the instrument heavier, and more liable to leakage.

Boehm's method has been generally adopted by flute-players both in England and abroad. [The history of a famous controversy as to the priority of its invention may be read in Christopher Welch's *History of the Boehm Flute* (1896).] Klosé's modification applied to the clarinet is used in France for military bands; many of Boehm's contrivances are incorporated in the oboes of M. Barret as made by Triebert of Paris. Bassoons on this system are rarely to be met with (see Flute; Gordon). W. H. S.

BÖHNER, Johann Ludwig, deserves mention as the original of Hoffmann's 'Capellmeister Kreisler,' and thus of Schumann's 'Kreisleriana.' He was born Jan. 8, 1787, at Töttelstedt, Gotha, and had an immense talent for music, which was developed by his father and by Kittl, J. S. Bach's pupil; but, like Friedemann Bach, his habits were so irregular that he could never retain any regular employment. He wandered about through Germany, and in 1808 lived at Jena, where he made the acquaintance of Goethe and Hoffmann, and was about 1810 theatre conductor at Nuremberg, but returned in the end to his native village. At length, drink and privation carried him off on March 28, 1860. He gave a concert at Leipzig in Sept. 1834, in speaking of which Schumann[1] mentions that he 'looked so poverty-stricken as quite to depress me. He was like an old lion with a thorn in his foot.' He had at one time been celebrated for his improvisation, but at this date Schumann was disappointed by it—'it was so gloomy and dull.' This was in the early days of the *Neue Zeitschrift für Musik*, and Schumann utters a half intention to write Böhneriana for the paper, founded on the old man's own confessions, 'both humorous and pathetic.' These were afterwards to be the basis of the PF. pieces, op. 16, called the 'Kreisleriana' (1838). Böhner's absurdities almost pass belief. He announced an organ concert at Oldenburg, the church was filled and every one full of expectation, when Böhner appeared in the organ-loft and said, 'It is impossible for Ludwig Böhner to play to such an idiotic audience.'[2] Fétis gives a long list of his works, containing an opera, orchestral pieces, quartets, sonatas, motets, etc., ending with op. 120. [Some piano pieces were republished by the 'Böhner-Verein,' a small society in Gotha.] G.

BOËLLMANN, Léon, French composer and organist, born at Ensisheim (Alsace), Sept. 25, 1862, entered the École de Musique religieuse, founded in Paris by Niedermeyer, at an early age, as a pupil of Eugène Gigout. After

[1] *Jugend-Briefe.* Letter to von Fricken. [2] *Ibid.*

obtaining various honours at this school, he was appointed in 1881 sub-organist, and soon afterwards chief organist at the church of St. Vincent de Paul, Paris. Boëllmann tried, in his numerous compositions, every form excepting only dramatic music. A symphony in F was played at the Conservatoire of Nancy, and afterwards under Lamoureux in Paris; the Variations symphoniques for violoncello and orchestra have made his name famous abroad, and have been often played in London. A sonata for piano and violoncello; a quartet, op. 10, for piano and strings, a work which gained the prize of the Société des Compositeurs in 1877; a trio, and much church music; songs, and pianoforte pieces; a 'Suite gothique' for organ, and another suite for organ; 100 'Pièces brèves' and a fantaisie dialoguée for organ and orchestra, represent the principal works for his own instrument. He was a fine organ-player, and had a very remarkable gift of improvisation. Hugues Imbert, in a sketch of Boëllmann, has said, 'His music is naturally fresh, graceful, poetic, and built on solid scientific foundation. It is genuinely French, in that his harmonic treatment, though often bold, is never otherwise than clear. His symphonic compositions are written in a pure style, derived from his intimacy with the classics of music, and are admirably scored.' Boëllmann died in Paris, Oct. 11, 1897. G. F.

BOËLY, ALEXANDRE PIERRE FRANÇOIS, French composer, born at Versailles, April 19, 1785, died in Paris, Dec. 27, 1858, a pupil of the Conservatoire of Paris, studying both piano and violin. He wrote sonatas for piano, for piano and violin, string trios, organ pieces, all of which are remarkable for their depth of thought and sincerity of intention. G. F.

BOESENDORFER, LUDWIG, the most famous piano-maker in Vienna. The firm was founded in 1828 by Ignaz (born July 28, 1796; died April 14, 1859), the father of Ludwig, who, born in April 1835, succeeded to the business in 1859. While adopting overstringing and high tension with nearly all other leading piano-makers, he has adhered to the light Viennese action for his ordinary grand pianos, adopting, however, the English action with a simple repetition contrivance for his concert grand instruments. He went beyond all others in compass, his 'Imperial' grand pianos having the extraordinary range of 8 octaves (from F below the usual A). These were given up after a time, and the extreme compass reduced to 7½ octaves. He opened a concert room in 1872, in which nearly all the chamber music concerts and piano recitals given in Vienna now take place. A. J. H.

BOESSET, PIERRE GUÉDRON[1] ANTOINE, Sieur de Villedieu, born about 1585, died Dec. 1643, intendant of the Queen's music, 1615; maître de musique to Louis XIII., 1617; intendant of the King's music, 1627, and 'surintendant de la musique des chambres du roi et de la reine,' 1632; composer of court ballets, 24 in number, and ten books of airs in four and five parts, which attained immense popularity in their day. An English translation of the first book of his airs appeared with the title 'Court Ayres with their Ditties Englished' (London, 1629). Some masses and motets are in the Bibl. Nationale in Paris. He was succeeded in his posts and titles at the court of Louis XIV. by his son JEAN BAPTISTE, born 1612, died 1685, and he, in 1667, by his son CLAUDE JEAN BAPTISTE, born about 1636, who composed, in addition to ballets for the court, a series of duets called 'Fruits d'Automne' (Paris, 1684). M. C. C.

[1] [He married a daughter of his predecessor, Pierre Guédron, and adopted his name as above, on the title of 'Court Ayres.' *Quellen-Lexikon.*]

BOHÈME, LA, opera in four acts, libretto founded on Mürger's *Vie de Bohème* by Giuseppe Giacosa and Luigi Illica, music by Giacomo Puccini. Produced at the Teatro Regio, Turin, Feb. 1, 1896. In English, as 'The Bohemians,' at Manchester (Carl Rosa Company), April 22, 1897, and at Covent Garden, with the same company, Oct. 2 of the same year. In Italian, at Covent Garden, July 1, 1899. Another opera on the same subject by Leoncavallo was produced at the Teatro Lirico, Milan, in the autumn of 1897. M.

BOHEMIAN GIRL, THE, a grand opera in three acts; the libretto adapted by Bunn from Fanny Ellsler's ballet of 'The Gipsy' (not the 'Gitana'); the music by Balfe. Produced at Drury Lane, Nov. 27, 1843, also at Her Majesty's, Feb. 6, 1858, as 'La Zingara' (Piccolomini as Arline); and in Dec. 1869, at the Théâtre Lyrique, Paris, as 'La Bohémienne,' with additions by the composer.

BOHEMIAN STRING QUARTET. Although this organisation, three members of which are still young men, dates back no further than from 1891, its doings already fill an interesting page in the history of chamber music, a taste for which it has materially helped to foster. No other four artists, with the possible exception of the 'Kneisel Quartet' in America, have so completely relinquished solo for quartet playing. Travelling and playing constantly together, Karel Hoffmann (first violin), Josef Suk (second violin), Oskar Nedbal (viola), and Hanus Wihan (violoncello) have realised the democratic ideal of a quartet in which neither instrument is unduly prominent, but in which each has in turn entire freedom of utterance. The second violin and viola are held by artists no less competent than the leader, whilst the violoncellist, an older and experienced man, has acted from the first as 'coach' to the party; thus each plays his part on strong and individual lines. Their performances are full of fire and virility, qualities which find enthusiastic admirers all the world over; but the more discriminating among the critics have not failed to observe that such

interpretations as theirs are mainly satisfactory when the work performed is more or less orchestral in style. In works of the pure classical school they lack repose and the finer touches. They are heard at their best in Czech music, especially in the quartet of Smetana which bears the title 'Aus meinem Leben,' of which they give an unapproachable rendering, and in the chamber works of Dvořák and other Bohemian composers.

All received their early training at the Conservatoire of Prague, a city which rivals Liège as a nursery of young violinists. Here KAREL HOFFMANN was born, Dec. 12, 1872, and studied in the Conservatoire for seven years. JOSEF SUK, born Jan. 4, 1874, at Křečovic, did more than study the violin. He studied composition under Dvořák (whose son-in-law he has since become), and to such purpose that he is now looked upon as one of the shining lights of the new Bohemian school. His earliest works were a dramatic overture and a piano quartet, the latter winning him a State scholarship. Since then he has written several orchestral compositions, including an overture to *A Winter's Tale*, two suites for the pianoforte, a piano quintet, and a string quartet in A minor, op. 11, which has been heard in London. OSKAR NEDBAL, born at Tavor, March 25, 1874, is also a pupil of Dvořák, and has composed, amongst other pieces, a sonata for piano and violin, op. 9, often played in London. He has acted both in Vienna and London as conductor of an orchestra composed entirely of Czech musicians. HANUS WIHAN, violoncellist and *doyen* of the party, was born at Politz, June 5, 1855, and held many good appointments before casting in his lot with the others. Notably he was a member of King Louis II.'s quartet in Munich, in whom Wagner took great interest, inviting them more than once to his house in Bayreuth. He has great mastery over his instrument, which he plays in racy and somewhat unconventional fashion. Hoffmann, Suk, and Nedbal were all pupils of his in the chamber-music class of which he was director at the Prague Conservatoire, and by him the Bohemian quartet was founded, although he only became an active member of the party after the retirement of the original violoncellist, Otto Berger (1873-97) owing to ill-health. W. W. C.

BOHRER, the name of a family of musicians. (1) CASPAR, born 1744 at Mannheim, trumpeter in the court band, and remarkable performer on the double-bass; called to Munich in 1778, and died there Nov. 14, 1809. (2) His son and pupil ANTON, born at Munich, 1783, learned the violin from Kreutzer, and composition from Winter and Danzi, and became violin-player in the court orchestra at Munich. With his brother MAX (born 1785), a clever violoncellist, he undertook in 1810 an extensive tour, ending in Russia, where they narrowly escaped transportation to Siberia as employés of the King of Bavaria, Napoleon's ally. In 1823 the brothers were appointed to the royal orchestra in Berlin, but, quarrelling with Spontini, lost their posts. Anton then resided in Paris till 1834, when he was made Concertmeister at Hanover; he died in 1852. Max was first violoncellist and Concertmeister at Stuttgart, from 1832 until his death, Feb. 28, 1867. The brothers married two sisters of Ferdinand David and of Madame Dulcken. Anton's daughter, SOPHIE, a girl of much promise as a piano-player, died in 1849 at Petersburg, aged twenty-one. F. G.

BOIELDIEU, FRANÇOIS ADRIEN,[1] was born December 16 (not 15), 1775, at Rouen, where his father held the position of secretary to Archbishop Larochefoucauld. His mother kept a milliner's shop in the same city. The union does not seem to have been a happy one. We know at least that during the Revolution the elder Boieldieu availed himself of the law of divorce passed at that time to separate from his first wife and contract a second marriage. Domestic dissensions were perhaps the reason why our composer, when his talent for music began to show itself, exchanged the house of his parents for that of his master, the organist of the cathedral, Broche, who, although an excellent musician and pupil of the celebrated Padre Martini, was known as a drunkard, and occasionally treated Boieldieu with brutality. On one occasion, it is said, the boy had stained one of his master's books with ink, and in order to evade the cruel punishment in store for him escaped from Broche's house and went on foot to Paris, where he was found after much trouble by his family. He seems to have been better treated by Broche after his return. We are not informed of any other master to whom the composer owed the rudimentary knowledge of his art. This knowledge, however acquired, was put to the test for the first time in 1793, when an opera by Boieldieu, called 'La fille coupable' (words by his father), was performed at Rouen with considerable success. It has hitherto been believed that Boieldieu left Rouen for Paris immediately, or at least very soon after, this first attempt. This, however, must be a mistake, unless we accept the improbable conjecture of a second temporary sojourn in the capital. Certain it is that Boieldieu was again in Rouen, October 28, 1795, when another opera by him, 'Rosalie et Myrza,' was performed at the theatre of that city. The success of this second venture does not seem to have been brilliant, to judge at least by the *Journal de Rouen*, which, after briefly noticing the book, observes silence with regard to the music. Many of Boieldieu's charming ballads and chansons owe their origin to this period, and added considerably to the local reputation of the young composer. Much pecuniary

[1] An important work by A. Pougin, *Boieldieu: sa vie, ses œuvres, son caractère, sa correspondance*, published in 1875, has thrown new light on the composer's career, and corrected many erroneous statements made by Fétis and other biographers.

FRANÇOIS ADRIEN BOIELDIEU

advantage he does not seem to have derived from them, for Cochet, the Paris publisher of these minor compositions, told Fétis that Boieldieu was glad to part with the copyright for the moderate remuneration of twelve francs apiece. Soon after the appearance of his second opera Boieldieu left Rouen for good. Ambition and the consciousness of power caused him to be dissatisfied with the narrow sphere of his native city, particularly after the failure of a plan (advocated by him in an article in the *Journal de Rouen*, entitled 'Réflexions patriotiques sur l'utilité de l'étude de la musique') of starting a music school on the model of the newly-founded Conservatoire.

To Paris therefore Boieldieu went for a second time, with an introduction from Garat the singer to Jadin (a descendant of the well-known Belgian family of musicians), at whose house, as well as at that of the Erards, be found a hospitable reception, and became acquainted with the leading composers of the day, Cherubini amongst the number. Boieldieu made his début as an operatic composer in the capital with the 'Deux lettres' (1796), and the 'Famille Suisse,' which was performed at the Théâtre Feydeau in 1797, and had a run of thirty nights. Other operas followed in rapid succession, amongst which we mention 'Zoraïme et Zulnare' (written before 1796, but not performed till 1798), 'La Dot de Suzette' (same year), 'Beniowski' (after a drama by Kotzebue; performed in 1800 at the Théâtre Favart), and 'Le Calife de Bagdad' (performed in September of the same year with enormous success). To these operatic works ought to be added some pieces of chamber music, which we mention less for their intrinsic value than for the sake of completeness. They are, according to Fétis, a concerto and six sonatas for pianoforte, duets for piano and violin, duets for harp and pianoforte, and three trios for pianoforte, harp, and violoncello. To the success of these minor compositions Boieldieu owed his appointment as professor of the pianoforte at the Conservatoire in 1800. With the same year we may close the first period of Boieldieu's artistic career. The 'Calife de Bagdad' is the last and highest effort of this period. If Boieldieu had died after finishing it he would be remembered as a charming composer of pretty tunes cleverly harmonised and tolerably instrumented—in short, as an average member of that French school of dramatic music of which he is now the acknowledged leader. Boieldieu's first manner is chiefly characterised by an absence of style—of individual style at least. Like most men of great creative power and of autodidactic training, like Wagner for instance, Boieldieu began by unconsciously adopting, and reproducing with great vigour, the peculiarities of other composers. But every new advance of technical ability implied with him a commensurate step towards original conception, and his perfect mastery of the technical resources of his art coincided with the fullest growth of his genius. During this earlier period matter and manner were as yet equally far from maturity.. This want of formal certainty was felt by the composer himself, if we may believe a story told by Fétis, which, although somewhat doubtful on chronological grounds, is at any rate plausibly invented. He relates that, during the composition of the 'Calif of Bagdad,' Boieldieu used to submit every new piece as he wrote it to the criticism of his pupils at the Conservatoire. When, as happened frequently, these young purists took exception at their master's harmonic peccadilloes, the case was referred to Méhul, to whose decision, favourable or unfavourable, Boieldieu meekly submitted. Considering that at the time Boieldieu was already a successful composer of established reputation, his modesty cannot be praised too highly. But such diffidence in his own judgment is incompatible with the consciousness of perfect formal mastership.

After one of the successful performances of the 'Calife' Cherubini accosted the elated composer in the lobby of the theatre with the words 'Malheureux! are you not ashamed of such undeserved success?' Boieldieu's answer to this brusque admonition was a request for further musical instruction, a request immediately granted by Cherubini, and leading to a severe course of contrapuntal training under the great Italian master. The anecdote rests on good evidence, and is in perfect keeping with the characters of the two men. Fétis strongly denies the fact of Boieldieu having received any kind of instruction or even advice from Cherubini—on what grounds it is not easy to perceive. Intrinsic evidence goes far to confirm the story. For after the 'Caliph of Bagdad' Boieldieu did not produce another opera for three years, and the first work brought out by him after this interval shows an enormous progress upon the compositions of his earlier period. This work, called 'Ma tante Aurore,' was first performed at the Théâtre Feydeau, Jan. 13, 1803, and met with great success. In June of the same year the composer left France for St. Petersburg. His reasons for this somewhat sudden step have been stated in various ways. Russia at that time was the El Dorado of French artists, and several of Boieldieu's friends had already found lucrative employment in the Emperor's service. But Boieldieu left Paris without any engagement or even invitation from the Russian court, and only on his reaching the Russian frontier was agreeably surprised by his appointment as conductor of the Imperial Opera, with a liberal salary. It is very improbable that he should have abandoned his chances of further success in France, together with his professorship at the Conservatoire, without some cause sufficient to make change at any price desirable. Domestic troubles are named by most biographers as

this additional reason. Boieldieu had in 1802 contracted an ill-advised marriage with Clotilde Mafleuroy, a dancer; the union proved anything but happy, and it has been asserted that Boieldieu in his despair took to sudden flight. This anecdote, however, is sufficiently disproved by the fact, recently discovered, of his impending departure being duly announced in a theatrical journal of the time. Most likely domestic misery and the hope of fame and gain conjointly drove the composer to a step which, all things considered, one cannot but deplore. Artistically speaking the eight years spent by Boieldieu in Russia must be called all but total eclipse. By his agreement he was bound to compose three operas a year, besides marches for military bands, the libretti for the former to be found by the Emperor. But these were not forthcoming, and Boieldieu was obliged to have recourse to books already set to music by other composers. The titles of numerous vaudevilles and operas belonging to the Russian period might be cited, such as 'La jeune femme colère' (1805), 'Télémaque' (1807), 'Aline, reine de Golconde' (1808) (to words previously set by Berton), 'Rien de trop' (originally a vaudeville, 'Les Deux Paravents') (1810), 'Les voitures versées,' also the choral portions of Racine's 'Athalie.' Only three of these were reproduced by Boieldieu in Paris; the others he consigned to oblivion. 'Télémaque' ought to be mentioned as containing the charming air to the words 'Quel plaisir d'être en voyage,' afterwards transferred to 'Jean de Paris.'

In 1811 Boieldieu returned to Paris, where great changes had taken place in the meantime. Dalayrac was dead; Méhul and Cherubini, disgusted with the fickleness of public taste, kept silence; Nicolo Isouard was the only rival to be feared. But Boieldieu had not been forgotten by his old admirers. The revival of 'Ma tante Aurore' and the first performance in Paris of an improved version of 'Rien de trop' were received with applause, which increased to a storm of enthusiasm when in 1812 one of the composer's most charming operas, 'Jean de Paris,' saw the light. This is one of the two masterpieces on which Boieldieu's claim to immortality must mainly rest. As regards refined humour and the gift of musically delineating a character in a few masterly touches, this work remains unsurpassed even by Boieldieu himself; in abundance of charming melodies it is perhaps inferior, and inferior only, to the 'Dame Blanche.' No other production of the French school can rival either of the two in the sustained development of the excellences most characteristic of that school. After the effort in 'Jean de Paris' Boieldieu's genius seemed to be exhausted: nearly fourteen years elapsed before he showed in the 'Dame Blanche' that his dormant power was capable of still higher flights. We will not here encumber the reader's memory with a list of names belonging to the intervening period (see list below). Many of these operas were composed in collaboration with Cherubini, Catel, Isouard, and others; only 'Le nouveau seigneur de village' (1813) and 'Le petit Chaperon rouge' (1818), both by Boieldieu alone, may be mentioned here. After the successful production of the last-named opera, Boieldieu, who had been appointed in 1817 to succeed Méhul as professor of composition in the Conservatoire, did not bring out a new entire work for seven years. In December 1825 the long-expected 'Dame Blanche' saw the light, and was received with unprecedented applause. Boieldieu modestly ascribes part of this success to the national reaction against the Rossini-worship of the preceding years. Other temporary causes have been cited, but the first verdict has been confirmed by many subsequent audiences. Up till June 1875 the opera was performed at one and the same theatre 1340 times, and yet its melodies sound as fresh and are even now received with as much enthusiasm as on that eventful night of Dec. 10, 1825, so graphically described by Boieldieu's pupil Adam. Such pieces as the cavatina 'Viens gentille dame,' the song 'D'ici voyez ce beau domaine,' or the trio at the end of the first act, will never fail of their effect as long as the feeling for true grace remains.

The 'Dame Blanche' is the finest work of Boieldieu, and Boieldieu the greatest master of the French school of comic opera. It is therefore difficult to speak of the composer, and of the work most characteristic of his style, without repeating to some extent, in a higher key of eulogy, what has already been said in these pages of other masters of the same school. With Auber, Boieldieu shares verve of dramatic utterance, with Adam piquancy of rhythmical structure, while he avoids almost entirely that bane of modern music, the dance-rhythm, which in the two other composers marks the beginning of the decline and fall of the school. Peculiar to Boieldieu is a certain homely sweetness of melody, which proves its kinship to that source of all truly national music, the popular song. The 'Dame Blanche' might indeed be considered as the artistic continuation of the *chanson*, in the same sense as Weber's 'Der Freischütz' has been called a dramatised Volkslied. With regard to Boieldieu's work this remark indicates at the same time a strong development of what in a previous article has been described as the 'amalgamating force of French art and culture'; for it must be borne in mind that the subject treated is Scotch. The plot is a compound of two of Scott's novels, *The Monastery* and *Guy Mannering*. The Scotch airs, also, introduced by Boieldieu, although correctly transcribed, appear, in their harmonic and rhythmical treatment, thoroughly French. The tune of 'Robin Adair,' described as 'le chant ordinaire

de la tribu d'Avenel,' would perhaps hardly be recognised by a genuine North Briton; but what it has lost in raciness it has gained in sweetness. In the finale of the second act we have a large ensemble of seven solo voices and chorus. All these comment upon one and the same event with sentiments as widely different as can well be imagined. We hear the disappointed growl of baffled vice, the triumph of loyal attachment, and the subdued note of tender love—all mingling with each other and yet arranged in separate groups of graphic distinctness. This ensemble, and indeed the whole auction scene, deserve the appellation 'classical' in the highest sense of the word.

The remainder of Boieldieu's life is sad to relate. He produced another opera, called 'Les Deux Nuits,' in 1829, but it proved a failure, owing chiefly to the dull libretto by Bouilly, which the composer had accepted out of good nature. This disappointment may have fostered the pulmonary disease, the germs of which Boieldieu had brought back from Russia. In vain he sought recovery in the mild climate of Southern France. Pecuniary difficulties increased the discomforts of his failing health. The bankruptcy of the Opéra Comique and the expulsion of Charles X., from whom he had received a pension, deprived Boieldieu of his chief sources of income. At last M. Thiers, the minister of Louis Philippe, relieved the master's anxieties by a Government pension of 6000 francs. [For some time about 1833, Boieldieu lived at Geneva; see an interesting article in the *Rivista Musicale Italiana*, vii. 269.] Boieldieu died Oct. 8, 1834, at Jarcy, his country house, near Paris. The troubles of his last years were shared and softened by his second wife, a singer named Phillis, to whom the composer was united in 1827 after a long and tender attachment. By her he had a son, ADRIEN LOUIS VICTOR, born Nov. 3, 1815, and educated at the Conservatoire under his father. He wrote several comic operas, some of which have been successfully performed at the Opéra Comique and other theatres. It was perhaps chiefly the burden of his name which prevented him from taking a more distinguished position amongst contemporary French composers. At the centenary celebration of his father's birthday at Rouen in 1875, a mass, and a comic opera by the younger Boieldieu, called 'La Halte du Roi,' were performed with great success.

The following titles complete the list of Boieldieu's works:—

'L'heureuse nouvelle,' 1797; 'Le Pari, ou Mombreuil et Merville,' 1797; 'La dot de Suzette,' 1797; 'Les Méprises espagnoles,' 1799; 'Emma, ou La Prisonnière' (with Cherubini), 1799; 'Beniowski' 1799; 'Le Baiser et la Quittance' (with Méhul, Kreutzer, and Nicolo), 1803. Produced at St. Petersburg—'Amour et Mystère,' 'Abderkhan,' 'Un Tour de Soubrette,' 'La Dame invisible,' 1808. After his return to Paris—'Bayard à Mézières' (with Cherubini, Catel, and Nicolo), 1814; 'Les Béarnais, ou Henri IV. en voyage' (with Kreutzer), 1814; 'Angéla, ou l'Atelier de Jean Cousin' (with Mme. Gail), 1814; 'La Fête du Village voisin,' 1816; 'Charles de France, ou Amour et Gloire' (with Hérold), 1816; 'Blanche de Provence, ou La Cour des Fées' (with Berton, Cherubini, Kreutzer, and Paër), 1821; 'La France et l'Espagne,' 1823; 'Les Trois Genres' (with Auber), 1824; 'Pharamond' (with Berton and Kreutzer), 1825; and 'La Marquise de Brinvilliers' (with Auber, Batton, Berton, Blangini, Carafa, Cherubini, Hérold, and Paër), 1831. (Pougin's Supplement to Fétis's Dictionary.) 'Marguerite' was produced after Boieldieu's death in 1838; and 'L'Aieule,' another posthumous work, in 1841. (*Quellen-Lexikon.*)

F. H.

BOISDEFFRE, RENÉ DE, French composer, born at Vesoul, April 3, 1838, has lived since 1843 in Paris. He has been favourably known as a composer since 1864; in 1883 he gained the Prix Chartier with his chamber compositions, among which may be mentioned, pianoforte sonatas, two trios, a piano quartet, two piano quintets, and a piano sestet, op. 43. He has written 'Scènes champêtres,' a symphony in A minor, and other works for orchestra, a 'Messe solennelle,' and a cantata-setting of the 'Cantique des Cantiques.' Boisdeffre writes with great elegance of style, but lacks the qualities of invention required in composers of the highest rank. (See the sketch by Hugues Imbert in *Nouveaux Profils de Musiciens*, 1892.) G. F.

BOITO, ARRIGO, Italian poet and composer, born at Padua, Feb. 24, 1842. His father was an Italian painter, and his mother a Polish lady, Countess Josephine Radolinska, which to a great extent accounts for the blending of northern and southern inspiration that is the characteristic of all Arrigo Boito's poetical and musical works. From an elder brother, Camillo, an eminent architect, critic and novelist, Arrigo acquired from his early years a taste for poetry. It may be said here that it was Camillo Boito who directed his brother's attention to Goethe's *Faust* as the proper subject for a grand opera, and this years before Gounod's masterpiece was written.

In 1856 Boito's mother left Padua and settled in Milan so that he might study at the Conservatorio there. Arrigo was admitted as a pupil in the composition class of Alberto Mazzucato. It is asserted on excellent authority that during the first two years at the school, he showed so little aptitude for music, that more than once the director, Lauro Rossi, and the examiners were on the point of dismissing him, and it was only owing to the determinate and steady opposition of his professor that the decisive measure was not carried out. This fact, compared with a similar incident in the career of Verdi, who at a comparatively advanced age was refused admission to the same institution on the ground that he had no aptitude for the study of music, will not fail to strike the reflective mind, and to show how in some cases genius may be latent, and may reveal itself only after years of well-directed industry.

The musical lessons at the Conservatorio being over before noon, the young Arrigo would regularly spend his afternoons and evenings in the library of the Brera studying literature. The time thus spent was soon productive of excellent fruit: before he had reached his eighteenth year, he was familiar with the Greek and Latin classics, had acquired a perfect mastery of the

Italian and French languages, and his first essays in the Italian and French press at once attracted the attention of scholars in both countries to him. Some articles in a French review were the cause of Victor Hugo's writing a most flattering letter to the unknown author, while in Italy Andrea Maffei and others publicly complimented him on his early poems.

It is a custom at the Conservatorio of Milan that the most successful pupils of composition on leaving school should write either an operetta or a cantata to be performed on the occasion of the annual distribution of prizes. Boito's work was 'Il 4 Giugno' (1860); and on leaving the Conservatorio, Arrigo Boito and Franco Faccio set to work together and produced a cantata, 'Le Sorelle d'Italia' (The Sisters of Italy), the poem by Boito, the music of the first part by Faccio, the music of the second part by Boito. By the time this cantata was performed in 1862, musical circles were greatly interested in the two pupils, as it was known that Faccio was already far advanced in his opera 'I profughi Fiamminghi,' and that Boito had already written and composed several numbers of his 'Faust,'—the garden scene, just as it now stands in 'Mefistofele,' belongs entirely to that period.

'Le Sorelle d'Italia' was an enormous success, so much that the Italian Government, which is perhaps the least musical in Europe, and the least inclined to patronise art, found itself almost forced by the current of public opinion to award the two *maestri* a sum of money, besides the gold medal, to enable them to reside for two years in various capitals of Europe.

As some forty years ago the staple, and we may almost say, the only paying article in the music market in Italy was operatic music, there was not the remotest thought of publishing the cantata, successful as it had been, and only two short duets for female voices, the one by Faccio and the other by Boito were printed. Unluckily the manuscript score, which ought to have been deposited at the library of the Conservatorio, through the carelessness of the keeper of the library and of the director Lauro Rossi, was lent and never returned, so that, unless chance throws the manuscript in the way of some musician, no hope can be entertained of ever hearing again that interesting work, the authors themselves having kept no copy.

During his residence abroad, Boito spent most of his time in Paris, and a considerable part of the rest in Germany. Strange as it may seem, Wagner's operas, which he had now an occasion of hearing for the first time, did not alter in the least his musical opinions and feelings: a change came over his mind many years after, when he began the critical study of the works of Sebastian Bach. He left Milan holding Marcello, Beethoven, Verdi, and Meyerbeer as the greatest composers in their respective fields, and when he came back he was even strengthened in his belief, though he had had many opportunities of hearing excellent performances of the best music. Yet—perhaps unconsciously—he did not feel at one on musical subjects with the majority of his countrymen. His genius, his keen appreciation of the beautiful, his devotion to Beethoven and Marcello, had enlarged his ideas beyond the limits that were imposed upon an operatic composer, and whilst leisurely working at his 'Faust' he could not bring himself to give it the fashionable and only accepted form of the Italian opera. He was too modest to preach a new faith, too honest to demolish before knowing how and what to build, and too noble to write with the sole end of amusing his fellow creatures. This, and the success of Gounod's 'Faust' in Milan, a success that obliged him to give up any idea of having his own 'Faust' performed, gave gradually a different turn to his mind, and he eventually found himself more busy with literature than with music. All his lyrics bear the date from 1861 to 1867 (they were afterwards published, with the anagram 'Tobia Gorrio' as the author's name, at Turin in 1877): his novel, 'L' Alfier Meno,' was also written in these years. He started, together with Emilio Praga and other friends, a lively, brilliant, but short-lived newspaper, *Figaro*; he contributed critical essays to Italian and French reviews, and was one of the most active and valuable contributors to the *Giornale della Società del Quartetto di Milano*, a musical paper edited by Alberto Mazzucato, whose aim was to excite an interest in, and spread a taste for, the study of instrumental music.

Englishmen, accustomed to numberless concerts where music of the great composers may be heard, will hardly realise what the condition of Milan—by far the most advanced musical town in Italy—was in the sixties. *Music* and *opera* were synonymous words, and no one cared for anything that had not been or could not be performed with success at the Scala. Bach, Beethoven, Mozart, Mendelssohn, Schumann, were as much unknown as if they had never been born. Even as late as 1876, the only copy of Beethoven's Symphonies to be had at the library of the Conservatorio, was a cheap edition printed at Mendrisio, and so full of mistakes as to be in some parts unintelligible. This state of things was absolutely alarming, and several more enlightened persons, amongst them the publisher Ricordi, Mazzucato, Boito, Filippi, etc., decided to start a Society of Concerts and a newspaper, in order to improve the public taste, and make it at least possible for the new composers to have a chance of being heard and appreciated.

Boito did much useful work in this direction: his articles were full of enthusiasm, and were interesting and readable. Amongst various miscellaneous articles he contributed one essay on 'Mendelssohn in Italy,' published in instal-

ments, in which he spoke of his hero in such a manner that it was considered disrespectful towards Italian composers and the Italians at large, and led to a duel, wherein the ardent musician was worsted, and in consequence of which he had to carry his right arm in a sling for several weeks afterwards.

In 1866 the war with Austria put a stop to all musical business, and Boito, Faccio, Tagliabue, Emilio Praga, and others, joined the volunteer corps under the command of Garibaldi. During the campaign they fought bravely, some of them even receiving a special mention for military valour. When the campaign was over, Boito decided to leave Italy and take up his residence in Paris: Victor Hugo encouraged him to do so, and exhorted him to join the Parisian press, and gave him the warmest and most affectionate introduction to Emile de Girardin. Accordingly Boito went to Paris in the spring of 1867, fully determined to give up music and throw in his lot with French journalists.

Thus Boito's career as a musician would have been absolutely over for ever, but for a succession of unforeseen and trifling incidents. When he arrived in Paris, Émile de Girardin, who was to act as his sponsor on his entering the Parisian press, was the hero of a political *cause célèbre* attracting for the moment the interest of all France, and the introduction had no practical consequences. After some time spent in vain suspense, Boito went to visit a sister in Poland, where the monotonous, tranquil, humdrum country life, and the many forced leisure hours he had there, put him again in mind of 'Faust,' and just to please his own fancy he sketched a musical setting of an arrangement of the entire poem, from the Prologue in Heaven to Faust's Death, and also completed some of the principal scenes.

While he was waiting for the autumn to go back to Paris and try his fortune again, Signori Bonola and Brunello, the managers of the Scala, who were making arrangements for the operas to be produced in the ensuing winter season of 1867-68, and had already secured two novelties, Gounod's 'Giulietta e Romeo' and Verdi's 'Don Carlos,' heard that 'Faust' was again occupying Boito, and they managed to obtain the opera, so that when the general public was thinking that Boito was on the staff of some Paris newspaper, unexpectedly the advertisements announced 'Mefistofele' as the new *opera d'obbligo* for the next season.

No doubt in the interest of art it was well that Boito entered into the engagement, but it was nevertheless a very rash step on his part, of which the effects were demonstrated by the memorable first performance of the original 'Mefistofele' which took place at the Scala on March 5, 1868. It must be fairly owned that the public was not ready to understand the new language he intended to speak, nor did the poet and composer know clearly what he was going to say to them. There is no denying that the original 'Mefistofele,' though poetically and philosophically admirable, was, taken as an opera, both incongruous and amorphous. It was an interminable work, with very deficient and feeble orchestration, no dramatic interest, and composed without the most distant thought of pleasing the taste of opera-goers. The conception was sublime and the outline bold and startling; but it was little more than a sketch, or a cartoon for a *fresco,* and the real work was absolutely wanting. It would have taken at least a year to get it properly ready, if the author had chosen to follow up the original scheme; but Boito found himself with very few months before him, barely sufficient to put the materials together.

The process of rehearsing at La Scala is a very long one, as it is done in the most conscientious manner: in the case of Mefistofele it was extraordinarily long, owing to the enormous difficulties the chorus and the orchestra had to grapple with; partial and general rehearsals amounted, if we remember right, to fifty-two, and during the many weeks spent in this way, all the interpreters had grown so accustomed to Boito's style, and his music had become so clear and familiar to them, that their heart warmed toward the young composer, they thought him the greatest composer in Italy, and answered to the numerous questions directed to them by known and unknown persons about the merit of the new opera, 'a second Guglielmo Tell.' 'Mefistofele' had absorbed the attention of all Milan, and of all musicians and amateurs of Italy: all seats and standing places had been sold weeks before the performance, and never after or before has been witnessed such an interest taken in the production of a young composer's first opera. In order to centre entirely the public interest in Boito, it was decided to make a breach of custom and let the composer conduct his own work; and another breach of custom was made by publishing and selling the libretto a few days before the performance. The first edition was bought up in a few hours, and eagerly, almost savagely, read, commented on, dissected, submitted to the most minute analysis.

The long-expected day came at length, and though the performance was to begin at 7.30, shortly after 2 o'clock the fortunate possessors of unnumbered seats could already be seen to gather near the large doors, in order to secure the best places. Boito's appearance was the signal for an applause as spontaneous as it was unanimous, that began simultaneously in all quarters of the house, and lasted several minutes. During all the prologue perfect silence was maintained, and an attempt to applaud the 'vocal scherzo' was instantly suppressed; the chorus and orchestra sang and played magnificently, and the effect seemed irresistible, and yet even towards the very end not the slightest guess could be given

as to the result, so that the nervousness of all the admirers and friends of Boito was increasing every minute; but when the choir gave out the last chord of E major, there came such a sudden thunder of applause that the last bars were perfectly inaudible, though played *fortissimo* by the full orchestra and military band. Six times Boito had to bow his acknowledgment, and yet the sound of applause still rang for minutes through the house; the cheering was taken up in the piazza outside the theatre, and it even reached the surrounding *caffès*, where hundreds of musicians had gathered with their friends to be in advance of any intelligence.

The friends of Boito were wild with excitement, and prophesied the triumph of the opera; but these prophecies were not destined to be realised. We have already alluded to the intrinsic reasons that made the original 'Mefistofele' unfit for the stage; in addition to these there was a very powerful accidental one that hastened the fall of the work, *i.e.* the utter inadequacy of the interpreters of the chief characters.

The first act did not produce any impression, in fact it went a good way to cool down the enthusiasm: the garden scene in the second act displeased the public, who contrasted it with the parallel scene in Gounod's third act, and found Boito's music decidedly inferior: the 'Sabba Romantico' turned the scale altogether. At the moment of Mefistofele's coronation the wizards, witches, and all the infernal crews knelt down, and satirising the ceremonies of the Roman Church, sang the plainsong of the *Tantum ergo*. From a poetical and musical point of view it was a splendid effect, but it was unquestionably in very bad taste to parody one of the most popular hymns of the Church. The audience considered it as irreverent, lost all patience, and began to hiss as lustily and heartily as they had applauded before. Boito's partisans stood him in good stead, and kept up to the very end of the opera a strong opposition to the majority, but this of course served only to increase the disturbance. Challenges were exchanged, resulting in duels the next morning, the confusion and clamour in the theatre reached such a pitch that during the fourth and fifth acts it was at times utterly impossible to hear either chorus or orchestra. When the curtain fell for the last time, all the members of the orchestra rose to their feet like one man and enthusiastically cheered the unfortunate composer; a rush was made from the pit into the stalls, and a shrieking and howling crowd hissing and applauding wildly rushed forward toward the orchestra. The house was cleared and the frantic audience fought it out in the streets until the next morning. The performance had lasted nearly six hours.

During the week another performance took place: one night the prologue, 1st, 2nd, and 3rd acts were given; on the following night prologue, 4th and 5th acts; but the conflicting parties could not agree, and at last the chief of the police thought wise to interfere, and 'Mefistofele' had to be withdrawn *by order*.

The idea of having the score of the original 'Mefistofele' printed, has been unfortunately abandoned, yet it may be hoped that in time the scheme may be carried out. For even if the thought of having the original opera performed in its entirety were to be dismissed, it would be a matter of regret that musicians should not have the opportunity of becoming acquainted with that grand conception, either by reading it or by partial performances. The 'Mefistofele' in its present form bears the same relation to the original work as W. G. Wills's 'Faust' to Goethe's masterpiece: it is an adaptation for the stage, of more practical use than the original, but of far less artistic import.

The only decided improvement in the rearrangement is the assignment of the part of Faust to a tenor instead of a baritone: the absence of a tenor makes an opera acoustically dull and engenders monotony, especially in a long work. The parts that have suffered more by the alterations are the scene at Frankfort in the first act, and the 'Sabba Romantico' in the second act. These two parts were much more freely developed, and might nowadays be performed by themselves as cantatas; and the same applies to the grand scene at the Emperor's Palace, now entirely abandoned. A strikingly original 'intermezzo sinfonico' (a clever arrangement of which by Marco Sala, for piano duet, has been published by Messrs. Ricordi of Milan) stood between the fourth and fifth acts; it was meant to illustrate the battle of the Emperor against the pseudo-Emperor, supported by the infernal legions led by Faust and Mefistopheles—the incident which in Goethe's poem leads to the last period of Faust's life. The three themes—that is, the *Fanfare* of the Emperor, the *Fanfare* of the pseudo-Emperor, and the *Fanfare infernale*, were beautiful in conception and interwoven in a masterly manner, and the scene was brought to a close by Mefistofele leading off with 'Te Deum laudamus' after the victory.

From the spring of 1868 to Oct. 4, 1875, when the revised Mefistofele was for the first time performed at the Teatro Comunale of Bologna, Boito worked hard and in good earnest, yet of the two grand operas which took up most of his time at that period none but a few privileged friends have heard anything. They are 'Ero e Leandro' and 'Nerone.' 'Ero e Leandro' when finished, did not please its author; at one time he contemplated the idea of having the libretto performed as a poetical idyll with musical intermezzos and choruses, then he dismissed the subject altogether, and gave the libretto to Bottesini, who set it not unsuccessfully to music. More recently it was

again set by Mancinelli and performed with success. Of Boito's music nothing remains except four themes; two he made use of in his 'Mefistofele,' one he had printed as a *barcarola* for four voices, and the other he adapted to an ode he had to write for the opening of the National Exhibition of Turin in the spring of 1882 (unpublished). 'Nerone,' so far, seems to be the *opus magnum* of the artist's life, but no one can say positively when or if it will be performed. For a long time the work has been so far advanced that if the author chooses it may be got ready in a few weeks, but there are excellent reasons for not giving the finishing touches to it; these reasons of course are not made public, but it is not difficult to give a guess at them in the right direction. Another work, of no less importance than 'Nerone,' on which Signor Boito was engaged later, is 'Orestiade,' but this is surrounded by a still deeper mystery than that in which 'Nerone' is wrapped, though it is perhaps more likely that 'Orestiade' may be submitted to the public earlier than the other.

It is rather early days to pronounce *ex cathedra* an opinion as to the place which Arrigo Boito will take amongst the great masters; yet one thing is beyond doubt, and that is, that Boito has a right to a conspicuous place amongst the greatest living artists. It remains still to be seen whether, when 'Nerone' is brought within reach of criticism, it will not ultimately be accepted among the greatest musical dramas of the day. This is not a groundless supposition; the greatest part of the poem of 'Nerone' is not unknown to the present writer, who is supported by the opinion of an indisputable authority, the Italian dramatist Cossa. Signor Cossa, who had won his fame by his tragedy 'Nerone,' was allowed by Boito to read his libretto. His opinion was as follows: 'Vi sono dei momenti degni di Shakspeare; il mio Nerone, in confronto al suo, è roba da ragazzi.' (There are conceptions worthy of Shakspeare himself: my Nerone compared to his is mere child's-play). [It is not possible to assert with any confidence that the published tragedy of 'Nerone' (1901) is the libretto here alluded to, but that it is a magnificent literary work is beyond question.]

In later years Boito became a fervent admirer of Wagner, and particularly of 'Lohengrin' and the 'Meistersinger,' but he was not in the least influenced by the German master's work: he admired but did not follow him. The only influences that acted strongly on him were those of Beethoven and Marcello, and a careful and diligent study of 'Mefistofele' will corroborate this assertion. About the time when 'Mefistofele' was given in Bologna, he began to devote himself to the works of Sebastian Bach, who has since then reigned supreme in his estimation. Only the future will show what influence this study has brought to bear on his musical conceptions.

As we said above, all Boito's best poems are to be found in *Il libro dei Versi*, a little book of less than two hundred pages. With the exception of 'Rè Orso' they are short poems, full of originality and character. Opinions differed widely on their merit, but admirers and detractors agreed that either as an ornament or as a blemish they stand by themselves in Italian literature, and that he is no imitator. 'La mummia,' 'George Pfecher' and 'Ad Emilio Praga' have always been considered the best, and 'King Orso' a *fiaba*, in two legends, an intermezzo and a moral, stands like a sphinx in the way of learned critics. What the poet meant by it no one knows, but leaving apart the drift of the poem there are in it flashes of light, dazzling, wild, and sweet. The fifth number of the second legend, where the author narrates the thirty years' wandering of the worm that by fate had to enter the sepulchre of King Orso, is a marvel in its kind, and the troubadour's song (legend 1, no. 7) is unsurpassed in gentleness of thought and sweetness of expression, so much so that it is a wonder that song-writers have not yet seized upon it.

Boito is the author of several librettos or, rather, dramas for music, for it would be unfair to rank these literary gems on a line with the old-fashioned librettos of Italian operas. They are:—'Mefistofele,' 'Nerone,' 'Orestiade,' set to music by himself: 'Ero e Leandro' (Bottesini and Mancinelli), 'Amleto' (Faccio), 'Gioconda' (Ponchielli), 'Alessandro Farnese' (Palumbo), 'Tram' (Dominiceto), 'Otello' (Verdi), and 'Falstaff' (Verdi), the last a work which must rank as his masterpiece. Each of those that have been published constitutes a perfect work of art by itself, independently of the musical setting. He is likewise the author of several translations, which include Wagner's 'Tristano ed Isolta,' 'Rienzi,' and 'Cena degli Apostoli,' Beethoven's Ninth Symphony, and some smaller works by Schumann and Rubinstein.

Arrigo Boito has, since 1867, resided in Milan, where he lives with his brother Camillo. He does not occupy any official position, and leads a quiet and retired life. Though he is good-humoured, a pleasant companion, and of a kind and cheerful disposition, he carefully shuns fashionable society. The Italian Government has conferred upon him first the title of 'Cavaliere,' then of 'Ufficiale,' and lately of 'Commendatore'; but though he does not make a cheap show of pompous independence in refusing these titles, he does not like to be addressed otherwise than by his simple name, and even on state occasions he is never known to have worn the decoration to which he is entitled. In 1892 he was appointed inspector-general of technical instruction in the conserva-

tori of Italy, and in 1895 he was made Chevalier of the Legion of Honour. G. M.

BOLERO. A brisk Spanish dance in 3-4 time. The earliest form of its rhythm was

which later became

while to the longer notes of the accompaniment shorter melody notes were given, and *vice versâ*. Gradually the rhythm of the castanets, which were used as an accompaniment to the dance by the dancers themselves, was introduced into the music, which now assumed this form:—

or

The bolero usually consists of two chief parts, each repeated, and a trio. The castanet rhythm above referred to mostly commences at least one bar before the melody. Good examples of the bolero may be found in Méhul's 'Les deux Aveugles,' Weber's 'Preciosa' (gipsy-ballet), and Auber's 'Masaniello,' as well as Chopin's bolero for piano solo, op. 19. E. P.

BOLLA, SIGNORA, an Italian prima buffa, who sang in London at the opera in 1794. She was a very pretty woman, and a 'pleasing, genteel actress,' who with a better voice would have been an excellent singer. She was very successful in Paisiello's 'Zingari,' and in 'Nina,' which latter she chose for her benefit, with spoken dialogue instead of recitative; but this was considered an infringement of the rights of the English theatres, and after a few nights it was stopped 'by authority.' In 1802 she was singing at Paris in opera buffa with Lazzarini and Strinasacchi. J. M.

BOLOGNA. The first school for instruction in music in Italy was founded at Bologna in 1482 by Pope Nicholas V., when Bartolommeo Ramis Pereja, a Spaniard, was summoned from Salamanca to preside over it. Spataro (so called because he was by trade a maker of scabbards), one of the early Italian writers on music in the 15th century, was a disciple of Pereja.

In the 16th and 17th centuries Bologna had as many as thirty academies for the promotion of various sciences and arts. Four out of this number were musical, not including that of the 'Gelati' (founded 1588), which comprehended every science and art, and flourished throughout the 16th century. One of its members, Girolamo Desideri, wrote a valuable treatise on music. The four are as follows:—

1. 'Dei Concordi,' founded in 1615. The arms chosen by this institution were—three time-pieces, a clock, an hour-glass, and a dial. The motto—'Tendimus una.'

2. 'Dei Filomusi,' founded in 1622 by Girolamo Giacobbi, a learned classical composer of the Bolognese school, and maestro di cappella of San Petronio. This academy was entirely devoted to the study of musical science. Device —a bush of reeds, with the motto 'Vocis dulcedine captant.'

3. 'Dei Filaschici,' opened in 1633. Device —David's harp: motto—'Orbem demulcet attactu.' The object of this institution was to inquire into the science of sound.

4. 'Dei Filarmonici,' instituted in 1675 by Vincenzo Carrati entirely for music. Burney, in his *Present State, etc.* (France and Italy) 1773 (p. 230), speaks of this academy as still in existence. He was present at a kind of trial of skill amongst the academicians, which took place annually in the church of San Giovanni in Monte. The members of this society each composed portions of the service, and Burney, whose opinion of the performance was asked, praises highly the variety of style and masterly compositions of the members. 'At this performance,' he says, 'were present Mr. Mozart and his son, the little German whose premature and almost supernatural talents so much astonished us in London a few years ago when he had scarce quitted his infant state. He has been much admired at Rome and Naples, and has been honoured with the order of the Speron d'Oro by His Holiness, and was engaged to compose an opera at Milan for the next carnival.'

Orlov (*Traité de Musique*, 1822) speaks of the performance of the sixteen hundred members of the Philharmonic Society at Bologna, in the cathedral of San Petronio, to celebrate the festival of the patron saint. But there is no mention of this society in the report of 1866 as to the state of musical education in Italy.

In the 16th century there were but few practical musicians of the Bolognese school, though in the next, owing to these musical academies, the masters of the cathedral of San Petronio and other professors of the city were equal to those of the first class in any other part of Europe.

The result of these societies also appears in the series of musical dramas performed in Bologna since the year 1600. There seems to have been no public theatre in this city till 1680, when four operas were performed there 'nel Teatro Publico.' After this the music, which had previously been written by Venetian masters, was supplied by members of the Bolognese academies. Among these were Petronio Franceschelli, who set the prologue to the opera of 'Caligula'; Giuseppe Felice Tosi, who composed ten operas between the years 1679 and 1691; Giacomo Antonio Perti, a composer of church music, but also employed in operas for Bologna and Venice; Giovanni Paolo Colonna, maestro di cappella di San Petronio; Aldobrandini Albergati; Pistocchi, who founded a famous Bolognese school of singing; and the renowned composers, Clari, Bononcini, and Padre Martini.

[In the latter part of the 19th century, when

an interest in serious music revived and the modern theories of dramatic music were beginning to make their way in Italy, Bologna was in the van of progress. There some of Wagner's operas, notably 'Lohengrin,' were performed for the first time in Italy; and the musical culture of the city has been greater than that of any other Italian town, with the sole exception of Milan.] C. M. P.

BOLT, JOHN, born in 1564, was a famous player on the virginals, and lived at the English court for three years. He joined the Roman Church in 1588, and was organist to Sir John Petre. He was arrested as a papist in 1594, and went to Louvain, where he was organist of St. Monica's convent for twenty-eight years. He became a secular priest, and died August 3, 1640. Queen Elizabeth thought highly of him for his voice and skill in music. W. H. G. F.

BOMBARDON, BOMBARD, BASS-POMMER or BRUMMER, were originally names of the deeper varieties of the oboe or bassoon family; the bombardon, or contra-bass pommer, the largest instrument, reaching to FFF. These large instruments differed from the bassoon in being in one length without bend (the crook only excepted), and in having a much more limited compass. There are examples of 16th century date in the Hochschule für Musik at Berlin, and in the Conservatoire Royal de Musique, Brussels (see POMMER). From these the name was transferred to a bass reed stop on the organ, with 16-foot tone. In the *Traité de l'Orgue*, by Dom Bedos, it appears that the stop was sometimes carried down to 32-foot F. It was mainly employed in accompanying plain-chant.

The name is now applied to the lowest pitched of the brass valved instruments, as made with large calibre and broad quality of tone. As valves were applied to instruments of this type before the date of Sax's improvements, the bombardons may be considered as a group by themselves, apart from the saxhorns, which are more particularly a series of instruments of the bugle type, ranging from soprano to baritone in compass. The bass and contra-bass valve instruments, including the euphonium (*q.v.*), are the natural development of the old bass-horns and ophicleides, the distinctive feature by which they stand differentiated from the bugle type being the free use of the pedal octave lying between the first and second harmonics. The name bombardon or bass-tuba is usually given to an instrument having for its prime or pedal note the F or E♭ of the 16-foot octave, and contra-bass to an instrument in C or B♭, a fifth lower. The open notes of these four instruments are therefore as follows:—

Bombardon in

Wagner has written as low as E♭, the pedal note in the second example, which can be taken as a valve note on the F instrument, the most usual one in the orchestra; lower notes, although possible to some lips, are not to be depended upon. The upward limit of compass is one or two notes above the eighth harmonic. The seventh harmonic, as on all brass instruments, is rather flat, but this is of no practical consequence, as the note can be taken with the valves, which give a complete chromatic scale.

The instrument is built in two forms: upright, like the euphonium, but larger; and circular, passing over the performer's shoulder, with the bell directed forwards. It is usually written for as a non-transposing instrument in the bass clef, but for brass-band purposes it is sometimes written for as a transposing instrument in the treble clef, in which case the second harmonic, whatever its actual pitch, is always placed on the middle C line thus:— etc.

The tone is broad and open, but does not blend very well in the orchestra, except when in combination with other brass instruments. In military and brass bands, however, the bombardons in E♭ and B♭ contribute the mass of the bass tone. D. J. B.

BOMTEMPO, JOÃO DOMINGOS, important Portuguese musician and composer, born about 1775 at Lisbon, settled in Paris 1795, visited London, returned to Paris, and finally went back to Lisbon in 1820 and founded a philharmonic society which lasted till 1823; in 1833 he became head of the Conservatoire. As instructor of the royal family he was made Knight of the Order of Christ, and chief director of the court band. He died August 13, 1842. Amongst his works the following deserve mention —'Variçõessobreo fandango'; 'Messe de Requiem à la mémoire de Camoens'; Responsorii for Queen Carlotta Joaquina (1822); Missa solenne for the promulgation of the Constitution (1821); Requiems for Maria I. and Pedro IV.; 'Methodo de Piano' (London, 1816); 'Alessandro in Efeso,' opera seria. His style is clear and dignified, obviously formed on Handel and Haydn. F. G.

BOND, HUGH, appointed lay-vicar of Exeter Cathedral in 1762, was also organist of the church of St. Mary Arches in that city. He published 'Twelve Hymns and Four Anthems for four voices' of his composition. Many of his pupils rose to eminence in the profession. He died in 1792. W. H. H.

BONNO or BONO, GIUSEPPE, son of one of the imperial running footmen, born at Vienna 1710. Studied composition at Naples at the Emperor's cost, and in 1738 was taken into the

Imperial Hof-kapelle as Hof-scholar, from which he rose to be Hof-compositeur (1739), and, on Gassmann's death, Hof-kapellmeister (1774). He was essentially a court-musician. His oratorios were executed after Lent at the court chapel, and his 'festi teatrali,' or occasional cantatas, were mostly performed by archduchesses before their imperial parents. Bonno was for many years vice-president of the Tonkünstler Societät, and the society executed his oratorio of 'Il Giuseppe riconosciuto' (1774). The scores of twenty-five other pieces, serenatas, pastorales, oratorios, masses, and hymns, are preserved in the Imperial Library and the Musik-Verein at Vienna, and they show a very moderate amount of invention, sufficient to meet the wants of the time and the society in which he lived, but no more. He must, however, have had some qualities to make up for these defects, for Mozart (writing April 11, 1781, of the performances of one of his symphonies under Bonno's direction) calls him 'der alte ehrliche brave Mann.' He died April 15, 1788. A fine Amen by him, in the grand Italian style, is engraved in the Fitzwilliam music from an unfinished mass in the collection at Cambridge. C. F. P.

BONONCINI or BUONONCINI, a family of musicians in the 17th and 18th centuries. The father, GIOVANNI MARIA, was born at Modena about 1640, and was chief musician to the Duke, maestro di cappella of the church of San Giovanni in Monte there, afterwards (about 1675) of the cathedral, and a member of the Accademia dei Filarmonici of Bologna. He was a competent and productive artist, who left compositions in many classes, vocal and instrumental, and a treatise on *Musico prattico* (Bologna, 1673, 1688), which was translated into German, and is a clear and sensible work, still of use to the student. Five MS. operas are in the royal collection at Dresden, and many masses, cantatas, sonatas, etc., are in Eitner's list (*Quellen-Lexikon*). He died Nov. 19, 1678. His son, MARC ANTONIO, was born at Modena 1675. He appears to have travelled much, and to have been for some years in Germany—though this may be merely a confusion with his brother. In 1714 he was at Rome, in 1721 maestro di cappella to the Duke of Modena, where he died July 8, 1726. Six operas of his are mentioned as remaining in MS. His 'Camilla,' which has been published, had an extraordinary popularity abroad, and in England ran sixty-four nights in four years (Burney, iv. 210). For list of works see *Quellen-Lexikon*. He was apparently the best of the family, though his light is considerably obscured by his brother, GIOVANNI BATTISTA, who for the most part spelt his name Buononcini, and on whom, rightly or wrongly, the fame of the family rests. He was born at Modena 1672 (but according to Eitner, his op. 2 appeared in 1678), and instructed by his father and by COLONNA. He was a musician of undoubted merit, though not of marked originality, who suffered from too close comparison with Handel—as talent must always suffer when brought into collision with genius—and from a proud and difficult disposition very damaging to his interests. His first entrance into the musical world was as his father's successor at San Giovanni in Monte; afterwards he was attached to the court of Vienna at or about 1692. His earliest operas, 'Tullo Ostilio' and 'Serse,' were given at Rome 1694. In 1696 we find him and Ariosti at the court of Berlin, when Handel, then a lad of twelve, was there too for a time (Chrysander's *Händel*, i. 52). At Vienna he was court composer from 1700 to 1711, and a very prominent personage; but from 1706 to 1720 his time seems to have been divided between Vienna and Italy. In the latter year he received a call to London. A great impulse had recently been given to Italian opera by the establishment of the Royal Academy of Music. Handel was director, and Buononcini and Ariosti were invited over to place the new institution on the broadest possible basis. Buononcini was received with extraordinary favour, and there are perhaps few subscription-lists so remarkable as that to his 'Cantate e Duetti' (1721), for the large number of copies taken by individuals of rank. In England at that time everything was more or less political, and while Handel was supported by the Hanoverian King, Buononcini was taken up by the great houses of Rutland, Queensberry, Sunderland, and Marlborough. From the Marlborough family he enjoyed for many years an income of £500, and a home and an agreeable position in their house. His connection with the Academy continued for seven or eight years, during which he produced the operas of 'Astarto' (originally given in Rome, 1714, revived in 1720), 'Crispo' (1722), 'Erminia' (1723), 'Farnace' (1723), 'Calfurnia' (1724), 'Astyanax' (1727), and 'Griselda' (1722)—though that was suspected to be really his brother's [see Burney's *Hist.* iv. 284]. All these pieces were well received, and 'Astarto' ran for thirty nights. An episode of his operatic career was the joint composition of the three acts of 'Muzio Scevola,' in 1721, by Ariosti—or according to Chrysander (ii. 56) Filippo Mattei, or Pippo—Buononcini, and Handel. Buononcini's act was superior to Mattei's, but the judgment of the public was so unmistakably in favour of Handel's as to allow of no appeal. On the death of Marlborough, June 16, 1722, Buononcini was commissioned to write the anthem for his funeral in Henry VII.'s Chapel (August 9), to the words 'When Saul was king over us.' It was afterwards published in score, and has fine portions, though it is very unequal. About the year 1731 the discovery that a madrigal to the words 'In una siepe ombrosa,' which had been submitted to the Academy some years previously as his composition, was a mere transcript of one by Lotti, led

to a long correspondence, and caused a great deal of excitement and much irritation against Buononcini, and was the first step in his fall. It is difficult to understand why a man of his abilities, whose own madrigals were well known and highly thought of (see Hawkins's testimony) should have borrowed from another composer, if indeed he did borrow Lotti's music at all—which is by no means certain (Hawkins, ch. 185). The pride and haughty temper of the man, which closed his lips during the whole contest, was probably a chief reason for the feeling against him. It is certain that it led to the severance of his connection with the Marlborough family, which took place shortly after this affair. He then attached himself to a certain Count Ughi, who professed to have the secret of making gold, went to France, and remained there for some years. There we catch sight of him once more, playing the violoncello to a motet of his own in the Chapel of Louis XV. In 1748 he was sent for to Vienna to compose the music for the Peace of Aix-la-Chapelle (Oct. 7), and soon after left Vienna to be composer to the Opera at Venice, where we leave him.

Besides the operas ascribed to him—22 in all—and the other works mentioned above, before leaving Bologna he published 4 masses for 8 voices each, duetti di camera, and an oratorio, 'Il Giosuè.' Four other oratorios, a Te Deum, etc. etc., remain in MS. at Vienna and elsewhere. 'S. Nicola di Bari,' and a Psalm, 'Laudate pueri,' are in the Royal College of Music; the Fitzwilliam Collection, Cambridge, contains an act of the opera, 'Etearco,' madrigals, and motets, a mass, and many cantatas, duets, and divertimenti. Novello, in his *Fitzwilliam Music*, published four movements, of which the Sanctus and Pleni sunt, from a mass, are the finest, and they are very fine. [See the complete list of works in the *Quellen-Lexikon.*] G.

BONPORTI, FRANCESCO ANTONIO, born about 1660 at Trient, was an Imperial Counsellor of Austria, and occupied himself with music, in which he was one of the earliest instrumental composers of importance. His first work—Sonatas for 2 Violins and Bass—appeared in 1696 at Venice. These were followed by many others, among which the most remarkable are 'Le triomphe de la grande Alliance,' op. 8, and 100 minuets for Violins and Bass. His 'Concertini e Serenate,' etc., op. 12, were printed at Augsburg in 1741. F. G.

BONTEMPI, GIOVANNI ANDREA ANGELINI, the son of a citizen of Perugia, named Angelini, adopted the name of Bontempi from a rich citizen, Cesare Bontempi, who was, according to one account, his godfather. He must have been born about 1630, is said to have been an artificial soprano, and sang in the choir of St. Mark's, Venice, from 1643 to the middle of the century, when he went to Dresden, either in 1647 or 1650 (Fürstenau, in various books on the music at Dresden, gives contradictory information, and in one, *Beiträge*, etc., says that he was at the court of Brandenburg in 1644). At Dresden he was befriended by Heinrich Schütz, and in 1666 was appointed capellmeister as coadjutor to Schütz. After a year he gave this up, and devoted himself to science, architecture, etc. He went in 1669 to Italy, and after a final visit to Dresden in 1671, settled down in his native city, and died there June 1, 1705. He wrote three theoretical works: *Nova quatuor vocibus componendi methodus* (Dresden, 1660, dedicated to Schütz); *Tractatus in quo demonstrantur convenientiæ sonorum systematis participati* (1690); and *Historia musica*, etc. (Perugia, 1695). His operas were 'Paride' (1662), published in Dresden with Italian and German words; 'Dafne,' written with Peranda (1672); and 'Jupiter and Io' (1673). (Eitner's *Quellen-Lexikon*; Riemann's *Lexikon.*) M.

BOOM, JAN VAN, flute-player, born at Rotterdam April 17, 1783, belonged to the band of King Louis Bonaparte, settled at Utrecht, and made many successful tours in Germany. His works chiefly consist of bravura pieces for the flute. His son JAN, born at Utrecht, Oct. 15, 1807, was brought up as a pianist, and after a tour in Sweden and Denmark in 1825 settled at Stockholm, where in 1849 he became Professor in the Academy and Music School. In 1862 he visited the chief capitals of Europe to examine the systems of musical education. He gave up his post in 1865, and died in April 1872. He composed symphonies, quartets, trios, and pianoforte pieces of every description. Another son, HERMANN, born Feb. 9, 1809, was an excellent flautist, a pupil of Tulou's, settled in Amsterdam in 1830, and died there Jan. 6, 1883 (Riemann's *Lexikon*). F. G.
